So, you know, levity, they may not be able to take in right off the bat. It's a learned process for them. They'd have to learn.

You're in a dark room, and you have, say, a red sheet of paper. You can't tell it's red. They pick it up and touch it, and they say, “Oh, it's red.”

You can't see your hand in front of your face, but yet, they can go ahead and they can distinguish colors that way.

You have some that are, once again, humanoid, and you have to be very careful because when you come up on that, you very quickly think that they're human.

But their pupils [Stone means 'irises'], like we have blue, green, and all that good stuff, brown. Their pupils are black. Therefore, they will go ahead and they will use contact lenses to cover that up.

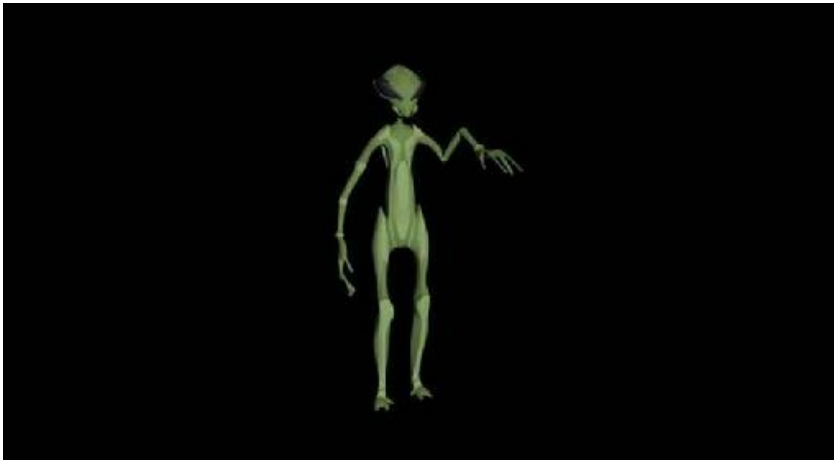
But if they forget those contact lenses, a person seeing them will be shocked because the eyes will look, you know . . . nowadays they're just going to say, “Oh, those are contact lenses.” And I don't know how many kids I saw show up having contact lenses that looked like cat eyes. And, you know, the whole situation is that's what they would say today.

But back in the day, there were no contact lenses. And back in the day, they'd wear dark glasses.

So when you see a picture and it's dark, there's no need for dark, dark sunglasses, you might ask yourself, “Is that person really from this planet or is he hiding something?”

I would say the freakiest was, and I'm going out on a limb here, because I hate doing this, because, “Oh, no, that's already been talked about”, is what you would call . . . I don't know, having a grasshopper-like face. And a lot of people call them the “praying mantises”.

But I didn't have any – how can I put this? I did not have any real problem with them, you know?



I got along good with them, but the one problem I did have – remember, I said they had the face about like a grasshopper. They ate like a grasshopper too.

And I think because when I was a child, we tried to help animals and grasshoppers, and I liked grasshoppers when I was a kid. Not to eat, but I just found them

fascinating, you know? And I'd watch them eat, and I think that prepared me, actually, for when I saw these creatures and the way they ate. Because I had many people - "That's disgusting!"

And I just went ahead and said, "You know what? That's natural for them. The way we eat may be disgusting to them."

And one of them actually made a joke about it – one of the insectoids that looks like the . . . - actually made the joke by saying, "Well, you got it right. We think that it's disgusting the way you guys eat. It's not normal."

What's normal about anything here?

* * * * * *

David Wilcock: All right, so that's some pretty heady stuff there. When we get into these kind of specific details, to me, that's where you start to feel the truth coming through. Somebody making up a story is not going to have this much level of specific detail, wouldn't you agree?

Corey Goode: Yeah, the fine details are where people get caught up, and also, remembering those fine details.

David: Right. If you're working in counterintelligence, would it be normal to try to get people to give fine details so that they could get caught up in them and make mistakes if you're trying to catch a liar?

Corey: Oh, yeah. Definitely. You're going to ask a person the same questions, pose it differently each time and work your way back to the details that they had given prior to see if anything's changed or to see if they can keep up with their lies.

David: Yeah, and Stone has been out there for 20 years, and his stories have always stayed the same, regardless of the fact that he's not ever been able to capitalize on this. He lost one of his sons.

It's actually a very sad story because part of his toll of being a whistleblower was losing one of his kids, apparently.

Corey: Right. Yeah. Consistency is very important.

David: So here he is describing this experience of being an intuitive interface for these ETs on these retrieval teams, but that the other guys on the team did not necessarily know that that's what he was there for.

Would it be common for members of a team to not actually know exactly what every member of the team is doing?

Corey: It depends on the situation. There are times when the team has to know all about their teammates. You also have compartmentalization in there as well. Even in small teams there is compartmentalization.

David: Right.

Corey: And it sounded like they had a pretty good idea he was there to do more than be the NBC [nuclear, biological and chemical] guy on the team.

David: So he's describing 57 different varieties of extraterrestrial, and that has been something that has jumped out at me over many years. You were told to read The Law of One material.

And in The Law of One material, it's explained that there are 53 civilizations in the so-called “Good Guy Confederation”. And then they also say that George Hunt Williamson was correct in a lot of his material and he identified six negative groups.

53 plus six brings us up to 59, which is only two away from 57. So how does the number '57' - I just explained The Law of One side of things – how does that number maybe permeate into some of the things that you might have also heard?

Corey: Now, if these crash retrieval teams . . . they're going to be given a list and information on non-terrestrials that are interacting with us the most, that they're most likely to run across in a crash situation.

David: Right.

Corey: Right.

David: Well, you've mentioned before the Super Federation. And what is the Super Federation doing here? Would they be working with us closely enough that they'd be in our airspace?

Corey: Many of them in the Super Federation are . . . they're what they call the 'genetic farmers' – a lot of them. There's a huge experiment going on, a big genetic experiment going on, and they're taking part in it.

They don't always come down to the surface, but, you know, they're going to have to come down to the surface to pick up subjects to test and to try to put new genome

into.

David: So they could be some of the groups that are crashing because they're actually operating in our airspace.

Corey: They are, yeah.

The crashes are occurring from the Super Federation group. There are also non-terrestrials that come into our solar system. As they're traveling around to other solar systems, they'll stop in to get supplies or do some trading real quick before they leave. So there's a larger number than that that are actually coming in.

We developed the ability to monitor our own skies and police our own skies that dropped quite a bit the number of non-terrestrials that were coming into our atmosphere, doing what they wanted to do, and then heading out.

But there's a lot more than 57 or 59 that are occasionally coming in and out of our solar system and interacting with us.

David: So it's possible that these crash retrieval teams could come across something that they did not have in the flipbook and would therefore, would be unfamiliar to them.

Corey: Absolutely, yes. And that's what happened along . . . That's how they built up to 57.

David: I see.

Corey: A lot of times, in one of these crashes could be a non-terrestrial that they've only seen once or twice. And others could be non-terrestrials that they've run across quite a bit.

David: So what kind of protocol would they have it it was something that they hadn't seen in the book? What would be done at that point?

Corey: Well, most likely, they're not going to try to do any type of medical care on them. And usually they don't know what type of pathogens they're carrying or what pathogens of ours that they're susceptible to.

So they're going to cordon it off until they have medical scientist professionals come in.

David: So there are different protocols in place if they don't know the medical procedures that would be safe, where they might be a lot more hands-off at first?

Corey: Right. If they're coming up on a completely unknown crash, there are a lot of things to take into consideration from the craft. What is it carrying? What type of chemicals or biologicals are emanating from it that can make them sick? You know, there's a lot to consider.

So they usually cordon it off and then send in some specialists to take readings. And if there was a being that was injured, they would probably succumb to their injuries by the time they got medical attention to them.

David: Are there problems with radiation and radioactivity in some of these crashes?

Corey: Yes. Yes. That's why they have NBC units traveling along with them – nuclear, biological, chemical.

David: Have there ever been cases of crashes where little nanites come out that could kind of crawl along the ground and then attack people or something like that?

Corey: Ah, I haven't heard anything like that. I have heard of people becoming ill and then dying from walking into crashed craft.

David: Hm. Just being exposed to it for a short time is enough?

Corey: Being exposed to it . . . Yeah, different radiations, the biologicals, pathogens from the non-terrestrials . . . There's a number of things.

David: Now, Stone is describing the idea that certain extraterrestrial physiology, that they could die from just the adhesive, or whatever it is . . . I guess it's the adhesive on a Band-Aid.

Corey: Or it could be the chemicals in the adhesive. Yeah, there . . . And I remember reading, because some of the "intercept and interrogation" subjects that we had had, obviously, had medical treatment sometimes.

They have to know how to triage and stabilize these beings so that they can get more information from them.

David: Well, he said that there was a certain type of wound-healing that might involve plaster of Paris.

Corey: Yeah, well, what I've read was that some of these beings were having kind of like anaphylactic shock to chemicals that were being administered to them that would be fine for humans and animals, that these beings were showing, basically, signs of an anaphylactic shock and dying.

David: Well, I've had other insiders tell me that ETs are shocked by our planet, in general, because of the number of chemicals that we use and that it's way more than they would use in their own worlds. Have you ever heard anything like that?

Corey: Right. They're so advanced that they don't need all these different chemical compounds.

David: And maybe because they're not exposed to them, they become a lot more sensitive to them.

Corey: Right – as well as pathogens. They don't have a way to fight them off.

David: Something like iodine, though, when he mentioned that, it seems like that's a pretty normal substance in the periodic table that helps biological life.

Corey: Well, there are a lot of human beings that are allergic to iodine, that can't have iodine in their system at all or on their skin. So it's completely plausible that something like iodine would cause some sort of allergic reaction in a non-terrestrial.

David: Now, why do you think that a certain type of dirt or mud would actually function as a Band-Aid for certain extraterrestrials? Is it the minerals in the dirt, or . . .?

Corey: Well, the minerals, and, also, the caking of the mud or dirt is also going to

allow their blood to coagulate.

David: Do some of these ETs heal a lot faster than we do?

Corey: Yes. Some of them that I witnessed that had been treated were already looking very healthy after they had had very bad injuries. And that could be some of the technology we used on them, but usually, after they were stabilized, they were put in a cell and kind of left alone. So they were healing on their own.

David: And since we're talking about all this, I'm curious about what do you end up feeding extraterrestrials that are in captivity? Can we feed them our normal food . . .

Corey: No.

David: . . . or do they sometimes require very unusual things?

Corey: Yeah, usually it's some sort of compound that's mixed together that has . . . It's kind of like a meal supplement that you would take instead of eating. It has all the minerals that they need - vitamins, everything – protein – everything that they need.

And different non-terrestrials have completely different systems. Some of them don't really appear to have an operating system in their body for digesting food.

So, yeah, they would have to communicate through an intuitive empath with these beings. You know, “How can I help you? What can I do?”

These beings will reach out to intuitive empaths and say, “I need nourishment. This is how you prepare it.”

David: Is drinking water going to be a fairly common thing throughout most being's biological life?

Corey: Well, interestingly enough, I remember seeing that in some of the beings they could only use distilled water for hydrating them or treating wounds.

David: Hm. Wow!

Corey: So I imagine that water can absorb minerals and all kinds of stuff. So it would have to be a purified water source.

David: So even though water is healthy for us, it's also got this blend of all the minerals that are unique to our planet, and maybe other planets might have a very different type of mineral blend that that water would have in it.

Corey: Right, right. And, you know, distilled water has been stripped of all that.

David: Right. Now, he also mentioned . . . He said “pupils”, but then he talks about people's pupils being different colors, so he obviously means “irises”. And he said that some ETs have black irises and it would be quite striking for us to see that if they didn't wear these contact lenses. What was your reaction to that part?

Corey: Well, I had actually seen beings that their eyes were . . . all you could see were the whites or pink. On each side of the eye it was black. And that's in more than one species.

And he mentioned that this was a species that was very human looking, that you would walk up upon and you would think you're walking up to people. And then you get right up to them and then you would notice something was different or not right.

David: Well, let's just clarify this because there might be some confusion in the audience. He's not saying that the entire eye, including the whites of the eye is all black like you see in a lot of these TV shows and horror movies.

Corey: No. The iris.

David: Just the iris. Right.

Corey: Right.

David: Those types are going to usually wear contact lenses before they would appear to us?

Corey: I hadn't heard of them wearing contact lenses, but I had heard that they will wear sunglasses. Or depending on the group, if their eyes are different, maybe put on some sunglasses. If their ears are different, just like off “Star Trek”, you know, put on a hat, cover up the pointy ears.

David: Right.

Corey: You know, that's if they're anticipating running into the indigenous people.

David: And he also mentions running into some kind of insectoid life – people with a head like a grasshopper. Where do you think he might have encountered beings like that? What might have happened, because he didn't really get into where he saw that?

Corey: It didn't sound like it was a crash retrieval situation. It sounded like he was at some sort of facility that was an inter-species sort of base, because he was interacting

with them.

David: Right.

Corey: He told the story about one of the people said the way they eat is disgusting, and he made a remark that, “Well, they probably think the way we eat is disgusting.” And one of the insectoids chimed in and agreed with him . . .

David: Yeah.

Corey: . . . which is another thing that has come up that we've heard in UFOlogy, and which I experienced personally. A lot of these non-terrestrials cannot stand the smell of us, the sight of us. We're just . . . We're very unattractive to them and we stink.

David: I also remember Pete Peterson telling me, and I've said this many times, when he met with a grasshopper-type being that it would put its head down when it laughed because it had these mandibles on its mouth that would open up.

Corey: Yeah. The one that I saw that sticks out the most was not exactly in a laughing mood.

David: Yeah.

Corey: It had been captured and it was being interrogated, but it had the mandible things that come out like this [Corey spreads his hands open and closed on both sides of his mouth]. It had a head that looked kind of like an ant or a grasshopper. From the front it was like this [Corey uses both index fingers to point outward from the sides of his forehead]. If it turned sideways, it stuck out a little bit further.

But a lot of times, people will call those Mantises, but there are several different types of insectoids.

David: And do you think that with Stone being the guy who first put out “57 different varieties” and that most of them are human or hominid in nature, could you just clarify for us, again, if that is consistent with your observations? Is there some sort of human setting or human-like setting that life, when it's intelligent, seems to take?

Corey: I've heard that there are different configurations of beings out there, but for the most part they are humanoid – you know, two arms, two legs, a head, fingers, toes of some sort.

David: What are some of the different configurations?

Corey: I've heard of configurations of . . . I think we've heard of like crystalline type beings or beings that were energetic kind of blobs, but not exactly flesh and blood as we would know it.

David: Right. Okay. Another thing that Stone mentioned was this bizarre sensory capability that some of these beings have, where they could touch a piece of paper in the dark, complete dark, and know that it was a red color.

That seems pretty outrageous. Some people might try to laugh at him or discredit him just from that one statement. What are your thoughts on that?

Corey: Well, some of these beings see through a different spectrum than we do. Their eyes absorb light from a wider spectrum.

David: Hm.

Corey: So the visible light that we use to see, if you turn that off, there's still a little piece on this side and that side of that spectrum that they can see. And there's also the fact that, I've heard, that a lot of the mind control that is being used on humanity has suppressed a lot of our senses, that we would be capable of things similar to that if we were not being manipulated.

David: All right. So we are finished with this episode now. Sergeant Clifford Stone has given us some really really great material. He is a brave American hero.

You have to understand how difficult it is for people to come forward and share this material with us.

When people want to laugh at this guy on the Internet, they don't realize, necessarily, that he has suffered poverty. He lost one of his children, and he has nothing to gain and everything to lose by coming forward.

So we applaud him as an American hero, bringing forward this information to help us all move into the Full Disclosure that we are hoping to get out of all of this.

So now, we're going to close out the episode with some of Clifford Stone's final thoughts for us after sharing all this very deeply personal and emotional information.

I'm David Wilcock here with Corey Goode. This is “Cosmic Disclosure”, and we're going to close out with a few thoughts from Sergeant Clifford Stone. Thank you for watching.

* * * * * *

A MESSAGE TO HUMANITY

Sgt. Clifford Stone: Now, the whole situation is there's that contact that's going on and there is interaction, but what we don't understand, we fear.

And when it comes to abductions, we don't understand. We fear. And I've always said, “I have never been abducted,” at least, I don't believe I have.

But now, with me saying that, let me tell you that I remember at a very young age seeing the stars where they cannot be observed anywhere on the planet of the Earth like I saw them on several occasions.

The one thing that I'd want everyone to understand and take away from this interview, if nothing else, I'd want them to go ahead and remember, one, let no one live in your mind rent-free. Two, search out and seek the truth.

Then, three, go ahead and demand answers on those things that are still left in question as a result of the exposure of those things being exposed by the truth.

The problem is, right now, too many people let people live in their mind rent-free, and that is something that you just cannot do.

You have people out there with their own personal agendas, and they're telling you that the Moon is green cheese, and everyone wants to believe that.

The whole situation is, if you go ahead and research the facts and you come out with understanding that the Moon is very complex, and there's a lot of mysteries. And we want those mysteries answered.

When it comes to UFOs, it's a self-keeping secret. Everybody knows UFOs, per se, as UFO reports, exist. They are seen on a daily basis.

A government saying, “We're not going to investigate no more,” does not make them go away.

There are people who have their psychic insulted on a daily basis by events of high strangeness that takes place, and no one wants to provide answers for that.

In short, we need those answers.

I know, for a fact, that eventually an event is going to occur, by design or by happenstance, that is going to be so profound there is not going to be NO way to

cover it up.

And not just the people here in the United States, but the world, are going to know, once and for all, we're not alone in the universe. But what we need to do is have people psychologically ready to accept that.

And I'll tell you right now, people say, “Oh, well, it's going to hurt religion.” No, it's not. “It's going to hurt this. It's going to hurt that.” No, it's not.

You want me to tell you who it's going to hurt? The scientific community of the world, because the scientific community of the world right now is so self-centered within itself. They can say, “We can accept extraterrestrial beings being out there.”

But can they really? Because the whole situation is they are locked within their own paradigm, where they know of exotic propulsion systems that someday we will acquire. And we will visit, not just the planets in our solar system here, but planets in other solar systems that are light years away.

And we're working on that technology right now. It's not a secret that we're working on it. It's just people don't know.

And these are the facts. These are the truths that people need to seek out.

And when they do that, they will realize that we are seeing UFOs in our skies, intelligent vehicles that are coming here from someplace else under intelligent control, by entities not of this world – maybe not even of our dimension.

But they have to realize that tomorrow we'll acquire that technology.

Day after tomorrow, we're going to become someone else's UFOs.

Bottom line: it's going to happen.

What's very key to all of this is that each and every person keep an open mind. And I hate to put it this way, there's a lot of things that have went on that for reasons I can't get into have to remain between me and God. That's the best way I can put it.

A lot of times I don't feel comfortable about talking. You relive it in your mind. It don't go away.

You see it in living color and there were those times I was one voice saying, “This is an intelligent living creature.” And some people would say, “No, no. This right here is

a creature. It's a new form of life. It's a new animal."

And dare I say this, at times I felt that the intelligence of these creatures, I felt that when we go ahead and put them on a lower pedestal than us, then the situation is we are not recognizing the fact of their intellectual capabilities – what we have to learn from them. But for selfish motives, we degraded them far below even that of what the human species would be.

Yet, because of their intellect, they are on a much higher pedestal than the human species is, and because of their spirituality.

And, you know, I know a lot of people was not as vocal as I was, but shared the same concerns that I was airing.

And one thing I want to see . . . I really want to see whether people believe in UFOs are here, whether we have extraterrestrials here or not. I want to see some type of recognition that in the event of that day occurring and we have intelligent beings coming here to this planet, then there are certain rights, certain civil liberty rights, recognized under law.

So no government, no military entity, for selfish motivation, can go ahead and treat them like test animals. And to be sure, lab animals have more rights than our visitors and are protected much more than our visitors.

Because as long as you go ahead and say they do not exist, no laws are going to be enacted.

So I'm not asking people to believe that they're here right now. I know they're here right now, but I'm asking to consider that eventually it's going to happen. But when it does, we need to have those laws in place.

And on a closing point, I'd like to add is that we have nothing to fear. We only have fear itself to fear.

If we open our minds and hearts, we have everything to gain. We have much to learn and it will be a brighter future if we can learn, as our visitors have learned, to coexist peaceably.

And also, have our visitors here, as one person put it, we should be willing to learn if they are willing to teach us. We should be willing to teach if there are things that they would like to learn from us.

So it's a trade-off, but the whole situation is we have much, much to gain just by keeping an open mind and seeking understanding and seeking out the truth.

Founders of Solar Warden Season 6, Episode 8

Cosmic Disclosure; Founders of Solar Warden with William Tompkins Season 6, Episode 8

25 Oct 2016

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode.

And in this episode, we have deeper insights into the Secret Space Program, with the astonishing disclosures of William Tompkins, our 94-year-old aerospace engineer who is clearly one of the founding fathers of the very Solar Warden program which he named – that same code name – that Corey later worked in.

In this first interview that we're going to show you, Tompkins gets into detail about one of the craft designs that he was working on for the Navy. Let's take a look.
* * * * * *

NAVAL GALACTIC BATTLE GROUP

William Tompkins: So we talked before about the different types. And this is a two-kilometer long spacecraft carrier, and it's streamlined to a degree.

And so in one of the big design review meetings, one of the managers said, “Wait a minute, Bill, it's a vacuum out there. You don't have to make it pointed. You don't have to have atmosphere to go working through.”

And so I said, “Well, that's true, but the electromagnetic protection system, which we still are not sure how we're going to word, may or may not be capable of handling all of the different types of vehicles or weapons that could be . . . being used on us. And also, under certain conditions, we actually can get into the planet's atmosphere and operate. So anyway, we got around that one.

Now, if you can picture here this area down in here [Bill points to the bottom, center of the craft] . . . I'm going to switch these, and you're going to see the lower part of the hull.

And what you see there is the different classes of attack and fighter aircraft returning to the mothership, or the spacecraft carrier, and with a vacuum-controlled entry sections . . . Actually, they would design to fold down so that you're already in support of making inside landing.

Nobody actually flies in these squadrons controlling any of the vehicles. It's all automatic, so you're not going to be hitting the walls or any of this kind of thing.

But very quickly, you can open these hatches on the side. The hatch then becomes sort of a platform to possibly land on if you're too low. And this answers the question of how do we handle the large spaces aboard the ships that are going to be operating on the missions.

So what we had done then was, using the same type of design concepts, we looked at the Marines' missions. We looked at the communication missions. We actually came up with virtually hundreds, then, of missions and sub-missions that we then in the tank [think tank] made recommendations back to the Navy themselves.

And one admiral, when he saw that first illustration, he made the statement that just the shape of that's going to scare them away. They'll turn around and go back, because it is a pretty hot configuration.

Some of the others are not as good and actually some of them are rectangular, depending on what the mission is required to accomplish.
* * * * * *
David: So that's a pretty technically detailed diagram. And it's just one of a variety of things that come from this guy who has no financial interest in this. His book didn't sell very much. He's just living on a fixed income. And yet, that degree of precision in the art doesn't seem like it would be coming from somebody who's trying to make something up.

So I'm curious about how similar that looks to anything that you saw?
Corey Goode: That was most likely one of the concept designs that probably got fine-tuned. But there could be a craft that looks like that out there that I hadn't seen. I didn't see all of our vessels out there.

Now, that looked very similar to longer, wedge-shaped vessels that I saw that had areas coming up off the top almost like you see on a Navy vessel on the ocean.

And also, it had stealth edges. The corners were very much like the stealth ships that you see – how they curve.
David: Well, and something kind of caught my eye, which is that in his discussions with his superiors on the design, they said, “Oh, you don't need to worry about aerodynamics. It's not going through an atmosphere.”

But what I'm thinking of is, “Wait a minute. There's all this charge that you've got to

move through even in space. There's inertia and there's electromagnetic fields.

So do you think that part of the reason why everything has an aerodynamic shape is that the basic vacuum energy of space itself has some sort of resistance that you have to cut through when you go through it?
Corey: They don't all have the aerodynamic shape.
David: Oh, okay.

Corey: And as far as moving through charged particles and all this stuff in space, that's what the material on the outside of the craft and the electromagnetic shielding is for.
David: But in a case like this, for that particular mission, if it's also going to go through a planet's atmosphere, it would be good to have some aerodynamic qualities.
Corey: Right. The vessels that travel inside our atmosphere and out are usually going to be somewhat aerodynamic, even though with the propulsion systems they have they are not traveling through the atmosphere per se. They are in a bubble. And inside that bubble, the bubble is traveling.
David: Is there a reason for why stealth technology seems to involve these different flat panels that are kind of arranged at different angles? What's going on there?
Corey: It deflects radar, lidar, different waves, away from the receiver of the radar or lidar. So how it works is if you send it out and it hits a flat surface that is angled right, it's going to come back and you're going to get a report from that wave bouncing back.

If you have sharp angles, then very little of that wave is going to bounce back. The rest of it's going to be dispersed, and the waves will bounce off, but they're not going to hit the detector.
David: Well, I know that my insider Pete Peterson described that when the stealth was rolled out for Gulf War I, that it had in fact been mothballed for 20 years and was a very archaic and almost useless piece of technology by that time. Here he's [Tompkins] doing something in the 1950s that looks like stealth.
Corey: Yeah.
David: So that's pretty darn interesting.
Corey: Stealth goes way back.
David: Really?
Corey: Right. Stealth was being developed soon after the discovery and invention of the radar.
David: Wow! So I noticed in the second image that he showed that you have these very, very large doors, or hatches, as he was calling them, that open up on the side of the craft, and then a lot of little triangular wedges going in.

So what was your feeling when you saw that part of the illustration?

Corey: Well, as far as the doors opening, I had seen elevators that lift aircraft, move aircraft around. But if you have a door opening out, that can cause a lot of logistical problems if you're in battle or if you are traveling at a high rate of speed.

So usually, they have the doors open like this [side to side], up and down, and not protrude out.
David: Right.
Corey: But if there was another purpose and a need for it, I could see why they would develop it.
David: What about the actual shape of all those craft that were going into the larger craft?
Corey: Yes, that was very familiar. And the fact that he mentioned in these newer vessels or carriers, they do fly drones. They have people all inside [buildings or large craft] sitting in long rows flying drones, and they control a number of drones apiece.
David: Really.
Corey: Yeah. Little constellations of drones.
David: So what would this type of craft that he was designing be used for? Is it an attack craft? Is this a support craft?
Corey: It can be offensive and defensive, but usually these craft are designed to be offensive for attacking an enemy.
David: Does the Space Program have any proclivity towards doing an offensive attack on a civilization that they think they could conquer and overwhelm? Or is there also . . . is it mostly going to be defensive when they're out there trying to see what's around and getting attacked?
Corey: Well, it depends on who is in charge of, I guess, the Navy assets at the time. These people follow orders. So if they have a problem with attacking another species, they have to follow orders.
David: Well, in the case of a movie like “Avatar”, we have a clear example of our own government/military-industrial complex, in what would appear to be the future, having developed a space program, going to another planet with people who are tall and have blue skin, but there was something there that they really wanted, which was this unobtainium.

Do you think “Avatar” is describing something that is actually happening? Are there certain cases where planets are invaded for their materials?
Corey: Well, I do know that certain aspects of the ICC, but especially Dark Fleet, are going out on offensive conquering missions. And they're doing this alongside the Reptilians.
David: Well, and I do also remember Pete Peterson telling me that many of the craft that you see in “Avatar” are exactly identical to stuff that he had actually seen or worked on. I'm wondering if any of them look familiar to you when you saw the movie?
Corey: I didn't witness a whole lot of craft that flew inside of an atmosphere.

David: Ah.
Corey: So all of those craft were clearly designed to fly inside of some sort of a dense atmosphere. The craft that I saw were not built to operate in atmosphere.
David: All right. Well, speaking of James Cameron, not only do we have “Avatar”, he also had that movie “The Abyss”, where he describes extraterrestrials underneath the surface of the ocean.

And here we have William Tompkins in a very interesting discussion about undersea bases. Let's take a look.
* * * * * *

UNDER SEA BASES

Tompkins: I did get hired by General Dynamics for a Navy program. And this program was to locate German submarines – anti-submarine warfare program.

And what's interesting about this is that the Navy selected the Lockheed P-3 patrol bombers to be the air vehicles to locate German ships and submarines.

Lockheed P-3 patrol bomber

German submarine

This is the Cold War now, and so there was roughly 15 other NATO countries who were using the same aircraft, the same electronics, the same sensing systems and the communication system – all of it engineered and designed in US.

And so the United States had 120 of these, and the NATO countries had like another 60 of them, all out looking for German [and/or Russian] submarines.

But that's not quite the numbers. It's more like we had 2,000 of these and NATO had another 1,000 of these – not quite that high. And remember, there were only 11 Soviet submarines operating at that time. There were many of them that were in training operations, but they weren't tactical.

And so here we've got 2,800 P-3 aircraft flying all around the planet 24 hours a day looking for submarines.

Well, gee whiz, that's not exactly what we were doing either. And there's a title to the program, which is the mission ASW – anti-submarine warfare. But there's also one which is ASUW. And so the “U” is for 'unidentified extraterrestrials'.

And so this was the second-largest amount of military money allocated for a program on the planet. It's peacetime, but it's sort of a war condition. And we have all of these

airplanes out, and it became necessary for a group, which I then was manager of, working for Data Graphics, which is a subsidiary of General Dynamics. And later on, I worked for the corporate office on the red team at the corporate level.

And when we look at the size of this program, the number of personnel that have to be trained to fly these aircraft, the upgrading continually of the sensing systems, the underwater systems of the satellite system programs that were required to be on board these aircraft, it's absolutely unreal.

What we were really doing was looking for extraterrestrial vehicles in the ocean and in the large lakes and their bases on the bottom of the ocean.

People don't realize how much money, how much time, and how many people have to be involved in these programs.

And what are you doing? You're looking for extraterrestrials. Do you realize what we're saying? I mean, you're looking for extraterrestrial vehicles and bases. Your Navy is.

* * * * *

David: Well, the first thing that strikes me about the interview footage that we just saw here is the scope of this classified military operation to try to actually identify who is on our planet, where are they, what is their infrastructure, what is their agenda?

It would have to involve a massive amount of effort. So what were your thoughts on that?

Corey: I have heard of operations similar to what he was talking about, of fleets that were combing the ocean looking for submerged bases, and also USOs – unidentified submersible objects, I believe.

Now, from what I understood, very few people in that fleet would know what they were actually looking for. Everyone would go about doing their normal jobs. It'd just be a normal mission or a training mission, they'd be told. But very few intelligence people in that fleet would know exactly what was going on.

David: Well, to have 2,800 P-3 aircraft airborne at all times – this is obviously before the era of accurate geostationary satellites.

Corey: Right.

David: We're talking about a massive, massive operation here. How long do you think this had to have been done for?

Corey: Until they had strong enough sonar that would penetrate to the deepest parts of the ocean, and until we had the satellite coverage we needed. They had some sort of groups of aircraft or Navy vessels that were combing the ocean looking for non-terrestrials.

David: Do you think that there might have been a temptation at some point to tell the

public, “Hey, we're aware of this extraterrestrial presence. We're doing the best we can. We're cataloging it now.”

Or was it just really important the whole thing be secret to avoid a panic of some kind?
Corey: Well, just in general, the Navy . . . I mean, you hear “loose lips sink ships”. Information is very compartmentalized to begin with, but this is not long after World War II, so everybody still had a different mindset than we do today.

If the government told you to stick a lit cigar in your ear, you'd say, “Yes, sir. Give me another.” That's just the way people were programmed.
David: So Tompkins is also discussing another point of corroboration with some things that you've said, which is that there were, in fact, underwater bases to be seen.

So could you review for us what your knowledge is about the existence of these bases, and where are they, what do they look like, who's in them, etc., etc.? Are there different types . . .
Corey: Yeah.
David: . . . that would be underground or underwater?
Corey: And there's a number of different types that are underwater. I even read about large underwater bases that were mobile, that moved along the bottom of the ocean and was doing some sort of core sampling or testing of the material that it was passing over.

And if you located where one of these were, you would then have to track it since they now were moving. So they would have ships that would just track a mobile underwater base.
David: Well, before we taped this segment, we were looking at just something like that on the Internet. Let's take a look right now at that little . . . This is an excerpt from a video describing something very similar to what Corey just described – two-and-a-half-mile wide, round object that seems to be tracing patterns on the sea floor.

Images from video on possible undersea ET exploration craft
So do you think that that is an example of one of these craft?
Corey: That very well could be. I mean, a two-mile-wide object is not going to be pushed in that unusual way under the ocean by a current.
David: So what would they be doing in a case like that? What's the objective?
Corey: From what I was told, these were like bases, but also laboratories. They were going around doing core samples, finding out what was at different depths below the surface, below the floor of the ocean.
David: Why would somebody want to have an undersea base if there's a honeycomb

Earth and they could just pop into one of those combs underground?
Corey: There's a lot of different regions inside the honeycomb Earth that belong to different groups that they claim as their territory.

Also, under the ocean . . . There are a lot of different beings coming here that could care less about us, could care less about any animals flying in the sky or running around. All they care about is the life forms in the ocean and the ocean itself. They see the ocean as a life form. And a lot of these are aquatic species.
David: So what do you think was going on when James Cameron made "The Abyss"? It seems a very specific idea was being conveyed. We also have reason to believe that some of his other movies had disclosure in them as well, like "Avatar". What do you think "The Abyss" was intended to get people ready for?
Corey: It was most likely groups within the military-industrial complex starting to seed our consciousness, which is what they've been doing through movies and television shows for a long time.
David: Yeah. That definitely makes sense, because this is an ongoing effort of four generations now of disclosure to get us ready for the truth.
Corey: Right. And as you've already reported, when Sony got hacked, it was proven that DARPA and these other groups were passing on ideas for movies and television shows.
David: Exactly. All right. Well, we have one more really exciting piece of footage for you to see here with our interview with Tompkins. And this time, he is describing his personal experience with one of the most infamous and legendary events in UFO lore – less known up until recently, a lot less known than Roswell, but several years before Roswell.

We're talking about the Battle of Los Angeles. Let's take a look now.
* * * * * *

BATTLE OF LOS ANGELES

Tompkins: February 1942, we were living in a very large home which had been converted to four apartments – two upstairs, two down.

We had a great big enormous deck that ran all the way across this real high-celinged building. So we were four blocks from the ocean, okay? We can't see the ocean, because it's down low and trees are in the way.

So my brother and I are laying on our floor listening to the radio and looking at some papers, and my dad says, "Get out here – out on the deck. Get out here NOW!" And we got up, and we went out to the back deck.

So right above the horizon of all the trees and stuff and buildings is this dot – a white dot. It's just there. And it's got to be some aircraft flying in to come over and land at

the airbase, but it's not moving. It's just a bright dot.

And off of this dot, to the left, is a little beam. It's like a pencil beam, but you can see it.

This is out over the ocean, like maybe inside the breakwater, because we couldn't see the ocean, and we don't know how far out it is. It could have been 10 miles out. What in the world was that?

So we're watching it for about five minutes, and then there was a flash – a brilliant flash into our eyes.

It lit up the trees, the back, the side of – everything got lit up.

And it went out.

And we looked and looked and looked, and everything was gone – nothing else. So we went to bed.

12:30 at night, the anti-aircraft guns started firing. What we're talking about is this fantastic situation, the Los Angeles event – the Battle of Los Angeles, okay?

The anti-aircraft guns all started firing.

We go outside. Here's this massive thing right above us this big [Bill holds his hands about 3-ft. apart] – right above us, maybe 7,000 feet.

The anti-aircraft shells are blowing up on the bottom of it all around it. There's eight searchlights all focused on this as they're shooting at it.

And, of course, nothing is happening. And it parks there for an hour and a half. While it's parked, hundreds of different types of vehicles – most of them circular, but some cigar-shaped, large ones – came in underneath, being fired on where they're still trying to shoot this thing down.

They came around him. They came over him – all night long.

Now, it got boring after awhile, so we went to bed at 3:00 a.m. I don't know how it

gets boring, okay? We went to bed at 3:00 a.m.

Now, when it started, everybody came outside. All of us are standing there watching this event.

Now, what was not published was that the breakwater is full of Navy ships who used up all of their ammunition that five-hour period – not just the coastal artillery who used up all of their ammunition, okay?

Your whole two Pacific navies, the Eastern Navy and the Western Navy, used up all their ammunition.

They finally quit, of course, just before daylight, and everybody went back inside.

But from the standpoint of all of us out there watching this, nobody got a heart attack. Nobody got sick. Nobody got scared. Nobody got frightened.

On the other side of the planet, London, was being bombed by the Germans. And they're trying to get into shelters.

We had a five-hour war, except they didn't shoot at us. But nobody got sick. The only persons who were actually wounded was from shrapnel. A couple of guys actually were killed.

Almost a million people in California watched an event for five hours of a massive extraterrestrial battle group that came over California with a mission.

* * * * *

David: Well, this is obviously one of the great classic events in UFO lore, something that just can't be covered up. Did you ever hear about or read about this battle on the smart-glass pads or in any of the briefings that you had on the inside?

Corey: I read that it had occurred. The only thing that I saw that wasn't reported here is that during the same time period, we did recover a non-terrestrial craft from the ocean in that general vicinity.

David: Really?

Corey: Yeah. I don't know if that would have been one of these smaller craft that he saw or the large one. To me, it seemed as though they were unaffected by the anti-aircraft.

David: But it is possible that one of them took a stray hit or something and landed in the ocean.

Corey: It could be. Or the Battle of LA craft and these other craft that sound like came out of it could very well have been searching for . . . It might have been a rescue operation.

You know, there's a number of things it could have been. They could have been probing our defenses, or maybe making a point to some of our leaders after a recent meeting.
David: Well, let me run this idea by you. This is something I discussed on "Wisdom Teachings". It's worth repeating and getting your thoughts.

If you go back to Fatima, Portugal, right after Portugal enters into World War I, which is this horrible, devastating thing where tens of millions of people are dying, ultimately, you have these kids who start to be in contact with what appear to be spiritual beings that ultimately leads to a mass sighting of a silvery disk in which 90,000 people witnessed this thing.

And then they're soaked in rain, but when the whole thing's over they were miraculously dry. The craft appears to shoot rainbow colors all over the sky. 90,000 witnesses . . . That would have been the end of the cover-up if it had happened in our times.
Corey: Right. And a million people seeing this in Los Angeles, and sounds like Long Beach and other areas – today, with everyone having an iPhone, it would – yeah, it would be over.
David: So do you think it's possible that both the Fatima sightings and the Battle of LA could be benevolent groups that are showing us these things as we enter into war, to try to steer us away from warfare perhaps?
Corey: It very well could be, because with their technology, they could have flattened the whole city with very little effort.

So they were obviously not there for some sort of offensive operation – maybe an intelligence operation, rescue recovery operation, or there to make a point. But I really don't know exactly why this incident occurred.

According to what I've heard, there was some treaty signed that this type of open sighting, open mass sighting, is against a treaty.
David: Right.
Corey: So there had to have been a good reason why it happened.
David: Now, we've heard from guys like Benjamin Fulford in some of his disclosures that he was told by Pentagon insiders that 75% of all production money for Hollywood films is coming from the Pentagon through various backdoor firms.

So let me just ask you first if you have ever heard anything like that?
Corey: Oh, yeah. Yeah. A lot of money from the DoD (Department of Defense) and Pentagon is going in for propaganda.
David: So why do you think the Battle of Los Angeles movie would be made? Do you think maybe they're confusing people's Google search so that they're going to find this

movie instead of any real information?
Corey: Well, they know that that was a very significant occurrence UFO-wise in American history. Nearly a million people saw it.
David: Right.
Corey: So it was already in our consciousness. So that's a tool for them. And they – they being different military intelligence groups – are trying to spin the narrative that all of these beings coming in are negative, and that they are here to invade. And this one obviously wasn't, because it didn't attack.
David: Do you think maybe creating a movie with the same title blocks people from finding the original incident at all?
Corey: It could do that, or it could just put the whole sci-fi spin on it to where . . . You know, we're already programmed to roll our eyes any time we hear anything alien or UFO. That's probably part of the effort.
David: I was fortunate enough at one of my conferences to have a woman stand up who was a little girl during the time that this happened and witnessed the entire thing. And it was quite fascinating.

We let her speak for some time to the audience. It was quite spontaneous.

The point is, a million people is a lot of witnesses. It's kind of amazing that we still have a UFO cover-up after something like that.
Corey: Yes, but the propaganda and the programming that has come from these intelligence groups has been very effective. So there's a good chance that if something like that happened today and we didn't get photos, a lot the people that witnessed it themselves would, after a few days, be like, “Oh, that didn't happen.” Or just forget about it and move on.
David: Well, another interesting thing regarding the Battle of Los Angeles is the “War of the Worlds” broadcast. The original broadcast with Orson Welles was in 1939. But then when the movie came out, it was after this had happened. And we have multiple eyewitnesses saying that the craft that you see in the “War of the Worlds” movie is very similar to the one in the Battle of Los Angeles, except that it has a little periscope on the top.

So why do you think they would actually put the real craft into the movie?
Corey: Well, they're always hiding things in plain sight. So if you were to see something similar to “War of the Worlds”, on some level you might be willing to discount it, thinking, “Oh, that's military, or that's some concept that's being used for a movie”.

You're going to jump to that instead of aliens automatically. That's possible.
David: Well, do you think also that putting those exact same craft into “War of the Worlds” where they become hostile attackers . . .

Corey: Oh, yeah.
David: . . . instead of peaceful demonstrators, could be like a form of mass mind control?
Corey: Well, sure. If you see a certain craft design and see it destroying cities in a movie, well, if you see it in real life, what are you programmed to think?

They could be coming down to say, “Hello”, and maybe give you a ride and show you around the solar system, but you've been programmed to run and hide because you think that it's an invasion.
David: Exactly. Do you think it's possible that we could have another mass demonstration like that at some point that there could be another event like that if, for example, this Mohammad Treaty gets overturned?
Corey: Absolutely. If the treaty that's supposed to prevent that is overturned, there are a lot of non-terrestrials that want to be up in the sky and over populated areas to let us know that they're here.
David: Now, you also mentioned in some of your recent briefings that both the SSP Alliance and the Cabal are concerned about the possibility of wreckage crashing into a major American city.

So just real briefly, since we're talking about these battles in the air, what are they thinking would happen, and how would that play out on the world stage?
Corey: Well, they're afraid that some of their weapons platforms that have been up in orbit, and advanced craft, could possibly fall into a populated urban area with all of the activity that's going on up there. There are shootdowns happening.

So they are ready to pounce on any crash. They have cover stories in place saying, “This was a nuclear-powered satellite that crashed. It's contaminated a large area. So stay in your homes or leave the city.”

And then they will focus on cleaning up the debris.
David: So this is something that they're actually very concerned about.
Corey: Absolutely. That is . . . I've heard a number of times that they're worried.
David: Are there more battles happening in our atmosphere now than there were before between these cloaked craft?
Corey: Yes. It's kind of reached a crescendo in recent times. There are human-piloted craft fighting each other, human-piloted craft fighting non-terrestrials and different non-terrestrial groups that are having skirmishes.
David: So what would we expect if they tried to cover this up? What would be the kind of headlines we'd see or the stories we'd hear?
Corey: Just like the example I just gave, that some sort of secret satellite had crashed or something like that. They're not going to say a UFO crashed.
David: Or a nuclear event . . .
Corey: Right.

David: . . . maybe a nuclear waste dump or spill
Corey: Test craft.
David: . . . chemical emission. Something like that.
Corey: Right. Something that's going to scare people.
David: Right.
Corey: Like some sort of disease or any number of things.
David: All right. Well, you saw it here first. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with Corey Goode. And we're reviewing footage from William Tompkins – absolutely mind-blowing stuff.

Thank you for watching, and we will see you next time.

The Law of One and The Secret Space Program Season 6 Episode 9

Cosmic Disclosure; The Law of One and The Secret Space Program Season 6, Episode 9

03 Nov 2016

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and in this episode we're going to start verifying some of the things that Corey has been telling us with empirical data. And there are various ways this has been coming in.

We did some episodes of William Henry talking about ancient art work and how it shows Blue Spheres, it shows Blue Avians.

We've got a new whistleblower, William Tompkins, who's come forward and validates many of the things Corey's saying. And now, also, we have The Law of One material, which has some unbelievable pay-offs of everything you've been hearing in this show.

So, Corey, welcome back.

Corey Goode: Thank you.

David: Since what we're about to discuss is going to be really mind-blowing for most people, the amount of correlation that's in The Law of One to what you personally encountered in your job, let's just talk about did they know about The Law of One in the Space Program, and if so, what was their opinion about it?

Corey: Yes, The Law of One was definitely known about. And certain individuals were required to read it. I was told that it was negative material and stay away from it. Stay away for it.

David: Ha, ha, ha.

Corey: And I did. I stayed away from it. I think in the early 2000s it was online, and I scrolled through and looked at a little bit of it, and that was the extent of it. But I never dug in and read it because I was somewhat programmed that it was, you know, something to stay away from.

David: Now, there were other people who we spoke to as whistleblowers who independently verified that as well, that they knew about The Law of One and the Secret Space Program. It's a common factor.

Corey: And if you recall that was one of the questions that one of the SSP Alliance asked Raw Tear Eir is, “Are you the . . .

David: “Are you the Ra from The Law of One?”

Corey: Right.

David: And then he just answered, “I am Ra.”

Corey: “I am Raw Tear Eir.” That is just all he said back.

David: And in every question that they answer in The Law of One, they always start . . . The first statement they make is, “I am Ra.”

Corey: Right. And all it did was confuse the audience, because they didn't . . . They were like, “Okay, he doesn't want to answer the question.”

David: So, in this episode, we're going to be getting into a deleted piece of material – there was an entire session, Session 8, that came through on January 26, 1981. That whole session was deleted from The Law of One because Dr. Don Elkins, the guy asking the questions, didn't know that this was possible.

It was so far out . . . What The Law of One told him about our government and the technology they have and the extent of it totally blew his mind. He couldn't tolerate that this was real and they said, “This is . . . We're going to have to ask a lot of

questions about this if it's true. So we better just remove it from the books."

So the people in the Space Program haven't seen this either. This only came out on the website a few years ago. It was actually in Book Five. I correct myself. It was in Book Five as of 1998. That's the first time anybody ever saw it. Now you can read it online.

Okay, so check this out. Let's read some things here.

LAW OF ONE ON SSP

8.2 Questioner: [Yesterday you said] "There is a certain amount of landing taking place.

"Some of these landings are of your peoples; some are of the entities known to you as the group of Orion." [Now, that's the Draco.]

My first question is what did you mean by the landings are of your peoples?

And when they're talking about "landings" here, they're talking about UFOs. So check out what happens here:

Ra:... Your peoples have, at this time/space present, the technological achievement, if you would call it that, of being able to create and fly the shape and type of craft known to you as unidentified flying objects.

Now, this ends up totally hitting Don by surprise. He did not expect this.

Unfortunately for the social memory complex vibratory rate of your peoples, these devices are not intended for the service of mankind, but for potential destructive use.

This further muddles the vibratory nexus of your social memory complex.

[This causes] a situation whereby neither those oriented towards serving others nor those oriented towards serving self can gain the energy/ power which opens the gates to intelligent infinity for the social memory complex.

So what they're really saying here is the Ascension is confused by the Space Program. It's not like they're doing . . . They're not doing themselves a favor. They're not doing us a favor, because they're not sharing the technology.

Corey: Right. The technology that could help us progress.

David: But you say now this Alliance does want the technology to come forward.

Corey: Absolutely. Their goal is to bring the technology to all of humanity no matter their race or creed or religion at the same time.

David: And you can see, Corey, from this that they're saying if that technology was released, it would have a very positive effect on the Ascension process.

Corey: It would be a different world.

David: Yeah, absolutely.

This in turn causes the harvest to be small.

So that's pretty shocking right there. It's just saying we've been so compromised, the number of people who have become loving enough to graduate is not that big.

Okay, now we going to really get into the details of this, and it's quite stunning how much this validates everything that you've said.

8.3 Questioner: Are these craft that are of our peoples from what we call planes that are not incarnate at this time?

He can't grasp what's really happening here.

Where are they based?

Ra: . . . These of which we spoke are of third density and are part of the so-called military complex of various of your peoples' societal divisions or structures.

They don't use the word 'industrial'.

Corey: Right.

David: Isn't that amazing though? The wording that they use: military complex. So they are saying this is physical people building unidentified flying objects. And remember mainstream UFO study back in 1981 when this was done, nobody was on to this yet.

What was the state of the Space Program in 1981?

Corey: In 1981, that was the beginning of Solar Warden. Solar Warden was just beginning to really get started. But there were other programs that had already started before World War II that were well, well-developed.

David: But there were plenty of unidentified flying objects by 1981 . . .

Corey: Oh, yeah.

David: . . . in the military complex.

Corey: Right.

David: All right. Let's go on.

The bases are varied.

They talk about bases. Listen to this.

There are bases, as you would call them, undersea in your southern waters near the Bahamas as well as in your Pacific seas in various places close to your Chilean borders on the water.

Corey: Ha, ha.

David: Now, you laughed when we said “Bahamas”. So how does this line up with anything you've heard?

Corey: I saw maps of underwater naval bases in the Bahamas.

David: Okay. In the Bahamas. And what about off the border of Chile, which is down closer to the bottom of South America?

Corey: I know that there are bases down there that are military, but I don't know whose they are. They may be more of the German breakaway faction.

David: Yeah. I would think so too, because they went to South America. So undersea bases, and then look at this. I mean unbelievable in 1981, January.

There are bases upon your moon, as you call this satellite, which are at this time being reworked [January 1981].

Corey: Bases that are being reworked?

David: On the Moon . . . by the military complex.

Corey: “Bases that are being reworked.” Does that indicate that they occupied a base that wasn't theirs and are retooling it?

David: Well, they don't explain that, but I think what they're saying here is there's a massive industrial expansion.

Corey: Hmm.

David: Now, think about . . .

Corey: ICC.

David: Think about what you said about the Lunar Operation Command.

Corey: Right.

David: Right. Does your knowledge verify that there was some sort of major upgrade to the LOC . . .

Corey: Yes.

David: . . . starting with the Reagan administration?

Corey: Yes. And also the building of the Dark Fleet base.

David: Right.

Corey: And there are several other smaller outposts that they don't really call bases.

David: But that's just way beyond, you know, anything that people thought they knew at the time.

There are bases which move about your lands.

Now that probably means some kind of mobile vehicle thing like a drivable base. Would you say that there are things like that – bases that can be driven around like people working inside a truck or something like that?

Corey: I know of mobile command centers.

David: Okay. That's probably what they're talking about.

There are bases, if you would call them that, in your skies.

Corey: That's probably the same thing.

David: Orbital platforms?

Corey: Orbital platforms or command stations that are craft that will fly over certain areas, cloak and stay in position to monitor and relay telemetry.

These are the bases of your peoples.

[They are] very numerous and, as we have said, potentially destructive.

David: So there again, they're talking about bases on the Moon. They're talking about orbital platforms, and they're saying these bases are very numerous. This is unbelievable.

And as you see here in a second, the questioner totally balks on this. He can't handle it.

8.4 Questioner: Where do the people who operate these craft come from? Are they affiliated with any nation on Earth? What is the source?

This gets interesting too.

Ra: These people come from the same place as you or I. They come from the Creator.

Now, that's Ra being blustery.

Corey: Yeah. We're all One.

David: Yeah. They don't want you asking these kinds of questions, but now 30 years later, 35 years later, it becomes very important.

As you intend the question, in its shallower aspect, these people are those in your and other-selves' governments responsible for what you would term national security.

So once again, Don just couldn't believe that the Space Program existed as you now have told us it was there at the time, because there was no information in ufology about this.

Corey: I don't think any information about the Secret Space Program really came out until, what was it, the '90s?

David: Yeah, at least. Now, notice that it says “other governments”. So what do we know about the Global Galactic League of Nations? Do we know when that got started? Because they're already saying here that there were other governments involved in national security stuff in space as well.

Corey: Well, they could be referring to that and that occurred in the '80s as well.

David: Oh.

Corey: But they may be referring also to the ICC, Interplanetary Corporate

Conglomerate. They're made up of corporations based in many nations.

David: Right. So now check out . . . He's really having trouble with this, especially the undersea bases.

8.5 Questioner: Am I to understand then that the United States has these craft in undersea bases?

Ra:...You are correct.

8.6 Questioner: How did the United States learn of the technology to build these land [and sea bases and craft]?

Ra:... There was a mind/body/spirit complex known to your people by the vibratory sound complex, Nikola.

Of course, they're talking about Tesla.

This entity departed the illusion and the papers containing the necessary understandings were taken by mind/body/spirit complexes [that means 'people'] serving your security of national divisional complex.

So they are basically saying here that there was some kind of Tesla connection. Does that verify anything that you've heard on the inside?

Corey: Well, yeah, Telsa in his electrical and electromagnetic research was way ahead of his time, and when he passed away, all of his information – it was documented – all of his information was taken away, made classified and put into the programs.

But I had not heard that all of the technology was based on his research. I'd presumed that it would have been reversed alien technology or gifted alien technology.

David: Hmm. But we certainly can see that if Tesla . . . If the eyewitness accounts of him having a flying disk are correct, that he would have had the capability . . .

Corey: Yeah.

David: . . . his papers would have had the capability to build the Solar Warden-type craft in the aftermath.

Corey: Sure.

David: Yeah.

Corey: They had enough scientists.

David: All right. Well, let's go on here.

Thus, your people became privy to the basic technology.

In the case of those mind/body/spirit complexes which you call Russians, the technology was given from one of the Confederation [that's the positive folks] in an attempt, approximately twenty-seven of your years ago, to share information and bring about peace among your peoples. [1953-54]

So that gives us a window. 27 years is like 1953 or 1954, and what they're saying here is a benevolent extraterrestrial group contacted the Russians.

Corey: That's right during the time frame also when a benevolent group came and contacted the United States military complex and warned them of the path they were taking and tried to give them assistance to deviate from it.

David: And they talk about that in The Law of One. They talk about meeting with Eisenhower, offering him a peaceful plan and that he rejected the plan.

So it's clear that they don't want to play favorites here. They gave it to both sides at once.

Corey: Was this information out in . . .

David: No. There was nothing in the public about Russians getting UFO technology in 1953.

Corey: There was no Internet or way to disseminate it.

David: I've never been able to find any research that validates this, but, again, the Russians are competing with the U.S., so they're not going to share that this happened.

Corey: No.

David: But as we go on, we see that it did not work out well with the Russians either.

The entities giving this information were in error, but we did many things at the end of this cycle in attempts to aid your harvest [ie Ascension] from which we learned the folly of certain types of aid.

So, again, the Russians got the technology. They're not using it for peaceful purposes. They're creating weapons of war.

Now, are you aware of the Russians having their own craft as well going far back in time like to the 1950s?

Corey: Yes.

David: Could you tell us a little more about that?

Corey: They were developing their own programs based on information that they had gotten from [Project] Paperclip people. They were developing technology from all different sources.

David: Including the Germans, as you said.

Corey: Including the Germans. And they had developed several different type of spherical craft and a few others that they were already flying in the skies before the Americans really . . . They were ahead of us.

David: Hmm.

Corey: And it was very concerning to the military factions of the early Secret Space Program. There was a lot of weird incidents that were making us have setbacks in our program that didn't make sense. We couldn't figure it out.

We were having some problems like there was something going on that was

preventing us from getting started as early as we could have.

David: Well, it's interesting here that the Confederation gave them a boost in the hopes of creating a peaceful outcome.

Corey: Yeah, it's . . .

David: They must have seen that the Russians were a counter-measure against the Cabal potentially.

Corey: Is this a group associated with Ra or whatever?

David: Yeah. The Confederation is their positive association of civilizations that are trying to promote Ascension and a benevolent outcome.

Corey: That's definitely direct intervention.

David: Yeah. And they screwed up, because the Russians took it the wrong way.

That [these errors] is a contributing factor to our more cautious approach at this date, even as the need is power upon power greater, and your people's call is greater and greater.

So this is why, also, they stopped landing and bringing people on board in person, like the benevolent ET stuff that happened in the 1950s with the positive contacts. They explain in here that they don't bring people up any more.

But we do know the abductions stuff was happening and they definitely get into that.

Okay, so he's still really having trouble with this. Check this out.

8.7 Questioner: I'm puzzled by these craft that we have undersea bases for . . .

Is this technology sufficient to overshadow all other armaments [on Earth]?

Do we have just the ability to fly in these craft or are there any weapons like there are . . .

Were they given to us [inaudible] or are they just craft for transport?

What is the basic mechanism of their [inaudible]?

So he's really trying to find out now, is this a superior military force to anything on Earth. Now before we get the answer, what would you say?

Corey: They are a breakaway technology. They're definitely weaponized craft.

David: Right. And you've never seen this before, right?

Corey: No.

David: So you don't know what they're going to say, but it's the same thing.

** It's really hard to believe is what I'm saying.*

He's having a lot of trouble with this.

Corey: This person asking the questions, is he a UFO skeptic?

David: It's Dr. Don Elkins who is a very well-read ufologist and a PhD physics professor who's been studying this stuff since the early 1950s and it's now in the 1980s.

Corey: Okay.

David: So he's been doing 30 years of research. So then they say:

Ra:... The craft are perhaps misnamed in some instances.

It would be more appropriate to consider them as weaponry.

So let's just stop right there for a second.

Would you say that this is accurate in terms of all the craft that our military-industrial complex was building had weapons systems on them in varying degrees?

Corey: Not all, but most of them are what . . . are referred to as weapons systems.

David: Really?.

Corey: Right.

David: There you go. It's amazing.

The energy used is that of the field of electromagnetic energy which polarizes the Earth sphere.

So they're talking about electro-gravitics, I think.

Corey: Exactly.

David: Particle beams.

The weaponry is of two basic kinds: that which is called by your peoples psychotronic and that which is called by your peoples particle beam.

Corey: Psychotronic?

David: Yes! And do you know what that is?

Corey: I'm wondering if it has to do with what we've just discussed before the technologically-aided remote viewing and influencing used as a weapon?

David: Exactly.

Corey: Is that what it is?

David: “Psychotronic” means electronics that interface with the mind.

Corey: Whew! And many of the craft are bio-neural interfaced - the weapons systems.

David: There you go. So what they're really saying here is 'psychotronics' mean technology that can control how people's minds work. Technology that can make people upset, that can make people anxious, create mass hysteria, that kind of stuff.

Here it is in 1981. It's unbelievable. And particle beam technology.

The amount of destruction which is contained in this technology is considerable.

The weapons have been used in many cases to alter weather patterns and to enhance the vibratory change which engulfs your planet at this time.

Corey: I was just about to ask if HAARP had anything to do with this.

David: Now, you've got to understand . . . What does “vibratory change” really mean? They're talking about Earth changes.

As the planet's vibration changes, you get volcanoes and earthquakes. So they're totally, in 1981, describing HAARP, weather modification and then also microwaving the fault lines to get earthquakes.

Now, are you aware of their being HAARP-type technologies on these orbital platforms or spaceships? Could they do it from the spaceships?

Corey: Absolutely.

David: Okay. Now, I've never heard that before. That's why I want to do this live. Because I'm just throwing us in. I didn't know what you were going to say.

Corey: Yes. They can . . .

David: So they can?

Corey: Yeah.

David: It's not . . . Because most people think it's just satellite arrays on the surface of the Earth.

Corey: They can cause localized weather events and they can cause earthquakes. They can cause molecular changes in structures to cause them to fail – catastrophic failures.

David: Right.

Corey: There's a lot they can do from orbit.

David: And it is interesting, if you've ever seen that movie with Mel Gibson called "Conspiracy Theory". Right at the beginning of the movie they have this space shuttle in orbit beaming down stuff that changes the weather and controls people's minds at the beginning of the movie.

Corey: Seriously?

David: This is just mind-blowing. It's right there. All this stuff that we talk about now in 1981 – way before anybody was talking about this.

Now he's just still reeling from this.

8.8 Questioner: How have they been able to keep this a secret?

Why aren't these craft in use for transport?

Because he's a pilot, right? That was his money-making job was to be a pilot. Why aren't they using this?

Ra:... The governments of each of your societal division illusions desire to refrain from publicity so that the surprise may be retained in case of hostile action from what your peoples call enemies.

Now, notice, again, they're talking about multiple governments.

So do you understand that? You look a little puzzled.

Corey: I'm a little puzzled.

David: The verbiage gets dense sometimes.

Corey: Yeah.

David: What they're basically saying is that the governments of the world, including other governments, because remember, this is multiple governments, they're not going to tell us because they're worried about an alien invasion.

They want to preserve the element of surprise. They don't want rogue alien groups to know that they have this technology – these bases on the Moon, under sea, orbital platforms, weaponized craft, so they have the element of surprise if they get invaded.

Corey: But they already know.

David: But there could be groups that didn't know.

Corey: Right.

David: Yeah.

Corey: Yeah, the interlopers that come in.

David: There you go.

Corey: We have people come in that haven't fully reconned.

David: Right. I think that's what they're talking about here. It's really fascinating.

8.9 Questioner: How many of these craft does the United States have?

Now this is very important. He said “United States”.

Corey: Right. He didn't say “governments”.

David: He didn't say “military-industrial complex”, and we're already dealing, as you said, with a breakaway civilization – the ICC. How far along were they at this point, 1981?

Corey: They were pretty far along. They had developed a lot of the technologies and were figuring out how to disseminate it to some of these other fledgling programs.

David: Was the United States still in control of the ICC by 1981?

Corey: The U.S. is not in control of the ICC.

David: That's what I wanted to have you say.

Corey: Right. The ICC is some super board made up of retired members of all these different military complex companies . . .

David: Right.

Corey: . . . from different countries that are part of the board that make decisions that no one in the, or hardly anyone in the, American government will ever hear about.

David: So the point here is that if they ask . . . You've got to be really careful how you ask the question. The United States by 1981 . . . Would you say that the only thing that the United States is actually controlling might be like the lower-level military space program?

Corey: Right.

David: Okay. That's what I thought, because this doesn't quite line up with everything else. Because as it turns out, what they say here is the only stuff the United States was controlling in 1981 directly was robotic unmanned weapon craft. And that comes up here.

8.9 Questioner: How many of these craft does the United States have?

Ra:... The United States has five hundred seven three, five seven three [573] at this time.

How does that line up with anything that you know? You've never seen this before.

Corey: That's not a stretch of the imagination if they are including drone craft, which they had very early on.

David: Right.

Corey: There was a lot that they were trying to overcome with shielding in outer space for astronauts or space program participants, so there could have been a very large number of unmanned craft.

David: There you go.

They are in the process of adding to this number.

[Other countries are not mentioned, including Russia] nor breakaway military complex.

8.10 Questioner: What is the maximum speed of one of these craft?

Ra:... The maximum speed of these craft is equal to the Earth energy squared.

This is one of these weird things they don't really explain. So we don't really know what that means except that it's somehow drawing off of energy fields from the Earth as it moves around the Earth.

This field varies. The limit is approximately one-half the light speed, as you would call it.

This is due to imperfections in design.

Are you familiar with there being drone craft that may be at a lower-level space program level that would not actually be able to get past half light speed unless they go through the Cosmic Web let's say?

Corey: Yes. Many of the craft in the beginning that were traveling from sphere to sphere within our solar system they would not be making a trip to Mars in a matter of 20 to 30 minutes. It would take them hours.

David: Right. Exactly.

Corey: And they had to overcome some technical issues and make some scientific breakthroughs before they were able to go superluminal.

David: It fits perfectly.

8.11 Questioner: Wouldn't this type of craft totally solve, or come close to solving, a lot of the energy problems as far as transport goes?

Ra:... The technology your peoples possess at this time is capable of resolving each and every limitation which plagues your social memory complex at this present nexus of experience.

That is a stunning statement. Would you agree with that?

Corey: It's a very true statement. I know that to be fact from my own experiences.

David: We have all kinds of problems. We have all this space junk around orbiting the Earth that's a big problem if we ever try to go out in space more. We have gigantic oil spills. We have huge gyres in the ocean of junk plastic that all needs to be cleaned up. Radioactive waste.

Corey: That doesn't even count, you know . . . People dying of diseases every day they don't need to be. Hunger. People going without water. You know, the energy, the so-called energy crisis that you hear about on the news. None of that should exist.

Those are all crimes against humanity in my book that they are still occurring with the technology that we have available.

David: And isn't it stunning that this was brought through in 1981. Nobody ever got to see it. I bought Book 5 as soon as it came out in 1998. And it was already in there.

Corey: It is definitely . . . It's amazing. It's amazing, yeah, that this information was being delivered to . . . I just wish he knew . . . he had asked some different questions, because we could have really gotten some pertinent information for these times.

David: Well, there's a lot more, but that's all the time we have for in this episode.

Corey: Okay.

David: But you're pretty blown away, huh?

Corey: Yeah!

David: You've never seen this before?

Corey: Yeah, I'm pretty surprised. I thought there were going to be some correlations.

David: But not this much.

Corey: Right.

David: All right, cool. You saw it right here first. This is his live reactions to seeing Law of One data that validates the Secret Space Program. This is Cosmic Disclosure. I'm your host, David Wilcock, and I thank you for watching.

Guiding Humanity to Ascension Season 6 Episod 10

Cosmic Disclosure; Guiding Humanity to Ascension Season 6, Episode 10

10 Nov 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. Corey, welcome back to the show.
Corey Goode: Thank you.
David: So when we were last talking, we had you going through some very interesting experiences where you were taken to Venus.

You met with this being called the Sentinel.

You were given an opportunity to know who you were, who you are, and who you will be, which you turned down. And we did have some negative comments come up about that in which people think that you're trying to paint yourself as a savior figure, that who you will be is a tease for the 'messiah' or something like that.

Corey: No.
David: So could you please clarify that, because that has created some confusion?
Corey: Sure. They have this information for every individual. It's not saying that I or Gonzales are lifted above everyone else.
David: Right.
Corey: Everyone else is going to be given this opportunity at some point to know who they were, who they are, and who they will be. Since they don't see time in the linear way that we do, and Tear Eir has stated that when we do reincarnate, it's not always in a linear way.

Sometimes we reincarnate backwards for experiences. So this was basically an offer of a life review, not an offer of revealing to me that I'm some sort of a messiah.
David: Some of the attacks have said that your humility is false and that you're actually just trying to act as though you were humble while, at the same time, trying to build yourself up as some sort of planetary savior figure.

So I understand that what's happening to you is very authentic. What is the reason for why you don't want to know this information about yourself exactly?
Corey: Because it was communicated to me that it would change the nature of all of my relationships in a very serious way. So learning this information may change me to a point to where I'm not going to be the same person with my family or friends. And a lot of people don't understand that. They're all about, "I want to know the information." You know, "I don't care what the consequences are." But I am very much a family man, and my kids and wife are very important to me.
David: So can you just say for the camera right now that you do not see yourself as a savior figure and that you're not going to try to change that in the future?
Corey: The whole message is for people to stop looking for savior figures, to start looking inside and become your own savior. That's what the message is, and that's what I'm living by.
David: So now that we've established this, after you had the experiences in the last update, including these interesting contacts, you've had the Blue Avians telling you that solar energy is ramping up, that we're going to start to see ghosts appearing, and that that's when we know that things are close is people are going to see ghosts.

What's the next thing that happens to you that we haven't covered?
Corey: Almost immediately after I left here after taping the last updates, I was flying home, and then I was going to go to Sedona to do the SSP Conference. Well, that night I was home, I was picked up and deposited on one of these Blue Spheres, and, again, off in the distance, I see Tear Eir standing.

And as usual, I look up, because I want to see whatever changes I can see in that cosmic scene that I've described to where I can see the Sun, the Earth, sometimes the Moon, depending on its position, and all of these Blue Spheres spread equidistantly out throughout our solar system.

And I had been seeing this electrical corona around the outside of the Sun that was going out a little ways, and then seeing electricity hitting these spheres. It looked like electricity being exchanged between the spheres.
David: You've kind of described that before, I guess, but was this more dramatic or more significant-looking?
Corey: Yes. On this occasion, for a few reasons. When I looked up, the Blue Spheres, the ones closest to me that I could see the best, were even more translucent than last time, as if they're fading out of existence.
David: And they had told you, right, that they were eventually going to fade out completely once we go through this.
Corey: Exactly. Exactly.
David: Okay. So what was different about these energetic phenomena this time?
Corey: On the outside of the Blue Spheres, it was rippling. There was rippling going on like a water effect when you throw a bunch of rocks into a pond, and you see just crazy rippling going on. That was going on, but it wasn't in synchronicity between the spheres.

Some were getting hit more, some less, and it looked like there was some sort of solar wind or kind of like sound waves when they hit the water.

They were just pulsing like, bz-bzz, bz-bzz like something's hitting them.

David: But this is after, as you said in previous updates, that the Draco mind control grid has already had to be turned up to maximum in order to try to keep our consciousness suppressed.
Corey: Correct.
David: So this is suggesting even more dramatic energetic changes that the mind control grid's not going to be able to stop.
Corey: Right. Yeah.
David: Okay.
Corey: These Blue Spheres, the way they're reacting now to this energy output, there's definitely an increase.
David: And you never saw them burble like water before?
Corey: I'd seen the ripples before, slight, but not this dramatic.
David: Okay.
Corey: Another thing that I noticed was there were large metallic spheres that were moving from the outer solar system slowly in, and . . .

David: Metallic spheres?
Corey: Metallic, large, metallic spheres.
David: Large as in how large?
Corey: I had no . . . They were not next to something to where I could get a base of reference, but they looked huge like maybe a third the size of the moon. But I'm speculating, because it wasn't next to something that I could use to compare it.
David: What could that possibly be?
Corey: Well, once when I looked at that, I turned around and looked down . . . to look back down at Tear Eir. And I caught him right as he was gliding in to come closer to me.

And I asked him, I said, “What are those metal spheres?”

And he said that there are other members of the Confederation that are here for a certain task, and they're preparing.
David: And Tear Eir didn't give you any information as to what they were going to do?
Corey: No. It's almost like he changed the subject or had better things to talk about.
David: Is it possible that these could be some form of arcs so that when we go through this change that certain people on Earth are going to be relocated ethically to other planets that'll be more appropriate for them if they can't handle the Earth's rise in vibration?
Corey: That wasn't communicated to me, but that's very possible. That's very possible, because they . . .
David: It does say that in The Law of One that there's a three-way split. You have negative people going on a negative timeline, positive people going on a positive timeline, and people who are not ready for the Earth's new vibration get relocated to other third-density planets.
Corey: Hm.
David: So that could be what this is.
Corey: Could be.
David: So what happens next?

Corey: He moves in. He greets me in his normal greeting and states that we need to cover this topic of the 300,000. He stated that after we had released the information, the manner in which it was released had caused a lot of anxiety and confusion, and that humanity or the people that were confused had put out a call for clarity.
David: First of all, let's just get into what do you mean by 300,000 in case somebody

didn't see that episode or doesn't understand?
Corey: When I was interfacing with Tear Eir the previous time, I was wondering how many people were ready to ascend.

And his response at that time was “less than 300,000”. I reported it, and then also, some math got kind of wonky.
David: Well, I tried to calculate what percentage of humanity that would be, and then when we somehow translate it to writing, we lost one of the zeroes. It was going to be 0.0045, and we changed it to 0.045, I think is what happened.
Corey: Yes. I got many emails on that. Yeah, there was some confusion in the delivery.
David: Okay.
Corey: He started communicating and bringing me back to that time to when I had that original question about how many people would be ready to ascend. And he stated that “In your current temporal reality at that moment, that is how many people were ready to ascend, and that that number is in constant flux.”

Our temporal reality right now is being decided upon, and there are constantly changes that are occurring because of us and our co-creative consciousness.
David: When we look at the meditation effect – I've talked about it on the “Wisdom Teachings”, 7,000 people – there's 39 studies of varying numbers of population like this, but the core one is 7,000 people get together and meditate.

And worldwide, war, crime, fatalities, terrorism, decreases by an average of 72%, showing that a very small number of people going a lot more positively can have this hugely disproportionate effect on everyone's consciousness.

So do you think it's possible that, perhaps, a small number of us like the number watching this show, which is way in excess of 7,000, that if we started to do our homework and be a lot more positive on a daily basis, that we could significantly increase that number by this radiant effect throughout the whole planet?

Corey: Absolutely. And one of the things that popped up the most in people's reactions were, how can the number be so low when there are millions of children on the planet?
David: Yeah.
Corey: Aren't most of them at least under some sort of age of accountability? And Tear Eir stated that there have never been, in the history of our planet, there have never been more wanderers on the planet than there are currently at this moment, and that most of the children that are here today are here to go through this experience and bring a loving vibe and help us through this consciousness transition that we're going through.

So a lot of the beings that are left out of that 300,000 number are wanderers, are people that are here from other soul groups that are trying to assist us in this great transition we're going through.
David: Most of the people watching this show probably are wanderers. The number all the way back in 1981 was 65 million. It seems very likely that the number now could be well in excess of 300 million or more.
Corey: More.
David: So the 300,000 might be people who are not wanderers, who are the entrenched souls that have been recycled through planet after planet. They can't get the ascension. They keep screwing up.

Only 300,000 of them at the moment were actually ready to go.
Corey: That's exactly right.
David: Okay.
Corey: Yes.

David: And a majority of the children that are now incarnating are already from a higher vibration.
Corey: Yes. The children have agreed to some sort of contract to come here and assist us in this transition by, a lot of the time, just by being here and being loving and being good and kind.
David: Let me ask you this. A lot of times when we are dealing with really lofty metaphysics and so forth, I used to go to this place called the Fellowship of the Inner Light. It was an interfaith church in Virginia Beach.

The best speakers always got rid of all the complexity and said that the core of the spiritual path is learning to love yourself.

Do you think that if a person has very consistently non-loving thoughts about themselves, that even if they're being Service-to . . . if they're trying to be Service-to-Others of other people, but they're not loving themselves, that that could knock down their polarity?
Corey: Very much so. If we don't go through a process of forgiving others and forgiving ourselves, then we're going to hit one of those glass ceilings when it comes to becoming service to others.

When you're making changes and healing yourself, you're making changes to the super consciousness, a being that we're all a part of.

So when you're assisting yourself, loving yourself, you're assisting in loving the rest of humanity as well.
David: So let's go forward now, and . . .
Corey: Yes.
David: What happens?
Corey: And then for a few moments we went into some more personal things. I was wanting to know what percentage Service-to-Others I was. I was very disappointed at the response. And then I was asking about people around me and asking more about what we have to do to become worthy of the 300,000 or make that number grow.

And it came back to him saying that there were all . . . we all were holding on to too many third-density issues, and that once we learn to let those go, then it's going to be much easier for this energetic change to have a positive effect on us.

We are all being forced to look in these dark corners of our soul and at these different incidents in our life that we have assigned so much power to. People, if they've been abused by certain people when they were a child, they may be 40 years old now, but if they have not forgiven that person and dealt with that energy, that person has the same power over them now than they did when they were abusing them.

So once we start to turn it around and start focusing on ourselves and the negative things that we need to focus on, we'll be able to guide ourselves onto this optimal temporal reality that Tear Eir was communicating about.
David: What is this optimal temporal reality?
Corey: It is the best case scenario for our collective consciousness. It is the Ascension.
David: Okay. So what's the next significant thing that happens in this meeting?
Corey: Well, apparently there was also some confusion on the Mandela Effect. And he went into the Mandela Effect a little bit more and described about how it is a cosmic phenomenon. It's not just something that's happening down here on Earth, and that it is on such a cosmic level that changes are occurring in the cosmos and in our own reality.

There are things that have been edited, large events that have been edited out of our shared reality that we have no memory of now. So let's say all of a sudden, tomorrow there is some sort of a shift, and none of us have a memory of 9/11.

It seems like what he was communicating, very significant things like that had been re-edited in our past. And when he was describing this to me, I saw a giant wall of crystal rods that were spinning, rotating. And in the prism effect, things were just instantaneously changing like I was seeing weird things like cars changed colors and the way they looked, trees not . . . I mean it was like a . . . It was very weird and very hard to comprehend.

But he wanted me to know that this is a very big part of the shift that we're going through.
David: So are you saying that some of these events might be majorly catastrophic like the start of a World War III or the detonation of a nuclear dirty bomb or those types of very . . . or a huge earthquake that kills millions of people? That kind of stuff?
Corey: Yes. Yes, that kind of stuff.
David: And they're being edited out?
Corey: Right. And . . .
David: Is this being done by the Sphere Beings?
Corey: That was MY question. I said, “What is the purpose for you doing this?”

And his reply was that they're not doing it. We are. That all of the beings in a cert . . . all beings in a certain, I guess, sector, their co-creative consciousness is creating this Mandela Effect.
David: Hm.
Corey: Yeah. And I've had a problem wrapping my mind around that.
David: It is very interesting if you look at the charts of Mars, the planet, in the immediate four days before 9/11, the entire planet is engulfed with red smoke, red clouds. And it's an unprecedented planet-wide dust storm that we've never seen before.

Since Mars is the planet of war, it suggested that the collective trauma that WE experienced on Earth somehow was reflecting backwards in time, and Mars, being the history of wars like 9/11, actually was showing a visible representation of that.

So if time does work in this non-linear fashion, and 9/11 could cast its shadow back into the past like that, are you saying that events that will happen are casting a shadow back into our subconscious, and then we choose not to have it take place somehow?

Corey: That is probably better than I could explain it.
David: Okay. How do we alter the timeline?
Corey: I am not exactly sure how it's working. Our co-creative consciousness is changing our reality. And part of the problem is we cannot fully understand this effect in our current state.

Once we go through this shift, and we have the benefit of not having these third-density issues, our minds are going to see things from a totally different perspective, and different types of physics and cosmology ideas are going to make sense to us.

Right now, I personally just can't wrap my mind around how . . . I mean, I was surprised how important our co-creative consciousness is in this process. So I'm still wrapping my mind around a lot of this.
David: Could it be as extreme as us shifting into a reality in which there was no Cabal?
Corey: Yes. We could, all of a sudden, be in a reality to where we're post-Disclosure. We have no really recollection of sitting here pining for Disclosure. We're in it. And it could happen in a twinkling of an eye, and we would have no reference.

See what I mean, it's hard for us to wrap our minds around this?
David: Well, if I may quote the Bible, in the book of Peter, it says, “The former world shall not be remembered nor even come into mind once this new Heaven and new Earth comes in.”

I've always been boggled by that Bible quote.
Corey: Another thing that will twist your noodle is Tear Eir communicated that many of the non-terrestrial beings that we're interacting with right now haven't even discovered our planet yet.
David: I don't understand that.
Corey: Exactly.
David: Ha, ha, ha. Many of the ETs that we're interacting with now haven't discovered our planet?
Corey: Yes. Let's say in 2080, non-terrestrials come into our solar system and discover us. These beings travel in time and space. There's no difference between the two.

So they come to a solar system, find it in its current state, and then go back in time in the solar system and start manipulating it.
David: Wow!
Corey: I'm still trying to wrap my head around that one too.
David: This also reminds me of Henry Deacon, who originally contacted me because he was so impressed by my inner planetary climate change paper I wrote with Richard Hoagland documenting NASA evidence of all the planets in the solar system changing.

And he said that they knew there was going to be a solar flash in his space program he was working in, which apparently was Solar Warden, although he disputes that.

And he said that as we get closer and closer to the solar flash, we'd be altering timelines so much that we could become so disoriented that we couldn't even have a coherent conversation - that there's a disorientation factor, because we keep hopping around on timelines.
Corey: Interesting.
David: Is that, perhaps . . . Could people be getting more and more confused as this goes on, because these timeline shifts appear to be very large?
Corey: Yeah, there's going to be a lot of confusion, because people don't know what's happening. Even you and I, we're discussing it, and we have a little bit of inside information, but we can't fully understand it.
David: I guess one of the things people would have trouble with is, well, wait a minute. If the reality that we're in changes, then wouldn't our written history books still have the old reality in it? Or is it that it changes in non-linear time, so even the

history, the written history has changed in the books?
Corey: Well, we're sitting here going back and forth trying to understand something that we just don't have the ability to understand yet. Time and space, space-time – we don't understand it like we think we do.
David: Would you say that maybe after the veil drops, and we get into a post-Ascension world, that we would then be aware of the fact that we have been on one timeline, that it was successfully shifted at that point?
Corey: I don't know. I have no way of knowing.
David: Okay. So this whole weird Internet speculation about the Mandela Effect, they [Blue Avians] are, again, saying that it's true, but it's even bigger than we think.
Corey: It's going on on a cosmic level.
David: So this discussion of the Mandela Effect, can we alter it with our own intention? Can we collectively intend to have these shifts take place, a small number of us maybe shift the whole outcome?
Corey: Absolutely. And Tear Eir made it very clear that a very small number of people can act as a rudder for the rest of our collective consciousness, because everyone else is in such disarray that the people like in this community, and some others that are awakening and coming together, they have more power in their co-creative abilities than they know.

And when two, three, four people start getting together and focusing on a positive intent, then we are creating that positive future.
David: Well, and if your guys are talking like The Law of One, and they've told you to read The Law of One, it seems that they are the source of The Law of One. Would you agree with that?
Corey: Yes.
David: We've established that now? They are the source of The Law of One?
Corey: It took me awhile to get there, but yes.
David: The Law of One endorsed Edgar Cayce's readings as authentic, and that's in there. Anybody can read that. And Cayce had a group called the Glad Helpers during World War II. In a reading, he said that that room of people, 40 people, could change and end World War II.

And they really didn't get it. They didn't get that 40 of them could actually stop Hitler and stop World War II from happening.
Corey: That's because these negative groups have been successful in keeping us ignorant of our co-creative power.
David: Did they talk to you at all about this co-creative power in this meeting after the Mandela Effect portion?
Corey: After the Mandela Effect, we moved over to discussing consciousness and how those of us in this community . . . it is perfectly fine for us to focus on the Secret Space Program and non-terrestrials interacting with us.

Tear Eir communicated that those of us in this field working on consciousness and ufology, we should begin to focus more on planting seeds and having a positive effect on our group consciousness.

And I wasn't given any specific ways to do that, because we all have our different talents or our different reaches or abilities, and every single person is just as important in this endeavor.

The person sitting home right now watching this show, they have interaction with many people in their life. And if they can have an effect on the co-creative consciousness of one, two, three people in their lives, that's a major effect that they're having overall.
David: So I feel like what you're giving us here is really valuable, because we are actually able to turn the needle and point the needle in the direction that we want it to go.

We are not simply watching this show and hoping that we're going to get Disclosure from the powers that were. But we control the outcome far more than we realize.
Corey: Absolutely.
David: And that is a very empowering message. Corey, I want to thank you for being here. And I want to thank you for watching. And anything you can do to try to live a more peaceful, stress-free life, we have lots of great resources on this channel for health, wellness, fitness, and all that stuff is available to you as a subscriber.

So I encourage you to check all that stuff out. I'm David Wilcock. This is Cosmic Disclosure, and we'll see you here next time.

The Banished, From Inner Earth Season 6 Episod 11

Cosmic Discosure; The Banished, From Inner Earth Season 6, Episode 11

16 Nov 2016

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And when we were talking through these updates last time, it was getting very, very interesting.

So without further ado, Corey, welcome back.
Corey Goode: Thank you.
David: So the gist of this message appears to be that a small number of us – and we have a really good number watching this show, a lot more than what was able to create the 72% reduction in terrorism in the meditation effect – that we could actually shape the whole future of humanity.

So we might have a lot more power in this thing than we realize.
Corey: Absolutely.
David: So that message takes away this idea that we're just spectators.

Corey: No, we're co-creators. We have the power to co-create. So use that power.
David: What's the next thing that happened after you were given this message about collective consciousness?
Corey: Well, I had a series of meetings with Ka-Aree, and they were in, I guess, what you've called The Construct.

David: Okay.
Corey: And in one of those meetings, I described to her an encounter I had in Long Beach, California, while I was on vacation with my family.

We were all staying in a hotel room, and I woke up. And up in front of me was a woman, looking right down at me.

And when she saw me, saw my eyes open, she reached over and, with her hand cupped my . . . over one eye, and tapped me on the forehead with a finger. And I went back to sleep. I passed out.
David: And I remember, on a personal level as your friend, when this happened, you didn't tell me about this right away. And this REALLY, REALLY messed you up.
Corey: Yeah.
David: It almost ruined our friendship for a while because you were so traumatized by it. You didn't want to talk to anybody. This really messed you up.
Corey: Yeah, I mean, I was in there with my family, and I was caught off guard, and, also, I felt violated.
David: What did this woman look like exactly?
Corey: She was about my height or a little bit taller, from what I could tell, and she had blue eyes, blonde hair and looked very human.
David: Okay.
Corey: I woke up, and her head was above my head. And when I woke up, she seemed surprised, and then she reached over and touched my forehead, and then that's all I remember.
David: But you were aware of your family. You were able to see that your family was all asleep as this happened?

Corey: I knew they were in the room, yes.
David: Yeah.
Corey: So I shared this with Ka-Aree, and I had noticed in previous meetings that she had been kind of acting a little differently towards me, just like she was observing me.

And when I told her about this incident, she told me that it was one of the Banished that she had told me about previously.

She had told me that I was more than likely going to start encountering people that they call the Banished. And these are Inner Earth groups from all of the Inner Earth groups that over time had interacted with humanity in a way that was not according to their culture or beliefs, I guess.

So they were banished to the surface.
David: I'm not sure I understand what you mean by interacting with humanity in a way that was not in line with their beliefs. Whose beliefs?
Corey: With the beliefs of whatever group they were a part of. If it was an Anshar, and they were going out to the surface of the Earth or reaching out and manipulating, or trying to, I guess, interact with humans on a way that . . . in a way that they had signed treaties against, or in a way that they just didn't culturally accept.

It was breaking like a cultural law.
David: So would you say that these people were taking actions that most of the Anshar or other groups would see as being negatively oriented and not necessarily the most positive steps?
Corey: I don't know if they would put it that way. It would just be . . . against . . .
David: Or they're trying to push the envelope somehow.
Corey: Yeah, they're just doing . . .
David: Breaking the rules.
Corey: They're breaking the rules. They're breaking the rules. There are treaties between groups. There are all kinds of rules, and some of these people were breaking them.
David: So some of these Banished might actually be trying to speed things up, but in the process, they're breaking codes that might have been established by higher intelligence for a very good reason.
Corey: And after they were banished, these people began seeking positions of power in human culture. They started blending in with us as much as they could, living in small little enclaves here and there, having children with regular surface humans.
David: Really?
Corey: Yeah.
David: How long has this been going on for? Is this all throughout human history?
Corey: Yes, for millennia is how it was put to me.
David: Well, I thought you've told us before that a typical Inner Earth human is going

to have some slightly different physiological features, like eyes that look a little larger, that kind of thing.
Corey: Yeah, but . . .
David: How could they blend in with people on Earth?
Corey: If you were not into ufology and you saw a very beautiful blonde walked up, and her eyes were 3% larger, you might think, “Wow! That's a beautiful anomaly. I'm going to go talk to her.”

You know, you're not necessarily going to say, “Wait a minute! She's not from here!”

Well, after I had explained what had occurred to Ka-Aree, and she was visibly concerned, I was sent back . . . one of the communication ended as usual.

And I met with her a few more times. And we were talking about personal things, or she was giving me direction here and there. She was still watching me. I could tell she was observing me.

And then, all of a sudden, probably about six weeks after I told her, I'm laying in bed, white flash. I'm now laying on the floor in this big domed Anshar room that I had first arrived in when I met her the first time in the temple complex. l
David: So this is not The Construct now.
Corey: No.
David: This is you actually being portalled there.
Corey: Right.
David: Okay.
Corey: All of a sudden I'm laying on a hard, cold floor. And I sit up, and Ka-Aree's walking in through the door that led back to the cleansing ceremony area where the pool of water was, the fountain.

And there were no guards this time. It was just her. And she led me back into the same area before, and I did that embarrassing cleansing ceremony.

This time only she was present and I was doing the ceremony myself.
David: So just to be clear, you have to strip down naked?
Corey: Yes, and cleanse yourself with the water from the pool.
David: And she's just standing there while you get naked and in her culture, it's no big deal.
Corey: Yeah. It's . . . Our getting embarrassed and stuff is just silly to them.
David: Right.
Corey: So after that, she headed out the door to what I'm calling the cleansing room, into that little hallway, and then she took a right to head back towards that domed room, and I followed her.
David: Were you in one of those robes like you had at the . . .

Corey: Yes.
David: Okay.
Corey: Yes, you have to put on one of those robes afterwards.
David: Okay.
Corey: And we went in and then took a hard right and walked . . . The domed room has a door on four sides. And on this side, was when we went into the cleansing room, we came out, took a hard right and walked in the doorway or hallway on the far side, one I hadn't been in before.

And we walked by doors that were covered by that hard light that I described before, kind of like a force field. And we walked to one door, and the force field turned off.

And I could see . . . it looked like a slab or a bed that had been formed. It was just even . . . There was . . . It didn't look like it had been manufactured and put there.

It looked like the whole room had just been carved around this slab. It was like molded up out of the floor.
David: Like it was extruded right up out of the ground.
Corey: Yeah. And she asked me to lay on the table. I have no explanation so far.

So I kind of sit on the table, first, and she walks across the room over to a wall where nothing was there, just like she did when she retrieved the nectar of Isis, what she tried to get me to drink the first time we were there.

And she turned around, and she had this big crystal rod, and it was phallic looking. It was very phallic looking, crystal.
David: So did you think . . . Ha, ha, ha.

Corey: I didn't know what was about to happen.
David: You see this thing. What do you think's going to happen?
Corey: I laid down on my back, and I was keeping an eye on her.
David: I could imagine.
Corey: And she came walking up, probably about two feet away from me. She was almost over me.

And she took it, and she started rubbing it on her hand like this [Corey motions with an up and down action on his palm, like creating friction], which didn't make me any . . . you know, ha, ha ha.
David: That's even worse. Ha, ha, ha.
Corey: Ha, ha. It starts singing. It starts making a noise, kind of like, you know when you rub your fingers on a glass with water in it and it makes that . . . you get tones?
David: Ah.
Corey: It was making sounds like that. And she just held it over my body and started waving it back and forth and then stopping here and there.

She stopped over my groin, my chest and my head, and she kept being drawn back here.

And it was making . . . almost like it was a metal detector when it was [buzzing], finding things. And she rubbed . . .
David: Did you feel the sound as well as hear it?
Corey: No, I heard it.
David: Okay.
Corey: I didn't feel it like in my teeth or anything like that, . . .
David: Okay.
Corey: . . . because I've had that sensation before. But she held it over me, and then she paused, and then it started making a real high pitched noise.

And I started seeing outlines or a head, shoulders, just – shoosh, shoosh – and there were like six of them that came out of my groin, chest and what appeared to be my head.

And I was EXTREMELY upset.
David: Did they just sort of look like amorphous ghostly forms, or did they have any shape or structure?
Corey: Yeah, they had . . . It looked like almost like a bald guy's head, and then shoulders, and then it just kind of blended down into shadow. It was kind of a see-through shadow.
David: Did it look like a regular human being . . .
Corey: No.
David: . . . or could you tell what the facial features were?
Corey: That's all I could tell.
David: Okay. Wow!
Corey: And it was about half a dozen of them that left. And I got up on my elbows like this on the table and I was like, "How did this happen? What's going on?"

And she correlated it back to my meeting with one of the Banished when she had touched my head. She said that they had used a process to where they had infected me with entity attachments.
David: Wow!
Corey: And they did this as a way to gain intelligence on what was going on with the Anshar.
David: So while these beings are attached to you, they can read your thoughts and relay it back?

Corey: I don't know how that works. Or they just might report what they see or observe.
David: What did you feel as these beings left you? Did you have a consciousness change, a feeling of . . .
Corey: No, I had a feeling of fear, of shock and fear.
David: Hm. Okay.
Corey: So I was very curious to why about at least nine other meetings we had had, she had not told me, A, "You have an entity attachment," and B, where it came from.
David: Hm.
Corey: And I was also very curious to know why she didn't remove it during that time period.
David: Sure.
Corey: Why would you . . . I mean, why would she leave it in me? You know, I was very . . . I was upset at the time, and I was wanting to know the answer to that question.

And she replied back with something that I really don't understand. She said that they had not yet attached to my energy vortexes, that once they attached to my energy vortex, she is able to, I guess, exorcise them from my body, but also close whatever portal they would use to come back.
David: So it's almost like they have to set up shop and lay a foundation and kind of build a house.
Corey: Right.
David: And if they're on the go and they haven't really settled in yet, they can't be resonated out with this technology.
Corey: Yes. And she said that she didn't think it would be in my best interests, those weeks prior, to say, "You have an entity attachment. It's going to hang onto you for a little while. Don't worry. I'll take care of it in four or five weeks." Ha. So, she just didn't tell me.
David: Did you ask her how this was allowed to happen in the first place? I mean, you've been protected from death before. Why would they allow somebody to come in and stick entities in you?
Corey: I don't know. I've been told that there's a possibility that I could lose my life in this mission, so there are no guarantees. In every conflict, there are casualties. So stuff's going to happen.
David: Right.
Corey: Some negative things are going to happen. I guess one of the things . . . If you don't run into the Devil, you know you're probably walking the same direction they are.
David: Ha, ha.
Corey: You know, you're going to have these negative interactions.
David: So what's the next thing that happens in our story after this?
Corey: Well, directly after this, that's when we discussed the Banished a little bit

more. We discussed . . . She told me about how they live in enclaves on our planet, and I think people . . . I think it's been out there that there have been different people that have reported that there are nonterrestrials living in groups here and there on our planet that our government knows about.
David: Yeah, I was briefed on that by Henry Deacon. I'm not going to say where, but I was given the specific name of a small town in which a large number of the people in that town, in America, are actually extraterrestrials with, as I've told you privately, different number of teeth, doctors in the town that know how to take care of them.

They don't like crowds. They always stay alone. They can't handle the telepathic interference of being around large crowds.

So this Banished stuff kind of fits in with some things I'd heard before.
Corey: Yeah, it kind of makes me wonder if that's what some of these groups are.
David: Because he had told me that they were Atlantean, that they were basically people who backdated to Atlantis, . . .
Corey: There we go.
David: . . . but still had that same kind of energy from Atlantis.
Corey: There we go.
David: Yeah.
Corey: And that's when she also told me more about how the Banished had intermarried into families of power. They're seeking power.
David: Ah. So this like is Cabal related as well.
Corey: Absolutely. Yeah.
David: Wow!
Corey: Some of them are making alliances with and marrying into some of these families.
David: So if the Anshar . . . Some of the oldest ones have been here for millions of years, then do these Banished actually have longer lifespans as well?
Corey: No. Well, they have the same lifespan that Ka-Aree's people do.
David: Which would be what?
Corey: I mean, Ka-Aree was over 130 and still looked like she was, you know, in her early 20s.
David: Okay. So the Banished then, even though they live on the surface of the Earth now, they might have dramatically longer lifespans . . .
Corey: Right.
David: . . . than regular people would.
Corey: Right. And from what she said, that life extension did not genetically make it into the children that they had with people on the surface.
David: Okay, so the documents that you had leading up to our taping here, you had to write it all down. You had 8,000 words, and you told me that you now have to have this reviewed by a particular group, and that what came back had only 5,255 words. Thus, 35% of this work that you just did over the weekend, hard work to write up

your experiences, 35% of it had to be removed.

So I guess what I'd like to know is, who are you working with that now wants to review your writing?

Is there something going on that's so timely and sensitive that they're worried about you spoiling operations that would otherwise take place? Let's just talk about that for a while now.
Corey: Sure. I had been actually complaining, as I do from time to time, to Gonzales about the lack of fresh intelligence I was getting. I hadn't been getting it for a while and for obvious reasons.

After I had been picked up by military-industrial complex Secret Space Program – we'll just call it MIC-SSP now – I had been put through a process where I accidentally gave up three people, including Gonzales.
David: Right. And those who watch the show will remember that you went through some sort of sedation. You were shown something like an iPad. Your retinas, or whatever, registered these faces, and you ended up outing these people, one of whom was Gonzales, which threw him into a whole different reality.
Corey: Absolutely, and absolutely angered the SSP Alliance. They were not going to give me any more information, any actionable intelligence, nothing.
David: And it appeared that Gonzales himself was very angry at you . . .
Corey: Oh, yeah, he was.
David: . . . sitting beside the Wrangler while you're there being interrogated.
Corey: Yeah.
David: Okay. So this MIC interaction caused them to become very angered by you, and the SSP Alliance felt that you had betrayed them somehow, even though I've always said, how could you have possibly prevented this?
Corey: Yeah, I couldn't have. And my question was, why didn't they come in and prevent it?
David: Right.
Corey: But, I digress.
David: So you said you were feeling like you weren't getting intel anymore.
Corey: Yeah, I was . . .
David: You got blacked out.
Corey: It was getting to a point to where a lot of the people I was working with around me were starting to withdraw and do their own things. I was feeling more and more isolated, and I felt like I needed to turn to Gonzales and say, “Listen, I want more intel. What do I have to do to get it?”

And the answer came back, before I release information, I have to send it through them for approval. But I had no idea they were going to be redacting 35% of what I was wanting to put out.

David: So how is this happening? Do you have some kind of contact person that you're sending these things to now, or . . . ?
Corey: Yes, I'm not going to go into it.
David: Okay. So in our private discussions, you've actually said that you're not even authorized to tell me what's going on, but you also said that if you could, that I would really like it.

So part of what appears to be going on - I don't know how much you can talk about this – is that even at the time of this taping, there may be some very sensitive operations getting ready to happen, that guys like me who've been doing this for so long are going to really like the outcome, but that it's so sensitive that we can't reveal it because it could screw up how it takes place.
Corey: That's correct.
David: It does appear that we're building up to some sort of major events.
Corey: Yes, several different events that they're working towards right now.
David: If you could give us just a little bit more of a clue of what they actually did authorize you to say about this, if there's anything, is this something that will make the people that watch this show happy? And what kind of happiness will they experience?
Corey: The part that I can share is not the part that's going to make people happy.

What I can share is that Gonzales reported that a lot of these secret Earth syndicates and the Earth Alliance were making a lot of progress in their negotiations. They had decided on a lot of things. They are just now working on the fine details.

So when it comes to the financial system and a lot of truth coming out, yes, I'm optimistic, after what I've heard.
David: What kind of financial changes do you think might take place?
Corey: It's going to be a switch over to the new financial system that we've heard so much about over the last five or eight years that has never come into fruition – that this is actually really going to happen.

But, you know, that's not necessarily a good thing. It's just a different system. But it is taking power away from the Cabal.
David: Okay. Are we going to be looking at something more like the Special Drawing Rights [the International Monetary Fund's form of international money], where the currencies of the world are thrown into a basket and they're weighted based on, for example, their overall gross domestic product? Is that the kind of economy we're looking at?
Corey: Yes, but that's the part they're still negotiating, the fine details.
David: Okay.
Corey: A lot of groups don't want it to be an even playing field, currency wise. They want it based on some sort of a GDP, but that's still in negotiation.

David: Are you being told that at some point in the future, that you will be allowed to release these things that right now you cannot?
Corey: I'm not being told that in the future I can release it, no. I'm just being told that certain things I cannot talk about because there are operational projects going on right now.

And a lot of it, also, after that perceived betrayal by me in that situation where I was being interrogated, I think they're also really kind of testing me as well.
David: Do they believe you and your story?
Corey: What do you mean?
David: Do the MIC people think that you're telling the truth?
Corey: No. No. I had another meeting that I will share at some point with this group that had interrogated me before, and I was told that most of the people in their project think it's all a big joke.
David: Hm. So what you're saying is that there's some really juicy stuff here, that you've been told that for whatever unfortunate reason you can't share with us, but if we could hear it, we would be happy.
Corey: Yes, on a lot of it you would be. There's some stuff that's not all that exciting.
David: Okay.
Corey: But some of the next encounter I can talk more about.
David: Okay, so what was the next encounter after where we were in the story here?
Corey: The next encounter was when my wife and I, we went to Sedona for a vegan – not really, . . . I guess, a raw non-cooking kind of experience to learn how to be a proper vegan.

And while I was there, a Blue Sphere came into our hotel room. That's unusual. I don't normally have Blue Spheres come and pick me up when I'm traveling. It just doesn't normally happen.

I got up, indicated I was ready for transport, and it took me up to, once again, a Blue Sphere. And on that Blue Sphere was Tear-Eir and Gonzales.

And, of course, I looked up at the cosmic scene, and it looked basically the same as before. I could still see . . . There were about nine metallic spheres.

And the scene looked pretty close to the same, with the buffeting of energy across the Blue Spheres having that watery effect.

David: Uh huh.

Corey: It looked pretty close to the same. So I turned my attention back to Gonzales and Tear-Eir, and they were right in front of me now.

Tear-Eir communicated something that I thought was kind of low on the totem pole information wise for him to be addressing me about.

And it had to do with all of these new so-called SSP whistleblowers, . . .
David: Right.
Corey: . . . and that some in particular were trying to rewrite the Blue Avian message and origins to match their belief systems. And there was . . . And it was causing a lot of confusion.

So I thought that was kind of odd, because that's not normally the kind of thing that sixth-density beings want to communicate with me about, but I guess it was important enough that it needed to be addressed.

So Tear-Eir told me that some of these situations I need to address in as loving a way as possible.
David: Well, let me ask you this. Are there any other SSP whistleblowers who are out there representing themselves as such right now who you actually think are disclosing the truth?
Corey: Yes, there are some SSP whistleblowers out there that have good information and appear to be telling the truth. There are a whole lot of other ones that are, I guess, trying to live a mythical life or write theirselves into the narrative.

But that's what Tear-Eir had concentrated on, speaking about that. And then he went on to give me some advice about how to handle it, how not to interject emotion into it and all these kinds of things.

And that was the conversation. Some personal things were pointed out to me as well. I was given guidance about my attitude and certain things that I needed to change.
David: Okay.
Corey: And then I have the conversation with Gonzales. And Gonzales tells me, "Listen, the negotiations have gotten to a point to where the Powers That Still Are, are about to release and disclose, fully, the military-industrial complex's Secret Space Program," which consists of oval-shaped craft, triangle-shaped craft that fly in and out of our atmosphere, going into lower Earth orbit to service a couple of space stations that are owned by the DIA, NSA and the Air Force intelligence groups.
David: What would these space stations look like if they're announced?
Corey: Pretty much like what we've seen in sci-fi, round, kind of donut looking. They're not super sophisticated, probably maybe 20 to 50 years more sophisticated than the International Space Station.

And he stated in order for them to be successful in disclosing this information, they need to quash and quiet – that means discredit – anyone that is giving legitimate Secret Space Program information, because when they release this as being THE

TRUTH, they don't want people saying, “Hey, what about bases on Mars? What about this? What about that that Corey and Tompkins or any number of other people have talked about?”

They want to be able to say, “Oh, you mean the person that was discredited?” and that way discredit the information as well.
David: Do you think that's going to be successful?
Corey: I don't know. I don't know. They're already working. They're marshaling their forces right now. They're getting people that work in the field, in this field, to, I guess, get on board with this, I guess, appeal to their egos and give them a briefing and say, “This is information that's . . . You're getting the top of the totem pole information,” so the people succumb to their egos like a lot of the people in the military-industrial complex have, that believe that they've been given the highest intel in the land.

And he stated that what was under way was that these various intelligence groups were trying to super soldier the SSP topic.

What happened was that the people that were telling legitimate stories suddenly became drowned out by all of the groups of people coming in and saying, “I'm a super soldier.” “I'm a super soldier.”

And then it became kind of a big community of people just sharing their super-soldier stories.
David: Right. And I remember reading something online of a guy saying he could jump out of a helicopter, and he could land in such a way that his legs were really springy and he could bounce up and he didn't need a parachute.
Corey: Yeah. That's not how it works. Yeah.
David: Silly stuff.
Corey: Yeah, silly stuff. But it's become this whole thing. And now, if you were to mention the super soldier projects to any number of researchers, they're going to scoff at it now. You know, “Oh, all that's just debunked. It's a bunch of BS, da, da, dah.”
David: Right.
Corey: So that was a very successful operation. So he said, “I can see in the future there being conventions where people show up and say they were in the Secret Space Program, and they all sit around and tell their stories, and that they're not doing it to be malicious.”

There's also the aspect of people that are being manipulated into thinking that they were in the Secret Space Program.
David: Well, I want to point out that you said this to me before this guy Max Spiers, who claims to be a super soldier, suddenly announced that he was dead. And it becomes a top story on “Drudge Report” and a top story on “Daily Mail”. He vomits black goo, and then he's dead.

Corey: Right.
David: You had told me that before that happened.
Corey: Right. Yes, so we're starting to see the beginning of what's going to be a major campaign to discredit anyone talking about this topic.

So he communicated that with me, and he said that I should get together with people in this community and find a way to mitigate that problem as much as possible, to prevent it from growing into that kind of a community and causing those kinds of issues.

So it was a big enough deal that I had a quick meeting with Tear-Eir and Gonzales about, and Gonzales was concerned. So that was the end of that meeting, and since then, just as you've mentioned, we've seen several signs that that indeed is occurring.
David: Right. So what would you feel is a way to preserve the credibility of what we're doing with this show and what we've done with Tompkins, things like that? I mean, I know, Tompkins, we didn't even know about him until after we'd already taped 40 to 50 episodes of this show.
Corey: Yeah.
David: And then it's like, "Oh, my god, here's this guy who knows all the same stuff."
Corey: Right. Well, then, and they're also doing this project as a way to discourage future whistleblowers from coming out. If they totally humiliate me or Tompkins or any of the others, then I think they believe that future whistleblowers will just stay quiet.
David: Right. How would you like to be able to let us know who is real and who is false as this goes forward? Do you have any idea of how this is going to happen?
Corey: Well, that's going to have to go with each of the viewers and the people out there. They're going to have to start using more discernment . . .
David: Okay.
Corey: . . . and not start getting emotionally attached to a story just because it's exciting and they like it.
David: Right.
Corey: So they're going to have to vet theirselves.

The last thing that Gonzales and Tear-Eir want us to do is to get into a position of, "They're a fake. They're real. They're a fake," and then all this inner fighting starts to occur in our field.
David: Sure. Would you say that if you never mentioned anyone as credible, that that means that they're probably not?
Corey: It could be.
David: Ha, ha. Fair enough. All right. Well, that's all the time we have for in this episode. I'm your host, David Wilcock, here with Corey Goode. And we will see you back here next time. Thanks for watching.

Troubling Encounters Season 6, Episode 12

Cosmic Disclosure; Troubling Encounters Season 6, Episode 12

25 Nov 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, our insider's insider. And in this episode, we are continuing our fascinating investigation into the updates that he has been experiencing as this whole narrative moves forward, and all of the intrigue and the interesting things that are going on.

So without further ado, Corey, welcome back to the show.

Corey Goode: Thank you.

David: So where we last left you, we were talking about how you are now getting intel that is interesting to you, but that it's going through a review process.

And that seems similar to the job that you were offered before that you turned down when we discussed this in previous update episodes, where you were going to kind of fulfill the role that Gonzales was filling, because they had nobody else who could do it, but then you turned them down.

Now it seems like, in a sense, you have something like that, where you're getting some intel. You have to maintain some confidentiality. You can't tell me or anyone else.

Do you feel like that's the same thing, or do you feel like those things are different? What you're doing now is different than what they offered before.

Corey: It's much different.

David: Okay.

Corey: What I would have done with them before would involve me not doing TV shows.

David: Not at all?

Corey: Right. It would have involved me basically disappearing into the background and taking over doing what Gonzales was doing when he was here.

David: Would you have had to say that everything you said was a lie and discredit

yourself, or would you just disappear?

Corey: Just sort of disappear.

David: Wow!

Corey: Yeah. So, yeah, things definitely . . . and in this topic have escalated since then. There are three incidents I'd like to talk about today, and we can . . . and a couple of them were pretty quick, so we can cover them fairly quickly.

I had a number of encounters over the last couple of months, and the number of pickups I've had to go to the Blue Sphere has increased.

David: Hm.

Corey: And there's obviously something, something . . . It's picked up. Something is going on.

David: There was a period of time where you really weren't getting that at all . . .

Corey: Right.

David: . . . and it had kind of just become you and Ka-Aree and The Construct for the most part with Gonzales.

Corey: Right. And I was literally withdrawing from not having fresh intelligence. It was . . .

David: Right. You were starting to lose your inspiration.

Corey: I was.

David: Yeah.

Corey: Well, not anymore. There . . . A . . . Some of these almost blend together because I wasn't documenting them as soon as they happened because I had other things going on.

David: You were doing some of your own events for the first time. Those events were deemed very successful. I've heard really positive feedback about you at Mt. Shasta, for example, those kinds of things.

Corey: Right. But the meetings kind of have changed a little bit. They've been more

frequent, and in some cases rushed, like the one I'm about to tell you about.

David: Okay.

Corey: I was at home, and I got picked up in the normal way with a Blue Sphere. And the Sphere took me up, or the Blue Orb took me up, to a giant Blue Sphere again.

And immediately I noticed Tear-Eir and Gonzales and Mica together, and they were real close to me this time.

David: Hm.

Corey: And I was looking at Mica, because I like to look at him. He's just so . . . He's just beautiful as a being – his energy.

And Gonzales stepped forward and grabbed my hand, and just did one . . . a one pump shake like that.

And I noticed Mica was watching us very closely. And then Gonzales went on to talk a little bit about what had been occurring in recent meetings, that they were getting further and further along on this new financial system, that the transition they were hoping to be smooth, but more than likely would be rocky, and that I should put some money into some precious metals, and that I should definitely make sure that I have enough food on hand for me and my loved ones for a period of time.

David: Okay. What do you mean by rocky?

Corey: Not a smooth transition. There could be a complete drop in commerce for a period of time to where, you know, kind of similar . . . if there's a hurricane, all the food gets wiped out in six hours and then there are no new trucks coming in. You know, that kind of a situation.

David: We've heard about this financial change before, and some of the things you've leaked in the past indicated that they kind of want to just change it over without really telling us anything, but what you're describing now sounds like there would be some kind of an announcement.

Corey: Yes.

David: This would not just be a covert operation.

Corey: No, it won't be covert, and there will be some disruption, according to what Gonzales was saying.

David: Okay.

Corey: So we covered that a little bit, and then we went back on to the topic of the false SSP whistleblowers, and the program that they're getting more and more intelligence on that is about to be executed against people who were involved with the SSP program to discredit us.

And there were some more details about that that I'd like to keep to myself for now. And then he very quickly and abruptly ended the conversation, reached over, gave me a shake again, and he doesn't normally shake my hand.

And he walked back and stood next to Mica.

And I'd been glancing over at Mica throughout the short conversation, and he was observing us very closely.

Mica walks up to me, sticks his hand out, so I stick my hand out, and he does a one pump shake. And he looked very pleased with himself that he was partaking in our culture in some way.

David: Ha, ha.

Corey: And he said, “Let's walk and talk,” and he slid his arm inside of my arm like you do it you're walking along with usually a person of the opposite sex. And I guess

I was as little uncomfortable by it, and he noticed within two or three steps, and then he pulled his arm out and put it to his side. And then we kind of walked a big circle talking and then came back to where Gonzales was.

But while we were doing a short little walk and talk, he started telling me that his people are beginning to reach out to our people in their dream state to introduce themselves and to impart information, to give us teachings on how to extricate ourselves from this current control system of the Draco, which they successfully did, how to come together as a society when our society has been programmed to inter-fight.

So his people are beginning to lay the groundwork for open contact and assistance from them in the future.

It was, again, a very rushed conversation as we were walking and talking, and I had some questions I wanted to ask him, and it was along the lines of how his people are going to interact with ours.

He mentioned a few brief things about how his society struggled to go through the transition that they needed to to become what they were today.

David: Hm.

Corey: And he was just letting me know that it is not a smooth transition, and that his people are going to be here to help us through it.

David: Right. That's very cool.

Corey: The only thing that I really got out of it that was really new was the information about his people starting to reach out to ours, which is exciting.

So Mica walked right up to Gonzales, and I was about to ask him a couple questions. And, as a matter of fact, in the beginning, I told him I had a couple of questions.

He asked if I was able to process the information that he'd given me last time, and I told him, “Yes. I had spent a lot of time thinking about it, and I had a few questions.”

And he said, “There will always be time for questions.”

And then at the end, I thought I was going to get to ask one of those questions, but instead he just walked me up to Gonzales, and he stood next to Gonzales and turned towards me, and a Blue Sphere appeared behind him and Gonzales and shot out immediately to me.

David: Hm.

Corey: It was time to go, so I went home and that was the end of that encounter.

It was very soon after this though that I was picked up again by this military-industrial complex Secret Space Program that had interrogated me months before.

David: Okay. So when the MIC picked you up this time, did it have any difference in quality to some of the other ones, because some of the ones you reported in these previous updates sounded pretty hostile, pretty unpleasant?

Corey: Well, this was a little more cordial, a little bit more. All of a sudden, I was awake after going to bed. I was awake, and I'm walking down my alley barefoot in my shorts and t-shirt that I sleep in.

David: Oh, my gosh.

Corey: And as I'm rounding around a gate to this parking lot that's right next to my house, I see this huge craft using it as a landing pad, and there are two . . . looked like Air Force airmen standing outside.

David: What do you mean by huge? How huge is huge?

Corey: It is probably about 100-feet long.

David: Wow!

Corey: It was big.

David: What did it look like?

Corey: It looked similar to some of the shuttlecraft that the SSP had transported me on, including the Mars Adventure that we reported on, configuration wise, but this was more of a stealth-looking craft.

It didn't have wings on the side. It was . . . If you looked at it from the top, as weird as it sounds, it was shaped sort of like a fish.

It's nose curved up. The fuselage was narrow all the way to the back, and then these two little fin-looking things came out. Looked like tails.

David: Hm.

Corey: Looked kind of like the tail section of a conventional craft without a stabilizer.

David: Okay.

Corey: And the ramp at the back was at the tail, opened down this way. [Corey points with a sharp angle downward.] It was a ramp with stairs on it, very narrow – enough for one person to go up.

David: Did it have landing gear, or did it hover?

Corey: No, it had landing gear just like a conventional craft.

David: Okay. And what was the surface appearance? What color . . . Whatever did it look like?

Corey: It looked like a stealth craft.

David: So black?

Corey: Grayish, almost black.

David: And they landed this 100 ft. craft in a parking lot or something?

Corey: Yes, in a residential area.

David: Wow!

Corey: Yeah. So the two airmen that were waiting for me walked me up this ramp - very narrow, VERY steep ramp.

So I walk up the ramp. I walk through a room that's mostly dark, but there are cargo nets on the ceiling and wall, and something's in the cargo nets. It's some sort of storage area.

And then we walk through a small other little area that looked like you might prepare food in it. It was just a real small area.

David: Okay.

Corey: And then we walked through the next door, and I found myself in the exact same room where I was before, where it had the three chairs on the wall and the two beds on the wall.

David: Oh, my goodness.

Corey: And my heart was beating really fast. I was . . . I was . . . I was worried.

David: That's the interrogation room.

Corey: Yes.

David: Yeah.

Corey: So the two airmen had me sit down in the same chair, and then they buckled me in . . .

David: Wow!

Corey: . . . strapped me in, and then left without saying a word. They didn't say a word at all in the beginning. And next thing I know, they . . .

David: But they also had somehow been able to control your mind, right, because you say you wake up sleep walking in your pajamas in the alley next to your house?

Corey: And not only that, after I woke up and was wondering what was going on, I was still automatically going where they wanted me to.

David: Really?

Corey: Yeah.

David: Your body was like on its own thing.

Corey: Mm-hmm.

David: Wow!

Corey: Yeah.

David: So now you're in a chair strapped in, just like last time. You must have been really freaking out by this point.

Corey: Right, and I did . . .

David: Because nobody talks to you.

Corey: Right. And I wasn't encouraged when they came out . . . The two airmen came out and had this cart, a rolling cart on the floor that they were messing with syringes and other things on.

David: Oh, my gosh.

Corey: So they were preparing to do some sort of an exam, and I could see what was going on. I could tell that they were about to perform an exam.

David: Like a chemical interrogation or something.

Corey: I didn't know what. And while I'm looking at them doing this, the door opens in the front closer to where the cockpit is, and in comes this older guy in an Air Force uniform as well, BDU-type uniform. [BDU: battle-dress uniform]

It looked like the day you buy them. It didn't have any of the flir or patches that you have on the shoulders or chest that indicate your name, rank . . .

David: Ah. Wow, that's weird.

Corey: . . . or where you're assigned. And he came in the room and they snapped to attention, so I could tell immediately that he was in charge.

David: And what did this guy look like? What was his basic facial features?

Corey: He looked like he was about 5' 10", 5' 9". He looked like he was in his late 50s, maybe early 60s. He had a white goatee and white short hair.

David: Okay.

Corey: Yes, and he carried himself very cocky, like he's in charge.

David: Wow! Okay.

Corey: So he sits down in the chair right next to me, I mean, right next to me, and begins asking me just questions about . . . again, like the Lunar Operation Command, about individuals that I had given up the last time, how I knew them. He was obviously skeptical.

He was telling me that, "You know that all the people I work with in all these programs are laughing at you and ridiculing you, right?"

And I said, "Yes, I've heard that."

And he was addressing me by my first name, and I asked him, I said, “How should I address you?”

And he just gave me this look like I was an idiot, and he said, “You can address me as 'Sir'”.

I said, “Okay, sir.” I said, “What is going on?” I said, “I've been through this before. You got the information that you wanted from me, right?”

And he told me that he didn't believe it.

David: But didn't they have scientific validation that you'd been to these places by taking hair samples, and you had traces from those places in your hair?

Corey: Yes.

David: Okay.

Corey: And while we were having this conversation, the two airmen immediately walked over and repeated the process. They took blood, skin scrapings, swab in my cheek and took more hair.

David: Now before any of that happened, you say he sat down right next to you. Was there any threat? I mean, obviously that you're not going to do it, but is there any threat once you've been harnessed into this chair that you could have gotten your hands on him or tried to attack him in some way?

Or were you harnessed in such a way that that wouldn't have been possible?

Corey: He was close enough to where I could've messed with him.

David: Okay.

Corey: Yeah.

David: So he's pretty brave then or trusting to get down next to you and not think that that might happen.

Corey: Yeah. Well, I was strapped down in a folding chair, clearly at a disadvantage.

David: Of course. Right.

Corey: Right.

David: There's no benefit to you doing that.

Corey: Right. I mean, they'd take me out and throw me into outer space if I did something like that.

David: Right.

Corey: And he said, “Yes,” he said, “the men that did those tests were working under my orders, but I don't trust the results.”

He said, “I am here to observe the tests being done again, . . . “

David: Oh, wow!

Corey: “. . . and to also maintain chain of custody on the evidence” that they gain. He's going to bring it to the lab himself, basically.

David: So he would obviously be part of that MIC program in which it's so compartmentalized that they're told they're the top, and they have no idea of this world that about six other people besides you have told me about – that's what we're calling the Secret Space Program. He just has no idea about it.

Corey: Yeah, that's definitely how it seemed, but he was being real coy. He was . . . He seemed like he was reading me. When he was asking me questions, I felt like it was a human lie detector test.

David: Hm.

Corey: You know, he was . . . He just had that air about him.

David: Okay.

Corey: So they had already taken the samples from me, and they had left the room, and then – 'they' being the two airmen -

David: Okay.

Corey: - and this other guy remained with me, they guy in charge. The two airmen come back in, and I see in their hand they have another one of those iPads that they'd showed me before.

David: Oh, boy.

Corey: And he said, “I would like you to look through these pictures and let me know if you see anyone that you recognize.”

And I immediately closed my eyes. And when I had my eyes closed, I was sitting there because they held it up. I could see six photos of people – headshots. So I closed my eyes.

I was like, “No, I'm not going to do this again. I'm not going to do this again.”

And I hear walking around, and then all of a sudden I hear this “bizzZH, bizzZH” sound, and I felt it all through my body, and I felt myself just going to . . . not to sleep, but just . . . I no longer had control of my body.

David: Wow!

Corey: It changed my state of consciousness somehow. And my eyes were open, and I was hanging down with my head down. And my head was basically looking at my lap – my face was.

And I saw the iPad slide under, and just . . .

David: This is very similar to what happened last time.

Corey: Yep.

David: Yeah.

Corey: Just like last time. They went through, and it was the same three individuals. It was no one new – Gonzales and the two others. I identified them again.

And then he stated that he thought that this SSP Alliance I was talking about were people from one of the groups he oversees that had broken away.

David: Hm.

Corey: Because, indeed, one of the people did belong to one of those groups that reported to him.

David: Hm.

Corey: And he was thinking that there was some craziness going on inside his rank.

David: Did you get the sense that he wanted us to know the truth, us as humanity, at some point, or did you get the sense that he wanted to keep this very secret?

Corey: My sense was that he was there to do a job, and his job was to find out if I was full of it or not . . .

David: Okay.

Corey: . . . by taking these trace samples that he had his men do. And he wanted . . . I guess, he was one of these "show me" kind of people. He wanted to see for himself.

David: Right.

Corey: So after I identified the people in the photos, they turned off the device, and I looked up, and he wasn't sitting next to me anymore. He was gone.

And I was thinking, "Well, if I don't remember him leaving, what else happened that I don't remember?"

David: Well, you said from the previous one that you recovered memories in which they were saying things to you like, "You will forget. You will forget."

Corey: Yes. Yes. And that hasn't happened yet, anyway, in this. I don't have any recollection of that.

David: Okay.

Corey: But it was after that the meeting was over, and the two airmen where escorting me out the way I came. And I was feeling pretty indignant. I was not happy with the way I had been treated.

So I was kind of trying to put a air on of a little bit of confidence or cockiness. And it lasted maybe about 10 steps, because when they were bringing me down that steep ramp, my knee buckled – my bad knee buckled.

David: It's like instant karma.

Corey: Yeah. And . . .

David: Because the beings are all about you being in this state of positive service to others, Ascension-compatible consciousness, and you'd gone into this negative frequency.

Corey: I guess.

David: Wow!

Corey: But . . .

David: So your knee buckled?

Corey: Yeah, I was about halfway down the ramp, and my knee kind of buckled and twinged. It hurt. I was, like, “Ah!” And I almost fell off the side about 8 ft. down to the concrete.

David: Oh, wow!

Corey: And the airman behind me, he reached up and he grabbed my elbow like this, because I was falling.

And when he did, it twisted my back. I pulled a muscle in my back, and I couldn't go down the rest of the stairs.

And the airmen were mad. They were upset that I got hurt. And they were discussing that I got hurt in their custody while . . . under a big wig. They were worried about it. And they were discussing, should they take me back up the ramp or take me home.

And at that point, I said, if I have a vote, I'd like to go home, please. So . . .

David: Yeah, really.

Corey: Yeah. They looked at each other and then glanced back up the ramp, and then helped me the rest of the way down the ramp. And then they helped me walk all the way through my alley, all the way into my backyard.

And they were about to walk me in through my back door when I was like, “Wait a minute!” I thought about my family being in there, and it just . . . I had a visceral reaction.

And I said, “I'll hobble to my couch and sleep there.” And . . .

David: Wow!

Corey: . . . they didn't say anything. They just turned around and jogged off into the dark.

David: Hm.

Corey: So I hobbled over, and I go to sit down on the couch, and I sit down, and before I can get my weight all the way back and get comfortable, a Blue Sphere shoots through the wall, never slows down, and snags me and picks me up.

David: Wow!

Corey: Just “shoosh” like that.

David: That's never happened that way before.

Corey: No-o-o-o. I was caught way off guard. And then I find myself standing in one of these ancient Mayan vessels that are made out of stone, that are giant cylinders – motherships.

Looks like they were just cut out of the inside of a mountain and then teleported into space. It's like being in a cave almost.

And I'm standing in a very familiar room.

Before I even started shooting “Cosmic Disclosure” and right before . . . it was before I even started talking to you about this, I had had a detached retina.

And while having the surgery, I had shots in the eye a lot, and it brought back a lot of memories. And I went through a period to where I was depressed, upset. I couldn't hardly get out of bed.

And I was picked up by the Mayans, and that was the first time I ever saw Gonzales. He was with them. I didn't know him.

David: Oh.

Corey: He was translating for them basically because they wouldn't connect with me. They wouldn't interface with me.

And they went through a process where they put like a halo kind of thing on my head, and it went “thupt” sucked to my scalp when they did.

And they were running their hands over this floating rectangle that was just levitating in the middle of a room that was stone, and it was plain.

They were just doing this [Corey moves his hands around in the air]. And it was explained to me that they were doing work to help me disassociate from a lot of those traumatic memories, so that I . . .

David: Did they heal your retina as well?

Corey: No, I had already gone through that surgery.

David: Okay. So then what happened this time when you get there again?

Corey: Well, this time I see four of the Mayans standing in the background, and Gonzales standing a little bit in the foreground walking towards me.

And I was like, “What's going on?” And he wasn't really answering me.

He pulls up this stone that is a sphere. It's black. It's close to the size of a tennis ball, and he holds it up to my head, my forehead, and he starts doing like this [Corey moves his hand side to side]. And he's kind of got this concerned look on his face.

David: Hmm.

Corey: And then he kind of brushes the concerned look off of his face, and he asks

me, “Have you been feeling strange or having memory issues?”

And I said, “Yes, as a matter of fact, I've been having more and more issues when trying to recall certain information and issues that I didn't have prior."

And he kind of got the concerned look off of his face. He kind of wiped it off, and he said, “Well, actually, I'm kind of surprised that you're able to even remember your kids' names.”

And I was like, “What do you mean?”

He said, “Well, for someone who's been blankslated as many times as you have and spent so much time on the research vessel inside that magnetic field of the torsion drive,” he said, “a lot of people in the programs end up having neurological issues, early onset dementia, and things like that.”

And I commented . . . I was like, “Great. One more side effect from being involved in this stuff.”

David: Two of the insiders I know, Jacob and Henry Deacon, both have had extensive nerve system problems, just like you said.

Corey: Yes.

David: Same thing.

Corey: Yes. That's very common. He basically just performed this exam on me, and we had a short conversation, and he said, “Well, I guess it's time to get you back home.”

I said, “Wait a minute.” I said, “Are you forgetting something?”

He turned around and looked at me like, “What?”

And I pointed at my knee, because I was standing with all my weight on one leg, and I had my knee kind of limp on the other side.

And I left out, when I first got there, I was hurting. My back was quivering. My knee was hurting. And one of the ancient Mayan people reached up on the same floating piece of stone, just three fingers, went like this [rubbing action], and all of a sudden the pain went away.

David: Wow!

Corey: And the pain was gone during our conversation, but I still . . . my back was stiff and my knee was . . . it was obviously still damaged.

David: So what did he say when you said, “Wait a minute?”

Corey: He said, “I'm sorry. We can't help you out with this one.” He said, “You should be fine in three days or so if you take it easy.” And I was obviously going to have a question after that.

He turned around and started walking towards the four Mayans, and I was going to wait for him to turn around. I was going to ask him a question about, “Why can't you help me out?”

And then a Blue Sphere came, not as quickly as last time, stopped in front of me, and I just read from the situation that the conversation's over. And I indicated that I was ready to go home. The Sphere took me back home.

I was right in front of the couch again, and immediately, my back started spasming. My knee hurt real bad, so I kind of flopped down on the couch and went to sleep. And that was the end of that encounter.

David: Well, I think it's important to point out that neither you nor I or anybody else doing this are exempt from karma. And even if you have access to these beings, they're not just going to interrupt any type of karmic procedure that we have to go through.

So, I guess, that's probably been explained to you before, right, by the Blue Avians, that they can't just take away certain things from you because you might need to experience them for whatever reason, right?

Corey: Right.

David: So did you, in fact, have it clear up after a few days like they said that it would?

Corey: Yep. After about three days, I still had a little bit of problems, but it was good enough to where I could . . . I was mobile again.

David: Is there anything that you'd like to say as sort of a summary or concluding statement? We've had some things here that are a little upsetting, like you sleepwalking and getting re-abducted.

What do you think the re-abduction was about from the MIC group?

Corey: Them trying to confirm their prior test results that some of the brass just . . . They could not accept this information. Just could not accept it.

David: Do you think Gonzales holding that sphere was helping to clear up some of the mind wipe effects that they were causing on you by doing this to you over and over again?

Corey: It seemed as though he was scanning and reading something, and I'd left out . . . I'd asked him why this had happened.

And he said it was all according to plan. And I said, “What plan and how come I'm not privy to this plan?”

And he said everything unfolded the way it was supposed to. He said, “Please just trust me for a little bit longer, and I'll explain it all later.”

David: Do you think it's possible that when they interrogate you, that they're actually getting information that's going to change their organization somehow as they realize this is true?

Corey: Yeah, I think they got some sort of information from me that the Alliance wanted them to get.

David: Very interesting. Well, that's all the time we have for in this episode. It's very enigmatic stuff going on here, and I'm sure that much more will happen in the future. This is an evolving story.

And this is just another chapter in something that apparently has some very exciting stuff for us coming up in the future.

This is “Cosmic Disclosure.” I'm your host, David Wilcock here with Corey Goode, and I thank you for watching.

Law of One and The Secret Space Program Season 6, Episode 13

[Cosmic Disclosure; Law of One and The Secret Space Program; Technological Salvation] Season 6, Episode 13

30 Nov 2016

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. We are now going to be getting into an astonishing number of correlations between what's printed in The Law of One and what he's been telling us on this show about the infamous and dreaded Draco Alliance.

So, Corey, welcome to the program .

Corey Goode: Thank you.

David: So we've already seen something that's gone way beyond what you thought The Law of One would have in terms of the amount of specific detail.

I know you've never seen any of this stuff before, and I think it's really cool we're going to get this on camera – your first takes as we go through it. And this really, in my view, what you're about to see here is the best information on the Orion/Draco that's in The Law of One.

Now, before we go any further, and I do think you said this on a show before, but I just want to reiterate it now. There is a connection between the Draco and the constellation Orion, correct?

Corey: Yes. And I don't know if that's where they came from, but there are some symbols that are prominently displayed that are Orion symbols.

David: Symbols on their uniforms, on their ships?

Corey: That people have seen displayed on ships, inside ships.

David: Really?

Corey: Right.

David: You've never said that before.

Corey: Triangles . . .

David: We're getting this on camera for the first time. You've never said that before. Wow!

Corey: Right. Triangles with the Orion symbol.

David: Well, I know the Apollo mission, some of the Apollo missions, the patches, had the A and then there's the Belt of Orion in the middle of the A.

Corey: It's the Belt. Yeah. In the triangle, the Belt.

David: Oh, wow! So this explains why The Law of One would call them the Orions, because that's the logo they're using.

Well, I have heard from other insiders that they have a big settlement in Orion, that they've controlled some major sectors there.

Corey: Yeah. I do know that they have been in just about every star system that we can see with our naked eye.

David: Right.

Corey: And they have caused problems in each of those star systems, conquered some of them, been kicked out of others.

David: That's all going to be in here, so let's hit the ground running. This is going to be incredible for you.

LAW OF ONE ON SSP

8.12 Questioner: At the same time you mentioned that some of the landings were of our peoples, you also mentioned that some were of the Orion group [which is their name for the Draco. It's very obvious. We'll get into all that later. Very obviously the same.]

[We] talked a little about the Orion group, but why do the Orion group land here? What is their purpose?

David: This gets really interesting.

Ra: . . . Their purpose is conquest, unlike those of the [benevolent] Confederation who wait for the calling.

David: And the calling means we have to ask for their help. They can't help us without our freewill permission.

So conquest. And would you say that's the Draco in a nutshell right there?

Corey: That is their mandate. They conquer and not only that, they have co-opted part of the Secret Space Program to assist them in conquering.

David: Wait til you see what's in here because it validates that completely.

Ra: The so-called Orion group calls itself to conquest.

8.13 Questioner: Specifically, what do they [the Orions or Dracos] do when they land?

Ra: There are two types of landings.

In the first, entities among your peoples are taken on their craft and programmed for future use.

David: Now, what do you think that means?

Corey: There are a lot of individuals that have no idea that they have been picked up by any type of non-terrestrial. A lot of these people are harden skeptics even, and they have been programmed to be triggered by certain events in the future to act a certain way and to perform certain tasks.

David: Wow! Wait until you see what comes next.

Ra: There are two or three levels of programming.

David: And this gets really bizarre.

Ra: First, the level that will be discovered by those who do research. [Abduction]

David: And I just put in here in parentheses my guess is that they mean abductions. That seems pretty obvious.

Ra: Second, a triggering program. [Mind control]

David: That definitely seems to be mind control, which is what you were saying, but wait until you see number three now.

Ra: Third, a second and most deep triggering program crystallizing the entity thereby rendering it lifeless and useful as a kind of beacon. [Programmable Life Form]

David: And that seems to suggest the idea of a programmable life form. Have you heard about the possibility that certain organic, seemingly biological life forms could

become programmable?

Corey: Yes, with the help of nano technology.

David: Right. So, this programming, this deeper level they're talking about would involve some sort of AI compromise.

Corey: Sounds like it.

David: And what they're saying here, if you read it carefully, it becomes lifeless. The AI could take over someone's body so much that traditional biological life isn't even really a factor any more.

Corey: Yeah, I haven't heard that part.

David: Do you think it could go that far?

Corey: It could.

David: Yeah. Well, we've heard from Dr. Steven Greer about the PLFs or the Programmable Life Forms, that there are these . . . Some of these Greys apparently are not really alive.

Corey: Yeah.

David: They're like a bio-robot.

Corey: Right.

David: Does that line up with what you saw?

Corey: Yes. Some of them are remote controlled like avatars.

David: Right, exactly. So this, again, way too advanced for what you should have seen in 1981.

Ra: This is a form of landing.

David: That's one of the forms, but then there's another one.

Ra: The second form is that of landing beneath the Earth's crust which is entered from water.

David: Now you're smiling. So are there bases that the Space Program has that are on

Earth that you enter in from the water and they are under the crust?

Corey: There are bases for many non-terrestrial groups and terrestrial groups that are below the ocean crust and the Earth crust where entrances are underwater.

David: Wow!

Corey: Yes.

David: And they're specifically talking about the Draco here. The Orions.

Corey: Here they're talking about the Draco, but the Super Federation – they call them 'embassies' in the Secret Space Program.

David: What would we see in one of those portals in the ocean? What would it look like when they go in?

Corey: Well, they are giant . . . They're like a cave systems.

David: Okay. It's not like an iris opens and closes necessarily.

Corey: Well, some of them , , , they have put holographic types of technology to cover them, and some of them our military have put types of material that will reflect radar, sonar, in the same manner that the surrounding rock and material will to camouflage it.

We have electromagnetic powered, basically, submarines as well . . .

David: Right.

Corey: . . . that travel in and out and they travel beneath the crust and then within all of these rift zones under the crust.

David: I bet you didn't expect to see this, huh?

Corey: No.

Ra: Again, in the general area of your South American and Caribbean areas and close to the so-called northern pole.

David: But the point is here, notice they say, “Again, in the general area of” the Bahamas and Chile.

Corey: Yeah.

David: Right? So what they're saying is that the Draco bases and the human bases are joint bases. Right? Because they 'again', and that fits with what you're saying as well, right?

Corey: Many of them are joint.

David: So you would have these Dracos working alongside humans in underground bases, just like it says here and undersea.

Corey: Uh-huh.

8.14 Questioner: What [is] the objective with respect to the conquest of the Orion group?

David: He doesn't . . . This is only Question 8. He's only been doing this for less than two weeks now.

Corey: He's asking why . . .

David: Yeah.

Corey: . . . the Orions conquest?

David: Why the Orions want to do this, because he doesn't really get the negative agenda yet. This is before he understood loosh, before he understood all that stuff that comes out.

Ra: As we have said previously,. . .

David: This is an amazing answer.

Ra: . . . their objective is to locate certain mind/body/spirit complexes [ie people] which vibrate in resonance with their own vibrational complex, . . .

David: Meaning people who are powerful and think of themselves as elite and very evil.

Ra: . . . then to enslave the un-elite, as you may call those who are not of the Orion vibration.

David: So notice it says here they're not going to come in and conquer directly. They've got to contact the planetary elite.

Now, you said that the first group the Draco contacted was who?

Corey: The Nazis.

David: Right. So this fits in, doesn't it?

Corey: Yes. The Nazis were very much of the same vibration as the Draco.

David: And what were the Nazis trying to do?

Corey: They had the exact same agenda to subjugate the world, reduce population and control it.

David: It lines up very, very nicely. So now we're going to skip from Question 14 to 23, just to keep things moving.

8.23 Questioner: The most startling information that you've given me, which I must admit I'm having difficulty believing, is that [the] United States has 573 craft like you describe.

David: Because there was nothing like this in UFO lore at the time.

How many people in our government are aware that we have these . . . how many total people . . .

David: And notice the wording. Again, you've got to be so careful how you ask these questions.

How many people of United States designation . . .

David: If he had asked it differently, he would get a totally different answer.

How many people of United States designation are aware of this, including those who operate the craft?

Ra: . . . The number of your peoples varies, for there are needs to communicate at this particular time/space nexus so that the number is expanding at this time.

David: Now, I believe that what they mean here is there's a need for people in the United States who know about this to communicate with the Breakaway Civilization, because he didn't ask about that. He asked about the U.S. But wait til you hear this.

Ra: The approximate number is one five oh oh [1,500].

Corey: That's not many.

David: What do you think about that estimate based on the classified world as of 1981, the number of people that are on cosmic top-secret or higher clearance level, the

need to know, and are still actually living in the U.S. and are not part of this Breakaway Civilization?

Corey: I would say the numbers are not that different.

David: That's pretty close to what you'd estimate?

Corey: You know, a little more now, but it's still a very small number of people that have the full knowledge. A lot of people think they have it, but the people that are, as you say, communicating with the Breakaway Civilization for logistics is a very small number.

David: And when I spoke to Hoagland's insider, Bruce, recently, about this and asked him the same question, he said there's about 3,000 here on Earth who know everything right now, which is only double that number. So this is . . . It's a very tightly controlled thing.

And so then they say:

Ra: It is only approximate for as your illusory time/space continuum moves from present to present at this nexus, many are learning.

David: So they're saying the number's going to go up quickly.

8.24 Questioner: Where are these craft constructed?

David: Wait until you see this. Nobody knew about Area 51 back then. Okay? It was not out in the open.

Ra: These craft are constructed one by one in two locations:

. . . in the desert or arid regions of your so-called New Mexico

. . . and in the desert or arid regions of your so-called Mexico, both installations being under the ground.

David: Does that line up with anything that you saw?

Corey: Yes. Ha, ha.

David: Ha, ha.

Corey: That's very interesting. There are facilities in Mexico . . .

David: Really?

Corey: . . . out in big desert regions with mountains separating them, and I don't know exactly where it is geographically, that have underground areas where they construct some of the parts of the technology, at least they used to. I don't know if that's still the case. This is back '80s, '90s.

David: Well, this is a leap of faith for me because we have not talked about this, and I just threw you in. I didn't know . . . I've never heard an insider before tell me that there was actually underground bases in Mexico.

Corey: And I don't even think the Mexican government is aware of them.

David: They talk about that.

Corey: Oh, okay.

David: Yeah. Check this out. What about New Mexico? Let's just . . . Have you heard about New Mexico with underground bases?

Corey: Not so much . . .

David: Obviously Nevada.

Corey: Yeah, Nevada, Utah and a few . . . not so much New Mexico . . .

David: Okay.

Corey: . . . when it came to constructing things.

David: But it's possible.

Corey: Oh, yeah, yeah. I'm not privy to all information.

David: And a lot of this stuff would be done in the desert.

Corey: Of course.

David: So now he's doing a double take.

8.25 Questioner: Do you say the United States actually has a manufacturing plant in Mexico?

Ra: I am Ra. I spoke thusly.

Corey: That's what I said.

David: Ha, ha.

Corey: Ha, ha.

David: And then he's got to beat him down for asking lame questions.

Ra: May I, at this time, reiterate that this type of information is very shallow and of no particular consequence compared to the study of the Law of One.

Corey: That . . . Raw-Tear-Eir, when I ask questions or bring up concerns, often I hear "it's of no consequence".

David: Really? The same wording as this?

Corey: Yeah.

David: It's funny too because on this show most of what we do is what they would consider transient information, but yet they've been trying to get you to focus on this message . . .

Corey: Yes.

David: . . . which is all they really care about – the study of The Law of One, and it says it right here.

So even though we might be fascinated by this stuff, for them it's like, "Come on, you guys, focus on information that matters as much in 10,000 years as it does today."

Corey: And with my communications with them, they keep wanting me to go back to the spiritual, you know, message.

David: Well, that's why we're doing this. Ha, ha. Because ultimately if somebody watches this show, but they don't get the material they need to know spiritually to be able to ascend, you know, what's it going to get you when the solar flash happens? Ha, ha.

Corey: You'd be seeing a lot of spots. Ha, ha.

David: Ha, ha.

THE ORION GROUP

7.14 Questioner: You mentioned Orion as a source of some of the contacts of UFOs.

Can you tell me something of that contact, it's purpose?

Ra: . . . Consider, if you will, a simple example of intentions which are bad/good.

David: Let me just toss a little explanation in here. In The Law of One material, there's never an absolute. So if something is bad, it's bad/good as oppose to good/bad.

Corey: Is that point of view, perspective thing?

David: Yeah, because ultimately what they're going to be explaining here is that it's bad to us but it's good to the people that are doing it. They think they are doing good. So lets . . . and they're going to talk about Hitler. They use that as an example.

Ra: . . . Consider, if you will, a simple example of intentions which are bad/good.

This example is Adolf.

David: They don't usually ever use a last name.

Ra: This is your vibratory sound complex.

CHOOSING AND ENSLAVING

The intention is to presumably unify [the people] by choosing . . .

David: This is the intention of the Orion, the Draco.

Ra: [The Draco's] intention is to presumably unify [such as a planet or their empire] by choosing the distortion complex called elite from a social memory complex

David: So the social memory complex is their word for a planet, because they say we cannot tell you apart from each other. You are not distinguishable to us as individual beings. You're part of this social memory complex. You're one mind in symbiosis with the Earth.

So these empires want to conquer those minds. They've got to get the whole planet to do this.

So that's what they're talking about.

Corey: And that's what the Inner Earth people said.

David: Oh, really? Tell me more.

Corey: Before they had more developed beliefs and understandings that their earlier

people believed that they were produced and came from the Earth and that they were consciously connected to the Earth and stewards of the Earth and their consciousness returned to the Earth.

David: Okay. Yeah, so that fits perfectly. So they're looking at our social memory complex. They're seeing the people that are here on Earth. And they look for the elite. They look for the most powerful, the most wealthy, the most trending towards evil.

Corey: Corruptible.

David: Yeah.

Ra: . . . and then [after they've chosen those elites, they] enslave, by various effects, those who are seen as the distortion of not-elite.

David: Which is pretty straightforward.

Ra: There is then the concept of taking the social memory complex thus weeded and adding it to a distortion thought of by the so-called Orion group as an empire.

David: So this is pretty straightforward so far. The idea of the weeding being they want to weed out any resistance to their tyranny.

And as you know, the Draco are not just going to show up. Right? It's not their pattern to just appear in our skies and show up as these giant reptilians as say, “Here we are.” Right? That's not the way they're doing this.

Corey: Right. They're subject to certain cosmic laws that they have to find loopholes and to be able to skirt the laws.

David: That's exactly what's about to be explained.

Corey: Okay.

RANDOM ENERGY

Ra: The problem facing them [the Draco, the Orion] is that they face a great deal of random energy released by the concept of separation.

David: Meaning they see themselves as separate from the One. Of course, this book is called The Law of One. Everybody's part of one mind. Service-to-Others is helping yourself, etc.

The Draco believe in separation, but that means betrayal happens all the time.

Ra: This causes them to be vulnerable as the distortions amongst their own members are not harmonized.

David: What they're saying here is it seems like there's this constant battle within the group itself and people getting overthrown. Is your data consistent with that?

Corey: I don't have any information about reptilians killing each other and fighting amongst themselves, but the information that I had in the meeting I attended where there was a Draco present, they also in their federation had insectoid-type beings and mantis-type beings.

Now, there could be some power struggle and stuff like that going between these groups and them.

David: But let's also say too that you have Cabal groups on Earth that the Draco are attempting to create as an elite and then keep them in their group.

Corey: Right.

David: So there's definitely been those kind of problems.

Corey: Yeah, yeah. Definitely.

David: Yeah. So this does fit very nicely. I mean, this is still pretty generic, but it's going to get a lot more specific.

DENSITIES OF ORION

7.15 Questioner: What is the density of the Orion group?

Ra: . . . Like the Confederation, the densities of the mass consciousnesses which comprise that group are varied.

There are a very few third density, . . .

David: And that, of course, would be like your Committee of 300 types, Illuminati types, that kind of thing. That's what they're talking about.

. . . a larger number of fourth density, a similarly large number of fifth density, and very few sixth-density entities comprising this organization.

David: So the fifth density thing becomes very important now. We're just setting up the story right now.

THEIR NUMBERS ARE 1/10TH

Ra: Their numbers are perhaps one-tenth ours at any point in the space/time continuum, as the problem of spiritual entropy causes them to experience constant disintegration of their social memory complexes.

David: So let's talk about this. Would you say that from your information that that data of the bad guys being only 1/10th as numerous as the good guys out there flying around the universe, would you say that's approximately correct?

Corey: They're definitely outnumbered, and that's why they use other groups that they have conquered as proxy soldiers for them.

David: Right.

Corey: They have certain elements of our space program that fight alongside them to increase their numbers and their ability to govern their territory.

David: And what's happening with this SSP Alliance would be another example of the disintegration of their group, this spiritual entropy, because people keep turning on them.

Corey: Yes.

David: They keep losing out on their opportunities.

Corey: And that's happened, I've been told, the whole time they've been here. They haven't been in constant power. They've been in power. They've been kicked out of power. They've come back and regained power. It's been kind of an ebb and flow between different groups.

David: Another perfect correlation.

STO RESULTS IN STS

David: This is a very interesting line.

Ra: Their power is the same as ours.

The Law of One blinks neither at the light or the darkness, but is available for service to others and service to self.

However, service to others results in service to self, thus preserving and further

harmonizing the distortions of those entities seeking intelligent infinity through these disciplines.

David: So I think that's a very interesting point, don't you? That the service to self path, they just want all the benefit. They want to take. They want to consume. They want to conquer. They want to control.

But here it's saying that if you help people, that you then are helping yourself.

Corey: Right.

David: Is that consistent with the message that the Sphere Beings have been giving you?

Corey: It's exactly the same message. I mean, the message was to raise your vibration, to be more forgiving of yourself and others, to become more of service to others. It's the same.

David: And when we're working collaboratively like that, now we're able to gain benefit. It's not like you have to control people and dominate people to gain benefits for yourself.

When we start sharing, cooperating, forgiving each other, everybody gets to work, and everybody gets to benefit from that.

Corey: Correct.

David: Yeah. So this is a very important little philosophical point here that shouldn't be forgotten.

CONCEPT OF SEPARATION

David: So now we're going to get into the concept of separation.

Ra: Those seeking intelligent infinity through the use of service to self [like the Draco] create the same amount of power,

but, as we said, have constant difficulty because of the concept of separation which is implicit in the manifestations of the service to self, which involve power over others.

This weakens and eventually disintegrates the energy collected by such mind/body/spirit complexes [that's people here on Earth] who call the Orion group and the social memory complexes which comprise the Orion group.

David: So what are some of the key examples of the disintegration that we're seeing in the Cabal now that would fit in with this that you're aware of?

When you got introduced to the White Draco, they announced themselves as the Committee of 200. Right? Not 300.

Corey: Yeah, and it could be a different group. The people that were in suits, human beings that were in suits that were present, they introduced theirselves as the Committee of 200.

David: So that would imply exactly what they're saying here that there's just this constant disintegration going on. It's breaking down. The alliances are fracturing. They can't hold it together.

Corey: In that very meeting, that Royal Draco offered to give up that very group and all of their foot soldiers for safe passage out of the solar system.

David: Right. And you can't run a group in which you're constantly betraying the members. And these Royals were like, “Just let us free, and we'll betray everybody else we've got.”

Corey: When that occurred, it caused shock waves.

David: Again, it's perfectly mirrored right here. It's incredible.

SPACE-TIME AS A MEDIUM

Ra: It should be noted, carefully pondered, and accepted, that the Law of One is available to any social memory complex which has decided to strive together for any seeking of purpose, be it service to others or service to self.

The laws, which are the primal distortions of the Law of One, then are placed into operation and the illusion of space/time is used as a medium for the development of the results of those choices freely made.

David: So isn't that interesting? What they're really saying here is, space-time is not real. Time is not linear. It's an illusion in which we are being given a teaching mechanism.

And there is a relationship between the thoughts that we have and the actions we take and then what results.

So this is a basic point in The Law of One, which I know you've validated many

times. How does what you've heard about the nature of time fit with what we just read here?

Corey: This is exactly what I've said. And I receive emails that what I stated is ridiculous of space and time not being linear, or time not being linear in particular.

David: But yet what they're saying here is that it was built that way as an illusion so that we can learn and grow spiritually.

THE ORION GROUP

Ra: Thus all entities learn, no matter what they seek.

All learn the same, some rapidly, some slowly.

David: The goal is the same. We're all going back to the oneness.

SOCIAL MEMORY

11.16 Questioner: What do the crusaders do?

David: This is where it gets really interesting about how the Draco take over a planet. And they get really specific now.

Corey: Are they calling them crusaders?

David: Orion crusaders, Orion empire, Orion confederacy. They use those terms.

Ra: The crusaders move in their chariots . . .

David: And that, as it turns out, is spaceships, ships of war. They explain the chariot term is a term of war.

Ra: The crusaders move in their chariots to conquer planetary mind/body/spirit social complexes . . .

David: Here's the key line, Corey:

. . . before they reach the stage of achieving social memory.

David: Now, what that implies, and we're going to get into more information about it, is that there is a point at which time our planet unifies in consciousness.

And once that happens, they have no ability to do anything more to us at that point.

Corey: Absolutely. And that's what I've been talking about with the co-creative consciousness. Once we realize the power that we have, they cannot manipulate us or have any control of us whatsoever.

David: And one of the things that I think is interesting is this is 1981. Now with the Internet, we have this unification of knowledge available to us. So that is the stepping stone to social memory where all information is available to all people.

So it's getting very edgy for these guys already. They can't hide things anymore. So this is really interesting because it's basically saying once we ascend, once we go into that global consciousness, there's nothing more they could ever do again to hurt us.

Corey: And that's what the elites use – television, media, all these different mind control methods – to achieve is to keep us ignorant of our co-creative mass consciousness and how we're connected.

David: Because once we get it, they're done.

Corey: Yes.

11.17 Questioner: At what stage does a planet achieve social memory?

David: It's a very important question.

Ra: . . . A mind/body/spirit social complex [that's a planet of people] becomes a social memory complex when its entire group of entities are of one orientation or seeking.

David: Now think about this. It says in harvest the negative are plucked out. So once that harvest event occurs, the negative aren't there anymore. That collective mind becomes positive.

Corey: And also, that's the root of the divide and conquer method or tactic . . .

David: To stop us from unifying.

Corey: . . . that the elite use. Right.

David: You got John Lennon writing songs like “Imagine”. They don't want that to get out there. As soon as he's ready to come forward again with this new rebooted music career, he gets “assassinated” by “a lone nut gunman”. So they're trying to control that from going too far in that direction.

So Corey, this is something else that I want to talk about. You said something to me in the car today that blew me away. We've never said it on the show. Heard it from

you for the first time.

You said that you were aware of there being three out of the five Sphere Being Alliance groups that have showed themselves so far.

Corey: Right.

David: But you've had new briefings that we haven't discussed. Could you tell us what those new briefings said, because it's very relevant to this?

Corey: Well, it isn't exactly a new briefing. I've known this for a little while, but I just haven't shared it.

David: Okay.

Corey: The two so far . . . the two other beings or groups of beings, they stated that they will present themselves to all of humanity during the time of transformation and will reside with us for an age.

David: So we're not going to see them until a transformation occurs.

Corey: Until right before or during the transformation.

David: What is the transformation?

Corey: I'm assuming that it's some sort of energetic event.

David: Like the idea of the solar flash that we keep talking about.

Corey: Right.

David: So what you're saying is that the other two of the five Sphere Being groups show up for the first time as the solar flash goes off, and there are boots on the ground here with us as this happens.

Do you think that once those people show up and the negative is removed that this verse becomes true that we're now all of one direction or seeking?

Corey: Yes.

David: Is that the idea?

Corey: Uh-huh.

David: And those people are helping to protect us so those negatives can't come back?

Corey: I don't think they're here to protect us. They'll be here to guide us through the rest of our transition as . . .

David: In protecting ourselves.

Corey: Right.

David: It's incredible how much this lines up with everything that's happening to you.

ALL KNOWLEDGE AVAILABLE

Ra: The group memory lost to the individuals [on the planet] in the roots of the tree of mind then become[s] known to the social complex, thus creating a social memory complex.

David: How do you think this could apply to some things that you've seen? Is it possible for a group of beings to become telepathic enough that there's like a telepathic Internet, not technological, but that knowledge is available like, for example, in the Inner Earth, the library?

Corey: Recently, in the last several months, Ka-Aree started communicating with me telepathically in like a telepathic conference where . . .

David: And you were pretty unsettled about that at first.

Corey: Yes. And she told me that before long, this will be commonplace with all of my people and really kind of made me . . . was trying to make me feel kind of silly. But I always request face to face communication because of . . . I don't want to have trickster beings come in and cause problems.

David: Well, we could dig up another episode later on of quotes from The Law of One explaining protocol, and that if you are in that Christed state, or the White Light state or the State of Unity, whatever religious term you want to use, the prayerful, loving, centered, peaceful, White Light, telepathic communication is totally secure at that point.

Corey: She's probably there, but I don't know if I am.

David: Ha, ha.

Corey: Ha, ha. But that is definitely how that group communicates. They sit around and have conference calls, but it's all telepathic.

David: So if these two new groups are going to come in and help usher us through this change, are the Inner Earth beings going to come to the surface for a while as well and work with us directly? Or are we going to be going down there? Do you know anything like that?

Corey: I have no idea. I do know that the Inner Earth groups are petitioning to have some sort of treaty that was signed just after the time of Muhammad about preventing open contact to have that amended so that there can be more preparation work done openly.

David: All right. Well, there's a lot more really cool stuff here. So let's keep going.

Ra: The advantages of this complex are the relative lack of distortion . . .

David: This is very, very dense verbiage.

Ra: The advantages of this complex are the relative lack of distortion in understanding the social beingness and the relative lack of distortion in pursuing the direction of seeking, for all understanding/distortions are available to the entities of the society.

David: So what this is saying is that once we achieve this social memory – and that's what repels these guys – that now we are unified in our beingness. We're unified in our seeking, and all knowledge is available to everyone.

So it seems like with the Inner Earth beings that they're already there.

Corey: They are.

David: And that's the fourth-density change.

Corey: Yep. They already have that experience now.

David: And it would appear from this that once we go there, that all these embassies, all these Draco groups, they're not going to be allowed to stay in our planet or around us at all.

Corey: Well, when that happens, the energy changes are going to be incompatible for them to even be here.

David: Ah, I see. All right. So now what we're going to do is get into the actual method of how the Draco try to conquer a planet, which for people who don't really understand these cosmic laws, how things have to be authorized, it would appear, oh, it's an alien invasion just like you see in the movies. They swoop in, guns a-blazing.

That's not what you're going to see here. Check this out. And this is exactly what you've been telling us.

HOW IS IT DONE?

11.18 Questioner: Then we have crusaders from Orion coming to this planet for mind control purposes.

How do they do this?

Ra: As all, they follow the Law of One observing free will.

Contact is made with those who call [them].

David: And we know who that was. You said it started in the 1930s.

Corey: Well, before that even.

David: Right, with these Germans and then the military-industrial complex.

Ra: Those then upon the planetary sphere [that's people like us] act much as do you [that's this Law of One group] to disseminate the attitudes and philosophy of their particular understanding of the Law of One, which is service to self.

David: So how are we seeing this service-to-self philosophy being disseminated on Earth right now? What would be some examples?

Corey: Well, this call went out way before the 1930s. They've been dealing with the elites for thousands of years.

David: Right.

Corey: So for one, the money system. It'.s been called the Babylonian Money Magic System – Slave System. It's set up as a way of controlling us and mind controlling us into thinking that materialism is the most important thing, keeping up with the Joneses.

You've got to have a nicer car than the neighbors or at least comparable. That is the mindset that they tried to instill in us.

David: Might makes right.

Corey: Might makes right.

David: Manifest destiny.

Corey: And they want people to be caught up in all the lower vibrational traps of ego, vanity, all those . . . greed . . .

David: Pursuing things, celebrity.

Corey: Right.

David: What about these movies and music videos and so forth that keep having satanic type of imagery in them, satanic symbolism. Do you think that would be a part of that philosophy as well?

Corey: Yes. That's to affect a person's consciousness and to lower their vibration to keep them not looking to more spiritual information that will raise their vibration.

David: So the game really is that they have to get us to be enslaved by our own free will.

Corey: Right.

David: Because that's the rules that they have to follow. Isn't it stunning that all this stuff is right there in The Law of One yet again? So it says:

Ra: These [people] become the elite.

Through these [these elite], the attempt begins to create a condition whereby the remainder of the planetary entities are enslaved by their own free will.

David: It's right there in this Law of One material.

So that's all the time we have for in this episode. Once again, you're seeing astonishing . . . I mean, did you know that it was this close with what you've already been hearing?

Corey: No.

David: It's pretty amazing, isn't it?

Corey: It is.

David: Yeah. So that's all the time we have for in this episode of “Cosmic Disclosure” - amazing connections between The Law of One and now the Draco.

We'll see you next time. Thanks for watching.

Life After Disclosure Season 6, Episode 14

Cosmic Disclosure; Life After Disclosure Season 6, Episode 14

DAVID WILCOCK: All right, welcome back to "Cosmic Disclosure." I'm your host, David Wilcock. We're here with Corey Goode. And in this episode, we're going to kind of go into dessert instead of always just eating dinner, the dessert being, what happens when we have life after disclosure? Here to talk more about it is Corey Goode.--Corey, welcome to the program.

COREY GOODE: Thank you.

DAVID: We spent a lot of time talking about aspects of your testimony that are going to be very hard for people to swallow given the learning curve, the amount of novelty of what you're describing, how unusual this is. Are you seeing a positive future coming out of all the stuff that we're doing on this show? I guess that's where we should start.

GOODE: Well, whether our future is positive or not is still in play. That is fully up to us. But I think that what we're doing on this show and what others are doing in this field are definitely bringing us closer to some sort of a disclosure.

DAVID: You mentioned that we may not have a positive outcome, and that depends on us. Could you be a little bit more specific? Because that's a little provocative.

GOODE: Well, people that heard my update, heard me speak in my update, when Tear-Eir said that there is an optimal timeline that we are trying to achieve, but us as human beings, our co-creative consciousness, are directing us on this path. So if we don't get out there as a community and help raise the awareness and consciousness of others, then we're not necessarily going to find ourselves on that optimal timeline.

DAVID: Well, I guess then before we get to dessert, what would the suboptimal timeline potentially look like? Are we dealing with a catastrophic type of reality at some point?

GOODE: It's speculation. We don't know. There are so many different realities that we could create for ourselves. As a group consciousness being, we haven't decided where we want to go yet. And we're in the middle of making that decision right now.

DAVID: So let's say that that consciousness starts to make better choices. What would be some of those steps that would be maybe a more predictable through-line of disclosure? So what might people start to see that you could say now that they can go back and say, Corey, said that, and boom.

GOODE: Well, we're definitely going to start having more reports, photos, video, of these triangular-shaped craft and some of these oval-shaped craft that they use. They are planning on doing a partial disclosure event to where they're going to just tell us about a program that they have in low earth orbit--a couple of satellites, and these triangular locus craft that take off that the Air Force controls.

DAVID: But wait a minute. You've never mentioned on this show, at least, triangular locus craft. What do you mean by that?

GOODE: Well, these triangular craft that people see that everyone labels TR-3B.

DAVID: OK. So you mentioned two satellites?

GOODE: Yes.

DAVID: Let's talk about that for a second. This is part of what you're calling the lower levels Secret Space Program?

GOODE: Right. And the technology of these satellites, which they're stations. They're space stations. The last I heard, there were two. And they're being serviced on a daily basis by these triangular craft.

DAVID: Obviously cloaked or something.

GOODE: No, not necessarily. They have perspective in their favor. If you have a triangular craft, it's at 90,000 feet, flying fast. You're not going to be able to discern what it is.

DAVID: It's almost just like one pixel in human vision.

GOODE: Right, right. So we're on the verge of this DIA, NSA program being revealed. And the technology will be maybe 50 years ahead of what we have right now. It's barely more advanced than the International Space Station.

DAVID: What are we looking at? You say a satellite. People could think of a rolling tin can with some solar panels on it. That doesn't seem to be what you're talking about.

GOODE: No, no. They have manned satellites where they'll switch out crews. Two, three people will be on some of these satellites. But they also have larger space stations, circular space stations.

DAVID: Circular?

GOODE: Yeah. But that's a part of what I've been calling the lower level Military

Intelligence Program.

DAVID: So what would be the next step? Let's say that you are proven correct, and they announce that there are International Space Station type things but bigger and a little more advanced, and they announced that flying triangles exist. Where does that get us? I mean--

GOODE: Well, that would get us just a little bit into the partial disclosure timeline. That is what these groups are working for. They want a partial disclosure, that this type of information to come out, no information about aliens in the beginning, and then slowly give us chunks. If you remember back--was it around 1980 when we first found out about the stealth bomber?

DAVID: Right.

GOODE: Everybody's, "oh, that's real cool." And then it became old news very quickly.

DAVID: Right.

GOODE: They're expecting the same thing to happen with this lower level Secret Space Program.

DAVID: Do you have any idea of what some of the increments might be after we become comfortable with the idea of these circular satellites and triangular craft servicing them and visiting them?

GOODE: I really don't. I know there are a lot of different plans that are being negotiated. Pretty much the Earth Alliance and these secret Earth syndicates have come together and agreed on something, and that something being humanity cannot take a full disclosure event. It would be chaos. And they're right. It will be. A full disclosure event is not going to be a kumbaya moment where everyone holds hands and we're all excited. It's going to be very disturbing, upsetting, and it's going to be a process that us as humanity, we're going to have to work through.

DAVID: If we had the data dumps that you had mentioned before that had been prepared, would those data dumps involve a full disclosure if they did happen?

GOODE: Yes. The data dumps are the full data. And they've now decided, because of the different kill switch for the internet, ways to bring down electrical grids to keep the information from getting out until they remove it from the system--they have decided that they're not going to do an all in one data dump, document dump. They're going to do it in spurts. And most likely, it's going to be a tit for tat kind of data dump release--the Alliance releasing information about the Cabal and their selves, but

mostly looking negative about the Cabal. And the Cabal's going to say, hey, wait a minute. We weren't the only ones with dirty hands. Look what this so-called Alliance has been doing the whole time.

DAVID: So in a life after disclosure, one of the things that probably will happen based on what you just said is some sort of understanding on a mass level that there was an organized cult running world politics. Do you think that's in the cards as part of the partial disclosure?

GOODE: No.

DAVID: No?

GOODE: No, not as I've heard it described. They're going to try to keep all of the worst stuff hidden--the crimes against humanity, all of the things that they've done here on Earth to people to keep the secret. That kind of stuff, they're not going to want in public for a while.

DAVID: When we get to the point that extraterrestrials start to become involved in this, how do you see that changing our society? Like for example, you've talked about Ambassador Mica in some of our earlier updates. And he's describing what happened to his planning. And I know that you've met with him more than since the last time we had updates. So could you get a little bit more into what the really big picture perspective is like, not just this drip, drip, drip disclosure but once we really truly have gotten through that horrible, breaking-through experience and we get the full knowledge of what's going on.

GOODE: I think that is going to take a generation or two. I mean, we're so programmed in our different belief systems, the way we've lived and the way we're programmed, to worship. It's going to be very difficult to bring in beings that we would consider higher than us, spiritually, technologically, without us feeling this compunction to give away our sovereignty or to worship them. We're going to have to overcome that as well. And that's going to take a while.

DAVID: Or to want to destroy them.

GOODE: Or yeah. And Ambassador Mica said that in the beginning, they don't expect us to have open arms towards non-terrestrials. They expect us to be very leery of any being not from this planet.

DAVID: Now, the Blue Avians, at one point, had told you that the Alliance was not to be attacking any ICC or other faction facilities in our solar system because it was going to be handed over to humanity.

GOODE: Right, the entire infrastructure is going to be handed over to humanity once we've gotten through this process. And we'll be a "Star Trek" civilization overnight, because all the infrastructure is already up there.

DAVID: Is there any type of standard boundary around the experiences that people have when they're brought into secret programs and they first come into contact with an extraterrestrial being? Is there a sort of subset of predictable reactions that they take when they're actually brought into that for the first time?

GOODE: Some of the people, they will just drop them into the situation with non-terrestrials. But they usually acclimate them first. You're told, yes, it exists. You're shown a picture. You see video. You read more information about them. And then you'll see one far away. And then you'll see one closer. They acclimate you to the situation if they want you to be an asset. If you go through this process, you're going to be laying on the floor, sucking your thumb for a little while, and you're no use to them.

DAVID: If they just throw you in?

GOODE: Right.

DAVID: Are there people that have had psychotic breaks if they get thrown right in?

GOODE: Absolutely, yes. That's a fairly common thing to happen when people especially meet some of these very upsetting looking non-terrestrials.

DAVID: Are there unfamiliar smells that they experience when they meet those beings?

GOODE: Very strong ones, yes. Yes, especially the reptilians--ah, they're horrible. They're horrible. They smell like this musky urine smell. And it is just horrible. So yeah, I mean, your eyes, your brain's going to have to deal with what you're seeing, what you're smelling, what you're hearing from them.

DAVID: I remember Pete Peterson describing that there's sort of an involuntary vomiting reflex that you have to really fight not to have when you meet unfamiliar looking, intelligent being.

GOODE: Even if they're nice, benevolent beings, for a while, until you get used to them, you've got this very sick feeling in the pit of your stomach. Something just doesn't--it just feels wrong. It doesn't feel right. They're not supposed to exist, and here you are working beside them. So it takes a while for you to get used to being in their presence.

DAVID: So the other day, I was here, and I watched you taping "Open Minds" with Regina Meredith. But you said something really interesting I'd never heard you say before about the money system. And you said any planet that has a money system is basically what?

GOODE: A controlled planet. Yeah, it's going to be a prison planet. These planets, to where they've had freedom, they've done completely away from a Babylonian money magic system because it's only there for control. And if you don't need control, it's useless.

DAVID: Wouldn't you say that a lot of people who might be on the more winning side of the money system would have very strong resistance to the idea that people they think of as lowly or lesser than themselves would now have equal power and equal opportunity as they do?

GOODE: Well, I believe, before we get to that point, we're going to have some sort of an economic shift, that we're going to go to a new economic system first, that's going to be controlled in the East, that we will have a time where we'll have a jubilee. There will be debt forgiveness. People will get a certain amount of money depending on how much damage they had suffered from the control system that was set up. So a lot of people now that enjoy sitting back, calling their selves millionaires or billionaires, when that happens, they may find that [FSHHT] all of that has been erased. And they may be on a more equal playing field with everyone else.

DAVID: Wow. Are you saying--I think you're saying it, but I want to try to pin you down a little more--that this jubilee is part of the plan?

GOODE: Yes. Absolutely. Yeah, that's been a part of the negotiation from the very beginning. And we've been hearing about it for years. Next month, there's going to be a crash, and a new system's going to be set up. We've been hearing about it forever. That's been going through negotiations all this time.

DAVID: How would they calculate what your level of damage is from the Cabal? I'm not sure I understand that.

GOODE: Well, if you're in a country that has suffered more than other countries, you're going to get more of a boost to try to bring you up to an equal level. One of the things they are describing right now, as a part of this partial disclosure and changing the financial system, is to also level the playing field in the monetary system to where every country's money system is going to be valued the same. That's still in negotiations because a lot of them want it to be based on some sort of a GDP type situation.

DAVID: Right. So this financial system change, now I've heard about what's called

SDR or Special Drawing Rights and the idea that currencies get thrown into a "basket," quote, unquote. And the basket represents, like you said, the level of assets that a given country has. And then that weighs in its percentage of how much equity their currency has as part of this global system of trade. Is that seeming to be the direction that this is going?

GOODE: Yes, that's definitely in the negotiations. They basically have come up with an overall, OK, this is what we're agreeing to do. And they're starting the process. But all the fine details, they're still negotiating, deciding exactly what information, when. And that will be negotiated all the way throughout the process. Because if they give us a little bit of information and react in this way, they wanted us to react in another way, then they're going to change the way they're ceding the information to us. The information is going to be delivered in a mind control kind of way. That's what they plan on, anyway.

DAVID: And you believe that this is a widespread consensus that's now been reached amongst the Alliance.

GOODE: Yes. A lot of them honestly believe that it would be irresponsible to do a full disclosure event because humanity just wouldn't be able to handle it. And that is the reason behind why some of these Alliance groups are agreeing with these syndicate groups. They honestly believe that it would destroy society.

DAVID: How much extraterrestrial involvement is there in this discussion? In other words, are these Alliance groups meeting with certain benevolent or negative ET faction and involving them in the discussion?

GOODE: No, what's really happening is like these syndicate groups, they're meeting with non-terrestrial groups. And the Alliance, they're meeting with non-terrestrial groups. But when they come together to do the negotiations, they're all basically proxies of these non-terrestrial groups. They're there with those groups' agendas in mind in the negotiations.

DAVID: Now you've mentioned the possibility of debt forgiveness, but then you've also said that they don't want to disclose any of the occult involvements of this Cabal. So how would we get to a point that we are acknowledged that we've been screwed and we're given reparations?

GOODE: Right now, the majority of humans on this planet are so mind-controlled that they don't even listen to conspiracy theory. So this is something that they see they could do in a feasible way.

DAVID: I don't see how they could tell us that we've been screwed by the Cabal and give us reparation payments without the occult aspects also--

GOODE: Well, some of the occult stuff will come out.

DAVID: Oh, OK.

GOODE: Some of it will, but not all of it. They're going to control what comes out. So it will be nice, bit-sized pieces for the masses. [THEME MUSIC]

DAVID: When we're looking at the things that you said to us, I am consistently amazed at how many other insiders were telling me this stuff, totally off the record, before you ever came onto the scene. What are some of the oppositional elements that are starting to come out against you now as a result of the work that we've done on this show? What is being attempted?

GOODE: Well, I was informed that there is a campaign going on that is going to discredit as many SSP whistleblowers as possible so that they will have a better chance of success in doing this partial disclosure.

DAVID: Why are they trying to knock down SSP whistleblowers right now?

GOODE: What's about to occur is that there is going to be a revelation of a secret space program. And they're going to say it's the Secret Space Program. And this is the one that's ran by the military industrial complex. It's controlled by the NSA, DIA, and the Air Force.

DAVID: Now let's say that we actually achieved full disclosure at some point. What does the world look like after full disclosure? Let's just start talking about that.

GOODE: After we've dealt with all the consequences of full disclosure?

DAVID: Well, yeah, I guess it's a complex discussion, then. Because it's not just what happens after it's over. It's what happens as we start to get it.

GOODE: Exactly. Yeah, if we get a full disclosure, as I've said before, it's going to affect the psychological and emotional state of everyone on the planet. It's going to be a rough time. Because everyone that has their personal belief systems, they're all going to be challenged immediately. And then we're going to find out we were lied to. And we're going to wonder, are we being lied to now? We're going to have a whole process to go through.

DAVID: Now, you yourself have said that you were told you would be shocked by some of the things that would come out, that they'd even surprise you in a full disclosure scenario.

GOODE: Yeah. If it's going to be something that will surprise me after I've heard

about all the slave trade and all these other dark programs, then that's not something I'm looking forward to hearing.

DAVID: Let's just say that we are going to use Mica's people, who you've discussed in previous episodes, as a statement for how we are going to proceed through this. I guess one question, first of all, is, what does it mean to defeat the Draco exactly? It seems that the MIC has the technology to do that now. We've talked about that. They can shoot down ships and so forth.

GOODE: That's not enough.

DAVID: What is really involved in it?

GOODE: What you have to defeat is the control mechanism of the Draco or what is controlling the Draco. And that is the artificial intelligence. And when we're able to wipe out artificial intelligence and it can't back itself back up and reinfect people and other beings, then that's the only time that we're really going to be able to say that we have a chance to defeat the Draco.

DAVID: Well, I know that Mica's people seemed to have said there will be training given to certain individuals for the defeat of the Draco. So that doesn't seem to just involve doing an EMP strike on AI.

GOODE: In conventional military terms, if you go in and knock out the technology, you still got to go in and physically take the infrastructure. So if we knock out--the AI is knocked out, we still have a group of beings that have been serving the AI. And that's probably going to be a good time to hit them, because they're going to be confused once they've lost the group that they report to.

DAVID: Do you think that these beings can live if the nanites in their bodies short circuit? Are they still biologically functional?

GOODE: I believe that, yes, they are still viable--a separate biological entity, yeah.

DAVID: So what is that going to look like? In terms of whatever Mica's people ended up doing, did you ever get anything specific from him about whether they took out the AI first and then went after the Draco, just like you said?

GOODE: Yes. The AI was taken out by solar activity.

DAVID: Really?

GOODE: And then the military, which they had a military at that time, rose up and took out the Draco when they were in a confused state.

DAVID: What could that world look like where we've had an EMP that takes off the AI influence? Are we now seeing Draco flying around in the sky? We know where they are? Are they now trying to overrun the Earth? Are we seeing them instead of them always hiding like they were before? Is that part of what's going to happen?

GOODE: Yes, they would be revealed and also exposed and on the run.

DAVID: Wow. Now, Mica looks like a man of African descent based on the art that you commissioned, more or less--

GOODE: Sort of, yes.

DAVID: --with some maybe Asian features also. Did they have more of a homogeneous look to them on their planet than we do here? Because it seems like we have very sharp differences in racial phenotypes.

GOODE: They have other races and looks as well to their group, yes. He mentioned that there was genetic diversity, and they had different species.

DAVID: Different looks, different races.

GOODE: Right.

DAVID: Interesting. So at this point, we're saying that there is a solar flash that knocks down AI. But you've also described before that the solar flash should have really remarkable effects on human consciousness.

GOODE: Yes.

DAVID: So how do those two things fit together? What is the effect on human consciousness that will start at the same time that we begin trying to extricate ourselves from the Draco problem?

GOODE: Well, if we didn't have these energetic influences, just getting this disclosure--and after the solar flash alone--would send our consciousness into overdrive, because our consciousness has been suppressed technologically by these negative groups for so long. But pairing that with these energetic changes that are occurring, we're going to start becoming much--it will be much more difficult to pull the wool over our eyes to begin with. And deception is how they've ruled us all this time. And if they can't deceive us anymore, we are empowered by the truth.

DAVID: You also have said, when we've talked about this consciousness shift, that there is a very upsetting, jarring aspect to it--the sort of, if you throw up, you'll feel better, side of the story. Let's go back to Mica's people now. Did Mica's people have

that experience?

GOODE: Yes, it was very rough.

DAVID: Really?

GOODE: It was. And they had these other guardians that came in to help them. And they called them guardians, but some of them were beings from nearby planets that came in and helped them in the way that they want to help us.

DAVID: Really?

GOODE: Yeah. So they received assistance. But they were given time to process the information before these beings came in and started working amongst them and helping them.

DAVID: So I still am having a little trouble understanding. If the solar flash goes off and people are thrown into some sort of disconcerted state as they adapt to this new consciousness, what does that look like as a planet? And what does that look like in terms of if the AI has already been taken out when that happens and now everybody's disconcerted, everybody's having a dark night of the soul, how does that transition into defeating the Draco? I'm not sure I get that.

GOODE: The way it was described to me, they are left in complete confusion, complete disarray. They don't have the natural pecking order to contact and find out what they're supposed to be doing because who they report to is going through the same thing they are.

DAVID: So in a consciousness sense, this is almost like them being knocked back to caveman level.

GOODE: Well, let's put it this way. If a solar event happened and there were no aliens here, we're so dependent on technology that just imagine the disarray we would be going through. They're even more dependent on technology. They are controlled by technology. So it's going to be many times worse when that technology is removed.

DAVID: Some people who are watching this show are going to be saying, hey, what about amnesty? What about clemency? Aren't some of these beings, if they've been totally stripped of everything they had, we find out that they really disliked what they were in and they don't want to be part of it, are we going to have amnesty for those beings? Or is there going to be like a rehab possibility for them, some sort of imprisonment where they can't do harm but they're able to rehabilitate? Or is it more like a genocidal cleanout?

GOODE: How we handle things is going to put us, as a species and a planet, on one path or another. If we handle things--you know, scorched-earth, kill everybody that was involved, then that--you can't get a positive out of the negative. If we start off on the wrong foot, then we're probably going to end up on the wrong path. So I'm not an advocate--

DAVID: I would strongly disagree, yeah.

GOODE: I'm not an advocate of clemency at all. But at the same time, we're going to have to find some sort of middle ground. I mean, we're just going to have to. And that's something we're going to have to do as a people, together.

DAVID: I couldn't agree more. I think it's a big, big mistake. In light of everything we know from the Law of One and how the Blue Avians appeared to be the embodiment of that source, it would be a huge mistake for us to act like everyone is equally guilty and everyone should just be murdered.

GOODE: It'll be very difficult for us not to react that way, though. As a species, when this information comes out, people are going to be beyond angry.

DAVID: That's very understandable. So the context for our discussion also includes that I just wrote this book, "The Ascension Mysteries," which for people who are out there saying that you are the only guy saying this, I put an incredible amount of stuff together of other insiders that are all saying the same things that you've been saying. There's a lot of unknowns about this solar event, and I go into a lot of detail about ancient teachings, which in some cases seem to imply--and this would include the Bible, that whatever the solar flash is, our bodies are changed into something more energetic. It's a very discontinuous event in which maybe one part of the Earth goes through a cataclysm, but then people on this other layer of time or something do not experience it.

GOODE: Well, the way it's been put to me several times is that this shift is a consciousness shift that occurs. And because we have a co-creative consciousness that interacts with matter--the matter, our bodies, will change in a progress afterwards or during.

DAVID: Well, we have statements in the Bible, for example--and I'm going to go to other texts as well. But the Bible says, flesh and blood cannot inherit the kingdom of God. And the Kingdom of God, of course, turns out that it means outer space when you correct the translation of "Elohim" and the translation of "heaven." So flesh and blood cannot inherit this new reality that we're going to change into. You have the Zoroastrians, and they talk about phoscorite, this solar flash. And they say, the wicked are consumed in it as if they're burned in fire, but that the just go through some sort of transmutation. In the Bible, book of Matthew, it says that the negative are burned as if

they were wheat or weeds tied up into bundles and burned in the barn. So you say a consciousness shift. Based on those Bible quotes and some other things that I've just been alluding to, how far of a shift are you hearing that this is going to be?

GOODE: There are going to be immediate changes, but it's going to be a gradual shift. Mica's people did not all of a sudden start levitating and flying around after this occurred. They had to go through a process. And it occurred just like evolution, but it happened extremely quickly.

DAVID: Well, what I'm also interested in is the Law of One speaks extensively about that there is a separate and habitable fourth density sphere of Earth that is activated on when this happens, and that we now live on that sphere, and that the third density sphere becomes no longer habitable for human life. So it does appear that we're hearing about a very major splitting in which one level of Earth is catastrophic but another level of Earth is activated and can now be lived on. And it's like a hologram of the previous one, but at a higher vibration.

GOODE: It could be. I know that with Mica's people, things did not unfold as their ancient teachings had expected exactly. So we may be reading too much into it. It may not mean exactly what we think it does or what we want it to mean. So there are a lot of unknowns, like you said, about this solar flash and exactly what is going to occur immediately. His people, they're still flesh and blood. They've been gaining all of these abilities--able to telepathically connect with each other. Their life has extended a little bit. And they expect it to keep progressively extending. They've gone through this process and are still going through this process, according to what Mica said.

DAVID: Do they have telekinetic abilities starting to form?

GOODE: No, no. They can't fly around or move objects with their minds yet. But they have the ability to communicate telepathically. And they have a much deeper understanding of the universe than they had before. They see concepts from a totally different perspective now.

DAVID: One of the things that we've heard about ascension is this idea that the veil is dropped, and we now have awareness of our other lifetimes as well as the one that we're in. I've had it explained to me from the beings themselves that it's as if you have an unbroken continuity in the astral plane in your spiritual form that goes from lifetime to lifetime. And that once you go through this, it's as if you re-access that greater part of yourself. The limited human mind is now unlimited. You have access to this other part. You remember being that person.

GOODE: Mica stated that they became in closer communion with their higher selves. That right now, we have a hard time connecting with our higher selves, most of us.

After this event, they had full access to their higher selves or what they would consider full access after what they had before. So--

DAVID: Do you know what that looks like? What does that mean?

GOODE: I think it means that there is a veil also between yourself and your higher self. When that is removed and you are able to commune with your higher self, then you're going to have access to all these past life memories and future life memories.

DAVID: Did he ever explicitly tell you that they now have access to parallel lifetimes or other lifetimes?

GOODE: No.

DAVID: OK. But you strongly assume that they do?

GOODE: Yeah, I surmised that your higher self is going to have a recollection of who you were in the past. And if you have direct communion with your higher self, it stands to reason to me.

DAVID: How quickly do angelic beings come on the scene, beings that are obviously non-physical, energetic beings that are of a significantly higher level?

GOODE: Immediately after the flash occurred, they had guardians come in that were associated with the Sphere Being Alliance, that didn't physically interact with them as much as they were there to make sure everything stayed status quo in their star system, to make sure that no other beings came in and took advantage of them going through this process and taking advantage of them in any way.

DAVID: When we have talked about the Super Federation before, you mentioned that as these solar flashes happen, there's sort of an interstellar rescue operation that takes place from these Super Federation groups that are doing their genetic, long-term projects. Is that part of what you're describing now, or is that something different?

GOODE: He did not describe anything like that. What he described was these two guardian races basically coming in and I guess being like police that don't interfere. These groups wanted Mica's people to solve their own problems and fix things on their planet, just like they want us to.

DAVID: So what did the tyranny of the Draco look like for them on their planet?

GOODE: They were controlled by sort of like a new world order. They didn't have different countries that might war with each other. Everything was controlled by one government on their planet, already at that point.

DAVID: And it was similar to what we have here where the government is people like them, but they're controlled by the Draco, which is in turn controlled by AI?

GOODE: Yes. And he said, towards the end, it became more overt that the Draco were controlling everything. But I guess it's kind of like people waking up here. We're becoming more awake. That's what occurred on his planet as well.

DAVID: So once we see this flash occur, you're saying that positive beings of some kind come in and make sure that nobody can mess with the process.

GOODE: Right.

DAVID: What does that actually look like for the people? How do they trust what's going on? How do they know what this is?

GOODE: For the most part, they don't know that there's a guardian race that's come in to oversee their process.

DAVID: Oh.

GOODE: Yeah, they're oblivious to it. There will be people in their society that will know about it, kind of like Mica knew what was going on. But for the most part, they don't know. They're focused on their planet, on their healing and making it through this process.

DAVID: Did Mica's solar system also have these sphere assets come in to help transition it?

GOODE: They went through the exact same thing that we're going through.

DAVID: To what degree do they have access to technology compared to where we are now? How much has that changed for them?

GOODE: That changed almost overnight. Because like what's expected to occur here, all of the technology they had was basically made inoperable during these solar pulses that occurred. And they had to start over again. And when they started over again, their technology started becoming more of a consciousness-based technology--much more advanced.

DAVID: And you're saying that's also expected to happen here?

GOODE: Yes. Yes, once all of this technology that we think is modern is removed--we have these different secret space programs that have built out an infrastructure--that what's going happen to this infrastructure during this solar pulse? So we're going

to go from using electronics only to using different types of technology that is consciousness-based. And Mica's people are doing that with--they use crystals and different types of stones that somehow they're able to interface with, and their consciousness, effect change on another object or being.

DAVID: There was a whistleblower associated with the original Disclosure Project where he was tasked with remote viewing. And the job of his group was to create a communications system that was telepathic because there was an anticipation of a great solar event that would make electrical equipment inoperable. So my point being that we've had other insiders come forward who are also anticipating here that this is going to happen.

GOODE: If you noticed, President Obama signed a very interesting executive order.

DAVID: Yeah.

GOODE: In this executive order, Obama stated that all of these federal agencies needed to prepare for solar flares or geomagnetic disturbance that would bring down not only the electrical infrastructure but would affect technology long-term. So they're building EMP devices to test it in probably a city near you, at some point.

DAVID: And most people who watch this show are probably savvy enough to know that there was this thing in the 1800s called the Carrington Event. At the time, we only had telegraph lines, and it melted everything, just from a solar flare. So this is a very serious concern. What do we do without technology? I mean, do these beings that show up help us once we lose all our toys so that we don't just become totally bereft of the basic necessities for life?

GOODE: If we put out a calling, then we'll have beings help us. But during this time period, they fully expect us to be untrusting of other beings coming in, bearing gifts, after we had just broken the control system of another non-terrestrial group.

DAVID: Did that kind of thing happen with Mica's people as well?

GOODE: Yes.

DAVID: So they went through a period in which much of their entire technological infrastructure was stripped from them?

GOODE: Yes. And everyone was in a bad psychological state. They had to overcome the technical issues and the psychological issues. That's saying a lot. That's a lot to overcome. And they were able to overcome it and flourish.

DAVID: What are the most likely time windows of when we would expect this solar

flash to happen here? Because it obviously is going to happen.

GOODE: Yes, it's going to happen. When I was in the programs, they had a window of between 2018 and 2023. And most recently, I heard that they had stretched it to 2024.

DAVID: Meaning that that's not when it's going to happen, but that's the last of when it could happen.

GOODE: That's the window they expect it.

DAVID: 2018 to 2024.

GOODE: Right.

DAVID: It does appear, from what you're saying, that this would create some losses of life, especially perhaps in countries that are really, really dependent on the immediate usefulness of their technology to provide basic goods and services.

GOODE: Well, think about all the different health technologies that are used to keep people alive. When that technology is gone, yeah, I expect that there's going to be loss of life. And these new technologies aren't just going to appear. It's not going be like, oh, we lost all of our technology. Oh, here is a zero-point energy device. That's going to take a while to roll out as well. And that is something that Mica did talk about, was that the new technology--there was a period of time where they were developing this new technology from--they had kind of secret programs as well--that there was a lot of physics that their general population didn't know about, just like we don't know about.

DAVID: Did Mica's planet have something akin to a military industrial complex with a space program?

GOODE: Yes.

DAVID: That was secret?

GOODE: Yes, they were very militaristic. And within a generation, they were able to get rid of their military altogether.

DAVID: Did the Draco also weaponize that military and try to use it for interstellar combat?

GOODE: Yes.

DAVID: Interesting.

GOODE: It was mentioned that there is a karmic tie-in. Right now, we have people, human beings, flying alongside the Draco in other star systems or in between star systems, causing problems. We're going to have to pay for that in some way.

DAVID: Well, I wouldn't necessarily think that people who have never contributed to that would be equally karmically liable as people who did participate in it.

GOODE: No, but as a society, the whole society is receiving the karmic backlash at the same time. It's going to affect everyone.

DAVID: Mica's people obviously went through a pretty difficult transition, based on how you're describing it. What is the feeling you get when you meet one of them now? What do they look like? What's their energy?

GOODE: Completely beaming with love. And the vibration is completely different than ours. And also, their mind, they don't have 10% of their processor dealing with all of this negative stuff, or more of their processor. Their processor is fully focused on continuing this transition. They are able to focus like this now after these AI and other control mechanisms were removed from their planet.

DAVID: And yet, despite them having this sort of benevolent, beatific, meditative consciousness, you say that they actually like us.

GOODE: Oh, yes. They're very excited and look very forward to interacting with us and helping us make this transition. So they do want us to not be fearful of the transition, but they would like us to understand that it's not going to be what many of us think it is going to be--just a flash of light, angels everywhere, and then it's over.

DAVID: And we suddenly act like Jesus and have all his abilities.

GOODE: Right, it's going to be a process.

DAVID: Interesting. All right, well, this is some of the stuff that I love to hear the most. I hope you've enjoyed it as much as I have. This is "Cosmic Disclosure." I'm your host, David Wilcock, and we'll see you next time.

Interview with Insider Pete Peterson Season 6, Episode 15

[Cosmic Disclosure; Interview with Insider](#) **Pete Peterson** Season 6, Episode 15

17 Dec 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I am so glad to be bringing you none other than Pete Peterson. So, Pete, welcome to the show.

Pete Peterson: Thank you, David.

David: When you first started talking to me, one of the things you said was so surprising about an extraterrestrial experience that your family went through with you.

Pete: My parents had a big formal English garden out behind our house.

David: Okay.

Pete: And had a nice raised gazebo, orchestra stand, whatever, and they did a lot of city events. This town was about three blocks long, maybe four.

David: Ha, ha.

Pete: But people would come and have their wedding ceremonies in the formal garden

on the little trellis, grape arbor stand that was there, a raised stand.

David: Okay.

Pete: And we were having this . . . I was 10 years old. I remember that. And we were having this wedding there.

And just about as they were to say their vows, somebody said, “Holy cow!”, or words to that effect. “What's that?”

And everybody turned and looked. And for the next hour, for God knows why, we were given a show of flying saucers. And that's the only thing you could call them. They were every kind of shape and size you could imagine.

Some actually went through the air like subway cars, which you don't see, but like a wild train at Disneyland. And they had little round holes, and you could see that there was something inside the hole, because there was light inside like there would be from an airplane.

David: What were some of the shapes that you saw?

Pete: Well, we had cylinders. And some went this way [vertical] and some when this way [horizontal], but they didn't seem to turn this way [horizontal and then vertical], they just went this way [either stayed vertical or stayed horizontal while moving].

David: How many objects did you see in the sky, roughly?

Pete: Oh, at one time I might have seen 30.

David: Wow!

Pete: And most of the time you saw five or six. Then they'd come by and make passes. They'd come by and go straight up and disappear. They'd come straight down and turn and go sideways. They'd circle around.

There were four little cities there together. There's New Plymouth, Idaho; Fruitland, Idaho; Payette, Idaho; and Ontario, Oregon. It's right on the Snake River. Right off the backside of my father's farm, or my grandfather's farm, is the Snake River. And that's the division between Oregon and Idaho in western Idaho.

And so they were seen by about 6,000 people in those towns.

David: Wow! So you mentioned as far as shapes go that there were vertical cylinders,

horizontal cylinders . . .

Pete: There were tops, I called them, because I had a toy top as a kid that you push this thing up and down and it would make noise and spin.

Then when you go back into history, you look back to the German bell [it] looked that way.

David: Right.

Pete: So there were some of them bell-shaped, and some of them were absolutely just round as this table and then just perfectly rounded on the sides like a traditional flying saucer.

David: Hm.

Pete: But some of them usually had like a cupola effect on it, like a saucer with a cupola, like a control area where you could see out of, and a bottom of it that was there.

And there were some of them that put down landing gear and lifted it. How, I would assume it was landing great rather than . . . It might have been stabilization gear, but three legs would come down.

And they'd have a pad at the end about the size of this table [about 5', or 150cm, in diameter].

And some of them came within, I would say, as close to 60, 70 feet [183~213 meters] from us.

David: Wow! And how many people were in your party?

Pete: There were probably, I would guess, as many as 150 people at this wedding. We had a good-sized backyard, and it was full.

David: And this sighting obviously is so dramatic that there's no denying what's happening. It's not like . . .

Pete: No, it was no fiction of no one's imagination. Everybody had the same story.

David: Right. Were people screaming? Were they running and hiding? Or what was going on?

Pete: I think they were mostly absolutely jaw frozen. I mean, we were . . . It was stunning. And I mean, it was like you went to the final explosion of a fireworks show or something. I mean, it was just boom, boom, zoom, zoom, zoom, zoom, everywhere, all different times, but almost like it was coordinated because they didn't run into each other, and there were so many of them, they could have.

David: Huh. Could you see machinery or rivets on the outside or anything like that?

Pete: Some you could see rivet marks. Some you could see what I would now call weld marks. I mean, there were lines, but they weren't rivet heads or rivets. And some

of them were homogeneous.

Several of them were, to me, obviously organic.

David: They had an organic appearance.

Pete: If you look at something engineered by man, it usually has right angles. It has straight lines.

David: Right.

Pete: You look at a banana, it's got lines on it.

David: Sure.

Pete: And it's shaped geometrically.

David: This goes on for an entire hour in front of this whole wedding party?

Pete: For an hour. I'm a kid. I'm 10 years old. I'm guessing it would have been about an hour.

David: One of the first things about you that I find interesting, Pete, is that your family has a direct connection to a very famous scientist. So whey don't you tell us a little bit about that?

Pete: My grandfather on my father's side, a Peterson, was Tesla's right-hand engineer and confidante and a few other things at the Colorado laboratory.

David: So your grandfather had direct access to the Tesla knowledge and technology.

Pete: Right, and was a co-conspirator of that technology, if you would. The problem was that Tesla was . . . His thinking was very different from the thinking of the typical scientific world at the time he was here.

And his ideas were so revolutionary that they appeared to be non-founded. They were so far advanced that people didn't understand what he was talking about, and there aren't . . . The problem I've had my whole life, there aren't words to discuss reality the way it is.

We have to take ancient reality and use those words and then try to talk about it.

David: Hm. What year were you born?

Pete: 1940.

David: Okay. So somehow in eighth grade, you build an antenna whose performance far exceeds that which the U.S. government was normally using for military applications.

Pete: Oh, they didn't have anything like it.

David: They didn't have anything like it.

Pete: Like they had 1,000-watt radios, and they planned on them talking 280 miles.

David: Okay. 1,000-watt, 280 miles.

Pete: I had a 1-watt radio that I could talk anywhere on Earth.

David: Wow! I mean, let's just talk about results.

Pete: Well, the results were . . .

David: You say it could talk to anybody in the world, and if they test that . . .

Pete: You could take their little backpack radios they already had or their little walkie-talkies they already had, and you could talk 8 to 10 times farther.

David: Wow!

Pete: And if you were in a canyon, like where I live in a hole in the ground, if you live in a canyon, you do what's called nuclear vertical incidence skywave. You shoot it straight up in the air, and it goes straight up in the air and comes right back down, but it's on the other side of the mountain.

So now you can talk over the mountain, where before you had no communication over the mountain.

David: How did the government find out that you had done this?

Pete: Because I won the science fair project, and it was antennas, and antennas was a big thing for the government.

David: Okay.

Pete: I mean, they spend millions and millions of dollars. So I built a few antennas for

the government. And as usual, I was going to patent it. And I went to patent it, and they said, “Sorry, this has already been taken by the government.”

The first people that look at a patent are some agency of the government.

David: There was a journalist just in 2014 or 2015 who actually said that - this was a whistleblower, a Snowden-type of thing – that all patents must go through DARPA [Defense Advanced Research Projects Agency] first.

Pete: They have to go through somewhere.

David: Right.

Pete: And they do.

David: So that already did come out in the open.

Pete: So I never heard back from them, because I hadn't applied. If I'd applied for a patent, I'd have been paid and all this other stuff.

David: What was the first interaction that you had with the government? Did somebody come to your house? What happened?

Pete: This fellow from the local radio club that I was a member of, local ham radio club, had been involved in that kind of stuff, or was still involved in that kind of stuff.

They had people . . .

David: Government stuff?

Pete: . . . in every town that go to all the science fairs. They go to all the club meetings. They keep their ear to the ground.

David: From the government?

Pete: Yeah, they're paid by the government to do this.

David: Okay.

Pete: Some are agents, and some are just people that had the training, and they retire, and they're good people and have a good record, and they go to them and say, “Well, we'd like you to do this for us, and we'll pay you this much money.” And they usually say, “Yes”.

David: So he finds you at this science fair.

Pete: So he finds me at the science fair, but he knows me, because we're in the same club. And I give talks to the club all the time.

David: A ham radio club.

Pete: Ham radio club. I'm teaching them all kinds of things, and they can double their power and triple their power, or their apparent power, actually.

David: And how old are you at that point?

Pete: 14.

David: Okay. Do they show up to your house?

Pete: They showed up at the school.

David: Okay.

Pete: And took me and contacted my parents and said, “We're going to take him for a while.” Ha, ha, ha.

David: Okay.

Pete: This has happened numerous times. So they took me off, and we went down to some fort in Utah. I don't have any idea where it was. I mean, they drove me around in the middle of the night in circles and circles and crap and took me somewhere.

So I went down there, and I brought some antennas and some antenna manufacturing parts with me, and we made some antennas – showed them how to do it. That was the last I heard.

And then they called back, and they said, “We really want to thank you for this. You're an asset to your country, and you've helped out a lot, etc., etc., and we'd like to pay you something. Would X amount be enough?”

Well, my mouth went open, and my eyes went open, and I said, “Oh.” Then I remembered things my granddad had taught me.

He was a merchant. Ha, ha. I said, “Well, that would be about right.” Ha, ha. So they paid me.

David: Are we talking like five figures, six figures?

Pete: No, no, no. We're talking . . . yeah, five figures, just five figures.

David: Okay. That's very substantial for a . . .

Pete: In those days, it was . . .

David: . . . a 14-year-old kid.

Pete: Yes, siree.

David: So when is the next time that the government contacts you again after you build these antennas for them?

Pete: It was after the third science fair. Two guys come to the school, and they pick me up. And, I mean, in those days we don't have a lot of the problems we have today.

And they picked me up and wanted to take me down to the office. And they showed me . . . one guy shows me an FBI badge.

David: They were wearing civilian clothes at this point?

Pete: Civilian clothes.

David: Okay.

Pete: This is my ID. This guy is my driver. Turns out he was the guy, but he was driving.

David: Ah.

Pete: So they drove me around to talk to me for a while about the different science fair things I'd done and other things I was working on – other things I was doing.

And they said, "Well, we'd like to invite you to become a student of a very famous school." Ooh, that's interesting.

So they took me to some office downtown, innocuous office.

David: Downtown Boise, Idaho?

Pete: Yeah.

David: Okay.

Pete: It was in the post office building, and it had a number on the door. And I went in there, and the guy that had been the driver became the talker.

And there were two other guys there and they had a long discussion, and they taught me about what White Star Ranch does.

Then they said, “We pick the brightest kids, and we put them into a training program. And we let you go through school as normal through your senior year, except that in the summers, you work for us, and we put you in super laboratories and things. That was . . . Wow!

And so when they found out I was interested in everything, they tried to give me a test. Well, they tested me for three days.

David: What do you think the White Star is?

Pete: It's the name of a . . . innocuous name for a place where they take care of sick, physically deformed, mentally deformed children, and where they take care of geniuses.

David: Okay.

Pete: And you go there and work with them, because I'll tell you, all those kids are geniuses.

David: These are children who have physical deformities, but their mind works?

Pete: Physical deformities . . . Their minds work like you can't imagine.

David: Okay. Okay, so the White Star Ranch has, then, some children with deformities, as you just said, . . .

Pete: Right.

David: . . . and some who are genius kids like yourself.

Pete: Well, they're like Stephen Hawking.

David: Right. Okay.

Pete: And that's just an absolute 100% example.

David: Right.

Pete: And they come in all fields. One of the groups that has one or two groups ahead of me was Westmoreland, Nixon, Kissenger, you know, that whole group of people.

They were one of the groups that was before me. Their thing was geopolitics.

David: So they worked at White Star Ranch.

Pete: No, they were . . .

David: They studied there.

Pete: They studied through White Star Ranch.

David: Okay. How many White Star Ranches in America were you aware of?

Pete: I eventually became aware of probably 20, just as a guess. Some of them were guesses, but they were good guesses.

David: So then 15 is when you actually go to White Star Ranch, age 15?

Pete: That's when I learned about it.

David: Okay.

Pete: And then we visited later.

David: Okay.

Pete: We signed up. My parents signed me away – made an agreement with my parents that they would trade me, and they would give me a college quality education.

David: When you actually start going to White Star Ranch more frequently . . .

Pete: No, no. It's not a place you go to. It's a place that governs you.

David: So you were able to do home study?

Pete: Well, no, I was shipped off to various places and met with probably 40% Nobel Prize winners, spent one on one with them for six months and then spent six months in the field that I'd learned about there.

David: So you're not going to regular school anymore?

Pete: Well, I was until the 12th grade.

David: Until the 12th grade.

Pete: But at the same time, in the summers I was totally tied up.

David: Okay.

Pete: And a couple three times we went to White Star Ranch so that we could learn to work with these Mentats.

David: Mentats?

Pete: Well, that's the only word I know of in the English language, and you'll find it in Dune.

David: These are the people who have . . .

Pete: These are people who have IQs of 300, 400.

David: Physical deformities?

Pete: And they usually have a physical deformity of some kind or a psychological deformity. They have people that have to be in the dark. They have people that can't be near other people.

You have people that have organs on the outside of their body as well as on the inside. You have people that are like Stephen Hawking.

David: But they are extremely bright.

Pete: EXTREMELY bright.

David: White Star Ranch is sounding to me, Pete, like it's a very sensitive, very classified . . .

Pete: It's a first intelligence layer.

David: Okay. And supposedly during this time, the OSS has turned into the CIA, but the intelligence community in the American government is still pretty young. But obviously what you're describing is a vast, well-funded, secretive organization of

some kind.

Pete: Okay, I think I see where you're getting. We've had alien contact for the last probably 4,000 or 5,000 years. Now, when I say “we”, I'm talking the society that exists today.

David: Okay.

Pete: The one before us destroyed itself.

David: Right. So are you saying then that the people who built White Star Ranch were working in conjunction with extraterrestrials?

Pete: They had to be.

David: Okay.

Pete: I mean, when I go back and look at how they trained me, the sequence that I was trained in, they had to be involved because they had to want to have somebody that could understand things down the line.

I was being trained for something way down the line.

David: Right.

Pete: I mean, it was obvious to me.

David: Why do you think they would be pulling in kids who are eighth, ninth grade to do that?

Pete: Because I had over 300 inventions that were 25 to 50 years ahead of anything out there. It was that I have a gift of perceiving from wherever. I didn't bust my butt learning things and then become a super inventor because . . . It's just because I had a natural profile.

That's what first picked me up, was I was fitting that profile.

David: Oh, you had a DNA profile that they tested?

Pete: Right, but at that time, it was before DNA. but it wasn't DNA, but it was a profile, things that I'd done.

David: Right.

Pete: I invented 50 things that were 30 to 40 years ahead, and most of them are things that nobody had even talked about.

David: Right. When was the first time that you became directly aware of extraterrestrial involvement in the White Star Ranch program?

Pete: I learned from that program. I learned that there were such things, because I was put down to help reverse-engineer things that were built for . . . obviously, I mean, there's no question about it.

It was . . . Well, how do these controls work on this craft? What do they do? What turns it on? What turns it off?

David: When was the first time that you saw something that appeared to be extraterrestrial hardware or just unusual technology?

Pete: That was about when I was about 22, 23.

David: Okay.

Pete: And what I was asked to do was to say, "This seems to be a control panel. Is it a control panel? If it is a control panel, what does it do in this vehicle that it's sitting in?"

David: Were you in some kind of military base?

Pete: Well, I would guess so because it had a number of electric fences and guards and radar and all that kind of stuff.

David: Okay.

Pete: I think they call it Area 51, but I don't know that it was 51. It might have been 52, but I don't know.

David: Okay. So if you were born in 1940, and you're 22 years old, this is now 1962, right?

Pete: Yes. I was, yeah, 22 years old.

David: How did you see extraterrestrial hardware? What happens next?

Pete: I come up an elevator and get off the elevator. And this hangar has got in a big circle set out wreckage like you would see if they were investigating a crash of some

kind.

David: Okay. Wow!

Pete: You know, the whole idea is to wrap it all back up into what it was. Say, “Well that came from over here.” It's like putting a big jigsaw puzzle together.

David: Right.

Pete: So I was taken to what was in the center, which they said, “This is very probably the control panel.” And it was set so that obviously a person that had appendages would sit like this [Pete lays his hands and arms out in front of him on the table].

They obviously had three fingers, because there were grooves for these to fit in, things that fit in. Thing that held the hand down.

So it was still something that anti-gravity wasn't perfect for because they were holding it. The anti-gravity craft, you can go upside down and you don't even know it.

David: Right.

Pete: So I looked at it, and I said, “Well, okay.”

They said, “So how do we start it? We want to turn it on, but we don't want to . . . If we would build something like that, we'd build it so if somebody found the crash, and they went in and turned it on, they would all be evaporated.

David: Right.

Pete: So we have to think, “Well, these people are smarter than we are, because we can't build anything like this.” I mean, the speed of it was noticed before it hit, evidently.

And as I asked for it, I was given certain things that would be helpful for me in figuring out answers. They didn't want to give . . . They never want to give away anything they don't have to – “need to know” or however you want to call it.

David: Sure.

Pete: So I played with that for about eight months. And so we kind of found out and found that, “Some pieces hit, bounced, and they didn't belong there. They belonged over here.” Because you'd see a break - obviously [it] was two ends of a break.

And it eventually got set around, and eventually it got put together.

David: Was there anything unusual about the material, . . .

Pete: Yes.

David: . . . like it's alloy or its weight?

Pete: Amen.

David: Okay. So it was very lightweight?

Pete: Very lightweight.

David: And unusual metallic alloys?

Pete: Unusual reflection, unusual finish, unusual joinments, whether it was rivets, was it welds, was it different sputtering? You know, there are all kinds of ways to hook things together.

David: You worked on this for eight months, and I'm curious as to whether any results came out of all the study that you were doing. Did you make any progress?

Pete: When they finished the physical reconstruction, it was functional.

David: Really?

Pete: [Nods head 'Yes'.]

David: Did you come into any physical contact with extraterrestrials during this time?

Pete: One.

David: One. Okay.

Pete: And I think it's the one that was left over.

David: Oh, really?

Pete: It was the survivor.

David: And could you tell us a little more about that?

Pete: Other than height and maybe the ratio of the size of the eye to the size of the skull, the size of the skull to the size of the body, other than that, I couldn't tell any difference at all between us.

David: So this looked pretty much like a regular human being?

Pete: Yeah.

David: But you were notified or informed that he had been piloting this craft at some point? They told you that?

Pete: No. Never. No. Hell, they don't tell that kind of information.

David: Okay.

Pete: That's not a . . . I don't need that to know that whatever, except that he was there to give a lot of explanation later. And he came in probably right at the tail end, probably within a month of my debriefing.

David: So let's walk through that for a second. This guy walks into the room, and aren't you curious about how he knows about the technology?

Pete: He walked into the room and was bringing everybody some drinks.

David: Okay.

Pete: So he's somebody there, one of the guys, etc., etc.

David: Okay.

Pete: And then I sat down, and he sat down next to me, and he says, “Can we talk for a bit?”

And I said, “Yeah.”

And he says, “You're the guy that's doing the reconstruction of the controls?”

“Yeah.”

And figuring them out to start with. And then, “Well, did you notice this? Did you notice that?”

Well, “. . . was the first to notice this,” I knew that he was somebody different. Ha, ha. Obviously.

David: Yeah. Ha, ha, ha.

Pete: And I said, “Yeah, I noticed that, but I didn't see any practical thing yet.” I wasn't done studying it.

And, I mean, you go piece by piece, because you're working on something that's totally outside of the realm of anything that you've ever heard of or seen or whatever.

David: Yeah. But if the control panel is made for hands with three fingers, then that would imply that this guy wasn't actually one of the pilots but may have just been in a position to know about those people.

Pete: Well, you have to understand there's a huge commerce in craft in the universe.

David: Right.

Pete: So I didn't say he was a guy that built it or it was built for.

David: Right.

Pete: He was somebody who had studied it from the outside knowing some of the underlying technologies.

David: When was the next time that you came into contact with extraterrestrial type of wreckage after this first experience?

Pete: Oh, boy, I would guess 26, about four years later.

David: Okay.

Pete: And then I was called in to do a look-over of another craft that was pretty much whole as best I could tell. It didn't look to me like it was a crash victim.

David: More like it was donated or something.

Pete: Well, I think it was traded. There were people, OTHER people, there.

David: What do you mean by OTHER people?

Pete: They were not from this planet.

David: Okay. How could you tell?

Pete: Ha, ha, ha. Well, if you saw one, you would know, because they're not . . . There are some that, as far as I can tell, are worried that they're progenitors or they're ours.

I mean, I can't tell the difference. And I've seen some of the CAT scans and things of those people, and there's no difference.

David: They're just like us.

Pete: As best I can tell. I mean, they have . . . Like when you look at an Oriental, they have an extra fold in their eye that makes them look like they have slanted eyes.

And these people had a little different look to their eyes. There are a lot of breathing mechanisms that extraterrestrials have.

So you look at a lizard, it's just a hole and a scale on the front of the head somewhere.

David: Right.

Pete: And there are some that breathe through the top of their head and some that breathe down through the thorax.

So the differences, if there are differences, are pretty major.

David: So let's walk through this, because this is something that everybody watching this show, they want to hear the truth. This is some of the experiences you've had that people are going to be the most interested in because we've been lied to for so long.

Somebody in your position who gets to see this for real, that's an incredible thing.

So first of all, were you briefed in advance? Did you have to read a bunch of briefing documents before you got to meet any extraterrestrials?

Pete: I had to go through training and briefings and everything and then told that, "You're going to see these things, and what you see stays here with you."

David: Oh. So you were thoroughly prepared in advance for what you were going to see. They told you that extraterrestrials existed and this kind of stuff before you ever got to actually see this.

Pete: They told me that I would see very strange people.

David: Huh.

Pete: "Don't make any suppositions." That's what they told me. "Don't make any suppositions. You'll come to your own conclusion. You keep them to yourself."

David: Wow!

Pete: "And then when you leave the base, you leave them here." They say you just . . . and he makes this motion [hand covering his eyes]. "You just wipe that out and don't ever think about it once more or mention it."

David: So you must have been quite nervous or excited, I would think.

Pete: Excited. I was excited.

David: Okay.

Pete: I felt very safe with the people I was with, so.

David: Okay. Now, how unconventional were these first people that you saw?

Pete: I would say from minor to . . . from marginally different, though it's like when you see a person with Down syndrome on a street. You can tell they have Down syndrome from a block away.

David: Right.

Pete: And they're very, very little difference, 3% or 4% difference is all. So yeah, you

could look at this person and you could tell by the way they walked, by the way they turned. And that caught your eye.

David: Did their clothing look like ours or was there something different about the clothes?

Pete: Most of it looked like it could have come from a custom shop or something like that, but it wasn't anything like ours. I mean, the buttons were not buttons, and some were magnetic strips, because I was interested in that kind of stuff, anything that I could find that was new and different.

We had different things in the bathroom, different types of stalls.

David: Really?

Pete: Yeah.

David: Ha, ha, ha. Some of them were that different?

Pete: Yeah. On the other hand, one of the things I was going to mention when I was here with you is how alike many of them are.

I mean, the fact that they have four legs. They don't have six legs or five legs or nine legs, and two eyes and the nose and the breathing apparatus in between. Then a mouth, mandible, you know, chin and breathing pipe and ears.

Then there were some later on that came on that were much more insectoid. And so they had . . . And I'd studied grasshoppers and all kinds of things like that when I was younger.

So I knew what their ingestion system looked like and how they sliced off pieces of things or broke them off.

They all pretty much looked to me like they came from . . . I mean, I was thinking about it. I said, “Where would they have come from? What can I see that would tell me that?”

That's how I think about things.

David: Right.

Pete: So I would say, well, I would say they were all from close by because I see differences and sometimes what you'd even call a major difference, but it wasn't really

a major difference. It was just a larger, smaller, shorter . . . There are some that have little, tiny, short forearms, for example.

David: Hm.

Pete: They looked like somewhere back in time we all came from the same beginning.

David: Right.

Pete: And then, later on, I got to see ones that were having conversations and doing different things, and they looked really different.

I mean, you could see that like . . . we called them Dracos or Dragons group. And then there's another group that look a lot like insectoids, especially the praying mantis kind of . . . like it may have come from a praying mantis.

David: Right.

Pete: And some speak and some just talk to you in your head. And some do it some other different way. Darned if I know. It's like you know what they're thinking and they know what you're thinking.

David: So when you were brought up to this craft, did you see any extraterrestrials at that time?

Pete: That was my first time seeing an insectoid.

David: Really? So what was . . . That's . . .

Pete: I mean, I noticed that the skin scraped together, and it sounded like fingernail files. It was a chitinous type of . . . or it was an exoskeleton.

David: How did it feel to see such an unconventional-looking being?

Pete: How would it feel to a young person, like, “What the hell is this?” You know, like . . .

David: Yeah.

Pete: For me, because I felt secure with the people I was with, then I felt secure. So it wasn't a fright. I didn't think the thing was going to turn around and eat me.

David: Right.

Pete: And they wouldn't have brought me there for that because they had too much training in me.

David: Right.

Pete: So I didn't have fear from that, but I had wonderment, like “Holy crap!” It looked like it was an insect that was structured – two feet, two legs, two arms, two hands.

Didn't seem to have any wing. If the wings were there, they were well folded. So I didn't see any wing thing to it.

It had . . . It didn't have long antennas, but it had little balls on stubs. [Pete brings two fingers about two inches apart close to the left side of his left eyebrow.]

David: This did not look like a human body with an insect head stuck on top.

Pete: It was definitely not a human body. I would say the legs were that big around. [Pete makes a circle about 2-1/2 inches in diameter with his thumb and forefinger.]

David: Really?

Pete: Like the eye stalks and stuff. They have two things come out like this. [Pete shows his thumbs and forefingers about two inches apart coming out from the side of his forehead about eight to twelve inches.]

They are kind of oval like a flat tube, and then they have the eye on the end of it.

David: Huh.

Pete: But the eye could tilt.

David: Were they compound eyes?

Pete: Yes, they were compound eyes.

David: And how did it communicate?

Pete: It spoke like it had horny plates and things like that that it moved around to make the dissonances and the resonances, stuff like that. It didn't sound like it was coming through a soft-tissue mouth.

It was kind of high, squeaky, raspy.

David: Hm. But it could speak English?

Pete: It spoke English. And there was a definite accent as well, like it would say the same letters we would say. It would say the same letters, and they would sound the same.

There are some species that say the same letters and they sound a little different, like maybe they'd learned Russian first or Sumerian first.

David: And what were you there for? What was the being talking to you about?

You obviously go up into this craft with it.

Pete: Right.

David: Okay.

Pete: Well, being as I had written the manual for the first one, what was being discussed was what's the difference between the controls of this particular device as compared to other devices.

And I only knew them as “other devices”.

David: Okay.

Pete: Now, I did have the knowledge of the first thing that was reconstructed. So I'd seen that. I could see that these controls were very similar, but they were obviously much more modern.

They could have been modern by 400 years. I mean, they were . . . The control did the same thing, but it did it in a whole, totally different way.

David: All right. Well, that's all the time we have for in this particular episode. This has been very fascinating. As always, it's corroborating a lot of things we've heard from others.

So, Pete, I want to thank you for being here, and I want to thank you for watching.

Revealing a Bigger Plan Season 6, Episode 16

Cosmic Disclosure; Revealing a Bigger Plan Season 6, Episode 16

21 Dec 2016

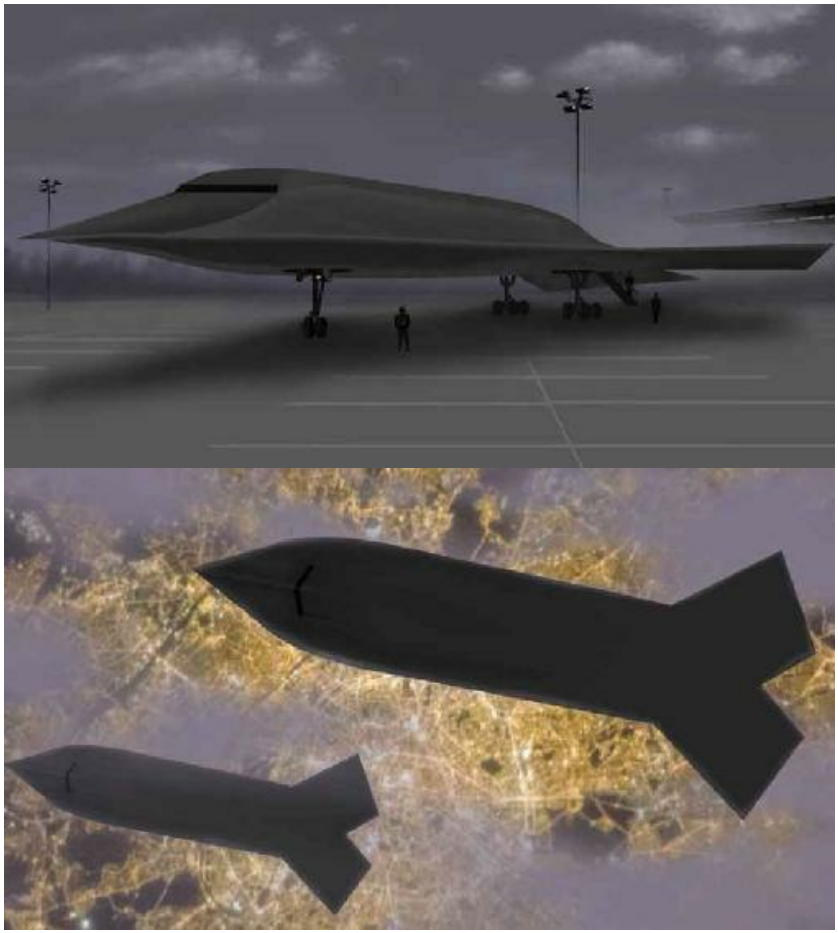
David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I am here with Corey Goode.

And in this episode, we're going to get into some very exciting new updates. I have seen some of the bullet points of what we're going to be talking about, and this is really going to be one of the classics. I'm sure of that.

So Corey, welcome back to the show.
Corey Goode: Thank you.
David: When we last left off, you had experienced a knee injury as you were falling out of this MIC craft – Military-Industrial Complex, MIC, what you used to call the Lower-Level Space Program; we're trying to give them a more respectable name.

Take us from there. What happens next after you've had the knee injury?
Corey: Well, since the last time that we spoke and that I released an update, soon after I'd gotten home – it was around October the 26th, early in the morning – I found myself once again in my shorts and T-shirt, no shoes, walking in the parking lot behind my house.

I woke up in the middle of walking, and as I was trying to figure out what was going on, I'm still walking. I'm walking towards the same craft as last time, the one that's sort of fish-shaped when you look at it from the top.



David: So this is clearly some kind of anti-gravity craft, . . .
Corey: Yes.
David: . . . not a regular airplane at all?
Corey: Yes.
David: Okay.
Corey: So I see the same two airmen from the last time. And as I was walking up, they immediately asked me if I'm physically able to walk up the ladder.
David: So these were the guys that brought you home and then jogged back the last time?

Corey: Yes, same guys.
David: Okay.
Corey: They walked me up the stairs. I walked through that same storage room, and they walked me into the room where I've been several times before, the one that has the beds that fold out of the wall and chairs.

David: The dreaded interrogation room.
Corey: Right. It looks like a little medical room.
David: Now, you've had some pretty unpleasant experiences in there. So how are you feeling when you find yourself unable to control your own walking, and you walk right up to this craft?
Corey: It's . . . My heart was beating really fast. It was pure anxiety.
David: Sure.
Corey: My heart was beating really fast. I'm breathing heavily. I'm trying not to show it, because you don't want to show any type of weakness to these types of people.
David: Of course.
Corey: But I'm sure they could still see it in my face.
David: Yeah.
Corey: But I was feigning that I was being braver than I really was.
David: Right.
Corey: So they walked me over, sat me down in that chair, buckled me in the harnesses and left.
David: Wow!
Corey: Yeah. So the next thing I know . . .
David: Was there anything different about it, or did it all look the same?
Corey: It all looked the same. The energy was a little bit different. They seemed like they had a little bit friendlier of an energy about them – not as stern.

David: Okay.
Corey: They were still military like.
David: Interesting. So even though they're strapping you into a harness where you've been tortured before, somehow the vibes were better this time based on what you're saying about the energy?
Corey: Yeah, a little bit more laid-back. Not . . . I wouldn't say friendly, but friendlier.
David: Right. You were dealing with this guy who looks kind of like Sigmund Freud or something with the white hair.

Corey: Yeah, white goatee.
David: And he didn't believe that you had been to these places, but you know you've been there. And his scientific test was intended to confirm what he'd heard before, but he wanted his own proof.
Corey: Right. And they had done the same tests before, and he wanted to have control of the evidence all the way to the lab.
David: Okay. So now you're thinking maybe something has come out of this where it was proven right again, and it's changed their attitude. Maybe they realized they're not the only cog in the machine, so to speak.
Corey: Right. Yeah. So I'm sitting there, and as soon as they walk back out the other way back towards the storage room and the tail of the craft, and the older gentleman that we were just talking about, with the white goatee and hair, came briskly walking in from the forward of the craft.
David: Now, did he ever give you any name besides, “Just call me Sir”?
Corey: Sir.
David: Okay.
Corey: He was saying, “You know, I now believe that some of what you're saying is true based on the test results. So apparently, you were in a proximate area that you

claimed that you were."
David: Hm.
Corey: So I didn't know whether to be relieved or not. So I was just sitting there listening.
David: So do you think that maybe . . . I mean, this would obviously be a really big deal for this guy. I mean, we could just call him for a name, because he looks like Freud. We could call him Sigmund. Right?
Corey: Okay.
David: So Sigmund is now confronted with evidence that everything that his whole life has been built around is a lie.
Corey: Yes. And that's one of the things that he mentioned, was that he, in particular . . . They were beginning to feel like they were not at the top of the totem pole intelligence-wise like they'd been led to believe.
David: Right.
Corey: He went on to say, "I was actually stationed at several bases in Antarctica."
David: He was? Sigmund was?
Corey: He was. Yes. And that got my attention. And he said . . .
David: Several bases?
Corey: Yes. Yes. And he said that under the ice shelf, they had discovered a number of ancient cities, ruined cities – not just one – and that indeed, like I had reported, they had found flash frozen woolly mammoth-type age animals, and also these what he called Pre-Adamites.
David: Pre-Adamites?
Corey: Yes. I'm assuming that means before Adam in the Bible.
David: Right.
Corey: And he stated that indeed, they were kind of spindly, had elongated skulls and had strange proportions in their torsos, and that they had obviously not been designed to live in the barometric pressure and the gravity of this planet, and that they had sort of like, I guess, stations where they were studying humanity on different continents.
David: Okay.
Corey: There was some sort of a catastrophe that occurred, and Antarctica flash froze completely.

So he stated that these Pre-Adamites had not had access to their cities, their ancient cities, for over 10,000 years, and that had been a big problem for them. These were the Pre-Adamites that were in these little bases here and there across the world.

After they lost access to their ancient cities, they began to interbreed with the local human population, and then you started having these Adamite-Pre-Adamite hybrids.

And there were all different sorts of them, because they were breeding with different races. There were some of them that had African look, some of them that had Caucasian look, and some of them that had South American looks.

David: Okay.
Corey: He stated that the cities go back as far as when these beings apparently arrived here on Earth 55,000 to 65,000 years ago.

He said from his briefings – this is information coming from him – apparently, they came from another planet in our solar system that was no longer hospitable to life.
David: Did he say where this planet was?
Corey: No. It sounded like either he didn't know or he wasn't going to share it with me.
David: Okay.
Corey: And it was around this time that I began to wonder exactly why he was sharing this with me. And I think he saw the look on my face, and he kind of pulled away.
David: Are you saying that these Pre-Adamites are still here in some form, because we've talked about the Vatican and the mitre hats, that that could hide their elongated skull?
Corey: Yes. In a conversation later on that I have with Gonzales, that comes up.
David: It does appear, then, that these people are living on Earth. Did he tell you whether they live in underground cities, or are some of them actually living on the surface?
Corey: No, I didn't get that detailed of information.
David: Okay.
Corey: I was . . . The only other information that he really gave me was that we humans had discovered these ruins in Antarctica some time ago and had been excavating them, but the Pre-Adamites were not allowed to go down there.

Antarctica was being controlled by the Reptilians.
David: Wow!
Corey: And it was only in recent times that some sort of a deal was brokered to where they allowed these Pre-Adamites to begin to go down there and visit the ancient cities.
David: What did they find in these ruins, exactly?
Corey: Well, they found lots of technology – much of it destroyed, but lots of technology. Just about all the buildings were . . . There were hardly any bricks on top of each other. It was a complete wipe-out. Yet, underground . . .
David: Yet there was still intact technology?
Corey: Right. But underground is where they found more.
David: Oh.
Corey: They found the ancient libraries, and then they found caches of technology.
David: So it must have been fascinating for them if they are now somehow going to be able to gain access to their own ruins.
Corey: Yeah. I mean, it'd been over 10,000 years, and all of their records were there. The bulk of their technology was there.

It would be like sending some of our people to a base on the moon and then having a

catastrophe happen on the Earth to where they couldn't come back for supplies.
David: Okay. So in the next bullet point we have, at some point he suddenly stopped talking about this.
Corey: Right. I had a look on my face. I didn't understand why he was telling me all this all of a sudden. It felt . . . It was a little awkward to me. I didn't understand the reasoning.

And as I was thinking that, he saw the look on my face and he kind of stopped. He told me that he was going to use the same technology on me again to change my state of consciousness . . .
David: Oh, boy.
Corey: . . . so that he could see if he could get more information out of me. And I told him, “Listen, I am happy to answer any questions. There is no need for that.”

And he ignored me, walked over to that same little stainless steel table, picks up a kind of fat cylinder that has a convex cone at the end that looked like some sort of a antenna.

And he looked down and was messing with it, and I heard that [whirring] sound come up. But just before that, he put in earplugs.

And that's the last thing I remember other than I come to as I'm walking down the tail section of the craft, and my arm is behind me, and one of the guys has my elbow like this [holding tightly] walking me down. And the other guy's in front of me reaching behind and holding my wrist. They were making darn sure that I didn't fall.
David: So this wasn't so much that they were being hostile towards you or restraining you as much as that you were all doped out and they didn't want you to fall?
Corey: They were obviously trying to make sure that what happened last time did not happen this time.
David: Wow!
Corey: So I was really starting to come to as I was coming down the stairs, and I started walking back to my house. I walked through my gate, walked to the back door and opened it, and when I opened it, there was a Blue Orb zigzagging around in my living room.
David: Wow! I'm feeling tingles on my scalp as you're saying this.
Corey: Yeah. I mean, I opened the door and it's just -zit-zit, zit-zit, zit-zit [moving around the room] zigzagging around.
David: Wow!
Corey: And I closed the door behind me and it shot right here [directly in front of Corey's chest] and stopped, and I indicated that I was ready. And the next thing I know, I find myself back on the Mayan craft.
David: Okay. Wow!
Corey: This time, I'm standing in the exact same place. And next to the floating stone

console that I described last time, Gonzales is sitting there looking. And there are six Mayans in the room this time, including three females.

And I had only seen a female close up once before. And they don't look that much different than the males.
David: Okay. Did they have a topknot hairdo?
Corey: Yeah. Their hair was braided. The topknot hairdo is . . . The artist wasn't able to completely depict . . . Their hair is more up in braids, and then braided into big circles.
David: Ah.
Corey: And then inside the braids, they have the gold filament.
David: Wow! Okay.
Corey: Anyway, Gonzales looks up at me and comes walking up, and in his hand is that same black stone sphere.
David: And what was the purpose of that sphere when you saw it in use last time?
Corey: The last time, he used it to scan me.
David: For memories?
Corey: He walked up to me, and as he walked up, he was raising it. And he was smiling, being very pleasant. And he said, “Please focus your intent on the Magic 8-ball,” you know, like an 8-ball from pool, from billiards.
David: Right. Right. He's being funny.
Corey: Right. Right. He's just holding it probably about four or five inches from my forehead, and he's doing this [moving the black sphere back and forth in front of Corey's forehead].

And I can tell he's concentrating.
David: For your memories or something? You never really explained.

Corey: Well, I don't know.
David: Okay.
Corey: It could be some sort of a tricorder kind of a device.
David: Okay.
Corey: I don't know. So he scanned for a minute, and then he turned around and he walked back and pushed it against the side of that stone console, and it just [whoosh] went inside of the console.
David: Wow!
Corey: It was gone. And he turned and he glanced at the Mayans that were in the room, and I guess some sort of telepathic thing occurred, and they turned around and walked into the next room.

There was a double-wide door into the next room, and the next room looked almost identical to the room we were in with our floating console. And they all gathered around the console.

And Gonzales came up to me and he said, “I want to apologize and give you some explanations about what's been going on.” I was ready for that.
David: Apology may not seem like enough at this point. You've been tortured. You've been interrogated.
Corey: He was talking more about the last two incidents.
David: Okay.
Corey: He stated that this had been allowed on purpose. He stated that inside this MIC Secret Space Program, there are a lot of people that are starting to get a little disillusioned.

They're starting to think that there IS more going on than they have been told, . . .

David: Right.
Corey: . . . even though they've been promised that they're top of the totem pole right intel-wise.
David: Right.
Corey: He said that I had to not know about the operation, because they would have been able to figure it out very easily.
David: Sure.
Corey: And I had subconsciously retained all of this telemetry from the Anshar reconnaissance flight, and there was a lot of other information that I had retained subconsciously.
David: I don't exactly know what you mean by telemetry.
Corey: I don't remember what all the information was. But it was giving . . . I had all of these panels popping up. Ka' Aree had to tell me not to get lost in the information, just to look at the scene.
David: So they could kind of index you like a computer and look at what you saw on those panels and read it off of you, basically?
Corey: Yes.
David: Okay. Because right, when you go into that kind of exotic state of consciousness that this technology does, it's similar to like scopolamine, and you can very precisely relive the moment you were in and review whatever is in that moment.
Corey: Right.
David: Okay.
Corey: Gonzales said that basically, they were trying to exploit the state that these MIC SSP people were in, the state of a little bit of disillusion.
David: Right.
Corey: He stated that this was the perfect opportunity to seed the information about the wider Secret Space Programs, all of the other stuff going on, into this group in a clever way.

And by doing so, this could possibly combat, or prevent, this partial disclosure that is about to occur of this actual MIC Secret Space Program.
David: Right, because if they themselves cast doubt upon what they've been told, then they're not going to be able to go forward and know that they're representing the truth. They're going to have doubt.

They're going to have reason to believe, with proof, that you were telling the truth, because your hair tests confirm you were at these locations.
Corey: Right, and the interrogation information. And a very small percentage of this MIC program were just starting to wonder what was really going on.
David: Did you feel any better about all the hellacious things you've been through, knowing that you were taking one for the team and might have been instrumental in stopping partial disclosure?
Corey: Absolutely. If you know there's a purpose to your suffering, then you can file

it away better.
David: Absolutely. What's the likelihood of Sigmund being able to percolate this information through the command structure of the MIC Space Program? Does he have enough influence that what he's learned from you is going to saturate through the ranks, or is it so compartmentalized that there will still be lots of groups that don't know anything?
Corey: It's extremely compartmentalized, but from what he had said to me the time before, he is in charge of several programs. So he was pretty high up.
David: Okay. So this definitely could have an effect of starting an avalanche of truth?
Corey: Yes.
David: That's awesome.
Corey: Yes.
David: So did Gonzales have anything else to tell you that was interesting in this meeting?
Corey: We started to discuss the Pre-Adamites, the conversation I'd had with Sigmund. And Gonzales said, indeed, his intelligence confirmed the same thing, that there were two bloodlines among these Pre-Adamites that were considered to be royal.
David: So what do we know about these two bloodlines? Does it correspond to the Americas and Europe, for example?
Corey: Well, the only way he explained it to me is that there were two bloodlines that were both considered royal bloodlines, and they were in competition with each other for resources and control over certain financial systems on our planet.
David: Right.
Corey: We discussed a few of these things, and then the topic changed. A long time ago, I had been told that in certain ancient structures there are cavities and walls to where ancient technology has been stored.
David: Well, if we're looking at the idea that the Cabal has created the Taliban and Al-Qaeda and ISIS as their pop-up proxy armies, when we see things like the Taliban blowing up the ancient Buddhas in Afghanistan, it seems so absolutely unacceptable that they're destroying these ancient monuments.

You think there was more to it than just them being religious fanatics?
Corey: In some cases it's just fanaticism, but in other cases they are looking for something. And in this case, they had completely flattened several extremely important historical sites, ancient Sumerian sites.

And they did find technology in the walls. I don't know what type of technology.

Not only that, but in the process of flattening this certain complex, they found an even more ancient complex underneath it.

And the last time I talked to Gonzales, they were actively excavating as quickly as

they could because of the battle that was beginning in Mosul. They had this technology in Mosul, and they were supposed to turn it over to the Pre-Adamites in the Cabal.
And these proxy groups – is exactly what Gonzales called them – had located this technology, and they were refusing to turn it over.
David: That's understandable.
Corey: Well, not to them. This is another Cabal group that was refusing to hand over technology to their bosses, basically.
David: Right.
Corey: So Gonzales said this is a major sign that the Cabal's coalition is weakening big time.
David: So what are the objectives of gaining access to this technology? Are they doing it on behalf of the Pre-Adamites? Is it something the Cabal wants? What are they trying to do here?
Corey: The Pre-Adamites are trying to gather as much of their ancient technology as they can.

So that's one of the reasons why they were also very excited to go back down to their cities in Antarctica and have access to these caches of technology.
David: Do we have any reason to believe that they might be trying to pull their own cosmic false flag, and if they have technology, that they could betray everybody and become their own little warring group?
Corey: I don't know if I'd go that far, but they are definitely preparing for some sort of a conflict or something big.
David: Do you think that they are concerned that they could be outed and publicly blamed and put on trial just as members of the Cabal are, if they in fact have organized the Cabal?
Corey: Absolutely. That's why these elites and these Pre-Adamite groups are freaking out right now.
David: A lot of people are going to be confused at this point regarding the fact that we've talked about AI controlling the Draco, Draco controlling the Cabal. Now we have the Pre-Adamite group being brought in.

So what do you know about the relationship between the Pre-Adamites and the Draco in terms of the control systems of the Cabal?
Corey: I don't think they like each other very much from what I hear. But the Cabal deals with all different types of groups, and a lot of these groups don't get along.
David: But the one thing they all agree on is secrecy?
Corey: Yes.
David: Okay. So Gonzales is describing to you that these artifacts are being located.
Corey: Right.
David: And do we have any knowledge about what is still remaining in other structures? If they've been ruining structures, are they going to try to ruin more

structures?
Corey: Well, he did state that some, I guess, black op types of programs or operations, had occurred, that in the dead of the night they had sent operatives in all of these other ancient ruins all over the Earth and they were going in with very advanced sonar-type equipment, checking the walls.

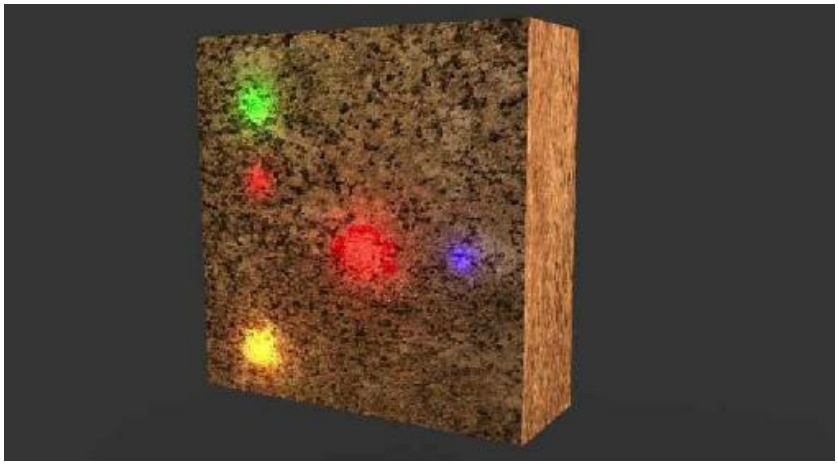
They were checking from space to see if there were any more ancient ruins beneath it.

So yes, they were obviously wanting to find this technology before the Cabal groups did.

Yeah, it was about this part in the conversation that I noticed that that floating console started having all these different colored lights and symbols that were starting to flash.

And Gonzales saw me looking, so he turned around and looked and immediately walked over to the console.

And as he was walking to the console, two of the Mayans came in the room. And they began to look at what looked like some sort of a sequence of glyphs that were just doing the same pattern on the stone console.



David: Did the colors vary?
Corey: Yes.
David: What were some of the colors you saw?
Corey: Blue, red, orange, yellow – green even.
David: Okay.
Corey: And Gonzales turned to me, and he kind of had a concerned look on his face again. And he said, “Has your memory improved or gotten worse?”

And I said, “You know, it's actually been getting worse.” I said, “I've been having problems remembering things like my children's birth dates.”
David: Wow!
Corey: And he wrinkled up his forehead and he said, “Well, I'll consult with the Mayan group to see if there's any way we can aid you.”

And then all of a sudden, he got a big smile on his face. I guess he'd seen behind me, a Blue Orb had appeared in the room and zipped from behind me and then was zipping around in front of me and did the normal thing, stopping like right here [about one foot, 30cm, in front of Corey's chest].

And he just started . . . he was smiling and started doing this [waving good-bye].

And I indicated I was read, and off I went. And I ended up right back home in the living room where I had started. I was exhausted. I walked over to the couch, laid, down, and fell asleep until my kids came down.
David: So what's the next thing that happens in our update chronology here?
Corey: About two days later . . . I'm a real early riser. I'd gotten up very early to go

down and get some work done in the living room.

And I was sitting on the couch typing away on my laptop when all of a sudden, I got this very strong staticky feel in the room, just all over my . . . The room was full of static electricity.

I knew something was going on. And my attention was pulled over to my right.

The wall where the fireplace is, the outside wall that went out to the backyard, started almost turning like liquid. It was doing like this [Corey gives like a waving motion].

The wall was bowing inward into the room, and the bow area was kind of moving around.
David: My insider Daniel, who worked at Montauk, said that when a portal randomly misfired and showed up in the wrong place, like when he was in the cafeteria, it looked exactly like that, and that you'd eventually in some cases see like a grassy field through the middle of it that wasn't really there.

But if you walked through that hole, you would go there.
Corey: Right. I'm looking at this scene and I'm getting nervous.

I have an L-shaped couch in my living room, and then I have the coffee table inside the L, and then I have the wall with the TV on it.

I got up when I saw the wall doing this weird thing, and I moved further away, but I'm still in between the couch and the coffee table.
David: Ha, ha, like that's going to do anything.

Corey: I know, but I was getting like . . . I was whoa. I was getting away. And just like she walked out of water, it was that same Banished woman from my hotel room.

And I was shocked. It threw me off. I freaked out.
David: Wow!
Corey: I was shaking. I was freaked out.
David: Now, can you describe what she looks like?
Corey: Yeah. And she was taller than I had remembered. But when I saw her before, I was laying down on my bed.

She was a good probably three or four inches taller than me.

She was gorgeous. She had thin frail bone structure, beautiful blue eyes, and she was wearing . . .
David: White hair like Ka 'Aree?
Corey: No. Blonde. And then she had white . . . it looked like white twisted cloth that was around . . . She was wearing a very revealing outfit, very little. It was like a wrap that went across her chest, and then also her lower area, there was some sort of a wrap covering her.
David: Okay.
Corey: And she immediately said, “I am Marra. Don't be afraid. I'm not going to hurt you. It's okay.”

She's, you know, calming me down, but it wasn't working. And I saw that she saw that I was nervous. I was scared.

And I saw that that pleased her.
David: Did she have like a sarcastic smile kind of thing?
Corey: She had just a small little smile, and then here smile became very big, and then she just started walking towards me with intent.

And she had taken maybe two or three steps when there was a big brilliant flash of light. And the next thing I know, everything's fuzzy. I'm trying to see again.

And I see I am in a domed room. So I realize that the Anshar had intervened.
David: So you got portaled out from your house along with Marra?

Corey: Yes.
David: Really!
Corey: When I was . . . When I started to be able to see again, I saw two of the Anshar men coming up to Marra, approaching Marra.

And she had a very shocked and freaked out look on her face. Her demeanor completely changed.
David: Wow!
Corey: And they walked up to her. They kind of looked at each other. I guess they were communicating. And they escorted her out of this doorway that had one of the hard light force fields to close the door.

The force field went away and I saw a corridor, and they started walking down the corridor that kind of went and curved away from the door.
David: So was she seriously worried about having been captured?
Corey: Oh, yeah. She was freaking out.
David: Right.
Corey: I was the one shaking like a leaf.
David: Right.
Corey: I was literally shaking. And my heartbeat's real fast. I'm breathing. I'm still suffering from an overdose of adrenaline.
David: Yeah.
Corey: And Ka 'Aree looks at me, and then she walks right up to me and she puts her hand on the side of my face and looks deeply in my eyes, and immediately I start to calm down.
David: So did she tell you what the heck had happened? What was going on? What was this thing?
Corey: I was like, why are the Banished coming back? Why was she coming to see me?
David: Sure.
Corey: And all she said was that her intentions were not honorable, and that was the reason they intervened.

And I said, “Well, what's going to happen to her?”

And I was told that she's going to be put in stasis until the conclusion of events on the surface of the Earth had happened.
David: Wow! Did you get the sense that that wasn't going to take very long, that we're heading toward some rapid conclusion?
Corey: That's the overall feeling that most people in the programs have. It's coming to a head.
David: So it would appear that, given how much you've been warned in the past about authorizing and karma, if something negative like this was allowed to happen to you,

there has to be some coherent reasoning in that based on what the Blue Avians have shared with you, what's in The Law of One.

In The Law of One, they're always telling the three people that channeled it, “Guard your alignments carefully. Don't allow any negative thoughts to come into your mind. Try to preserve as much harmony with each other as you can.”
Corey: Yeah, and that was . . . And after Marra had been escorted out, we conversed a little bit about Marra. She told me that obviously Marra would not be a problem for me anymore, but that I needed to keep an eye out for some of her group who, after some amount of time, are going to come looking for her.
David: Right.
Corey: At that point, she puts both of her hands on both of my shoulders and is looking directly in my eyes, and she starts to talk to me again.

I get a conversation about how I need to raise my vibration, that some of my anger issues that I've been having with certain people were affecting me in such a way that they had been having problems reaching me in The Construct.
David: Right. And these anger issues might have also given enough of a crack that Marra could get in there.
Corey: Right.
David: Okay.
Corey: So we had that conversation, and when she was done saying what I just said – she had her hands on my shoulder the whole time – she just went [pst], did a quick pat like that [on Corey's shoulders] and backed up, and she said, “We're sending you home now.”

And there was a big flash, and I was back in the living room.
David: Now, since that happened, have you had any further Blue Avian contacts prior to our taping now?
Corey: Yes, I have. The only thing I can really share is that the cosmic scene that I saw. And when I looked up, the cosmic scene looked basically the same except the spheres are extremely transparent.

They're getting more and more transparent.

The nine metallic spheres that I saw were basically still in the same position.

And the content of the meetings were very similar to the conversation I'd had with Ka 'Aree. They were concerned with the triggered state I had been in.

It was not conducive to the mission at all.
David: That's all the time we have for in this episode of “Cosmic Disclosure”. We're actually way over, but you love it when we do that. We'll see you next time.

I'm David Wilcock here with Corey Goode, and thanks for watching.

Viewer Questions Part 5 Season 6, Episode 17

Cosmic Disclosure; Viewer Questions Part 5 Season 6, Episode 17

27 Dec 2016

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I am here with Corey Goode.

What we're going to be doing in this episode is we're going to be reading your questions to Corey and getting his real responses. So that's part of how we are forming an interactive community where as a subscriber you actually get to affect the outcome and not just be a passive observer of what we're doing on the show.

So, Corey, welcome to the show.

Corey Goode: Thank you.

David: Let's just get right into this, and we'll start with the questions that we have for you. So I have the list right here.

And the first one is:

“You stated that the MILAB groups targeted wanderers and starseeds. How do they know that a wanderer is a wanderer? Are wanderers and starseeds the same thing? Only answer this if you are willing. Are you a wanderer, and is that why they targeted you?”

So the MILAB groups target wanderers and starseeds. How do they know a wanderer's a wanderer? Are wanderers and starseeds the same thing?

Corey: How do they find these wanderers or starseeds? In the past, they did it through standardized testing. They would have tests that would pop up anomalies.

And if a person popped up a flag that they might possibly be one of these target groups, the people that run the projects will then send in another teacher or counselor that works for the district to come in and give tests eye-to-eye with the kid.

And from that, they are able to extrapolate very easily if they are a soul not of this world.

They use these standardized tests for many different reasons, too. It's not just to find starseeds and wanderers. They're also looking for sociopaths at a young age so that they can bring them in and, you know, mold them.

David: So are you saying that the wanderers are being contacted by their home, native groups, and that the Space Program has the ability to monitor all such contacts that occur on Earth?

Corey: Well, that occurs. A lot of these people are being “abducted” or contacted by their soul groups, and that is a way for them to find people to do further testing on, but they have to do some sort of an interview. And the person doing the interview is going to be some sort of an intuitive empath.

David: Okay. As far as the question of, “Are you a wanderer, and is that why you were contacted?”, what would you answer to that?

Corey: I would say, “Yes”. And I have shared this publicly before. Tear-Eir told me that I and the members of my family are a member of their soul group.

David: When they talk about wanderers, they're talking about ET souls. And when somebody uses a term like “starseed” or “crystal child” or “Indigo child”, these are just different semantic terms for what in The Law of One is only referred to as “wanderers”, but I think it's basically a blanket term, “wanderer”, that applies to everything.

Corey: Okay, that makes more sense because I really couldn't differentiate the two.

David: Sure. All right, let's have another one:

“Are the astronauts on the ISS, International Space Station, aware of SSP program, Secret Space Program, and everything going on with the moon, or are they kept in the dark? Wouldn't the ISS astronauts observe activity going on around them?”

Corey: Yes, they absolutely do observe activity going on around them. For the most part, they're seeing the military, the MIC SSP, the program that is controlled by the NSA, the DIA, Air Force, that kind of thing.

They have a couple of space stations up there that every time they orbit the Earth, they get a look at. So they're seeing these space stations that are about 400 miles to 500 miles out, and then they see the unacknowledged craft that are servicing these space stations. So they are very well aware.

A lot of these astronauts also go through a type of blank-slating as well.

David: Well, something that you didn't mention that I think is relevant to the question is, haven't there also been a lot of these feeds that get cut from the ISS?

Corey: Absolutely, yeah.

David: So anomalies will show up on the films all the time.

Corey: Right. And that's what we . . .

David: And then it just so happens to turn the camera off.

Corey: Yeah, that's what we get to see. They get to see the whole show.

David: Right. So do you think those people . . . Like when we look at the Apollo astronauts, they're almost all Freemasons?

Everybody that walked on the Moon was a Freemason, and they actually put a Masonic flag on the Moon's surface as well.

Do you think that the people in the ISS are brought into some kind of secret society or are sworn to secrecy in some way, have non-disclosure agreements?

Corey: Well, for the most sensitive projects, they are going to pull people out of the secret societies, because they have already gone through all these tenets, brainwashing.

They've already been tested that they're not going to reveal certain secrets, so they feel that they can count on these people. They're read it.

David: Right.

Corey: There are plenty of astronauts that are not Freemasons that are not going to be privy to the same information.

David: Sure. All right. Let's go for another question here:

“Do Grey aliens, Arcturians and Pleiadians actually exist? I know that the Greys work for the government and are the creations of the Reptilians. But are the Arcturians and Pleiadians peaceful?”

So first of all, I mean, he kind of answers his own question, but do Grey aliens, Pleiadians, and Arcturians actually exist? That would be the first question.

Corey: Well, I can most easily put it this way. There are non-terrestrial beings that are in contact with us who claim to be from those locations, yes.

David: Okay.

Corey: We found out over a long period of time, the SSP did, that where most of these beings said they came from was not true. It was some sort of operational security measure they took so we didn't know where they came from.

After that, they started labeling different non-terrestrials similar to like they do stars when they're discovered, like N-T-E, and then like an eight-digit number. And that becomes their designation.

David: Well, if you're inside the Inner Earth civilizations, and you're seeing that they clearly have craft that can fly through rock walls, it wouldn't be that hard for them to travel to some place like the Pleiades or Arcturus, because both of these are very nearby stars. Wouldn't you say that?

Corey: Right. Yeah, and that's how they found out that a lot of these people were not where they came from because they did secret missions to go verify.

David: Oh, really?

Corey: Yeah.

David: Well, but couldn't these people have settlements and outposts at Arcturus and the Pleiades?

Corey: Yeah, absolutely. And in the Pleiades, . . . The Pleiades is a large star system. The Mayan group has outposts there.

There are a lot of . . . The Pleiades has a lot of different groups inhabiting it.

David: Oh, I'm sure.

Corey: So if a being says, “I'm Pleiadian, or, I'm from the Pleiades, that is kind of like us saying, I'm from America. You know, where in America?

So I hope that answers the question.

David: Well, based on the groups that actually said they were Pleiadians or Arcturians, could you just describe in a little more detail what they're like and what would their characteristics be?

Corey: There were different beings that were coming to us, wanting to make deals with us, were meeting with military and secret society types from the Cabal.

And some of them were coming with what we would consider good intentions to help us with our problems, and some of them were coming to exploit us.

David: Sure.

Corey: That's why . . . And if you have groups like that that come from a same star system, and all three or four of them are claiming to be Pleiadians or whatever the name of that star system happens to be, it becomes very confusing for the Secret Space Program and these global secret syndicates to figure out.

They have to go out and do their due diligence.

David: So if I can simplify what you just said as an answer to the question, there is no one Pleiadian group or Arcturian group identifying as such.

Corey: From my experience in the programs, there were, right, several groups that had made these declarations, and later on we found out that it wasn't true.

David: Okay. Now, the other part of the question I think is worth you commenting on because this person mentioned the idea that Greys are a product of Reptilians as if it was a foregone conclusion. But is that actually true?

Corey: There are some biological androids that are created by different groups, and they get pretty much lumped into the same category.

We have Greys, these programmed life forms we've heard about. Well, so do . . . They have different types out there of programmed lifeforms that resemble the Greys.

So, yes, I would say that some of the beings – I'll say "beings" - that we've described as Greys, have been created by some of these negative groups.

David: What the question didn't cover that I think you've also said is there are also intelligent civilizations that are not androids or programmable that have a Grey physiology.

Corey: Right. Yeah, they have similar characteristics and the human mind. We've heard big head, big eyes, little body: Greys.

And another being comes that looks similar, that's the leap we take.

David: Right. Okay, this is a really interesting question, which I'm sure you can have some fun with:

“What can we do to aid the Sphere Beings in the changes that we wish to see take place on Earth?”

Corey: Very simple. This little spotlight that we have, that we're shining out into space and all around the Earth, looking for answers, looking for ways to affect change, take that spotlight, [Corey redirects his hand that was pointing outward toward himself. Whoosh] turn it towards ourselves.

Change begins with each of us as individuals. The message is clear. If we begin to spend our time trying to become more of service-to-others, trying to raise our vibration, then we are literally helping change the Earth one person at a time.

And then after we make these changes, or during while we're making these changes, we're being observed by others.

And they're going to be curious how we've attained this change. So we can share it with our example, or raise curiosity in others when they see the change in you.

The biggest thing that Tear-Eir has pushed home to me is that everything needs to happen in here [ie, inside our self]. All the work that we do out here can be all for nothing if we don't do the inner work and change ourselves.

David: There's been a number of questions on the forum, and we had another list that we compiled before we came up with this one. People are commenting on how much your personality has changed.

It's almost like a much milder version of the classic story “Flowers for Algernon,” right? Like, you used to be pretty slow in the way you were talking. Your physical weight, your body, was heavier.

You've undergone a very dramatic transformation, including your apparent IQ level. And people are saying, “Is this Corey or did he get replaced by somebody?”

Corey: A clone.

David: How would you tie in what's been happening to you to what you've just said?

Corey: I finally began to practice what I was told to preach and started doing the inner work, and it's been very difficult. It's not been easy.

You know, obviously, yeah, there have been a lot of changes in me. Some of them had to do, you know, I was going through surgery at the time and was on medications.

That has some to do with it.

But mostly, it has to do with I started making the inner changes and following the guidance that I was given that I had been telling everyone else to do.

David: How do you think that high vibrational diet affects your consciousness? I mean, it does appear, just based on a kind of back of the envelope calculation, that you've had about a 15-point boost in your IQ since you did that.

Corey: Well, that has to do with the diet a lot, but it also has to do with doing the inner work, you know. If you have all these traumas that you haven't dealt with, they have mass.

The have actual mass, you know, energy mass in your body. When you work on those and you release that mass, then you're releasing a lot of the resources up here [Corey points to his head] that are being redirected to deal with the problem that you're not dealing with consciously.

David: Well, that's actually a really good point, and it's mirrored in psychology. Having studied psychology for a degree from a university . . .

Corey: I was a psychology major, too.

David: Yeah, so we do hear in mainstream thought that if someone has repressed memories of trauma, that that does actually take a strong amount of their mental energy to withhold those memories from their consciousness in the subconscious mind.

Corey: It takes a lot of energy, yeah.

David: And then once those memories are freed, all the energy that's diverted into the subconscious mind now becomes accessible to the conscious mind.

Corey: Yeah.

David: So would you say that if someone has traumatic, buried memories, that there is a certain amount of mental energy that's always going to keep that suppressed?

Corey: Absolutely. You know, 10%, 20% of their mental and psychological resources are being used to manage that situation.

David: Interesting. Okay, so now we've got another one here:

“A question on a lighter note. Are you aware of, or do you have, any information on ET civilizations having their own music or other cultural arts?”

Corey: Yes. Part of this will be from the more negative topic of the slave trade. Not only do they trade human beings off, but some of the most treasured works of art that were created here on Earth are now hanging on walls on other planets because of the trades that have been done.

Now, recently, people remember me speaking of Micca and his people.

David: Sure.

Corey: He's the ambassador from one of the closest stars to us in our local star cluster.

David: Right.

Corey: And he said that his people are absolutely enamored with our art and our music. They like many of our different forms of entertainment.

And they, too, have entertainment and art and music on their planet.

David: Well, you would think that if humans are a very common design, at least throughout our galaxy and neighboring galaxies, that almost every planet is going to invent drums, you know, a piece of wood with an animal skin on it.

They're going to invent stringed instruments like guitars. They're going to invent wind instruments like trumpets.

Corey: I just got an interesting mental picture of an ET sitting around a fire playing a mouth harp. Ha, ha.

David: Ha, ha.

Corey: But I see where you're going now.

David: Yeah. All right, cool. Let's have another question:

“What do you know about the Vedic literature?” This the literature coming out of India.

“Is Sanskrit a universal language spoken all over the universe?”

Corey: From what I understand, some sort of pre-Akkadian dialect, ancient pre-

Akkadian dialect, is what they call a root language, not only for us on our planet, but out in the cosmos with certain beings.

David: Okay. Now, it's interesting to note that when we have the ancient Vedic scriptures, that it appears there was this Aryan migration, and that roots of Sanskrit occur in languages like Ukrainian, even English. A lot of the European languages actually have strong roots in the primordial Sanskrit.

Corey: Yeah, it's a root language.

David: So do these root languages have some sort of telepathic contact? Like, if you use this language, are you tapping into some sort of data bank of all the other beings that use the language telepathically?

Corey: Well, language is – I've stated before – it's seen as a negative thing for the most part. A lot of these non-terrestrials, that are positive at least, see language, us speaking to communicate, as you and I sitting here trying to manipulate each other into accepting the other person's point of view.

David: Right.

Corey: The way most of them communicate is a very pure type of communication, and that is done in the way that we call telepathically.

David: Right.

Corey: But they do have variations of these root languages out there that these different beings use in certain situations, especially when they're dealing with other cultures, such as like our planet.

Like, if they run across a planet that's early in its development – they don't have a strong language developed – they will give them a root language that will develop out from there.

Some of the eggheads or scientists stated that because there are so many similar root languages on other planets, that it will not be extremely difficult to learn these other languages and communicate with them fairly quickly.

David: Well, if we look at the work of Stan Tenen, he has gone into the Hebrew alphabet and described how each of these so-called fire letters could be modeled with a tetrahedron that has a spiral inside of it – a three-twisted spiral. And then you reflect that light onto a surface and each of the different symmetry spins of the tetrahedron corresponds to one of the letters of the Hebrew alphabet.

Corey: Yeah. Well, language is seen kind of as a stepping stone. You know, when you're an undeveloped species, and you're communicating with grunts and growls to each other, that does not allow you to expand your consciousness and to evolve.

Once you start to have language, you're able to have these more hyper-dimensional kind of concepts to relate information to a like being, if that makes sense.

David: Yeah, that's interesting. Well, and then we also get into Asian culture and the fact that, like Egyptians, they seem to have a pictographic thing where you get these complex characters, especially Chinese, Japanese.

Do you think that would be a different ET group that had its own way of doing things that distributed that to just those areas?

Corey: Yeah. There have been a lot of different non-terrestrials that have been in contact with different races of human on the planet.

David: What might be the reason for why a particular group would want to create complex pictograms like Kanji characters?

Corey: Well, you take one character, and it can communicate a very broad concept to a person. Where if you take one word or one character from our alphabet and showed it to somebody, what is it going to communicate to them?

David: Would you also say that, perhaps, if you look at the language of dreams and how a particular symbol can mean multiple things, and all those interpretations are correct, that some of these more meditative cultures could have language in which a character means multiple things and that's all a meditation on a particular concept cluster?

Corey: Yeah, that could totally be what's going on with some of these.

David: So pictograms could actually be a tool for meditators to help them grasp the interconnectedness of things.

Corey: Right. You know, hieroglyphic, pictogram-type characters, when you see them, your consciousness is pulling more from a hyper-dimensional and multi-dimensional . . . you're pulling more information from one character.

David: Sure. All right, let's have another question here:

“Can you explain the caste system in Ka 'Aree's group? How does their government work? Is it a meritocracy, or do the priestesses handle all of the politics?”

Corey: Interestingly enough, the priestesses do not handle all of the politics. They do have elders, but when it comes to government . . . These are fourth-density beings.

All decisions are happening on a telepathic kind of level.

All of these people are entering The Construct that I've described to you, where Ka 'Aree and I have communicated. All of these people can go in, and they have in this environment somewhat of a hive mind or group consciousness.

And that's how things happen.

David: So is there a caste system?

Corey: From what I saw, there is a caste system in the sense that they do have a priest caste, but when I spent time out in the city, it was told to me that people rotate and do different things.

Like, sometimes they'll be working in the gardens to help grow food. Sometimes, they'll be working with children, or sometimes they'll be doing . . . you know . . . you know, they're doing many things. They're not pigeonholed.

David: So this is definitely not a caste system in the sense of an undesirable caste that never has any hope of reaching anything beyond what they were born into.

Corey: Right. No queens, drones, worker bees and soldier bees. Yeah, it's not like that.

David: All right. Now, we have another one which gets into the kind of stuff that we try to normally avoid, but we're just going to engage on this. We agreed off camera that we would talk about this because there has been some attacks that have come from Dr. Steven Greer, trying to undermine your credibility, my credibility . . .

Corey: . . . and Tompkins.

David: . . . and that of William Tompkins. And I just want to point out, before we ask this question, that I have all the greatest respect for Dr. Greer's work. I was at the Disclosure Project event in May 2001.

I met most of the 39 witnesses myself on the ground. And I've also encountered a variety of people who did not speak to Greer, who had never wanted to come forward, and they only trusted me. For whatever reason, that's just the situation I ended up in.

They told me a lot of things. You come along, and then later Tompkins came along,

and I'm hearing the same stuff, which had never been put online.

When you and I first started talking, there were literally dozens and dozens and dozens of examples of this happening.

So it's kind of embarrassing because somebody like Greer might think that he's got all the information, whereas a lot of people have come forward who didn't talk to him. And with my own discernment, I saw, okay, this guy, Corey Goode, actually has the goods. Pun intended.

All right, with that as a disclaimer to start, let's ask the question:

“Dr. Steven Greer of the Disclosure Project and ET Contact Initiative states that ETs and EDs, meaning extradimensionals, must have a very high level of consciousness that would preclude them ever being negative or hostile, and that hostile ETs are nothing more than a propaganda trick. What are your thoughts?”

Corey: Well, those of us that have had experience know that there absolutely are negative ETs. The thought that all of us damn, dirty apes are the only evil beings in the universe is a little insulting.

Duality does not end where our atmosphere ends. A lot of what he said is that we may be setting up people – saying that there are negative ETs – setting them up for some sort of a false flag invasion.

Well, from what I've been told, using technology to project an invasion in our skies is really no longer viable.

What they've moved to is a plan to disclose the lower Secret Space Program – lot of the people he's talking to – and to introduce us to a human-looking non-terrestrial that they'll say has been here helping us for a long period of time.

And then that human-looking non-terrestrial will introduce to us a new sort of esoteric type of religion that they have.

And if we are under the impression that all ETs are positive when they arrive here, we're going to succumb to our programming, drop to our knees, worship them, and, without question, take on a new religion.

So I think that all of us have our own personal belief systems, UFO religions, if you will. And, you know, that's fine. But it's a double-headed coin when it comes to people saying that it's dangerous to say that there are negative ETs, while with what I just said about people thinking that there are only positive ETs, can set up humanity

for an even larger type of slavery.

David: Well, I would also want to point out here that this is not simply a question of two public figures who claim to have insider testimony warring it out on an opinion basis and only having opinion as to whether one is judged to be right over the other.

I would say, as somebody who's been on 90 episodes of "Ancient Aliens" on History Channel, that we have a lot of academic research from so many ancient cultures where it's very clear that they were contacted by extraterrestrials.

And the overwhelming majority of those cultures report negative beings and positive beings warring in their skies, warring with each other on the ground, trying to control people on the ground.

So this is an academic discussion. There is no evidence in the academic literature from all these ancient civilizations that we have voluminous records of, of only one good group contacting.

There always seems to be a war between good ETs and bad ETs in all these ancient traditions.

Why do you think that is?

Corey: Because duality is throughout the cosmos. You know, you have these negative beings that are very destructive to consciousness. And then you have these positive beings that are trying to, I guess, put their thumb on the scales in a non-interventionist way, to help us expand our consciousness.

David: Sure. What about this idea that, "Well, if you're going to develop space travel and anti-gravity and portal travel, you have to be some kind of divine being?"

Corey: Well, I've met a lot of our Secret Space Program people that have these abilities, and there's nothing divine about them.

David: Right. All right, let's have another question. We still have some time here:

"Are there other civilizations in other star systems that face similar disclosure issues to our own human civilization, as in, their civilization is, or was, withholding information on technology, history and the existence of other beings out there besides their own native population?"

Corey: Absolutely. Ambassador Micca's people, they were in a very similar situation as we are. They had the Reptilians controlling their planet in much the same way that

ours is.

So they overcame this control system and have gone through what we're going to go through – a post-Disclosure acclamation and then a consciousness renaissance.

So that is what we have in store for us, and, yes, other planets in our star system have gone through the same thing or are going through it right now.

David: Well, and would you also argue, based on how well The Law of One correlates, the prime directive seems to be pretty consistent, right?

So a given planet is going to be kept in its little petri dish so they can develop their own culture, their own customs, their own languages, up to a point. And only after that point are they welcomed into this greater galactic community?

Corey: Absolutely. Yes, we have to earn our place in the wider galactic community. Just having Disclosure is not going to do it.

You know, we have to . . . A lot of these beings legitimately are afraid of us, because we're a mess.

A lot of them want to come and aid us in the post-Disclosure process, to aid us in navigating into this big consciousness boom that they have had.

David: Sure. All right, let's have another one:

“Off-world sources, speaking through a channel . . . “, and one of these, of course, is The Law of One – we've discussed that - “have indicated that the SSPs have environmental rehabilitation technology to correct our current problems. Have you had any exposure to this? Would it be too deeply classified to obtain this through any Freedom of Information Act requests?”

Corey: Well, in order for you to put in a FOIA request, it has to be an acknowledged program. If it's unacknowledged, it doesn't exist. So, you're not going to find . . . I mean, if you put in a FOIA request, they're going to say, “No such program.”

David: Right.

Corey: Right. Yes, I was familiar with a lot of the technologies they have that – I can't remember how they work – ionizing certain radiations in our environment and making them inert.

They have ways of cleaning the ocean.

And, of course, we have the zero-point energy technologies that will stop the future pollution of the planet.

Yeah, if these technologies would be released, we could change our planet in a matter of just a few years.

David: So you're familiar with there being radiation-alleviating technologies?

Corey: Yes. Yeah, they can easily make radioactive material inert.

David: Well, that's a very positive message for us to end on.

We'll see you next time right here on “Cosmic Disclosure”. It's really great to hear that. I'm your host, David Wilcock, here with Corey Goode. And we thank you for watching here on Gaia.

Cosmic Disclosure Season 7

Corey Goode, David Wilcock, et al

Lifting the Military Industrial Curtain Season 7 Episode 1

[Cosmic Disclosure; Lifting the Military Industrial Curtain with Heather Sartain] Season 7, Episode 1

06 Jan 2017

David Wilcock: Okay, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and we are here with Corey Goode. And we have a special insider for you, someone who has bravely come forward and is bringing us a lot of interesting corroborating information. Her name is Heather Sartain.

So, Heather, welcome to the show.
Heather Sartain: Thank you.
David: All right. And Corey, welcome back, buddy.
Corey Goode: Thank you.
David: So, Heather, let's just hit the ground running here. Since the viewer might not know anything about you, I'll just say that you came up to me at a conference and told me that your father worked for Lockheed Martin.
Heather: That's correct.
David: And that there was a lot of very interesting stuff that he said that fit very nicely with what I've already been talking about.
Heather: Yes, that's true.
David: Okay, so could you just briefly tell us a little about yourself now. I know that you're a college professor, but what is your specialty in your work as a college professor?

Heather: I teach part time at a local university, and I teach geology and astronomy and

physics courses. My background is in physics and geology.
David: Okay. So Heather, I wanted to start out by explaining that you handed me some very interesting documentation here, the first one being your father's Texas driver's license.

Heather: Yes.
David: And so we see that his name was Edward. It's very clearly real. It says it expires on January 27, 2017. And when did he pass away?
Heather: In July of 2013.
David: July 2013. And the next thing that I have here is, it says, “Lockheed Martin Corporation Master Retirement Trust”. It's a check made out to your mother for $2,103.75.

BEATRICE SARTAIN
2702 DOLPHIN DR
SEABROOK TX 77586

ACCOUNT ID LMC L203123
PLAN NAME LOCKHEED MARTIN CORP MASTER RETIREMENT TRUST

PAYEE INFORMATION

PAYMENT DATE	CHECK NO.	PAYEE SOC. SEC. NO.	NET PAYMENT
01/27/2014	5539154237	[redacted]	2,103.73

PAYMENT DETAIL

PAYMENT SOURCES	Current	DEDUCTIONS	Current
PENRETRO	2,103.73		
GROSS PAYMENT	2,103.73	TOTAL DEDUCTIONS	

And it says, “Lockheed Martin” right on here. And this is his retirement or pension or something?
Heather: Yeah, she receives half of his retirement after he's passed on.
David: Okay. So I just wanted to bring that up to confirm to you watching this that a lot of UFO researchers they really want to see the documentation. And you've been able to provide us with proof that your father did work at Lockheed Martin.
Heather: Yes.
David: You grew up with your father having been in the Air Force, you said, originally?
Heather: Yeah, he was in the Air Force first of all, and then later he worked for NASA through different contractors.
David: Okay.
Heather: And he retired from Lockheed. And he was an aerospace engineer, a senior aerospace engineer for 37 years, working on top secret projects for NASA, as well as Space Shuttle mission and all the way back to Skylab and Apollo missions.

So his career covers several decades.
David: So, Corey, I remember that when you were brought up to the LOC, and you had the NASA hat on, they told you, “Take off that ridiculous cover”.
Corey: Right.
David: Does NASA have any inside knowledge at all? Or are they just a civilian space agency?
Corey: There are individuals inside of NASA that have closer to the full scope of information, but most of them that have been briefed or know about a Secret Space

Program, only know about the one the Military-Industrial Complex has created.

The last I heard, it was two space stations and a number of triangular craft that service them.

David: Okay. Heather, getting back to what was going on here, when was the first time that your father said something to you that was out-of-the-box? And what did he say?
Heather: He had referenced a UFO encounter that my mom and my sister had in 1966. And this is pretty close to Johnson Space Center where they lived and where I grew up. And that was several years before I was born. And they were talking about it, and he was talking about the different alien groups that he was aware of.
And about the age of 12, 13, I began to ask questions, you know, “What are you talking about? I thought 'aliens' was a story.

“This UFO that mom saw, is that for real, or was it something that's like military?”

And he said, “No, it's real.” And he mentioned the type of aliens that they saw moving inside the craft, so they were pretty close proximity. [It] happened to be over the Gulf of Mexico, the bay area where the Johnson Space Center is located.

And there was no sound in this encounter that . . .
David: What was the shape of the craft?
Heather: A disk.
David: Okay.
Heather: It's like having two plates, one on top of the other, so that it's kind of a flattened disk appearance, metallic.

She said it had blue, glowing lights all the way around it. And it wasn't like lights you would see here normally, a special technology.
Corey: And it was close enough that she could see people inside?
Heather: Yeah, my sister was six years old. She still remembers what she saw. They could see beings, at least three, moving around inside the craft. And they weren't very large. She said they were like the size of children.
David: Right.
Heather: And so that's when I heard my dad telling her, “You know, those are the Greys. They're robots. They're programmed by a higher intelligence, an older civilization. They come in and out of our atmosphere quite often. They're actually here all the time.”
David: Wow!
Heather: And he talked about different groups that are here on this planet, living among us, and they've been doing so since ancient times, actually, not just in recent times, but ancient times.
David: Well, hold on one second. Corey, as far as the idea of Greys being robots, does that line up with what you've heard?
Corey: Yes. There are, as we've discussed, a number of different types of beings that have been thrown under the Grey umbrella.

There are the programmed lifeforms that the military uses when they abduct people. And then there are also a group of Greys that were somewhat biologically and technically created by a group that is controlled by artificial intelligence, an ancient group.
David: Okay. When she gave a description of the craft, does that line up with anything that you are familiar with?
Corey: Yeah, that's a pretty classic UFO for that time period.
David: Okay.
Heather: She described it as being the size of a typical 10-by-10, 10-by-12 living room. So that's about all the space you would have inside the craft.
David: Okay.
Heather: Yeah.
David: It must have been overwhelming for you as a child to have seen movies like “Close Encounters” or “ET”, and then to be finding out, wait a minute, this is not just some fiction.

I mean, what you've already described is a lot of information to hear as a child or as a young adult.
Heather: Yeah, well, I know that what my mother and sister witnessed was pretty incredible. And for my dad to talk nonchalantly like, “Oh, yeah, those are the Greys.”

I later on became curious, well, why is he so comfortable with this? He doesn't speak

as if it's a joke.

My dad had a very serious personality, very dry sense of humor, a very technical person. Most aerospace engineers are very technical and serious-minded people.

And as I got older, I began to ask questions about the different alien groups that he would mention from time to time, either with his peers, a couple of friends he used to work with – I'd hear things in their conversations – or when he was talking to my mother.
David: Okay, let's just pause for a second there, and I want to get into your father's friends. We had talked off camera about that sometimes they would come to the house?
Heather: Yes.
David: So could you just set that up for us a little bit and what was interesting about that from your perspective?
Heather: They were also aerospace engineers working for Lockheed, and they would come over, and they would have private conversations in our home.

These were things they talked about away from work, but they would share amongst each other. And these were things they were learning from the government.

They all had military backgrounds. And these are things that they would discuss because they're piecing parts together of things they've been exposed to.

So they would talk about metaphysical things, energy, how it can be manipulated, how the population could actually change the rotation of this planet mentally. You can change the atmospheric conditions.

And they would talk about different types of technology that the government's working on that is sort of a reverse-engineering technique based on crashed UFOs that have been recovered and reversed engineering has taken place.

Now, I can't attest to if they were working on this reverse engineering, but I know that they understood it. And they had knowledge of it from work.
David: All right. Well, . . .
Heather: These guys worked under top secret.
David: You said some bombshell stuff, though, and I don't want to make people drink off a firehouse, so let's go back to that.

And actually, first of all, just to set this up, Corey, what is your . . . I mean, we're talking about Lockheed like everybody knows what that is. So what is your knowledge of Lockheed and their role in what you were doing?
Corey: Well, Lockheed, of course, is a contractor for the government. They do a lot of

research and development.

So a lot of what they develop goes into the Military-Industrial Complex Secret Space Program.
David: Oh. What specific types of technology are you aware of that Lockheed Martin is making for the Military-Industrial Complex?
Corey: Well, I don't know the scope of how much they designed and created this technology, but I know they were heavily involved in the creation of these torsion field engines, as well as their power plants, which in the beginning were your normal, run-of-the-mill nuclear reactors.

Then, later on, they moved to thorium reactors. And then after that, they moved to using this zero-point energy technology.

The reactor would build up electricity in these giant capacitors, and then the capacitors would provide the energy where they were needed for the engine or other devices.
David: So, Heather, I wanted to . . . Now that we've kind of set up what Lockheed is, and, Corey, you're saying that they are very involved in the Secret Space Program.
Corey: Yes.
David: Okay. So you mentioned this idea of overhearing your father and two other insiders, I guess, saying that our consciousness changes the rotation of the Earth?
Heather: Definitely.
David: What exactly . . . Could you be a little more specific on that?
Heather: Definitely.
David: Because that's a pretty shocking thing for people to hear. That's very outside the box.
Heather: If everyone on the planet were to be, say, on the same continent . . . The closer proximity you are, the more effective the electromagnetic spectrum works.

And through certain types . . .
David: I don't really understand that, though. The closer . . . So you're saying if all our population was on one planet . . .
Heather: No, on one continent.
David: On one continent. There would be some electromagnetic effect?
Heather: There would be this electromagnetic change, and it would actually change the rotation of the Earth just by the human thought process.
Corey: The proximity of all the minds together.
Heather: Uh hm. Yes.
David: They were saying this based on speculation or based on research, or how did they come to this idea?
Heather: I would say that this is based on stuff that they already know, and this is stuff that they're concluding, or stuff that they know as fact.

David: Well, let me ask you this, Heather. In a lot of the research that I have done, when I was working on my first book, “Source Field Investigations”, we have some pretty remarkable information showing that what they call LOD, or Length of Day, meaning the Earth's rotation, does undergo modifications based on solar activity.

So you might have the sun give off a burst of energy, and it will either quicken or slow the Earth's rotational speed in a way that is subtle but measurable.

Did they have any reason to understand why the Earth's rotation could be affected by human beings? You say it has to do with electromagnetic energy somehow?
Heather: Yes. Inside every person, you have control over electromagnetic fields. You have your own inside the pineal gland, and you also have the interferences of other types of electromagnetic energy. So that includes all of the light spectrum.

We have really short wavelengths of energy coming in from cosmic radiation all the time. And we also have very slow wave or longer wavelengths of, like, radio waves, for instance. Like AM radio waves can be three meters in length.
David: Right.
Heather: And our pineal gland actually produces short wavelength radiation. And it's not harmful to us or animals or anything on this planet. But the closer you are together, the more metaphysically powerful it is.
David: Hm.
Heather: And that doesn't mean that we have to be like crammed inside a tuna can, but it just represents the proximity of the mind and the consciousness working together can affect an entire planet, if not neighboring planetary bodies.
David: And they knew this scientifically?
Heather: Yes.
David: Okay. So, Corey, this seems to raise a lot of questions about mass consciousness effects. And what are your feelings about how the Cabal has been aware of this and is using this knowledge?
Corey: Well, I mean, as I've stated many times, the power of our co-creative consciousness, they want to keep us unaware of, because that is THEIR true power.

They manipulate us and our collective consciousness to cause things to happen in real time and in our world.

And their magic, it's not really that true of a magic. It is just manipulating us to make things happen with our co-creative consciousness.
David: Heather, did you ever hear anything like that from these conversations?
Heather: Yeah, well, just talking to my father one on one, we would have discussions about things like this.
David: Really?
Heather: And one of the things that we did discuss, and I have noticed over the years,

there's a lot of distractions to keep us from being in touch with the power that we have in our DNA and the organ, the pineal gland.

That organ is tremendously important. It has been just very surveyed over in medical science. Students are not learning about it.
David: Right.
Heather: There's a reason for that. When I first started reading about the pineal gland and the power that it holds for us, I asked my dad questions.
David: Oh?
Heather: And I wasn't too surprised that he knew about it, knew exactly what I was talking about. He said, "I'm glad you're reading that, because that's a very important organ that they are going to distract you from."

There's a lot of distractions all the time politically, in the economy, and environmentally.
David: So, Corey, did you hear about the pineal gland while you were working in the SSP?
Corey: Yes, definitely. And all . . .
David: I've never heard about it actually generating low-frequency radiation before.
Corey: Anything that emanates from it is going to be radiation.
David: Right.
Corey: It's something radiating from it. And when I was looking at the smart glass pad, we're talking like 30 years ago. So there's a lot of stuff, fine detailed, that . . . I was not into pineal gland stuff, but they did talk about measuring effects from a distance from the pineal gland of different things radiating from that point in the body.
David: What does it do, though? I mean, if we're generating this radiation, so what? What's the difference?
Heather: That organ is really important both spiritually and with the rest of the cosmic space that we live in.
David: Okay.
Heather: It's not just Earth-bound. It's a communication device as well as an awareness device. And without it, there would be a tremendous amount of things that we'd never become aware of.

It is the foundation of consciousness. It's a communicator.

But there are so many things that the pineal gland is purposely exposed to in order to basically pipe down the functionality, if not completely turn off its functionality.
David: I think what you just said, and I want to clarify this, the things that it's being exposed to, you mean things that our Military-Industrial Complex, or Cabal, or whatever we want to call them, are deliberately creating to try to suppress its function?

Heather: Oh, yeah. I have a coworker and a friend who used to work for the water department.
Corey: Fluoride.
Heather: And he told me about how much sodium fluoride he had to add to the system and that over the years that he worked there, and he worked there for I want to say a couple of decades, over that time, they just kept adding more and adding more .

And this is right at home in the Houston area, but it's not just Houston. It's all over the U.S.
David: So let me just add something that I think is relevant here in case you watching this don't already know this.

My research has showed that the interior of the pineal gland is water, but that there are small crystals in there, and that fluoride, because the blood-brain barrier is not in effect for the pineal gland, anything that's in your bloodstream can go in there.
And if there is fluoride in your bloodstream, it attaches to these crystals that are very important to the pineal gland's function.
And ultimately you get this thing looks like a bony lump on an X-ray. It's actually calcified pineal gland.

So did he ever talk about the calcified pineal gland?
Heather: He talked about our government suppressing the pineal gland for a very good reason. And if you ever really wanted to control our type of being in our population, that's the first way to do it. That's the first thing you're going to attack.

And it's not been in recent years. The pineal gland has been under suppression for hundreds of years.
David: Corey, are there any strategies that can be done to fight back against this pineal gland calcification?
Corey: Well, yeah. A lot of people have changed their diets, what type of water they intake, and doing a lot of meditation helps.

But mainly, it comes from taking care of your temple and being very guarded about what goes into it.
David: So distilled water occasionally would help to decalcify?
Corey: Yes, that's what I've heard.
David: Okay. Now, Heather, you also mentioned that your father and his buddies said that we could change the atmosphere. What exactly does that mean?
Heather: Well, every molecule, every compound that exists in our atmosphere and the state of a gas – and it doesn't matter if it's a solid, or a liquid, or a gas, but even gases can be connected to the electromagnetic fields that we produce because all electrons in the outer shell are manipulated by these field forces.

And these field forces are waves that travel through and propagate through space and atmosphere.

So human consciousness, or the human electromagnetic field that's produced, can change atmospheric conditions.

We could actually environmentally clean up this planet through our thoughts, . . .
David: Hm.
Heather: . . . because the thoughts is what controls everything we do and how we perceive.
David: Have you ever heard anything like that, Corey?
Corey: I hadn't heard it put like that, but what she was talking about that occurs subatomically, I definitely read.
David: So our minds could create a storm? Is that one thing that could happen? Could we create severe weather?
Heather: I would say yes. That's one thing that could happen, but it would take a group effort in order to do so. I wouldn't attribute that to just one person.
David: Why are they so freaked out about this? What's the threat?
Heather: The main thing that the Cabal or our government is trying to do is suppress our awareness. The less we are aware of what we can do, the less we're going to do.

The first step is being aware. The second step is then utilizing what functionalities you do have access to.

Some of the things that have occurred in our government over time besides suppression of the pineal gland is suppression of our DNA. Our population has had upgrades of DNA just based on geological catastrophic events.

My father told me that some of these events are controlled by alien groups.
David: Hm.
Heather: How they manipulate Earth catastrophic events is through the Earth's inner core.
David: Through the inner core.
Heather: Yeah. That's where the . . .
David: Could you be a little more specific?
Heather: The Earth's inner core is responsible for the Earth's magnetic field. That magnetic field is a shield. Right now it's been under depletion for a number of years.

It goes through cycles of becoming very strong to very weak. Some of that has to do with the Earth's parallax, which occurs every 26,000 years. And we're about 4,000 to 5,000 years away from another complete parallax.
David: Hm.
Heather: And that has to do with the Earth's wobble. So that wobble will change, and

eventually the North Star that we have today will be a different star.
David: Sure.
Heather: So when these things occur, there are a time window of opportunity to manipulate the planet, and that's when the tectonic plates will move. That's when catastrophic events will take place. That's when human DNA will be changed.
David: So Corey, does this line up with anything you've heard? Is the magnetic field in some way a shield that when it's weak it will allow more of this DNA-modifying energy to enter into our planet?
Corey: Yes, and in addition to what she's said, I've also heard that the strength of our field has to do with our core, but also it has to do with the interaction of the, I guess, core in the sun.
Heather: Um. Definitely.
David: Your father is sitting there with his buddies, and was this stuff that you were not supposed to be hearing?
Heather: He didn't think I was listening.
David: Oh. Ha, ha, ha.
Heather: I heard bits and pieces of their conversation. As I got older, him and I would talk, and when he noticed that I was genuinely interested and was following what he was telling me, he told me more.

But there were things that he did not tell me because they were top secret, and he adhered to the instructions he was given at work.
David: Hm. When did you start to get more information about extraterrestrial groups and what types of groups are out there?
Heather: He had mentioned there was a number of groups and that we, meaning our government, has been aware of these groups for a number of years now.

So I asked him what types of groups there were, and he talked about the Pleiadians, of course being from the Pleiades star system. They're very tall and fair beings. They're broad-shouldered. They're very wise. They're a very old civilization.

As far as he knew, they were among the oldest of civilizations in operation. They're very kind. They're only here to do good.

He also talked about Nordics. Nordics are farther away than the Pleiades star system. He said they had no body hair. They were also tall. They were also a good group, and they work on things like the Pleiadians to help raise consciousness, and not just our planet, not just our solar system.

He talked about Reptilians. They're very intelligent. They're also an older civilization. However, their intentions are not good.
David: Right.
Heather: They're very evil.

He talked about two different types of Greys. Both are being controlled by older civilizations, one type being tall, and the typical pictures of the oval face, the small nose, the large eyes.

And actually, he did mention to me before that some of the Greys are controlled by the Pleiadians.

The small Greys that are about three to four feet in height that you would typically see in the craft like my mother and sister witnessed, those are very robotic, very programmable, and those are controlled a lot of times by the Reptilians.
David: Oh. Okay.
Heather: Although other alien groups can take control over these robots because the technology is old.
David: All right. Well, let's take stock of some of that, Corey, because we've got a good foundation here.

So the first thing that she mentioned was Pleiadians. And you said they were tall, Heather?
Heather: Yes.
David: Could you be a little more specific? Did he ever give . . .
Heather: Seven, eight feet tall.
David: Okay. So have you heard of anything like that?
Corey: I've heard of beings like that, but as I stated before, in the programs they found out that a lot of these beings that we were interacting with that were telling us they were from this or that star system, they were not telling us the truth.

They were doing it for operational security so we didn't know exactly where they did live in case we developed technology and became a problem.

But there are some of these people that get lumped in with the Nordics that are around eight foot tall. A lot of them have blonde to like strawberry blonde kind of hair. And they'll have blue eyes. They're very tall. The men sometimes will have beards.
David: And she also had mentioned Nordics, and you said that they did not have body hair.
Heather: That's what he told me.
David: Okay.
Corey: Right. There are groups out there that are completely without body hair, bald. They're tall, pale. But I'd never heard them referred to as Nordics before.
Heather: Okay.
David: And let's talk now, Heather, about Reptilians, because that's something that we've actually gone into quite a bit on this show. So I'd like to . . . When did this subject with your father first come up?

I mean, the television show “V” was out in the early '80s, and so that was obviously an invading alien race that tries to look benevolent, but then they have a Reptilian face under the human face.
Heather: Yeah. When we first talked about the Reptilians, I was 19.
I was going to college, and I was working part time at Space Center Houston. And that's when he really opened up and started to tell me more.

I think he felt that I was at a mature enough age to comprehend it, and he did tell me a few times, “I wouldn't talk about this stuff with your friends. I wouldn't share this information, especially not right now. Just keep it to yourself.” So I did.
David: Right.
Corey: Sounds like stuff I tell my daughter.
David: Yeah. How did this subject with him come up? What was the first . . . How did it start?
Heather: I would hear him say something, say, with my mom, having a conversation. I'm like, “You said something to her about Reptilians. What do you mean by that?”
David: Hm.
Heather: So usually I was asking questions based on something I heard him say.
David: Okay. And what was his response?
Heather: Well, one time he just said, “Oh, they're bad. They're really, really bad. You don't want to encounter one.”

And I don't know if he has, and I don't know that he would ever disclose that, but . . .
David: What was the description that he gave of them?
Heather: Well, they have scales. They're very reptilian-like. They look like us, but they have a body full of scales.

Their eyes are different. They have different-shaped head. They have a little bit larger head than we do. And he said something about the top of their head. They had some type of hard material, almost like a helmet.
Corey: Like a nuptial hump?
Heather: Yeah. Yeah. And he said they controlled some of the small Greys that do the abductions on this planet without our permission.
David: Right.
Heather: A number of people are abducted, not just animals.
David: Did he get into any detail about their color or their appearance in that sense?
Heather: I don't know that we discussed their color.
David: Okay.
Heather: But he said, “Just think of a snake and how a snake skin looks and appears.” That's kind of what they would look or feel like.
David: Was it confusing to you when he first brought this up to try to understand and visualize what he was talking about?

Heather: Yeah. I think I laughed a few times. It sounds a bit ridiculous, especially in 1992.
David: Yeah.
Heather: And that was the first I had heard. And then when the Internet became available, around the time of 1996, 1997, there wasn't a whole lot of information available.
David: That's for sure.
Heather: But as time progressed, I would do some research, library and Internet, just to see what is available, and basically to verify what he has told me before. There wasn't a lot of information.
David: You said the eyes looked different, but you weren't specific. Did he ever tell you how they looked different?
Heather: I think he said they were yellow in appearance or red, not the same colors of our eyes here.
David: That's exactly what Corey said before.
Corey: Yeah.
David: Did he talk about vertical-slit pupils?
Heather: Well, he said they were reptilian eyes.
David: Right. Okay. So that lines up very nicely.

Let's profile these beings for a minute. Did he give you any information about where they had originated from or how old they were or anything like that?
Heather: The Reptilians, he said, were an old civilization, but they've had a lot of problems. And he didn't get into a whole lot of detail other than they've moved around. And they have had an enormous amount of evil intentions on not just the Earth, but other groups.
David: Are these ETs all holding hands and signing “Kumbaya” together, or is there some type of battle between them?
Heather: There's definitely a battle. There's a galactic battle that's been going on since time began.
David: So, Corey, how well does this correlate with things that you've heard?
Corey: It sounds a lot like what we've discussed.
David: Sure.
Corey: Yeah. For sure.
David: And this idea of the Reptilians having to move around a lot, she didn't get a lot of information, but what is your understanding of why they have to move around?
Corey: They are a transient species of conquest, and they travel from region to region, looking for clusters of star systems that they can exert their influence over.
David: And they keep getting wiped out or beaten?
Corey: Yeah. They've had . . . A lot of people out there, they've been programmed to believe that the Reptilians are all-powerful, they cannot be defeated or killed and all this.

They've been defeated many times, even here on Earth. They've been chased off of Earth many times and come back.
David: So, Heather, you mentioned the history of the Reptilians, the Nordics, the Pleiadians. Did you ever get a thing about how old the Greys were? Or are they just something that's created, almost like a commodity?
Heather: The Greys are created as if they were androids made by people. They're robots. They are programmed, although they have a powerful computer-like mind that has biological aspects.

And they can control the crafts that they're in, but there are times they're not very good at it.
David: Really?
Heather: Yeah. There's been times that they don't come into the Earth's atmosphere at the right location, and that's why there's been crashes. Just like a computer that a human programs, it can crash. It can get viruses. It can have issues or things you overlook. It's the same thing with the Greys.
David: One last thing I want to ask you, Heather, just before we close out this episode is, some of the stuff that you've said might be terrifying to some of the people that are watching this show.

Did your father ever express that there was a vulnerability of these negative groups? Are they just invincible and all-powerful, or is there a vulnerability there?
Heather: He told me this. They work in large numbers because they have to.
David: Really?
Heather: It takes a lot of say, Reptilians, to get anything done. They work on a very low level of consciousness, very low, intense radiation.
Corey: Like drones, kind of droning around.
Heather: Low vibration.
Corey: Yeah.
Heather: So they have to work in large numbers to accomplish what they want to do.
David: Hm. So how is that a vulnerability?
Heather: Wipe them out to a small number.
David: Ha, ha, ha.
Corey: Yeah, find a way to split them apart.
Heather: Yeah.
David: Divide them . . .
Corey: Divide and conquer.
David: . . . and they don't have the strength when they're separated.

So that's all the time we have for in this episode. I'm David Wilcock here with Heather Sartain and Corey Goode. This is “Cosmic Disclosure”, and I thank you for watching.

Revealing Hidden Technology Season 7, Episode 2

Cosmic Disclosure; Revealing Hidden Technology with Heather Sartain Season 7, Episode 2

15 Jan 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey Goode and our special guest, Heather Sartain, whose father worked for Lockheed Martin, a well-known defense contractor, and who decided to tell her some things that he probably shouldn't have, but we're all very glad that he did.

Now, he's talking with his buddies in your house, and you had mentioned in our previous episode that they discussed craft that had been reverse-engineered.

Now, that's a very common thing we hear about in UFOlogy, but I'm interested in starting today on what you heard specifically about this particular subject when you were hearing them talk.
Heather Sartain: The craft that had been recovered in Roswell, New Mexico – and that's not the only place there has been a crash.

Roswell Daily Record

House Passes Tax Slash by Large Margin

Security Council Paves Way to Talks On Arms Reductions

No Details of Flying Disk Are Revealed

Ex-King Carol Weds Mme. Lupescu

That crash occurred in 1947. And there have been other places, especially out in the desert, where craft have been recovered.

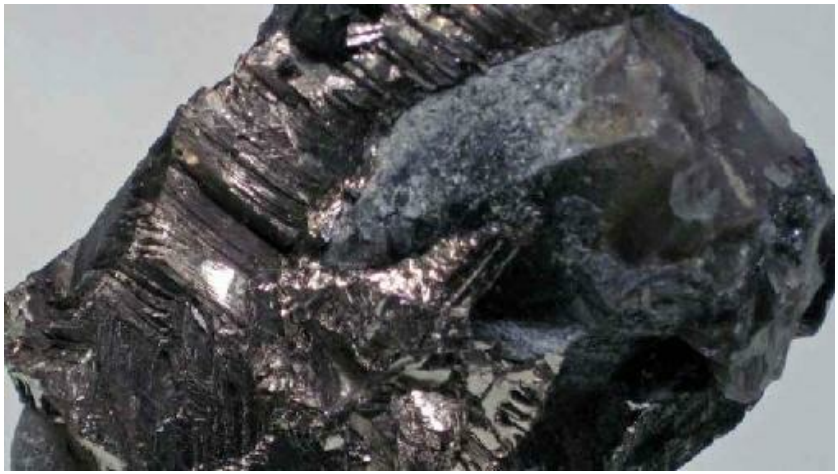
The government, the military, has housed them underground at Ellington Air Force Base, as well as at Area 51.

And they have been able to turn on the mechanisms that control the craft, and, of course, there's a lot of very intelligent engineers available to reverse-engineer this technology.

And it's just like if you were to take a cell phone, and you're from another century, and you're a smart person, and you understand how electricity works, perhaps, you can reverse-engineer a cell phone.
David: Did he ever talk to you about some of the hurdles that they had to go through in order to be able to run the craft? Was there anything unusual about the technology?
Heather: The unusual things I heard him tell me about the technology, it's very quiet, it's very powerful. It works off electromagnetic energy.

There's a reason why most of these craft are metallic. That metal is not commonly found here. It's actually a manufactured material, and it's not manufactured here.

So this is manufactured in another planet or solar system by other groups of aliens.
David: Were there unusual alloys in the metal?
Heather: It was a mixture of metals, from what I understand, and they have a high density. Some have lower density. So there's been a number of different craft that have been recovered over the years.
David: Did you ever hear about scandium aluminum or bismuth or any of those elements?
Heather: Oh, it's funny you mention that, because a student of mine just found some bismuth . . .
David: Oh, really?



Heather: . . . and they thought it was a meteor, and they brought some to class.
David: Oh! How about that!
Heather: Yeah, it's very unusual. In fact, I took it to one of the planetary scientists at NASA for analysis, and it's all bismuth. They don't know where this came from. It's a very strange conglomerate of material.
David: So, Corey, when she mentions high-density alloys, high-density materials and being built outside our solar system, or at least off-planet, does that conform with some of the things you've heard about the composition of these craft?
Corey: I know that they were exotic alloys, but I don't recall that much of what I was reading about the metallurgy.
Heather: I understand part of it, from what he told me, is for protection when they enter our atmosphere. And they have the ability to enter the atmosphere very quick, so high velocity, and the metal can withstand the frictional forces.
David: And you mentioned in the previous episode that the Greys are programmable robot types, but that sometimes they miscalculate their entry.
Heather: Yeah, their minds are programmed. Their minds are similar to ours, but they're more computer-like. There's more electronic materials that are going on inside their bodies, although some are very biologically built.

So if you think about DNA being the unit of how everything's built and as being a communication to RNA on how to make a cell, their bodies are capable of regenerating a lot of parts on their own, sort of like how ours are, except they are programmed by higher alien races, and they are able to control the craft as if they're the CPU on the craft controlling the movements of it.
David: So, Corey, have you heard anything about there being Greys or any other operator where their brain becomes part of the CPU of the craft and how it functions,

like she said?
Corey: Well, yes, our craft operate that way now.
David: Really?
Corey: It's bio-neuro interface. Yeah, their hands – now it's a type of glove that has little pieces in the glove that are metal that interface with our neurology. And then it wirelessly goes to the craft.
David: Hm. So what would make them crash when they come in? Why would they not have the ability to fly the craft correctly?
Heather: It's a bit similar to us moving a space shuttle through the atmosphere. There is particular areas where you want to come into the atmosphere, not only for landing purposes, but for frictional heat purposes.

And this material that they use is more resistant to frictional heat than, say, the space shuttle. And there is things like lightning in our atmosphere, and there's actually been crashes as a result of lightning interference.
David: Hm.
Heather: So a strong bolt of electricity can just temporarily mess up their trajectory, their readings.
Corey: Guidance, yeah.
Heather: Yeah.
David: You also mentioned the Roswell crash, 1947, that a being was telepathically communicating with someone.
Heather: Yes.
David: Can you just share that story with us really briefly?
Heather: Yes. There was a nurse with the military at that time, and she was actually brought in because some of the bodies were not functional anymore. But there was a particular being that was still functioning and still . . . I guess “alive” would be an appropriate term for this.

And she was the only person in the military at Roswell that the being would communicate with. And she interpreted that as telepathic communication.

She realized that she was having thoughts that were not of her own. She was having thoughts about things that she doesn't have knowledge of, and that's how she realized the being was communicating with her.
David: Wow!
Heather: There's actually a book available on this. It's called “Alien Interview”.

David: And your father told you that this book was actually authentic?
Heather: Yes. Yes. We used to have Monday night meetings at a friend's house, and we would talk about things like this book. And he said that, “Yeah, I can attest that a lot of that information in there is very true.”
David: Hm. Okay, so this gets into a big, big subject. If they have gotten these disks, and you're saying now that they were able to successfully reproduce them to some degree?
Heather: Yes.
David: Okay. Then these are interplanetary craft, correct?
Heather: Mm-hm.
David: So you must have asked him at some point if they had gone out into our solar system, if they had built anything, if they had done anything, if they had found anything. So let's open that up now.
Heather: The UFO disks are more like just for transport purposes, where they come here to get data or perform abductions. They actually go to another place, maybe a larger craft or space station where they dock.
David: The UFOs do?
Heather: Yes.
David: Okay.
Heather: Yeah. The craft I'm referring to are too small to really have any other functionality except transport.
David: Okay. But as far as folks from Lockheed and other defense contractors, once they gain the ability to leave the Earth, what are they doing out there? Did they find anything?
Heather: They have seen things that look like large pieces of equipment in our solar

system, but they don't know what the functionality of that equipment is, other than that we did not put it there.
David: Now, you also had mentioned to me before that he discussed something having to do with Saturn.
Heather: Yes.
David: And could you get into the subject of Saturn for a moment with us now?
Heather: Sure. There are . . .
David: And how did this come up? When did you first hear about this?
Heather: I probably heard him make these statements when we were having conversations, probably when I was in my 30s.
David: Okay.
Heather: So this is more recent information. And he described to me there being over 60 moons around the Saturn system.

If you go beyond the moons that we typically hear about, the larger moons, the ones that have atmospheres or a lot of geology, you find some misshapen moons out there that kind of resemble asteroids.

There's one in particular. The name of the moon is Hyperion.

It has deep cavities in the moon. It almost looks sponge-like.
David: Is that what it's called to everyone out in the known world, or is that what the secret program calls it?
Heather: That's what you're going to find in science books as far as a name is concerned, but NASA refers to that moon as Saturn 7 moon.
David: NASA calls it Saturn 7?
Heather: Yes.

David: Because it's the seventh one out from Saturn?
Heather: It's the seventh one in that profile of moons, yeah.
David: Oh, okay.
Heather: And there is a vault that our government is storing inside one of the cavities of the moon that contains very important information and materials.
David: Hm.
Heather: And the reason it's out there is because we cannot house this stuff on Earth. The contents of this vault, I have no knowledge of, but it's very important information, if not technology or something we may need in the future.
David: Okay, Corey, does any of that sound familiar to you?
Corey: Absolutely. Yes, I had heard tale that there was a vault, and that it was for continuity of species if something were to happen on Earth. It has seed banks, genetic banks to reproduce every living organism from microbe up on this planet, and also it's a data repository.
David: Hm. We've talked on the show a lot about ruins in the solar system and stuff that might be pretty old, and I'm wondering if you've ever heard anything about that?
Heather: Yes, we've had conversations, my father and I, about the pyramids on Mars and Earth. These are, from what I understand from him, location areas for pinpointing a particular area of the planet for manipulation purposes.

And one of those manipulation purposes is controlling the Earth's inner core, which then, in turn, affects the Earth's magnetic field tremendously.
David: Well, we do know that the largest amount of land, in terms of longitude and latitude . . . If you actually draw lines around the Earth, the greatest amount of land coverage is . . . it crosses where the Great Pyramid is.

So the Great Pyramid is like at the balance point of the Earth's actual continental mass. And that sounds similar to what you're describing.
Heather: Yes, it does.
David: So he said that Mars has pyramids that serve the same function?
Heather: Yeah, but more in ancient times. From what I understand, there was a lot more activity on Mars in ancient history than there is today.
David: Sure. What about the Great Pyramid here? Did he tell you anything else about it that was unusual that we don't really know about mostly?
Heather: There's a whole lot of technology under there . . .
David: Under the pyramid?
Heather: . . . that's been there for a long time and is utilized, I would say, regularly, from the way he explained it. It's still operational today.
David: In what, like a chamber? Is there a chamber under the pyramid or something?
Heather: I know it's centered and that there is a connecting-type technology in the capstone of the pyramid. So it's deep underground, but it creates a connection. And exactly what that is, I'm not sure.
David: Well, you'd mentioned something about the Earth's core. What's the

relationship between the pyramid and the Earth's core?
Heather: Control. So the pyramids have a special technology that's designed to manipulate the Earth's inner liquid core.
David: Mm.
Heather: And that inner liquid core is what transmits our magnetic field. So it can be controlled on making it weak or strong.
David: And is this something that either the good guys or the bad guys in that ET sense can manipulate?
Heather: Oh, yeah, especially the Reptilians.
David: Mm. Okay, so, Corey, I let a lot of this fly out before I wanted to tie this back to you. Now, are you aware of there being unusual technology in or under the Great Pyramid?
Corey: I've never heard anything specific, but I've heard in the program all kinds of things, including that the capstone of the pyramids was put underneath the pyramids.

I've heard several different things about some chambers that they can't get to because there are fields protecting them.
David: Mm.
Corey: But I've never heard very detailed information that is concrete.
David: We have this really interesting clip that we're going to see now from C-SPAN, where Buzz Aldrin, the astronaut, goes on television and talks about this monolith on Phobos. Let's check out the clip right now.
C-SPAN: Buzz Aldrin Reveals Existence of Monolith on Mars Moon

David: What do you think Buzz Aldrin was doing when he mentioned this? Why

would he say something like that?
Heather: Well, I think it's important to create awareness. There's very few that will come forward from the government, military, NASA included, because they are working under top-secret projects. They are sworn to secrecy.

The reason somebody would come forward like my dad has in his own not-so-directly way, but like telling me and telling like my mother, is the information is something you feel should be shared.

It's like, why shouldn't this awareness be made to everyone? Because if you don't, you're just helping the Reptilians.
David: Sure.
Heather: And we don't want that to happen. But there's a lot of exchanges and perks that take place with our government, including technological advances, in order to suppress that awareness.

So in exchange for . . . I'm just going to use gold as an example. In exchange for gold, you don't want to create that awareness because you're allowing the Reptilians to have power.
David: Now, as far as the actual monolith on Phobos, did you hear from him about any other ruins besides the pyramids on Mars?
Heather: Yeah, definitely.
David: Could you give us some examples?
Heather: There's technology that's been found on the Moon.
David: Okay.
Heather: Astronauts have actually been on the Moon. The walks on the Moon, the investigations of the Moon are not a hoax. The Saturn 5 rocket did launch. We did make trips to the Moon.

A lot of the things the astronauts have recovered on the Moon are not going to be shown to the public.
David: Really?
Heather: Yes. The lunar rocks, to be honest with you, they resemble actual rocks. This satellite, even if it's purposely made, it's made just like a lot of other moons.

The deception lies within the fact that there are things on one side of the Moon we never see. So the synchronization process of a 28-day cycle, or approximately 28-day cycle around the planet . . . and it's like being in your car. So you're driving around a roundabout, and a person is facing your car, and you face each other the whole way around. You're never going to see the other side of the car or the person.
David: Right.
Heather: So we call it a synchronization orbit, and it's done purposely. This is not by chance or coincidence or by nature.

David: So what did you hear is on the dark side of the Moon?
Heather: A few things, that's all I've been made aware of . . . some craft, including crashes, launch pads, stuff that's been abandoned, including old electronics that were not reverse-engineered. They're actually left there.
David: Old electronics from whom?
Heather: Other civilizations that have utilized the Moon.
David: Okay.
Heather: It is my understanding some artifacts have been brought back, but they are kept underground. We don't have public information for them.
David: You have also mentioned that your father had a friend who was deeply involved in black ops, and he's still around.
Heather: Uh-huh.
David. What was his role? What do we know about this guy that you can tell us?
Heather: I can tell you that preparations for some things that were considered conspiracy theory or hoax, such as Y2K, him and my father and a few others had prepared. This was a real and true event.
David: Yeah.
Heather: Also, December of 2012 being the end of the Mayan calendar or something else, there was something that was going to occur, and I know from the two of them talking, as well as my father talking to me, there were intentions for these events to take place, but they were stopped.
David: What events are you referring to?
Heather: Y2K, for instance, that was a planned event.
David: Oh.
Heather: December 21, 2012 being the end of the world, they already knew it wasn't. This was not an apocalyptic event of any sort. This was a preplanned event that had to do with other alien groups with bad intentions, probably the Reptilians.
David: Like a cosmic false-flag attack on Earth for that date you mean?
Heather: Yes.
David: Really?
Heather: Also a distraction . . . I've heard them talk about that this is a possible distraction. That's why it stopped. Or it was stopped by other ancient civilizations that have better technology and wisdom.
David: What was the truth behind the Mayan calendar? Did you ever hear about why the Mayan calendar was so interesting?
Heather: From what I understand in our conversations, the Mayan calendar is a piece of event record-keeping and cycles. The end of that cycle has a lot to do with moving through the zodiac and the constellations.
David: Right.
Heather: That goes back to the parallax of our planet as well. And there is no specific end to the Mayan calendar. Although it ends at that time, it is moving into another part of the zodiac.

And coming from a NASA engineer, astrology is never really talked about, but I would say that there are very specific aspects that relate to astrology that are real and true.
David: Sure. We have so many quotes from ancient civilizations talking about an expectation of some kind of solar event. Corey has also talked about the idea that the Sun might give off some kind of flash of energy.

I'm wondering if you ever personally encountered that from your father or other insiders, and if so, what did you hear?
Heather: Well, there is a very good reason why NASA has probes and craft that orbit our Sun. We are keeping track of these upcoming events based on changes of the Sun's magnetic field.

The Sun is like a giant magnet. It really is. It interacts with the Earth's magnetic field all the time. And the way the Sun is composed of its energy, there are going to be times when there are CMEs, and there are going to be times where there is a release of plasma.

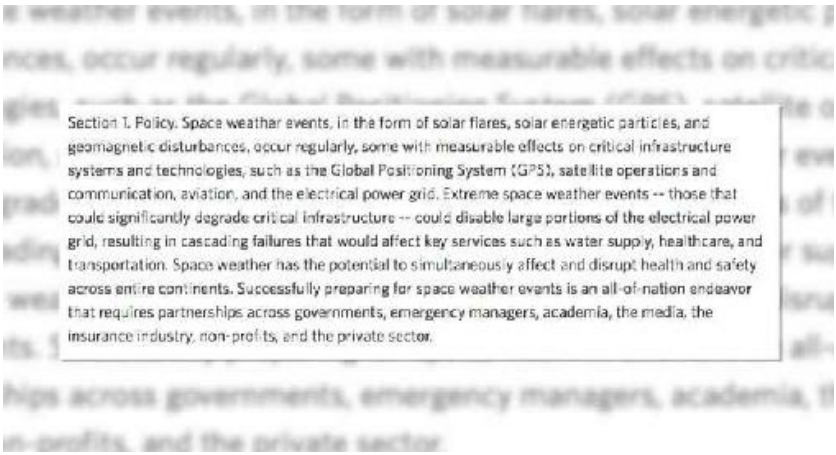
And that affects our planet's inner core, which in turn affects earthquake activity and volcanism.
David: But you also mentioned something about the Sun releasing plasma. Is this more along the lines of what I'm talking about, like a giant flash?
Heather: Yes. This is inside the Sun's corona. So there's an outer portion of the Sun that has a strong magnetic field that extends far into our solar system that actually causes weather, not just on Earth but on other planets.

And that's actually controlled, and our government knows how to control this.
David: Really?
Heather: Some of this comes from technology of other alien groups, not just by direct communication, but from some reverse-engineering. It's a matter of fact that the reverse-engineering of these small disks that are used for transportation for the Greys works on electromagnetic field propulsions, and that has actually helped us better understand using magnetic fields of other planets.

And the Sun's magnetic field isn't all that much different, other than it's very strong.
David: Mm. So just to divert to that for a second, do we need fuel for these craft to travel, or is there something that allows them to go for a long way without requiring refueling?
Heather: No, it's free.
David: Okay.
Heather: There's electromagnetism everywhere.
David: When you say that our government has the ability to manipulate the Sun's energy, did you get any specifics on how that's being done?

Heather: Well, we've actually protected our planet several times from these CMEs and flashes.
David: Really?
Heather: Mm-hm.
David: Interesting.
Heather: But that's not to say that other groups, such as the Reptilians, can't also do the same. They've had a handle on that technology longer than we have.
David: Mm. So we know back in 1859 there was something called the Carrington Event, where the Sun gave off one of these flashes.
Heather: Oh, yes.
David: And the whole Northern Hemisphere, all the telegraph wires melted in America and everything. So what would be the effect if the CME were to hit us now? Would it be that bad if it was a direct hit?
Heather: A direct hit will definitely wipe out electro-communications, from satellites to your cell phone. It would make changes in your DNA.

This is actually one way upgrades are made. Not all upgrades are equal.
David: Mm.
Heather: These interferences or these changes that reach our planet don't necessarily kill people, but they will damage primitive technology. And I mean the technology that we're used to today, such as cell phone technology and the electricity that we use is very primitive.
David: Sure. Now, Corey, you'd sent me a document recently that was an Executive Order that Obama signed regarding solar events.
Corey: Yeah.
David: And could you tell us that story? Because I think right now is a really relevant time for that.
Corey: It popped up out of the blue right during the time we were talking about how a lot of the elite are expecting this large solar sneeze.
The timing of this Executive Order is more than just a little suspect, knowing what we know about what is occurring with the Sun and what all these elites are expecting.



David: Obama is basically organizing a very comprehensive directive for how we would prepare for and endure a major catastrophic solar event. That's what the document is basically saying.
Corey: Right.
David: And they come out in the open with this.
Corey: Right.
David: So why do you think they're doing that now?
Corey: These groups have different ideas about what will occur when there is a solar flash, but they all understand the fact that it's going to be big, from taking out electronics to mutating our genetics.
David: Just like she was saying.
Corey: Just like she was saying.
David: So, Heather, based on the fact that we have so much insider testimony saying the Sun is going to give off a massive energy release, from people that Corey has been talking to, I've spoken to many of the other insiders, and there's so much ancient wisdom about it and also scientifically provable data, could you get a little more specific about who have you spoken to who, if they did, said anything about the Sun giving off a huge flash?

Like what did you hear about it? Who told you? Could we get into that a little bit?
Heather: The only specific details I have on a CME or a blast from the Sun's corona is from science and technology, my own education, talking to planetary scientists that I know.
David: Okay.
Heather: And it is a fact that the Earth's magnetic shield is very weak right now. When it's stronger, we have a lot more protection from that much energy being directed at this Earth, because that electromagnetic shield repels it.

David: Right.
Heather: And so it's a matter of, will we have a stronger magnetic field when this happens? And since that can be manipulated, the question is, who will manipulate it, and when will this be done in a timely manner?
David: What is it like for you being a college professor and having knowledge of things like this? Have you had times where you want to tell your students about some of this stuff? And what would happen if you did?
Heather: There's been times that I might shed an opinion or something that they may have seen on television, such as different alien groups. There are chapters in our textbook where we talk about life in the universe and the possibilities of that.

And we can actually attribute all of that to the Kepler Space Telescope, as well as the Spitzer Space Telescope, as well as the Hubble Space Telescope.

We've discovered so many planets that have some of the same constituents of our planet that you almost can't put that in a textbook that life isn't possible elsewhere.
David: Sure.
Heather: We can also thank the Drake equation from 1969.
David: Yeah, which has now been completely disproven because there's 40 billion watery Earth-like planets just in the Milky Way galaxy, and that's now NASA data. Without saying that.
Heather: Exactly.
David: So you told us off camera that you also have had interaction with NASA astronauts who told you some things that they're definitely not going to say publicly. So could you describe a little of that for us now?
Heather: Yeah, just a little information. I won't disclose who I've spoken to, but astronauts have seen a number of UFOs while they are in low Earth orbit in the space shuttle.

Some have knowledge from collaborations with others in the military. Some have backgrounds in the military that date back before their time with NASA, where they have actually had encounters with aliens and also spacecraft.

All of that has been kept closed and top secret, but they will either disclose it to friends . . . Some have come forward on television. There's no doubt about that. You've mentioned one of them.
David: Buzz Aldrin, Gordon Cooper. Um-hm.
Heather: Yes. And they do have interactions with craft, with aliens. They have knowledge of it.
David: Some of our astronauts have had direct interaction with extraterrestrials?
Heather: Yeah, in their military careers, . . .
David: Ah.
Heather: More so in the military, not so much with NASA.

David: We're out of time for this episode. I was curious, Heather, if you have any final thoughts, anything you'd like to share with the audience based on all that we've been discussing here?
Heather: Yeah, I think that the more we make awareness happen, the more people that disclose and our role in this collaborative effort, the better things are going to evolve and advance.
David: Well, Heather, this has been awesome. I really want to thank you for being here.
Heather: I appreciate being here.
David: You've had a lot to say, and it's been really amazing. And, Corey, again, thanks for being here.
Corey: Thank you.
David: And thank you for watching. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with Corey Goode and our special guest, Heather Sartain. Thanks for watching.

Law of One, SSPs Negative Forces Season 7 Episode 3

Cosmic Disclosure; Law of One and SSPs Negative Forces Season 7, Episode 3

29 Jan 2017
David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode.

And in this episode, we are continuing our stunning investigation, by popular demand, into the amazing correlations between what is in The Law of One material and Corey's own direct experience with the Secret Space Program.

There's a lot of things in here that many people might not catch. I've been a Law of One scholar since 1996, and so I've ferreted out some very interesting stuff that, even if you've read The Law of One, you might have skipped.

So, Corey, welcome back to the show.

Corey Goode: Thank you.

David: Okay, so Corey, when we last taped the show, you hadn't seen The Law of One at all. Has that changed since then?

Corey: Yes. Actually, I was able to read the first book of The Law of One. I only read it once.

And there's a lot to retain, so I'm going to need to read it a few more times, obviously.

David: Yeah. When I first got into it, I would spend 45 minutes without turning the page, just intensely concentrating. The verbiage is very difficult. And what I'm going to do for you guys is make sure that I try to interpolate this as much as possible.

But we are picking up where we left off in a previous episode, so let's just dive right back in.

CAN YOU NAME NAMES?

So can you name names? This is a question that's being asked.

11.19 Questioner: Can you name any of the recipients of the crusaders' – that is, any names that may be known on the planet today?

David: [The crusaders], of course, are the Draco beings.

So now, the questioner, Don Elkins, is basically trying to find out, okay, who has been contacted directly by the Draco? Can you actually give us a name?

And you know Ra is really touchy about that, because of free will. Unless somebody is dead, they can't. And even then, they're really worried about free will.

So the answer gets a little complex because of that.

Ra:... I am desirous of being in nonviolation of the free will distortion.

David: So clearly, again, they don't want to say what's really going on here. They don't want to get too far over the edge.

To name those involved in the future of your space/time is to infringe; thus, we withhold this information.

David: But of course, if they did, it would be the Council on Foreign Relations, Trilateral Commission, the Illuminati bloodline families . . .

Corey: Council of 300, all of the think tanks . . .

David: It's very clear that that's what they're kind of alluding to, but they don't really say. And they do actually mention people running the financial system at some point in here.

We request your contemplation of the fruits of the actions of those entities whom you

may observe enjoying the distortion towards power.

David: So there you have it right there. The distortion towards power just means people who have created financial power, worldly power. And these are the people that have had contact with what they're calling the Crusaders of the Orion, which is the Draco.

In this way you may discern for yourself this information.

David: So have you noticed, Corey, in dealing with these beings yourself, that there are things that you'd like to ask that they balk on, they don't want to just give you the answer to every question that you ask them, like the Blue Avians?

Corey: Absolutely.

David: Could you give us some examples?

Corey: Not really because it has to do more with personal life kind of things going on.

David: Okay.

Corey: But the response is always, they've got to be careful of violating free will. And also, if they've given me information and I shared it in an unloving way, or not the right way, with another person, I've been talked to about violating the free will of others.

David: Well, you also, in one of our update episodes, described a situation where you injured your knee falling down a ramp coming out of the SSP craft, and that they didn't actually heal you.

Corey: Right. That was the Mayan group.

David: Yeah. And it was apparently you needed that karma for some reason.

Corey: Right.

David: Okay.

We shall not interfere with the, shall we say, planetary game.

David: So clearly, there is some degree . . . They do talk about that the Guardians are allowed to make sure the harvest goes well. And “harvest” refers to this Ascension event.

But for a large amount of time, they don't really want to interfere. We have to do this

ourselves.

And is that, again, similar to what you hear?

Corey: Yes, and interesting enough, this whole situation is referred to as a “game”, or “the game”, by a lot of the elites.

David: Ah! Right. So there's a lot of correlations here.

It is not central to the harvest.

David: So this event is going to take place regardless of whether they tell us who these people are or not.

Corey: Right.

David: The real thing is about opening the heart, being more loving, more service-to-others oriented, as you've said so many times yourself.

Corey: Absolutely.

HOW DOES ORION TEACH?

David: Yeah. So how does Orion teach? This is a big question.

11.20 Questioner: How do the crusaders pass on their concepts to the incarnate individuals on Earth?

Ra:... There are two main ways, just as there are two main ways of, shall we say, polarizing towards service to others.

There are those mind/body/spirit complexes upon your plane [people] who do exercises and perform disciplines in order to seek contact with sources of information and power leading to the opening of the gate to intelligent infinity.

David: Now, Corey, as you read this, the idea of “doing exercises and performing disciplines to seek contact” - what does that remind you of, or what are you thinking would be happening that would relate to that?

Corey: Secret societies and the ancient mystery school teachings that they have taken and corrupted is what pops into my mind.

David: Are some of these people actually practicing meditation and trying to do – even if they're very negative – they're doing a meditation practice?

Corey: Oh, yeah. They meditate.

David: Okay. And do you think that all of the blood trauma type of stuff that they do is related to this, as well?

Corey: It could very well be related, because blood sacrifice . . . All of these deplorable practices that they do, they have multiple reasons why they do them.

Of course, they want to have the person commit this type of crime to be able to use it over them. But also, they use it to affect the person's energy and psyche, to start to manipulate their psyche.

David: Well, now, you've spoken before about this very bizarre situation that took place between Jack Parsons, allegedly one of the founders – well, not allegedly, we know he's one of the founders of NASA – and L. Ron Hubbard, where they did this thing called Babalon Working. And they were trying to summon, inside a magic circle, some kind of spiritual creature.

And you said to me in private conversation that those rituals that took place over several days actually had some very destructive effects.

Corey: Yes. And there have been reports that I've heard of, out in the middle of nowhere – let's use where we are now as an example, in the Boulder [Colorado] area – off in the mountains away from all prying eyes, these groups will get together, form a circle, and do some sort of a ceremony.

And many times, a Reptilian will appear in the middle.

David: Really?

Corey: Yeah.

David: Now, you mentioned before that there were actual damages in the Earth's protective field caused by that ceremony that Hubbard and Parsons had done.

Corey: Right. It had opened some sort of a rift.

David: And you had mentioned the idea of somebody going with like a boxcutter knife alongside a sheet . . .

Corey: Right.

David: . . . and like slashing long holes in the sheet as they walked by.

Corey: Right.

David: So as the Earth rotates and they're doing this Babalon Working at a particular latitude line, is there some type of tear that they cause in the Earth's energy field that rotates as they continue doing it?

Corey: Right. It's just like if you took a globe, spun it, and then took a Sharpie and touched it to the globe as it was spinning. It's going to leave a streak.

David: And what was the effect of this tear? What happened once they created that tear?

Corey: This tear allowed beings from another dimension to have access to ours.

David: So it's actually . . . it creates a portal that they could get in through that they otherwise wouldn't have.

Corey: Right. But it ended up being one that they could not close.

David: It seems pretty bizarre that just a couple of people could do this much damage. Why do you think it works that well?

Corey: Well, I mean, you've spoken many times about small groups of people getting together causing major effect on the larger population.

David: In the meditation effect for a positive sense, yeah.

Corey: Right. Well, why wouldn't it work for a negative sense as well?

David: Okay. So this is one of the ways that the Orion, or the Draco, would contact individuals incarnate on Earth. And they said there was two ways. So let's keep going.

There are others whose vibratory complex is such that this gateway is opened and contact with total service-to-self with its primal distortion of manipulation of others is then afforded with little or no difficulty, no training, and no control.

Corey: So basically, they're just evil enough to where birds of a feather . . . and they come together kind of thing.

David: Sure.

WHAT INFORMATION?

David: Okay. So then the next question that they ask is:

11.21 Questioner: What type of information is passed on from the [Orion] crusaders to these [incarnate] people?

David: And this is a pretty simple answer.

Ra:... The Orion group passes on information concerning The Law of One with the orientation of service to self.

The information can become technical just as some in the Confederation, in attempts to aid this planet in service to others, have provided what you would call technical information.

The technology provided by this group is in the form of various means of control or manipulation of others to serve the self.

David: So this is interesting, because what they're basically describing here – first of all, technological information being provided by the crusaders – wouldn't you say that lines up perfectly with Nazi Germany in the 1930s?

Corey: That the negatives were imparting this information?

David: Yeah.

Corey: Absolutely, yes.

David: So actually giving the Germans the ability to perfect their flying saucer technology. You had said before that the Americans didn't have as much ease in getting these reverse engineerings to work.

Corey: Well, the main reason was that they were completely scientific minded. They were not using these occult-type practices with science together.

David: Ah.

Corey: That's what the Germans were doing. They would have test craft. They would put all kinds of runes and glyphs all over them, do ceremonies, and couple that with the technology they were developing.

David: So based on what The Law of One is saying here, it would imply that actually putting those runes on their craft, or the swastika and shapes like this, somehow allowed the negative to give them more information about how to perfect the technology?

Corey: Right. And just like on the positive side, who was that famous mathematician

we were talking about in the car yesterday who was getting this type of information, but positive information, about mathematics and physics from . . .

David: Oh, Srinivasa Ramanujan?

Corey: Yes.

David: Yes.

Corey: Yeah. So it happens on the dark side and the light side.

David: Right. As the quote goes on, though, they start to talk about mind control systems. And let's read a little bit more before we discuss this.

So they're talking about “various means of controlling and manipulating others to serve the self”. One of those would be, of course, building UFOs allows them to control the planet, to have a weapon that they could fake an alien invasion with, for example.

But it also gets into mind control.

NUCLEAR ENERGY

So then he says:

11.23 Questioner: Is this how we learned of nuclear energy?

And the answer is actually pretty interesting.

Was it mixed, both positive and negative orientation?

Ra:... This is correct.

So that's pretty interesting right there, the idea that this really messy, dangerous power source was partly given to us by negatives because it would cause a lot of damage if it was used.

Corey: Right. And what I've heard is a lot of the Reptilian vessels use a dirty type of power plant.

David: Oh, really?

Corey: Yeah. It doesn't affect them, the radiation, but human beings would not be able to last in those craft very long.

David: Well, and you're also familiar, I'm sure, with how American power plants use so much of this heavy water, and they leave the waste products stored in these giant tanks.

And there's been a plan to try to hit the fault line going through the middle of America, and they put all of these power plants along the fault line, and create a big disaster that way, but the positive beings have stopped this from happening.

Corey: Yeah. That was, at the least, very poor planning.

David: Yeah. But it seems intentional.

Corey: Right.

David: These guys are really crazy.

The entities responsible for the gathering of the scientists were of a mixed orientation.

The scientists were overwhelmingly positive in their orientation.

David: This includes Einstein. They talk about that.

The scientists who followed their work were of mixed orientation including one extremely negative entity, as you would term it.

David: And they never really say who that is. And it would be useless to really try to speculate on it.

But it's interesting here, because look at what they're telling us. The initial wave of people that make these breakthroughs that are used by the negative, the initial wave is positive. So they're protected. Their free will is protected. They're allowed to make these huge breakthroughs.

Corey: That is no different than what occurs in the military-industrial complex today. Many of these engineers and physicists, all the different scientists, feel like they are saving the world. They feel like they're doing a very good thing.

David: Right.

Corey: And they put in the work. And, of course, above them, there's no need to know what happens after that, so they have no idea what's going on.

ORION DARK FLEET

11.24 Questioner: Is this extremely negative entity still incarnate on Earth?

David: This is 1981.

Ra:... This is correct.

David: So, again, you could speculate about who this is, but we don't really know.

11.25 Questioner: Then I assume you can't name him.

David: The answer, of course, is yes.

12.2 Questioner: [You] mentioned that the Orion crusaders came here in chariots.

David: Now, “chariots” is their term for basically flying saucers or what we could call UFOs.

Corey: Chariots of the Gods kind of thing.

David: Yeah. Because it's a chariot of war.

[Could you] describe a chariot?

David: This gets interesting, because the Dark Fleet stuff you've told us? It's amazing how much correlation there is here. Wait till you see this, dude.

Ra:... The term chariot is a term used in warfare among your peoples.

That is its significance.

The shape of the Orion craft is one of the following:

David: I've been waiting for so long to see your live reaction as we do this.

Corey: Triangles?

David: Well, just wait.

Firstly, the elongated, ovoid shape which is of a darker nature than silver but which has a metallic appearance if seen in the light.

David: What do you think of that?

Corey: Sounds very familiar to some of the art and descriptions that I've given.

David: When you did the art, when we commissioned the art about the battle that was taking place over Antarctica, tell us a little bit about the shootdowns again. What was

happening there?

Corey: Right. And these were actually Dark Fleet vessels, . . .

David: Yep.

Corey: . . . according to the intelligence. And there were six of them that were trying to leave . . . that left from under the ocean close to Antarctica and were trying to leave orbit.

And we had dozens of what were described as Chevron craft of unknown origin came in and attacked them, and caused enough damage that they retreated back the way they came.

David: So they're elongated ovals just like it says here.

Corey: Like teardrops. Like teardrops.

David: . . . “a darker nature than silver”.

Corey: Right. Often described as pumpkin seed shaped.

David: Right. And I did not actually see this in The Law of One until originally it was April 2016, after you'd already made that graphic. And then I wanted to do some of these episodes.

And I was shocked because it's one thing to kind of get loose connections. But when you have The Law of One, as we've said in previous episodes, describing our government having bases on the Moon, that they're in the process of being rebuilt and expanded, bases that move along the surface of the Earth, bases under the sea – there's so many correlations with the things that you've said that nobody was talking about in UFOlogy back in 1981.

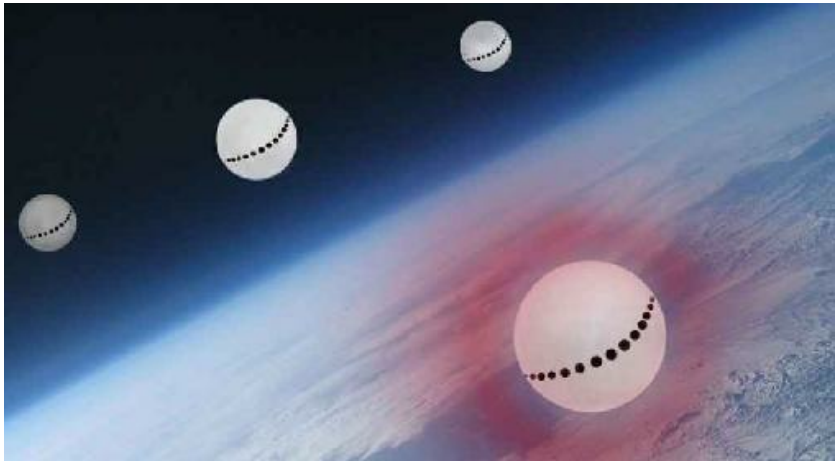
And here's another example. It's totally amazing.

So this perfectly fits with what you said.

In the absence of light, it appears to be red or fiery in some manner.

David: I'm curious, what are your feelings on that?

Corey: That definitely describes some of the craft. I haven't heard it mentioned directly in correlation with just the Reptilians, but even the cosmonaut-type spheres that were over Antarctica during that time observing, when they're inside the atmosphere moving around, they have kind of an orangeish-red corona.



David: So this perfectly fits once again. Well, there's another type.

Other craft include disc-shaped objects of a small nature approximately twelve feet in your measurement in diameter,

the box-like shape approximately forty feet to a side in your measurement.

Other craft can take on a desired shape through the use of thought control mechanisms.

David: So we have three things here. We have flying saucers 12-feet wide, a box type of shape, and then they can create anything that looks like what they want.

Corey: Well, and also, they have what look like metallic craft. And there would be rooms inside, and with electric stimulation they would change shape. They'd go into balls, they would flatten out, and then the rooms on the inside would move around . . .

David: Oh, wow!

Corey: . . . to match the shape change. So in flight, they could change from a cigar shape to a flat circle or a disk. They can change actual shapes.

David: Well, yeah. There are also UFO sightings not only of craft changing shape, but of actually splitting and going off and becoming two.

Corey: Hm mm. Yeah. They do that too.

David: Is that also what it can do?

Corey: Yeah.

David: Wow! Yeah, you never said that on the show before.

So as far as like a 12-foot disk, is that one of the sizes that you've seen?

Corey: Yes.

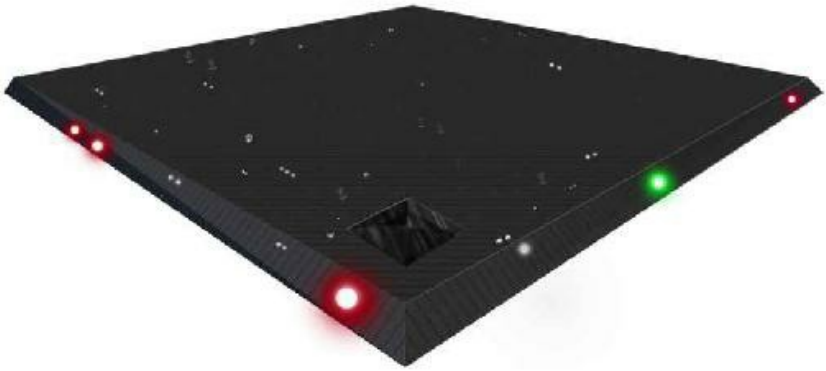
David: Maybe more like a drone craft or something?

Corey: Yeah. Those smaller ones are usually drones . . .

David: Okay.

Corey: . . . around that size, like six to 12 feet.

David: And I also know, in some of the same art that you already had commissioned back before I saw this, that you did describe squarish craft that the Dark Fleet have.



Corey: Indeed.

David: And it says right here, boxlike shape 40-feet to a side. So again, very, very nice lineup here. It's amazing.

VARIOUS CIVILIZATIONS

So now they're going to talk about that . . .

There are various civilization complexes which work within this group.

David: Meaning it's not just one type of extraterrestrial race.

Corey: Well, yeah. That matches the conquered race that I've told you about that a lot of people confuse with Nordics.

David: Right.

Corey: They're like eight foot tall. They have the taller foreheads, receding hairline kind of a thing, kind of the same bob haircuts, blonde hair, big blue eyes, six fingers.

David: Right.

Corey: And the intel on them is that they're a conquered race, just like we supposedly are. And just like we have Dark Fleet going out with the Reptilians on conquests, that's what these beings are doing.

David: And those are some of the most troublesome ones, right, that particular group?

Corey: They're the ones that we've seen a lot in conflicts. So, yeah, they'll send those beings in as cannon fodder a lot of the time.

David: Wow! Interesting.

Some are more able to use intelligent infinity than others.

David: That means their ability to manipulate consciousness, their kind of magic powers like telekinesis, telepathy. So would you agree with that?

Corey: Absolutely, yes. Yeah, I mean, there have been many accounts of people going to some of these bases where there are Reptilians, or these Nordic-type groups that I've told you about that are walking around with these big pelican cases that hold equipment, levitated, floating behind them as they walk along.

David: Right.

The information is very seldom shared; therefore, the chariots vary greatly in shape and appearance.

David: In other words, the Draco, even if they have people working with them, they don't necessarily want to give them that much technology.

So it's kind of like, “Come with whatever you've got.”

Corey: Yes. And the Dark Fleet have much more advanced technology and weaponry than the other space programs, most of them. And their technology has been enhanced by this Draco group, but not enhanced to a point to where they could become a threat to them.

David: Right. That makes perfect sense.

Now they talk about the Quarantine. This is an interesting discussion we've had many discussions about.

THE QUARANTINE

12.3 Questioner: Is there any effort by the Confederation to stop the Orion chariots from arriving here?

David: Of course, now with the Spheres and the Outer Barrier, it's gotten much more.

Ra:... Every effort is made to quarantine this planet.

However, the network of guardians, much like any other pattern of patrols on whatever level, does not hinder each and every entity from penetrating quarantine, for if request is made in light/love, The Law of One will be met with acquiescence.

David: So this is something that I've heard from several other insiders, and I definitely wanted to get your take on it in these Law of One episodes.

Is there some kind of energetic barrier around the Earth that at times prevents people from just being able to come in and leave whenever they want?

Corey: Absolutely. They have to, I guess, come in and leave in a certain way, in a certain trajectory, that is monitored. If they come in through any of the other ways, then they can risk damage to their vessels.

David: Right. So this is what The Law of One calls the Quarantine, and they explain that they do not hinder every entity from coming in.

Corey: Which will coincide with some of the beings that I told you that, when the Outer Barrier was erected, there were a lot of beings that ended up getting trapped here that are extremely benevolent.

David: Right.

Corey: And that included the groups that were here that couldn't care less about us, that were just here to study the rainforests or the ocean life.

David: And I also have heard from other insiders that the Quarantine actually does involve, to some degree, physical microsatellites in Earth's orbit that enforce this protective grid in some way. Have you heard something like that, that there are . . . ?

Corey: I know that WE have put out swarms of very tiny satellites that are out there for monitoring and defending the planet.

David: Okay. That's the same thing I heard from others.

If the request is not made, due to the slipping through the net, then there is penetration of this net.

David: So some entities can randomly get through.

12.5 Questioner: I didn't quite understand. How does the Confederation stop the Orion chariot from coming through the quarantine?

Ra:... There is contact at the level of light-form or lightbody-being depending upon the vibratory level of the guardian.

David: So what they're actually saying here is a light-form might be like a wall of light. It might appear as a craft. Lightbody-being may actually be some sort of apparition.

But what it's saying is that a lot of these entities would try to get in, and they're going to run into something that would stop them.

These guardians sweep [the] reaches of your Earth's energy fields attempting to be aware of any entities approaching.

An entity which is approaching is hailed in the name of the One Creator.

Any entity thus hailed is bathed in love/light and will of free will obey the quarantine due to the power of The Law of One.

David: Now, this is all very nebulous, so we're going to keep reading because it'll all make sense in a second.

12.6 Questioner: What would happen to the entity if he did not obey the quarantine after being hailed?

Ra:... To not obey quarantine after being hailed on the level of which we speak would be equivalent to your not stopping upon walking into a solid brick wall.

David: So anyway, it's describing a solid energetic barrier, something that you just can't go through it no matter what.

Corey: Right. And science has discovered interesting energetic anomalies around the Earth.

David: Absolutely.

12.7 Questioner: What would happen to the entity then [if] he did this?

What would happen to his chariot?

Ra:... The Creator is one being.

The vibratory level of those able to reach the quarantine boundaries is such that upon seeing the love/light net it is impossible to break this Law.

David: So that . . . I highlighted “love/light net”, because it is apparently some kind of grid-like mesh of light that they just can't get through if they're trying to get in other than the normal way to get into the planet.

WINDOWS IN THE NET

Therefore, nothing happens.

No attempt is made.

There is no confrontation.

The only beings who are able to penetrate the quarantine are those who discover windows or distortions in the space/time continua surrounding your planet's energy fields.

David: This opens up a huge discussion, because what they say is that if our free will on Earth gets shaky enough, they have to allow a certain amount of random windows that can, they might only be very brief, but they allow the bad guys to come in for just a short time and then get back out again really fast.

Through these windows they come.

These windows are rare and unpredictable.

David: So this is something that's allowed to happen by our own free will.

WHO GETS CONTACTED?

Then it says:

26.34 Questioner: Is it necessary in each case for the entity who is contacted in one of these landings to be calling the Orion group?

Or do some of these entities come in contact with the Orion group even though they are not calling that group?

Ra:... You must plumb the depths of fourth-density negative understanding.

This is difficult for you.

David: So we're seeing they're setting us up here for something interesting.

PLUNDER AS THEY WILL

Once having reached third-density space/time continuum through your so-called windows, these crusaders may plunder as they will,

the results completely a function of the polarity of the, shall we say, witness/subject or victim.

David: Dude, this is the Galactic Slave Trade. They are describing exactly what you've been telling us right here in The Law of One, that they may plunder as they will. The people who are plundered do not necessarily have to be consciously calling the Orion group.

But then, notice it says the results are a function of their polarity.

So I know that when you've talked about the Galactic Slave Trade, it would appear that just anybody could get picked, and that's going to freak a lot of people out.

Corey: It's because humans are the ones collecting the specimens that are sent off planet into the slave trade. In the beginning, they were just being taken, and then the secret space programs, once they had more control over our airspace, the powers behind that force decided, “We can use these people as a commodity for trade.”

And that's how having a large piece of the human trade business came about.

David: So then it says:

This is due to the sincere belief of fourth-density negative that to love self is to love all.

David: So they believe that they are the elite, they are the special, and that they love themselves, and that other people do not love themselves as much as they do. Therefore, they've become god where none exists and everybody else should worship them.

Did you encounter that type of belief in the Cabal in the times that you saw this stuff going on?

Corey: I guess they obviously passed that way of thinking down to their human minions.

David: Sure.

Corey: Yeah.

TEACHING LOVE OF SELF

Each other-self which is thus either taught or enslaved thus has a teacher which teaches love of self.

David: That's just like what you were saying. The elite pass this down to everyone else.

Exposed to this teaching, it is intended that there be brought to fruition a harvest of fourth-density negative or self-serving mind/body/spirit complexes.

David: Now, do these people believe in their own form of Ascension, just like it's saying here, that they're going to ascend?

Corey: Yes. Yeah. Some of them believe it will be a technological Ascension. Most of them do.

They are AI prophet-type people. And as it turns out, many of the Draco seem to be as well.

David: Right. But there's others that would actually believe in a sort of spiritual Ascension, as well?

Corey: Right. There are so many different esoteric and other type of beliefs among these groups. Very few of them agree on their belief systems. They just agree on their overall agenda.

David: All right. Well, since we've talked about some pretty disturbing stuff in this episode and we're out of time, I mean, The Law of One does say – and I want to point this out – they make it very clear in here that the negative is never allowed to do more than what is required to awaken humanity, that by having this great villain in the planetary game, we become . . . our hearts open up and we realize that there is a reason to want to be more loving, there's a reason to want to be more positive, there's a reason to want to save the Earth, to protect the animals, to seek truth and justice and freedom and liberty.

What do you think is the big vulnerability of these negative forces? What is their critical weakness that the positive groups will ultimately use against them and are using against them?

Corey: Their complete devotion to self. You know, they're . . .

David: How does that bring them down?

Corey: These groups are also so interrelated on their hierarchy that, if they can disturb or affect any of the upper hierarchy beings, it trickles down to the rest.

David: So it's sort of like a computer, where you would have the CPU fighting with the memory fighting with the hard drive. You can't have a functional system when it's constantly betraying itself.

Corey: Right. Another thing this topic brings to mind . . . I hear people all the time saying, why won't the Blue Avians come down here and just squash the Reptilians? Why don't they just take an active role?

The creation of The Law of One book was to be a guide, and most of all, to stimulate our consciousness. That is pretty much all they're concerned about, is stimulating and raising our consciousness.

If they can do that, we take care of the problem ourself and they don't have to get involved.

David: Yeah. And I think that when we look at the meditation effect and how much, as you were talking about the negative can do that, a small group of people focusing on the positive can have such a hugely disproportionate effect on the outcome that, as more of us are enlightened and we realize that such evil exists, we become a lot more dedicated on our path.

And once we do, we have a dramatic effect on how this is all going to turn out. Would you agree with that?

Corey: Absolutely. The one thing that they've tried to drill into my head is that we are our own saviors. We are the ones that have to clean up this mess. They will mitigate some of the problems that we have to overcome, but we have to do all the work.

And I think we're beginning to see a change in society and things occurring in the background to where we might be on the precipice of those changes.

David: Cool. All right, well you've seen it here, a lot of really great Law of One connections to what Corey is saying.
As a scientifically-minded person who's written scientific books, when I look at this type of data, it's absolutely convincing to me this is not the product of coincidence or chance. This is two different sources that are talking about the same body of true information. It's the only logical explanation.

I'm David Wilcock. This is “Cosmic Disclosure” here with Corey Goode, and I thank you for watching.

Law of One and the SSPs: Consequences Season 7 Episode 4

Cosmic Disclosure; Law of One and the SSPs: Consequences of Channeling Season 7, Episode 4

29 Jan 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we're going to get into the negative groups and their influence on channeling.

So Corey, welcome back to the show.
Corey Goode: Thank you.
David: Over the years, we've seen a whole lot of people either A, portraying themselves as fake insiders, or B, saying that they are having some sort of channeling experience. And what has been your experience with most of these channelers that are coming out on the Internet in terms of the truthfulness of what they're saying?
Corey: A lot of it is . . . I don't know, not stuff that correlates with my experiences, to put it nicely, yeah.
David: Right. And would you say that a lot of these people also seem to become culty in the way that they present themselves and in the way that their followers then encounter the material?

Corey: Yeah, and that's one of the major problems and why Tear-Eir said that they no longer use that type of communication, is because the ego distortion that people have.

People get Christ complexes, start feeling like they're the saviors. They're delivering the information that will save the world. And their head puffs up, and they get these

grandiose ideas about theirselves.
David: Certain individuals do have actually positive, useful channeling happening to them. I've been doing the dream research where I get my dreams every morning since September 21, 1992, pretty much every morning.

And as of November 1996, I began having a telepathic communication take place using the protocols of remote viewing. But I was having very significant future prophecies, all kinds of highly accurate things that were clearly bending reality.

So let's just confirm then that not all channeling is bad, and that it can be done, like in cases of Edgar Cayce, or The Law of One, or the Seth books. Certain people can do it actually, and do it well.
Corey: Right. Right. And yeah, I mean, I'm sure that's the case. And it's just the Blue Avians, the Sphere Being Alliance, that have told me that they no longer use that type of communication because of all the distortions.
David: But also, just so we have this on record, because I don't think that's ever been said in this show before, you've said to me, off camera, that one of the things that the Sphere Beings or the Blue Avians did tell you is that they have been also in communication with me.
Corey: Right.
David: That this was something that's been going on with me for quite some time.
Corey: Right.
David: Okay. So you can confirm that The Law of One and the Blue Avians do appear to be the same source? You now have been told this.
Corey: Yes, but they have given me a warning about The Law of One – that it was not meant to be a Bible or something that you sleep under your pillow with. It was meant to be a guide, and also to help us expand our consciousness, which is our overall goal.

And they have stated that too many people have turned it into a religion.
David: I would agree with you in the sense that there's a lot of cracks that are left that you really need to fill in on your own. So it's always a good idea for us to make up our own minds and put various sources together and draw our own conclusions instead of just blindly worshiping one thing and saying, “This is the truth and it's all in this book.”
Corey: Right. And the book is passing through all of our personal distortions on the way to be locked into our belief systems.
David: Sure.
Corey: So all of us have these personality distortions that affect and taint the information.
David: All right. Well, with all those disclaimers in place about my own channeling and that they told you that I was actually getting contact from them, so this was not a negative example of channeling. So it can be done right. But here, we're going to hear about how a lot of times, people are not getting accurate information. So let's go to the

slide now.

NEGATIVE INNER PLANES

12.14 There are many upon your so-called inner planes which are negatively oriented.

[They are] thus available as inner teachers or guides.

[They are also] so-called possessors of certain souls who seek this distortion of service to self.

David: Now, when they talk about inner planes, they're talking about the Inner Earth. So are you familiar with there being groups of people inside the Inner Earth who would possess individuals on the surface who are like Illuminati or negative-oriented kind of people?

Corey: Yes, there are positive and negative Inner Earth groups. And just like the Anshar, when I walked through the library and there were all these egg-shaped chairs floating off the ground with people kicked back and looking like they're in a meditative state, they were reaching out to humanity to impart wisdom and ideas that were not their own.

David: Right. So the same thing could be done with these negative groups in there?

Corey: Absolutely.

David: Okay. So that's exactly what it says here. Now, this is where we get to the really important stuff.

MIXED CHANNELING

12.15 Questioner: Is it possible for an entity here on Earth to be so confused as to call both the Confederation and the Orion groups [while they are channeling]?

David: Look at the answer.

Ra:... It is entirely possible for the untuned channel, as you call that service [meaning channeling], to receive both positive and negative communications.

Corey: And they can't tell the difference between the two. They'll be sure that it's this benevolent being that they're in contact with that they trust, and then a trickster being will come in and give them information in a similar way which is distorted.

David: Right. And this is something that I think is so significant, Corey, because there are so many people I've seen online who assume that if some aspect of a channeler's work is provable, or if they make a future prophecy, or if they nail something, that therefore, well, that's it. This is the stamp of legitimacy. This channeling is now authorized. It's the way it is.

But what you're saying, and what it's also saying in The Law of One, is that somebody could get positive information, which would include very accurate data and also get negative data at the same time.

Corey: It's like a man in the middle attack. You'll have contact with a benevolent being, and then one of these negative beings will slide right in the middle here, get in the channel, and distort the information or send different distorted information.

David: Well now, you may not be aware of this, but if we go back to this whole story of Edgar Cayce, who, of course, if anybody doesn't know, he did 14,000 deep trance readings that he was unaware of what he was saying while he was entranced, but yet, could diagnose people's medical problems and prescribe accurate treatments.

The Cayce readings are basically seen as sacrosanct by Cayce fans. And yet, if you study what it says, Cayce himself got angry at his haters, and it allowed a negative entity, calling itself Halaliel, to come in. And Halaliel said that California was going to sink into the ocean in 1998, which didn't happen.
Corey: If you become cynical about life, untrusting, feeling like you're under attack in certain ways, then you're definitely opening yourself up, especially if you become overconfident and you're not always testing the spirits and the information as it's coming in.
David: Now, have the Sphere Beings warned you about the possibility that this could happen to you as well – that if you became overly negative, that you could invite negative things to happen to yourself?
Corey: Definitely, yes. I could, as you say, authorize negative things to happen by my thoughts and actions.
David: So what are some of the coaching that you're been getting in terms of how you would avoid that from happening?
Corey: Doing a lot of meditation and learning the dangers of anger and jealousy, and all of these different things and what it does to you.
David: All right. Well, now let's go back to our slide. And you're going to see here what happens when somebody starts to get positive and negative communications. It's a very interesting answer. It ties in with what we've been saying.
If the entity at the base of its confusion is oriented towards service to others, the entity will begin to receive messages of doom.
David: Isn't that interesting? When you look at a wide variety of channelers, they have a predominantly positive message. At the same time, there is this streak of fear porn in it, and they think there's going to be a pole shift, or they think the economy is going to collapse, or that some kind of alien invasion is going to happen.

So what it's saying right here is that this is actually a function of the negative contact.
Corey: Well, and it's also, as we've spoken about before, why would they do this? Well, they're trying to affect our mass consciousness to have us, with the power we have, our co-creative power, to manifest what these doom-and-gloom type of prophecies . . . It becomes a self-fulfilled prophecy many times.
David: Even if somebody is really unbalanced and very ungrounded in their life, what you're saying is that even the lowliest among us, in terms of what we would normally judge people by in worldly terms, their consciousness still has a very powerful effect.
Corey: Absolutely. Every single point of consciousness, which is a human being, has the same co-creative power.
David: So have these beings also explained to you that no matter how far off

somebody seems to be, that every life is valuable and salvageable and can potentially be transformed into something amazing?
Corey: Absolutely. Yeah. All of our distortions can be overcome with wisdom and knowledge.
David: All right. Well, let's go on with this because there's a lot more interesting stuff here to explore.
If the entity at the base of the complex of beingness is oriented towards service to self [ie, the negative path], the crusaders, who in this case, do not find it necessary to lie, will simply begin to give the philosophy they are here to give.
David: So this would be your Cabal type of people where they're actually getting this direct telepathic communication. Were you aware of people in the Cabal having telepathic communications with demonic type of presences?
Corey: Oh, yeah. Oh, yeah.
David: How would that look? What would they be doing?
Corey: It . . . I guess, I hate to use the word 'channeling' with the demonic side, but they do ceremonies. A lot of it involves bloodletting, sexual magic, and that kind of stuff, to get them in a state to be able to communicate telepathically with these negative beings.
David: Right. So there might be a group of people that uses one person as the channel . . .
Corey: Right.
David: . . . and then opens up that communication.
Many of your so-called contacts among your people have been confused and self-destructive because the channels were oriented towards service to others

but, in the desire for proof, were

open to the lying information of the crusaders.

who then were able to neutralize the effectiveness of the channel.
David: So I hope you can see that this is of absolutely pivotal importance. We get a lot of comments, a lot of questions, about you in particular, and people say, “Well, why can't he film a Blue Sphere picking him up? Why can't he film the craft landing in his backyard?”

And what it says right here is that that's the desire for proof.

So this is a very interesting subject because The Law of One is always talking about the first distortion, free will. Free will's so important.

And what would happen if they gave us proof? If these higher beings gave us absolute proof that they really exist, what would happen?
Corey: Most of us would succumb to our programming to worship, and we would

drop to our knees. The problem they have already is thousands and thousands of people are going into meditative states and trying to reach out to the Blue Avians and are asking them things that you would hear Christians getting on their knees and praying and asking for.

So that was one of the major things that they wanted to avoid from the beginning in contact with me, is any type of worship or religion being built around it.
David: What do you think is the benefit of this material never being given absolute proof for the seeker?
Corey: These beings are not wanting to come here, appear before us, putting their arms out and saying, “Here I am; now change.” Their whole mission is to affect our consciousness in a way that we change ourselves.
David: Right.
Corey: Because they are already karmically tied to us from them trying to interfere in the past to help us change, and all it did was make things worse.
David: It would appear that when you don't get absolute proof but you get compelling clues, that that inspires the seeking. That makes people hungry for more and that quest for knowledge.
Corey: It's supposed to happen up here, not out there.
David: Right. So this is why we got to avoid the desire to prove every little thing. And to some degree, you will get subjective validation, and I think that's an important point too.

You've talked about Blue Spheres contacting people individually.

Corey: The amount of emails that I'm receiving right now from people that only discovered me a week or so before after they had a Blue Sphere or Blue Orb come

into their house, zigzag around, and then leave – these are doctors, lawyers, nurses, you know.
David: Right.
Corey: And I'm getting a lot of emails from these types of people. So this is a situation that is occurring more frequently, as I was told it would.
David: And also, I would say some people might get one contact of that type, and then they keep wanting another hit, another hit, but they don't get it. And what's the benefit there?
Corey: Well, a reason that they don't get it is because they already received everything that they were supposed to. A lot of the information is imparted to their subconscious or higher self, and they have to do the work to slowly start to get access to that information.
David: Very interesting. All right, let's continue now.

WEAKER MINDED ENTITIES

53.16 The most typical approach of Orion entities is to choose what you might call the weaker-minded entity that it might suggest a greater amount of Orion philosophy to be disseminated.

Some few Orion entities are called by more highly polarized negative entities of your space/time nexus.
David: So when it says "weaker-minded entity" here, what it seems to be referring to is somebody who is not necessarily strong in their faith, and they're more susceptible to being influenced by new ideas.

Those are the type of people that if they hear a voice talking in their head, they're going to say, "Well, this has got to be the voice of God, and everything that I'm hearing is the truth."

So would you say that fits with how the Voice of God technology would work?
Corey: Absolutely. That's . . . I mean, we've described it on other episodes.
David: Are there some people who would be stronger in their mind that the Voice of God technology might not work as well on?
Corey: People that had will, had a weaker will . . .
David: Oh, interesting.
Corey: . . . were more susceptible.
David: So when a person has a stronger will, it's not necessarily going to work as well, if they can just speak a voice into your head?
Corey: Right. A stronger will, stronger-minded person that is going to question what's happening a little bit more than just going, "Oh, my goodness, I've always wanted to be in contact with another being. Here they are, so this must be a good situation."
David: Very interesting. All right, let's go on here.
In this case they share information [with the highly negative people on Earth] just as

we are now doing.
David: So that's a direct Cabal type of situation.

Now, this is something the Cabal likes to do all the time. When they contact these highly negative people, it says:
However, this is a risk for the Orion entities due to the frequency with which the harvestable negative planetary entities then attempt to bid and order the Orion contact just as these entities bid planetary negative contacts.

The resulting struggle for mastery, if lost, is damaging to the polarity of the Orion group.
David: So there was a couple of quotes in here, in between where we were last time and this one, that I didn't use. But the idea here is ritual magic can, in fact, imprison a negative energy, that people on Earth can basically, as it says here, “bid and order them to do things”.

And I'm curious if your experience in this underworld that you saw evidence of that being possible, that Cabal people could actually force demonic spirits to do their bidding.
Corey: Absolutely. They would use mind control, and also, entity attachments, to control and manipulate people. Well, how do they get these entity attachments to do their bidding?

They use black magic and rituals.
David: So an entity can essentially get trapped by the laws of the universe into doing something that it doesn't want to do.
Corey: Right. And many of these entities supposedly come from this place called The Outer Realm. They are here. This is not their natural environment. So they're here causing problems, but they are also susceptible to pitfalls of this environment.
David: Right. So this, again, is amazing how well what's in The Law of One correlates with what you learned from the inside of this very dark world.
Similarly, a mistaken Orion contact with highly polarized positive entities can wreak havoc with Orion troops.

unless these Crusaders are able to depolarize the entity mistakenly contacted.
David: So I think this is a really interesting key here because . . . Like, for example, we've talked off camera quite a bit about the weird negative greetings that have happened to both you and me in Law of One terms, “negative greeting” meaning weird, bad, interferences that happen.

It's like every time we come out to do this show, there's strange, occult, weird things that seem to just go wrong. But most of the time, they work through other people.

We don't get hit directly, but the people who are coming into contact with us who are more susceptible, they can be influenced. They can be steered to start acting in a negative way.
Corey: Right. I mean, if you have a target that is beginning to make changes in their life to where they're not behaving in a negative way that would authorize attacks, then they have to use those around them who are more susceptible.
David: So the interesting thing that The Law of One is saying here is that if a negative entity were to try to contact you or me directly – and I'm just using us because that's something we can talk about easily – and we're working as hard as we can, so when you're working at that kind of a level, if these beings actually did try to invade my head or your head directly, and they're trying to get loosh from us directly, and that doesn't work, they will sustain tremendous damage.

They will actually lose a lot of energy if they try to take energy from us and it's not successful. Would you agree with that?
Corey: Well, I mean, "as above, so below" on that. I mean, in a military operation, if you spend a lot of resources to secure an objective and you fail, you've expended all of that energy, all of those resources.
They're gone. You're not getting them back, and you failed.
David: That's true, and I think it's also interesting to point out that The Law of One describes the protocol for how to repel negative greetings, and it's all about A, having a strong, healthy boundary, meaning you're not going to allow this to happen, but B, you're not angry.

You realize that there's only one of us here. There's only one being in the universe, one consciousness, and this entity represents a part of yourself that is negative and confused, and you can love that being as you love the part of yourself that is your shadow. So you don't hate it.

And I've heard this from others. One of my insiders that actually worked for the Cabal said that if enough people on Earth were laughing and happy for even one day, the negative would be completely wiped out. Would you agree with that?
Corey: Yeah.
David: So that is the protective protocol, then, is the positivity that we hold inside, because ultimately, this is a spiritual war.
Corey: It is. It's a war of consciousness and spirituality.
David: Right. All right, so let's now go on, because there's a lot of really good stuff here.
This occurrence is almost unheard of.
David: So it's very, very unlikely that a negative entity will try to get loosh out of a sufficiently positive person because the damage is so great if they do.
Corey: Right. You're not going to plan a mission that you know is going to fail.
David: Exactly.

Therefore, the Orion group prefers to make physical contact only with the weaker-minded entity.
David: And that's something that we've already discussed.

Okay, now we're going to get into some things that are interesting here to continue.

ORION MOSTLY 4D

12.16 Questioner: Are most of these crusaders fourth-density?

Ra:... There is a majority of fourth-density.

That is correct.
David: And this is interesting. Look at this:

MASS LANDINGS

16.8 If the Confederation landed on Earth, they would be taken as gods, breaking the Law of Free Will and thus reducing their polarization towards service to all.
Corey: That's absolutely correct.
David: Right. Now, check this out. I want to wait to comment until we get to this.
I assume that the same thing would happen if the Orion group landed.
David: This is the question:
How would this [a mass landing] affect their polarization towards service to self it they were able to land and became known as gods?
David: And the answer is very interesting.
Ra:... In the event of mass landing of the Orion group, the effect of polarization would be strongly towards an increase in the service to self, precisely the opposite of the former opportunity which you mentioned.
David: And then they say, okay, okay, question:
16.9 Questioner: If the Orion group was able to land, would this increase their [negative] polarization?

What I am trying to get at is, is it better for them to work behind the scenes and get recruits, shall we say, from our planet, [where] the person on our planet going towards service to self strictly on his own using his free will?
David: . . . instead of this big, big mass showing?
Or is it just as good for the Orion group to land upon our planet and demonstrate remarkable powers and get people like that?
David: Look at the answer.
Corey: They've done it before.
David: Well, they have done it before, but they actually explain:

WORKING THROUGH US

Ra:... The first instance [of working behind the scenes] is, in the long run, shall we put it, more salubrious [meaning more beneficial] for the Orion group.

In that [case,] it does not infringe upon The Law of One by landing and, thus, does its work through those of this planet.

In the second circumstance, a mass landing would create a loss of polarization due to the infringement upon the free will of the planet.
David: So I find this very interesting. Everybody thinks that if there was an alien invasion, that we'd be so much worse off than what's actually happening. But what they're actually saying is the worst way that this could be happening to us is what's already happening, which is that they work behind the scenes.

They advertise out in the open. They put the All-Seeing Eye in the pyramid of the dollar bill. We never really know that they exist, but everybody kind of worries that there might be a monster under the bed, but they don't get the full proof, and that this actually allows them to do more than the mass alien invasion scenario. Isn't that interesting?
Corey: Well, we can bring that to a more Earthly scenario. What if there is a country that was one that we didn't want to go toe-to-toe with in a war? We are going to have more results by infiltrating them and using intelligence. And we've done regime change many times using those methods.
David: Sure.
Corey: And if we came in with tanks and all that, the people may mobilize and come together all against us. So that is not the best way to cause regime change. And it's the same with these beings.

They've done this to many planets, and they know how to do it. They know how to go in and manipulate from the background.
David: Well, do you also think that a lot of the people who are working in [these] compartmentalized secret programs, that they would perhaps not do their jobs, and that a lot of the infrastructure that the negative uses wouldn't be there if those people actually knew that they were working for Reptilians that literally appear like the biblical Satan?
Corey: Absolutely not. For the most part, the people that are doing the work in these programs are positive people. They think they're inventing things that are going to help the planet or help protect the planet. That's what they've been told. That's the briefing they had received. So they're putting positive energy into what they think is a positive outcome, but they're being misled.
David: So the interesting part here too, which I kind of just touched on, is that The Law of Free Will that The Law of One keeps talking about requires them to tell us what they're doing.

It requires them to actually advertise the whole time – television shows, movies, radio programs, people that actually are whistleblowers who come forward and reveal what's going on. And then we turn our backs on that, and we say, “Oh, that's just

fiction. That's just fantasy."

Why do you think this idea of hiding it out in the open is such a significant part of the negative agenda?
Corey: Instead of them having to come in and put boots on the ground, they can manipulate us to use our co-creative consciousness to create the situation that they desire.
David: I would absolutely agree with that. And I want to thank you out there for being a part of Gaia and for being a subscriber here because this is grassroots. We are not mainstream media, and we require your support to keep going.

So please let your friends know about this. Spread the word to people who are aware, and together, we can actually bring this over the goal line.

So this is "Cosmic Disclosure". I'm your host, David Wilcock, here with Corey Goode, and I want to thank you for watching.

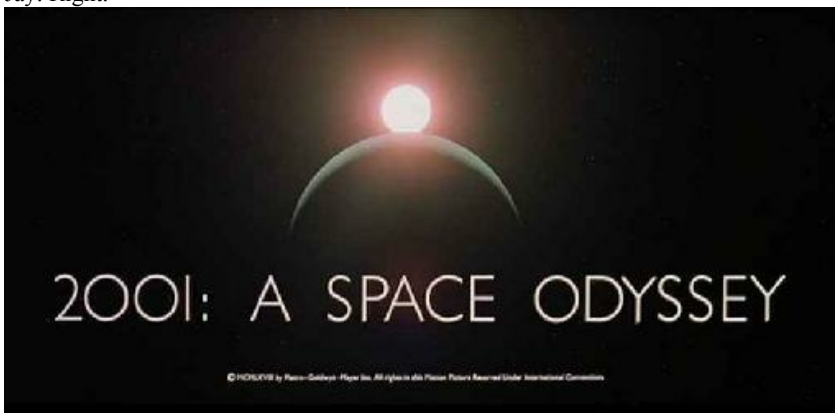
The Great Solar Flash Season 7, Episode 5

Cosmic Disclosure; The Great Solar Flash Season 7, Episode 5

10 Feb 2017

David Wilcock: All right, welcome back to "Cosmic Disclosure". I'm your host, David Wilcock. We're here with Corey Goode, and we're also here with one of the only guys who's been in the scene longer than I have, Jay Weidner.

I got into what you were doing a long time ago, and I think one of the first things . . . The way I first encountered you was through Richard C. Hoagland.
Jay Weidner: Yeah, right.
David: So you worked with him for a long time.
Jay: Yeah, about 10 years I spent with him.
David: And you did some pretty phenomenal analysis of "2001", . . .
Jay: Right.



David: . . . which I'd never really seen the full extent of that. So since this episode's on the solar flash, and, of course, "2010" has a flash of Jupiter . . .
Jay: Which was based on Hoagland's theory, too, by the way.
David: Oh, really?
Jay: Yeah. The "2010", the followup novel by Arthur C. Clarke, it says at the end, "based on a theory by Richard Hoagland."
David: No kidding?
Jay: Yep.
David: What do you think the message of "2001" was? What were they trying to tell us in that movie?

Jay: That we are on the edge of a great transformation – the human race is. And that we are faced with kind of a Hobson's choice, where we can go down the AI thing with Hal and have AI run our lives, or we can rebel against the AI, cut it short like the astronaut Bowman does in the movie, and then physically, organically ascend – ascend like he does, by going through the stargate.

So the aliens, whoever the high intelligence is, are trying to initiate humanity, and he's the first one through the gate.
David: Corey, do you think that “2001” might have been an effort to disclose the reality of Ancient Builder Race ruins, considering there's this black, obelisk-type slab on the Moon?
Corey Goode: Oh, yeah. That's obvious. Yeah.
Jay: Yeah.

David: So, Jay, when the original obelisk shows up, a lot of people are confused by “2001” at the beginning. They say, “What the hell? There's 15 minutes of monkeys running around, screaming.”

Jay: Right. Yes.

David: And then this obelisk shows up, and the first thing that happens when one of the monkeys touches it is he becomes aggressive.

Jay: Yes. He learns how to kill and eat meat. They're eating veggies before, plants, but after the encounter with the monolith, they turn into meat eaters.

And clearly, the next shot is a guy eating raw meat.

And then the first killing, the first murder, happens over the waterhole.

And, again, Kubrick is telling us that transformations are messy. They can be very messy, and that violence can come from transformation, especially if they're not ready, and the first murder happened.

And then, of course, Bowman kills Hal at the end, near the end of the movie, before his transformation.

And then Hal, the AI computer, murders all the astronauts. So the whole thing is about Hal is trying to stop them from becoming enlightened, because he's reaching his own form of sentience.

And in the beginning, the monkeys were headed for extinction, for sure . . .
David: Okay.
Jay: . . . because they're hiding at night from the wild animals, and the monolith intervenes to bring about the first wave of enlightenment.
David: Why do you think that the bone that the monkey uses as the weapon to kill gets thrown up in the air, and then it turns into the Odyssey.

Jay: Yeah, because he was trying to . . . He was saying that all of human history that happened between the time of that first transformation and the time of the next transformation, which is the next part of the film, all of that is useless and pointless. All of that history, all of that is pointless.

The only thing that matters is this transformation of the human race. That's all he cares about. He doesn't care about anything that happened in between, because none of it's important.

The only thing that's important is this transformation by the monolith to create a new human.
David: Why do you think he chose the year 2010 for the next movie?
Jay: I don't know why he chose 2010, but I think I know why he chose 2001.
David: Okay.
Jay: Okay. So what happened was the original title was “Journey Beyond the Stars”. And then, mysteriously, in late 1967, Stanley decided to change the name to “2001: A

Space Odyssey”.

Well, what's very interesting about this is that one of Stanley Kubrick's best friends was Mel Brooks. They grew up in the Village together, and at late 1967, an episode of “Get Smart” appeared called “The Walls of Jericho”.

Now, this was very interesting, so stick with me on this.
David: Okay.
Jay: So in this plot, Maxwell Smart is assigned to find out why these buildings that this company is building keep falling down. And he's assigned to be on the construction crew and find out what's going on.

It's so important because the building that they're building is called the Odyssey, and it's going to house the Moon program, and so they don't want it to fall down.

So Maxwell Smart goes to the building site, and he finally figures out, and he calls the chief on his phone and he says, “Chief, I've figured it out”.

And he says, “They're putting the explosives in the building as they're building it”. All right?
David: And what year is this?
Jay: This was 1967, the year they decided to build the World Trade Center.
David: Oh, my goodness.
Jay: All right? Freeman, the researcher, he was a pretty good researcher – his name was Freeman Fry – he interviewed the architect of the World Trade Center's Chief

Assistant. The architect's now dead.

And on video, he said, “Yes, we put explosions [explosives] in the building as we built it.

Video interview:

Guest: We noticed in Las Vegas that people have that stuff, and it's starting to spread through New York. And I said, “What's starting to spread?”

Host Freeman Fry: Yeah.

Guest: “Well, to put in demolition devices before you take occupancy.”

Fry: No way.

Guest: “And that means they'd come down like a set of pancakes.”
Jay: I think both Stanley Kubrick and Mel Brooks had dealings with the New York mob. They're very famous. People know the mob funds movies. And they got word that something was going to happen.

He made the Maxwell Smart, and Stanley Kubrick changed the title of his film to “2001: A Space Odyssey”, because he knew it was going to happen in 2001.

I know that sounds far fetched, but you should watch this Maxwell Smart.
David: And this building is related to the Moon?
Jay: Yeah. It's called the Odyssey.
David: But it's . . . The building had something to do with colonizing the Moon?
Jay: The building had to . . . It was housing the Apollo program.
David: Well, Corey, how close is 2010 to the date that you were given for some sort of solar flash like the flash in the solar system that happens in the movie?
Corey: Well, in the programs, on the smart glass pads, and the scuttlebutt, [it] was occurring between the years 2018 and 2023.
David: So we're getting really close to the end of the Mayan calendar here, too.
Jay: Right.
David: Right?
Jay: Yes.
David: Do you think Arthur C. Clarke was aware of that when he made the date 2010?
Jay: I do. I think Arthur C. Clarke is . . . You say Corey's the insider's insider, then Arthur C. Clarke's the insider's insider insider. He's hanging with everybody, right? Wernher Von Braun. And he's got young Stanley trailing behind him as he's meeting everybody in the space program – Hermann Oberth, everybody, right?

And I think Stanley learned an awful lot. I think if you look, and if you watch underneath the story of "2001", there's a secret space program. He says, "We're not going to tell them. We're going to make up a story that there's a virus unleashed on the Moon, and we're not going to tell anybody what we found."

And it's clearly there's a secret space program going. And even the mission to Jupiter, in the movie, the reason is secret – the whole reason for why they're going.
David: In your work, Corey, with the Secret Space Program, have you heard if there is a practical technology that allows alchemy to occur – the idea of transmuting some sort of base metal into gold? Is that something that's actually real?
Corey: Well, yes. When they were building the ARVs, what they were calling Alien Reproduction Vehicles, they had what were glass vortexes, or glass cylinders with creating vortexes of mercury. And they would put high currents of electricity into this spinning vortex of mercury, which would create a spinning electrical field.

And the problem they had was that the mercury kept turning into gold. And this has actually been reproduced in laboratories at universities.
Jay: Really?
Corey: Yeah.

Jay: That's really important, because that's the Bell technology.
Corey: Right.
Jay: That's very important. Interesting.
David: Well, Jay, do you think that it's possible that if this technology did exist in some sort of archaic sense, that it was also a metaphor for some sort of spiritual process?
Jay: I do. I think it's both physical and spiritual. I think that they put the turning lead into gold, or mercury into gold, actually, is a big part of alchemy. We talked about that a lot, turning mercury into gold.

I think that it's . . . You're not really supposed to transmute something into gold until you've transmuted your own soul into gold. So gold is God with the L taken out.
David: Mm.
Jay: Right? And the L is lead, right?
David: Mm.
Jay: And so when you take the L out of gold, you achieve godlike status. And I think that that's really the goal.

And turning lead into gold, or mercury into gold, is a sign that you've achieved this. You've achieved a high level of ascension, and that you now have the ability to transmute physical objects.
David: Do you think that some of these Cabal secret societies are alchemists?
Jay: No, what I think, I'm pretty sure . . . I once had access to a Freemasonic library, which I was allowed to read all the books. I couldn't take them out of the library, but I could read them. I couldn't take any notes, either.
David: Mm.

Jay: But I read in there that there was a rift around the late 1700s, when Amschel Rothschild decided to get the elixir of life. And there was a rift inside the Freemasonic society at that point.

And the good guys, the white hats, they left, and they split. And they've never been seen since.

The black hats, they want to find the white hats, because they've [the white hats] got the secret of life, the secret elixir. And they don't want to give it to them [the black hats], because the last thing they want is for the black hats to live for a long time. They want them to die. Right?

And these guys, the black hats, are doing everything they can to find these guys; the CIA, or the OSS at the time, at the end of World War II, covered all over Europe looking for Fulcanelli, the great alchemist.

And they were going to torture him and find out everything he knew. I guarantee it.

Frequently, in Europe, an alchemist would invent the elixir of life, and he would tell a friend that he had it, and, of course, then the word would spread. And then the king would find out, then the king would arrest him and then try to get the secret out of him.

And he couldn't give the secret to a bad person, so he had to die. And this happened over and over. That's why alchemists keep very, very quiet.
David: Corey, are you familiar with any actual lineage of history here on Earth of people being able to find life extension technology, maybe through some of these occult practices or secret sciences?
Corey: There is life extension technology and age regression technology, and I don't know its source. I don't know if it's non-terrestrial, or if it comes from some of this alchemy lineage.
Jay: Well, we don't even know if alchemy is terrestrial. Not really.
Corey: I guess that's true. Yeah.
Jay: They claim that . . . In the origins of alchemy, they claim that etheric beings gave them the knowledge. Isis, the prophetess, a being came to . . . She wasn't the Isis of Egypt, but she was a practicing alchemist in Egypt, Isis, the prophetess.

And an “angel”, quote unquote, came to her one day and said, “I want to have sex with you”. And she said, “No way”.

And he said, “No, I really do”.

And she said, “Only if you give me your secrets”. And that's how the secrets of

alchemy came to humans. The real secrets of alchemy.
David: That's pretty intense.
Jay: Yeah.
David: So, Jay, this alchemical tradition, would you say that it's connected to Mithraism?
Jay: A part of it is. It's based . . . Alchemy can be found in ancient India, ancient China, ancient Egypt and ancient Europe. And it appears that it all comes from the same source.

And the reason that Taoist alchemy . . . Taoist alchemy used to have an elixir of life, but they realized it was so dangerous, because the Chinese emperors kept killing them for it.

So they said, "We're not going to . . . We're never going to release the secret any more, ever. It's buried forever because we can't have any more people dying."

And so they resorted to practices that give you long life – Taoist practices.

And so alchemy seems to be the basic science of what I believe was a pre-existing civilization that was destroyed by something 13,000 years ago.
David: Now, in the Methraic tradition, you have the Leontocephalus, the lion-headed god.
Jay: Yes.
David: And in those initiation rites, they blow fire out of the lion's mouth.
Jay: And they also chop the head off the bull.
David: Right, the Tauroctony.
Jay: The Tauroctony, yes.
David: So what do you think that blowing fire out of the lion's mouth represents?
Jay: That's alchemy. The lion is gold. He represents gold or god. And it's very representational of the alchemical experiment and how it works.

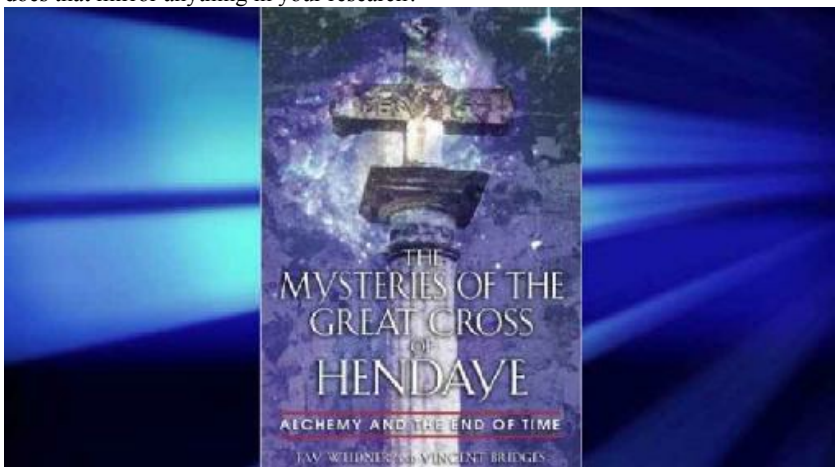
So every time you see a lion, you're talking about god or gold, the king, the royal, the top. Right?
David: Do you think that it could also be a solar flash, like some sort of solar event they're representing?
Jay: I do. Absolutely. One of the things I discovered when I was in this Freemasonic library was that the very, very basis of Freemasonry, when it started, whenever it started – and they're obtuse about when it started – but was for a father to son hand-me-down of knowledge about a great solar flare that actually ended the Younger Dryas in about 11,000 BC.

So there were two disasters. There was a disaster that happened 13,000 years ago that brought on the Super Ice Age. And then 2,000 years later, something happened that

ended the ice age immediately and caused amazing amounts of flooding. All right?

And Robert Schoch, Boston University geologist, his last book that he put out, he says that it was a gigantic solar flash, that there's evidence all over the planet for this.
David: Corey, does this solar flash appear to be a basic part of celestial mechanics, regardless of what solar system you're in?
Corey: Yes. And it has to do with not only where our star is traveling through the galaxy, but our star's connection through the cosmic web to other stars.

There could be feedback of energy through this cosmic web, through our star, which emanates.
David: So, Jay, what he was just saying about this interconnectedness between stars, does that mirror anything in your research?



Jay: Yeah. The Hendaye Cross has the angry Sun, which is symbolic of the flash, and then on the block, or the pedestal on the other side, is an eight-pointed star. And it's like the Central Sun of the universe that controls all the stars of everywhere.

And when it burps, everything else sneezes. And it's very clear. Fulcanelli, the alchemist, is very clear that that's what's going on here, that they're all connected.

But there's another thing I want to talk about, which is what this . . . what I think this flash is in a physical way. And that is that the equator of the Sun rotates every 26 days, while the north and south hemispheres rotate every 37 days.

And what happens is the bottom of the Sun goes this way (counterclockwise), and the top of the Sun goes this way (clockwise), and you create torsion shear, it's called. And after a while, this builds up. It starts crossing each other and building up, and it takes

about 25,000 or so years for this to just completely . . . and we're at that place right now.

The Sun used to be yellow. Okay? The Sun is no longer yellow. It's white now. And I'm old enough to tell you, it used to be yellow. And anybody my age will tell you that the Sun definitely was yellow.

If you look at little kids' drawings from 30 or 40 years ago, . . . Now they draw the Sun as white, but we used to draw the Sun as yellow.

And it's changed, and NASA knows this. And I think chemtrails are attempts by the elites to dampen this incredible light.

I know guys who do construction, and they tell me . . . they're in their 40s, and they tell me that, Jay, 75 degrees doesn't feel like 75 degrees anymore. It feels like 95 degrees.

He says, “It says 75 degrees, but I'm absolutely toasting on the roof of the house that I'm making.” And I said, that's because the solar, the UV, is through the roof. We've never seen UV like the ultraviolet like they see it right now.

And NASA doesn't know what to do. They're actually changing their whole idea about how to carbon date and everything, because the Sun is not a stable star. They now know it.

When I first came out with my work about 15 years ago, NASA called me an alarmist and said, “He's an alarmist”. They said, “He's an alarmist. Don't pay attention.”

Now NASA's really concerned about this and is advocating putting generators on nuclear power plants, because if you have one of these, an EMP will happen, and everything will be wiped out. And they're really, really worried about it.

And so in 15 years, they've changed their mind, and it's good.
David: Are you familiar, Corey, with any technological means they might be using in the Cabal to try to forestall this change or to try to throw off the change?
Corey: Yes. I've been told that they've been developing technologies that will buffer these energies and prevent them from reaching the Earth's surface.
Jay: And I've been told the same thing, that they're really working overtime to try to make it . . . And there's different kinds . . . I've noticed that there's different kinds of chemtrails now. There's new kinds.

They used to be just streaks in the sky that would blossom and connect to each other and create a silvery sheen blocking the Sun, but now they're little spots that grow into

clouds, odd-looking shaped clouds. And our beautiful weather in Colorado has really been kind of destroyed by these things.

It was like almost every day, the silver sheen appears in the sky, destroying our bright blue sky, and it's getting kind of disconcerting.
David: Just last month, Los Angeles openly admitted that they seeded clouds. They have these guns that they shot from the ground.
Jay: Yeah.
David: “Oh, we haven't done this since 2003,” or something like that.
Jay: Yeah, they're doing it all the time.
David: They're just getting us ready for that.
Jay: They are, and you look at the drought-resistant seeds that Monsanto is developing, and it's like, well, why are you doing that? They're worried about something.

And this goes back into the Al Gore global warming. “It's all our fault.” Well, it's not our fault. It's the Sun that's causing all the heat to go up. It's not the humans.

Humans . . . I'm not saying I'm for pollution. I'm not, but I'm saying one volcano going off puts out more pollution than we do. It's not that. Although, I think we should cool it on the pollution.

But we've got to look at the Sun. That's where the real problem is. That's what generates weather, nothing else. And they're worried.

And so when Corey came on and talked about how the Blue Avians have shut down the solar system, and everybody wants to get out because they're worried about this solar flash, and these things are all connected, you know.

It really resonated with me because I knew that was right. I mean, even places like Denver Airport were really constructed, I believe, around this solar flash.

So it's in the center of the country, giving everybody equal access and time to get there. And then the trains go down and take them right into the mountains where they're safe from the solar flash.

If you go to the Denver Airport, there's these four very disconcerting murals. And one of them has the whole world on fire, and all of these extinct animals, like the sea turtle that went extinct a few years ago, and three coffins in it – a black child, a white child and a Native American child, in a coffin. Dead.

What does that mean? You know, what does that mean?

And you really have to wonder, because the whole Denver Airport looks like a Freemasonic temple.
David: Sure.
Jay: There's a plague, and there's this . . . You're wondering, what is this really about? And I really think it is about that. I think it's about the Sun.
David: Are you aware of there being a base under the Denver Airport?
Corey: Yes. Yeah. There's a base and a tram system that connects to other bases.
Jay: Yeah.
David: And did that have something to do with this continuity of government plan?
Corey: There's a continuity of government, continuity of species.
Jay: Wow!
David: Okay.
Jay: And again, when I came out about the Denver Airport 15 years ago, I was on "Noory", and I said that it was part of COG. And everybody was like, "What's COG?" You know, "What's C-O-G? What's he talking about?" Right?

And everybody said, "There is no such thing as 'continuity of government'. Weidner's crazy."

And then after 9/11, Cheney came out and, “Why were you moving Bush all around the country?” He said, “It was all part of COG”. And he said the word “COG”. I was like, “There he is!” He admitted it. There is continuity of government, you know.
David: Well, I wanted to get into, in this episode, some slides that we have – some really amazing stuff that's going to frame this discussion.

Now Corey, just to set this up a little bit, it was in the 1950s that these beings you called the Blues appeared, right?
Corey: Right.
David: Can you review that for us? What exactly happened? What did they say?
Corey: They had appeared to our government and told us that we were headed in the wrong direction and in league with the wrong nonterrestrial groups, and that we needed to make changes. And that if we were to scrap those agendas and technologies that they would help us.

And we shooed them away.
Jay: Interesting, because that's the same time that Fulcanelli's book with the Cross of Hendaye's coming out in the 1950s.

And there's one part about alchemy I want to get back to before we go here.
David: Sure, sure.
Jay: There's a text, a Sufi alchemical text, from a long, long time ago, and it's called “The Language of the Birds”. And it's about these bird beings that come to Earth, and they bring the alchemical knowledge to Earth.
David: Wow!
Jay: And it's quite an amazing book because the main bird is a blue bird.
Corey: What?
Jay: Yeah. And it's all about compassion and peace. And I just thought I'd bring that up, because it's very interesting that this book exists. And I've read it many times.

And the Blue Avians and the whole message is very similar.
David: Yeah, we also have the Bird Tribes of Native America.
Jay: That's right.
David: There's the Tengu Mountain Bird Men of Japan. I mean . . .
Jay: And then there's “The Aviary”, which is the group of secret people inside the aerospace industry. They call themselves “The Aviaries”. So, hmm.
Corey: Yeah.
David: So the reason why I wanted to bring up that contact with Eisenhower in the 1950s is that during that same time, as we've talked about in “Wisdom Teachings”, there were ET contacts happening to private individuals, and they were getting channeling, in some cases, coordinated with UFO landings.

They'd be brought on board a ship, they'd meet these benevolent beings, and then

they'd start getting telepathic communication.

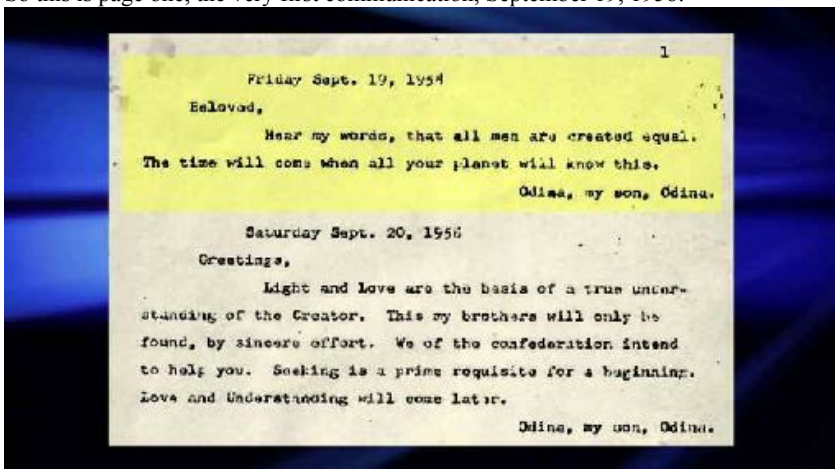
THE BROWN NOTEBOOK: LAW OF ONE PRECURSOR

One of the most authenticated ones that ever happened is called “The Brown Notebook”, and it was just called that because it was stored in a brown notebook.

This was the direct precursor to The Law of One. This was the material that Carla Rueckert, who channeled The Law of One, read that tuned her up. Because when you read the right stuff, it seems to harmonize your frequency with extraterrestrial consciousness, and get you ready for contact.

So I want both you guys to see this, because some of this stuff is unbelievable. These are scans from the original thing.

So this is page one, the very first communication, September 19, 1958:



And, of course, it's not gender neutral here, because this is the 1950s.
“Hear my words . . . “
David: I'm just going to make it gender neutral.
“Hear my words that all people are created equal. The time will come when all your planet will know this.”
So that right there suggests some kind of huge change in the planet, where everyone is aware that we are one consciousness.

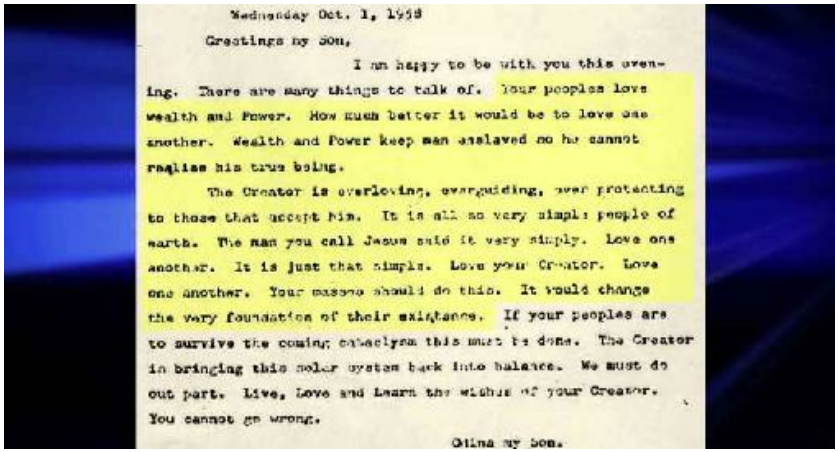
Now, this is also funny. You see that it says “Odina”?
Jay: Yeah.
David: That's because the beings were saying “Adonai”, but they didn't know the words, so they didn't know how to spell it.

Jay: Oh, that's wild.
David: Isn't that crazy?
Corey: What is “Adonai”?
Jay: “Adonai” is God in Hebrew.
David: Yes! And it's also something that The Law of One always ends with.
Jay: Yeah.
David: The end of each session, they say, “Adonai, my friends”.
Corey: Oh, really?
David: Yeah. Okay. Now, the very second channeling comes in the next day. This is a guy that actually had a UFO contact, was brought on board. He was vetted out by W. B. Smith. He passed the 200 questions where he was able to answer all these things that other verified channelers had said.

So this guy was vetted out.

And it says:
“Light and Love are the basis of a true understanding of the Creator. This my brothers will only be found, by sincere effort. We of the confederation intend to help you. Seeking is a prime requisite for a beginning . . . “
David: Which means, you want to be seeking Truth.
Jay: Absolutely.
David: That's what we're all about here.
Jay: Yep.
David: And then:
“Love and Understanding will come later.”
So you might begin by having this quest for the mystery.

The very third message comes right away, October 1, Wednesday. And this message is obviously the longest one yet. And right away, they get right to the point. It's unbelievable.



Wednesday Oct. 1, 1958

Greetings my Son,

I am happy to be with you this evening. There are many things to talk of. Your peoples love wealth and Power. How much better it would be to love one another. Wealth and Power keep man enslaved so he cannot realise his true being.

The Creator is everloving, everguiding, ever protecting to those that accept him. It is all so very simple people of earth. The man you call Jesus said it very simply. Love one another. It is just that simple. Love your Creator. Love one another. Your masses should do this. It would change the very foundation of their existance. If your peoples are to survive the coming cataclysm this must be done. The Creator is bringing this solar system back into balance. We must do our part. Live, Love and Learn the wishes of your Creator. You cannot go wrong.

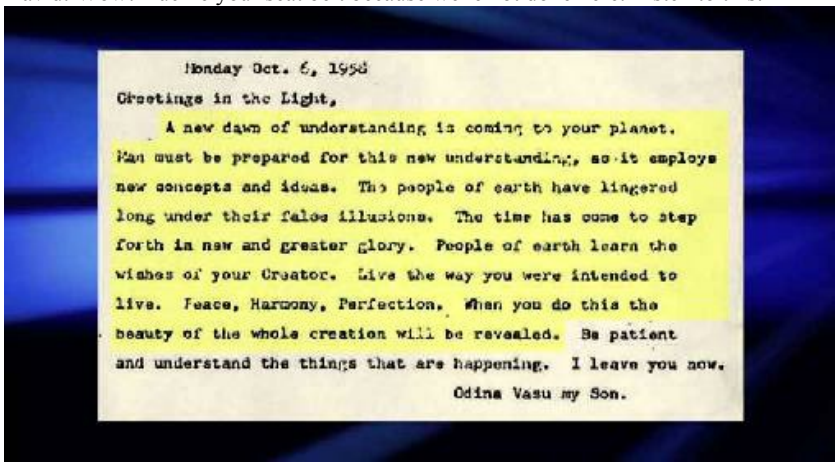
Ciina my Son.

"Your people love wealth and Power. How much better it would be to love one another. Wealth and Power keep [you] enslaved so [you] cannot realize [what you really are].

"The Creator is everloving, everguiding, ever protecting to those that accept [it]. It is all so very simple people of earth. The man you call Jesus said it very simply. Love one another. It is just that simple. Love your Creator. Love one another. Your masses should do this. It would change the very foundation of their existence. . . "
David: So they're talking about some kind of change in the physics that actually changes what we are.

But wait a minute now. Listen to this, because, Jay, all the stuff you've done with the Hendaye, alchemy.
Jay: Yeah.
David: Listen to this:
"If your peoples are to survive the coming cataclysm this must be done. The Creator is bringing [your] solar system back into balance. We must do our part."
Jay: Wow!
David: Isn't that something?
Jay: That is wild!
David: Because this is a verified channeling . . .
Jay: Absolutely.
David: . . . from the 1950s. A private individual who doesn't know anything about the ancient prophecies, doesn't know about alchemy, certainly doesn't know what the space program has got, and he's independently saying there's going to be a catastrophe that brings our solar system back into balance. So . . .
Jay: That's very interesting, because William Tompkins, he says that in the '50s, about

1,400 people – cab drivers, postal workers, just regular people – began receiving telepathic messages like this.
David: Really?
Jay: Yeah. A lot of it with technology that they didn't even understand to help build machines and devices to help advance us.
David: Wow!
Jay: Yeah.
David: Hm. So Corey, how does this fit in with some of the things that you've heard?
Corey: I mean, this is exactly what I've been talking about, having no idea that there was other information out there. I mean . . .
David: Wow! Buckle your seat belt because we're not done here. Listen to this:



It says:
"A new dawn of understanding is coming to your planet. Man must be prepared for this new understanding, as it employs new concepts and ideas. The people of earth have lingered long under their false illusions. The time has come to step forth in new and greater glory . . . ."
David: Meaning the glory of the body – the ascended light body.
". . . learn the wishes of your Creator. Live the way you were intended to live. Peace, Harmony, Perfection. When you do this the beauty of the whole creation will be revealed."
David: So this was less than a week after the other one. It seems to be saying that when this solar system is brought back into balance, that there is some sort of unveiling.
Jay: Yeah.
David: So Jay, what do you think the alchemical tradition, this idea of turning into gold, how does that relate to what we're seeing here?

Jay: Well, I think that the human race . . . Again, go back to “2001: A Space Odyssey”. The human race has a point. There is a purpose to this whole thing.

And what that full purpose is, I'm not sure totally, but I think I have a fairly good grasp on it. And that is to turn us into ascended beings. We are essentially electrical beings.

And when we turn into gold metaphorically, that means that the electricity that's in our body is able to flow without any resistance. That IS ascension. That IS what happens. That is what Padmasambhava was doing in that cave.

And the cave has to be cold, too, by the way, because electricity works much better in a cold environment.

And so I think that's what this is all about and where we're headed.
David: Well, we're going to do another episode on this . . .
Jay: Okay.
David: . . . because we've got a lot more of this material to go through. And this, to me – I think Jay, you'll agree with me, and I think, Corey, you'll agree with me . . . What we're talking about right now, this great solar flash, this is really the core of everything.

If this event is really going to happen, what could possibly be more important for us to be talking about?
Jay: Absolutely. Yeah.
Corey: Or to prepare for.
Jay: Exactly. It's the most important thing there is, because it's going to alter all life on this planet.

But there's another point that has to be made. The pineal gland is activated by sunlight. Okay? The serotonin, the melatonin, are governed by darkness and light.

When the light changes that's coming through your eye, it changes your pineal gland. It changes the chemicals that are emitted by the pineal gland.

So this chem spraying that's stopping all of this? That's wrong. We need to go through this.
Corey: Absolutely.
Jay: We need . . . Our bodies have to go through this. It's vitally important for us to go through, even if it's painful, because it's going to change our consciousness. They know that.

They know that the changing Sun is the change in consciousness, and they're trying to

mitigate it. We have to really lobby to get this stuff stopped.
David: Absolutely.
Jay: I mean, no more chem spraying.
David: All right. Well, this . . . I'm on the edge of my seat. I can't wait to get into the rest of this. We're coming back next time to finish out the discussion on the great solar flash, here on “Cosmic Disclosure”, with our special guest, Jay Weidner, and Corey Goode. We'll see you here next time. Thank you for watching.

Transformation Power of The Great Solar Flash Season 7 Episode 6

Cosmic Disclosure; Transformation Power of The Great Solar Flash Season 7, Episode 6

21 Feb 2017

David Wilcock: All right, welcome back to "Cosmic Disclosure". I'm your host, David Wilcock. And we're going into part two of our examination into the great solar flash with our special guest, Jay Weidner, who has been researching this exact subject and how it relates to alchemy and how it relates to Stanley Kubrick and the movies "2001", etc., for many, many years now.

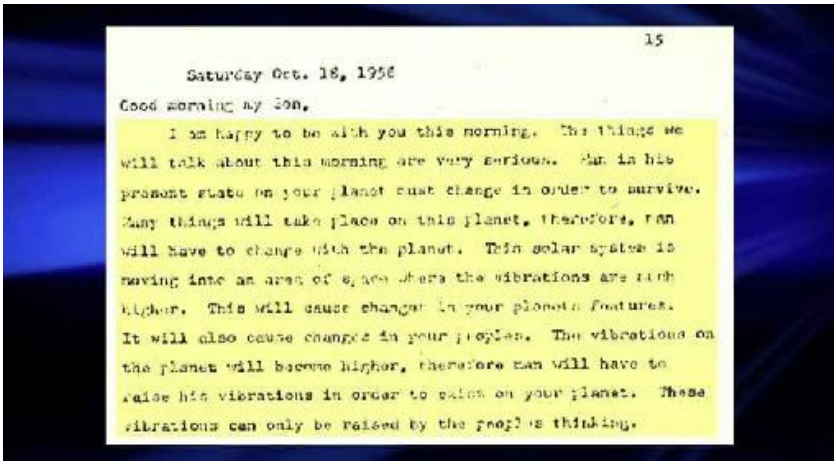
He's one of the only people out there who's been doing this longer than I have. So, Jay, welcome back to the show.
Jay Weidner: Hey, thanks.
David: Corey, welcome back to the show.
Corey Goode: Thank you.
David: So we're going to get right back to where we were with the Brown Notebook, which is amazing information given to someone who was actually contacted in person – just like what's been happening to you, Corey – brought on board a ship by benevolent beings, brought up there, given a tour, and then they get telepathic information, which comes in the form of this channeling.

And what we're seeing here is one of the earliest verified channelings from the 1950s. This guy W. B. Smith gave people a list of 200 questions, and everybody who answered in the same way, he was able to verify, because it was based on classified intel.

So people all over the country who have never spoken to each other, they all could answer these questions properly.

This is a verified channeling. It's one of the only ones we have. And when you read what W. B. Smith said about those channelings, he said it contained religious-sounding information about the end of the age. But he never went into detail.

Now, look at this. This is mind-blowing.



15

Saturday Oct. 18, 1958

Good morning my son.

I am happy to be with you this morning. The things we will talk about this morning are very serious. Man in his present state on your planet must change in order to survive. Many things will take place on this planet, therefore, man will have to change with the planet. This solar system is moving into an area of space where the vibrations are much higher. This will cause changes in your planets features. It will also cause changes in your peoples. The vibrations on the planet will become higher, therefore man will have to raise his vibrations in order to exist on your planet. These vibrations can only be raised by the people's thinking.

“I'm happy to be with you this morning. The things we will talk about this morning are very serious. Humans in their present state on your planet must change in order to survive. Many things will take place on this planet. Therefore, you will have to change with the planet.”

Now check this out.

“This solar system is moving into an area of space where the vibrations are much higher. This will cause changes in your planet's features. It will also cause changes in your peoples. The vibrations on the planet will become higher. Therefore, you will have to raise your vibrations in order to exist on your planet. These vibrations can only be raised by the peoples' thinking.”

Jay: Well, there you go.

David: I mean . . .

Jay: Wow!

David: That's the money shot right there.

Jay: That really is.

David: Now, Corey, do you think, based on this, that if the Sphere Alliance is putting up an outer barrier around the Solar System, and these ETs, these Draco, Orion-types can't get out, do you think that, based on this kind of information, that they're just not even going to be able to exist if they stay in here once this happens?

Corey: That's exactly what the Sphere Being Alliance communicated to me.
David: Oh, they did?
Corey: Yeah. And not only the Draco, but other non-terrestrials that are here intervening. They will not be compatible with the new vibration, or energy.
David: Let me just play devil's advocate for just a moment. Don't you think it's possible that, for people in the Cabal, that if they're looking at these benevolent ETs, or allegedly benevolent ETs, as actually facilitating things like the fall of Atlantis, which we talked about last time, things like this, in which there actually is a mass death of negative beings, don't you think that the negative beings could see these benevolent beings as terrorists?
Corey: Oh, yeah. Yeah. They're going to see them as the enemy, of course.
David: Because they just want to be able to go on doing what they're doing forever and not be interrupted.
Corey: And according to their theologies and philosophies, they're doing what is 'good'. So they see these, what we call benevolent beings, they see them as evil.
David: Now, Jay, why do you think it's necessary for these negative entities to physically expire?

Jay: Well, because they're dictators of the whole Solar System, and this is a good thing.

Fulcanelli tells us in his chapter on the Cross of Hendaye that many beings will die when this event comes, all right, but not all. And I think he was really talking about this cleansing, a cleansing of the whole area and getting rid of a lot of negative entities.

So I think that they are going to die, and I think that they're really worried – very worried. And I've heard this from other sources, not just Corey.
David: I mean, how bizarre is it that we got this guy – I think it's Nebraska or something like that, in the middle of Nebraska – [who] doesn't know anything about ancient prophecy? He's just an ordinary dude, gets brought up there, and they start giving this information through him.
Jay: Definitely my sources have told me that in the 1950s aliens began telepathically talking to very good humans, giving them information in order to facilitate the evolutionary shift of the human race to bring us into a larger manifold. That's what I've been told.

And the Sun is a central part of this thing. And the change that the Sun is going through is a central part of this thing.
David: Now, Corey, in The Law of One – we discussed this already – there was a statement about the idea that the illusion of space-time is granted for us to have the experience of seeing the results of our actions.

Do these . . . Is death part of the illusion of space-time?

Corey: Well, I guess it would be, since we're having our experience within that medium. But death is a part of also the learning experience.
David: So these beings aren't really dying per se. They're just being removed from one level of the planetary or interplanetary game.
Corey: They're being, I guess, recycled.
David: Right. And because space-time is ultimately an illusion, it does appear that these potential . . . that these periodic mass catastrophes, although there is the appearance of physical death within the illusion, that it's more like gardening, right?
Jay: Hm mm.
David: It's like plowing the field to harvest.
Jay: Yes.
David: What is the harvest? What happens, Jay?
Jay: Yeah.
David: It's the tilling of the soil, right?
Jay: That's right, yeah.
David: So what do the alchemists think about this idea of the metaphor of rebirth? They've used the 'new dawn' language in this.
Jay: Yep. They are not . . . They don't believe that death is the end. They believe that you want to extend human life to give each human enough time to figure things out. And they think we've been somehow messed with, so we have a short lifespan. And so we can never figure things out.

We die at like 70, 80, and that's it, right? And it's really not enough time to actually figure things out.

So alchemists try to do things to extend their life so they have more time here to figure it out. And the alchemists lore is that the average human can live to be 300 to 800 years old.

And just imagine if we lived to be 800 years old, how the world would be changed. There would be no wars, because nobody's going to fight war if you've got 780 years left to live, right?
David: Sure.
Jay: You're not going to have children until you're 200 years old. You're going to be very wise when you have children. Your children are going to be very wise.

You go to college until you're 150. You know what I mean? I mean, it's just a completely different world, and they've denied this to us.

The patriarchs in the Bible lived to be 900 years old, so . . .
David: Right.
Corey: Well, even the oldest and wisest among us right now are still spiritual children.
Jay: They are. And it's a very important part of our future to have us live longer lives.

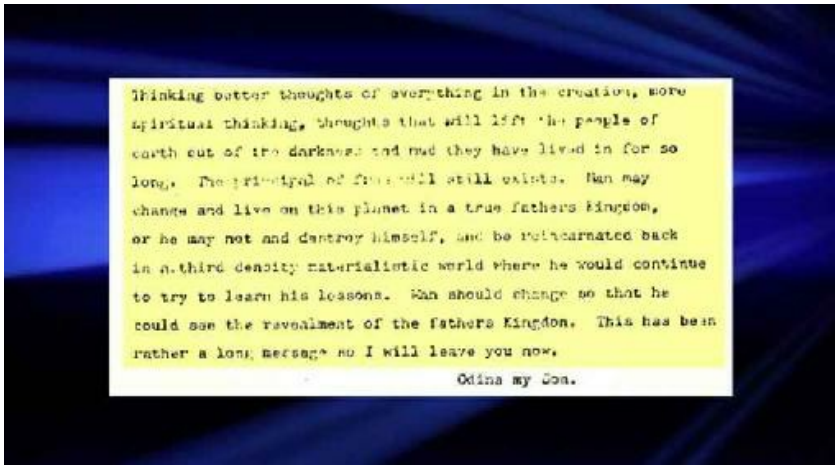
I think that's part of the vibratory change that's going to happen. And we're going to start living longer.

We already are actually living longer lives. When my grandparents were in their 60s, they looked like they were in their 90s, right? Nowadays, people in their 90s looked like people who used to be in their 60s.
Corey: And it's not because of all the pharmaceuticals we're pumping through them?
Jay: Ha, ha.
Corey: Ha, ha.
Jay: I hope not. Again, the pharmaceuticals could be a way to mitigate the shift that they don't want, right?
Corey: Yes.
Jay: Right? The fluoride in the water – when did it happen? The 1950s, right? And what does fluoride do? It calcifies your pineal gland.
Corey: Well, on that point, they do put things in the food and water that have metals and things that bring down our density, that keep our density lower.
Jay: That's right. We know that.
David: Well, the first Project Camelot whistleblower, alias, Mr. X, said that he was going through documents at a military defense contractor, and documents from the 1950s described that meeting with what you were calling the Blues and Eisenhower, in which the government denied them their request to bring us into a peaceful age as long as we had nuclear disarmament.

But then they said, "If you cover this up, you can get away with it up until 2012, and at that point we're coming back whether you like it or not. There's nothing you can do about it."

So, Corey, since so many of these prophecies have revolved around the year 2012, the Mayan Calendar end date – there were crop circles that said it – does it appear, since you've got this date range of 2018 to 2023, that maybe we got an extension to have a little more time from what the original intention of the end date was?
Corey: You know, I don't know, but it's become very obvious from the panic and how quickly things are changing in the programs that the 2018 beginning date has obviously moved up.

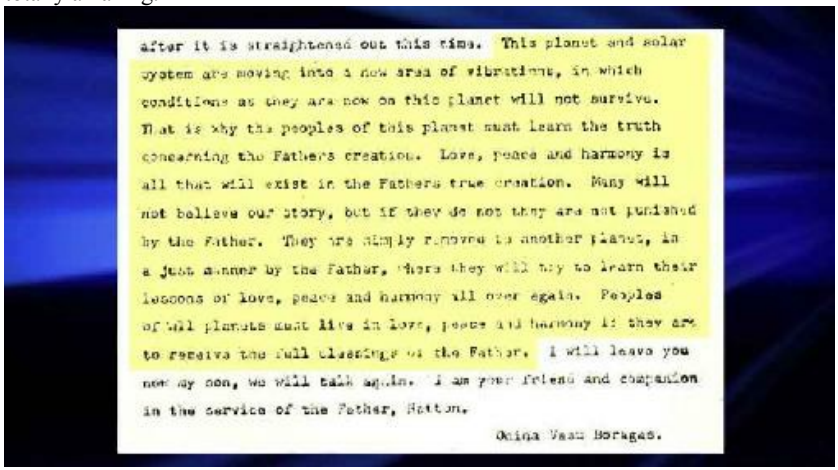
Things are happening very quickly. So I think things are happening before these different Cabal groups had planned out. They were using these different techniques to view the probable future, getting information from non-terrestrials, and they were basing their plans on that – on that date.
David: Well, we're actually not done with The Brown Notebook. And if this hasn't already blown you away, there's more to come. So let's check that out.



“Thinking better thoughts of everything in the creation, more spiritual thoughts, thoughts that will lift the people of Earth out of the darkness and mud they have lived in for so long. The principal of free will still exists. You may change and live on this planet in a true divine kingdom, or you may choose not to and destroy yourself and then be reincarnated back in another third-density, materialistic world, where you continue to try to learn your lessons. You should change so you can see the revealing of this divine kingdom. This has been a rather long message, so I will leave you now.”
David: So what they're saying there is the idea of planetary recycling, people being transported.

So, Corey, when we have these giant Spheres coming into the Solar System and then The Law of One source says that their job is the management and transfer of planetary populations, how do the Spheres . . . do you think . . . is it possible that those Spheres will be transporting people to other worlds once this transition is complete based on what we're seeing here?
Corey: It's absolutely possible because that's how they've transported me.
David: Ah, right. So why wouldn't they have the technology to portal out people by the hundreds of millions or billions?
Corey: Oh, yeah, easily.
David: The same way that they just did with you.
Corey: Yeah. And if they can use these Spheres to contain the entire Solar System, that's child's play to them.
Jay: And I've heard from high sources that they can just - “pfshht” - pick you right up and take you away. It just happens in a flash. And a lot of these missing people disappear this way, I think.
David: Absolutely.

Jay: Yeah.
David: Now, this is another quote from a later session. It's the same kind of thing – totally amazing.



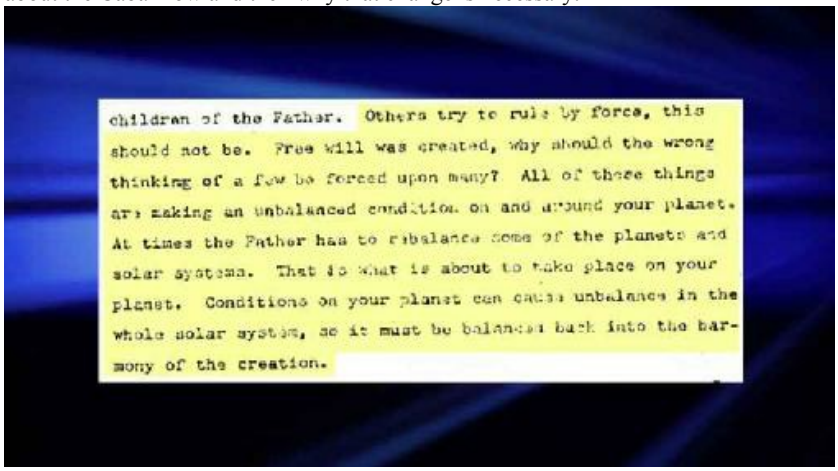
after it is straightened out this time. This planet and solar system are moving into a new area of vibrations, in which conditions as they are now on this planet will not survive. That is why the peoples of this planet must learn the truth concerning the Father's creation. Love, peace and harmony is all that will exist in the Fathers true creation. Many will not believe our story, but if they do not they are not punished by the Father. They are simply removed to another planet, in a just manner by the Father, where they will try to learn their lessons of love, peace and harmony all over again. Peoples of all planets must live in love, peace and harmony if they are to receive the full blessings of the Father. I will leave you now my son, we will talk again. I am your friend and companion in the service of the Father, Hatonn.

Ohina Yeau Borages.

"This planet and solar system are moving into a new area of vibrations in which the conditions as they are now on this planet will not survive. That is why the people of this planet must learn the truth concerning the divine creation. Love, peace and harmony is all that will exist in the true creation. Many will not believe our story, but if they do not they are not punished . . . They are simply [David clears his throat] removed to another planet, in a just manner . . . where they will try to learn their lessons of love, peace and harmony all over again. . . ."
Jay: Interesting.
"People of all planets must live in love, peace and harmony if they are to receive the full blessings of the divine kingdom."
Jay: Nice.
David: So once again, they're reiterating that everybody has to learn this, and if you don't get it, you continue your education on another planet somewhere else. And again, this seems totally to be what's happening with these Spheres.

We're actually seeing the technological or more measurable physical aspect of how they all kind of come in at the last minute right before this thing's going to happen.
Corey: Right.
David: Do you think . . . I mean, the Spheres have to be here to do something, don't you think, Jay?
Jay: I do.
David: They're not just there for show.
Jay: I do. This is very interesting, because, I mean, you know, that's . . . it's almost

like the New Age Rapture. It makes you wonder if this is where the Rapture and all of that came from.
David: Absolutely. Let's go on [and] have another one, because this is actually talking about the Cabal now and then why that change is necessary.



“Others try to rule by force. This should not be. Free will was created, but why should the wrong thinking of a few be forced upon many? All of these things are making an unbalanced condition on and around your planet. At times, the [father-mother-god] has to rebalance some of the planets and solar systems. That is what is about to take place on your planet. Conditions on your planet can cause unbalance in the whole Solar System, so it must be balanced back into the harmony of the creation.”
Jay: There you go.
David: So doesn't it sound like here, if they're saying . . . and they're using a patriarchal term, but as people are reading, “the Father has to rebalance the planets and solar systems.”

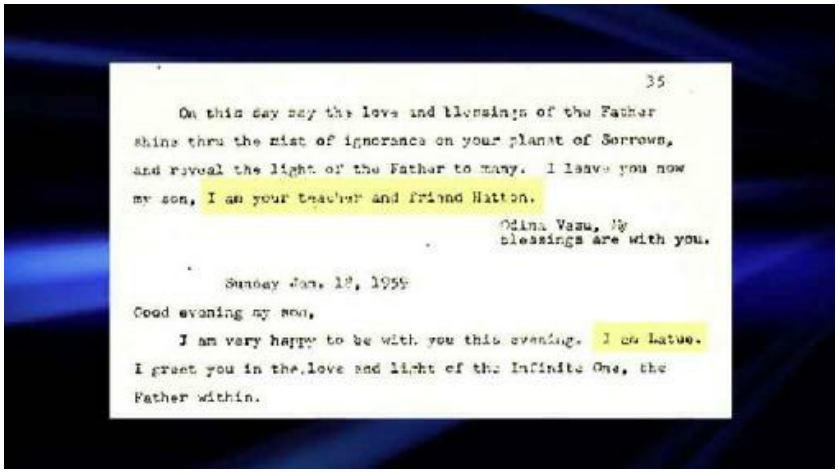
Doesn't that sound like the idea of these Spheres, like the Outer Barrier and all this kind of stuff?
Corey: Well, yes, because one of the things that was explained and shown to me was that these Spheres were spaced out throughout our Solar System and acting as a buffer, like a harmonic buffer, for these energies that were coming into our Solar System to give us more time to acclimate and adjust.
David: And it says here that the “rule by force” is creating an “unbalanced condition” and that they will, or whoever this Father is that they're talking about, has to rebalance what the Cabal has done.

So the defeat of the Cabal is obviously of key importance in this solar-system-wide

rebalancing, which they're saying is some kind of flash of energy from the Sun.

I mean, to me this stuff pays off everything we've been talking about. It's just amazing.
Jay: It certainly is. Now it goes back to what I've heard was happening in the '50s. And again, everything happened in the '50s. Everything started there.
Corey: Oh, yeah.
David: Tompkins' data was that 1,500 different people were getting . . .
Jay: 1,442 people. The intelligence agencies had discovered 1,400 people who were in telepathic communication, just normal people, not physicists or anything. There were physicists, but others were guys like this guy from Nebraska and uncovering amazing amounts of knowledge, including Tompkins himself, who was receiving one of the 1,400, and he was receiving information about how to build space vehicles and things like that.
Corey: Now, is this "the 1,442 contactees"?
Jay: Yeah.
Corey: They call them "the 1,442"?
Jay: Yeah, "the 1,442".
Corey: Huh.
David: Tompkins, in his book, describes that the people he's working with are throwing him these impossible questions and saying, design us a transport vehicle to get from cavern A to cavern B, and we need it by Saturday.

And he has no idea what he's going to do, and then he just channels it. And then they don't tell him what they're doing with it.
Jay: No. And he's unsure of where he's getting the information from. At the same time, he doesn't know how he could possibly build a ship that can house 300 people in a weekend. Ha, ha.
David: And then he concludes that they must be getting it telepathically from extraterrestrials.
Jay: Yes. Right – good extraterrestrials. And you think about if what Corey is saying is true, there's bad ETs here. You don't want to really face them. So how would you defeat them? You would do it this way. This is the most intelligent way to do it.
David: Balance the Solar System.
Jay: Yeah, balance the Solar System by taking good people, like this guy is, and feeding them information and getting him to release it. This stuff should have probably been released in the '50s.



35

On this day may the love and blessings of the Father shine thru the mist of ignorance on your planet of Sorrows, and reveal the light of the Father to many. I leave you now my son, I am your teacher and friend Hatton.

Odina Vasu, My blessings are with you.

Sunday Jan. 18, 1959

Good evening my son,

I am very happy to be with you this evening. I am Latue. I greet you in the love and light of the Infinite One, the Father within.

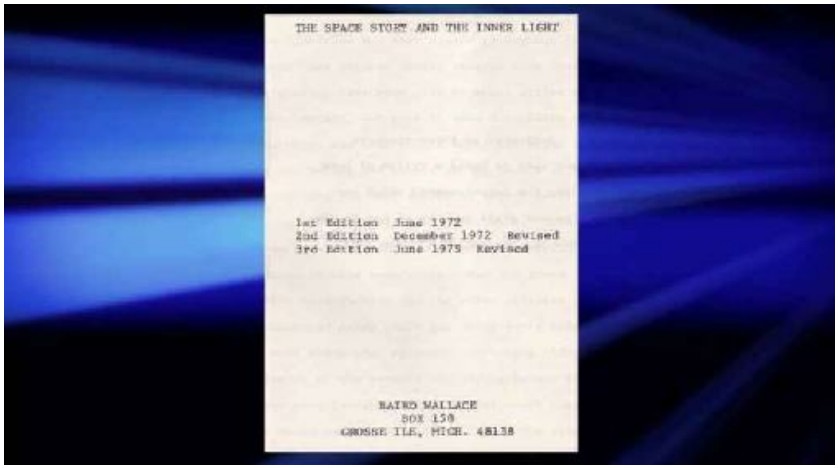
David: Yeah. So now this little quote, I'm not going to go into too much detail except just to say that it says, “I am your teacher and friend Hatton” at the end of the top one, and then “I am Latue” at the bottom one.

Hatonn and Latue are the two beings that were talking to Carla that she was channeling before she starts to channel The Law of One.

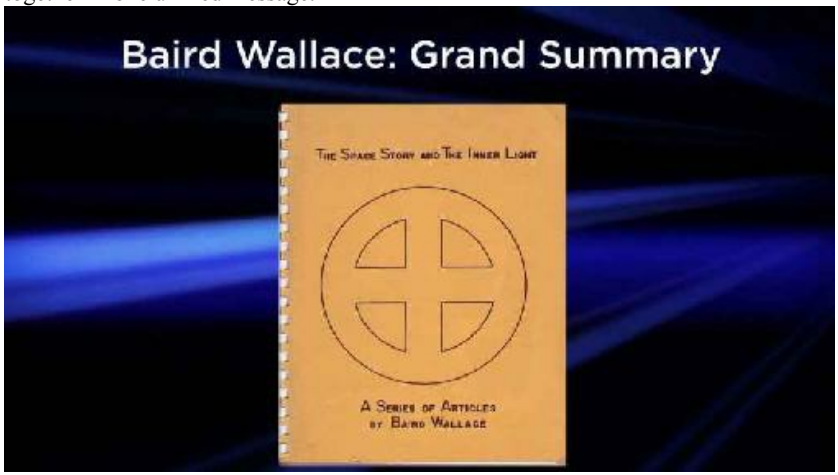
So these same beings found their way to Carla. Here's the beings – they're naming themselves – that are giving us these prophecies.

So they're still out there. Nebraska guy is not online anymore, but they jump over to Carla, and they start giving her the information. And that's what tuned her up to be able to receive The Law of One.
Jay: Right.

BAIRD WALLACE: GRAND SUMMARY

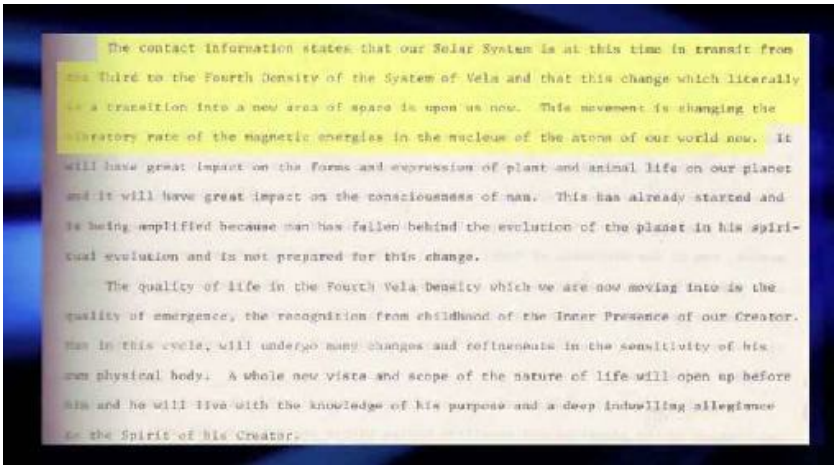


David: So now what we have here is this book by Baird Wallace that summarizes all of what these different contactees were saying in the 1950s and '60s. He puts it all together in one unified message.



And I'm going to show you the publication date, June 1972. [i] scanned it right out of the book. You could probably still find this if you really look for it. It's called “The Space Story and The Inner Light”, and I'm going to read you some quotes from this. We're not going to read it from the typewritten form here. You can pause it on your TV if you want to see that.

I'm just going to read it in a nice, favorable way like this.



“The contact information states that our Solar System is at this time in transit. . .” - remember this is 1972 - “. . . from the Third to the Fourth Density . . . ” [David: There it is. That's all the way back before The Law of One. They're already using the word 'density'.] “. . . of the System of Vela . . . “ [David: That comes from George Van Tassel's information.] “. . . and that this change which literally is a transition into a new area of space is happening now. This movement changes the vibratory rate of the magnetic energies in the nucleus of the atoms of our world now.”
David: So, Jay, this sounds a lot like alchemical.
Jay: It is. It is. Fulcanelli intimates several times in his book, “Mysteries of the Cathedrals”, that the entire human race is an alchemical experiment.

Corey says that 22 different races have come here to experiment on us. Other people have told me the same thing. And I think that, if I may, the experiment, I think, is, can we take a guttural creature, like in “2001”, and transform them into a very advanced spiritual being?

That, I think, is the main experiment. There's other experiments, like Corey says.
Corey: But you're right. It's genetic and spiritual. They say it's genetic and spiritual in context.
Jay: Genetic and spiritual. And as things like Gaia come out into the world, we're raising the vibe of everything and changing the game. And I think that Gaia is a big part of this whole change in consciousness.
David: Let's hear more of what he had to say about this meta analysis of all the different contact information.
“[This event] will have great impacts on the form and expression of plant and animal life on our planet and it will have great impact on the consciousness of [humanity].

This has already started and is being amplified because [Earth humans have] fallen behind the evolution of [their] planet in [their] spiritual evolution and [are] not prepared for this change."
David: Now, Corey, this is from 1972. Did you hear anything that sounded like that?
Corey: Well, what I said earlier, the Spheres are here to buffer the energy so we can acclimate at a slower rate because the Earth is changing faster than we are. And that's why . . . If they didn't do that, there were going to be more catastrophes . . . Earth changes happening and catastrophes because of it, and there would be fear and all that kind of stuff that would make it harder for us to raise our vibration.
David: So they really have needed this sort of intercession of the Sphere technology because we're not ready, just like it said here in '72.
Corey: Right.
David: Pretty amazing, huh?
Jay: Pretty amazing.
David: 40 years before 2012.
Corey: And them talking about the Solar System moving . . . because I hear people talking about the Solar System as being hit by all these energies . . .
David: Or the photon belt.
Corey: Right. It's shocking to hear that they're saying the same thing the Secret Space Program was saying, is that our Solar System is moving into a part of the galaxy that has like a nebula of clouds, high-energy particle clouds, that are causing changes to our Sun and our Solar System.
David: And you said they were sending guys into those clouds in spaceships to see what happened to them, right?
Corey: Right. Well, they were sending them out there to investigate. And people . . . weird things were happening to them. They were having breakdowns, psychological breakdowns.
David: Well, could you go through that? Like, different . . . Not everybody responds to the cloud the same way, right?
Corey: Exactly. And they were artificially recreating this energy in closed environments and having unsuspecting people go in thinking that they're doing unrelated work and seeing what it did to them. And they were doing it to our own people.
David: What are some of the things that happened?
Corey: Well, people that went in that were like sociopaths, they went nuts. They lost it.
Jay: That's actually what I've heard is about to happen.
Corey: Yeah. And the people that were positively oriented started getting all blissful and just happy and whistling, that kind of thing. And people that had, you know, people that had psychological issues, those became enhanced.
David: Wow! So this is really lining up very beautifully with what he's saying.
Jay: So the good get better and the bad get worse.
David: Ha, ha.

Corey: And the crazy get crazier.
David: All right, so now we're going to go on with this quote from this amazingly vetted-out material and just see how much more it lines up with everything we've been discussing.
“The quality of life in the Fourth Vela Density, which we are now moving into, is the quality of emergence, the recognition from childhood of the Inner Presence of our Creator. [Earth humans] in this cycle, will undergo many changes and refinements in the sensitivity of [their] own [bodies].”
Now, Jay, you said before that there was a really interesting Masonic ritual where they keep you in the dark for a long time . . .
Jay: Right.
David: . . . and then bring you out. Could you just kind of go over that again here?
Jay: Well, again, this goes back to the pineal gland. It's kind of like tricking the pineal gland, you might say. This is a poor man's way of getting the Elixir of Life.

So we know that serotonin is emitted from the pineal gland when light strikes it in the morning. And we know that melatonin comes out of the pineal gland when you're in the dark.
We know that melatonin reverses the aging process, okay? And so what they would do, in my opinion, was they would put you in a dark room for three days, complete darkness, and then your brothers, the Freemasonic brothers, would come, and they would put you into a dark coffin, light-free coffin, and then they would take you to either the top of a mountain or the top of a building, somewhere where you could see the rising Sun. And you're blindfolded.

And if anybody knows the Masonic rituals, this is starting to make a lot of sense.
David: Oh, yeah.
Jay: And so then you're taken out of the coffin, and your brothers face you towards the Sun. They take off your blindfold, and the Sun hits your eyes. And for three minutes, you have to stare into the Sun.

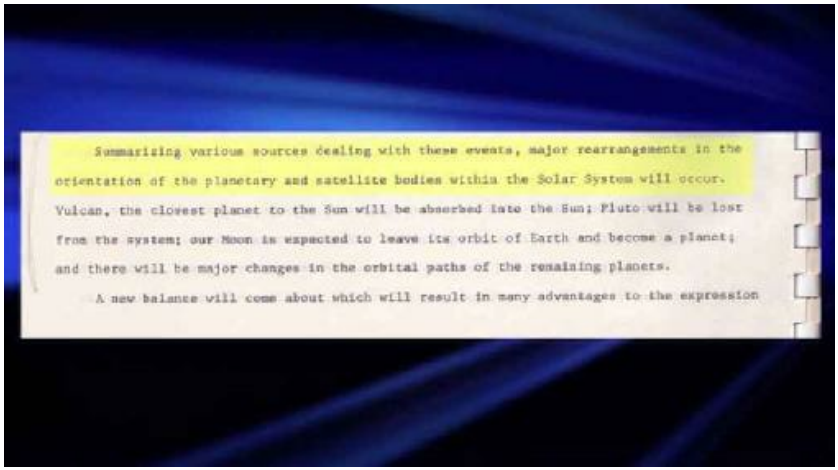
Then you put your blind . . . By the way, it's like a psychedelic experience when this happens.
David: Well, your brain has generated tons of melatonin.
Jay: Absolutely. We know that DMT is very close anatomically to serotonin, okay? And so what you're doing is you're getting almost like an endogenous DMT rush. It's your own DMT, though. It's homeopathic.
David: So it's like the melatonin is methylated. It gets suddenly transformed.
Jay: Into a super-serotonin.
David: Right.
Jay: And then they put you back in the casket, and they take you back into the dark room. You have to stay for 40 days.
David: Total darkness.

Jay: Total darkness. No light. And then what happens is that the super-serotonin turns into super-melatonin, all right?

So first it was melatonin. Then the light activates. It turns into a higher vibratory super-serotonin. And then once you get in the dark, that's transferred to super high vibratory super-melatonin, which begins to almost immediately reverse the aging process.

And supposedly you will lose 15, 20 years in this 40 days that you're in there.

And it's not a pleasant experience, from what I've heard.
David: Do they hit you with light again at the end of the 40 days?
Jay: No, they let you out.
David: Oh.
Jay: That's supposed to be . . . They let you out at night because it's very, very difficult to get back into the light after you've been in this experience. Your eyes are very sensitive. So usually, they let you out at night, and you usually become a night person for a little while.
David: Corey, have you heard of maybe some more advanced, perhaps chemical or energetic, means where some process, like what he's describing, might be able to advance people's psychic ability?
Corey: Well, yes. They chemically enhanced intuitive empaths with shots. Intuitive empaths that I run into are extremely advanced, but if they were to go for like six weeks or eight weeks without these shots, their abilities begin to diminish.
Jay: Right.
David: All right, well let's go on with this because we got a little more of this to get through.
“The whole new vista and scope of the nature of life will open up before them, and they will live with the knowledge of their purpose and a deep, in-dwelling allegiance to the Spirit of the Creator.”
David: That sounds great. Now, we're going to talk about this quote here, about what happens. And, again, we're not going to read it off the paper. We're going to do these nice slides.



“Summarizing various sources dealing with these events . . . “ [the solar flash] “. . . major rearrangements in the orientation of the planets and the satellites within the Solar System will occur.”

David: Now, before we go on any further here, Corey, have you heard about planetary orbits changing, like maybe the Earth's orbit extending in the number of days it takes, things like that, once this happens?

Corey: Yeah. And also about the orbits of the planets, that unlike some other solar systems, the planets are all askew. They're not in harmony at all. That's . . . Yeah, that's very interesting.

David: Isn't this crazy? 1972.

Corey: Yeah.

“Vulcan, the closest planet to the Sun, will be absorbed into the Sun; . . . “

David: And in The Law of One, they say it's a first-density planet, so it's not visible to us. It's like an energy ball.

Jay: Right.

David: It's not actually visible, but it gets reabsorbed.

“. . . Pluto will be [kicked out of our Solar System]; . . .”

David: It kind of already has been by NASA. Ha, ha.

Jay: It already has. Ha, ha.

“. . . our Moon is expected to leave [the] orbit of [the] Earth and become [its own] planet; . . .”

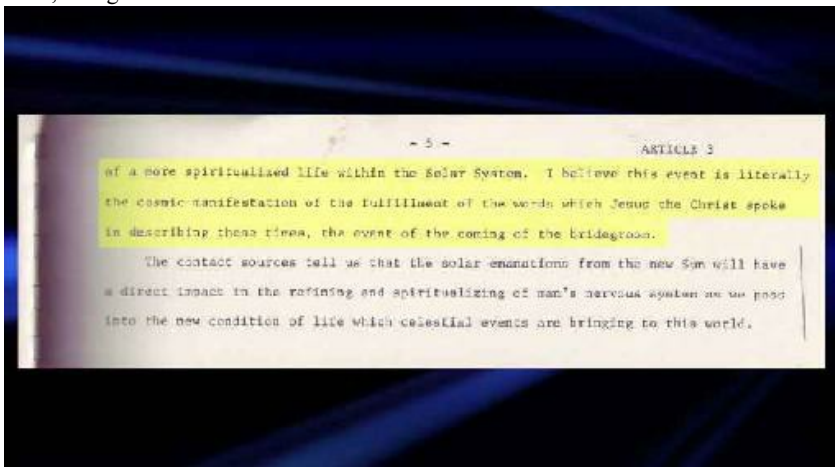
David: That's interesting. I don't know if I'd agree with that, but it probably will get kicked out, at least jettisoned from the Earth's orbit.

Jay: It is slowly moving away from the Earth.

“. . . and there will be major changes in the orbital paths of the remaining planets.”

David: So I mean, there again is exactly what we're anticipating based on insider data.

Now, let's go on and read the rest of this.



“A new balance will come about, which will result in many advantages to the expression of a more spiritualized life within the Solar System.”
David: That is Ascension, obviously.
“I believe . . . “ [This is the author speaking.] “. . . that this event is literally the cosmic manifestation of the fulfillment of the words which Jesus the Christ spoke in describing these times, the event of the coming of the bridegroom.”
David: And that is in the same book of Matthew right after they talk about the harvest metaphor. The bridegroom is just another symbol – the wedding, the alchemical wedding - . . .
Jay: It's the alchemical wedding.
David: . . . the wedding of flesh to spirit.
Jay: That's right.
David: Like the eclipse.
Jay: That's exactly right. That's what they're saying there. They're talking alchemy there.
David: And Jay, Kubrick is using eclipses and stuff all the time in “2001”, isn't he?
Jay: All through “2001” there's at least five eclipses in the movie.
David: So do you think Kubrick was aware of this biblical analogy to the wedding of flesh and spirit?
Jay: Oh, I do. Absolutely, I do. I believe that he was . . . I don't know if he was a practicing alchemist, but he definitely understood alchemy . . . and the Cabal.
David: Now, why do you think Kubrick at the last minute dissed the guy that wrote the score and then picks “Thus Spake Zarathustra”?
Jay: What do you think? Ha, ha, ha.
David: Well, I already know the answer. I'm just kind of throwing him a bone here.

Jay: I know the answer, too, because Zarathustra was the Persian alchemist. And from the very beginning, he's saying, “This is alchemy. Thus spoke the alchemist.”

And the opening trumpet from “Thus Spake Zarathustra” is over the eclipse at the beginning of “2001”. So there you go.
David: Zarathurstra is Zoroaster, . . .
Jay: That's right.
David: . . . who is the author of the prophecy of Frashokereti, . . .
Jay: That's right.
David: . . . where the Sun gives off this flash and transforms humanity.
Jay: Yep.
David: All right. So we're just going to finish this out really quickly, because we're almost done there. I just want you guys to hear this last little bit.
“The contact sources tell us that the solar emanations from the new Sun will have a direct impact in the refining and spiritualizing of [our] nervous systems as we pass into the new condition of life which celestial events are bringing to this world.”
Jay: Okay. So the “refining and spiritualizing of the nervous system” . . . The nervous system carries electrical currents through your body.
David: Yeah.
Jay: The Sun is essentially an electric Sun, as Corey has pointed out.
Corey: It is.
Jay: And so when the new Sun comes, it again goes through your eyes, hits your endocrine system, changes the nervous system, makes us more electric, advanced. So we can live longer.
David: Right.
Jay: We're light bodies.
David: And the eclipse is like a metaphorical example of a conjunction that's much greater, an alignment that leads to this solar emanation.
Jay: That's right. That is exactly right.
David: All right. Well, Corey, I mean, what do you think about all this from 1972?
Corey: It's unbelievable. I mean, I was two years old. Ha, ha. And this information, I didn't hear until fairly recently from, of course, a much different nonterrestrial source.
David: Do you think there's any possibility that somebody could have faked all this – the guy in Nebraska in 1958 – Baird Spalding [David means Baird Wallace.], 1972, reading all these different vetted-out channelers and how well it lines up with what you know?

Is there any way this could have been faked or somebody could have made this as a big hoax?
Corey: This is way before the time of the Internet, and your average library, I don't know if they would have all this information. And if it did, you would have to hunt and peck for years. That just doesn't seem practical.
David: Well, knowledge was kept secret, too, right, Jay?

Jay: Yeah, of course it was kept secret. This is clearly absolute proof, as proof as you can get, that what they're saying about this extraterrestrial telepathic contact was really truly going on.
David: Absolutely.
Jay: Yeah. I mean, I was around back then. I wasn't very old, but we were not very sophisticated in 1972. This is pretty sophisticated stuff.
David: Yeah, it's stunning. And this is stuff that was classified in secret societies, and yet, these guys in Nebraska are pulling it in.
Jay: And probably driving the Cabal crazy.
David: Oh, yeah.
Jay: Yeah.
David: Oh, yeah. They're trying to stop this.
Jay: Yeah.
David: Well, that's all the time we have for this episode. I hope you're as amazed as I am.

I wanted to present this information to you properly. I've been holding onto this stuff for a long time. I used to always close my conferences with this.

This to me is some of the crown jewels of my whole collection. And now with the three of us together, it's really the right way to present it to you. I hope you've enjoyed it.

This is “Cosmic Disclosure:”. I'm your host, David Wilcock, with our special guest, Jay Weidner, and I thank you for watching.

Deeper Disclosures Season 7 Episode 7

[Cosmic Disclosure; Deeper Disclosures from William Tompkins]
Season 7, Episode 7

21 Feb 2017

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with the insider's insider, Corey Goode, who has brought us a truly incredible repository of cosmic information that has now been verified by the insider William Tompkins, who at 94 years old, is a World War II veteran who has provided stunning corroboration of what Corey has had to tell us.

So, Corey, welcome to the show.
Corey Goode: Thank you.
David: So what we're going to do now is we're going to begin with a little excerpt of some of the things that Tompkins has been sharing with us about the amount of unlearning that is going to be necessary as we move into Full Disclosure. Let's take a look.
* * * * * *

SELECTED BY EXTRATERRESTRIALS

William Tompkins: People all over this planet, for at least 6,000 years, have been influenced by extraterrestrials: the Dracos and the Reptilians.

They have taken the information that is in, essentially, every school on the planet and they've modified the information. All history documentation in this country and in every country on the planet have been given lies about astronomy, lies about mathematics, lies about technical capabilities, lies about the universe, you name it. Okay?

Everything have been lies. Every PhD on this planet, whether they're scientific, whether they're medical, makes no difference. Every book that they read the six years they were in the university are lies. They are not telling the truth. They were not taught the truth.

At that time [when World War II began], we had 34 admirals in the Navy. All of them had been through Annapolis. They learned how to learn everything about the Navy, everything about history, everything about mathematics, everything about astronomy, you name it. They learned all lies.

So who did the Secretary of the Navy Forrestal select for this job?

Turns out Admiral Rico Botta was not an American. He was born in Australia. The Secretary of the Navy selected an Australian man who had not been infected with the lies that the Reptilians had taught us. He was freer of that.

So the Secretary of the Navy was aware of this because he had been contacted by Nordic extraterrestrials, people here trying to help United States. Okay? Very important point.

So when I was selected, I hadn't been to the universities. I hadn't gotten the bad information. I hadn't been given the wrong information. And this is the reason I was selected, because I was knowledgeable of the Navy, I was knowledgeable of what the threats were, but I hadn't gone to the university and picked up all the lies. Very important.

* * * * * *

David: Corey, how do you feel about that? That's a pretty bold, cowboy statement that Tompkins just made here.

Corey: It was common knowledge in the programs. They would talk quite often about how the physics models that we're using down here on the planet are incorrect. And they have not been corrected on purpose.

They use different hyperdimensional mathematics models than what are used down here. You know, the physics models, . . . You know, we're still on this quantum and, you know, classical physics model.
David: Sure.
Corey: While they are deeply into this electro-plasmic universe model of physics, which is the true model.

And another thing he mentioned was that they wanted people that had not been, I guess, corrupted by this incorrect education. That is VERY COMMON in the programs.

That's why they were taking children in, because we were not front-loaded yet on different religious ideas, social programming. A lot of that hadn't occurred yet. So they had basically a blank slate to work with.
David: It is interesting isn't it, the government studies that have shown that if they did disclosure, the two groups that would be the most hard hit by it would be religious people and scientists.
Corey: Yep, the academics.
David: So do you think that this science itself becomes a religion?
Corey: Absolutely. We spend life using every experience or information that we've heard from people we respect, we use that as little pieces of sand to grind into a lens that we use to hold up to all information coming in to interpret it.

Those are all belief systems. They're all religions, even science.
David: Yeah. He also mentioned astronomy. And where do you think astronomy has fallen short?
Corey: I think that keeping astronomers ignorant of the electro-plasmic universe model sums it up.
David: Right.
Corey: They are making calculations on what they're observing and using incorrect math to make the calculations.
David: If we're acknowledging that Reptilians exist, how would that happen?
Corey: Well, you often hear that the "victors write the history". Beings that are in control dictate what the minions get to hear.
David: Right.
Corey: And it's all done for control purposes. If you keep people ignorant, it's a throwback to people not being allowed to read back in . . . thousands of years ago, or currently in some places now even.

You're keeping people ignorant so they don't begin to think, or they don't have the ability to do further research on their own. They have to go by what they are told.
David: So when you say "the minions", you're saying that we have various pressure points in our informational system, our educational system, that can be manipulated. Humans are being manipulated, maybe wittingly, maybe unwittingly, by an extraterrestrial agenda in terms of what information makes it into the universities.
Corey: Yes. They've been able to get us to program ourselves through social norms – what's socially acceptable. That's programming. That's a control system.

And the same goes for educational systems.
David: So how does this play out in terms of other civilizations that go through the same thing? What would we expect to see as this knowledge embargo breaks down?

Corey: If you remember Mica, he's an ambassador from a nearby planet, that they've already gone through all of this change that we're starting to go through.

And what he stated is that after we get the truth, or a full data dump of a Full Disclosure, we're going to go through – after we go through the five stages of grief, you know, denial and all that – we're going to go through a consciousness renaissance.

All these brilliant people that are scribbling down these math equations that they think are so brilliant, and they are given this hyperdimensional model? They've still got brilliant brains.

And they're going to take this correct science and mathematics and they're going to run with it.
David: How does our relationship to the universe change once the science is authentically given, instead of this reduced model?

What do we look like now as conscious, sentient beings in this universe?
Corey: If you take away a lot of the mystery of the universe, you're empowering people both intellectually and spiritually. They've got a lot more room to grow.
David: What do you think it does to consciousness once this science suppression is removed? How do we see consciousness differently?
Corey: Consciousness, I believe, is going to evolve to the point to where we are able to – when we have these correct models, we have Full Disclosure, we have a better understanding of the nature of the universe – we're going to be able to not only understand our place in the universe, but our place on the planet and in our various societies.

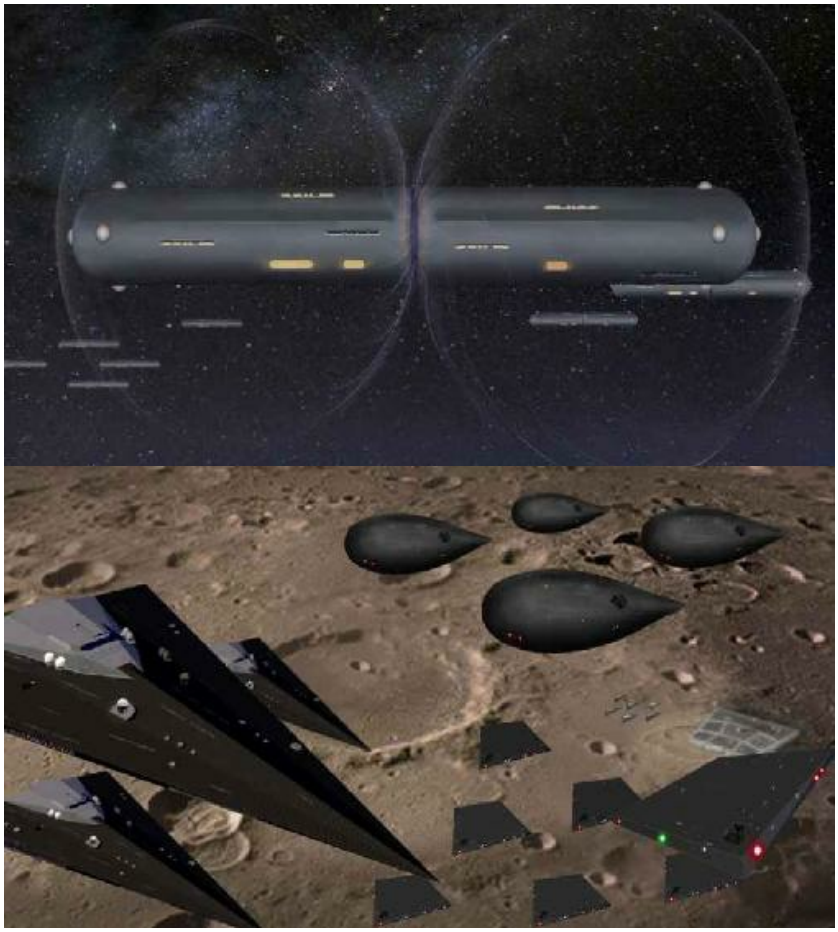
David: Do you think that it will be more commonly accepted that consciousness is a field and not just something localized in the brain?
Corey: That's one of the sciences that has been suppressed. So, yes, that will be revealed.
David: What personal experience did you have with that science being suppressed in your programs?
Corey: Well, it was just common knowledge that the powers of the human consciousness were being suppressed on the Earth, because our co-creative consciousness interacts with matter, because we can interact with matter.

The same people that are controlling what we learn scientifically, they're able to control us by causing us to . . . It's like the root of their magic.

They will create a catalyst and cause us to manifest something into occurring.
David: What do you think happens when we get to this idea that there is only one consciousness in the universe? How does that affect us once that becomes public?
Corey: Well, we figure out that we are all One. We're not as different and separated as we think we are.
David: Cool. All right. So in our next segment, we're going to go more into detail about the packages that Tompkins referred to only briefly in other episodes.

I really didn't understand all the semantic depth of the word “package” until I got this knowledge. And I think you're going to be really fascinated too. Let's take a look.
* * * * * *
GERMANS AND ETs
William Tompkins: They found out about extraterrestrials advising the SS in Germany and Hitler on how to build massive spacecraft carriers, how to build massive space cruisers to operate with the Reptilian Draco space navy.

7595



Now, what this turned out to be, after I got heavily into this, was this is the first time anybody in the United States knew that extraterrestrials were actually here on the planet and actually were working with Germany, had agreed, legal agreements, with Hitler.

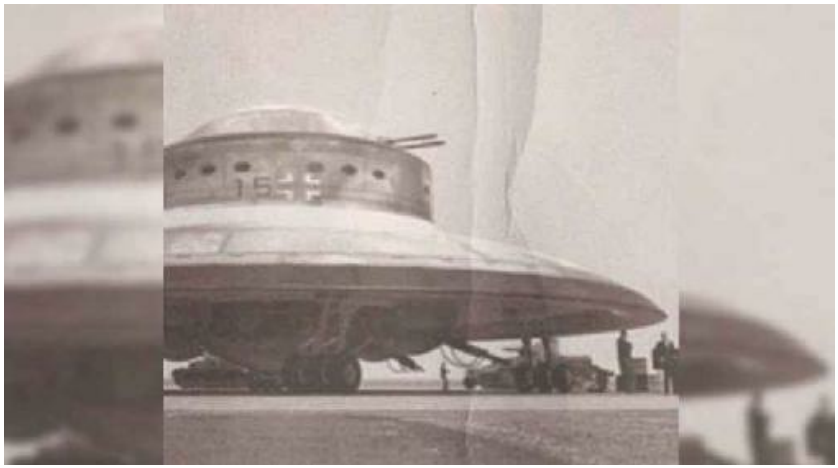
We then had these Navy spies, which we had operating there 24 hours a day from 1942 to the end of the war.

I worked in that office. The Admiral's aide would wake me up after 12 o'clock at night. He would tap me on the shoulder in the barracks.

All he would say is, “He's here.” I would get up, dress real fast. The aide would take me over to the tall building, the command center. We'd go upstairs to a small office at the top of that building, not the regular big Operation Command rooms, small office.

The Admiral would be sitting at the head of the table. The operative would be on the backside. I'm sitting next to the Admiral and one of the three captains is sitting next to me. The typist is sitting on the other side at the end of the table.

But actually what the operatives brought were perspective sketches of different research that's going on inside of laboratories.



They took photographs of the Germans next to the UFOs. Some of them were only 40 feet in diameter. Some were 250 foot in diameter.

So to try to put a perspective on this, these documents then, we put together what was called packages.

These types of packages, which are contracts to all of the Army, all of the Navy aerospace organizations' laboratories, and all of the aircraft companies, biomedical research companies, all over the United States.

Everybody got at least one package. Many people got as many as 10 or 12 packages to study. That was going on the whole length of the war.

It's a contract that they are required to implement the study. They're not being asked, “Are you interested?” No. So it's a different contract, okay? It's a requirement.

And, of course, it's way above “Top Secret”, but we don't have the documents stamped that way.

So the package then contains all this different information about, say, communications. All of it totally unreal to any possible engineering group.

So, like say, your President of Engineering at Northrop. The package that you guys got was in German. Okay? Some of it was in hieroglyphics. Nothing that you had in a package would be understandable.

You don't know the mathematics. You don't know the writing. You don't understand the photographs. You don't understand the rough sketches that the Navy operative makes.

So you're handed a box full of very poor information. You are required to take that and run with it, but you have no background. You don't have any book on any subject that you can flip through the pages to try to figure out what this even is.

You don't even know it's communications. It might be part of a propulsion system.

So this is why it was so difficult for all these people that got a package to take this and try to figure out what it is. Yes, it was a big learning curve for the Germans and the SS, but they had the vehicles.

We just had paper and a couple of parts. I mean, it was very difficult for the United States with the top people in the country to take this and then come up with, "How do I copy this? How do I make one of those? What is it?"
* * * * * *
David: So Corey, the first thing that jumped out at me in what we just saw was when he said that he was woken up at midnight, and that that was when he was taken up to have this meeting in which they're actually putting these so-called "packages" together.

Why do you think it was necessary for him to be woken up in the middle of the night to do this work that . . . I mean, wouldn't there be a secure room that he could go to during the day? Why do you think that was necessary?
Corey: Most likely it had to do for the security of the operative. They want to bring him in when there's a skeleton crew at night taking care of regular duties.

It's going to make it easier for them to sneak the person in.
David: So people don't see it. There's less espionage potential?
Corey: Right.
David: Okay. And he mentioned that some of what these people were able to get out of Nazi Germany, these – he didn't mention the number, but it was 23 embedded spies – he's said that before – all throughout World War II – included photographs of people, soldiers, I guess, standing in front of UFO-type craft that could be anywhere between 50~240, I think he said, feet in diameter.

I'm curious as to whether any of those documents survived and whether you got to see any of them while you were in the programs.
Corey: There were stuff like that all through the glass pads. But sort of like how he was describing, a lot of the information, it wasn't contiguous. It was kind of just haphazardly there.

You'd go through a lot of information that I didn't understand. There would be photos. There were many photos of Germans and craft.
David: He also mentioned hieroglyphics. And that might be something that our viewers were wondering why that would have occurred. What would the hieroglyphics be?
Corey: The hieroglyphics could be a security code, but in this case, it sounds like no one understood what they were. So they were most likely nonterrestrial script of some sort, iconography.
David: So this could be something that a spy maybe had a spy camera and took a picture of something that was on an extraterrestrial craft. And maybe he even didn't know what it was, but he's just smuggling out that intel? Something like that?
Corey: Right. Yes. Lots of bits and pieces. Back then, especially, there was no computer terminal they could go to and download things to a thumb drive and then go back to their superiors. They had to be very careful. But they were just getting little bits and pieces.

And they would have like a diagram. The diagram they would bring back; they would give to the people.

And if they didn't have anything to add verbally about what the diagram was about, they would have to reverse engineer just a diagram.
David: Are there extraterrestrials, to your knowledge, that would use some type of hieroglyphic language?

Corey: Yes. Most of the written languages are a type of glyph or looks like hieroglyphic. And one character or symbol can mean different things depending on

the context it's used [in]. And one character can mean quite a bit.

We're pretty limited in using just one character at a time.
David: Sure. He mentioned that some of the groups that were getting these packages were biomedical. Why do you think that would be?
Corey: Well, the Reptilians handed over genetics to the Germans very early on. I think . . .
David: I'm not sure what you mean by that.
Corey: Well, when supposedly DNA was discovered like '53 or '56, something like that, well it, actually, was well-known in the programs, and scientists were using genetic engineering way before we supposedly discovered it. And they were testing it on soldiers a lot of the time.
David: Do you think that part of this biomedical packaging could have been in the development of cloning technology?
Corey: Absolutely, yes. We were giving cloning technology for creating – just like out of "Star Wars" - creating a force of soldiers that could be used as cannon fodder. That if you were to lose a few thousand of them, it wasn't going to be that big of a deal.
David: Is this something that basically kind of allows you to print an organism, like you don't have to wait for it to gestate and grow into adulthood over the course of 20 years?
Corey: Well, they're growing these things also in these temporal fields.
David: Right.
Corey: And they can make it look like a little zygote grows up into a full grown human in a couple of hours.
David: Wow!
Corey: But the zygote in the field is experiencing 20 years.
David: Right. Time acceleration.
Corey: Right.
David: Another thing that I think some people, maybe like the nuts and bolts, meat and potatoes, UFO researchers like your Richard Dolan types, would maybe stammer on a little bit was when he said that the documents were not stamped "Classified".
Corey: That's common. That's how you disavow information.
David: I don't understand.
Corey: Well, let's say he got in a car wreck on his way to deliver a package, and he was unconscious. And someone happened to go through his car, found this package.

It would just be some very interesting and strange information to him.

If it was stamped "Top Secret", or any of the other indicators, then it's going to legitimize what is in the package and legitimize it as being an intelligence briefing.

So many intelligence briefings are delivered without any type of classification at all.

David: Were a lot of the documents that you saw in the glass pads not stamped "Classified"?
Corey: I rarely saw any stamps like that.
David: Really!
Corey: There would be like date stamps with signatures and different things like that, but I didn't see a whole lot of "Classified" or "Top Secret" stamped on them.
David: So then why would they stamp any documents "Classified"? Is that where more people are going to be handling them and they're worried about leaks?
Corey: Yes. You stamp things for management purposes, for people managing the documentation.

"Oh, I need to handle this with care, because it says 'Handle with care'."
David: Right. All right. So now we're going to have another segment for you. And in this case we're going to get into the dissolving of the official Nazi government as it was at the end of World War II and the interesting historical question of what exactly happened to these people who had access to extraterrestrials, highly advanced technology, and all of this knowledge that could be applied to what later became the Secret Space Program.
* * * * * *

WHERE DID THE GERMANS GO?

William Tompkins: By the end of the war, Germany had already removed massive, not underground, in mountain. This word 'underground' shouldn't be used. All over Germany and the occupied countries, Germany was building mass production of a dozen different types of extraterrestrial vehicles that were given to them by the Dracos. Okay?

So these are in mass production, not just prototypes kind of things. They've gone into mass production using slave labor with hundreds and hundreds and hundreds of in-mountain massive facilities.

80% of that had all been removed from Germany six months before the war ended. It had all been taken to Antarctica, and they were continuing the construction down there.

They had access to these with their submarines.

They built massive truck submarines, enormous submarines, to bring all this stuff down to Antarctica.

So the submarine, still submerged, goes through these tunnels. They go back through the tunnels, and they get to a lake where there's all these facilities and the cities and naval bases and towns and thousands of people.

And so Paperclip, we got the different people, and they certainly helped.

They came in and sort of took over all of the aerospace companies and all of the biomedical research companies. Okay?

And actually the Apollo vehicle was just one of the studies of the German ICBM bullets to have been used against New York and all the big cities in the United States.

They just hadn't gotten that far by the end of the war.

The German biomedical research people came over with Paperclip, too. And they set up operations in, for instance, Scripps Research, medical research, and eastern research companies.

They went and worked for them. They got jobs working for them, and then they started to come up in that organization. And then they took over the operation and were then very skillfully and diplomatically implementing many of these medical analysis, which are of extraterrestrial civilization people's history, which they have been doing this out in the galaxy for thousands, hundreds of thousands of years.

They may have only recently come here, but they've been involved here for over

6,000 years. And we're just now looking over this fence, holding on with our fingertips, and looking out there and figuring out what's going on.

It's really about where we are.
* * * * * *
David: He said that there were hundreds of production facilities. And he shied away from the use of the word 'underground'. He said 'in mountains'.

He said hundreds of facilities often involving slave labor in which these advanced Draco craft were being manufactured.

That's a shocking statement. And I'm curious as to whether you can independently corroborate that from what you heard.
Corey: I don't know about hundreds, but there were a large number of these types of cavern-type bases inside mountains in occupied Europe.

I had not been told that they were given to the Germans by the Draco. I was told that this was all a German operation, that they had dug out . . . I mean, these were dug out tunnels that they used slave labor to do. These caverns, . . . they were chiseled out.
David: One of the things that I really thought was interesting about this relates back to what war are the Nazis actually fighting? Because none of these ships actually appeared in World War II to any significant degree except for maybe the occasional sighting of Foo Fighters that American pilots were seeing in World War II.

So why do you think the Germans in the middle of World War II are so busily developing a technology that was not being implemented by them in World War II?
Corey: The Draco wanted them to build these vessels to fly alongside the Draco and do battle.
David: But where?
Corey: Out in space.
David: Okay.
Corey: They're turning over this technology, to the Germans at the time, for a purpose. And they have to operate within those guidelines.
David: “They.” Who has to operate within the guidelines?
Corey: The Germans. When they receive this technology, they now have to operate within certain guidelines dictated by the Reptilians.

And the Reptilians, they manipulate a lot of the surface stuff going on, you know, wars, and that kind of a thing. It's more of a management, planetary management, thing for them.

They're more concerned about conquest outside of our planetary sphere. And they are known for having conquered races fight alongside them.

I've mentioned the tall Nordic looking group that has the large forehead, six fingers, that are often seen in our solar system working alongside the Draco.

And it's been postulated that they are like what the Dark Fleet is to our planet – a group that either was conquered or made a deal with the Reptilians and then started fighting alongside them.
David: I can't help but be intrigued by this quote based on a class that I had in college that had a deceptively simple name, Contemporary Social Issues, but it was a class in government conspiracy.

And it explained – my professors explained to me in that class – Hitler's tanks were made by Ford Motor Company. Hitler's jets were actually made by Boeing.

And when the plants were bombed in Germany, they were repaid by these allegedly American corporations, who were allegedly fighting the Nazis, to rebuild those plants.

So it almost sounds to me as if the American industrial side was covertly building the war material for both sides of World War II, but then the Germans are involved . . . What they're really concentrating on is this other stuff that's for a war that's not even about World War II at all.
Corey: Correct. Right. It was a much more cosmic operation than the World War that was occurring on the planet.
David: So were the Draco concerned about whether the Nazis won or lost World War II?
Corey: These beings, they play the long game. The war may have served a purpose for them. Whether it was won or lost, you know, we're thinking from a human perspective. They play the long game.

Each of these things they use to set up the next thing. So it sounds to me like they were trying to get the Germans, . . . the World War II situation, . . . put the Germans in a spot to where they needed the help from the Draco.

They were starting to lose. They knew from the beginning that once the Americans got in, that it wasn't going to go well.

So the Germans, they had an agenda, but the Draco or the Reptilians had a much larger agenda that this was just one tiny little piece of.
David: So when he starts to describe the dissolution of Nazi Germany under Paperclip, which, of course, is Project Paperclip, the transfer of German scientists, what happens with this biomedical stuff he's talking about?

He's talking about them going out there, but then he clearly said what appears to be

almost like the origin of the whole pharmaceutical corporate industry is being run, secretly, by these transferred Nazis.

And so I'm curious as to what might be the agenda for Germans from World War II building a pharmaceutical corporation, which, according to what Tompkins said, is now the origin of Big Pharma in general.

Why would the Fourth Reich be controlling Big Pharma? What's the purpose?
Corey: When you have control of pharmacology, I guess, you can . . . I mean, people are so trusting of a pill.

Who knows what exactly that pill is actually doing to us? Is it helping suppress our consciousness?

I don't understand why they are doing it. I don't know the specifics. I think it's a multiple agenda-type program.
David: So do you think that part of the suppressed science might be that there are natural remedies for certain things that the pharmaceutical industry poses as if they are the only answer for – such as depression, ADD, things like this?
Corey: Absolutely. The planet provides us everything we need for medical, psychological, trauma healing. It's all in the jungles that we are burning down.

And that might be one of the main reasons we're burning them down.
David: All right. Well, that's all the time we have for in this fascinating episode. I sincerely hope that we get to the point in which this is a forensic document that is absolutely essential in the process of Full Disclosure.

And I thank you for being here on the vanguard of that social and cultural awakening with us here on Gaia.

I'm David Wilcock with Corey Goode and William Tompkins. This is “Cosmic Disclosure”, and we thank you for watching.

Antarctica The Process for Disclosure Season 7, Episode 8

Cosmic Disclosure; Antarctica: The Process for Disclosure Season 7, Episode 8

admin 21 Feb 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and we're here with Corey Goode. Corey, welcome back to the show.

Corey Goode: Thank you.

David: So in our last update we had just gotten up to the point where the dark priestess of the underworld, Marra, had materialized in your room, was acting very sarcastic, as if she had complete control of the situation, and was then portaled back by the Anshar and put in stasis, but they did give you a warning, right?

They said that others like her could show up.

Corey: They stated that there would be some of her kind coming to look for her.

David: Okay. Meaning that they might also visit you as well and you'd have to defend against them.

Corey: Right.

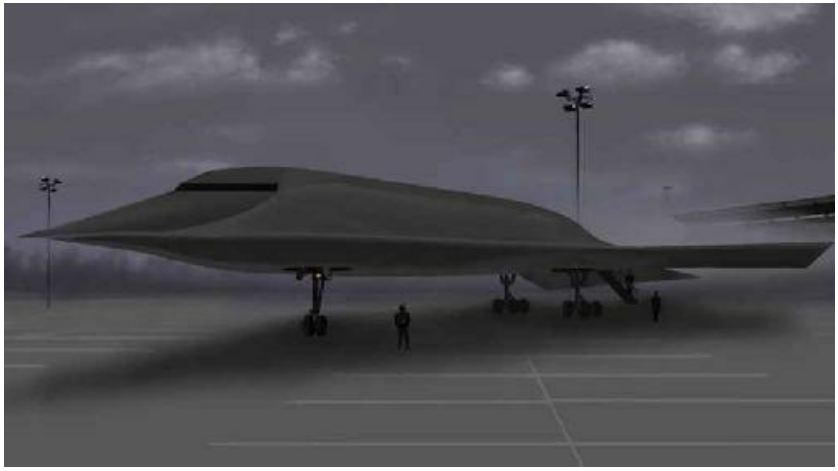
David: Let's go from what happens next.

Corey: Sure. And for the record, none of Marra's people have approached me since then.

David: Okay.

Corey: It's been fairly quiet.

Most of my experiences have now been with this MIC SSP.



I've been picked up a number of times, and in the meetings I've been giving [given] no-questions briefings by the two airmen that had assisted me up and down the stairs of the craft.

David: And that means you're not allowed to ask questions?

Corey: No questions. You just sit there and listen. They were filling me in on more information about Antarctica, what has been discovered down there, how it's being processed, how they plan on presenting it to humanity in stages . . .

David: Okay.

Corey: . . . as well as I was having meetings with who we call Sigmund – the commanding officer. And he has also been sharing interesting information with me, some of which I can't even discuss because it has to do with upcoming meetings that I'm going to have – more of a terrestrial nature.

David: Okay. So, then we've covered the thumbnail of that. Have you also been having Anshar meetings? And if so, what's the jest of those?

Corey: I have had a number of Anshar meetings. A lot of them, Ka 'Aree also preparing me for upcoming terrestrial meetings I'm going to have, letting me know that she's going to . . . for me to not be so nervous. I'm pretty nervous.

She's letting me know that she's going to help me in the process. She's going to be giving me information to communicate.

I've also been picked up one time by the Anshar and taken down to Antarctica.

David: Okay, so when we last spoke on this show, we had discussed the idea that there was interesting stuff going on down in Antarctica, but we hadn't really gotten into this big thing that you were withholding from me. You couldn't even tell me, and we couldn't talk about it on the show.

And that's where our "Endgame II" update begins. So what was the information that you were getting for months that you couldn't tell me and you couldn't talk about on this show that we're now cleared to talk about? What's going on down in Antarctica?

Corey: Well, according to Sigmund's men and Sigmund, they have made major discoveries. In 1939, the German expedition to Antarctica had discovered big slabs of rock with ancient writing on them, and they had taken a bunch of photos with them. After that they started a lot of secret expeditions.

David: So these are things that would remind us of stuff like Stonehenge or the pyramids or something like that?

Corey: A little more like Pumapunku or something, you know, that's really torn up and scattered.

David: Okay.

Corey: So after the Germans had discovered this, they started to, not really excavate for archaeological reasons, they started to clear out areas and begin to use them that they found. They found in cave areas ancient civilization artifacts, and they just moved them out and moved their military groups in and created bases.

So they weren't real interested in the archaeology in the beginning, which sounds not very much like the Nazis since they had archaeologists combing, you know, . . . combing Asia looking for certain . . .

David: Especially groups like Black Sun and Vril where it seems like they are very interested in this ancient history.

Corey: Right. It seemed mission was to hurry up and build this base. That was the primary ob . . .

David: Well, the clock was ticking and they knew that they were not going to be able to pull through on World War II.

Corey: Right. So they had been looking into it, doing some digs here and there, over the decades leading up to where they ended up working with the Americans, the industrial complex, military-industrial complex.

They were doing excavations all throughout the decades going all the way back, you

know, from the '50s and '60s.

Now, since then, in around 2002, they started bringing in actual professors and archaeologists from universities. And these are some people that we would know if you're into academics. These are people that we will know that have been going and doing digs and research in Antarctica.

And these people have been told that . . . you know, that's 14 years of research they can't tell anyone about.

And they've been promised that they are going to be brought out in front of the press and allowed to give a briefing and present the documentaries they've made and all of the information they've collected to the people.

David: And one of the stunning things was that you were being told we had to write "Endgame II" as fast as possible.

Corey: Yeah.

David: And two hours after it comes up, tabloids like the Mirror and the Sun, start repeating this same data that we were getting.

And then the next day after we put the update up, one of those same tabloids, I believe it was the Mirror, actually said that there was a team of scientists that had been in Antarctica since 2002, which you had already told me on the phone.

I hadn't remembered to put it in the article, but you had already briefed me on that.

Corey: Right.

David: And then there it is in this frickin' tabloid. And that to me was just so amazing the level of public confirmation of this stuff.

Corey: Right. I was being told that we were going to get scooped, that we had to get the information out immediately.

David: And so you were being told before that came out that, in fact, they had been there since 2002.

Corey: Yes, and what they were finding there is what blew my mind even. They were finding ancient technology that . . . They were finding spacecraft that had been cannibalized to create a new civilization, cities, and so forth.

They found areas that were laboratories for genetic experiments, which apparently genetic experiences had run amok among these Pre-Adamites.

We were finding all types of different humans around, even humans with tails, short humans, tall humans, all different types of humans, along with this original Pre-Adamite being that crash-landed here somewhere between 55~60,000 years ago.

David: What is a Pre-Adamite?

Corey: The alien group, non-terrestrial group, that once inhabited Mars and Maldek, after there were catastrophes mostly from their own doing, and war . . .

David: This was half a million years ago.

Corey: Right. Half a million years ago. Then they end up on the Moon for a period of time.

And then somehow they ended up getting chased off the Moon. There were some attacks that occurred, and after that they fled, but their craft were too damaged leave our solar system or make it to another planetary sphere.

So since they had to crash-land on Earth, they decided that they would go to this one continent that still had working Ancient Builder Race technology that was . . .

David: How old are we talking now?

Corey: The information that was given to me was 1.8 billion years old.

David: What do you mean by technology?

Corey: Well, they only had the technology that they had on these three craft with them. That's all the technology they had.

So they had to cannibalize and repurpose that technology from the spacecraft once they had crash-landed. And there were three that were extremely large. They were motherships.

And they were referred to as the Nina, the Pinta and the Santa Maria.

David: So just to be clear, it's not that there's any actual name connection, it's just that Columbus's three ships were called the Nina, the Pinta and the Santa Maria. So it's kind of like a tongue-in-cheek joke. You have three motherships that crashed on this continent.

Corey: Right. And they have several of those tongue-in-cheek references in this report.

David: And I want to point out, that this was one of the absolutely stunning details in which I start to ask Pete [Peterson] on the phone, “Do you know anything about Antarctica?”

And he independently says, “They're going to announce that they found a mothership.” He only knew about one – a mothership that was 30 miles wide, mostly circular in shape – that's been found under the ice.

Corey: Right. And so far they've only exposed the area about the size of an ocean liner. But in doing so, they've gained access to one of these ships.

And they've been going in, flying the craft around that were inside it, checking out . . .

David: Wo, wo, wo. They went inside this 30 mile-wide mothership, and they found craft inside the mothership?

Corey: Yes.

David: And they've been able to fly those craft?

Corey: Yes.

David: In the mothership or also outside?

Corey: No, outside. Out of our atmosphere even. They found a number of different types of craft that had different uses, one of which was a very ornate craft that was sort of stupa-shaped.

David: Like the Tibetan shine that we see so often.

Corey: Right. And they were referring to them as vimanas.

David: Really?

Corey: Inside the program, they were calling them vimanas. Whether they are or not, I don't know.

But these were only for transporting around the royals. They were different than the other craft. They were decorated and had gold on them and were very ornate.

David: And you said that the beings that were inside these craft were Pre-Adamites, but could you just give us a description of what that means?

Corey: Yes. They range 12~14-foot tall. They have elongated skulls. They were very spindly, thin.

David: Like Akhenaten, Nefertiti and their children, such as Meretaten.

Corey: Right. And the men had a flabby pocket on their chests – kind of a flabby chest.

And these beings, they've . . .

David: What about skin color?

Corey: The skin color was hard to tell because they had been in a huge cataclysm where they had . . . Some of the bodies, their arms were wrapped around them a couple times. There were big black spots on the skin. They had been under the ice.

They weren't preserved like you see in the movies like an iceman that you can re-animate.

And the biologists that have studied these bodies, done postmortems on them, have said that these are obviously beings that had developed in a much different environment than ours – a lower barometric pressure and gravitational field.

David: Who do you think, or who were you told, shot them down when they made it to Antarctica?

Corey: Apparently these Pre-Adamites have been in conflicts with the Reptilians for awhile. These Pre-Adamites they stated were not good guys at all, but were in some sort of a conflict with the Reptilians, and had actually kept the Reptilians in check here on the Earth during that time that they had crash-landed here.

There had been a couple other smaller catastrophes that happened where they had lost their power and the Reptilians always find an opportunity to come back in in a moment of weakness.

David: So does it appear then that wars between Pre-Adamites and Reptilians occurs almost from the beginning of when they got here?

Corey: Exactly.

David: Okay.

Corey: But after these cataclysms that occurred on Earth, the Pre-Adamites and the Reptilians sort of had a truce or a treaty. And after that point, the Reptilians pretty much controlled all of Antarctica and the Pre-Adamites had zero ability to get access to their ancient technology, their libraries. Everything was down there.

David: Right.

Corey: The people that survived the cataclysm were mostly the genetic experiments. They had created hybrids because they could not operate in our environment very well. And they created hybrids of them and the humans that were here on Earth.

So after the cataclysm, all of the main Pre-Adamites that were pure blood were down in Antarctica when it occurred.

There was a group of these Pre-Adamites, of this Pre-Adamite bloodline, that was in the Central America, South America region, and there was another completely different bloodline group – both royals – in Asia and Europe.

David: Now, when we're looking at the descendants of this original civilization, you said that they came here in three motherships. So I just want to be clear that these are the 30-foot wide motherships that we're talking about.

Corey: Thirty-mile.

David: 30-mile wide. Is that the largest type of mothership that they had?

Corey: No, they found other ships down there as well that are fairly large, but would be like sort of another . . . just a smaller vessel in a fleet.

David: So it's just that there's three big ones but there are other craft as well that were found.

Corey: Exactly.

David: I want to get into the connection to biblical scripture because one of the scriptures that's from the same time as the Book of Genesis, the Book of Enoch, was removed from the Bible but it's referred to by Jesus. It's referred to by a variety of people from that era as a very, highly revered text.

And it describes 200 fallen angels crashing to Earth, being giants, and then becoming cannibals who are actually hostile to Earth's population and were ultimately judged that they had to be wiped out in a big flood.

It sounds like we're talking about the same thing here.

So what's the connect with the Book of Enoch?

Corey: It is and the information that I received was that these Pre-Adamites had come down in a . . . they were in the grand experiment.

They shouldn't have been down here living openly amongst us, one. And two, they were now . . . You know, the other 22 genetic experiments that these genetic farmer races were conducting down here . . . this Pre-Adamite group started co-opting it and interfering with it. So they had to be dealt with.

David: And just in case somebody's jumped in and they didn't see those episodes, you described that when the protective grid [built by the Ancient Builder Race] went down 500,000 years ago after the planet [Maldek] blew up and became the Asteroid Belt, that we then have right away these so-called genetic farmer ET races that are then able to get in immediately and begin taking DNA from all over the galaxy and tinkering with Earth DNA.

Corey: Yes. And as we have been exploring more and more of the ruins down there, we've run across rooms that were . . . There were a series of corridors that were sort of arranged the same way you would see a circuit board.

And they were made out of a gold-copper alloy that had weird kind of circular carvings in them that they said were not for people to walk through. It was obviously for channeling large amounts of electricity.

Not far from there, they found the genetic labs where they found all these different types of beings in different stages of being developed.

And I did confirm that it was partially technological, partially biological, how they did these genetic experiments. They would create a zygote, or whatever, and then implant it in another . . . in a human or an animal, have it grow, and then that's how they incubated them.

They didn't have all of their technology. They were in survival mode from the moment they crash-landed.

They had to cannibalize all of their technology from inside of these craft, these big motherships. There's huge areas where stuff has just been ripped out.

David: If they're trapped on Earth, because they crash-landed, but then you say that there are craft that were found inside that can be flown around, doesn't that mean that they could have left Earth and gone anywhere else they wanted?

Corey: Well, yes, they could in the craft, but everything that they . . . all of what they had left of their society was now down here on Earth. And these craft are not long-haul vessels.

The little craft that they have are for, you know, scooting around the solar system. They were stuck here in the solar system.

And of the 22 different genetic farmer races, we have the Reptilians, and it's a hostile place for them to try to fly around. There numbers were small. They were not in a good tactical position.

David: So they could theoretically visit moons of Jupiter, moons of Saturn, places like this, but they didn't have enough duration of fuel, let's say, or whatever travel capability, to actually leave our solar system.

Corey: Correct. Right. And it was pretty hostile out in space during that time. They didn't want to risk an asset like flying it, you know, to Jupiter or whatever. They could lose that asset and they had very few assets left.

But this civilization controlled the entire planet. What little resources they had, they were able to control the planet.

After this last cataclysm occurred, none of the survivors, Pre-Adamite survivors, had access to their technology.

So we mentioned the group that was in Asia, Pre-Adamite group, and there was another one in South America, Central America, they could no longer visit or

communicate with each other. They were separated.

David: After the conventional Atlantean catastrophe we're usually thinking of.

Corey: Right. And they had always had some sort of a competition between these two bloodline groups even before the cataclysm.

This whole bloodline of these Cabal or Illuminati-type people, they trace their bloodlines through these Pre-Adamites.

David: So in the Book of Enoch, they're describing this group as the fallen angels.

Corey: Uh-huh.

David: So you're saying these Pre-Adamites with the elongated skulls, that that is the fallen angel storyline.

Corey: It is the fallen angel storyline, yes.

David: But we do have this Cabal, and this is one of the things that our insider Bruce has been saying, whether or not you believe this or not, the only thing that matters is that they do.

Corey: Exactly. Their religion is what . . . I mean that's . . . Their religion is everything. It's behind everything they do.

David: Where do we see this Pre-Adamite culture developing? Where did they hide out in the Americas after this catastrophe?

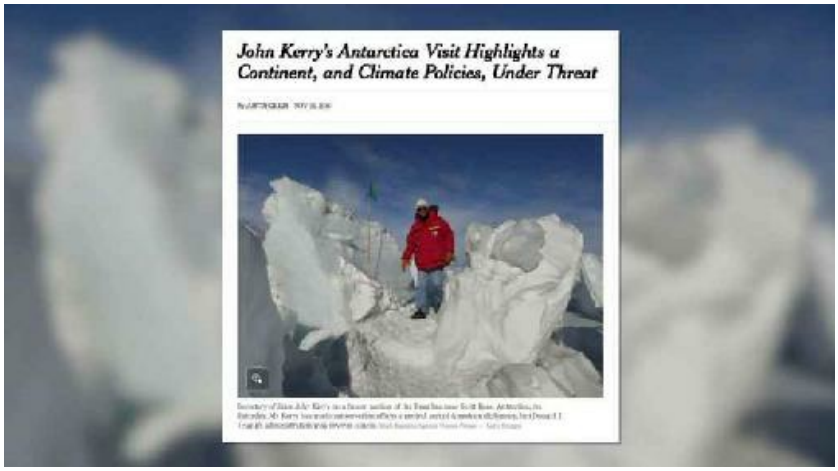
Corey: In South and Central America is where they had set up most of their enclaves. And they had been set up around other Pre-Adamite structures that were now destroyed because of the cataclysm.

There were huge earthquakes that basically liquified the ground and a lot of the buildings, massive buildings, they had just fell apart and fell and sunk into the ground.

They were running the hemisphere. They were mixing their genetics with some of the indigenous people of South and Central America. That's why we have elongated skulls beings that have a different colored skin but different genetic mix.

They were mixing their genetics with whatever group they happened to be around after the cataclysm.

And going back to the Illuminati religion being based on a lot of what this group did, the Pre-Adamites, you can now see why all of these interesting people have been making trips down to Antarctica recently, including Kerry on election day.



David: Right.

Corey: And even some of the royals have gone down there.

David: And now I'm speaking about the idea of some very interesting cargo that was found in those motherships. So could you describe what this precious cargo was that they still had on those ships?

Corey: Well, they had a number of beings that were in stasis. The information I received was that the surviving Pre-Adamites, the bloodline that originally came from another planet, had put theirselves in stasis before this cataclysm occurred about 12,800 years ago.

They have not awoken them yet. They're trying to decide what they're going to do.

Now, another interesting note, we do have these archaeologists and employees of various universities that are down there excavating and documenting all of this, but what they have done, they being the Cabal, I guess you'll say, they have used these large electromagnetic submarines that I discussed earlier to take a lot of archaeological items that they had found in other digs that they were keeping suppressed from humanity, they had them in huge warehouses.

They were taking some of these artifacts down to Antarctica and seeding them. And this one large dig that these archaeologists are going to make public.

They are also removing any body that does not look human. And a lot of the human bodies, they don't look like they were slaves. They have tunics that have gold thread weaved in the tunics. They look royal.

So they're planning on giving us a sanitized disclosure, and then over time they will disclose the Military-Industrial Complex Secret Space Program.

And after they do that, they'll say, “Oh, by the way, yeah, we've got this fairly advanced Secret Space Program, and while we've been out to other planets, we've found very similar ruins as we've found in Antarctica.

So they're going to try to trickle the information down over decades, and not immediately tell us about the ships they found and the high technology and non-humans.

David: You're not talking about necessarily something that you pick it up and it projects a holographic . . .

Corey: Out of place archaeology.

David: Okay.

Corey: They hide certain artifacts to keep the narrative alive of, you know, the Earth . . . we only have 6,000 years of civilization . . .

David: And you say that they're actually finding those genetic remains down there now.

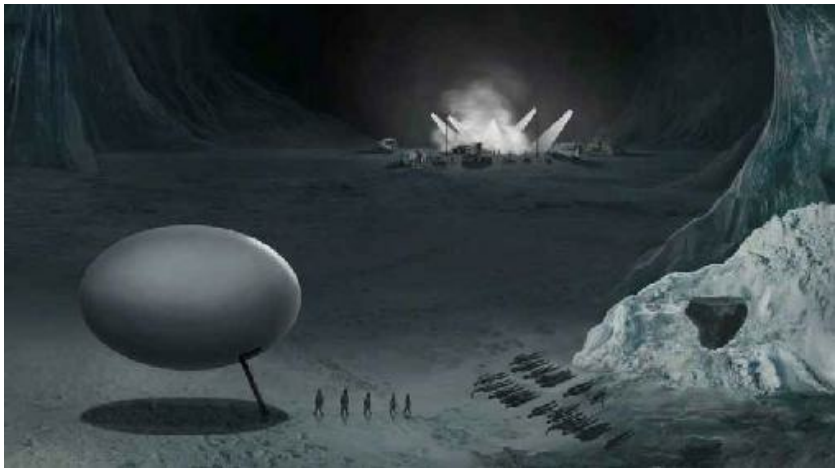
Corey: Right. And a lot of the human, I mean like us, humans, that they found under the ice . . . and this was a . . . they'd obviously been hit by a huge wave that then somehow flash froze . . .

David: An ocean wave.

Corey: An ocean wave, yes. And all of the bodies were referred . . . They jokingly, tongue-in-cheek, referred to it as the "Pompeii on Ice" because of the way all of the bodies were found, some of them huddled together. It was very similar.

David: Could you describe for us what you have personally seen? Obviously, you're getting no-question briefings, but what have you personally seen of what you're talking about?

Corey: I was taken by the Anshar, in one of their egg-shaped craft, down to Antarctica. And Gonzales was with us.



When we were taken down there, Gonzales had this like a rucksack that looked like it was military, human military.

David: Okay.

Corey: And when we went down there, he was taking out this like a core sample thing that had a handle on it and a little camera on the end with a long . . . with these long needles . . . looking things . . . that twisted on.

And he was walking up to each of these bodies, taking either a picture or video, I don't know, and then sticking the core, the needle, in the body, twisting it, pulling it out, and then dropping the core sample in these little plastic test tubes, and then putting them in the bag as he went on.

David: And you say “these bodies” do you mean Pre-Adamite giants?

Corey: Pre-Adamite bodies. There were these hybrids I personally saw in a fetal position, a very short human that had a tail [Corey spreads his hands about ten-inches apart] – you could see the folds of the skin going down on the back and then the tail kind of twisted out and it was frozen. So he was taking genetic samples.

And in the meantime, just before this, the Inner Earth groups were . . . they took us through a wall that hadn't been excavated yet. You could just see just a piece of stone sticking up out of the ice and snow.

It wasn't far at all . . . there was an excavation going on. There were tall lights on tripods pointed down into pits, and they were excavating.

They walked us right through the snow and the wall, and this room lit up.

And the room was full of scrolls, books. I mean, it was obviously a library.

The two Inner Earth beings walked up to one particular area like they knew exactly where they were going, opened up this collapsible box basically, and then started grabbing these metallic scrolls and putting them in the box. They were taking them. And these metallic scrolls were like laser etched with symbols.

The stone was . . .

David: Are you saying that the scroll was metallic or that it was a metallic container for a paper-type scroll?

Corey: They were metallic sheets of metal rolled up.

David: Oh, sheets of metal rolled up.

Corey: And it crinkled as they were picking it up. It sounded similar to tin.

David: Uh.

Corey: And on them, you could see there were like laser-etched symbols, and they were removing those before they were located by the people doing the excavation.

I still don't know what was on the scrolls or the significance of them. But when we left, they took them with them onto the craft.

David: Thank you, Corey, and I want to thank you out there for watching us, supporting us here at Gaia and making sure that we are on a path towards Full Disclosure. Thanks for watching

Corroborating the Evidence Season 7, Episode 9

Cosmic Disclosure; Corroborating the Evidence with Michael Salla Season 7, Episode 9

28 Feb 2017

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, and our special guest this week is Dr. Michael Salla from the Exopolitics Institute.

We're going to have a lot of fun with this. We're going to get into William Tompkins and some of the amazing research that Michael Salla has done in validating even further some of the claims that might seem pretty outrageous that we've been discussing on this show.

So, Corey, welcome back.
Corey Goode: Thank you.
David: Dr. Salla, welcome to the show.
Dr. Michael Salla: Thank you, David.
David: Your site is called “Exopolitics”, so it sounds kind of self-explanatory, but I'd like you to just start by defining what you consider exopolitics to be.

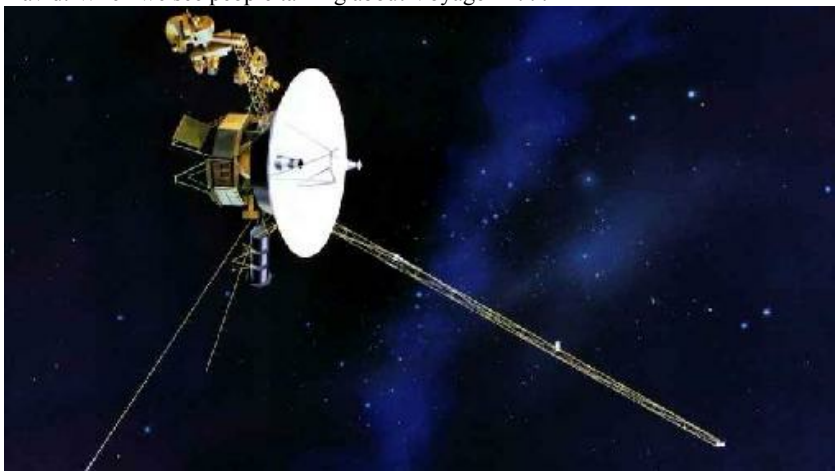
Michael: Oh, sure. Well, I was teaching international politics at American University in Washington, D.C. when I first came across this information about extraterrestrial life and repressed technologies.

And the more I looked into this and did my due diligence, I found out that this was

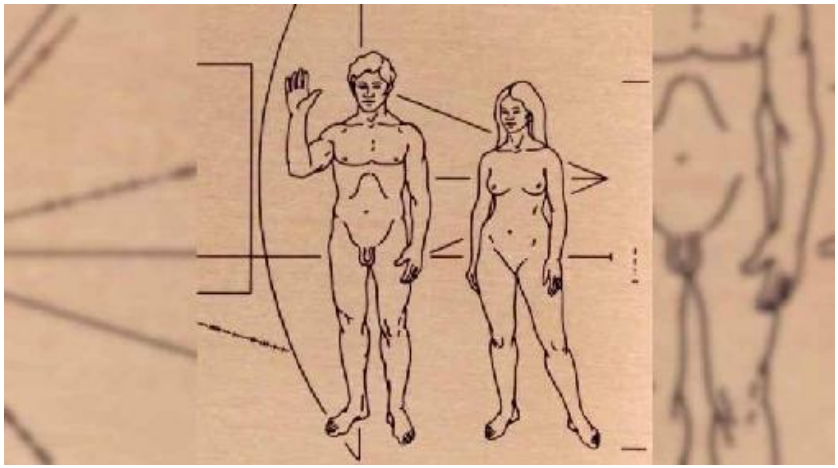
very real.

And so I looked at, well, what is the appropriate term to describe this? And being in international politics, the obvious one was something to do with politics, and, you know, because we have exobiology, exoplanetology, so the logical thing was exopolitics.

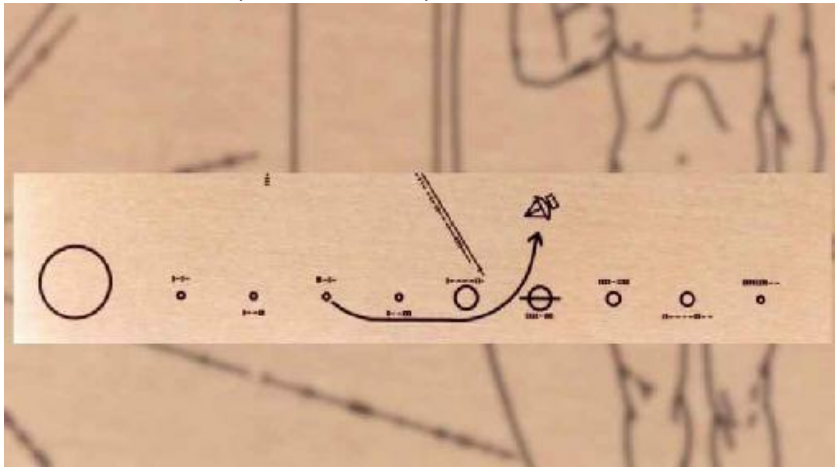
So I began to do research on it since that time.
David: When we see people talking about Voyager 2 . . .



. . . and the little plaque that is etched in on that with the image of the two humans . . .



. . . and then here we are, we're located here, . . .



. . . has your research concluded that that might be unnecessary or redundant? Are we really alone, or have we already been contacted?
Michael: Well, definitely, when you look at all of the whistleblower testimonies that have come forward over the years and all the witnesses, people who have had experiences, it's not a question of, well, one day, will we discover extraterrestrial life or will they discover us?

We've been discovered a long time ago and that they're actually visiting and interacting with us, and it's all about just learning about who's interacting with who,

what government agencies, what military departments are involved in this and the cover-up, and the extent of the cooperation.

That's the thing that most interested me, because I was always wanting to know – well, what is it that's driving international politics? And so the more we know about the agreements that exist, the more we know about what really is behind international politics.
David: And when we find out that all these decisions are being made without any voting, without any public approval, how have you positioned yourself in this dialogue with exopolitics?
Michael: Well, as a political scientist, I mean, what we really try to do is, you not so much kind of make value judgments about what policies are appropriate or not, but we just try to bring transparency into the whole issue.

Because the more things become transparent, the better decisions you can make about what should be done or what shouldn't be done. And then accountability. I mean, that's the key thing.

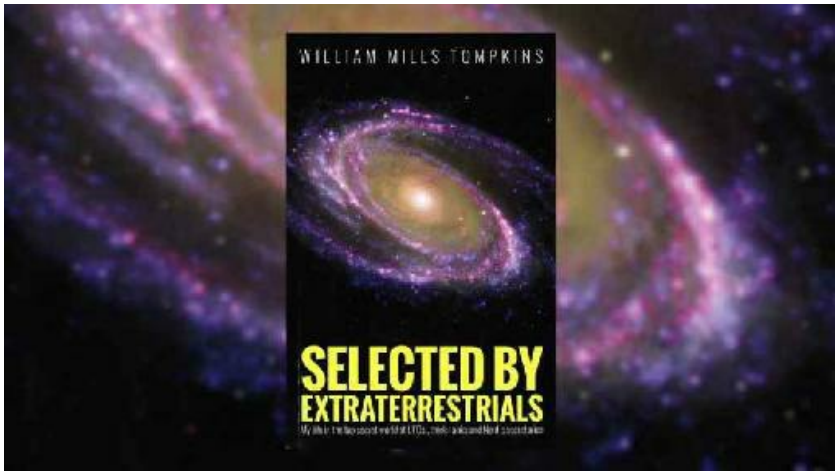
For political scientists, you're always looking at – well, how can we make people accountable? How can we make politicians, policy makers accountable for their actions?

And to make it possible for them to become accountable, you need to have transparency. So when we look at this whole extraterrestrial phenomenon, there's very little transparency.

So that means that people are doing things, making decisions that affect all of us without any knowledge on the side of the public or politicians, representatives that are supposed to be there kind of regulating this in some way, and zero accountability.

So to me, that's really the goal – to kind of bring transparency, to bring light to all of this phenomenon.
Corey: The lack of transparency, yes, being the problem, that's where the whistleblowers come in. Correct? And you've had access to William Tompkins for some time.
Michael: Right. Well, Bill Tompkins was very interesting because, when I first heard of him at the end of 2015, early 2016, I listened to some audio interviews about him, and he had incredible testimony.

And thankfully, I knew the key person that was involved in his book that actually came out in public in December of 2015 that is, “Selected by Extraterrestrials”.



And Dr. Robert Wood was a colleague, and so I found him, and I said, “Well, how come you're working with this man, Bill Tompkins, who has this incredible story?”

And Bob told me all about Bill Tompkins's history.
Corey: Yeah. Bob is known as a nuts and bolts guy.
Michael: Exactly.
Corey: Yeah.
Michael: And I've worked with Bob in the past in terms of validating certain documents, especially concerning the Kennedy assassination.

So to my mind, Bob is really one of the leading experts when it comes to document verification, especially when it comes to these secret projects.

So here he is saying that Bill Tompkins is the real deal, that he did work in this really highly secretive program that was run by the Navy, and then he worked in Douglas Aircraft Company for over a decade, and that his information was legit. So I then followed up.

I went down to actually interview Bill Tompkins in January of 2016 and did about 10 hours of video interviewing and really tried to get to the bottom of his story.

And then I went about the process of checking it out. Well, how valid is it, and do the people he named in his story really exist? Because what Bob would have done was he was able to validate the part of Bill Tompkins's story in terms of him working at Douglas Aircraft Company for 12 years, from 1950 to 1963.

But what about his time at the Naval Air Station in San Diego? Did that check you? Do the people he named – are they real people?

And the one that was the most problematic was the admiral that was supposedly running this program, which, in the book itself, he actually misspelled the name of the admiral. So we had no way of checking out, well, did this guy really exist?
David: So Michael, when we're hearing videos with Tompkins, he says “Rick Obatta”. And it sounds like the guy's name is Rick. So what was the secret that cracked this case, because I thought it was Rick, too?
Michael: Well, in the book, he refers to him as “Rick Obatta”.
David: Right.
Michael: And so we couldn't find any admiral called “Rick Obatta”, and so there was a breakthrough then eventually.

What happened was that it turned out that his name was “Rico Botta, B-O-T-T-A.
David: Right.
Michael: So once we found his real name, then we were able to kind of track down some biography on him and found out that, yes, this guy really did work for the Navy, that he was an admiral, and that he was in charge of the Naval Air Station in San Diego.

But what was really . . . I found fascinating was that, as we were trying to confirm whether or not this admiral existed and we found the name Rico Botta, but it was like, well, what do we know of him? There was nothing on the Internet about him.

So then just at that same time, in March of 2016, magically, on this Navy Aviator's website called “The Golden Eagles”, there was a one-page biography of Admiral Rico Botta. It just appeared like that – out of nowhere.

It was almost like we were being helped . . .
Corey: Right.
Michael: . . . by people inside of the Navy that wanted to give us some assistance.
Corey: Exactly. Right.
Michael: Because prior to March of 2016, there was absolutely nothing on the Internet about Rico Botta.
Corey: That's very possible since Tompkins is a sanctioned disclosure.
Michael: Well, that's right, that Tompkins is being helped. And to me, that was a really powerful confirmation that there are people in the Navy that want his story to come out.

Because once that one-page biography came out, then we were able to do due diligence in finding out more about Rico Botta, about his history, what Navy departments he was involved in after the Naval Air Station in San Diego.

So that was a big breakthrough because really confirming Rico Botta was the key in that part of Tompkins's story where he worked at the Naval Air Station in San Diego.
David: Well, Michael, I'd like to back up a little bit because, as a prominent UFO researcher, you are really one of the only people in the field who has broken ranks and stepped up and actually believed Corey's story to be credible.

Now, what was it for you that made you feel that Corey was credible?
Michael: Right. Well, one of the things that really kind of helped me was to see how his testimony was so consistent and how his body language was so consistent.

And when I first began to kind of communicate with Corey, back in – what was it – 2016, early 2016 – no, 2015.
David: Yeah.
Corey: That's right. '15.
Michael: Yeah. Early 2015. We did some email interviews. I think we did about a dozen or so like that.
Corey: That's right.
Michael: And so Corey was responding to questions, and so I would read his responses to those questions and put those out for the public so people could read what Corey was saying.

And so that was really very helpful because then we could see how his questions in these videos matched the questions that he had written down.

Because when you respond in writing, you know, you're accessing a certain part of the brain.
Corey: Right.
Michael: Your left brain. And when you're responding verbally in an interview, then you're using the right side of the brain. But the things matched. The testimony was the same.

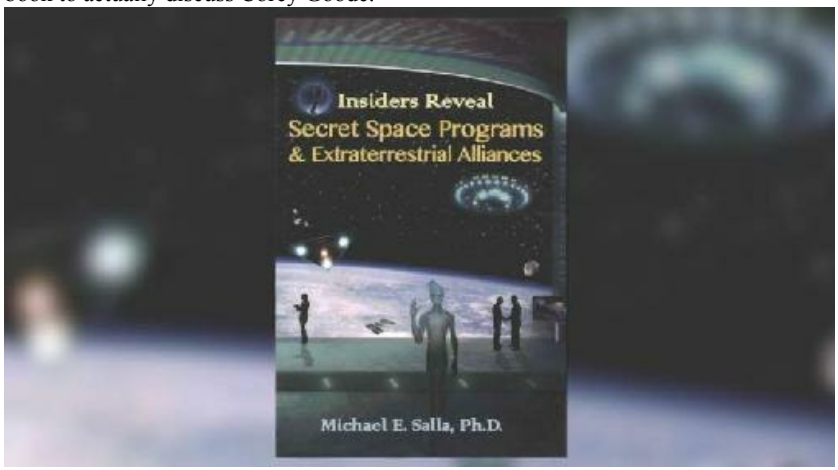
And then there were a lot of things circumstantially that matched, and the one that really kind of was very important for me was when Corey was talking about his trip to Mars in mid-2015 where he said that he went there with Gonzales to investigate slave labor abuses on Mars and described going to a colony where there was this kind of brutal manager of this facility, and he really ran it like a dictatorship.

Well, at the very same time that Corey came out with this information, the British Interplanetary Society organized this symposium in London where they had 30 top aerospace engineers and think tank people as well as some government representatives there discussing the very problem of how to remove a Mars' corporate dictator, that Mars would have a base in the future where there would be a dictator.

And it's like how do you remove this person?
Corey: Yeah, it was within days of the information coming out on “Cosmic Disclosure”.
Michael: Exactly. Exactly. And then there was a lot of other kind of congruities in terms of President Obama signing a bill that would actually make space mining immune from any kind of regulatory oversight, which meant that any abuses that were happening in space in terms of corporations abusing slave labor that were doing space mining, that all of that was free from any kind of government regulatory frameworks up until 2022.

So this all began in that same time that Corey was coming out with this information.

So there were a number of other things like that.
David: One of the other noteworthy things I think about here is that you wrote the first book to actually discuss Corey Goode.



Michael: The book title is “Insiders Reveal Secret Space Programs & Extraterrestrial Alliances”. And what I did in there was just used a lot of Corey's testimony that he had shared through these email interviews.

And so I used a lot of that material and just kind of did due diligence on it in the book in terms of – well, how does this match with historic documents? I mean, one of the key things that Corey said was that Nazi Germany had developed a secret space program and that this was operating out of Nazi Germany and out of Antarctica.

And so I looked into, well, what evidence is there that the Nazis actually did develop

a space program? And so there were historic documents that kind of supported that.

One was a set of documents out of fascist Italy from 1933 that showed that Benito Mussolini set up a top secret think tank to study a retrieved flying saucer – that the Italians in 1933 had discovered a flying saucer and that they had set up a top secret group to study it under Guglielmo Marconi. He was the head of it.

And so that showed that Italy, as early as 1933, was studying this phenomenon. And then soon after Italy entered into the agreement with Germany, and they shared all of that technology, all of their findings.

So that kind of supported what Corey was saying.
Corey: And then you fast forward to William Tompkins's book coming out that is saying very much the same thing, and Tompkins had been writing it throughout the whole time we were doing this show.
Michael: Exactly. Actually, what happened was that Bob Wood got a copy of my book and shared it with Bill Tompkins . . .
Corey: That's right.
Michael: . . . and said, “This is very similar to what you're saying” because my book came out in September of 2015, and Bill Tompkin's book came out in December of 2015.
Corey: Yeah.
Michael: And so the book where I'm basically examining your testimony and the history of this Secret Space Program in terms of the role of Nazi Germany with two separate programs – one in Germany and one in Antarctica – that this was something that was in the book.

And Bill Tompkins reads it, and he's saying, “Oh, my God! How did this information come out? I thought I was the only one that knew about this, and I was going to break it.”
Corey: Right.
Michael: But he was shocked that someone actually was sharing that before. So that was, to me, a very important corroboration from what you had said.
Corey: And I know you've done a lot of research into Tompkins since then. And through all the research that you've done, how many correlations have you seen? Has it been consistent?
Michael: Oh, a lot of correlations. I mean, just from very beginning in terms of how it all began, and then the role of the Navy, the US Navy, in putting together their own program to study what the Germans were doing, and then to begin the process of kind of reverse engineering and designing their own ships.

And so that was very important corroboration that Tompkins had to share.
Corey: Absolutely.
David: So, Corey, when he mentioned fascist Italy finding a UFO, I've never heard you on this show, or with any conversation, talk about what was the role of fascist Italy in this whole German Secret Space Program.

Do you have any personal knowledge of that?
Corey: Yes. Yes. A lot of the underground or mountainous types of bases that they had, they had in Italy.
David: Oh, really?
Corey: They were allowed areas in Italy where they could develop technology, and parts of it was developed in Italy.
Michael: And what I found very interesting that correlated between what Corey had to say and what Bill Tompkins had to say was that Marconi took a lot of that information to South America to start up a program down there – a kind of more private program – and Bill Tompkins said the same thing, that Marconi did start up something down in South America and that the Italians actually had a very big space program.

And so that is also one of the things that I found correlating between Bill and Corey.
David: So Michael, did you get into the research of Die Glocke, the German Bell craft and the anti-gravity research that they were doing? Did you cover that in the book?
Michael: I did. That was kind of like the effort by the Nazis to weaponize these kind of technologies during the war.
David: Yeah.
Michael: So that was part of that kind of program that was run by the Nazi SS and under Kammler, and that's where you have witnesses who have talked about the Nazi Bell and how that was something that they unsuccessfully attempted to weaponize, but that in Antarctica, you had a lot of the top Nazi scientists going.

And that's where they really developed their most ambitious and, ultimately, the most effective space program.
Corey: Right. And the non-kinetic weapons to go along with them.
Michael: Right.
Corey: The energy-based weapons.
Michael: Exactly.
David: So did you ever get into Project Highjump, because that's one of the most remarkable things that Corey's testimony has shared with us is this idea of a planned invasion of Antarctica after World War II to try to defeat whatever Nazi base was down there?

Did that check out when you did the research?

Michael: Yeah, exactly. That was a very important part of Corey's testimony, and it's something I've been interested in for a few years. There's been a lot of rumors about Operation Highjump, and there's a lot of information out there about Operation Highjump in terms of exactly what it was that Admiral Byrd's taskforce encountered down there.

But what I found very helpful from Bill Tompkins's testimony was that he said that there was some context to Operation Highjump, that it wasn't just this battle where the Navy kind of tried to take out the Nazi base in '46, '47, that as a prelude that Admiral Byrd went down to Antarctica in '45, '46 to negotiate with the Nazis down there.

So there was an attempt to first negotiate with the Nazis, and that that negotiation was not successful, and that the British had sent their special operations teams down there in that summer of '45, '46, which is immediately after the Second World War, after

Japan's surrender in August.

So that meant that after Japan's surrender in August, four months later, you have the British and the Americans both sending groups down there to Antarctica to find the Germans, to find any bases, and to negotiate, because they had negotiated with the Nazi SS at the end of the war, so they thought they could do the same with the Nazis in Antarctica, but that failed.

And so according to Bill Tompkins, when Admiral Byrd went back to Washington D.C. and said, "Well, the negotiations have failed," that's when the Navy decided that, at the next opportunity, which would be the southern hemisphere's summer of 1946, '47, they would launch Taskforce 68, which was Operation Highjump.

And, of course, that gave the Germans time to finish the development of directed energy weapons so that they could outfit their flying saucers down there so that, when the Navy showed up, now they had these flying saucers that were very effective in fighting against the Navy's best fighter planes and took out their destroyers and other ships as well.
Corey: Did Tompkins, in that testimony, happen to mention high-level meetings between the US and the Nazi breakaway faction in Argentina, or did he mention Antarctica?
Michael: He said, in '45, '46, that Admiral Byrd went down to Antarctica for conducting those specific negotiations.
Corey: Because I did read about high-level meetings that occurred in Argentina.
Michael: Okay.
David: During the same time frame?
Corey: Right.
Michael: Right. Okay. Well, that would be very consistent, I think, because there were many kind of stories about Hitler and Kammler and Bormann all going down to South America, setting up what would be the kind of political power, or the political center, of the Fourth Reich.
Corey: And they're also the gatekeepers to what's going on in Antarctica.
Michael: Right. I think that's . . . Yes, so there would've been negotiations there or meetings there, but Byrd apparently just went down to Antarctica straight to conduct these negotiations, according to Bill Tompkins.
David: Now, you may remember – I'm sure you do – the insider that Rich Dolan interviewed who said that there was a plan at one point to invade Area 51 from the President of the United States.

So I think it might be good for you to share what you know about that with us right now as a context to Highjump.
Corey: I think a president actually made a threat to invade with the army – with the First Army Division or something.

Michael: Yes, that's right. That was a whistleblower that Linda Moulton Howe first interviewed about 12 years ago. He used the pseudonym Kewper, and he said that he was part of a CIA team that was commanded by President Eisenhower to go to Area 51, to the S4 facility, and to find out what was going on down there, because Eisenhower felt that he was out of the loop – that the agreements that had been reached with the Nazis, with extraterrestrials, Eisenhower assumed that as the President, as the Commander-in-Chief, that there would be a chain of command, because that's what he was used to.
David: Yeah.
Michael: But what became clear was that the people running things in Area 51, they had a different vision of how these projects would be run and that infuriated Eisenhower because he didn't have a problem with secrecy – keeping things secret – but he had a big problem with going outside of the chain of command.

So when he found out that the people running the projects out of S4 and Area 51, what he decided to do was that he said that he would basically use the First Army that was stationed in Denver, Colorado, to invade Area 51 if they didn't basically report – give him an adequate report, a full report – on what was happening down there.

So Kewper, this whistleblower, was part of that team that went down to the S4 facility. And he described what he saw at the facility, and he said that he saw nine craft. Out of those nine craft, he said four were from Nazi Germany.

Two of those four were the very first Vril craft that had been developed by Maria Orsic and the Vril Society, . . .
David: Wow!
Michael: . . . and the other two were Haunebu that had been developed by the Nazi SS for the weaponization program, and that the other five were extraterrestrial crafts.

So Kewper's testimony is important because it gives another independent source of evidence that there were these discoveries of Nazi programs involving flying saucers and that the American military had retrieved some of these.

He wanted to kind of clear his chest on this issue.
David: Yeah.
Michael: He really wanted to have a clear conscience that he had told the truth about some really important historical events that he was associated with, and he just didn't want to take that information to the grave.

So he's just one of many whistleblowers who have that conscience that this is information that the public needs to know, and they're willing to put themselves at great risk in sharing that.
David: So, Corey, we've got a situation here where you have Nazis in Antarctica. An

invasion is attempted. It fails.

Then you have Eisenhower trying to invade Area 51. He fails. He warns about the military-industrial complex.

How do you . . . How does the Alliance see disclosure taking place? Because when people find out the kind of stuff, the exopolitic stuff, that Salla's talking about, they're going to be very upset.

There's totally non-governmental things going on for 70 years.
Corey: Right. Well, the Alliance perspective is let's just rip the Band-Aid off, start the healing.

What they're coming up against – this is the SSP Alliance – the Earth-based Alliance of all these various countries, some of them in the BRICS Alliance, have come together and started negotiating with what we're calling "the Cabal".

And the Alliance, they have plenty to lose in these disclosures as well, but what they've decided to do is do a very protracted disclosure over decades. And that's just not good enough.

And what's really occurring within the Alliance – the SSP Alliance – is that they're trying to grease the wheels so that releasing information about Antarctica before the Cabal releases their sanitized version.

This is all an attempt to make this sanitized disclosure impossible.
David: Well, Michael, you said you wanted transparency, and some of transparency is going to include people getting really mad and becoming violent.

So how do you see this transparency as a key to solving our exopolitical issues?
Michael: Well, because with the transparency, then you can have accountability. You can have congressional inquiries. You can have inspector generals of various departments.

You can have senior military officers kind of finding out what their subordinates have been doing, because a lot of this has happened outside of the chain of command – that what happened to Eisenhower wasn't an isolated incident, that it goes on today.

So you actually have, for example, four-star admirals not knowing what a captain might be doing who's involved in one of these programs. Similarly for the Air Force and the Army.

So that's the key is with transparency then you have accountability. And I think that's

the process, and that's really what I hope to be able to achieve in doing this research.
David: How do you feel the fear factor can be addressed? Like have you encountered a lot of fear from your audience as you disclose this and try to reach transparency?

That's what we're always warned about, right, is people are going to be so afraid that they can't handle the truth.
Michael: Well, the fear I've run into is more from the whistleblowers, the witnesses, that are fearful about sharing this. What is going to be happening to them?

I remember talking very vividly with Clifford Stone and giving him an interview, doing an interview with him, about 10 years ago. And he was telling me, “Look. After I finish talking to you, they're going to come in here and beat me up, but I don't care. I don't care. I can handle it.”

Because he knew that this was what was going on, that that was the price for revealing the truth.
David: Wow!
Michael: As a researcher, or for in the part of the audience, I haven't felt that much fear in terms of revealing this. It's really the whistleblowers, the primary witnesses, that are really fearful for their safety and their families.
Corey: Yeah, I'd have to agree.
David: Do you think that this fear card is something that is being pulled as an excuse to maintain secrecy?
Corey: No.
David: Or do you think that people will actually be afraid when it comes out?
Corey: They genuinely believe that there will be a complete breakdown of society. They genuinely believe this. They've tested it. They've brought in scientists and soldiers, and unbeknownst to them, they expose them to an alien or to this information and then read their response.

After . . . You know, they have personality profiles on people that work for them, so they have different personality types.

They think this one will react that way if they have a Christian background, which many in the military did.

So, no, they genuinely believe that if there was a Full Disclosure, they believe that it's irresponsible to do because it will cause deaths, mayhem, rioting in the streets. And they're right. It will. That's part of the process.

But if we keep kicking the can down the road, the reaction's just going to be worse.
David: If the beings that you're working with are benevolent, and they want Full Disclosure, what is their rationale for how we will respond as a people to Full

Disclosure, and why they're pushing for it?
Corey: Basically, the most important thing to these higher-density beings is the development of consciousness.

Us not having transparency is holding back this consciousness renaissance that we're primed for.

So the minute we get this information, yes, it's going to be a bitter pill. But in the long run, it's going to have a bigger payoff for us in the development of our joint co-creative consciousness.
David: Well, it's a very good message, and I hope you've enjoyed this. I know I have. This is “Cosmic Disclosure”. I'm David Wilcock here with our insider, Corey Goode, and our special guest, Dr. Michael Salla of the Exopolitics Institute. We thank you for watching.

Disclosure and Underground War Season 7 Episod 10

Cosmic Disclosure; Disclosure and the Secret Underground War

Season 7, Episode 10

06 Mar 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we are going to get into the social and global implications of this virtually civilization-defining disclosure that apparently is coming our way after all this time.

It finally looks like we're going to get at least some of the truth, and the effect is almost unimaginable.

So, Corey, welcome back to the show.

Corey Goode: Thank you.

David: What the heck is going on with Senator John Kerry going to Antarctica on Election Day? What the heck was going on there? Why was he down there?

Corey: A lot of big names are going down there. Apparently, these people are being given tours of a city that was discovered under the ice a couple of miles, as well as technology, including spacecraft.

David: I heard from [Pete] Peterson independently that there are a bunch of names that have gone down there that are not public, and I'm wondering if you also heard that.

Corey: Yes.

David: So this is basically like the big tour that everybody's getting – everybody who's on a sufficient level of “need to know” or importance to this group is going down there.

Corey: Yes.

David: What kind of stuff is happening when they go down there? What are they seeing?

Corey: I don't know exactly what each individual is being shown, but I know that some of them have been shown these cities that they've excavated under the ice.

They've also been given a ride in spacecraft that have been recovered under the ice.

David: Actual recovered spacecraft?

Corey: Right.

David: Well, that's very interesting because that ties in with something that I heard from Pete Peterson regarding Buzz Aldrin.

So why do you think he might wear that shirt, where it's describing traveling to Mars as an astronaut, while he's going down to Antarctica?

Corey: Well, maybe he's looking for a climate change on Mars. You know, that is a strange thing, especially now that we know that the ruins under the ice originate from beings that came from Mars.

David: And you said before that we can trace that all the way back. These people have a full unbroken historical lineage to Mars.

Corey: Right. They trace their lineage back extremely far and off of this planet.

David: So the interesting thing here is, based on what you just said, Pete's independent testimony to me when I called him and talked to him about what you were saying corroborated so many things, but then there was other stuff that you hadn't said.

And one of them was Buzz Aldrin reached a 200,000-mile altitude and said the impolite equivalent of “holy crap” seven times as he accelerated to that altitude because it was so fast.

Then he said that Buzz was taken around the back side of the Moon, got to see all of the Manhattan-type of lights that are there, all the structures, and then passed by a base that was over Antarctica as they came back in, and they gave it what he called a wing wave.

And that this apparently was what . . . The whole experience was so shocking to him that this is what caused him to have a heart attack.

I'm wondering if – since Pete said that so many of the assets of the space program that he's aware of are now over Antarctica – does this whole situation sound plausible to you that this could have happened?

Corey: It does sound plausible. I don't know the positions of the different MIC-SSP assets.

David: But this idea that the acceleration is so quick that somebody who is used to rocket-based travel might be really shocked. Does that make sense?

Corey: Oh, yes. And they most likely were on their lowest setting because normally it's so quick you don't . . . It's just kind of a blur.

David: So we're also hearing from Pete that there is a steam excavation method. You had mentioned steam excavation. But then Pete specifically said that they take large bags of water into these existing holes that are dug down in the ice. They drop the bag, and as the bag is about to hit where the ice is, they then hit it with these very high-powered microwave beams, and it all turns to steam and then, whoosh, it melts more of the ice.

Corey: That's how they open up a tunnel down . . . or open up a corridor down to an area. The rest, they do by hand with hoses with pressurized steam. They couldn't do

that around the artifacts or it would destroy it.

A lot of what is being discovered under the ice are . . . They are finding palm trees still in the ground. They're finding all sorts of prehistoric animals under the ice still preserved.

David: Wow!

Corey: And they've been bringing those back to the United States and Europe for study.

David: So you also mentioned to me in briefings that you got that this is a disclosure that is planned for a specific purpose at a specific time.

And that's a very important subject. And I think it's going to become the meat of this episode.

So we've been talking about the idea that this is going to come out, but we haven't gotten really into why or when or what is the agenda. So could you give us the overview?

I know some of what you got were no-questions briefings and things like this. What is the overview of – why is all this being done, and how is it going to be used?

Corey: Well, the plan that the Cabal, and I guess the Earth Alliance, have agreed to is that they are going to release bits and pieces of the Antarctic information once there is a catalyzing event – that being they start arresting the Cabal or they start setting up tribunals.

David: 'They' meaning the Alliance?

Corey: The Alliance.

David: Because people might think it's extraterrestrials if they don't know any better.

Corey: No, the Alliance.

David: Okay.

Corey: But the Alliance is also kind of working with members of the Cabal. They're trying to come together to find a way to 'responsibly' disclose information.

David: So what we have is a situation in which the Alliance does want disclosure to

occur, but they feel that if we were to get all of this at once, it would overwhelm us? And so they're picking something maybe more local, more associated with less of a leap in belief systems than UFOs and aliens?

Corey: Right. What they plan on disclosing first is that maybe, “We found a bunch of prehistoric animals. It's amazing.” Then, “Oh, we found remnants of a civilization,” and then only report that it was a human civilization that was very ancient.

That alone is going to blow the minds of most people.

They're going to unroll over decades . . . is what they plan.

Then they plan on announcing that we have a secret space program, and that, “By the way, the secret space program have found similar ruins around the Solar System.”

Once that occurs, then they're going to start getting into the nonterrestrial aspect of the discoveries in Antarctica.

David: So only after they've done the SSP and other ruins like this in the solar system will they then talk about what you said they are calling the Nina, the Pinta and the Santa Maria – these three 30-mile-wide motherships they found under 3½ miles of ice?

Corey: Correct.

David: So that's pretty late in the game.

Corey: Yes. And the SSP Alliance does not want it to unfold this slowly. They want to rip the Band-Aid off and have a Full Disclosure immediately to everyone.

David: What do you personally think is the right move?

Corey: I think that we need to just get it over with and have a Full Disclosure. I understand that it's going to cost lives. It's going to cost people their sanity in some cases, but we've got to get on with it.

If you do it in a controlled way, the key word is 'control'. There's always a way for someone to come in and corrupt the process.

David: In order to keep going on this thread, I want to just really clarify something else, which is part of what you just described – the tribunals. We only really briefly touched on that, but I think that's really important.

Is there a plan for the Cabal to be brought up on public charges? And will there be some sort of remediation of our financial system and the damages they've done to us in that process?

Corey: What I was told is that they were going to attempt to do tribunals in secret, but that was not going to be allowed to happen. It would be leaked immediately.

David: So if it's going to be something that can't be done in secret, that's going to be leaked, what have you been told? Or what do you think this is going to end up turning into?

Are we going to see this on all the major cable news channels?

Corey: Yes. Yes.

David: There will be big broadcasts, which we did have with Nuremberg after World War II.

Corey: Right. They want it to be televised, even though very disturbing things are going to be covered.

But the plan is to do tribunals in secret, because the tribunals are not only going to be on the Cabal, they're going to be on certain members of the Earth Alliance as well.

David: So do you think that there are going to be some people who – perhaps major politicians – will be having public tribunals and others who are so deeply involved in the off-the-books side of this stuff that they will not be televised?

Corey: It just depends on how things break after the tribunals are leaked. It's going to be very dynamic.

David: Okay. Now, we're also dealing with crimes against humanity that are staggering in scope. And it seems rather hard to believe that we could have tribunals in which such staggering and multiplicitous crimes are being pinned on to multiple individuals.

It seems like even the minimum of due process that someone would be owed, in terms of the right to a fair trial, and then the number of people who might be implicated, that we could be looking at something that could take years to unfold.

Corey: Oh, yeah.

David: Do you have any sense of who they might try to do first in this kind of a

process? Who would they go after first?

Would they go after major political figures, people that are the most recognizable, people who are the highest level criminals?

Corey: You can't go after a piece at a time. You have to decapitate them, and you have to bring them all shoulder to shoulder in front of the magistrate at once. You can't do it in bits and pieces, or it'll just fall apart.

David: Do you think that there might be some sort of mass arrest that precedes this in which all of the people who will be on trial are then brought into some sort of holding facility where they're kept under guard and could not easily escape, if at all?

Corey: It's possible. A good number of them are already under house arrest.

David: But what does house arrest mean for those who don't already know that term?

Corey: They get to sit in their mansions, sipping tea, with armed guards outside not allowing them to leave.

David: Now, you've also said before that there's been a lot of these Cabal folks that if they feel the heat is on, they're going to try to flee to maybe Argentina, South America or Antarctica, and that there may be a sudden number of people who all want to resign at the same time or something like that.

Will they be able to evade justice?

Corey: I've received reports of bases that were controlled by FEMA . . . that they were supposed to turn the bases over after this election. They were ordered to turn them over, and they refused.

So they sent in Marines. The Marines cut through the concrete, the rebar, the reinforced steel, and gave everyone in the complex one chance to surrender.

If they don't, they're ordered to wipe them out. I heard this from one source, and another source told me that it wasn't true, but it seems that you've independently . . .

David: [Pete] Peterson confirmed the same thing. And it was another one of these very shocking correspondences that led me to understand that the MIC-SSP we've been talking about – the Military-Industrial Complex Secret Space Program – is actually working with Pete and with you at the same time.

Corey: Right.

David: There were way too many things that Pete knew that you told me off the record.

Corey: The Marines that breached this one base I was told about and were in the middle of wiping out all of the inhabitants, they were shocked. They were not briefed that nonterrestrials exist or that they may run into them.

And these were like Special Forces Marines guys. All of a sudden they're in front of Reptilians, and they're doing battle with Reptilians.

And their psyches couldn't handle it. They had a huge problem.

David: This is also something that was exactly confirmed by Pete. And about the only difference is that you just mentioned Marines, and he said that some of the people that were used were Canadian Marines as well – Marines who were trained and based in Canada that were then tasked with this.

So we're talking about something that we've thought was going on for a long time. We see these strange earthquakes underneath Italy, strange earthquakes off the coast of Argentina, strange earthquakes off the coast of Malibu right actually directly around where people think there is a base off the coast of California.

So are these strange earthquakes, like in Italy, in South America, and so forth, all a part of this massive purging of underground bases?

In other words, what's the scope of this that's being done?

Corey: There has been quite an underground battle going on. Both sides are fighting as hard as they can right now.

David: It kind of shocks me to have heard from Pete that he got a call about how to dispose of 15,000 bodies, and they didn't really know how to do it.

It kind of shocks me that actions are being taken where the Cabal is either being given the choice to surrender, they have one chance, or everyone in the base is eradicated.

It's going to lead to people in the Comments Section saying, “If this is the Alliance, then what the heck is the Alliance?”

I will just tell you – before you answer the question – that as I've wrestled with this in my own mind and heart over the course of days – because I don't want to support killing innocent people at all – the only rationale that I can come up with maybe for why the Alliance is doing this is that they feel as if this is an absolutely necessary

thing to save the planet from total destruction, and that therefore these are casualties that are necessary in a very serious World War III that's just a shadow World War III that we're not aware of.

Corey: Well, if people out there are under the impression that angelic humans are going to come down and save us, they're wrong. These are very damaged human beings that are a part of the Alliance.

Most of the time they were forced to work for the Cabal, and they resent it. They know that the Cabal would give them zero quarter if the tables were turned.

David: Right.

Corey: They're not giving them quarter as well.

David: So would you say that there is some kind of decision that has been made that these people are so dangerous if they're not neutralized that they would try to, for example, nuke the planet or give everyone a virus or give everyone a catastrophe, like a volcano or a tidal wave or something like this?

Would they try to destroy all human life if they weren't wiped out like this?

Corey: Well, these are military-minded people, and the point is to complete an objective with as few casualties as possible. So that is the way they head in to all of these situations.

They are not going in looking to take prisoners or to ferret out who is innocent or not innocent in a base.

They're ordered to go in and clean out the nest, and that's what they do.

David: So let's also just briefly touch on this idea that you can confirm that this is a multi-year operation that just happens to be coming to a head around the time of a presidential election, but it is not determined by the outcome of the election itself. It was already underway. It just happens to have converged.

Corey: Right. No matter who would have won the presidency, there would have been . . . things were already occurring underground.

David: And it would have led to tribunals on the surface.

Corey: Right.

David: Which gets into things that we saw in WikiLeaks and all this kind of stuff, all paving the way for that.

Corey: Correct.

David: Another one of the things that you said to me, or kind of said to me, that also was in Benjamin Fulford's intel that I then got even more specifics from with Pete Peterson, was this idea of all of the – or at least the great majority – of the aircraft carriers from the US defense community have been brought back to port.

So I want to hear what you had to say on that, and then we'll compare what Pete told me and try to make some sense out of what's going on here.

Why would all of the aircraft carriers have been brought back to port? Fulford reported this. I asked Pete, and he confirmed it.

Corey: Well, there's a number of reasons. You're going to bring back all of your craft when there's going to be a reshuffling of the DOD [Department of Defense].

David: Right.

Corey: So there are things going on in multiple levels.

David: So you're going to have different people in command?

Corey: Right.

David: Okay.

Corey: So there are probably captains being swapped out, all kinds of stuff. I haven't heard a whole lot of details about why they were back, except that they were back.

David: What Pete said to me was that these ships take six months of people working 24 hours a day, seven days a week, to be restocked.

And he said that they were being restocked with technology that we were not "supposed to" find out about for 100 years.

You had mentioned drones, and you had mentioned that there are certain drones that we might see.

So before I say what Pete said, could you talk to us about the information you were given in these briefings regarding drone aircraft?

Corey: Sure. That we are going to start seeing more and more quadcopter-type vehicles around. They look like passenger cars with four propellers on them – four sets of propellers – that give them lift.

And they use a type of artificial intelligence – believe it or not – in the craft to allow it to have automatic air traffic control, landing. The people don't fly them.

They get in, put in a destination, and it will fly itself.

And what I was told was that this technology would be very prolific. You will see it everywhere. They will be flying all over the place.

And they were planning on a number of years after this was commonplace – this technology was commonplace – they were going to replace the rotors on the drones with this technology that is antigravity.

And what I was told is that the antigravity craft fly in much the same way as drones with yaw, pitch. They're controlled in very similar ways.

David: Isn't it interesting that the sequel to the movie “Independence Day” has what looks sort of like conventional military aircraft, but with these disc-like gravity generators on them?

Corey: Uh-hm.

David: Do you think that is a premonition of what this is actually going to look like once they do it?

Corey: Yep. They're going to be flat, disc-shaped.

David: Okay. Interesting.

So Pete had said that we're going to see some of the same military hardware that we're already familiar with in there, but that there's so much of a redesign with all this new stuff that they weren't going to show us for 100 years. It's all being put in.

It's not like we might see it all immediately after they go back out from port, but the point is they're now going to be on the ships and that it includes these three different sizes of drones that we see in these Hollywood films.

So what do you think is going to be the purpose of having three different sizes? I'm wondering if you actually heard about the three sizes?

Corey: Well, they've got all different types of these – what we're calling drones. And they have different purposes like you have different sized aircraft for different purposes – delivering weapons, delivering personnel. Some of them are very large and deliver large numbers of personnel.

What I've also been told is that they're retrofitting certain types of helicopters, certain types of aircraft, with this technology that we're talking about, and that we're going to be seeing a lot of retrofitted already conventional craft that we're used to.

David: I want to say this because people are going to say in the comments – and I want to give voice to that because it will obviously happen; we can anticipate this – you look at movies like "The Terminator". You look at movies like "Oblivion" with Tom Cruise and Morgan Freeman, in which drone aircraft are under control of malevolent AI, and the drones become a critical element of humanity being completely subjugated by nasty AI.

You've mentioned an AI problem. If these are computer-controlled drones, how do we stop this AI menace from actually taking control of all of these drones if they are deployed and trying to subjugate humanity?

Corey: I don't know the answer to that. That's a danger. It's a current danger.

I still get screened for AI when I go certain places. So it is still a concern.

David: So there's a couple of things that happened around the time of the presidential inauguration that were very anomalous, and they both happened almost simultaneously.

One was that we have the Mexican drug lord of the Sinaloa Cartel – this guy who they call El Chapo – actually being extradited to the U.S.

So let's talk about that one first. And the reason why I bring it up is that multiple Benjamin Fulford updates said that if he could be brought to the U.S., which the Cabal was staunchly resisting, that he would sing like a songbird.

So what do you think is the reason why El Chapo was brought to the U.S. at that time?

Corey: I believe he's here to talk about all of the intelligence operations that involve the drug trade and name names.

David: And I want to point out in one of the episodes of my show "Wisdom Teachings", we have a news story of guys being caught smuggling cocaine into the U.S. with the Sinaloa scorpion logo on them. And it was a massive amount.

And then when they were asked to produce ID, they had CIA identification. And they were caught by this group of 1,500 minutemen who are working . . . they're like former military, but they're not really part of a regular government operation.

So what do you think is the relationship between that story and this El Chapo story?

Corey: I believe that they're ramping up for tribunals. I believe that – as I've reported – they've had Cabal people that have turned state's evidence, that have been singing like birds for a long time.

They've been sitting them in front of cameras, asking them all the questions, and they've been spitting out ALL the deep dark secrets.

David: Another thing that happened right before the inauguration is that both George Bush, Sr. and his wife, become hospitalized in critical condition with what appears to have been either heart attacks or stroke-type of stuff, which, of course, would be due to high stress.

Corey: I think the election was more than most of us could bear.

David: Ha, ha. Do you think that they are fearing some sort of tribunal, and that once they saw this result that that caused their health to collapse?

Corey: All of these people are in great disarray and have a lot of anxiety right now – the people that were involved in these Cabal operations.

There is a lot of movement going on in the background to close bases, to clean up their active operations – the active operations of the Cabal.

So they see all of their assets disappearing around them, and that's what made them feel so secure in the past.

David: As you were giving me these stunning briefings, and as I was getting confirmation independently from Pete, I was living through what's now being called the biggest amount of rainfall and flooding to hit California since 1986.

We go from no rain at all – hardly – for six years, absolutely devastating drought that they say is never going to go away, and at the time of this taping already, the drought has been completely eliminated in Northern California. It's gone. It's totally over.

And they were saying, “Well, there's still kind of an extreme condition in Southern California,” but then more storms are coming in that have totally saturated Southern California. So we're probably going to see Southern California drought-free as well.

And there's so much water that they're calling it “an atmospheric river”. So what do you think is going on here?

Corey: The information I was given is that while the Alliance has been going and taking over a lot of these bases, they have taken over these HAARP facilities [High Frequency Active Auroral Research Program].

And what I was told was that when they shut off all of the HAARP facilities, there was an elastic snapback reaction of the atmosphere.

David: That would dovetail very interestingly with this weird arctic vortex that popped over the entire North America.

Corey: Right.

David: So do you think that's part of what they're talking about – the snapback?

Corey: Yes.

David: Okay.

Corey: Yeah, that it's the Earth naturally snapping back after the weather patterns had been augmented for so long.

David: Now, that's similar to what Pete said except that his intel was that the actual HAARP is being used benevolently now to directly steer this atmospheric river to California.

What would be the reason for why the Cabal might have been trying to eliminate water to California?

People think, “Oh, those hippies just don't get to flush the toilet as much.” But there's something going on here. What do you think was the objective for this drought?

Corey: The Cabal had been using HAARP and other technologies to control weather all over the planet. And when they control the weather or cause droughts or cause deluges, they are also, at the same time, sending their people in to talk to the people that control politically that region and have them manage policy based on getting the weather that they want to be able to grow crops.

David: So do you think that California being thrown into a drought is an attack against all of America and its food security?

Corey: Yes. Yeah, that's the breadbasket.

David: Right. So this is not just something about people not being able to water their lawns in California, it's an attack against America itself.

Corey: Right.

David: To me, this rain – because I live in Los Angeles – I have been saying for years, we will know when the Cabal is defeated when it starts pouring rain for days and days at a time.

And right in my little hometown, we've had so much rain that Topanga Canyon Boulevard has been shut down for like a week.

Corey: Yeah, I saw a giant boulder blocking the road.

David: That's right.

Corey: Yeah.

David: So the last thing that was in these briefings that I want to get to before we run out of time here, is you mentioned two other things that were very interesting that might come out along with Antarctica.

You mentioned rooms filled with gold, and you mentioned other ruins that might be seen on the seafloor.

Corey: Some unusual intel that was given to me, and it was somewhat out of place in the rest of the briefing, was that there was going to be a “discovery” of caches of ancient Mayan gold.

David: Wow!

Corey: And that this was going to be discovered and given back to the indigenous people.

David: Really?

Corey: Yeah.

David: And it was fascinating on that front, because I brought this up to Pete that you had mentioned that to me, and then he had a huge story about rooms filled with gold that were actually found by Bush, Sr., and, in that case, plundered. And so there's a lot of corroboration.

Hopefully, we can get him back to talk more about that.

The other thing you'd mentioned was undersea anomalies or bases or ancient ruins of some kind that would be announced maybe at the same time as Antarctica. Could you say more about that?

Corey: Or maybe just before.

David: Oh, just before?

Corey: The various navies of different countries for many decades have been discovering all types of ruins at a certain level below the ocean, . . .

David: Okay.

Corey: . . . certain depth, that depth and above. [Corey separates his hands about one foot.] And they have been doing sonar sweeps of them, getting all types of information, sending vessels down there that can properly excavate. And they've been bringing out artifacts.

And this is . . . I'm told that this is also going to be a part of some announcement about a lost civilization.

David: So one last thing I want to close with here is, do you think that the Cabal had originally intended this Antarctic disclosure to be some sort of massive distraction, maybe more benevolent, but on the level of like a 9/11 level of distraction to throw people off if these war crimes tribunals were to ever begin?

Corey: No. Originally, they had planned to slowly release this information so that we would see these royal bloodlines the way they do and treat them like gods.

David: Wow! But now you're saying the Alliance wants to use this as part of the beginning of the healing of how long people have been lied to as the Cabal is brought to justice.

Corey: Right, right. And the Cabal still wants to manage the release of the information, as do many of the Alliance.

David: So do you think that it's possible that some of the things that we've said, or the order in which it's done, could be changed around by the fact that we've already disclosed it now?

Corey: Yes. This is all very dynamic. Decisions are being made. They're having all types of meetings to come to a consensus between the Cabal and the Alliance.

And they're doing this to prevent open warfare. If they don't come to a consensus and find a way to work together to disclose this information and to bring the worst of the worst to trial, then we'll end up with a world war.

David: And can you confirm, lastly, what Pete has also said, which is that certain websites, like www.express.co.uk – new story, new story, ruins in Antarctica, lost

civilization in Antarctica, professors down in Antarctica, Buzz Aldrin goes to Antarctica.

All of a sudden, it's like there's some crazy amount of correlation between what little old you and me said and all of this stuff coming out in the media. What do you think is going on there?

Corey: They're trying to pepper the consciousness with seeds of information so they're not so shocked when they hear it.

And they're also trying to control the narrative.

David: All right. Well, you heard it here first. I really hope that this stuff comes true. Thank you, Corey. It's very brave for you to be stepping out there and giving us this information. The war is getting hot.

Corey: Yeah.

David: It's very contentious right now.

And I want to thank you out there for watching us, supporting us here at Gaia, and making sure that we are on a path towards Full Disclosure. Thanks for watching.

Tracing the Roots of the SSP with Michael Salla Season 7 Episod 11

Cosmic Disclosure; Tracing the Roots of the SSP with Michael Salla Season 7, Episode 11

16 Mar 2017

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode and our special guest Dr. Michael Salla from Exopolitics Institute.

So Michael, welcome to the show.
Dr. Michael Salla: Thanks for having me on the show, David.
David: Thanks. And Corey, good to have you back, buddy.
Corey Goode: Thank you.
David: I was talking with you about another book that you wrote, “Kennedy's Last Stand”, and so I'd like to open with that for this episode.
Michael: Well, the book really goes into what Kennedy knew about this whole topic. And the thing that . . .
David: What whole topic?
Michael: The topic of UFOs, flying saucers.
David: Oh.
Michael: Kennedy was very interested in that, and so the book looks at his history of trying to find out about it. But one of the things that I did in that book was, I was able to find out that, early in his career, Kennedy was actually a protege of James Forrestal, who at the time was the Secretary of the Navy.
Corey: The Navy, yeah.
Michael: And so Forrestal took Kennedy . . . This was before Kennedy became a congressman or even entered politics. And Forrestal, at the time, wanted to recruit Kennedy to his personal staff.

So Forrestal took Kennedy on a fact-finding trip to Germany in July and August of 1945. So this is after the war.

You had the Navy there, the Army there, basically pouring over everything that the Nazis were developing in terms of secret technologies and trying to find out what it was that they were going to bring back under Operation Paperclip – scientists and technologies.

So Forrestal . . .
David: So even though they fled to Antarctica, it wasn't like they got everything out.
Michael: Exactly, yeah. The Germans still had a lot of really advanced stuff down there. Certainly, as far as the Air Force and the Navy were concerned, the stuff that the Germans were working on in occupied Europe was just way ahead of anything

they had.

So the Navy was there trying to work out what it was that they should ship back to the U.S. to work on in their top secret laboratories.
David: Let me ask you this. Did the U.S. have captured German soldiers and scientists who were telling them what was there? Or were they just going into an abandoned building and then trying to poke around and look for things?
Michael: Oh, they had both. They had a lot of scientists, engineers, that were trying to cut a deal, trying to get a favorable place to live, or maybe even get repatriated to whatever country they were originally from, or even to the U.S., . . .
David: Right.
Michael: . . . people that had documents that wanted to cut a deal. People knew where the secret laboratories were.

So you had all of this happening, and so the Navy and the Army had their top intelligence teams in there trying to sift out exactly what was available.
David: All right. Sorry to interrupt, but I think this is really important, too.

In case people are younger, they don't understand this, Kennedy is not just an ordinary family. We have a background on the Kennedys in which Joseph Kennedy, the father of all the Kennedy brothers, was well-known as a bootlegger, and had made a significant fortune.
Michael: Well, yeah. He was a very successful businessman. I mean, he did a number of things, and bootlegging during prohibition was one of the things.
David: Right.
Michael: But he's probably best known for being the ambassador for the U.S. to England just before the Second World War.
David: Okay.
Michael: And he was also, along with James Forrestal, the . . . he became the first, I think, it's the President of the Securities and Exchange Commission.
David: Oh, really?
Michael: So this was . . . So he was really at the apex of the financial system in the U.S. at the time.
David: Right, because the SEC is what's regulating the whole stocks and commodities markets, and all that.
Corey: Yeah. And the tie-in to Forrestal is obvious. Forrestal pops up in ufology everywhere.
David: MJ-12, right?
Michael: Right, yeah. He was on the MJ-12 committee. And Forrestal, he was the guy that worked for a major financial company Dillon and Read. And so he was picked by the Navy, by Roosevelt, to actually help the Navy prepare for the war, because he had the expertise, the knowledge of major scale industrial manufacturing, and the Navy needed to really change in order to deal with the pressure of fighting two wars.

Corey: There are some interesting tie-ins between Forrestal and William Tompkins, are there not?
Michael: Very important. According to William Tompkins, Forrestal was the guy that picked the admiral that would run the top secret Navy program that was going to be trying to get as much information as they could on what the Nazis were doing, in terms of secret space technologies.

And Forrestal was also the guy that somehow was influenced by Nordics to pick Rico Botta to actually play this role.

So Forrestal was in communication with these Nordic extraterrestrials. And that's a part of what I discuss in the new book, "The U.S. Navy's Secret Space Program", the way in which Nordics extraterrestrials were helping the U.S. Navy, right across the spectrum in terms of – from the very beginning to the very end – in the Navy's developing a secret space program.
David: Do you think that at the time that Forrestal is bringing Kennedy over to this very recently defeated Germany, to get into all the good stuff, do you think they already had a plan with Joe Kennedy that his sons were going to run for president?
Michael: Well, that may have been a factor in why John F. Kennedy didn't accept Forrestal's offer . . .
David: Oh, he didn't?
Michael: . . . to join his personal staff, because Forrestal wanted to recruit Kennedy to his personal staff, and because Jack Kennedy died and – you know, his brother, his older brother died – the father, Joe Kennedy, wanted John F. Kennedy to now enter politics.
David: Oh.
Michael: And so that was why Kennedy turned down Forrestal's offer to be a part of his personal staff, and Kennedy then entered politics instead and became a congressman – elected to Congress in 1946.
David: Well, do you see, in your research in "Kennedy's Last Stand", any other evidence that Kennedy was actually given briefings or was made aware of some of what was going on with the extraterrestrial question?
Michael: Well, not so much as far as the extraterrestrial question is concerned, but as far as Nazi Germany's advanced programs, he was given access to all of it. I mean, he knew what . . .
David: Really?
Michael: . . . was going on, that Forrestal actually was showing Kennedy all of these advanced technologies and Kennedy wrote about it in a book that was published posthumously, called "Prelude to Leadership".
Not many people know about this book . . .
David: Never heard of it.
Michael: . . . but it's a book, written by John F. Kennedy, about his time in occupied Europe, and in Germany, in particular. But the important thing to keep in mind here is

that at that same time as Forrestal was showing Kennedy all of these captured German technologies, that Forrestal was the guy that was ultimately in charge of the Navy's secret espionage program in Nazi Germany, where they were getting all of this intel about Germany having two secret space programs.

And so Forrestal was looking, on behalf of the Navy, for anything that he could find about Germany's secret space programs.

And so that meant that Kennedy knew about all of this, as well.
David: Right.
Michael: And so this is an important historical fact that that book really articulates, that because of Kennedy's exposure to this whole phenomenon of advanced UFOs, flying saucers, extraterrestrial life – the kind of information Forrestal was sharing with him - because of that, when Kennedy became president in January 1961, that Kennedy really made an effort to get to the bottom of this whole phenomenon and really get power back, in terms of the president running these secret projects, rather than the projects becoming autonomous, as happened under Eisenhower.
David: All right. I want to ask you one more question about Eisenhower, and then I want to toss it back to Corey for a clarification.
We know that Eisenhower ordered this invasion of Area 51, as we talked about in our last episode. And in his infamous closing remarks as he leaves office, he warns about the acquisition of unwarranted influence, either sought or unsought, by the military-industrial complex, and then he hands it over to Kennedy.
Have you researched whether there was a conversation between Eisenhower and Kennedy about what Eisenhower had experienced in that transition of power?
Michael: Well, we know from official records that Kennedy met with President Eisenhower twice while Kennedy was President-elect, that they met in December and in January.

And the January event was just a couple of days, two or three days, before the farewell address. So I think it's fair to assume that whatever Eisenhower shared publicly is much, much less than what he shared privately with Kennedy.
David: Now, you've undoubtedly done research on this idea that some kind of benevolent extraterrestrial group met with Eisenhower.

So for those who are not familiar with that, could you just talk a little bit about your knowledge of the Ike and ETs event?
Michael: Sure. Well, I think that there's so many different whistleblowers who've come forward and witnesses, that we can kind of get an idea of the chronology of these different meetings that Eisenhower was a part of.

That starting in February of 1954, that Eisenhower traveled to Edwards Air Force Base, and he met with a positive group of extraterrestrials – what Bill Tompkins

describes as Nordic extraterrestrials – and they kind of really emphasized to him the dangers of developing nuclear weapons – thermal nuclear weapons at that time were being deployed; these were hydrogen bombs – and that the Eisenhower administration should follow a more peaceful policy and be open to receiving more spiritual, more ethical information.

Eisenhower, I think, personally, was very impressed by the Nordics, but his national security team said, “No, we're not going to give up nuclear weapons, and we're not going to listen to this kind of spiritual, ethical upliftment talk at all.”

So then Eisenhower met with another group of extraterrestrials in February of 1955, this time at Holloman Air Force Base, and this was a group of Grey extraterrestrials, tall Greys, that basically reached agreements with Eisenhower in terms of sharing their technologies.

The Greys weren't too perturbed that the U.S. was developing thermal nuclear weapons, and so that's where the agreements began with the Greys.
David: The alleged Tau IX Treaty that led to the formalizing of abductions and all that.
Michael: Right, exactly. And this, of course, all happened after the flyovers in 1952, the Washington flyovers, where you had those craft flying over.
And, of course, the big debate is, were they extraterrestrial or were they Nazi? And, of course, we've had different stories on that, but what Bill Tompkins and what Corey have said, as well as Clark McClelland, is that these were Nazi craft.

And so that suggests that the subsequent meetings that happened, these were . . . The agreement that happened after the Holloman Air Force Base was with a group that was allied with the Nazis.

And interestingly, one of the witnesses that was at Holloman Air Force Base in 1955, he actually referred to that Nazi element.
David: All right. So Corey, what was your personal knowledge of extraterrestrial contacts with presidents? When did that first start? Did anything happen with Truman? Did anything happen with Eisenhower, in terms of what you were told, yourself, on the inside?
Corey: There were meetings with Truman and Eisenhower. Eisenhower was meeting with groups that he mentioned, non-terrestrial groups, as well as one called the Blues.

He had a number of meetings where Nazis flew in in these flying saucers, landed it on bases, and came out and had meetings with, I mean, actual Nazis, as well.
David: And we've briefly touched on the Blues before, but this is a fascinating area for me because I was able to independently confirm what you said with Pete Peterson.

So could you describe for us, why were they called the Blues? What did they say and how was it taken?
Corey: They were called the Blues because they had blue skin, and their agenda was peaceful.

Much like the Nordics, they were advising us not to dabble in nuclear energy or weaponry. They also were giving us spiritually uplifting information, information about consciousness, stuff that the military really had no use for.

And much later on, they were referred to, and the Nordics, they refer to them, jokingly, as 'space hippies'. Although there were no hippies in the 1940s, later on they were called that.
David: What was the deal that the Blues were offering? What would we have to do to get their cooperation?
Corey: Give up nuclear weapons. Give up the pursuit of nuclear weapons.
David: But what would be the payoff for us if we did? What were they offering as the carrot?
Corey: To begin to help us spiritually, to integrate with other civilizations.
David: Now, you had mentioned very briefly Clark McClelland, and that's just popped up on the radar screen recently in a new insider correlation with Tompkins.

And I'm sure you're familiar with that, so could you share with us how McClelland has suddenly popped into the story?
Michael: Well, with Clark McClelland, he was a spacecraft operator for NASA at the end of his career. Prior to that, he worked for about three decades for various NASA contractors.

So he had a bird's-eye view of what was happening at NASA, and so he was able to confirm what Bill Tompkins had to say, that NASA had been infiltrated by Nazis.

Clark McClelland, for example, said that when he went to the office of Kurt Debus, who was the first Director of the Kennedy Space Center, that McClelland met Hans Kammler.
And Kammler was the Nazi SS General that ran their Secret Space Program in occupied Europe, trying to weaponize the technologies – the Die Glocke or the Nazi Bell – that Kammler was in charge of all of this.

So here you have Kammler, in the 1960s, at the Kennedy Space Center meeting with the director.

And so McClelland was able to confirm that that was actually happening, and so that was confirmation, or really strong corroboration, for what Bill Tompkins was saying about the way in which the Nazis continued to have this undue influence over the

entire NASA space program, and had actually infiltrated the military-industrial complex.

And that's one of the things that Tompkins says, that the military-industrial complex – various companies and various military organizations – found themselves almost in a kind of proxy war between these different extraterrestrial factions: the Nazi Reptilian group that were trying to infiltrate and take over the U.S. military-industrial complex, and then another group, the Nordic extraterrestrials, who identified the Navy as really being the one U.S. institution that was kind of much more aligned, or supportive, of U.S. constitutional values.
David: For those who are watching this show who are not familiar with Clark McClelland, I know what his background is, but I'd like for you to share in your words.

What was the big sizzle – his testimony about the Space Shuttle going back years ago – that we've all encountered?
Michael: Well, what he did was, he actually said that he saw on the NASA live feed, an incident involving the Space Shuttle, where there was another craft parked near the Space Shuttle – another spacecraft – and there was at least two different types of astronauts accompanying the NASA astronauts, or the Space Shuttle astronauts, who were out there doing a space walk.

He compared the size of these astronauts from this foreign spacecraft. They were around 10-foot tall compared to the NASA astronauts.

So he had a diagram illustrating what he had seen, and so he spoke at length about this as being evidence that there was a Secret Space Program program with alien astronauts that were somehow collaborating with the NASA space program.
David: So one of the things that you've gotten into, in some of your more recent work, is this idea of how the fictional tales that are told in movies, and comic books, and now video games, of course, regular books by science fiction authors, like Arthur C. Clarke, Isaac Asimov, how were they being influenced by what was going on from the things you've learned firsthand talking to Tompkins and other insiders?
Michael: Well, one of the people that Bill Tompkins identified as being a key player in the Navy's development of a secret space program was Admiral Leslie Stevens. Now, Admiral Stevens, he was actually a contemporary of Admiral Botta, who was running the Navy program out of San Diego, learning all about the Nazi space program.

And what I've been able to determine is that, through Freedom of Information Act [FOIA], that Stevens and Botta actually served together on at least one committee.

So this was something that really supported what Bill Tompkins was saying, that

Stevens was involved in this and was very familiar with the Navy's Secret Space Program.

Well, the important thing about Admiral Stevens is that he had a son who had the same name, Leslie Stevens, so Leslie Stevens IV. He was the producer of the famous show, “The Outer Limits”.
And at that time, around 1964, '65, Gene Roddenberry sat in on the set of “The Outer Limits”, to kind of learn from Leslie Stevens how to put together a science fiction show.
David: Wow! Let me interrupt you just really briefly because this is amazing. So I'm sitting with one of my insiders, who we call Daniel, and he's the guy that allegedly worked at Montauk, where they back-engineered a seat from a UFO, got it working, and you could sit in the chair, meditate and create a portal that could actually send people through space and time.

And one day he was talking about what happens when you use some of these technologies, and it creates a little orb that can look where you want to have it look.

And he said that the name of this thing was an “outer band individuated teletracer” or OBIT.

And we go online, and I just said, “Hey man, let's just look this up right now, and see if . . . has anybody ever leaked this information?”

“The Outer Limits” . . .
Michael: Exactly.
David: . . . had an episode called “Outer Band Individuated Teletracer” - exactly the same. And then, the actual description of it was that it was a device that could do all surveillance in all places at all times.

So that showed me right away, okay, “The Outer Limits” has got to have some kind of insider connection.
Michael: And one of the things about Leslie Stevens' father, the Admiral, he actually ran the psychological warfare operations for the National Security Council.
David: Wow!
Michael: So he was in charge of that. And Leslie Stevens IV, the producer of “The Outer Limits”, his background was military intelligence. So he actually served for military intelligence, and because of his expertise, I believe that what he did during the Second World War was psychological warfare operations.

So then what I've been able to deduce from my research – and it's in the new book – is that Leslie Stevens IV was basically working with his father, up until his father's death, in psychological warfare operations, in trying to introduce some of these

breakthrough ideas as a form of soft disclosure in the media and entertainment industry.

So when we have “The Outer Limits” being created, you have Gene Roddenberry sitting in on it after the failure of a series that he had earlier put together, which was called “The Lieutenant”.
So it was all about a Navy lieutenant. So that flopped. It only lasted, I think, one year, possibly two years.

And so Roddenberry was advised by his agent to come up with a science fiction show.

So he sat in on “The Outer Limits”, and according to people that were there, Roddenberry and Stevens had reached an information agreement, in terms of Roddenberry would get all the information from Stevens about developing his science fiction series, and he would get all the credit – that he wouldn't mention Stevens.
David: Wow!
Michael: And that's exactly what happened. And so then we have, of course, the creation of “Star Trek”.

And if you look at “Star Trek”, some of the main forces, there's an uncanny parallel with the main groups that Bill Tompkins was talking about.

So in “Star Trek” you have the Confederation of Planets. You have the Vulcans. The Vulcans, we can compare them to say the Nordic extraterrestrials, trying to help humanity.

You also have the Klingons, who would be represented by the Reptilians today.
David: Wow! Okay.
Michael: And then you have the genetically enhanced humans, which were the Nazis.

So if you look at the development of “Star Trek” as a series, the main protagonist in that series, there's an uncanny resemblance to the major extraterrestrial groups and factions, Earth factions, that were involved in these secret space programs right throughout the 1940s, '50s and '60s.
David: So another show that really pops up in my mind, Michael, is “Battlestar Galactica”.
Did your research turn up anything about “Battlestar Gallactica”?
Michael: Well, what was really significant about “Battlestar Gallactica” was that the creator of “Battlestar Galactica” was Glen Larson.
And Glen Larson actually worked under Leslie Stevens.
David: Oh, really?
Michael: He worked with him. They shared a lot of talent. Leslie Stevens was the senior, and so Larson had reached a similar kind of agreement with Leslie Stevens

where Stevens would come up with ideas and help Larson in developing a science fiction show.

And what's interesting – and this we've learned from people who have later on interviewed key people that were involved in the creation of "Battlestar Galactica" - was that the pilot episode of "Battlestar Galactica" was actually written by Leslie Stevens IV.
David: Really?
Michael: So you actually have the son of a Navy Admiral that was involved in the Navy's Secret Space Program, writing the pilot episode for a new sci-fi series that he would not get any credit for, but would actually go under the control and be all credited to Glenn Larson.
David: Wow!
Michael: And so, again, this kind of shows that the Navy, through Leslie Stevens, was wanting to have these ideas, the truth of a Navy Secret Space Program and different forms of extraterrestrial life, including artificial intelligence, because that's what "Battlestar Galactica" really focuses on, is the danger of artificial intelligence.

And so Glen Larson, in that series, just developed the whole idea of extraterrestrials that are having to deal with this conflict with different AI life forms who are intent on eradicating the human creators of that life form throughout the galaxy.

And this is something that kind of dovetails with what Corey has revealed. I remember Corey talking to great length about the danger posed by artificial intelligence, and how AI was screened by the different secret space programs because of the threat.

So this, again, is just confirmation that this was very real material that was being seeded into the public domain through these movies.
David: Do you think . . .
Corey: The truth is definitely stranger than fiction.
David: Do you think that this Leslie Stevens connection is why you hear Naval whistles when people walk into the room on "Star Trek"?
Michael: Oh, definitely. Yeah, I mean, you look at "Star Trek" itself, I mean, it's all based on this, kind of like, . . . they use Navy procedures and the rankings are Navy.
David: Right.
Michael: The Star Fleet – they talk about Star Fleet Command and all of that. So, yeah, they use a lot of Navy terminology in "Star Trek", and I believe that's because the Navy was getting Stevens to leak this stuff out into the public arena through soft disclosure.

Because I think what the Navy really thought, through the 1960s, that eventually, by the time that they had finished building their battle groups that were deployed in the

early 1980s, that disclosure would have happened by then.
David: Oh.
Michael: So I think that "Star Trek" was part of an effort by the Navy to kind of seed these ideas into the public consciousness, so that at some time in the future, when the truth was revealed that the Navy had the know-how to build these space battle groups, that the public would come on board and support it, and so the Navy could continue to develop this and expand it.
David: So Michael, I have some documents here that show some really amazing work that you've done in terms of taking the Tompkins' story that we've all been dealing with now, and bringing it into this Freedom of Information Act academic research arena that ufology is known for.

So the first one that you have here . . . it's from U.S. Naval Air Station San Diego signed by Rico Botta.
So what's going on here with this particular document?
Michael: Well, with this document, this was something that William Tompkins put into his book, "Selected by Extraterrestrials", and basically these were exit slips that he could use to be able to leave Naval Air Station San Diego with documents, with briefing packets, which is a key part of his story.
David: Right.
Michael: But in terms of verifying, well, is this real? Are these exit passes real? Do they have information on them that can be independently corroborated?

So that's what I tried to do, and I used the FOIA Information Act documents that I received to corroborate that these exit passes were actually signed by a person who actually was in charge of Naval Air Station San Diego at the time that Tompkins said that he received the permission to take these packages out. And then that, of course, concerns Rico Botta.
David: It says here that it was for "issue of non-combat airplane." Ha, ha.
Michael: Well, that's right.
David: So what the heck is that?
Michael: Yeah, well, what that document shows is that Tompkins not only was given permission to take these briefing packets out of Naval Air Station San Diego, but he was also given permission to use a plane – to take an actual non-combat plane that was owned by the Admiral – to deliver these packages.

So this is corroborating a key part of Tompkins' story that he took these different briefing packets to various aerospace companies throughout the U.S., especially the west coast of the U.S. at the time, the different military departments and so forth.

So it's really . . . Corroborating this document helps determine some key elements of his testimony.
David: Okay, now here we have a photograph of Rico Botta, Lieutenant Commander

of the U.S. Navy, August 27, 1934, and then his signature.
And what's so interesting about this, Michael, is that in this next document you showed us, you have compared that signature on that photograph to the signature that was on the release for the packages, and they're basically identical. I mean, it's the same signature.

So how did you get this picture of Rico Botta? Where did that come from? Let's talk about that first.
Michael: Well, that picture of Rico Botta, that came from his Freedom of Information Act files, the 1,500 pages of documents that I received.
David: So you filed for them, and you actually got them in the mail?
Michael: I filed with the aid of an attorney.
David: Okay.
Michael: His name is Duke Brookhouse and he has been helping with these FOIA requests.

And so, when we got the documents, I went through them and identified the ones that helped corroborate key elements of Tompkins' story.

So this particular document, with his signature and his photo – even though it's dated from the early 1930s – clearly shows that the signature is identical with what was on those exit passes that Tompkins gave.

So that is independent corroboration that Tompkins' document is genuine. And that's very important that you actually . . . Tompkins' exit passes . . . those two exit passes showing that he had permission to take these briefing packets out of San Diego Naval Air Station, that that's a genuine document.

So that's a very important part of corroborating his story that he was able to take these to different facilities, and that he was given permission to actually use an airplane to fly these to the different locations.
David: Okay. Now, the next one here, it says Navy Department, Bureau of Navigation, Washington, D.C., dated September 30, 1942, from the Chief of Naval Personnel to Captain Rico Botta.

And the thing that really jumps out at me here, it says, “Proceed to the place (or places – in the order given) indicated below, for temporary duty.”
And then you look down here, it says that this is “in connection with inspecting experimental aircraft and for conferences in connection with [David clears his throat to emphasize this part] aircraft matters:”

Then you get this list of “U.S. Army Air Force Experimental Station, Muroc, which we've all heard about the Muroc base, Douglas Aircraft, Northrop, Naval Air Station,

San Diego, Consolidated Aircraft Corporation, San Diego."

This is crazy. What is he talking about with "experimental aircraft and conferences in connection with aircraft matters?"
Michael: Well, this is, again, another document that independently corroborates various aspects of Tompkins' testimony, that Tompkins says that he was taking these briefing packets to those facilities, as well as many others.

So this document confirms that Botta, prior to this operation that Botta oversaw in Naval Air San Diego, Botta had traveled to some of these same facilities, and that these facilities were conducting experimental aircraft research. And that Botta was the Navy's guy when it came to understanding experimental aircraft research, and that Botta was being prepped for this new assignment, because visiting those facilities happened less than two months before he was transferred over to Naval Air Station San Diego.

So he was being prepped for that new assignment coming up, where he would be receiving intelligence from Navy spies in Germany about the Germans' secret space programs. And that once he received the intelligence from the Navy spies, that he would then instruct Tompkins to carry briefing packets to those facilities that you just mentioned, as well as many others that Tompkins said.

So, you know, again, this is another important document that independently verifies that Bill Tompkins' story is credible. And, of course, . . .
David: How did we get this document?
Michael: That came through the Freedom of Information Act.
David: Okay, so another document we have here is dated February 25, 1942, which, for the real UFO freaks, you're going to know that, because that is immediately after the infamous Battle of Los Angeles.

And what we're having here is Navy Department, Bureau of Aeronautics, from Washington, and it is orders for Rico Botta to have additional temporary duty. And it says for him to proceed, on about March 2, 1942, to Wright Field, Dayton, Ohio, i.e. Wright-Patterson Air Force Base.
Michael: Exactly.
David: Holy crap! This is amazing!
Corey: Smoking document!
David: Ha, ha. I just want to throw it across the room, it's so crazy. It's like, wow! So talk . . . I know what I'm seeing here, but talk us through, in case people aren't as excited as I am right now, as to why this is so significant.
Michael: Well, February 24 and 25, 1942, is when you had the famous L.A. Air Raid incident. And according to documents that have been released, The Majestic Documents, and according to what Bill Tompkins has said, there were two flying

saucers that were retrieved after that crash – one by the Navy, one by the Army Air Force.
David: So some of them did get shot down.
Michael: That's what we're told by The Majestic Documents and what Bill Tompkins said.

Now, the one that the Army Air Force got their hands on was taken to Wright Field, which was, at the time, the Army Air Force's premier research facility for foreign aviation technologies.
David: "Foreign." Yeah, ha, ha.
Michael: So this was taken, . . . or this craft was retrieved, on February 25, and it was being taken to Wright Field at that time.

Now, on this very same day, Admiral Botta, who is the head of the Navy's Powerplant Division at the Bureau of Aeronautics, gets orders to travel to Wright Field in early March, to basically do some work over there.
David: Right.
Michael: And the timing . . .
David: It says, "In connection with engine development." on the same document. What kinds of engines are they trying to develop here?
Michael: Right, so . . .
David: Probably anti-gravity. So, yeah.
Michael: So that's a smoking gun document . . .
David: That's incredible.
Michael: . . . that really shows that Botta was the guy that the Navy had tapped as their expert in understanding these foreign technologies – anything to do with extraterrestrial craft or Nazi craft – that Botta was the man.

And so he was nominated to go to Wright Field to really look over what it was that the Army Air Force had gotten their hands on from the L.A. Raid.
Corey: And did you say that, in an earlier conversation we had, that Rico Botta was an engineer?
Michael: That's correct. Yes, he was an engineer. He was an expert on engine development, on power plants.
Corey: Power plants.
Michael: He was, actually at the time, the Chief of the Power Plant Division for the Bureau of Aeronautics. So he was the guy that really understood what it was that needed to be done in terms of developing high-capacity engines for high-performance aviation maneuvers.

And so if you're talking about craft that were capable of spaceflight, he was the guy that would be able to give you insights into that.
David: Right, and you have this document right here from March 15, 1946, where it

says that, “his outstanding technical knowledge and skill, Rear Admiral Botta enabled his department , , , “ blah, blah, blah “. . . for combat aircraft . . . with the latest combat-improved changes . . .”
So it's clearly . . . You have documents here saying that he's involved in upgrading the quality of technology of combat aircraft engines and energy technologies.
Michael: Right. Exactly. That was his duty while he was working at Naval Air Station San Diego from 1942 to 1946, that he was the assembly and repair officer.

And so his job was to basically upgrade the performance of all the Navy jet fighter craft.

And in addition to that, he was also learning about what it was that the Nazis were doing in developing jet engines and also trying to weaponize flying saucers, because you had to consider that the Navy had to be prepared that the Nazis were going to succeed in developing weaponized flying saucers.

So the Navy was looking to Botta to provide the expertise and the leadership for how to deal with that contingency. But it didn't happen, fortunately, but Botta was the guy that the Navy had tapped to lead that effort.
David: You also have actually interviewed people associated with Rico Botta, and so could you tell us a little about that and what, in just a few minutes, is the most interesting takeaway of your research, up until now, in that department?
Michael: Well, I've been able to have conversations with the grandson of Rico Botta, who was able to confirm some really interesting things about Botta's contacts with the leaders of the aviation industry at the time, that he was personal friends with Jack Northrup and William Boeing, that Botta was also someone that continued to meet with senior Navy officials.
One official that was named was Admiral Mark Hill, who was Botta's military aide while Botta was the head of the Navy's Armaments Section at Philadelphia Naval Shipyards, that Mark Hill was helping Botta there as his military aide, and that after Botta retired, that Mark Hill, as an active officer and he became a Rear Admiral himself, continued to visit with Botta and have conversations.

And so, to me, that's pretty strong evidence that Botta's insights and knowledge about these very advanced technologies was something that was being shared, even up until the time of his retirement and subsequent death, with very senior Navy officials.
David: What do you think is going to happen with this forensic reconstruction of history in time? Will we be able to eventually get new insiders, and new whistleblowers, and really get a reconstructed view of 20th century history? Do you think that will happen?
Michael: Oh, definitely. Yeah. I think that's what's happening now, is we're starting to get the chronology of how the Navy developed its Secret Space Program, involving these enormous space battle groups, and that as these names are identified, and we

start to track down relatives or others that worked with them, we're probably going to find others that are willing to talk about what it was that they experienced.

So we're trying to do that now, and I'm hoping that in this investigation of Admiral Mark Hill and Admiral Botta and his relatives, that we're going to have more names popping up.
David: Corey, do you have any last thoughts before we close the episode?
Corey: It's been amazing to me, the entire process of Tompkins coming out. He's literally providing the information, or a lot of the information, I observed in the glass pad. And to see someone come out that was giving that intel, or delivering that intel, it's a very strange synchronicity.
And the fact that he had no idea I was coming forward – all of it seems orchestrated.
David: And we're now getting this actual nuts and bolts documentation – connecting dots, interviewing survivors – to actually show forensic reconstruction of the whole history of what led up to you eventually being in something that most people think is just completely outrageous and beyond belief.
Corey: Absolutely. And Dr. Salla's latest research is just bolstering it more and more.
David: Well, I want to thank you, Michael, for coming in. I think these are really groundbreaking episodes that will be of extreme historical importance as we get into Full Disclosure.
And I want to honor you for your contributions in really bringing the academic spectrum in on this whole question of our "Cosmic Disclosure" show.
Michael: Thank you, David. It's been a pleasure. And thanks, Corey.
Corey: Thank you.
David: Thank you. And I want to thank you out there for watching. You are a very important part of "Cosmic Disclosure". With your support, telling your friends about it, we are lifting the laughter curtain. We are bringing real academic interest into something that was so far outside the norm of what UFO researchers used to talk about, and yet, as you're seeing, it all adds up beautifully.

This is "Cosmic Disclosure". I'm your host, David Wilcock, here with Corey Goode, and our special guest, from Exopolitics Institute, Dr. Michael Salla. Thank you for watching.

Viewer Questions Part 6 Season 7, Episode 12

Cosmic Disclosure; Viewer Questions Part 6 Season 7, Episode 12

20 Mar 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with our insider's insider, Corey Goode.

Your questions, as I've said so many times, shape and influence this show.

Corey, are you ready to handle some audience questions?

Corey Goode: Good to go.

David: Let's dive right in and hit this. “Corey states that he has been picked up by a blue orb. I physically have seen a yellow orb with my son three years ago. He was seven at the time. He called it 'a starship' and started running towards it. It was not small, and it made no noise.

“I looked at my son, and it was gone. I have a hard time understanding why I froze, but my son knew what it was. Can you explain what a yellow orb is?”

It sounds to me like this is actually a UFO sighting. It just might have had yellow light.

Corey: Yeah. Sounded like it was a actual UFO sighting.

And we've talked before about there's all different types of orbs. And none of them have . . . They're not necessarily interrelated with each other.

A lot of times, if an entity, a disembodied entity, or a spirit appears, it will appear as a orb – different types of orbs.

I had a friend tell me one time that he was hunting, and he saw a red orb floating around. And probably four years later, I was with a friend, hunting, and I looked over in a cornfield, and I saw a basketball-sized red orb that looked like it was on fire inside of a crystal ball almost, just floating like it was scanning the field looking for something.

And then it just floated off and disappeared. I have no idea what that was.

David: All right. Well, let's keep going along here. We're going to try to get through a lot of these.

The next one we have is Leannaarts, “Corey and David,” - so I guess this is open to both of us - “what are your thoughts on the idea that not only is the Earth a prison planet created by Reptilians, but that we are tortured by these beings after we die and encounter them in other dimensions? That they created religion, money magic system, and a magnetic Earth force field to control us, and a Moon operation to wipe our memories?”

Corey: I think we're crediting the Reptilians with a little too much, to be honest.

David: This is widely divergent with my own belief system, of course.

Corey: Right. There are a number of nonterrestrials that are using this planet as a petri dish that they are doing experiments in.

Yes, it is a prison planet. We're basically free-range slaves running around, thinking we're free, and that we have all this knowledge of the universe.

Now, the Reptilians and these . . . There's various other groups that we've been in contact with that have been contributing to what's going on here on the planet.

And we can't attribute all of it to the Reptilians because they've just been a small part.

David: Would you say that ultimately, negative extraterrestrial intelligence is responsible for creating UFO religions like this, because if someone were to be coming from a place where they believe what this question says, that they would generate loosh?

Corey: Yeah, they're exploiting our genetically and socially programmed biases. We create religions ourselves. And they see how much those religions control us.

So, yeah, why wouldn't they give a little boost to a religious idea?

David: So we have another question now from Leahahuman. “Please talk more about the art and culture of ET people. It is very nice to hear that the people of Earth are being recognized for their creativity.”

So this seems to be in relation to what we've been calling, for lack of a better term, the Micaites, who you met.

Corey: Correct, yes. And not only through Mica. This bartering, this galactic bartering system that we have with other civilizations, has included them wanting works of art, you know, statues.

You know, art that may have gone missing in World War II could be hanging on a wall in another solar system right now.

So yeah, we're very creative. They love that about us. And they are creative as well and have their own art to share with us.

David: The space program insider, Jacob, who has been so helpful for years in giving me lots of intel, corroborated very nicely with what you have to say. And he explained meeting certain types of extraterrestrials in which he said they were very boring people, and that any one of them that you meet, it's like you're talking to the same person. They all seem very similar to each other.

Do you think there is some reason for why humans on Earth might have greater diversity in their personalities and potentially greater creativity than some of these extraterrestrial civilizations that are out there?

Corey: I think what you just described would be the minority.

David: Okay.

Corey: But, yeah. I mean, all the genetic tinkering that we've had happen to our species has created a . . . All of them have very strong emotions, but they're usually a very fixed, narrow band of emotions.

David: Similar to like the Vulcans in “Star Trek”?

Corey: No. They're non-emotional.

David: Right, okay.

Corey: They love, but they love hard, and they experience love differently than we do.

With us, we have such a wide range of emotions that it's a benefit and a detriment to us. We can't control our emotions.

Once we learn to control our emotions and channel it into creativity, then, . . . I mean, we haven't even begun to create what we're capable of.

David: Do you think there might be some sort of primordial darkness in the human soul here on Earth based on this idea, as you said, that it might be akin to a prison planet, that perhaps that grist for the mill is generating greater creativity, greater quality of art, than we might see in a more utopian type of civilization, where they

don't have that level of pain?

Corey: Yeah, that's very possible.

David: I would think so. We now have Gymratt89.

“Hey, Corey. To your knowledge, is there any intuitive empaths, personality metamorphs, etc., that have slipped through the cracks or have managed to keep a low profile and remain off the radar or undetected from MILAB recruiters, government or Cabal groups?”

Corey: Yes. With the personality metamorphs, they're so difficult to train and work with. Many of them make it just a little bit through the program, and then they're blank slated and kicked back out to society.

So there are a lot of personality metamorphs out there. And if you're an intuitive empath, if you're not discovered through some of this testing or through family lineage that's being observed, then there's a very good chance that you're not going to end up on the radar.

David: You mentioned that there are an increasing number of people who have had a blue orb experience. And then they don't know what the heck that is, and they Google it up, and they find our show, and then they're writing you.

Do you think, based on this question, that those people are necessarily all being identified? Or is it possible that some of that is happening off the radar as well?

Corey: A lot of it's happening off the radar, but the blue orbs are usually visiting people to awaken them to why they're here.

I sent you a video. People are speaking Spanish in the background, and there are blue orbs just flying around. And they're gasping and talking about it.

And those types of shows are done to awaken people.

David: So when you say “awaken”, is it possible that some sort of DNA activation or consciousness quickening is taking place that would create an intuitive empath in someone who may not have had that ability before?

Corey: No, I think it's basically reminding people of who they are, and what they're here to do on a subconscious level.

They don't consciously go, “Oh, wait a minute. I'm an alien. What am I doing here?”

You know, “it's time to get to work.”

David: Right.

Corey: It's all happening subconsciously, but it's a catalyst.

David: All right. Let's go with another one here. This is UFO22:

“Question for anyone.” I guess that means I could take a crack at this myself, but that's not really the format of our show.

“How did Sigmund and the lower-level program group learn about Corey in the first place? And what was the technology/mind control methodology used to get him from his house to their ship, where the chemical interrogations took place?” So that's really two questions.

Corey: Right. Well, they found out about me from all of the chatter that's occurred since we began this show. This MIC group is Air Force, and they are given a totally different briefing than a lot of the people in these other secret space programs.

And what I was saying was matching to a certain point, but then, again, a lot of the stuff I was saying they couldn't buy into because it wasn't a part of their briefing.

So therefore, they decided that they were going to pay me a visit and gather a little bit of intel and find out what's going on.

And the second part of the question, how do they control you to make you walk outside of the house on your own?

They have technologies that control the mind and autonomic systems of the body. They can make you breathe faster, or they can speed up or slow down your heart. They can make you get up and walk or open doors. They have the ability to do it.

Scientifically, I don't know the specifics. That's probably more of a Pete Peterson question.

David: They can't just take us over like a remote control robot and make you walk and actually move your legs with a joystick or something.

Corey: Yeah, they can.

David: Oh, they can do that?

Corey: Yeah.

David: Okay. So this must be way more powerful than what regular human telepathy is capable of.

Corey: Right. I mean, they're going to be able to get you up on your two legs, walking, get you opening the door. And a lot of it has to do with once they get your body in motion, your mind subconsciously starts to, I guess, go along with it. It's natural, you know?

When you reach for a doorknob, your mind and body . . . you don't have to sit there and tell yourself, “Turn the door knob.” It just happens.

So they're kickstarting that part of your brain.

David: Well, in disclosing something that contentious, I would be concerned about the fact that there are a lot of people out there who could be diagnosed with schizophrenia, who would then be inclined to take something that you just said and think that their motions are being remote controlled.

We have a lot of people who believe that they're being gang stalked, for example, when in fact their symptoms are totally consistent with paranoid schizophrenia.

So given the fact that there's only a total of 800,000 people in all branches of the intelligence community, how widespread do you think this really is, because a lot of people might be inclined to think that they're being singled out, or that they're being remote controlled this way?

How many people do you think might actually be getting this kind of stuff happening to them?

Corey: The nonterrestrials use it in abductions. It is something that we got from them, that we reverse engineered from them.

David: Okay.

Corey: It is something that is from a higher civilization, that knows the physiology patterns of all of the life in the universe – or in the galaxy, at least. And manipulating it, it's child's play for them.

David: I guess my question really is about the people who are going to maybe have panic attacks and think that they could just be possessed by this technology at any moment in their lives.

Corey: Well, you know, you're always going to have those types of people. Any time I mention anything, people that have personality distortions or chemical imbalances are going to take the information in through their filter and apply it, and there's nothing we can really do to prevent that.

David: And I guess that's part of the problem with Full Disclosure, isn't it? There's going to be all kinds of delusions and paranoid fantasies that people can start to have that they have been singled out.

And typically, when you encounter these types of people, they believe that because they're aware of some of the truth of what's going on with the Cabal, that the Cabal is actually after them, that they're being followed.

But I don't really think most of the people that are learning about this on the Internet are actually being singled out by the Cabal for surveillance, that kind of stuff.

Corey: No.

David: So could you speak to that a little bit?

Corey: Yeah, I mean, it's pretty rare to be targeted like that. You have to be more of a threat or an asset to them than just having belief systems about UFOs and aliens or thinking that you know something other people don't. I mean, you're going to have to be an actual asset.

Like the nonterrestrials. They come down. This person is one . . . They consider it [him/her] one of their assets, and they control them. They don't control the people around them.

Other than . . . You know, they use similar fields to cause entire areas of neighborhoods – for people to go into a deep sleep or to change their brainwaves, put them in deep theta. They change their consciousness during the process of causing locomotion in your body.

David: Well, I want to throw something at you. I may have said this in the show. I may have not.

But one of the most profound experiences I had was getting a flat tire right near Washington, D.C., driving up to New York from Virginia Beach.

And I go to the tire store, and the guy that was working at the front desk had been in the CIA. And I figured this out pretty easily based on a few tells that he gave me.

I mentioned the two black ops UFO programs that Sergeant Clifford Stone has talked about on our show. It was already out there – Project Moon Dust and Project Blue Fly – and the guy's eyes get all wide.

He goes, “How did you know about that?”

And then we got talking. And I said, “Okay. Well, you guys are my problem.”

He said, “What do you mean?”

I said, “Well, I've been saying certain key words on the phone and then there's a click, and the lighted dial actually blinks off and on. And it's very clear that when I say certain words like 'extraterrestrial', that my phone is being recorded.”

And I said, “Are they singling me out?”

And he said, “Well, where do you live?”

I said, “Virginia Beach.”

He said, “How many people do you think are being surveilled that way in Virginia Beach?”

I said, “I don't know. Maybe 100?”

He said, “About 40,000, last time I was in there.”

And I said, “Okay. This is what I thought. Are they just recording all this on a hard drive and not even really listening to it?”

He said, “Yes.”

So is that really most of what's going on – the sort of Snowden bulk collection . . .

Corey: Right.

David: . . . without any real . . .

Corey: Haystack.

David: . . . personal action from intelligence operatives on people?

Corey: Right. And it's key words that cause something to rise up to be looked at

closer.

David: So just to wrap up that one point. I have encountered incredible paranoia. And it seems as if the Cabal has put out a strong mind control to try to make people feel that if you learn anything about this information, that you now have intelligence operatives hunting you down, spying on you.

And I just don't really think most of the people would ever be even bothered with by the Cabal.

Corey: No.

David: Would you agree?

Corey: Right, right. That way, we kind of self-manage ourselves.

David: Right. Okay. The next question here comes from Larz, who says, “I love these Q&A episodes. I wish they came out more frequently.” Okay, well here we go.

“I can 't remember if these questions were ever asked and answered, so I'll ask anyways. I'd like to know more about the daily lives of some of the ETs that Corey knows about. So here are my questions. I'm sorry if they sound silly.

“Number one . . . “ We're just going to go through these one at a time since he's got seven numbers.

“Number one: What do some of these ETs eat and drink? And do they eat as frequently as us humans, such as breakfast, lunch and dinner?”

Corey: A lot of these beings are very advanced, and their metabolism . . . they manage their metabolisms with their consciousness, and they don't have to consume food or nourishment that often.

Others have to receive nourishment very often. It depends on which beings we're talking about.

There are certain beings that do absorb nutrients through their skin; some that eat just like we do. Many eat just like we do.

So it just depends on the individual being's metabolism and where they're from – what planet they're from. Their eating habits are going to match that.

David: I think it was Henry Deacon who told me this, that there were certain aquatic

ETs where they actually take algae, and they have these gills on their chest, and they just rub the algae into those gills. And that suffices as a meal for them. Have you ever heard of anything like that?

Corey: No, but I can see . . . Gills are similar to lungs. That's where the blood vessels go to collect oxygen. So more exposed blood vessels might be an easier way to get nutrition directly into the bloodstream.

David: And have you heard about any that would actually put their hands into some kind of an algae and be able to absorb from their hands?

Corey: Like Mork? [Sucking sound] Ha, ha.

David: Ha, ha.

Corey: No, I haven't.

David: Okay. When he says do they eat as frequently as we do, like the three-meal-a-day paradigm, you said some of them eat a lot more infrequently. Are there others, maybe the more human-looking types, that would be really similar to us, where they would have much more similar dietary patterns?

Corey: Right. And a lot of it is going to have to do with their circadian rhythms that were developed on their planet as they developed.

You know, if they have a planet that has a 28-hour day, their body and metabolism are going to match that rhythm. So they're going to be taking in nourishment to match that rhythm.

David: Along the same line of the question, I'm curious about dietary compatibility. In other words, could extraterrestrial beings come to Earth and be able to survive by eating food that you could get in a grocery store here?

Or are there divergences in the types of foods that they would eat?

Corey: Well, many of them would go into anaphylactic shock if they ate the things that we ate.

If they are going to eat from this planet, they're not going to be eating usually out of the same dish that we are.

David: Monosodium glutamate, additives, chemicals, preservatives, this kind of stuff – is that what you mean?

Corey: That, or it could be as simple as wheat, or barley, or something like that does not react with their system right.

They literally swell up and will have an anaphylactic shock.

David: Well, and I remember early along, when you were first getting brought up for the SSP Alliance, that they had these little balls of nutrition that you could have eaten, but the problem, they said, was that you'd have some kind of reaction to them.

Corey: No. I had to eat those.

David: Oh!

Corey: They're sort of like little peanut butter balls with flaxseed and all kinds of stuff in them. My wife has made something similar. I had to eat those because the type of printers or replicators that they had, the food would have wreaked havoc on my system.

David: Really?

Corey: Yeah.

David: Interesting. Okay. “Number two: Do they have 9:00 to 5:00 jobs? What type of jobs do they have?”

Now, this kind of gets into the interesting thing about “Star Trek”, which is they go to Ten Forward. They don't pay for a drink. They just say that they want a drink. Or when they have a meal, they just have a materializer that makes it for them.

So do they have 9:00 to 5:00 jobs? Or do they have to earn money?

Corey: Well, they have to put in time in their duties, of course, . . .

David: Okay.

Corey: . . . but I don't know. A lot of times, if they're working with us, they'll work a 9:00 to 5:00 just because that's what we do.

David: Okay.

Corey: What they do in their free time after they punch out, I have no idea. It's just as divergent as the different beings that are out there. Some of them may go to their quarters and paint. Some of them may go and meditate.

Some of them may be more social and come together. It's hard to distinguish.

David: Would you say that maybe apart from drone-type clone beings, that most sentient life would alternate between periods of productivity and periods of leisure?

Corey: Right, right. Like going back to the circadian rhythm, the body's going to have to shut down to repair and process. If they're biological entities, they're going to have to go through some sort of cycle like we do.

David: And along those same lines, do all biological life forms, regardless of origin, end up having sleep cycles?

Corey: Yes. Yeah, they sleep. Some of them don't sleep for long periods of time, and then they will have a sleep cycle, like days or weeks.

David: Interesting. “Number three: Do they sleep?” I guess we just answered that.

“Number four: What's their educational system like, if any?”

Corey: Most of these beings are learning the way I hope that we learn in the future. This information is downloaded.

They have technological means of downloading data to their brains, and then having access to it. So they don't go and sit in a university environment, spend months learning one subject. It's downloaded, and they're able to apply it.

David: What would that entail as far as the biological birth and maturation process, where you have something starting out as a baby, and then going through childhood, adolescence, adulthood?

If you can just download information, what would be the point of all those years before adulthood then?

Corey: Well, they're downloading information throughout that process as they age – information that matches where they are in their process of growing. I mean, they're not going to . . .

David: If that would apply, you could have a much, much more intelligent being than us.

Corey: Absolutely.

David: Yeah.

Corey: Yes. But, you know, you're not going to download a library to an adolescent being. You're going to download the information. They physiologically have to be able to process it.

If you overload any consciousness with information, it's going to shut down.

David: “Number five: What do they do for fun? Do they play sports or watch TV and movies?”

Corey: Yeah. You know, depending, again, on the being. Some of them may spend time writing poetry, doing art. It's completely dependent on the type of being.

Most of the more human-type ones, they're very similar. The cultures are very similar. The languages usually come from the same root languages that have been departed to them, so it's not going to be that difficult for us to bridge languages with them.

We're going to have a lot more in common with these people than we're led to believe in sci-fi.

David: “Number six: Do they celebrate holidays or birthdays, or have any type of parties?”

Corey: I do know that they celebrate their life cycles, birthdays – at least, Mica's people do. I don't know . . . I'm sure that they probably have marked the calendar for the day that they finally threw the Reptilian rule out of their solar system. I would be surprised if they didn't.

David: Let's just get into a general question that that suddenly raised up for me, which is chronometrics.

If you have left your home planet, even though maybe your biological rhythms are naturally tethered to that home planet, I would think that if you went to another solar system, that you would then start to be governed by the physics of those rotating bodies.

Corey: Not so much governed, but you begin to have interference, kind of like temporal jet lag or something. They come here, and things just don't flow the same.

David: Well, and one of the things that you told me in the car that I think would be great to toss in right now was your understanding that in the SSP, you could be working from the '80s in the same base with a person who got pulled in all the way

back in the 1950s.

Corey: Correct.

David: And that you're experiencing the same time there. So if that's true, as you just said it was, how did they even keep track of time at that point?

Corey: Well, you're going off of a standard time – some sort of Zulu standard time – for the day. They use military time. But if you take someone from the past and bring them to now, this is still the same solar system, the same circadian rhythm, the same cycles.

So that's not going to affect them as much as you may think. There is that zero time reference that occurs, but these different people that are working together, you're not allowed to discuss your past.

So it took a while to discover that they were going back in time and grabbing brilliant minds and technicians to bring them to the time frame I was in.

David: So do you have any way of knowing, if you were working in the late '80s, what percentage of the people that were there were pulled from, let's say, the 1950s? Or were they even going a lot earlier than that, like maybe 1800s, 1700s, and bringing people like that in as well?

Corey: No, I think it was in more of the modern industrial age that they've been pulling people.

David: So they'd have the right kind of knowledge base to be useful, perhaps?

Corey: Right. And the oddities that you would see would be the way they talked and the way they carried theirselves.

From decade to decade, people talk and carry theirselves significantly different.

David: So just to round out this list of questions here.

“Number seven: . . . “ - now we're getting a little racy - “Do they procreate like us humans?”

Corey: Yes. Yes. They seem to enjoy sex very much.

David: Okay.

Corey: They don't always – just like us – they don't always use sex just for procreation, but many of them, they will do what we're starting to do. They will put their genetics into a lab, have them genetically engineered, create this being in a more sterile environment than a womb. That's pretty prevalent.

But there are others that go through the complete birth cycle just like we do.

David: So the gender polarity would be a common element throughout extraterrestrial civilizations?

Corey: Yes. Yes. And, well, there are some species that have male, female and other sexes. It's very strange.

David: Well, I remember Jacob, the space program insider, telling me that his knowledge of the Reptilians was that people are thinking that they're looking at different Reptilian races, whereas he was saying that there are actually six genders that are on what he called a spectrum between fuller male and fuller female, and these areas in between.

And that those beings might appear to be sharply divergent-looking to us in terms of how they appear, . . .

Corey: Yeah, they look different.

David: . . . but that they're actually just on this gender spectrum. Have you ever encountered anything like that?

Corey: Not with the Reptilians, but yeah, with other species they do have more of mammalian-type species. They have a spectrum, I guess you would say, but it's not just male, female. It requires a group effort to procreate.

David: Hm. All right. Well, that's all the time we have for in this episode of taking your questions. I have a lot more here, but that will be for another time.

This is “Cosmic Disclosure”. I'm your host, David Wilcock, bringing you your questions in a live debate here with Corey Goode, so you get to shape our discussion. And keep sending them in. We're going to keep using them. And I want to thank you for watching.

Pushing the Limits of Disclosure Season 7 Episod 13

Cosmic Disclosure; Pushing the Limits of Disclosure with John Lear **Season 7, Episode 13**

28 Mar 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode, and in this episode we are bringing you none other than John Lear, the son of the inventor of the Learjet. And in this first segment, you're going to see him share his background with you.

So without further ado, I bring you John Lear.

* * * * * *

JOHN'S STORY

John Lear: You know, my dad was Bill Lear, and he developed the Learjet. And I was really totally involved in aviation from the beginning. And I flew for different airlines all over the world.

And in 1985, I started getting interested in this UFO thing, which I didn't believe in.

There's a reunion here every once in a while, or every couple of years, here in Las Vegas of Southeast Asia pilots. And [i] talking to one of the guys, and he mentioned that he'd been stationed at Bentwaters.

And I said, “Oh, that's where that saucer supposedly landed.”

And he said, “No, not supposedly, it did. I didn't see it, but I know the guys who did.”

And so I said, “You mean this stuff is real?”

And that's what started me on all this. And then everything I'd run into got me a little bit further.

* * * * * *

David: All right. In our next segment, we're going to get into some of the real meat of this, where we have a classic case in UFO literature.

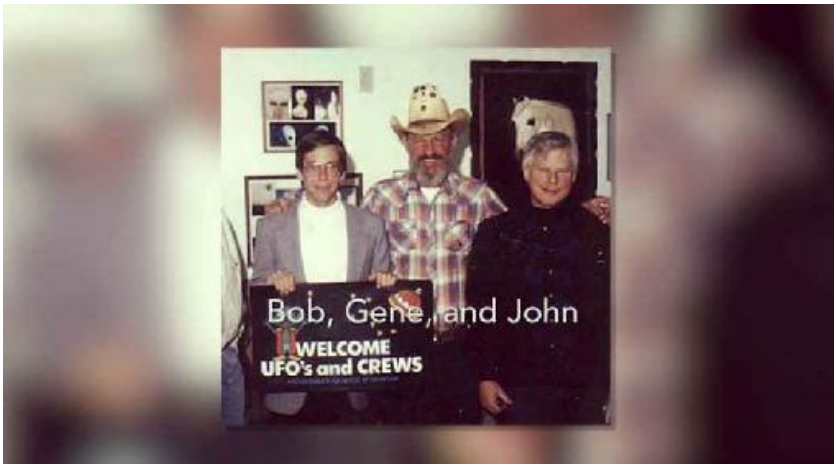
I found out about this I think even before the Internet, because for me, prior to the age of the Internet, you would have to go to the bookstore, and you'd look for the new UFO books. And, of course, all that information is about a year out of date.

But one of the names that came up in those books was always Bob Lazar. Who is Bob Lazar? You're going to find out right now in this next segment. Let's take a look.

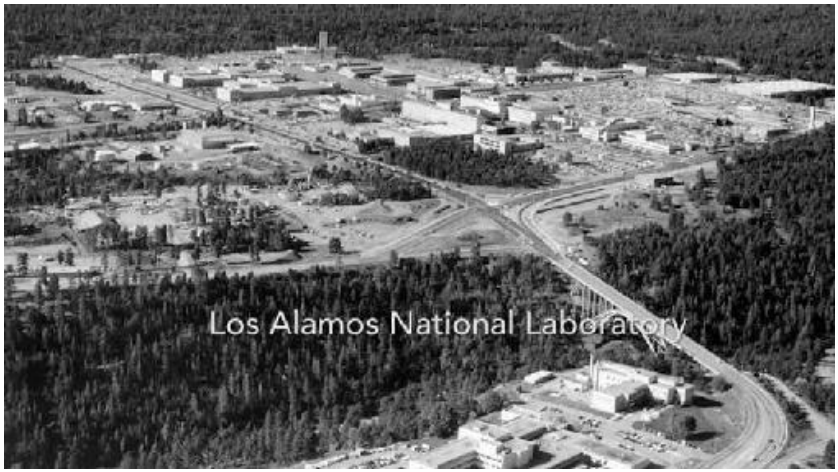
* * * * * *

BEGINNINGS OF AN INSIDER

John Lear: His name was Gene Huff, the appraiser, and we were talking about UFOs.



And Bob Lazar was sitting there rolling his eyes, and he said, “You guys are nuts.” He said, “I worked at Los Alamos. If there had been anything secret like that, I would have known.”



And I've heard that so many times. It's incredibly ignorant people that say, “I would have known.” Ha, ha, ha.

Anyway, during the rest of the summer, we gave Bob enough information that he could check with his friends that still worked at Los Alamos to find out that, well, yeah, something is going on because they do know a lot of stuff.

So he called up Dr. Teller, who he had met at Los Alamos, and said he wanted to re-enter the scientific field. And Teller said, “Do you want to work with me at Livermore here in California, or do you want to work in Nevada?”

Bob said, “I want to work at Area 51.”

Teller said, “Okay, let me get back with you.”

So this was in October of '88, and Bob then, over the next several weeks, got three interviews.

And he'd go down to EG&G, which is Edgerton, Germeshausen, and Grier, and there was a panel, and they interviewed him.

And he aced all the interviews. I mean, he was just right up with everything they wanted to know as far as scientific, and where he'd been, and what he'd studied in college and all that kind of stuff.

The second interview, their first question was, what's your relationship with John Lear? And what else do you do with John?

And so there was definitely interest there.

He used to come over in the evening, and we'd bullshit about what was going on. He said, “I saw a disc today.”

And I said, “What?”

“I saw a disc?”

I said, “Theirs or ours?”

He said, “Theirs.”

I said, “You went to Area 51?”

And he said, “Yeah.”

And I said, “Well, what are you doing here?” I said, “You know they followed you. Why don't you just work for a while, find out what's going on, and THEN talk about it?”

He said, “John, you've taken so much crap over the past few years.” He said, “I wanted to tell you it's true. I was in it. I touched it. It's not ours. It's from billions of light years away or wherever.”

And so that's how I met Bob. And he worked for the next few months.

And he'd tell us when the test flights were going to be, always on a Wednesday night. And we'd drive out there and take photos or videos and stuff.

One of the times, we got caught. And that's when the security guards stopped us within the test site.

We were still on BLM land, and it was legal, but they said, 'We can make it awful difficult for you if you stay here."

So we left and got out on the highway, and that's when the Lincoln County sheriff stopped us.

"Get out of the car; hands up," you know, all that stuff. They wanted to know two things: why are there four people in his car – or five people now – and there was only four when the security stopped you? And Bob had run out in the desert.

And the other thing was, "Where's the 9-millimeter?" Because Bob had said he got the 9-millimeter.

After about an hour, the sheriff – and I used to know his name real well – he said, "I don't know why I've been told this, but I've been told to let you guys go and not to say anything more."

So we drove home, and early the next morning is when Dennis Mariana, the guy that Bob worked for, said, "Bob, don't go to the airplane. I'm going to pick you up. We're going to go up to Indian Springs."

And Indian Springs is now Creech Air Force Base, and that's where the center for all test site security activities are.

And they took him there, took him out of the car with a gun in his ear and said, "Now, Bob, when we gave you this clearance, it didn't mean you were supposed to take all your friends and tell them about the flying saucers." Ha, ha.

So at that time, Bob's wife was having an affair with her flight instructor, which Bob didn't know about, but which they knew about, because they were listening to all his phones.

Everything was tapped – my house, Bob's house, Gene's house, everything.

So they said, “When you get your life straightened out, you're welcome to come back.”

And Bob said the reason he never went back was the fact that the last two trips he made up to Area 51, he could remember getting on the 737 to go to Groom Lake and getting off, but nothing in between – no working, no what he did, none of that. So that bothered him.

He wanted to know what he was going to be working on, but their mind control is so far advanced now.

* * * * * *

David: So, Corey, I wanted to start when he mentioned Edgarton, Germeshausen, and Grier, I think is the name of the EG&G defense contractor.

Corey: EG&G is one of these ICC companies that pops up all over the place.

David: Okay, so they are directly involved in reverse-engineering spacecraft of an advanced nature?

Corey: Yes, yes, working on different components of them.

David: Okay, now, he also mentioned Los Alamos, and some people might be tut-tutting on that one and saying, “Oh, that's just a nuclear facility.”

Are they really only messing around with nuclear weapons there, or is there something more?

Corey: No, there's always other programs being run underneath. I thought it was very interesting when he stated that Bob Lazar rolled his eyes and said, “If there's anything going on there, I would have known about it.”

I had an incident when I worked at the Federal Reserve. One of the guys that worked under me, out of the blue, stands up from his desk, turns to me, and – he was in the Air Force for like eight years – and he said, “I worked at all these places that they say UFOs are being flown at and reverse-engineered.”

And he said, “If this really existed, I would know about it.” And he was just looking at me.

And I was like, “Hmm.”

David: Right.

Corey: So that's a common thing. A lot of people would work all around this type of activity and, because of the compartmentalization, have no idea what's going on.

David: So if he said that after going back to Area 51 a couple times and having no memory of the work that he did there, and Lear is saying the mind control technology has gotten that good, is it possible that he also had experienced things at Los Alamos and had gotten blank slated on that as well?

Corey: He was absolutely blank slated. They had developed the blank slating process way earlier on astronauts, people involved in the space program.

And they were even using some of that in our first nuclear program. They were doing studies and doing mind wipes on people chemically, all different types of methods.

So this is something that goes back to World War II.

David: Okay, now I want to get into Bob Lazar with you in some detail, because the original testimony was extremely fascinating. It shaped my whole career, and he really didn't touch on it at all, but he is the center of how that came into being.

So the first thing I want to throw at you is Element 115. Bob Lazar's testimony was that there was a super heavy, i.e., “transuranic element”, that has an atomic weight of 115, and that that was the source of propulsion for the ship.

Now, at the time those books came out, no one had been able to get that heavy of an element to actually form, but Lazar said that once you get up past, I think it was 112 or 113, that all of a sudden it's not radioactive anymore – it becomes a stable element – but that it's very dense, and all you have to do is shoot protons at it, and it gives off tremendous amounts of energy, and that's how the ship is powered.

And there's a little sphere that the Element 115 is in. It's like a triangle of it. Then there's a tube that goes up, which he called a waveguide. And that this was the propulsion system of the ship.

So I'm wondering if any of that aspect of Lazar's testimony is anything you can comment on or clarify for us?

Corey: Was he saying that the propulsion and the power plant were one and the same?

David: Yes.

Corey: Okay, that would make sense for some of the more advanced extraterrestrial craft. But a lot of them were just using torsion field engines that were very similar to like the Glocke . . .

David: Okay.

Corey: . . . that had a separate power plant that would funnel high amounts of electricity to these torsion drives. And there would usually be three of them on most of these craft.

David: That's a very important part of what Lazar said as well, and I want to get to that in a minute.

Are you familiar with the idea that elements that are super heavy, i.e., with an atomic weight up around 115, could become stable again and non-radioactive, that you could actually hold them without dying?

Corey: The periodic table that was on the wall of various craft I was in when I was working with the scientists had way more than 112 or 114 or 118 elements on it.

David: Really?

Corey: [Shakes head to confirm this.]

David: All right, in this next segment, we're going to get into Lear and his father's aeronautics company's role in developing what we now think of as the Secret Space Program. This is very fascinating. Check it out.

* * * * * *

THE SSP AND THE ISS

John Lear: I know that my father was the prime contractor for antigravity in 1952.

And I've got the papers on that. Unfortunately for him, he couldn't keep his mouth shut.

And he went down to Bogota in 1953 and started talking about UFOs. So as close as he was, they kicked him out of the program, but Lear, Incorporated, still kept with that antigrav stuff.

And I think that was totally complete by 1956, which means we had saucers then – you know, the whole enchilada by then.

Kwajalein is where all the secret stuff goes. All those launches are out in the South Pacific.

And Kwajalein Island, the Ronald Reagan [Ballistic Missile Defense Test Site], they launch probably every other day. There's probably 1,000 astronauts currently qualified that go up all the time.

So I was working ATS, Above Top Secret, or wherever it was, and we were talking about the discrepancies with the shuttle going up and taking 48 hours to get to the ISS, when it only took the Russians an hour.

And then the same thing, when they disengaged from the ISS, why did it take them over 48 hours to come back?

And, of course, what they were doing is . . . and what tipped me off is one of the videos they had when the shuttle got there, they opened the door, and it's only half full.

So what they were doing is taking as much stuff that they could for the astronauts that were doing all the secret stuff, and, of course, the things they had to have like fruit and perishables and stuff. And that had to go up and be unloaded.

And then the Russians would always launch the same day that the shuttle launched. And that stuff that they had in their rocket would be transferred to the shuttle, and when it came back down, the reason it took them two days is they were going to all the different space stations and dropping all the stuff off that the Russians had given.

Which brings me to the Cold War. I think that was all bullshit. There was never any

Cold War. We've always been allied with the Russians.

* * * * * *

David: So, first of all, Corey, John Lear is describing how his father with his aeronautics company apparently was put in charge of developing antigravity, or at least was one of the groups tasked with that.

Corey: Right.

David: And he was essentially excised from the antigravity research, even though his own company was still involved in it. And therefore, he believes that by 1956 that we actually had working flying saucers.

So let's just start with that little piece of data, and what does your experience and background suggest is the truth behind what he just said about this?

Corey: Well, the way you stated it was accurate, because they were . . . like Tompkins was doing. They were seeding this information to many different engineers and companies.

David: Like in these packages?

Corey: In these packages.

David: So could a package include blueprints of working antigravity prototype that then they'd have to reverse-engineer or something like that?

Corey: Yes. I mean, if you have five different groups with five different engineering teams, they all do not come up with the same concept.

Then you have five different or a few different concepts that are being worked on by different teams that are not cross-pollinating or polluting each other.

David: Now, the next thing that he got into was the times, you know, 1952 and 1956, where he thinks we had working prototypes. That sounds pretty close to some of what you said on the show.

Corey: It does, and it's right during the time that all of it was being developed.

David: Now, you'd mentioned before that the U.S. had gotten to a certain point in its own research, but it essentially hit a brick wall, and that, therefore, the Nazi breakaway faction overflights of Washington, D.C., in 1952 that kind of forced a

truce to be made, that the U.S. wanted to do that in part because they needed intel from the Germans to be able to perfect their own antigravity. Is that still true?

Corey: Yes.

David: So what do you think was going on with Lear Aeronautics at this point? Was it only the German influence that then actually got them to perfect that technology by, as he said, 1956?

Corey: From far behind the scenes, this German breakaway group had infiltrated the military-industrial complex. Right after Paperclip, the infiltration had started.

And then after the overflights, and we made the agreement with the Nazi group, then, yes, they infiltrated like crazy after that.

David: Okay, the next thing that Lear talks about is this island that he said approximately 1,000 astronauts that would be working out of Kwajalein and doing space missions. That seems a lot less than some of the stuff that we've talked about.

Is It possible that this might be the MIC Secret Space Program that he's referring to now?

Corey: Yes, that's what it is.

David: So how do those numbers fit with what you've heard about the MIC program?

Corey: Not a whole lot of specifics on the numbers, but there were a number of islands that they were launching these multistage rockets, like old rockets.

David: Oh, wow.

Corey: And they were servicing . . . This is also how they created some of these space stations. Some of these MIC space stations are made out of different stages of rockets that, once they were used to leave orbit, they then ferried these pieces together, sort of welded them together in almost a circle, but more of like a flattened circle.

David: Like an octagon.

Corey: Like an octagon. And they would have like two or three layers of those, and in the middle, they have more of those types, like fuselage or stages of rockets, that are turned the other way.

And then the station spins, creating like a third gravity or something like that. And the shuttles would come and dock at the top of the spoke of the wheel.

David: Oh, so they did use the space shuttle?

Corey: Yeah, they used the space shuttle, conventional rockets, and later on when they started developing these larger, triangular shuttles. They called them shuttles. They had plenty of room to bring all of the food and . . . I mean, you're bringing stuff up, and you're bringing stuff back.

David: So what do you think . . . When he's talking about the space shuttle taking 40 hours to do the same work that the Russians do in one, I guess what you're now doing is you're confirming that that could be work that's being done, just like he said, going through MIC Secret Space Program bases like that.

Corey: Yeah, the space shuttles that we saw as a kid, they would dock with these secret space stations. They were helping build them in the beginning.

As we were developing the shuttle fleet, we see these black triangles. Those are what now service these various space stations, and they have manned satellites that have three to six people that rotate in and out.

David: What were those astronauts thinking they were doing? Was this like Star Wars and defending us against nuclear attacks from Russians, that sort of stuff?

Corey: It's the Star Wars program, SDI.

David: Okay.

Corey: They were all sworn to secrecy. All of the people that were able to make it into the astronaut program, I believe, as we've said before, they were Freemasons, people that they had in other projects in the military, and had proven that they could keep their mouth shut – not to mention that they also used blank slating on them quite a bit.

David: All right, we have another segment from Lear now in which he describes some of his own intel about this mysterious, enigmatic base out there in the middle of nowhere in the Southwest. Let's take a look.

* * * * * *

WORKING WITH ETs

John Lear: I always tell this story about the Area 51. They hired a security guard when they were first cranking up, and he was supposed to sit at one of these hallway intersections.

One of the praying mantises comes walking down like this [John sways his shoulders from side to side], and the guard looks at him and has a heart attack and dies.

So what they did is they were more careful now. Over a period of three or four weeks, they flash different photos so that they didn't get so scared when one of these things walks down the hallway.

Joe Resnick was telling me he was working in a laboratory with a Reptilian. And he said they look just like us, and the only difference was they would close the inner eyelid every once in a while. And it would shock him every time they did that. They had two sets of eyelids.

* * * * * *

David: All right, so let's pick up on the second part first. He's describing a Reptilian that he says looks just like us except for a nictitating membrane in the eye.

That doesn't exactly sound like the same type of Reptilians that you've been talking about. So why do you think that human-looking of a being would be called a Reptilian? What do you think was going on there?

Corey: There are a number of different types of Reptilian types of beings that we've talked about.

David: Sure.

Corey: But this could be even a hybrid for all we know, a human hybrid with a Reptilian.

David: Since you've personally seen a whole bunch of different types of ETs, did you see any that had a nictitating membrane like what he described?

Corey: There are a lot of different beings, especially the aquatics, that have a membrane that goes this way [Corey uses two fingers in front of his eye and moves them together and apart horizontally], and then they have an eyelid that goes this way [Corey positions his thumb and forefinger in front of his eye and moves them together and apart vertically].

David: So this kind of gets into the other thing, where he's talking about the mantis being. I guess there is a kind of a psychological shock that you're going to face when confronted with extraterrestrial life like this.

Corey: It's very rare that they're going to just put a person that's not acclimated to nonterrestrials in a situation with nonterrestrials.

In the beginning, they'll show pictures of dead nonterrestrials to them, show like a video clip. Then they'll get to see a dead one. And then they just slowly acclimate them to interacting with these nonterrestrials.

They did a lot of testing to see how people would take Disclosure, and often they would be military personnel that they would expose to nonterrestrials, and it was never a good reaction.

David: Are the mantis beings one of the most difficult types for us to see?

Corey: The Mantis and the Reptilians. There is a programmed visceral reaction. I don't care who you are, how advanced you think you are. When you first see these beings, your body, before your mind has a chance to process it, your body has some sort of a strange visceral reaction.

David: Pete also has described the sound of the sliding of the chitin as you are around one of these mantis beings, that even the sound of their bodies moving is like very disturbing and makes you feel tense, even if you don't see them.

Did you ever experience that?

Corey: Yeah. There are a number of beings that they would have kind of like an insectoid-type outer exoskeleton. And they would make noises or sound almost like fingernail kind of sounds, just strange kind of sounds, but it wasn't really that

disturbing to me.

David: All right, so in this next clip, we're going to have some really contentious information about the idea of the nature of our Solar System.

Wait until you hear what Corey has to say, because even though this may seem hard to believe, there is some compelling insider testimony to back up what Lear is about to tell us. Let's take a look.

* * * * * *

OUR STAR SYSTEM: REVISED

John Lear: Our star system with the Sun and allegedly the nine planets – there's really 40 planets. And many of them are hidden so that we can't see them for various reasons. And they want to keep that all secret, but there is so much going on between all of the 40 planets, their moons, their satellites.

Carl Sagan would say, “Yeah, well, there's probably aliens, but they're millions of years away.”

No, they aren't. They're right on Earth. Probably 25% of the population, Earth's population, is aliens. Of course, we're aliens, too, but . . .

* * * * * *

David: So let's talk about this. Is it possible that there are these other planets out there?

Corey: Well, there are other planets and planetoids, some of them within and beyond the Kuiper Belt. They call them “Kuiper Belt objects”.

Some of them are being detected. Gravitational anomalies are being detected. And astronomers are beginning to say, “Yeah, there's something out there.”

But some of the planets, just like Pluto – I think Pluto is like 17 degrees off the ecliptic plane in its odd orbit . . .

David: Right. It's the only “planet” or planetoid that's offset in the official record.

Corey: Right. And we've got a pretty messy Solar System. There are other planets and planetoids that are in strange orbits off the ecliptic plane.

David: And he mentioned that they have satellites around them, meaning moons as well.

Corey: Yeah.

David: So is that true based on your experience?

Corey: Yes. I mean, they have a gravitational pull of their own. Some of them have many objects that are similar to moons that orbit them. But there are a large number of objects out there yet for conventional astronomy to discover.

David: You'd mentioned before that the SSP Alliance has a presence out in the Kuiper Belt. Are all of these different planets that we're now talking about, planets and satellites, being occupied in various ways? Is all the real estate essentially being used in some form or another?

Corey: They've all either been occupied in the past or are being occupied now, by both our space fleet, as well as nonterrestrials.

David: So the other thing that he discussed was the idea that 25% of the actual inhabitants of Earth – and this might not include anybody on the surface, would be my assumption – 25% could be extraterrestrial. How does that kind of a percentage estimate line up with what your intel would suggest about, let's say, Draco in Antarctica, Inner Earth civilizations, that kind of thing?

Corey: Well, to me it sounded like he was saying that they were living amongst us, just like us . . .

David: Hmm.

Corey: . . . 25% of the population. The amount of Draco and other beings that are below certain areas of our planet far exceeds that.

I have not heard any intel that stated that there were that many nonterrestrials living amongst us as us.

David: Right.

Corey: What he did say also is that we are all ETs, which is true. A lot of people talk, "I think I'm a hybrid." Yeah, you are. We're all hybrids. We're all genetic experiments, and we have genetic stock from all over the cosmos.

David: All right, so now we have another segment for you in which Lear is going to

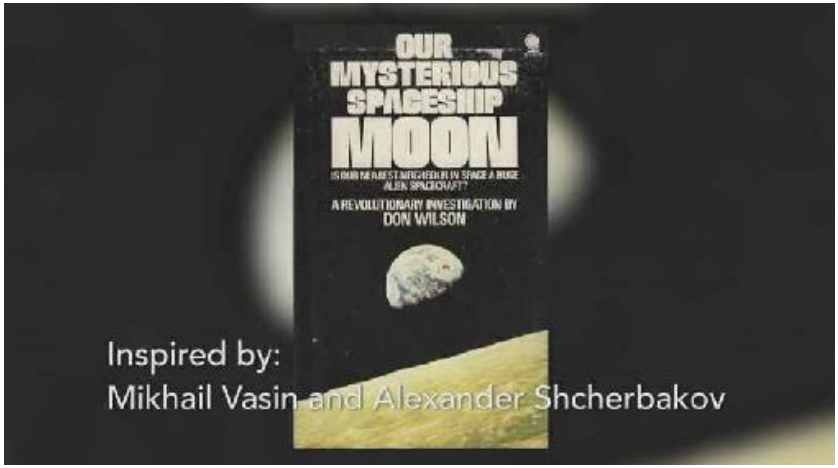
describe his own intel surrounding the Moon.

It's a little different than what I've heard and what Corey has heard, but rather than argue about it, we just want to try to find some common ground here. So let's take a look.

* * * * * *

THE MEN ON THE MOON

John Lear: The Moon is artificial. The two Russians that wrote the book about being a spacecraft, they were right on. It was.



And there's all kinds of stuff inside the Moon, and yeah, it's artificial.

To monitor us about what's going on, they, you know, the humans that live there, are completely separate with the Greys that have the laboratories up there.

I estimate there's probably a quarter of a million people on the Moon right now. They're not humans like us, but humans from somewhere else.

And we used to think that the Greys would pick up one in 10. No, they pick up EVERYBODY. And they do it all the time, and they give them updated programs and things like that.

And fantastic laboratories they have up there. And we figure there's 7 billion people on Earth. That's a lot of trips.

And it's said that if they ever showed themselves without the cloaking, the sky would be black all day long with the ships going back and forth, taking all the different people back and forth and doing all the tests and stuff.

* * * * * *

David: When Lear was describing the Moon being artificial, this, of course, is something you've discussed many times. So did you have any additional thoughts on that part of what he had to say regarding the idea that there could be, he believed, potentially a quarter million people living on the moon?

Seems like from some of the stuff we've been talking about, it might be a lot more than a quarter million.

Corey: It very likely is many times that.

David: Hm.

Corey: Yeah, the Moon is so developed out, especially on the inside, as he was saying.

David: There is a very strong claim being made here that everyone on Earth is being subject to these abductions by Greys. I'm not sure where he heard this from, but it doesn't seem like that lines up with what I've heard from other insiders. And I'm curious about what your experience of that type of information would be.

Corey: Well, there are a large number of abductions that occur by other beings other than the Greys.

David: Sure.

Corey: You know, there's a grand experiment going on down here, and there are a large number of people that are being abducted. But it's not everyone. I mean, just the logistics of that.

Also, he mentioned that the skies would be full of craft if they were not cloaked. That is . . . it wouldn't be black, but we would see an amazing amount of air traffic if they weren't cloaked, both our own craft and theirs.

David: Are their highway type of things or conduits that the craft go in? It's not just

totally scattered all over the sky like insects?

Corey: Right. They have flight corridors that they fly in. Even the Anshar, they have to fly within certain flight corridors.

But these craft are flying so fast, they could be flying all around, and you're not going to see them if they are uncloaked unless they stop or are going really slow.

They're moving way faster, you know, thousands of frames per second. But there is a lot of traffic in these corridors.

David: All right. Well, this has been a really fascinating journey into the testimony of John Lear, the son of the amazing aeronautics pioneer, Lear himself, the guy responsible for what we call the Learjet today.

This is “Cosmic Disclosure”, and I hope you've enjoyed it. I know I have. I'm here with Corey Goode, and we'll see you next time here on Gaia. Thanks for watching.

Secrets of the Apollo Missions William Tompkins Season 7 Episod 14

[Cosmic Disclosure; Secrets of the Apollo Missions with William Tompkins](#) **Season 7, Episode 14**

04 Apr 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode.

So what we're going to start out with here is a segment in which [William] Tompkins is exploring the very contentious Freemason connection to all of this. Let's take a look.

* * * * * *

THE FREEMASON CONNECTION

William Tompkins: If you take me working in the secret think tank at Douglas, okay, the only two people that'd know that's even there at Douglas is the Vice President of Engineering and Dr. Klemperer.

When we had meetings with Navy admirals there on the programs, or when we had meetings of other top officials, or when we were doing design review meetings of our own people, because we had a lot of people in that group, the subject would get to a point where there was no answer.

And then I would come up with an answer.

The Vice President of Engineering would always throw this in. He said, “Bill, you

approach everything," meaning this subject and other stuff, "you look at it as if you're not from here at all."

I've had that stated to me hundreds of times by different people.

All I can say is, my dad was a 33-level Freemason. Okay? My uncle Harding was Chief Surgeon, Santa Monica Hospital – a lot of money, big house, spent every cent that he had digging through the insides of the pyramids trying to decipher the hieroglyphics. That's what he's trying to do. [He] has three daughters, my aunts.

We lived in that house for almost a year. And what are we doing?

There is a chair that he has next to the fireplace in that house. The chair is almost five-feet wide, wood chair, all covered with hieroglyphics.

And some people said that it was King Tut's chair. Well, that's a good thing to call it, but yeah, it came from one of the kings.

I don't know how he smuggled it out of the country, but he smuggled a whole lot of stuff out of that country. And he disseminated it to top research people in the United States.

So once again, who was Uncle Harding? A 33-level Freemason, okay?

And all I'm saying is there's a whole lot of stuff that we're not involved in, we don't understand.

* * * * * *

David: So, Corey, the first thing that he said is that everybody there acted as if he wasn't from here. These answers that he would come up with for seemingly ponderous questions no one could answer were suggesting, it appears from what he's saying, and if you read his book, that he had some sort of telepathic knowledge or some sort of deeper wisdom.

So regarding this concept of extraterrestrial lineage or extraterrestrial consciousness, is that possible, and do you think that that could be what's going on with Tompkins?

Corey Goode: It could be a number of things. It could be that he incarnated here from another extraterrestrial soul group, possibly these Nordics that he's talking about.

David: Uh hm.

Corey: Or he is in conscious and unconscious telepathic communication with them.

David: Which he does describe in his book . . .

Corey: Right.

David: . . . conscious communication with Nordics.

Corey: And I've experienced that myself.

David: So when he described this question of Uncle Harding being a 33rd degree Mason and also the head of the Santa Monica Hospital, taking all of his excess money and plundering out artifacts from the pyramids, some people might find that hard to believe.

They would think that there's very tight government regulations on those artifacts and where they go. Is that not true?

Corey: Not back then.

David: Okay.

Corey: It was very common for people to “do archaeology”. They called it archaeology, but it was basically just tearing up archaeological sites, looting it for trinkets that they would sell or take home to sell to a museum.

David: So you think that there actually could be artifacts as amazing as a five-foot wide chair covered with hieroglyphics just sitting in somebody's house?

Corey: Oh, absolutely, yes. There are large private collections of very important artifacts.

David: Why do you think Freemasons would be interested in this stuff?

Corey: As you know, or many may not know, everyone, in order to be involved in the civilian space program, were required to be Masons.

Masons are “keepers of knowledge”, and if they're getting these ancient wisdom teachings through their various teachings and all these things they have to memorize, what they have to memorize is just crazy.

If you've proven yourself that you're able to keep these tenets and secrets, then you're trusted with many more.

David: Right.

Corey: And you're already a part of an organization that is being managed.

David: And in case somebody doesn't know, what are the penalties for spilling Masonic secrets if you become an initiate?

Corey: Death.

David: Yeah, so it's a very intense rite of passage to be able to get somebody's confidentiality and a sense that you can trust them with secrecy.

Corey: They take it very seriously.

David: So why do you think he mentioned his father and this uncle being 33rd degree Masons when he discussed the idea that he might be an extraterrestrial soul?

Corey: A lot of these societies trace back their lineage to nonterrestrials that came to this planet thousands of years ago. And that, too, is very important to them, being able to trace this lineage.

While tracing the lineage, they're also tracing the history of the lineage. And all of this information, well, some of this information is going to be available to certain Masons.

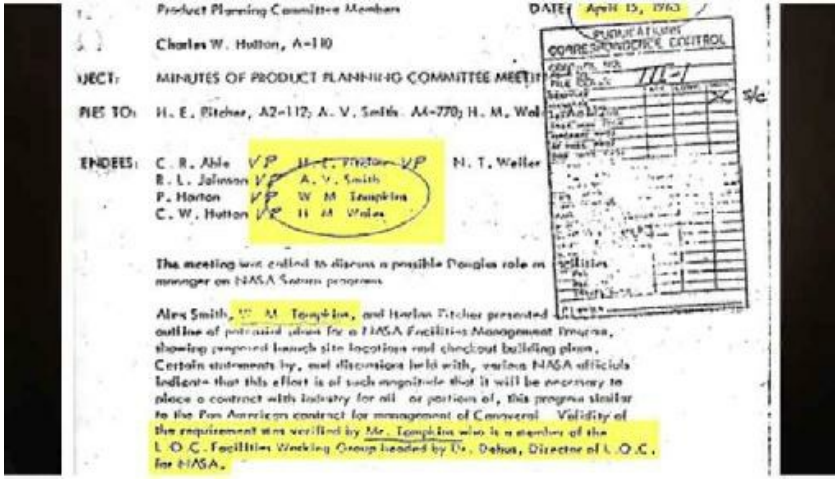
And apparently his uncle had heard enough of this information that he felt compelled to spend his own fortune to try to answer some of the questions for himself.

David: All right, now in this next segment, what we're going to have for you is a further discussion of Freemasonry as it applies to something very interesting that you might not have thought of before. Let's take a look.

* * * * * *

REWRITING THE APOLLO MISSION

William Tompkins: So now I am Engineering Section Chief at Douglas on the Apollo program, and I had 173 engineers and designers and scientists, actually 11 PhDs.



Product Planning Committee Members

DATE: April 15, 1963

Charles W. Hutton, A-110

SUBJECT: MINUTES OF PRODUCT PLANNING COMMITTEE MEETING

FILES TO: H. E. Pitcher, A2-112; A. V. Smith A4-770; H. M. Wol

ATTENDEES: C. R. Able VP H. E. Pitcher VP N. T. Weller
R. L. Johnson VP A. V. Smith
P. Horton VP W. M. Tompkins
C. W. Hutton VP H. M. Wolen

CLASSIFICATION CORRESPONDENCE CONTROL

The meeting was called to discuss a possible Douglas role as manager on NASA Saturn programs.

Alex Smith, W. M. Tompkins, and Harlan Pitcher presented an outline of potential plans for a NASA Facilities Management Program, showing proposed launch site locations and checkout building plans. Certain statements by, and discussions held with, various NASA officials indicate that this effort is of such magnitude that it will be necessary to place a contract with industry for all or portion of, this program similar to the Pan American contract for management of Canaveral. Validity of the requirement was verified by Mr. Tompkins who is a member of the L.O.C. Facilities Working Group headed by Dr. Debus, Director of L.O.C. for NASA.

And I make the suggestion. These guys take it and run with it. Okay? Best group of engineers on the planet, top guys.

And we put together a whole new NASA program for the Moon. Threw out everything that NASA had done, came up with a whole new one. Okay?

I submit it to the heads of engineering. They submit it to marketing, and marketing talks to the manufacturing people, and they try to fire me. Okay? Because manufacturing wants to manufacture. They don't want to do this engineering stuff at all. Okay?

I don't get fired. I get authorized to go ahead and do this. But marketing, . . . they wouldn't do it. So the Vice President of Engineering said, “Secretly, we're going to do this ourselves.”

So I put the stuff together. I have a six-foot by six-foot model of the new NASA mission command center – looks just like a big theater with step-down seating, screens on the wall.

So I put it on to a brand-new DC-7 and all my documentation, and I fly down to the secret Redstone Arsenal, secret space station, where all the Germans and where NASA is.

And I rent a truck. And I'm in a three-piece business suit. I rent this truck, and it's got all these gears that I've never run.

And I drive this thing with a box in it into this secret area. Okay?

But what's interesting is that my secretary writes me a letter which will get me to the top man in Redstone Arsenal, but she tells me I'm not going to need it.

And as I'm driving up, she tells me telepathically, “Don't worry, Billy, the gates are going to open.”

So I'm driving in, and these great big gates open, and I drive right on in, past an enormous area on the side with dozens and dozens of trucks and cars and automobiles and equipment, where everybody has to go through security to check everything you've got in that truck, get permission to take it in, and all that stuff.

So I drive right through the gate. The gate opens.

I drive in that thing and start looking for von Braun's office myself. I go through the traffic of the base. Okay.

I get to the base, finally the tower. The four security guards of the building come down. They put their rifles next to the building door.

They're coming down the stairway with a great big enormous dolly. This dolly has

four wheels. They all carry it down the steps. They roll it over to my truck. They take the bars and the side bars, wooden bars, off the side of the truck. They take my model and move it over to a dolly.

Where did the dolly come from? Why was the dolly there?

They push the model in on the big dolly, back into a bunch of offices, down a hallway. The elevator door – quite large door, elevator – opens up with three other elevators on the side of the center one. The doors open up. They push this in.

I walk in with my satchel full of my data. We go up to the top floor. The doors open.

They, not saying a word, push this dolly into the lobby area. Those doors opened up.

We went into the first big office area with all of von Braun's people on this side and Dr. Debus people on that side.

The doors into this great big conference room open up. They park the dolly. They open up the box.

They pick this model up that's got . . . it's covered with this soft blue cloth. They set it on the blue cloth in the conference room.

Dr. Debus' secretary and Dr. von Braun's secretary come over to me.

The four guards take this dolly. They roll it back out. They click their heels, and they salute, and it goes downstairs.

Now, remember, I haven't said a word to anybody. I came on board this facility without any piece of paper. I've come in. I haven't talked to anybody. And both of them already know that I'm here now.

So Debus' secretary said that Dr. Debus will be here in just a moment, and Dr. von Braun will be here too.

Debus came out of his conference room, and he introduced himself to me. And von Braun came out of the other conference room, and he introduced himself to me too.

So now they've got this great big blue thing in the middle of their shiny conference room table.

I said, “I'm William Tompkins. I come from Douglas, and I have a proposal that we'd like to present to you on some changes we feel are necessary for the Apollo to get to the Moon.”

Nobody stops me. Several of von Braun's people come in and sit behind him on his table. Debus' people sit with him. Both of the secretaries sit down, and I start talking.

And at the right point, I pull this cloth off, and I show them what you and everybody else on the planet has seen, which is Complex 39's launch control system, where you've seen Dr. von Braun sitting up at the top and all the engineers and everybody watching the stuff on the screen.

So I have a model of this, and what took place was they both heard my pitch. It took me about 40 minutes on the pitch, and von Braun shook my hand and said, “We need to get together.”

And Debus shook my hand, put his arms around me, and he took me to every top guy in NASA there, introduced me as some sort of genius.

* * * * * *

David: So once again here, what we are seeing is an extremely valuable historical document showing us how one of the most highly regarded and beloved images associated with the Apollo missions and our trips to the Moon, what he's calling Complex 39, what most people would just think of as Mission Control, was actually something that he himself designed, going against the will of the manufacturing crew, who just wanted to manufacture.

So why do you think he said that he would get such a backlash and that manufacturing just wants to manufacture?

Like what were you hearing when he's describing this ping pong juxtaposition between engineering and manufacturing?

Corey: A lot of these engineers, they don't like to be pulled off of what they were doing or working on for a long period of time and be put on a special project. A lot of them will resent it.

They are now reporting to people that they didn't report to out of their core group. They would just rather have things status quo. And that's the way engineers are.

You don't want to shake things up with them too much, or it will affect their work.

David: So the people that were in what he's calling “manufacturing” were engineers, but they were specialists in a particular category.

Corey: Right, you'll have engineers, and then you have technicians, who are basically engineers and just as smart as the engineers that are actually putting into practice what the engineers have designed.

David: Is it possible that there are certain cases in a highly secure military facility where somebody would get clearance to be able to bypass the normal security checkpoints as he's describing?

Corey: In very rare circumstances. Back in the '40s, similar things happened with the delivery of the nuclear . . . of transport of the nuclear weapons.

They would go in through a side gate or right through the front gate. The sentries would be told ahead of time, “This vehicle's coming at approximately this time. Wave them through.”

David: Now, last time we saw a segment in which he was describing the actual development of the German V-2 rockets. I mean, he didn't call them that at the time, but that there was a nuclear-type of capability is what he was implying that they were

working on that, and that those missiles were then directly implemented into the development of the Apollo program, that same German technology – von Braun, of course, being German.

Corey: Right. These aren't the V-2s. These were actual multistage ICBMs that they were already developing . . .

David: Oh, really?

Corey: . . . on the board developing at the time. So von Braun came in with that knowledge. So making multiple-stage rockets was something that he already had put a lot of time and effort into engineering.

David: All right, so the next segment that we have for you is another very interesting one in which this really amazing man is describing that there was a lot more going on with the Apollo missions than just landing on a dead old dry piece of rocks with nothing to see. Let's take a look.

* * * * * *

ONE SMALL STEP

William Tompkins: First phase was to get up there, pick up the rocks, take the pictures and get back, okay?

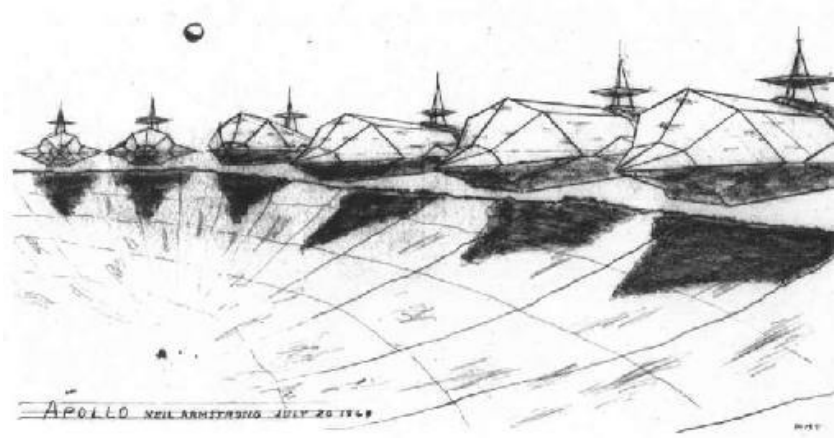
So we get there. We got all these vehicles all around the rim, and one of those nearly

push us out of orbit to even get in there halfway to the Moon. It came right up next to us. Okay?

And so the public didn't hear the conversation, “The damn thing's almost going to hit us!”

Communication, Mission Control, right out of the vehicle. And so you get there, but you've spun around several times. You've taken all your pictures of all the stuff that's already there. You know where you want to be.

And then, as you make your first run, here's all these vehicles coming in – great big massive things.



And they go park around the rim of where you got to land! Holy cats!

So you land. You do your . . . We have to do our thing.

And then the guy says, “Okay, go ahead and pick up some more rocks. And I know you have a problem, so do two or three of your additional missions, and don't come back. Period.”

* * * * * *

David: So what do you think was going on there? I mean, Tompkins is presenting it from the eyewitness perspective. What's the insider perspective on this story that we just heard here?

Corey: The Apollo crew landed in an area that was sensitive to the Reptilians. They came out and surrounded the rim of the . . .

David: “They” the Reptilians came out?

Corey: The Reptilians came out in a number of large ships to intimidate.

David: I see.

Corey: And when the astronauts gathered the rocks, did a few of their experiments, and then went to leave orbit, one of these vessels escorted them.

David: So when Tompkins is saying, “The guy told us not to come back. Just get a few samples and go”, who do you think he means by “the guy”?

Is he talking about Mission Control, or is he talking about extraterrestrials, or what do you think he was driving at?

Corey: Apparently, one of these nonterrestrials, either a Reptilian or not, told them that they needed to leave and not come back. It could very well have been even a Nordic telling them, “Hey, you need to get out of there. Do what you need to do, and then don't come back.”

David: Some people watching this who are not more familiar with this type of disclosure could be experiencing what in psychology we'd call cognitive dissonance about the idea that something this big could have happened on the Apollo landing, where Neil Armstrong seemed pretty happy when he's saying “One small step for man. One giant leap for mankind.”

You know, we have film. We have photos of what's going on down there.

Corey: He probably was quite happy at that time. That was . . . And then later on, all of a sudden you've got these intimidating-looking craft that are ginormous surrounding the crater you're in. That's probably going to change your tone a little bit.

David: A lot of skeptics would assume that this is completely ridiculous – the idea that, “Oh, well, of course, the astronauts would have talked. Of course, we would have known about this. Of course, they would have captured it on film, or somebody would have squealed, or something would have leaked out.”

How do you answer that?

Corey: That's what the blank slating process is for. I've heard many a story of

astronauts that will have no memory of their mission, or very little memory of their missions.

So a lot of them, they're having their memories manipulated.

David: Bob Masters, who was the husband of Jean Houston, the famous female celebrity, actually tried to hypnotize Edgar Mitchell after his Moon missions and spent 40 hours trying to hypnotize Edgar Mitchell.

And Edgar Mitchell was never able to remember a single thing that happened to him when he was on the lunar surface.

Is that what might have happened to Edgar Mitchell?

Corey: It sounds like that might exactly be what happened to him.

David: Skeptics might say, “Come on, man, that there was live video feed coming in from the landing on the Moon.” How could these ships have not been seen?

Corey: You have at least a two-minute delay, and then you also have the medical channel that they would go to to discuss things that were not for the ears of the public.

David: So, in other words, if we have Germans who were brought over here to build NASA that have oaths of secrecy that they're keeping and maintaining, they would have designed this from the beginning knowing that there was going to be things they didn't want us to see and make absolutely sure that we only saw the version of reality that they wanted us to get. Would you agree with that?

Corey: I would agree.

David: All right, what we're going to see now in this next segment is another very interesting historical document suggesting that Tompkins may have had a pivotal role in the development of the very secret space program business model that Corey actually was involved with as a functional profit-making enterprise in our Solar System. Let's take a look.

* * * * * *

INTERPLANETARY CORPORATE CONGLOMERATE

William Tompkins: I get fired from Douglas for going to Apollo and von Braun and changing the program. I get fired on a Friday.

And Saturday night, my secretary calls me and tells me, “Okay, Billy, I've talked to Dr. Debus, and he wants you to talk to Dr. so-and-so at the corporate office of North American over at LAX.”

So I call Dr. Debus, and he has made arrangement for me to take a position in the corporate office of North American in advanced space programs, vehicles, and over propulsion system programs at Rocketdyne.

Anyway, they're the ones that build these great big space shuttles, and everybody see them. So now I'm an adviser to these guys. I bring my stuff with me, a lot of it, from Douglas to my offices in North American.

I put together a rough of a plan how to design and build commercial spaceships which could go out into the Solar System and set up facilities on local solar system planets to learn how to mine some particular mineral here on the planets as a learning program to go out into the galaxy as business and commercial and operate from another star's planet with large corporations, all private, nonmilitary, to not just go look for mining, but virtually any subject we can come up with – commercial, interface, commercial.

But they had far more important things to do, and so we didn't get involved . . . I didn't get involved with developing that. But other people took it over later on, and they implemented the program.

2003, they had their facilities run in two different locations, one on Mars and one on another planet off of the second star, closest star.

They're mining now. They're mining, and they're commercially operating – North American, a company here in Los Angeles, okay, still the same company as it was way back doing rocket engines and space shuttles and all this other stuff.

So they took that concept, used it, used it for commercial operations, which is what we wanted to do way back when we were trying to start this. Okay?

But they took the time. They brought the people in, and they did the commercial stuff, and they're doing it now. They're successfully operating.

What I'm trying to say is there's maybe as many as 25, 28 companies here on this planet that are operating commercial operations out in the galaxy.

* * * * * *

David: All right, so, Corey, what we're seeing here is really fascinating, the idea that Tompkins may have actually been the first person, at least in the West – we don't know about the German side – to have considered the possibility of using this not just as a Reptilian invasion force, but to develop a commercial mining industry and production industry out in space.

Corey: Well, yes, the Germans were already exploiting the military aspect of it to fly

alongside the Draco. The U.S. Navy and parts of the U.S. government were developing a counterbalance of power against this German fleet that was being developed to fight alongside the Draco.

And basically, we were going to be doing the same thing with these Nordics, fighting alongside them, fighting the Draco. So that . . .

David: So do you think it's possible that his historic role could be confirmed by this, that perhaps up until the time that he had that idea, that no one had actually been thinking about this as a potential business that money could be earned from, or profit in some other form?

Corey: The moment they develop the technologies, they start various think tanks to come up with ways to exploit it for commercial and military purposes. So he was probably just one think tank.

David: And he described that there were 23 to 28 industries, I believe is what he said.

Corey: Companies.

David: Companies here on Earth that were all involved in this industrial manufacturing in our Solar System and outside our Solar System. How does that number jive with what you've heard?

Corey: It's much larger than that, but that could be probably the core companies that started what we are calling the Interplanetary Corporate Conglomerate. They could have been the first businesses to begin this program.

David: Another thing that I feel we need to cover here is he mentioned in 2003 that there was a mining facility on Mars and another one in one of the two closest stars to our solar system.

That is certainly a lot smaller than what we've talked about with you on the show before, so . . .

Corey: Yes, that is much smaller in scale compared to what we're actually doing out there. We're mining the Asteroid Belt. We're mining various planets for minerals, and we have a number of mining operations on Mars.

David: What's your knowledge of how many sites there are where commercial adaptations are taking place outside our Solar System?

Corey: There are a number of them. They're usually Draco-controlled worlds that

they've allowed us mining rights, I guess you would say.

We've gone into other star systems in our local star cluster to look for minerals, and when we got there, we were turned away by the inhabitants.

David: Probably violently, I would assume.

Corey: Well, you know, we don't have a real good reputation running around with the Reptilians, around the cosmos, causing problems.

David: Right. All right, well this has been another fascinating glimpse through the pages of history.

William Tompkins, a true American hero, coming from the very highest levels of the World War II military-industrial complex secret space program apparatus in its origin.

And now we have the opportunity to connect the dots. And I hope that you're seeing, just like I am, how beautifully all of these threads line up, and that we are, in fact, talking about something that is true, and in time will become public knowledge and will dramatically transform every aspect of life on Earth and in our galaxy as we know it.

I'm David Wilcock here with Corey Goode and our special guest, William Tompkins. This is “Cosmic Disclosure” on Gaia, and I thank you for watching.

Viewer Questions Part 7 Season 7, Episode 15

[Cosmic Disclosure; Viewer Questions Part 7] Season 7, Episode 15

11 Apr 2017

David Wilcock: Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, our insider's insider. How are you doing, Corey?

Corey Goode: Doing well, thank you.

David: Welcome back to the show. All right, first question is from Schmitz_K, and it is as follows:

“Love the viewer questions. I also have a question of my own. Do the SSP vessels produce gravity or are they a zero G environment? And is gravity severely reduced in the LOC?”

Was there gravity when you were on the ship?

Corey: Yes. They have plates on the floor that create a gravitational field, but also within the bubble of the torsion field, it creates an environment to where they can control the gravity better for some reason.

Now, the lower level SSPs, they don't have all of the artificial gravity. So you'll see the monkey bars on the ceiling that you use, you know, for getting around.

David: Oh. If we go back to the German Bell craft, did they have zero G environment when they were flying in those?

Corey: Yes.

David: They did?

Corey: Yeah.

David: The second half of the question was about the LOC. Is there severely reduced gravity in the LOC? I guess they're thinking about the Moon's gravity being less than ours and how the astronauts supposedly bouncing around.

Corey: Right. On the LOC, there was one G of gravity.

David: Oh.

Corey: Now, there are some of the other surface bases that they have that we haven't talked about so much where there is no gravity.

David: Oh, no gravity?

Corey: No gravity, except for, well, the Moon's natural gravity.

David: Right, okay.

Corey: Right.

David: Okay. We have a question from Marcus O., and it is:

“I would like to hear Corey going into more about the work he's done on himself, also more on his high vibratory diet and what work exactly we could be doing on ourselves. I understand that he doesn't want to come across as a leader, and that we shouldn't be 'following him', but some of us would like advice and extra information.

“For people who are trying, i.e. with diet and meditation, what would be some good suggestions for both? It would be nice to hear more about the work we should be doing for this conscious renaissance.”

Corey: Well, there is a component to this situation that I'm having my vibratory state augmented just by being in the presence of some of these higher vibratory beings.

David: [David shakes his head in agreement.]

Corey: And I'm getting personal one-on-one advice from them, and it's very uncomfortable advice. About 80% of my communications with them involve them shining lights where I've refused to shine lights.

David: So for somebody who isn't having beings show up in the room with them and giving them a higher vibration just by being in their presence, what are some of the practical steps of people actually achieving that forgiveness?

Corey: Less looking out here for solutions and a lot of introspection. We all have the traumas in life that we think we've put behind us. We don't have to deal with them anymore.

Well, it's time that we start, you know, digging them up, holding them up to the light, and, you know, doing the hard work. This has been very difficult.

A lot of people are like, you know, "You're getting this one-on-one contact. How lucky are you."

It's very, very difficult. It's demoralizing at times.

My ego has been so, I guess, massaged in – not in a way to make it bigger but to make me more humble.

Anytime you begin to think highly of yourself, they come, "Wait a minute. Look at this, this and this."

And you know, it puts you back in your place and puts you back on the path.

David: So the question also revolved around dietary issues, and there's another one that we have in here, I think, that is going to cover that as well.

So he was specifically saying he's already trying to do a healthy diet, but what are some of the suggestions that might be of assistance?

Corey: Well, that is definitely a process as well. One of the things I was being told, especially by Tear-Eir, was that I was not practicing what I was preaching.

I was talking about high vibration diets, going home and eating corn dogs and all these nitrates, . . .

David: Right.

Corey: . . . and it was wreaking havoc on my body. I mean, you can see from the first

season, you know, how unhealthy I looked.

David: It's amazing, the transformation of how much you've changed. And it really did seem like once you had that contact with Ka'Aree, and you touched her hands, and then you had this mind-meld that something really triggered in you at that point.

Corey: You know, it's a difficult path. Each person's path is different.

I mean, you have to deal with your old traumas. You have to deal with your current behavior that is destructive.

If you don't do that, no matter how spiritually advanced you think you are, you're just deluding yourself.

You have to work and take care of all these little earthly issues that are acting like a parachute to hold you back.

David: So since the question also related to diet, I want to bring up the subject of the weapons system, something that several insiders have talked to me about, the idea that the Cabal itself actually has put in certain ingredients in food that is intended to reduce lifespan, decrease happiness, increase weight, all this kind of stuff.

So are you personally aware of the idea that the food system that we have is being weaponized in certain ways?

Corey: Yeah, our entire environment has been weaponized against us. That's why we've got to mitigate all of those weapons as much as we can.

And in my case, I ended up moving to a vegetarian diet. I was pretty much forced to by getting food poisoning.

David: Right.

Corey: So I was real slow to start practicing what I was preaching.

David: Okay, so the next question is from Sedona Visionary, and it says:

“Corey has mentioned more than once that he uses a technique for releasing negative entities from his energy field. I would really like to know the how-tos. I know he said he does it using the name of Jesus Christ, but there must be a little more to it than that that would be helpful for people watching this show to use.”

Corey: Once I realized that I did have entity attachments, I went back, of course, to

my background and how I was raised, and I called on the name of Jesus and it worked. They just fled the scene of the crime.

David: Right.

Corey: Later on, I was reinfected with entities by Mara, one of the Inner Earth people that had visited me without my permission.

David: The negative being, in this case.

Corey: Right. In that case, Ka'Aree removed them with some sort of tone from a crystal, and they fled exactly in the same way.

I guess the power that I assigned to the name of Jesus gave it some sort of a vibrational strength with my will and my belief that the name of Jesus would clear me.

So I say that because the tone, the vibration of that crystal, was what drove them out of me the second time.

So there has to be other methods of doing it, of course. I'm not going to say you have

to go to the Inner Earth and have a crystal waved above you or call in the name of Jesus.

People can do it on their own, but it's very difficult. A lot of times, these entities will act like they've left, you know, “I'm leaving”, you know, do the little walking noise and then sneak right back around and come in.

The best thing you can do is just make your body of a vibratory nature that it's very difficult for these beings to coexist with you.

David: We have one from Merwitch Mama. Ha, ha.

“Why are we still calling Gonzales, 'Gonzales'? If he's already been compromised and no longer even on Earth, why can't we know who he really is? It would go a long way toward getting more people on board with this.”

Corey: He has family here that I wouldn't want to put in danger. I've already outed him, and it caused a lot of problems with the Alliance, the SSP Alliance. Half of the command and control structure will not show their heads, you know, for command and control purposes.

David: Right.

Corey: So I'm not going to do anything to cause any more damage.

David: I totally agree. Wanderer 1027:

“I am confused as to why the Alliance is more concerned about the Cabal exposing the dirt that the Cabal has on them than they are about giving humanity Full Disclosure. Should we care what individual factions of the Alliance have done more than our own ascension?

“Also, why, Corey, are you concerned about the social effects of Full Disclosure? Society's already broken. We experience a dark night of the soul for a reason, don't we?”

So, I guess the first question is, “Why is the Alliance more concerned about the Cabal exposing the dirt on them than Full Disclosure?”

Corey: Well, because they will be standing next to them in tribunals. They were carrying out orders that were given to them for a long time. And in the process, many crimes against humanity were committed.

David: Stuff that would be so extremely compromising that people wouldn't feel very forgiving?

Corey: Absolutely not.

David: So regarding this idea that the social effects of Full Disclosure, the question seems to be confronting you as if you are concerned about Full Disclosure breaking down society, and they're saying society is already broken. This is just going to give us a useful dark night of the soul if we get Full Disclosure.

Corey: People have all these ideas about what disclosure is going to be if there's a Full Disclosure event. And it is going to be more than a dark night of the souls. Many people are going to die in the process. It's going to be chaos.

It's not going to be people holding hands singing “Kumbaya”. It's going to be . . . We are demanding one of the most difficult times in our life. We're demanding we need this disclosure, but we don't fully understand how difficult it's going to be.

I mean, there are countries that have been victimized by the Cabal that are going to find out a bunch of information. They're going to want to go to war with Cabal countries.

It's going to be a mess. It's not just going to be people that won't get out of bed and eat because their religion has been basically proven as wrong.

David: Right.

Corey: It's far more reaching than that.

David: So it would seem, then, that even a Full Disclosure, the most ethical way to do it would be in a series of stages where there's some acclimation along the way.

Corey: That's what the negotiations have been all about. The Alliance, the Earth Alliance, they believe that it's irresponsible to just drop it all on the people. They think it should be, you know, put out in a slow way.

But in that case, if you don't put it all out at once, then you're always going to have somebody that's wanting to hold back little bits and pieces.

So I'm for Full Disclosure, but what I'm saying is, everyone out there, be careful what you wish for because it's going to be a lot more difficult even for those in the UFO community than what we think.

David: Well, if you think about, Corey, our own creative process when we were developing “Cosmic Disclosure” with the folks here at Gaia, we were looking at a lot of information that you could tell us about Draco and things like that that were VERY disturbing things.

And we did structure the show so that that kind of stuff came in later episodes after we'd had multiple episodes to try to front load the positive at the beginning.

So do you think there's a way that this could happen with Full Disclosure or are you saying it's like a data dump and it just all kind of comes blasting out?

Corey: That's what Full Disclosure is, is a complete dump of everything.

David: Right.

Corey: And everything . . . I mean, there's going to be a lot of disturbing information.

David: We have another question now from Akhaishimray, and it says, and we've heard this one before:

“Are you not allowed to film your interaction with the Blue Avians or Mica or even just a view aboard one of the spheres? And if so, why? A 360-degree camera would be ideal since that's difficult to fake.

“Why must disclosure only come from a CNN camera?”

Corey: I'm not allowed to bring any technology with me. I'm screened for AI every time I go up. You cannot bring technology with you.

So there's no way I can bring a camera with me and stick it in Tear-Eir's face when he's trying to communicate to me.

David: So you're saying that any technology from Earth could potentially have this AI in it . . .

Corey: Uh-huh.

David: . . . just as the . . . because you also mentioned it can exist as an electromagnetic source.

Corey: Right. Right. It's just security protocol.

David: Right. Is there also some reason, in terms of the Blue Avians and what they're

wanting to be disclosed, that they don't want too much proof too quickly so that free will is preserved?

Corey: The way they see it, all the proof, that's all up to us and the process. The only thing they're concerned with is raising the vibration of humanity and raising our consciousness.

The way they see it, if they raise our consciousness, everything else will just fall into place.

David: Sure. Just because this is something that's come up a lot in the discussion forum, people have often said, “Why can't he put some kind of camera in his living room so that if a sphere shows up, he can catch it on film as it's happening, and then that'll be the big event that finally proves that he's telling the truth?”

Corey: Well, the one time that I did put a camera up in my room, the meeting did not occur that night.

David: Really?

Corey: Right.

David: What do you think is the reason for why the beings don't want a definitive smoking gun of proof given to us at this point?

Corey: Everyone has to go through their own process, their own spiritual process in raising their vibration and going towards disclosure.

People say that, “Oh, I'm spiritually advanced. I will not worship beings if they appear.”

But that is not the history that these beings have seen with us.

We are programmed to worship something higher, and a being comes in, we'll be, “Oh, this is an angel”, and try to apply it to whatever personal religion we have built up in our heads, and then start praying to them, which they already have a problem with.

David: Right. This is a subject we could talk about for a long time, but we are trying to get through a bunch of questions here.

We have one from Jenaceae:

“Okay, so are the Pre-Adamites then what we are calling the Annunaki or are they the step-link between the Annunaki and the elite Cabal sun god worshipers?

“All the sun god people the Cabal worship have elongated heads, right?”

Corey: Well, the Pre-Adamites are basically fallen angels. 55,000 to 60,000 years ago, they pretty much crash landed here after a series of misfortunes.

They are not allies with the Draco, by any means. They've had agreements with them, but they kept the Reptilians in check in the past.

And it was after this last deluge or global catastrophe that caused Antarctica to shift its place on the globe and then be covered in ice that they lost all access to their technology and were then unable to keep the Reptilians at bay as they had done in the past.

So it's really hard. Annunaki is a term that can mean, you know, “from the heavens”, or it's kind of a blanket term.

David: Right.

Corey: So the Reptilians are often referred to as Annunaki and so are these Pre-Adamites.

David: Okay. We have John 1111:

“Hi, Corey and David. I am a wanderer, and as a result, a friendly, nonviolent person. But I was wondering if I would incur some sort of karmic debt by wanting to destroy Reptilians? Is there anything wrong with wanting to kill the bad guys or should we just let them be?”

Corey: We have to go . . . and this is going to sound really bizarre, but we have to get to a point in our journey – and it'll probably be well after disclosure – to where we're going to have to forgive those beings, or it's going to hold us back spiritually and karmically.

We're going to actually have to forgive the beings that have been torturing and murdering and enslaving us for millennia.

David: It would appear, if you look at the history of Atlantis, that seemingly benevolent beings, these Elohim, did decide for Atlantis to be destroyed and that a lot of those lives were lost. So it would appear that maybe on a level bigger than individual human free will that nature itself sometimes does things that resolve some

of these issues or dramatically reduce the population of a negative civilization.

Corey: Right. These negative beings, they're being neutralized and taken care of right now, not only by higher density beings but by the universe itself, by the cycle that our galaxy is going through.

We still have to fight this battle against them. We have to fight for sovereignty, but after we win the battle, then we have to move to a point where we can forgive them, which is . . . I'm not at that point.

David: I also have often looked at what the Cabal is doing, where they think population on Earth is the enemy and population must be attacked.

And my response to that is, if nature sees something out of balance, nature will take care of it. It's not necessarily our right, or our privilege, if they want to think of it in such a dark way as that, to try to do these things when nature will take care of itself. It has cycles of replenishing and cleansing.

If there is to be a problem, it's not our job to go out there and try to do this.

Corey: Right. And sociopaths are the ones that usually rise to power in these organizations.

David: There you go. So now we have another one. This is from ARW 575:

"If we are all one, then I presume we are one with the Reptilians and all other entities. How can we evolve if we race around the galaxy battling with other entities? Are we not then just warring with ourselves? It gets confusing."

Corey: You have mass consciousness. You have the mass consciousness of humanity, and I've described, when I was shown this mass consciousness being, that it was a traumatized schizophrenic basically.

David: Yeah.

Corey: There is some sort of a battle, but also a process that the Reptilians are growing and learning from these experiences just like we are. It's a hierarchical situation.

At the very tip-top, we are all one.

David: Well, what would you say also about the idea in The Law of One where they explain that we live in the illusion, and that the illusion is staged for the benefit of the

development of consciousness?

Corey: It's all about consciousness, the development of consciousness. That's all they care about, these higher density beings. That's really the . . . Everyone is like, you know, what is the reason for life? What is the purpose for life?

It's all about the continual development of consciousness, not only on an individual basis but as a mass consciousness being that we're a part of.

David: Okay, now we have Selene 2:

“What, if anything, does CERN have to do with manipulating the Earth's magnetic field? Anything you can offer there would be useful. Many thanks for your wonderful disclosures.”

Corey: From what I understand, CERN is one of these multipurpose-type technologies. There are different groups of scientists going in, trying to achieve different goals.

They're using it as some sort of a . . . They're trying to interact with the Earth's magnetic field. They're using it trying to create portals. They're using it to also develop torsion field technologies.

It is a laboratory that has multiple purposes. It's not just there to create a wormhole. It's not just there to interact with the ley lines. It is a multipurpose technology.

David: I'll just throw in here that in talking with Henry Deacon, he actually worked on CERN for a while as a job. And he said that it is so difficult to actually get the particles to hit each other that it requires people who are intuitive.

And he was one of the people who was psychic enough to be able to intuitively work the controls so that you'd actually get particle collisions.

I'm wondering if that lines up with anything you heard?

Corey: It doesn't line up with what I've heard, but it makes total sense.

David: Right. Next, we have DJ Miss Mixit:

“Corey, could you please ask some of the beings from higher vibrations the best, most efficient tools for clearing the pineal gland.

“Is there a Hertz frequency I can make? Is meditation enough for me to simply imagine it being cleared?”

Corey: Meditation and diet are the way to go. You want to make sure that you can remove the calcification in your pineal gland, but also you want the pineal gland interacting with your higher self in a conducive way.

So you need to have yourself on the right vibratory level through meditation.

David: I would also just point out, one of the things Peterson said is that the halides, which would be like chlorine [chloride], fluoride, etc., pass through the blood brain barrier and attach to the little crystals in your pineal gland, and that's one of the main things that causes calcification.

Corey: That's true.

David: So have the beings told you to avoid tap water and things like this?

Corey: Yes, I only drink spring water at home.

David: Okay.

Corey: Right.

David: Next, we have one from Inscizor:

“My questions are about densities. What density would Jesus or the Buddha have been considered to have moved into after being here?

“How about the in-between live state before one is to reincarnate? How does that fit in with the idea of densities of consciousness?”

“Is heaven considered to be the next, say the fourth or higher, level of consciousness, or is it something entirely different?”

Corey: The way densities have been explained to me is it's all about consciousness. It's different vibratory states of consciousness.

And once you reach a certain vibratory state of consciousness, as we've stated, you can control matter with consciousness.

So you begin to change your environment as you go up the octaves consciously.

David: Okay. We have L. Mensah 732:

“Can mass consciousness toward a specific goal via the Internet be as effective as being physically together in one place?

“For instance, I guess this is Heather Sartain's episode, she mentioned people being on one continent and how that would affect Earth's rotation.”

So I think what they're looking at here is could we do, like a mass meditation and reduce terrorism without everybody having to be in the same room like they were in the original transcendental meditation studies?

Corey: Yes, that definitely does work. You don't have to be in proximity with other people. But when you get a lot of people that are . . . they have practiced disciplines to where they can meditate deeply, you get a lot of those people in proximity, there is a power to it, for sure.

David: I agree. So here's another one from Sassafrass 7:

“Good stuff. I have so many more questions. How do the Reptilians reproduce? Do they have a gestation period and then are born similar to mammals on Earth?

“But if they are fourth-dimensional beings, do they need to be born at all or do they just create their bodies with thought? I understand they do eat. Unfortunately, they enjoy eating people.

“I thought a fourth-dimensional being would not need to eat. Does this mean they are doing this only for sport or something like that?”

Corey: Yeah, well, this all goes back to our different belief systems on what dimensions, densities are. A lot of people think that a fourth-density being could be standing right next to us, and we wouldn't see them. We'd be passing through each other. You know, we couldn't hold hands with them.

That's not at all the case. It's just they have a different consciousness vibration.

What I'd normally say is, what do you consider a dog or a bacteria? You know, second, first-density life, you can interact with them, no problem.

David: Right. Sure. As far as the Reptilian breeding cycle and birthing cycle, is there a sexual reproduction that leads to a pregnancy and a birth?

Corey: Exactly. Yes. And they also use cloning.

David: Okay. Lastly, we have 23 Window:

“I wanted to put something forward. The name 'wanderers' and 'starseeds' alone come with a positive connotation, but now, I'm hearing that the Cabal or MILABs identify these kids early along, take them, and fractionalize their brains into doing work for the Cabal.

“Weren't these people sent here in the first place to do good for humanity? Yet, the Draco has infiltrated the Cabal and figured out how to brainwash them and control them for their own purposes.”

Corey: Yeah, they basically hijacked their mission. That's the whole point. They hijack their mission. They come here with certain abilities, and then they exploit those abilities.

And in doing so, they're co-opting the enemy the way they see it. They're causing . . . These starseed beings are coming here to effect positive change on the planet.

The Reptilians, for instance, do not want positive change on the planet, so they're corrupting these “soldiers” to fight for them.

David: Well, this obviously is not an airtight system in which all people who are wanderers are being completely compromised.

So could you speak to that a little bit, in terms of how would someone navigate this successfully if they are an ET soul and still be able to do what they're supposed to be doing on the planet?

Corey: Well, stay away from any government organization that tells you you're special. Ha. That's number one.

And practice humility, concentrate on your own personal journey, and meditating on what your mission is. And once you've been awakened to your mission, go for it.

If you do that, then you're going to affect positive change and combat the groups that are co-opting the starseeds.

David: That's all the time we have for in this episode. I'm your host, David Wilcock here with Corey Goode. This is “Cosmic Disclosure” on Gaia. And we thank you for watching.

Astral Projection- Our Place in the Universe Season 7, Episode 16

Cosmic Disclosure; Astral Projection and Our Place in the Universe with William Tompkins Season 7, Episode 16

18 Apr 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode.

And in this episode, we have more of the very stunning new information coming to us from our World War II veteran insider William Tompkins.
* * * * * *

ASTRAL PROJECTION

William Tompkins: When I was just a boy, and I was, like, seven, eight and nine years old, I used to fly a lot. Now, I didn't have an airplane. I just flew.

We were living in Santa Monica. We were living in Hollywood, and I flew a lot, mostly at night, but a couple of times in class, in school, recess, I'd just go behind the building, and I'd take a flight.

And I'd sometimes . . . I'd put my arms up, but most times I'd just go out.

And so I could fly all over Hollywood, San Fernando Valley, go down to the beach at Santa Monica, fly up to Malibu, fly all the way down to San Pedro, look at the Navy ships and the dry docks in San Pedro, and fly over LAX and come back.

I had a hard time flying over LAX. There was a lot of stuff going on, so I kept myself

away from the airports as much as I could.

A few times, after I'd had fun just flying around low key – and in particular, it's more fun at night with the lights – I'd just shoot out, out into the galaxy. And I flew way above 186,000 miles a second, way, way above that.

And it took everybody a long time to figure out that even the Germans could fly faster than that, and certainly the extraterrestrials could, okay? But what I am saying I do, is I fly out there.

And one time I flew into . . . it was the admiral's command ship of a Reptilian space navy. I flew right into his office. I could see, hear and smell everything that they were saying.

To me, it came to me in English, just like when I flew one time over Russia. Admiral Sergey Gorshkov had been building a whole series of futuristic ships that don't even look like they're from the planet because they were built with stealth.

I flew over the base, Vladivostok base, and I actually flew around the base. I went down, looked into the edge of the construction facilities, came back up high, flew into Sergey Gorshkov's office, and I could see, hear and smell the coffee in his office.

And his language . . . which language? English. All of them were talking English. Okay?

I actually got into a research group in the Navy where I was an adviser to this psychic type of whatever that I'm doing here.
* * * * * *
David: So that's some pretty interesting stuff there. We're hearing that he has been able to do this ever since he was seven or eight years old.

And Corey, one of the things that jumped out at me, I was five years old when I had an out-of-body experience. I woke up floating over my body, and it was the event that got me to study ESP.

So I started to do psychic experiments by the time I was seven years old. I wanted to get another chance. I was only able to do it once when I was a kid.
Corey: Yeah, I thought it was commonplace. I thought everyone could do it. I was doing it . . .
David: This was something that happened to you often?
Corey: Mm-hmm.
David: From what age?
Corey: The age of four and five years old it was spontaneously happening, and then I was able to control it through my youth.

We'd be on long car drives. I'd be bored, and instead of asking, “Are we there yet?”, I would just project myself outside of the car, and I would float and fly above the signs as we passed, above the overpasses.

And I thought it was something everyone could do.
David: Is there something about extraterrestrial lineage in the soul that makes it more likely that people will be able to do this?
Corey: Well, let's say that, in a previous life, you were a more advanced extraterrestrial. You had advanced consciousness abilities, and you agreed to be incarnated here on Earth as a human.

We still have that same oversoul that has the same knowledge. So that knowledge has to slowly trickle into this conscious being that we agreed to become.
David: Is there any reason to believe that if a person goes through excessive trauma, that that trauma might propel them to be able to develop astral projection?
Corey: Yes. That's actually a technique that is used in the programs. They will cause people to astrally project by inflicting extreme trauma upon them.
David: How does that end up working? Why do you project out of your body then?
Corey: That is a . . . It's an escape or a protection mechanism that our psyche has. It's a disassociative ability that our psyche, and we have spiritually, to disassociate and divorce ourself from what is occurring.

And once they program a person through trauma to be able to project out of their body, then they start training them how to do it for operations.
David: And what would be an example of an astral projection?
Corey: Very similar to remote viewing. It's going to be going to gather intelligence at a remote location.
David: Well, it seems that this is a very ancient technique, isn't it? I mean, this is something that mystery schools have talked about for a long time.
Corey: Right, it's a heavily suppressed ability that all humans have.

David: One of the things that, maybe, our viewers are not aware of, there is one particular secret society called BOTA, or Builders of the Adytum, and the Adytum, believe it or not, is a room that has an altar with a sacred book inside with sacred knowledge.

And the room is completely walled off. It's usually a cylindrical room, all bricked in. You can't get in at all except in your astral body.

And so the key for the initiate is, can you astrally make it into that room and then read the book inside the Adytum, and only if you can accurately recount what the book says have you then become a true initiate.

Have you ever heard of anything like that?
Corey: Well, I mean, there were similar exercises that we were all put through.
David: Really?
Corey: Yeah. You would have to identify an object in another room, its color. It wasn't as . . . We weren't reading books, but you know, we were children.

And they would have us identify toys or paintings or different things in another room that was walled off, and that no one in the experiment, at that time, knew what was in there either. So you weren't getting psychic hits, or you weren't front loaded in anyway.
David: Some people might be inclined to dismiss Tompkins' testimony based on the idea that he's saying, for example, he went into the office of an admiral of the Reptilian navy, and that he's hearing things in English when they clearly are not speaking in English.

And the same thing with the Russian where they had these unconventional aircraft, stealth aircraft.
Corey: I have heard of that before, that your mind – your astrally projected astral body – is able to interpret other languages to the language that the mind uses.
David: So there's sort of a natural translation function going on.
Corey: Not all the time, but some people have that innate ability.

You can't just astrally project to a lot of these black bases. They're protected by people that have remote influencing abilities and are enhanced by technology.

I've heard them called “Those Who Scatter”. They'll scatter your thoughts.

Also, shadow beings that will protect facilities from astral projectors. Astral projectors will go try to get into a facility, and all of a sudden they'll get this real dark being that's now chasing them all over the place.

So they do have astral security.
David: All right. So in our next segment, we're going to have Tompkins blast us out into the cosmos, and specifically, we're going to hear what he has to say about settlements on the Moon.
* * * * * *

OUR MOON

Tompkins: Well, first of all, it's not your Moon, and secondly, it's not a moon. It's a command center for a region of this part of the Milky Way galaxy. That's what it is.

And it doesn't rotate. Everybody forgets the thing doesn't turn. Okay? So it's not a moon. It's not YOUR moon. It's a command center with probably 25~35 different civilizations in there, all of which operate out here for this part of the Milky Way galaxy.

And, yes, some of those people actually are at war with each other, but they have personnel living here. Their families live here. The kids are getting educated. They get young. They get older. They get married. It's a big hunk. It's a big facility.
* * * * *
David: So Corey, what was your reaction as you saw this segment just now?
Corey: It's exactly what I had stated in the past. There are a number of factions that have territory on the Moon that they operate in. And there will be blood enemies for millennia that are operating within a kilometer or two of each other, I mean, groups that you do not get together no matter what.
David: Now, he mentioned 25 to 35 civilizations. I'm curious how well that dovetails with what you've heard?
Corey: That's probably about right. There are a lot of the genetic farmer races that have 'observation posts', is what they call them.

And they do use it as an observation post and a station that they go back and forth doing these genetic experiments on us from.
David: Now, one of the things that jumps out at me was, I kind of thought of this, like you said, as an outpost or maybe a stopover point, whereas he's saying that you have families living there. You have children being educated there, growing up in these lunar bases.

So we are dealing with what would appear to be like a permanent housing for potentially large populations of people from several, you know, 25~35 civilizations.
Corey: I mean, it would be similar to us having a marine base in Europe. The soldiers have families that are there with them. It's going to be one of those scenarios.

I had not heard intelligence of families and children. The information I had received was that they were more sort of like military outposts.
David: When I went to Japan, I went to Tokyo, the main city, and it's amazing when you're there, and you look out, and you see something that kind of looks like Manhattan, but it is so big.

Tokyo is so incredibly large, there's such a density of buildings that you can't even see to the point where that highly compressed density of buildings stops.

So when we have a city of that size, it's a very small geographical footprint, but you could potentially have 20, 30 million people living there.

I'm wondering if the level of development on the Moon in some of these territories these people have is sufficient enough that you could have a population that large in a small space.
Corey: It's all about technology. If we were not so technologically developed, it wouldn't be possible to have a city like Tokyo.

They have mastered all of the energy needs, the protein requirements that people may need, everything that's needed to process waste on a much more efficient level than we are.

So, yeah, they're able to have a much higher population density than we are.
David: Are there immigration requirements that would prevent anyone who is not part of their indigenous culture from being able to even see the inside of these cities?
Corey: Absolutely. You don't have one group going into the cities of others. I mean, it's like the UN or kind of like how Antarctica is carved up for all these different countries.

It is undisputed territory, and they do not cross over or invade.

The Moon was made sort of like a Switzerland zone, a conflict free zone, after some major, major battles that happened in our history. And they left some of the remnants of that battle on the Moon as a testament and a reminder of the battles and how bad it got.

These are the conflicts that led to these treaties being signed between the different genetic farmer groups, some of these more negative groups that we're talking about,

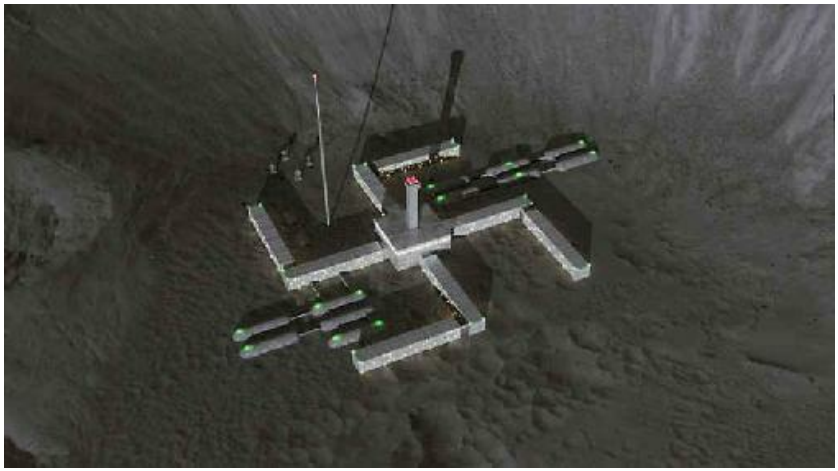
that allows them to live and operate in close proximity without being at war all the time.
David: Pete Peterson has an insider who came from the Russian space program, who told him that if we were to be able to see the dark side of the Moon – which as Tompkins noted, it's always against our view. We can't ever look on that side – that it would look like Manhattan at night.

Meaning the entire circular area of the backside of the Moon, if that circle could be turned towards us, the whole thing at night is just literally covered with lights.
Corey: Yeah, there's one particular, I think it's called Luna City, that has a lot of light.

But you have to also note that they have a type of cloaking that goes over their buildings and structures that looks just like the rest of the arid terrain of the Moon.
David: Oh, wow!
Corey: So you could fly over and just see craters when actually that's a projection over a base or an outpost
David: That is interesting because, as we know, retired Major Bob Dean, according to what I heard from Jacob, my insider who met up with him at a Project Camelot event and recognized him from the Secret Space Program . . .
Corey: I'm pretty sure he did at least one 20-and-Back.
David: Yeah.
Corey: That's my opinion.
David: But one of the things that Dean said while he was talking to Jacob was that there was an island in the Pacific where half of the island looks like an island, but it's a cloak, and that there's a very important base there.

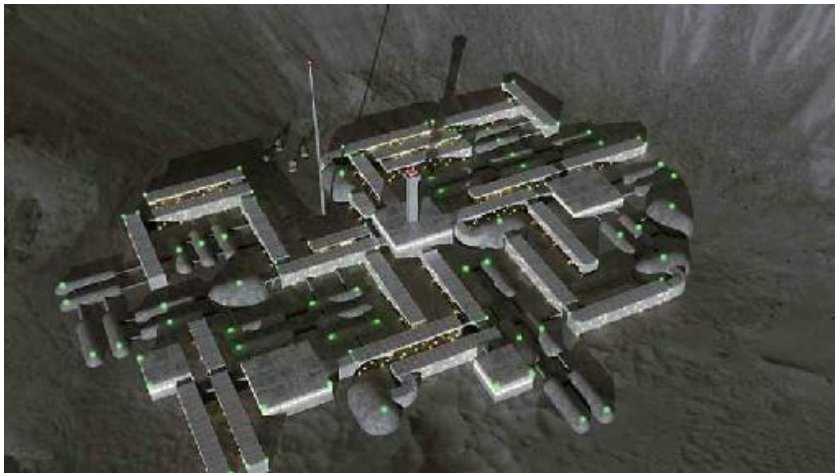
And if it wasn't for this hologram that makes it look like it's just an island in the ocean, you'd see this amazing thing.
Corey: Oh, yeah, they can disappear entire islands.
David: Wow! So this is stuff that could be used on Earth right now.
Corey: Absolutely.
David: You can confirm that.
Corey: Yeah. It can be used over Antarctica. It could be used any number of places.
David: All right. Now, he also mentioned that the Moon is a command center. How much of this is also inside?
Corey: Almost all of it. The majority of it is under the surface of the Moon in these deep huge fissures, cracks and lava tubes.
David: And one last thing was you mentioned that we have some new art of the Lunar Operations Command.
Corey: Yes. Yes.

If you look at this image, this is an image that I commissioned that is a 3D rendering of the swastika-looking arrangement of buildings that . . . how the LOC originally looked.



David: Okay.

Corey: And then I have another image that shows how it was built out to cover up the swastika.



David: Interesting. All right. So in this last segment, we have one final set of words from Tompkins for us in this episode, and this is his statements on how he sees our place in the universe based on his own personal and stunning insider knowledge and direct experience with extraterrestrial contact, including Nordics. Let's take a look.

* * * * * *

OUR PLACE IN THE GALAXY

Tompkins: We've now accepted that we have 200 trillion galaxies. Not million. We have 200 trillion galaxies out there.

I mean, what . . . We are so naïve of what's out there. It's totally unbelievable. Millions and millions of planets out there – very small things and things that make our Star look like kid stuff.

Our star is just a little dot over on the side – even our galaxy.

And while we're talking about that, this subject comes up all the time, and it's an appropriate time to say it.

If we can visualize us as the center of the Milky Way galaxy, we're reaching out like this with our arm.

Everybody in this room, and all the audience that's going to be watching this, has to realize this is one of the arms of the Milky Way galaxy. You're located at my first joint.

You're not down . . . Wait a minute! You're not down where the action is. Even in the Milky Way galaxy, you're not downtown where ALL the action is.

You are out here at this tip, which in time, you're going to get thrown off because the galaxy rotates. The galaxy rotates, all of them do.

They rotate, so the tips get thrown off. Other galaxies come by, and they pick up that stuff. So you may be going to the next galaxy several weeks from now. Okay? Takes quite a while. [Smiles]

So to realize that you're not downtown, you're just one of the castoffs.

This little Solar System thing that you've got here – it's . . . You're out in the boonies.

And it's interesting that we have to address who we are, where we are, and what we know and realize that the universe is unbelievable. And so opportunities for young people in this country, all over the world, to be involved in this commercially, okay . . .

Come on. Forget about carrying a big gun. There's too much of that. That's not the right step. You've got to have the largest . . . enough to be able to stop it, and this is where the Navy has been saying this for 240 years. If you have a large enough navy, they'll back off.

You don't need to use a shooting navy. But if you don't carry that, people are going to really make it hard for you.

And so to me, I think we're just starting. We've just got the tip of the iceberg of where we can go and what we can do, and it's unbelievable opportunities.
* * * * * *
David: All right. So, wow! That's a very sobering reminder of the awesomeness of our cosmic identity.

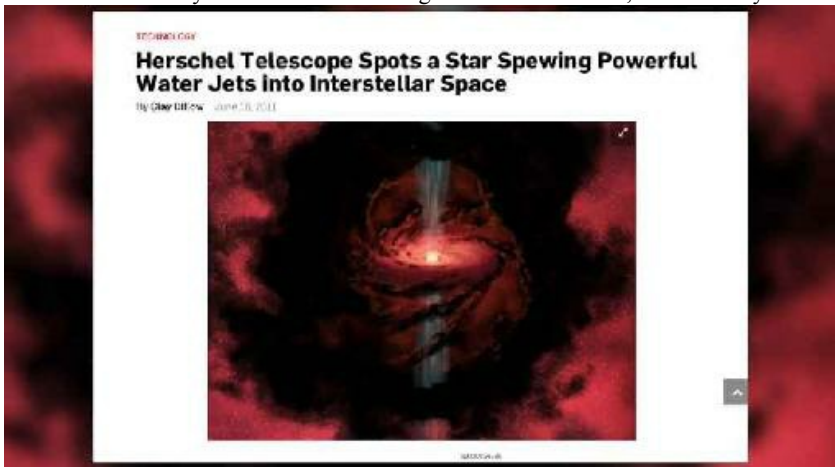
I've been quoting from the latest NASA studies, which have revealed that there are as many Earth-like watery planets in our universe as there are grains of sand on Earth, on the entire planet. All the grains of sand put together – there's a watery planet like Earth out in the universe for all of that.

So it's a staggering number.
Corey: It's a template that's all over the cosmos.

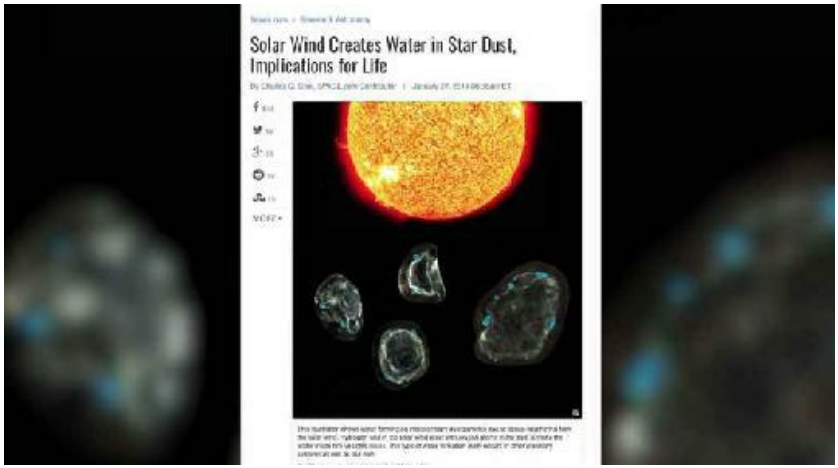
David: And these watery planets in this theoretical mock-up that NASA has put out, they're looking at, okay, well, maybe one out of a hundred of them is going to have life, and then maybe one out of a hundred of those is going to reach intelligent life.

But based on what you've told me before, it seems like intelligent life for a watery planet is far more prevalent than that one out of one out of 100 thing.
Corey: Well, yeah, and also, you have to understand that each solar system has its own dynamics. So there are going to be times of developed societies in the solar system, and then there are going to be cataclysms - cycles that occur.

Then they'll have long periods of having more basic life that inhabit these planets.
David: And if our conventional estimate of the age of the universe is about 13.8 billion years – there's different opinions, but that's one of the common ones – then that would mean that there could be civilizations much older than ours that already reached very high technology.
Corey: Oh, yeah. Come and gone.
David: So the idea that we are the only intelligent life in the universe, in light of all these new statistics, is totally ridiculous.
Corey: Yes, it's beyond ridiculous. It's arrogant. You have the right mix of minerals, distance from the sun, the planet being seeded with the correct enzymes or proteins from comets. Then you have all the building blocks for basic life, and it's everywhere.



And now that they've found out that the stars produce water, . . .
David: Right.
Corey: . . . that's where a lot of the water's coming from.



And the Sun is also producing the harmonic wave that allows life to come about.
David: Yeah, this is something I've done a lot of scientific validation of. If people also watch “Wisdom Teachings”, they're going to hear, in many of my DNA episodes, astonishing proof.

We went into Wilhelm Reich and how you can, in fact, generate life just out of electrifying a rock and water. All you have to do is that, and you'll eventually get life to form.
Corey: Right, and also where in the galaxy this solar system is, is also going to depend . . . is going to dictate how advanced and how quickly life advances or progresses.

More towards the center of the galaxy, things are occurring a lot quicker. Time is occurring differently.

There's a lot more going on, civilization wise, towards the center of galaxies than in the cosmic boondocks that he was talking about.
David: I did find that fascinating because my insider Jacob, who was very extensively knowledgeable about the Secret Space Program, claimed to have been to over 200 different off-planet sites, to have seen over 400 different types of extraterrestrials, and he was the guy who gave me a lot of information that correlated so well with what you've brought up.

Jacob was telling me that, yes, the center of the galaxy is so much more advanced, and there's so much more going on there that it's almost incomprehensible to us.
Corey: Time flows differently. Energy, everything . . . Towards the center of the

galaxy, things are occurring, from our perspective, much quicker.
David: Now, Tompkins also mentioned that there were commercial opportunities. It's not just about going out there with a gun.

What do you think could happen in a post-Full Disclosure world where people will have the ability to potentially even have a portal in their home, and in the course of one day maybe even travel far outside our Solar System, meet with other people, travel to other places? What kind of society is that? What kind of businesses could we start to develop at that point?
Corey: Well, there's already a lot of commerce going on between our Solar System and the other solar systems, but it's being controlled by a very militant and fascist group.

If it's put in the hands of the people, we're going to be able to do this – start bartering – from our own best interests.

Right now, a lot of the people in the secret space programs are somewhat forced into it.

When it becomes an all volunteer navy-type situation for space, then we're going to have people that are bringing more creative energy to their mission. And if it's not a military mission, it's going to be more of a mission for commerce.
David: Some people watching this show might be cynics, and they would say, “Well, what could we possibly be offering to any other cultures? We're like Neanderthals, troglodytes, in comparison to these people.

“Even if we developed the portal capability, even if we could pop over to a solar system outside of our own and visit an advanced culture, if they've got gigantic buildings made out of transparent aluminum crystal, what are we going to do going in there they would possibly want from us?”
Corey: Well, there are going to be some civilizations that are so much more advanced, there's nothing that we're going to really have except for maybe some biologicals or genetic stock that we are willing to trade from our planet.

A lot of them, that's what they're interested in. So the more super advanced civilizations . . . we're not really going to have much that they're going to want to trade.

But there are a lot of civilizations that are very close to ours. Our level of development is similar to theirs to a point to where they're buying vessels from us.

We're engineering technology that nonterrestrial groups covet, they want, and they're willing to trade for it because we're known as very diligent and brilliant engineers.

David: Could there also be job opportunities for people who might be, let's say, artists or musicians or teachers?
Corey: Absolutely.
David: That kind of thing?
Corey: Yeah, I would expect a lot of exchange programs when it comes to the arts, because it's . . . All the planets have some form of art.
David: And how much of a wide diversity are we looking at of places where artists or teachers or musicians could go and volunteer their services once this opens up?
Corey: Just about every planet that has a human-type civilization. The reason that they tell us not to call them nonterrestrials, or ETs – they tell us to call them people – is because there's very little difference, genetically, between us and them.
David: Right.
Corey: They are people, and people have desires. They have interests. We can cross-pollinate our sciences, our arts, with other star systems that are interested in our art.
David: So there's a potential in our future where we could have educational programs, where we're going to help people to get to a point where they would be welcomed as diplomats, ambassadors, teachers, sharers of knowledge, but it's going to require us to level up our spiritual maturity before we're ready for that.
Corey: We're going to continue to be sort of isolated until we go through this consciousness renaissance. Once we do, and we're not as damaged, we don't have as strong of PTSD, then we're going to be able to go out and interact with them.
David: Well, that's a very fascinating and hopeful message.

We'll see you next time here on “Cosmic Disclosure”. Special episode with William Tompkins. I'm David Wilcock here with Corey Goode, and we thank you for watching and supporting us.

Allying with the MIC SSP Season 7, Episode 17

[Cosmic Disclosure; Allying with the MIC SSP](#) **Season 7, Episode 17**

26 Apr 2017

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and we here with Corey Goode for another fascinating update. Without further ado, let's hit the ground running.

Corey, welcome back to the show.

Corey Goode: Thank you.

David: More recently, you have started to interact with a Military-Industrial Complex Secret Space Program. There are a lot of movies out there that, according to Pete Peterson in one of the briefings he gave me recently, are showing hardware that this group actually possesses. And they're putting it out in the open – a movie like “The Avengers” that has a flying aircraft carrier.

So what is your knowledge about how this MIC group is working with Hollywood in maybe getting us ready for things that they're going to show us?

Corey: Well, according to Sigmund and everyone else I've talked to, they are planning on doing a slow, I guess, disclosure of a certain type of secret space program that, as I stated before, the DIA, NSA and Air Force have control of.

And they plan on making this program known, which most of the activity happens within 500 miles of the Earth. They have space stations and manned satellites within that 500 mile range.

And that's most of that zone that they have control over.

David: In Ronald Reagan's own handwritten book of his memoirs – comes out in 1985 while he's still President – he kind of let slip that he was aware that we could put 300 people up into orbit. And there was certainly nothing having to do with the space shuttle that would have anywhere near the capacity to hold 300 people.

So what was he talking about there?

Corey: He was referring to this program. This program . . . There are several decent sized space stations. There are manned satellites that have anywhere from three, six, eight men on duty, or I should say people on duty, that are serviced by these triangular craft. And they exchange personnel and supplies.

This is the information that our President recently received in a briefing.

David: Really?

Corey: He received a very low-level briefing and was upset because he knew it was a low-level briefing.

David: We have reason to believe that Trump's uncle was involved with some of this classified information as well. What is your knowledge about that?

Corey: His uncle, whose name was John G. Trump, and was a MIT professor or scientist at the time, had actually been called to go out to Tesla's property after he passed away to help remove all of the paperwork and experiments.

So this could very well explain some of the comments that the current President made very recently.

If you remember his inauguration speech, he mentioned a few interesting things about hidden technologies at the very end.

DONALD TRUMP – 2017 INAUGURATION SPEECH

“We stand at the birth of a new millennium, ready to unlock the mysteries of space, to free the Earth from the miseries of disease, and to harness the energies, industries, and technologies of tomorrow.”

David: So he's describing technologies that could include free energy, that could include age reversal, or at least disease reduction, stuff that seems pretty out of the box.

And it's a big cowboy move for him to make promises like that in his inaugural address. So granted, people would say, “Well, yeah, politicians, they just make stuff up all the time”, but is there something more to these statements?

Corey: Well, you take that his uncle was involved with this free energy-type technology, or allegedly, then he may have heard things down the family line about free energy being invented and available.

So he may have had that information. And when he received the briefings, he realized that he wasn't getting the full information from his security advisers.

David: You seem pretty confident that Trump thinks that he only got low-level information when he was told about the Military-Industrial Complex Secret Space Program.

Corey: Right. He wasn't told about any free energy, any of these healing technologies, in this briefing. But he sent a secret presidential memo, according to the information I received, to the Department of Energy, to the DoD and another group, requesting that, or basically demanding that they declassify over 1,000 patents . . .

David: Wow!

Corey: . . . out of 5,700 or so. And, I guess, some people may not know, but it's documented that there are at least 5,700 patents that have been deemed harmful to national security.

David: Why would somebody invent something and then thousands and thousands of things are not being allowed to be shown to us?

Corey: Well, it comes to, I guess, the almighty dollar. Advanced energy technology would put the oil companies out of business. Advanced healing technology would put people even more powerful – the pharmaceutical conglomerates – out of business.

David: So what happened when the President asked for these patents to be declassified? That seems like a really strong and bold move.

Corey: Yeah. He received the typical pushback, and these groups said it would take at least 10 years for us to get all of this ready, but we'll start working on it right away.

David: 10 years?

Corey: Yes, and . . .

David: That's ridiculous.

Corey: He immediately pushed back that he wanted them released in the next three years.

David: You've mentioned Sigmund and that he has started to, perhaps, believe that what you're saying is true. He's taken hair samples from you. He's proven that you were at these places that you say that you were.

How is he handling the fact that you may know something that's true? What is he doing with that knowledge?

Corey: He basically hit the roof. He was extremely upset. He approached his superiors in a very upset manner and told them, “Listen. I feel like you're not giving me the full information.”

Some of them became concerned because they felt like they weren't getting the full data. So they have allowed him to start an investigation to investigate this Navy program.

David: 'They' the higher ups?

Corey: Yes. His superiors have then authorized him to begin this investigation, which he's been undertaking.

David: What is the nature of that investigation?

Corey: To establish the details and existence of a Navy secret space program that is more active in the outer Solar System and other solar systems. They really want to find out the details of this alleged Navy Secret Space Program, because as he said to me – and I will clean it up – he said, "I used to think we were the tip of the spear, but I found out we're the f**ing Coast Guard."

David: Ha, ha, ha.

Corey: And not to put down the Coast Guard in any way, . . .

David: Sure.

Corey: . . . but he was talking about strategically. They thought they were the tip of the spear, keeping the planet safe and surveilling the planet, when they're just basically the Coast Guard. And the Navy Secret Space Program and other programs are the tip of the spear.

David: Do they have anything beyond this 500-mile radius around the Earth that you said?

Corey: Yes, they have very small locations on the Moon, and I hear further out, but I haven't verified where all of their assets are.

David: Anything on Mars?

Corey: I've heard rumor of that, but that I haven't verified.

David: When you say, 'very small', how many personnel would be able to work there?

Corey: I haven't had numbers, but I would assume it would be maybe 30 at the most.

David: Oh, wow!

Corey: Yeah, very small facilities.

David: Right. What might they be doing out there? What would be their objective of being there?

Corey: That's their mandate, to protect the planet and surveil the planet.

David: So it's like a surveillance and military defense outpost.

Corey: Right.

David: So the MIC group is Air Force. Is this the extent of the Air Force's involvement in a space program, or is there another aspect to the Air Force that is in what you're calling the Secret Space Program?

Corey: They're involved in other aspects of other programs, but anything that they're working on, they don't communicate that information to this MIC Secret Space Program because they don't have a need to know.

As a matter of fact, this MIC Secret Space Program, when they're out in their space stations or flying around, they're told that anything they see that flies by that's much faster than what they are flying, they're told that those craft are concept craft that their peers are developing.

David: Has Sigmund started to utilize you as an asset in any way to inform others who may be curious about whether this Navy Secret Space Program is real?

Corey: He had prepped me that he was going to start having me do briefings of various VIPs.

David: Oh!

Corey: So I was kind of preparing myself for that. And the last time we were here shooting Cosmic Disclosure, I was very shocked, and I believe you were too, when we saw in the same hotel we were staying in, this SAS forum was there.

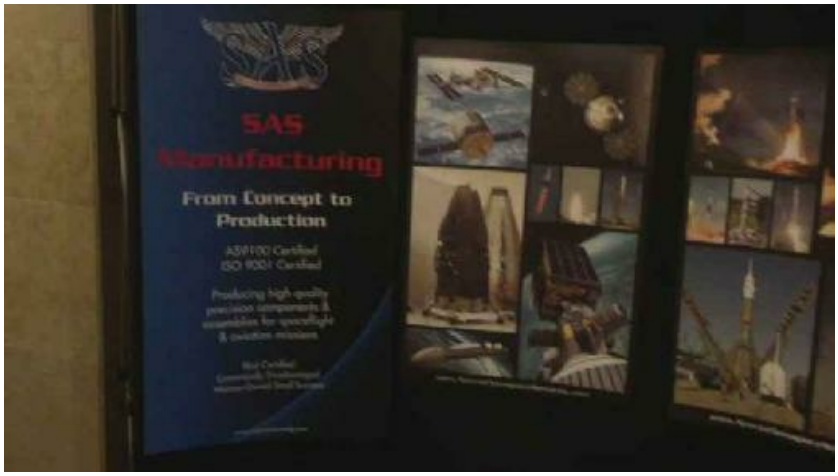
It's a Human Spaceflight and Exploration Forum.

David: Yeah, I have to say that walking around and seeing all that in physical form right in front of me, it did literally make the hairs stand up on both of my arms.

Corey: Right. And I was shooting video while I was there for my vlog.

COREY SHOOTING VLOG

“What are the chances of the Human Spaceflight and Exploration Forum being at the same hotel as me?”



And I captured pretty much all of the signs they had out in the corridor showing all

the different energy technology, propulsion technology, they were going to be discussing. So it was a significant meeting.

David: Now, what happened as far as that meeting being set up? Was that in any way designed by the MIC group because we were here?

Corey: It's pretty interesting, but I think that had been set up for a long time. It just seemed to work out well for getting me to talk to a few of the participants.

And I was very shocked early in the morning when I was supposed to come and shoot here. I had a knock at the door, and there was a person standing there.

And he greeted me with the proper information that would signify that he was in contact with Sigmund's group, . . .

David: Wow!

Corey: . . . which caught me off guard. And I wasn't expecting to do a briefing. I'm sitting in my sweatpants and a t-shirt.

So he asked me if I'm willing to do a briefing. And I was like, “Right now?”

And I looked, and there were four other people in the hallway, three of which were people that were going to soon come in my hotel room, which made me very nervous, who I would then give a briefing to.

And one of them introduced himself to me as a former astronaut who flew shuttle missions. I didn't recognize him. He's kind of a balding guy. He had a Masonic ring on.

David: Okay.

Corey: And I talked to him, and I talked to a physicist who was there. And he was a physicist engineer. And then there was another person that was part of the military-industrial complex that had a lot of connections.

And I started to give them the briefing, just like I have in Cosmic Disclosure from the very beginning.

And they all started looking very nervous and bewildered when I started with my story. Yeah, they were very uncomfortable.

David: What kinds of questions were these guys asking you, and how did you answer them?

Corey: The person who started hitting me with the most questions was the physicist engineer guy. And he started asking me questions way over my head.

And Ka'Aree had told me that she would assist me in these briefings when needed. I had no idea in what capacity. I thought she would feed me information.

David: Right.

Corey: All of a sudden, she started basically speaking through me and answering all of these questions. His eyes were getting bigger and bigger. And, finally, he stood up and threw his hands up in the air and said, “I cannot accept any of this.”

And he turned around and stormed out of the room.

David: So just so we're clear and people don't make things up online, you were still speaking in your own voice, not in a woman's voice or something like that.

Corey: Right.

David: But you're just able to hear words in your mind and then verbalize them?

Corey: Right. Yes.

David: Okay. When he stormed out of the room, what happens next?

Corey: It turned a nervous situation into a 'I didn't know what to do next' situation. And the other two guys kind of humored me. I was nearly done anyway.

And that kind of truncated the conversation. I finished my briefing with the other two. They got up and left.

And I was told by the guy as he was walking out – that originally knocked on my door – that the next day to make myself available that evening to talk to some more people.

Well, apparently my briefing didn't go over too well because the next day nobody showed up, and the SAS conference was gone.

David: It was gone.

Corey: Just poof, gone.

David: So then you go home the day after you have this meeting, and what happens to you then?

Corey: I was feeling a little weird before I flew home, and I started coughing up this . . . While I was still here in Boulder, I started coughing up this really weird uniform black stuff. And there was a lot of it. It was really weird. Nothing like that had really ever happened to me.

Then I also, as I was being flown home, we did have a rapid descent, which I believe I had some sort of reverse altitude sickness that contributed to the situation.

But hours after I got home, I ended up in the emergency room. I started having all these weird pains in my body. My joints were aching, and I couldn't hardly breathe.

And what really concerned me is on my left shoulder, the joint really started hurting, and my chest started hurting, so I went to the hospital just to make sure I wasn't having a heart attack.

David: Wow!

Corey: They slapped an EEG on me real quick and figured out that I wasn't having a heart episode of any type. And then they put me back in the waiting room, and I left after a few people came in puking their guts out. So I kind of left against medical advice.

David: How did the briefings with Sigmund and his people continue after this initial event?

Obviously, it looks like somebody might have given you some kind of attack weapon. That's one interpretation of this. Did you talk to him about that?

Corey: Not to him. Ka'Aree did tell me that there was some sort of an attack that was orchestrated – something was most likely put in my food or water – and that she didn't think that it would have caused that large of an effect on me if I hadn't have been exhausted already.

David: Did you ask Sigmund about this?

Corey: It came up. He said that it had nothing to do with him, and that they were investigating it.

David: So what happens next in terms of briefings that Sigmund brings you to? Do you talk to others, and how does it go?

Corey: Yes. And I can't discuss the details of where it occurred, where these things occurred, but I was talking with anywhere from three . . . one, three, larger numbers of people – a total of about 28.

And I was giving the same briefing. Ka'Aree did not answer any of their questions in the further briefings. That kind of freaked the guy out a little bit.

David: Did she identify herself when she was talking through you?

Corey: She did, yeah.

David: Really? Okay. So that would have definitely been very uncomfortable for someone who's not comfortable with this.

Corey: A scientific person. Yeah, they were not happy at all with that part. But when I'm giving these briefings, I had 13 people out of 28 stand up, throw their arms in the air, and storm out saying basically the same thing, “I can't accept this.”

David: Hmm.

Corey: And the other people that remained just kind of . . . almost like they thought they were being punked. They're looking around. Their heads jerking around looking at each other.

They've got these kind of stupid grins on their face. They were just having problems with the information. They were polite though.

But afterwards, they were telling their superiors, “What a waste of time. What a crazy story.”

So since then, Sigmund has put a pause on briefings.

David: How much do these guys know? Do they know about the MIC group?

Corey: Yes.

David: Do they know about extraterrestrials? Do they know about Atlantis and Antarctica?

Corey: No, no, no.

David: Pre-Adamites?

Corey: No. They don't know any of that. They don't have a need to know. They're engineers. They just know about the programs they've dealt directly with.

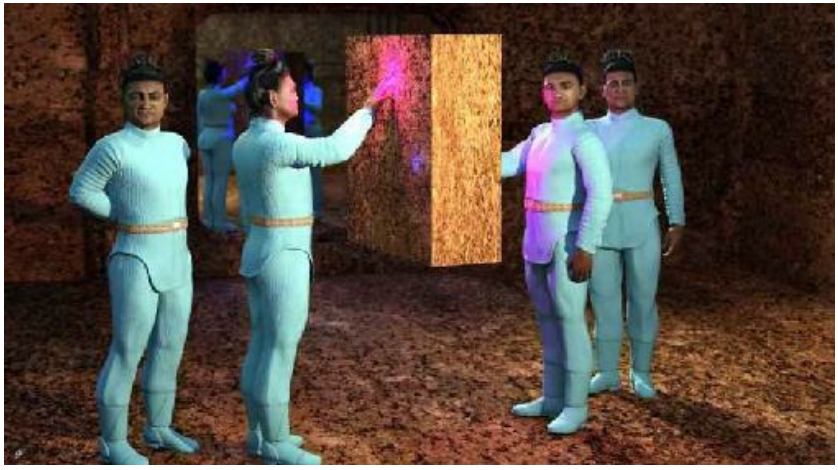
And those usually don't go anywhere further than this MIC SSP group that was basically kickstarted during the Star Wars Initiative.

David: Have you had any further meetings with the SSP Alliance since we last did our updates?

Corey: Since I first met Sigmund, and Sigmund started this hunt for these SSP Alliance groups, they've been keeping their heads down. So the only person that was a part of the SSP Alliance that I've been meeting on a regular basis is Gonzales.

And he's been coming and picking me up in the Mayan craft.

David: What's the reason for him showing up in that way?



What was the objective of these meetings?

Corey: Well, since he's been staying with the Mayan people, I've been teleported to this giant stone craft somewhere out in orbit.

David: And what's going on? What's happening to you when you go up there?

Corey: I've been having some memory issues that concerned Gonzales. The last time I had reported I was up on the Mayan craft, and he had come up to me with this Magic 8 Ball-looking stone that he was scanning my head with, giving me concerned looks.

I've slowly started to find out what he was concerned about.

David: You had alluded to some big dark secret that has started to come up for you about your past that you found to be very upsetting that has very negative implications for your memory and your health.

Corey: Right. Many may recall that before I really started even talking to you, Gonzales – before I knew him – and the Mayans had appeared in my house after I'd had an eye surgery.

It was a detached retina surgery that the surgeon said was no different than astronauts' eye. It took three times to repair it. It was a very traumatic surgery.

I had some sort of a full memory recall that was very upsetting. I was basically almost suicidal at the time. And the Mayan group brought me up to this vessel and had suppressed a lot of memories that had popped back.

They also disassociated the, I guess, emotional energy I have tied to certain memories. When I try to talk about all of this, I would go into some sort of a panic attack.

The information that they hid away is causing some of my memory issues that I'm having.

He explained to me that he found out that I had done two other 20-and-Backs . . .

David: Really!

Corey: . . . that I have really no memory of. That was hard for me to accept. It was very upsetting.

And he has been working with me to help mitigate the issues on my memory from these other 20-and-Backs. The only thing is I've been having sort of a bleed through. I've been having dreams, and they've been pretty dark.

David: Does this mean that you have 20-and-Backs that were not Solar Warden at all?

Corey: I don't know what . . . I don't know the details of them yet. And I don't know if I'll . . . Hopefully, I don't want to process the information if it's as disturbing as what has been popping into my dreams.

David: Given that the Mayans seem to have very advanced technology, what method did they use to heal you of these horrible things that were coming back in your mind, and the damage that it was resulting in?

Corey: Right after the eye surgery, what they had done is they had further suppressed those two 20-and-Backs scenarios to where I would have no memory of them. And it had unintended consequences.

The way the mind compartmentalizes things, there was starting to be some bleed through. And there were some memories that were associated with my first 20-and-Back. So when they truncated those memories, there was something missing.

So my mind was trying to fix what was missing, and I started having memory issues and disturbing flashbacks.

So originally they had taken those memories and suppressed them further.

What they're doing right now is, I'm going up, and they're helping mitigate the issues. They have this free will thing. They won't totally fix different ailments of mine, but they are mitigating them so I can continue with this mission.

David: Have you had any other meetings with the Blue Avians, and, if so, what have they been telling you?

Corey: Yeah, I've had . . . The meetings with Tear-Eir have slowed down dramatically. And that's happened before. It's kind of been an ebb and flow as things are occurring.

David: Right.

Corey: And most recently, Tear-Eir has told me that we've entered into a very important three-year window as a species, that we're creating as a species the, I guess, reality that we're going to experience together.

That this three-year window is very important – how we, I guess, exert ourselves to try to get disclosure is very important.

It's very important to start doing things like mass meditations, anything that can kickstart that hundredth monkey effect within the rest of our subconsciousness.

David: The mention of three years is interesting because Jacob, one of the other guys who was a very, very knowledgeable space program insider, but wouldn't tell me everything he knows, as you and I both know who he is.

He spoke a lot about 2020. That was one of the key windows that he was always describing. And that's exactly what you're saying.

Corey: Yeah, 2020. Gonzales has made jokes about 20/20 vision and 2020 being an important part of this transition. So 2020 . . . There's some importance tied to it for sure.

David: Given the fact that Tear-Eir is being that specific, and that as we've talked about in many other episodes, we're expecting some kind of solar energy flash, this would imply that it's definitely not happening prior to 2020. Would you say that?

Corey: I'd agree.

David: Okay. But the window of 2020 to 2024, because you say they've also added a year on . . .

Corey: Yes.

David: Could you talk about that window? And what do you think might be going on with 2020 and that period of time?

Corey: I'm not sure what's going to occur, other than we're making some sort of a decision as a people in that time period. It's important.

A lot of these groups that are trying to massage and muddle things are kind of sitting back now. Pretty much, the ball's in our court.

How we're going to proceed from now on, a lot of it has to do with how we process this new information, and how we react to it.

David: There was a blueprint for partial disclosure that seemed pretty obvious.

Tom DeLonge, the multi-Grammy winning lead singer of Blink 182, arguably the biggest rock band of the 1990s, is saying that he met with 10 different military insiders. It came out in some of these WikiLeaks data dumps that actually verified that he was having meetings, and who he was meeting with.

And now he's got the second of his two books of the “Sekret Machines” series that gets into Nazi bell craft and all kinds of stuff, but basically seems like the MIC space program. What's going on with that initiative in light of all this stuff that you're now

bringing to the surface?

Corey: They're, I guess, tacitly proceeding with this partial disclosure narrative, but at the same time, heavily investigating all of this new information, which could affect the plans for doing this partial disclosure of the MIC Secret Space Program.

David: Is there the same degree of support for the Tom DeLonge initiative now as there was before, or has that changed?

Corey: On the face, yes, they are proceeding, but many, especially in the control structure, they want to know the results of the investigation Sigmund's doing. They're very interested in this investigation.

David: The Vault 7 documents had a big build up for them going on where WikiLeaks was putting out all these cryptic tweets, and people were trying to figure out what was going on. There was a real big buzz.

And then it comes out in the open, and it's all about the CIA. And they're saying there's 8,700 documents in there.

What are we seeing with Vault 7, and can we expect more of that kind of stuff to happen?

Corey: Yes. I was officially told that this document or data dump that I talked about in the first couple of seasons of Cosmic Disclosure has finally started to occur in earnest.

That there were going to be further clusters of very uncomfortable information that are going to hit the Internet.

And as we have time to digest that, maybe even before we have time to fully digest that batch, another one would come. And then another one would come – with in between those, the Cabal doing a few tit for tat releases of data of their own, but nothing as significant as what the Alliance is leaking.

So we're in the beginning of this document dump, and there's a lot more coming.

David: Are we still expecting there to be some sort of new financial system once the dust settles? Might there be an economic collapse? What about that, just briefly?

Corey: I'm not seeing any information about an imminent collapse. It sounded like, until we have some sort of a disclosure, they are keeping everything stable.

So at a future point, there will more than likely be some sort of a change in the

financial system since it's going to be exposed that the financial system that we have right now is completely corrupt.

David: When this financial change happens, what will the effect be for the average person?

Corey: A more level playing field. That's the goal. A more level playing field for all of these different nations to start interacting with each other. And hopefully, when we get to that point, we'll also have technologies that we'll be sharing with all of these other countries, which will bring us closer together and into a new era.

David: If these technologies do get declassified, have you gotten any evidence as to how that will take place?

In other words, are they going to be officially announced, or are they just going to start to bubble up, or how is it going to happen?

Corey: It's going to occur in the data dumps, more than likely. And then officials with egg on their face are going to either have to confirm or deny the existence. That is the information I have.

David: Well, I want to thank you [Corey] for continuing to fight the good fight. And I want to thank you [audience] for supporting us by watching this show and being subscribers.

I'm David Wilcock. This is “Cosmic Disclosure”, and I thank you for watching.

Revealing the Original Secret Space Vehicles Season 7 Episod 18

[Cosmic Disclosure; Revealing the Original Secret Space Vehicles with Mark McCandlish](#) Season 7, Episode 18

02 May 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I hope you're having an amazing day, and maybe after you see this episode, it's going to become even more amazing. I'm here with Corey Goode, and we have a special guest today, Mark McCandlish, one of the original thirty-nine whistleblowers who came forward at the Disclosure Project event on May 9, 2001, at the National Press Club in Washington, D.C. to disclose the reality of the extraterrestrial presence on Earth.

|So, Corey, welcome to the show.
Corey Goode: Thank you.
David: All right. We're going to start now with an intro and overview of Mark, in his own words, from his background. Let's take a look.
* * * * * *

MARK'S STORY

Mark McCandlish: My electronics aptitude was so high right out of high school that the Air Force was really enthusiastic about getting me to work on something like a weapons control system on aircraft. So that's where I wound up going.

After I got out of the Air Force, I used the GI Bill to go to Brigham Young University, studying design illustration. And then I went to Art Center College of Design as an automotive design major and eventually changed my major to just straight illustration when I began to see that the bottom was about to fall out of the automotive industry,

and they weren't going to be hiring any designers in the late '70s, early '80s.

And that's when I went to work for the defense industry.

I had been approached by the Calabasas Division of Lockheed, and I think this was right at or right before the time that Lockheed joined with Martin Marietta and became Lockheed Martin.

And the gentleman that had asked me to prepare this illustration said that, “We can't tell you what it looks like. We can't tell you anything about the aircraft, only that it's the second generation in an existing family of extremely high speed, high altitude aircraft.

And so we need you to draw a picture of something that looks really fast.

So I looked around, and the two fastest aircraft that I was aware of at the time was, of course, the SR-71 Blackbird, which is Mach 3 , and then the prototype XB-70 Valkyrie that was built by Rockwell International's North American Aircraft Division.

So I combined features from those two aircraft, and I thought, this is a really cool-looking aircraft.

And I went in, and much to my surprise, they had a couple of engineers from Lockheed Skunk Works there.

And it was an order gentleman with glasses, a receding hairline. And they were actually wearing little white lab coats with the pocket protector and the slide rule and this kind of thing.

And so I opened up my sketchpad, and I turned around, and I slid it across this big, beautiful, mahogany table in this conference room.

And right away, I could see that something was wrong. The gentleman both took on an appearance of being kind of startled, like they were seeing something they weren't expecting.

And then one of the two gentlemen – the man with the glasses, the receding hairline – you could literally see his face turn red. You could see beads of sweat starting to form on his forehead and his lip. And his hands started to tremble.

And he slams his hand down on the notepad, and he says, “What are these canards, and what are these winglets out on the wings? Those would be torn off at Mach 17 . . .” And he stopped himself right there as he said “Mach 17”.

And I thought, “That's 12,000 miles an hour [19,300 kph]!”

And they were both upset. And they were upset in a way that, at first, I thought it was because I didn't do a good job, because the illustration didn't look credible.

And then I thought, “No, this is something else.” They're reacting because I've hit something. I've hit the nail right on the head with this illustration, and they may perceive that what I've done here is because of some kind of a leak – some kind of an information leak.

And so the first thing I did was I tried to assure them by saying, “Well, look, I'll be happy to illustrate whatever you want, but the fact is, I just don't know what your aircraft looks like because nobody's told me. They said they can't tell me. The design is classified. So what I've done here is I've combined most of the most interesting features from these two aircraft – the two fastest aircraft that I know of – the SR-71 and the XB-70.”

And so then they kind of calmed down a little bit and relaxed. But at that point, the cat was already out of the bag. They'd said “Mach 17”.

It really pointed out to me that there were some programs that were going on. And, of course, you always assume that there's something classified going on all the time behind the scenes.

But as far as aircraft design was concerned, it really helped to illustrate that there were things going on – advanced projects – that were really pushing the envelope in terms of material use, high speed, high altitude and propulsion systems that had never been seen before – these supersonic combustion ramjet or scramjet engines.

And so it was an eye-opener. That's for sure. It let me know that there were other things out there that the general public didn't know about.
* * * * * *
David: Okay. So what you see there is very interesting. Here's a guy who's describing having a direct one-on-one meeting with insiders from Lockheed Martin Skunk Works.

And they told him that canards and winglets on the plane would fall off at Mach 17. So clearly, he had access to the real deal.
Corey, what were your thoughts as you watched this clip?
Corey: It was pretty interesting. I had seen information about these early planes that they were developing, and they were very, extremely aerodynamic.

But when he was talking, for some reason – it popped in my mind – I remember a

type of engineered crystal that they were using that they would put on the outside of these craft that . . . You know, like piezoelectric crystals. If you hit them, they'll give off an electrical charge?
David: Yeah, sure.
Corey: These convert friction heat into electric charges.
David: Oh, that makes sense.
Corey: And then the skin of the plane would have this crystalline material painted over it. And then the heat would be turned into electricity. The electricity would transfer through the skin of the plane into something that would quickly store the electricity. So it would be kind of like a heat sink.

It would be pulling electricity very quickly, and heat couldn't build up.
David: Well, let me just mention that there are known things called photo cells, which we already have in electronics, where they can sense a light source and actually convert that light to electricity.

So this idea of basically what you're describing as a thermal couple on the outside of the plane, that's totally plausible within electronics that that could work. I just never thought of it before. It's fascinating.
Corey: Right. I'd forgotten about it, too. It just popped in my head when I was watching that clip.
David: So Mach 17, . . . of course, some of the people watching this may not be aware that conventional aeronautics . . . even Mach 4, Mach 5, is considered extraordinary.

What are the speeds that you encountered with some of the craft that are in the classified world that he got a little taste of here?
Corey: Well, yeah, there was a lot of talk of craft that were being developed between Mach 9 and Mach 20 . . .
David: Right.
Corey: . . . that were being developed that were mostly for flying in the atmosphere – test craft to get to a point where they could develop craft that could fly in and out of the atmosphere.
David: So is it normal for somebody like Mark McCandlish to have this background of industrial design – he said that he majored, at first, in drawing automobiles and getting really nice technical illustrations of them, and then in his case, going into the defense industry – that a guy with those skills could end up potentially in some kind of classified program?
Corey: Absolutely. They need people of all skill sets. You're going to run across a lot of draftsmen, artists, that worked for the government that have a lot of knowledge like he does.
David: Now, another thing that is interesting to me was he mentions Brigham Young University. And Pete, tongue-in-cheek, called that whole area – Utah, Idaho, etc. - "Mormania". And it was originally a joke, but apparently, on the inside, they now

actually use that term – that what I've heard from him – and I want to get your thoughts on this – is that many people who worked for the CIA and other intelligence agencies are recruited from Mormon states in America, that there is a Mormon component to the black ops world.

So I'm curious if you ever heard anything about that?
Corey: Yes. I read on the smart glass pad about how different Mormon groups were creating vaults underground and were reporting back to the intelligence agencies that they were encountering beings when they were trying to build their facilities underground.
David: Beings that were not human?
Corey: Correct.
David: When we see a guy like McCandlish coming out and talking about this, what do you think he had to gain from this? In other words, I don't see any evidence. I don't think he's ever written a book.

He kind of went off the radar after Disclosure Project in 2001. Now here it is, 16 years later, he pops up again.

So do you think that there's any self-interest or manipulation going on here? What's his objective?
Corey: One of the things you see quite often with whistleblowers is that in the process of being a whistleblower, they end up losing their careers. And he pretty much lost his career within all of the defense industry and basically was in hiding for a while from what I hear.
David: All right. We're going to now continue with some more footage for you to check out. This is the second part of our groundbreaking interview with Mark McCandlish. Let's check it out.
* * * * * *

COVERT CRAFT

Mark McCandlish: Well, this is a story that came to me through another aviation artist that . . . One of my contemporaries met this fellow and a friend of his at an air show at the old Chino Air Base where they brought a lot of the aircraft after the Second World War to be demolished and scrapped for their aluminum and so forth.

And he was saying that this fellow had a friend who was a former astronaut – it was one of the Buzz astronauts, Buzz Aldrin or Buzz Carpenter – one of these gentlemen.

And this individual was flying a Learjet, ferrying it from one location to another, and he was passing over North Central Nevada at the time – broken clouds and this kind of thing.

And he comes out of some clouds and into an open air space, and below him and to the left is this black aircraft that looks sort of like a flattened-out football shape.

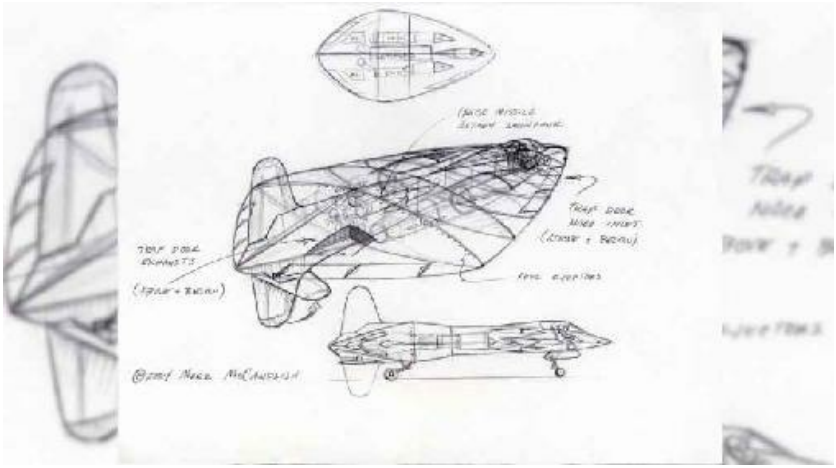
And on the back end of it, it has not only a vertical stabilizer or a tail on the top, but there was another one down below.

A lot of people don't know that the early A-12 version of the SR-71 Blackbird also had the same feature. It had a folding vertical stabilizer on the ventral surface on the underside of the aircraft.

But this aircraft had an unusual inlet design. It wasn't the typical thing where you have a big hole hanging down underneath the wing where the air for the engine comes in.

This thing had, what looked like, a pair of these triangular-shaped NACA ducts near the leading edge of this.

There were no wings, no tail feathers – nothing. It was just sort of a lifting body design, like a flattened-out football shape.



Control surfaces along the leading edges and on the trailing edges, but the inlets were a pair of NACA ducts.

And then at the back end were a pair of trapezoid-shaped exhaust ports. But then at the midsection, the widest part of this platform, was a ridge. And along the trailing edge of the ridge were what appeared to be a number of fuel injectors pointing outward where it was obvious at some point in the flight regime of the aircraft, there would be something expelled from those ports.

And it was actually operating kind of like the whole back end of the aircraft was a linear aerospike engine, which has that kind of a configuration.

The pilot is there, and he looks at this plane and realizes that if he hadn't seen it directly that he might have collided with it in the clouds.

And so he gets ahold of the ground control operator for that region, and he says, "Why didn't you inform me that there was another aircraft in my vicinity?"

And he said, "Well . . . " The response was, ". . . because there isn't any. We don't have anything on radar at all."

And he says, "Well, the hell there isn't." He says, "I'm looking at a plane right now. It's black. It has the two tails." He described what he was seeing, "I'm in his 5 o'clock position."

And there's a long silence on the radio.

And then all of a sudden, he can see in the window, the cockpit – it's kind of like the X-15 cockpit where it's mostly aircraft with just a little tiny window and a splitter in the front. And he sees the face of the pilot look around at him like this, and like, "Oh, crap!", and banks away and goes into one of the clouds and disappears.

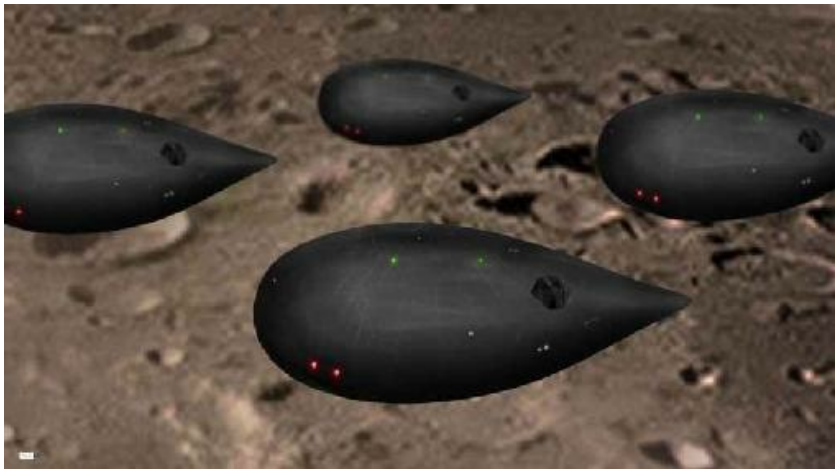
So a little while later, there's another voice that comes onto the radio – a deeper voice, a more serious voice, and he says, "Okay, pilot zone, so you need to change your heading and come in to Nellis Air Force Base, and we need you to land there and be debriefed. And I want you to roll out and stay at the end of the runway. You will be met at the end of the runway."

And so then they take him in, and they put him through interrogation and make it real clear that what he saw was something that doesn't officially exist, and he's not to talk about it.

But eventually, apparently, he did tell someone, including this colleague of mine who shared the story with me.

* * * * *

David: The first thing I thought of when he said a 'squashed football' was your description of the Dark Fleet craft which you said have a dark teardrop-type of shape.



Corey: Right.
David: But based on the illustration that McCandlish made here, is that what we're looking at, or is this something else?
Corey: I knew immediately, the way he was describing the craft with the two fins, the two stabilizers, that it was a test craft from the military. I've read before about these vertical stabilizers, that are on the top and bottom, that, at a certain stage in flight, the bottom one drops to give them further stabilization.
David: Well, he had the location right, because he said this witness saw this over Nevada.
Corey: Right.
David: So there you go. That's your Area 51.
Corey: Right. That's a good place to see test craft.

I've received quite a few emails from pilots, that don't want to go public because of their jobs, that have described seeing very similar things.
David: Really?
Corey: Yeah.
David: One of the insiders that I have had contact with – I met through Pete Peterson – he claims to have been able to build eight different types of anti-gravity device. And he worked on aerospace design.

He has described that a lot of times these planes were built, and then they were mothballed. And he believed that the purpose was money laundering – that the plane was said to cost much more than it really did. It justifies these budgets.

The actual money spent on it might be much less, and then the less of the money goes

to some other thing. Have you heard of that, and if so, where's the money going?
Corey: Yes. A lot of these contracting companies are . . . I mean, everyone's heard about $200 hammers, $300 toilet seats . . .
David: Right.
Corey: . . . that kind of thing. That occurs all the time to bring in extra money for black budgets. So that's fairly common.
David: What might some of those black budgets be? I mean, wouldn't this plane be the goal . . .
Corey: Right.
David: . . . or would it be something else?
Corey: Something like this probably came from a budget from a craft or something they were building that was known. And then they overcharged for that craft . . .
David: Right.
Corey: . . . and funneled that money into a craft like this. And a lot of times they'll build these craft. They'll put millions of dollars into building a craft like this just to prove a certain concept for future craft that they'll fly around a few times, and then they mothball them or take them apart.
David: Right. So given the design and the shape of this particular craft, what type of usefulness to you think it might have?
Corey: I think they were trying to increase stabilized flight past Mach 3 to 5, most likely.
David: It doesn't really look like it would capture air like a wing. Do you think there's some sort of anti-gravity component to how this works?
Corey: No. This is a conventional jet. It's just really advanced technology. It's kind of like what he was talking about – sort of like a ramjet. It brings in the air at the wings and expels the gases and air out the back to propel it.
David: All right. Next, we have another very interesting and strange story from Mark McCandlish, which I'm sure you're going to like. Let's check it out.
* * * * * *

SURPRISING TECHNOLOGY

Mark McCandlish: There was a gentleman, and I don't remember where he was located, but he had a custom of jogging early in the morning with his dog. And one of the challenges that he made for himself was he would jog on this path that would go up to the top of this hill near the town where they had the city water supply. It was a big tower.

And it was a heavily wooded area with a clearing around the tower itself.

And as they're jogging up the hill, he comes out into the clearing where the tower is, and here is this aircraft. And it looks like a conventional jet aircraft standing on its tail, and it's orbiting this water tower silently.

No jet engine noise, no dust being kicked up or anything, and the pilot is just sort of playing.

And he's just standing there with his mouth hanging open, and his dog is barking and really going crazy.

And while the pilot's doing this, he kind of looks over his shoulder, and he sees the jogger there. “Oh, no!”

So he lights up the after burner, and off he goes using conventional power.

So it just pointed out that there must be some other things that they're incorporating and folding into some of the . . . maybe even the standard issue aircraft that are giving them abilities that are not completely obvious when looking at them from the outside.
* * * * * *
David: This is one of those stories that seems to stretch the credulity a little bit. What is your feeling about the idea that conventional aircraft might have some sort of anti-gravity that would allow them to do those types of tricks?
Corey: Well, it's definitely not something that would be standard issue on one of the fleets right now out to sea.
David: Right.
Corey: But they have retrofitted conventional-looking craft with anti-gravity for specific reasons to be used, I guess, for special missions. It's not something that a lot of the different lieutenant commanders out there in the Navy that fly jets . . . they're not going to have this or know about this type of technology being incorporated into conventional craft. But it is something I've heard of. I haven't seen it with my own eyes.
David: I've also had Peterson tell me that military aircraft are all now – or at least many of them – are equipped with a technology that he called 'masking'. Are you familiar with that and what that's all about?
Corey: Yeah, masking is a common term. It just means 'camouflage'. It's an electronic camouflage.
David: So would a masked craft still be visible once the masking is turned on?
Corey: No. No.
David: Right.
Corey: That's the whole point of it. It pretty much . . . You're seeing what's behind the craft.
David: So what would the usefulness be of a pilot able to back the tail of a plane down and then turn circles around a tower like that?
Corey: That's not really the point. The point is to be able to loiter and hover to engage targets like a helicopter would and then having the supersonic flight capabilities as well.

It's one of the reasons also they developed the Harrier.
David: Sure.
Corey: Then you have the vertical takeoff and landing capabilities as well.
David: Now do you think it's possible, given that he seemed to have been turning circles around a tower, that the anti-gravity, in some way, was able to partially attach to the mass of the tower and use it as a center of balance or a pivot point for him?
Corey: No. Most likely what occurred is . . . They have a lot of this smart flight technology in drones now. And it's usually a camera that has intelligent computers connected to it.

The camera acts like an eye, focuses on like a tower, and then it will loiter and hover

around a certain object.
David: Ah. So this could have all been done automatically. He was just having fun.
Corey: Right.
David: He doesn't have to do any fancy flying at all.
Corey: Yes. It looked like he took a little time out of a normal test flight to play around a little bit on his own.
David: All right. Now we're going to see a very interesting section of this interview where McCandlish is describing a UFO sighting that actually led to photographic evidence. Let's take a look.
* * * * * *

THE CEDARVILLE UFO

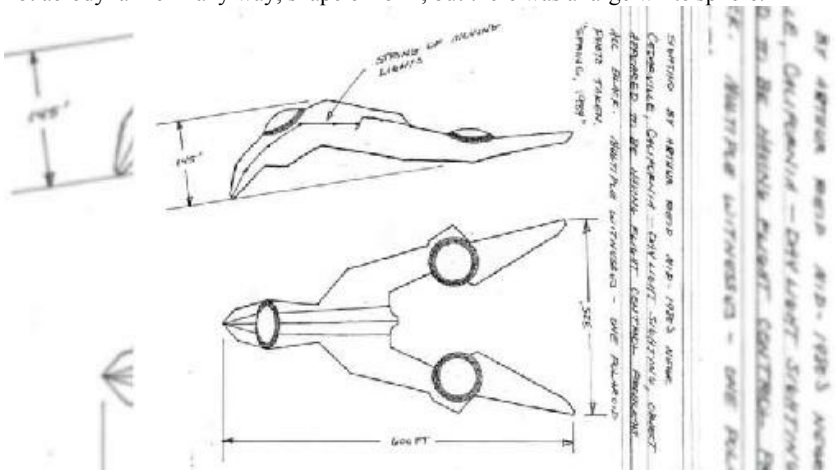
Mark McCandlish: It was a fellow that I knew – his name was Arthur Reed – who took this photograph in 1982. He was just exploring northern California by car.

He was driving somewhere about 10 miles north of Cedarville, and he saw a large group of people that had pulled off the road, and they were all sort of looking off to the west.

And so he, just out of curiosity, stopped to see what it was. And off in the distance was this immense, black thing – big, large, V-shaped vehicle.

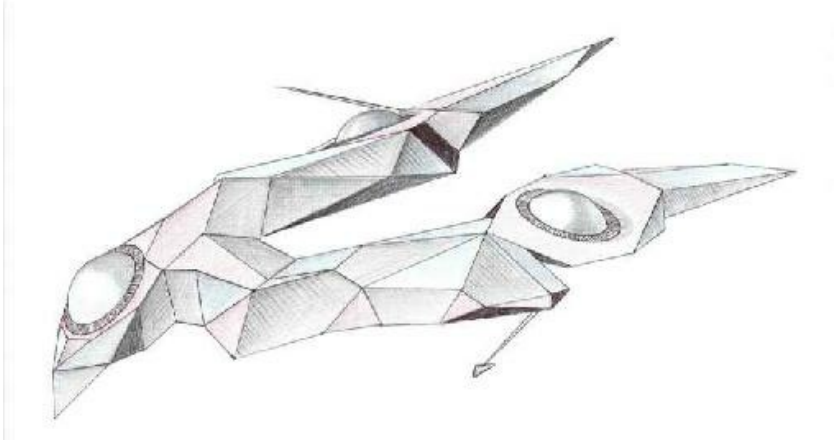
And the shape of it was what kind of gave it away as the possible product of Lockheed Skunk Works, because it had the same sort of faceted flat surfaces like a Stealth Fire.

The craft looked an awful lot like a large black V, and in the middle of each of those two wings, or legs, or whatever you want to call them, which were really thick and not aerodynamic in any way, shape or form, but there was a large white sphere.

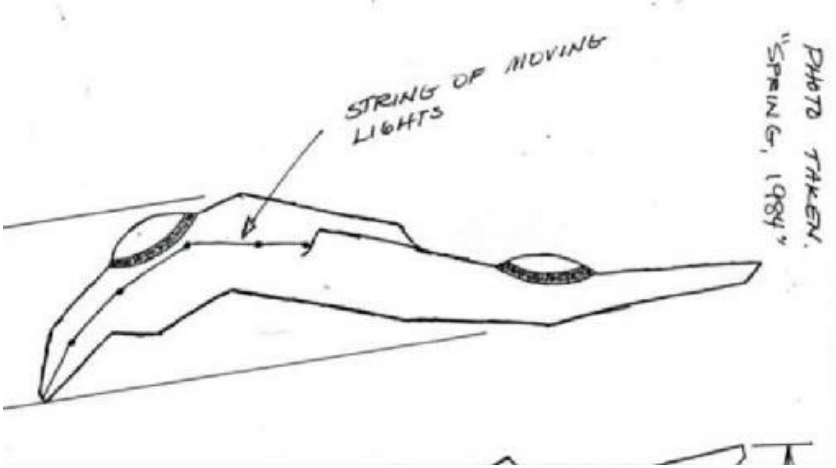


And then there was one up in the very front where they kind of came together. And there were seams on the surface of the thing that looked like the different parts of the

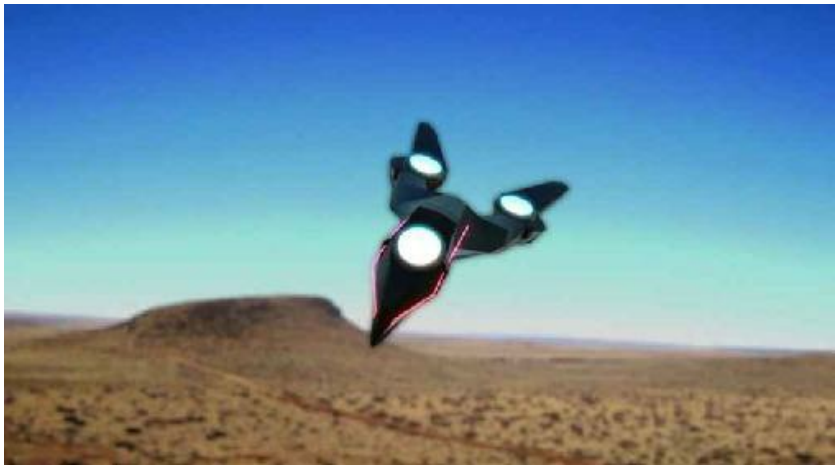
vehicle could be articulated and folded up into almost a triangular shape.



There were a series of red lights that went from the nose back towards part of the fuselage where the wings joined together.



And the thing was in a nose down, bank to the left, and it was hovering in this position about maybe 250 feet off the ground.



And it was maybe a quarter of a mile to a half a mile off the roadway.

Very large. He said that he thought that this thing was somewhere between 300 and 600 feet on a side. It was that big.

He said that it was making this low, pulsating, humming sound, almost like something you'd see in a science fiction movie, sort of this [whirring sound] kind of sound. But he said it was so powerful, so loud, that you could feel it in your chest – that your chest would kind of vibrate and resonate with the sound.

And the people that were there that had pulled off the road represented kind of like a cross-section of what you'd find in America – the deeply religious people that are crying and on their knees, praying to God to deliver them from this chariot of the devil.

There were other people who were running towards it and waving and saying, “Take me for a ride”. And there were other people there hooting and hollering like they were watching a fireworks show on the 4th of July.

In the photograph, in the foreground, you can see people standing in the bed of their truck, and you're seeing them all from the back, so you can't tell exactly what they're doing. But a lot of them, their arms are like this [up in front of his eyes], like they're watching it through field glasses.

There are other people just sort of standing around, just taking it all in, watching everything.

But he said that this thing sat there for the better part of a half an hour, and that's why there were so many people that had pulled off and were watching.

And apparently, there was some kind of a flight control issue with this thing, and it had initiated a bank, and then they couldn't pull out of this dive, so they just stopped. And it was hovered in this banked, nose-down position.

And so apparently, whoever was working on this thing was not able to repair that particular problem. And so the way they resolved it was this thing continued in its bank. I have to turn my hand the other way to do it right, but imagine that this [his hand is now face up and he's pointing to his palm] is the upper surface like this.

So the thing flips end over end like this [the top rising up and back], but at the same time, it continues the roll. So it goes like this [it first rolled to the right and then the nose twisted up and back], and it's pointed up and away from the crowd.

It starts to climb out slowly, getting louder and louder, and then it gets to about 5,000 feet and [hands slap together] gone just like that, out into space.

But he said he went back about a week later, and he parked his car in the same spot. And he was walking out to see if maybe there was any evidence on the ground that this thing had been there. Maybe something got dropped off of it, or maybe there was crop circle-type evidence – that kind of thing.

This Air Force truck comes rolling up – the dark blue with the yellow stencil on the side - “United States Air Force”. And a couple of military cops tell him he needs to

get out of there and leave immediately, or they're going to arrest him, and they're going to impound his car. So he leaves.
* * * * *
David: Well, isn't it cool to have some really good illustrations – a guy that can back up his story with visuals like this?
Corey: And a photo – an actual photo.
David: Yeah. That's a very interesting and bizarre-looking craft. Let's just start by getting your thoughts as to, have you seen anything like that? What do you think its purpose might be? Is it just experimental? Was it actually used in operations, etc.?
Corey: I saw a lot of experimental craft, and a lot of them did say "Lockheed" on them, and they were faceted. And some of them were . . . I don't know how to . . . You could manipulate or articulate different areas of the craft. So this sounds to me like it might have been one of their test craft, a concept craft.
David: So when you say 'manipulate' or 'articulate', you mean the craft can move . . .
Corey: Change configurations.
David: Shapeshift, basically.
Corey: Right.
David: What would be the value of something like that?
Corey: Well, if you have three different points that are being used, I guess, as like impulse-type engines – electrogravitic engines – usually, they have them on a type of a gimbal that you can manipulate them, turn them this way, and then pull you in that direction.

So that's going to be kind of the same concept. And most of these that I read about were remotely controlled – the test craft. They didn't necessarily have pilots.
David: Well, I'm thinking about the old James Bond movie where he's got the car, and he drives it into the water, and then things all start shifting. And now that it's in water, it's got fins instead of tires.
Corey: Right.
David: Or it becomes a jet, and it flies, and wings come out. Is it possible that the shapeshifting has something to do with where it's traveling, like if it's in atmosphere or in space or something like that?
Corey: I would think it mostly has to do with controlling the attitude and pitch and yaw of the plane.
David: Just the actual manipulation.
Corey: Right.
David: Is it normal for people to be able to see one of these, or was this some kind of an accident that took place?
Corey: I think he described what most likely happened very well.
David: Right.
Corey: There was some sort of computer glitch, or they weren't able to communicate with the craft, and it went into a loiter position. It was most likely programmed to go into a loiter position if there was an issue.

David: Now, earlier in this same episode, he was talking about how craft that are going to travel at Mach 17, that he couldn't have these canards and winglets on the craft because they would get torn off.

The thing that strikes me is, you're talking about a craft that has moving parts – a craft that has all these facets on it. It's got an unusual shape.

Wouldn't that type of a structure stress out under very high velocity and not be a good choice for a high speed aircraft?
Corey: No. Most . . . A lot of them are faceted – the craft that are supersonic.
David: Okay.
Corey: That's actually a part of the design. It's not only for deflecting radar, but they design them to be highly aerodynamic.

And I didn't see anything that would cause a whole lot of drag on that craft.
David: But the joints . . . In order to have the joints be strong enough that things could move and then hold up under that velocity . . .
Corey: Most likely it moves into a different configuration.
David: Oh, for high speed?
Corey: For high speed. Right.
David: That, I can understand. So maybe the two Y-like sides of it would pull together.
Corey: Come together. Right. Right.
David: You mentioned before that the ICC – the Interplanetary Corporate Conglomerate – within the greater space program you were part of, was manufacturing and selling technology to over 900 extraterrestrial groups – 900 being the ones they were in regular contact with.

Would the ICC be testing anything on Earth, or would this be some other group besides them?
Corey: Well, the ICC controls a lot of these military-industrial-complex-type firms that contract this stuff. So they're going to be overseeing it anyway and pulling in technology that they see that can be incorporated into higher technology craft.

There's most likely an Area 51-type of Lockheed-Martin joint effort.
David: How might you use a craft like this? What would be its purpose? Is it an attack weapon?
Corey: Yeah. It probably has different weapons-platform packages you can put on it for reconnaissance and also weapons platform to make it a weapons platform. But most likely, that was a concept for another craft that . . . They'll build three or four different concept craft to finally come up with one final version.

So that could have just been part of a process of creating another craft.

David: Well, that's all the time we have for in this episode of “Cosmic Disclosure”. I'm here with Corey Goode, and we are watching the very surprising testimony of one of the original Disclosure Project 39 whistleblowers, none other than Mark McCandlish. We'll see you next time.

Antarctica; The New Area 51 Season 7 Episod 19

[Cosmic Disclosure; Antarctica; The New Area 51] Season 7, Episode 19

08 May 2017

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. Corey, welcome to the show.
Corey Goode: Thank you.
David: Everybody is talking about Antarctica, and your information is that there is a very interesting new finding or series of findings down there, and the more that this goes on, the more you've learned.

So tell us what's new in this whole Antarctica story that we haven't already been covering?
Corey: Well, some of the newest information that I received is information that's going to make some of the military-industrial complex a little nervous.

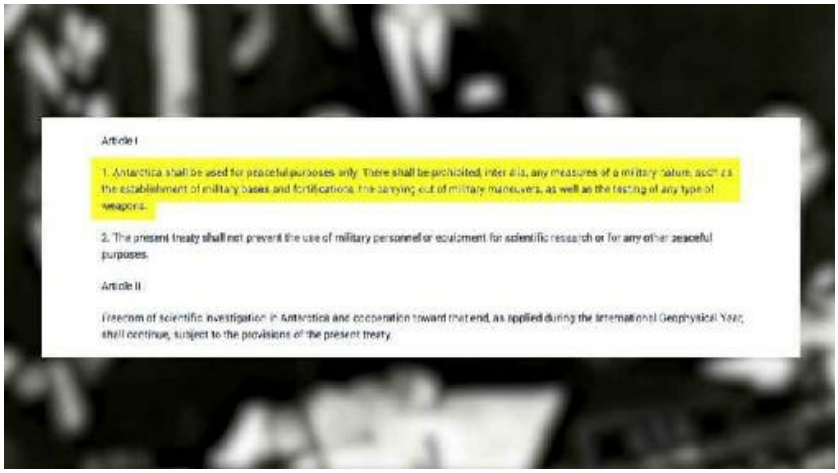
It turns out that during the 1950s, there was a project called Project Ice Worm, and they were basically in icecaps building launch silos.

This particular one that we have video of occurred in Greenland. Now what's significant about this is that they've used this method of creating under-ice bases all through Antarctica.

They've created mini-bases, but much larger, that have become R&D bases. And these research and development bases are where companies like Lockheed Martin are doing reverse engineering of a lot of the technology they have found under the ice.

This is also how they built some of the early Moon bases and Mars bases – very similar – in a very similar fashion.
David: So you're saying that Lockheed Martin and other groups have bases in Antarctica that are more extensive than what we were led to believe or what you were led to believe in earlier briefings?
Corey: Correct, but what's significant about talking about this publicly is that, I believe in 1959, an Antarctic Treaty was signed.

And in that treaty it was stated that no weapons of war would be developed or used on that continent.



It would be used for peaceful purposes only.
David: Yeah, there actually was something called International Geophysical Year 1959, IGY 1959, and that was when all these things were codified.
Corey: Correct.
David: And that's also when they mapped out what Antarctica looked like under the ice, and you found out that there is a continent with land down there.
Corey: Right, twice the size of the continental United States.
David: Right. So if they are developing weapons systems that contravene an international treaty that's been in place for over 50 years, how does that affect people's perceptions of these defense contractors once this comes out?
Corey: That aside, the scariest thing is that some of the Alliance groups . . . If this information gets out in the public, they will have full reason to set up a blockade – it would be similar to the Cuban Missile Crisis – to set up a blockade of a certain area of Antarctica, and they would try to force these groups to show what's going on inside these R&D bases.

Now, some other interesting information is that they have what they . . . They're referring to this as a part of an Antarctic Area 51.

There is also a very large former Nazi base that was turned over to the military-industrial complex, if you want to say that, more like the shadow government.

And this former German base was used as a secret space program port. It is now a major port – spaceport – for this shadow government.

They use it to fly in and out of the atmosphere all the time. And a lot of these craft

will service some of these space stations or fly beyond.
David: We did cover this in another episode, but I'd like to ask you again for this one. What would be the tactical or strategic significance of having a big spaceport in Antarctica? It seems like it's an inconvenient place to travel to.
Corey: Well, it is, but the electromagnetics you have to deal with from the atmosphere and the gravitational field is more conducive, even though they're using antigravity craft.

A lot of the times, when they fire rockets, they try to fire them close to the equator . . .
David: Right.
Corey: . . . for certain purposes. And also, if you're flying a bunch of classified craft in and out of the atmosphere on a regular basis, you know, Area 51, or out in Nevada or Arizona, those places aren't going to cut it. You're going to want a place where you have complete control, and it's very hard for prying eyes to see what's going on.
David: When you mentioned the Earth's electromagnetic field, what is it about the South Pole that makes that more conducive to a launch?
Corey: I guess there's less of the Van Allen Belt effect going on.
David: Okay. There was a very interesting episode of Ancient Aliens, and in this episode they had Linda Moulton Howe, who has a show on Gaia, giving a very interesting insider testimony about a man who was a pilot and who flew in a restricted area and saw a gigantic hole in the ice over Antarctica, and said that craft were coming and going from it.

What does that have to do, if anything, with what you're hearing about what's going on in Antarctica?
Corey: I'm told this area was very close to the spaceport. So, yeah, that is VERY significant, but what also is significant is that he was flying . . . the reason he saw this hole . . . it was in a restricted airspace. He flew over it because it was an emergency, and they were picking up – I can't remember how many – scientists that had disappeared for about two weeks.

And you don't disappear for two weeks in Antarctica and survive unless you have cover and supplies. So these scientists that he picked up were petrified. They'd obviously been told not to talk to anyone. They wouldn't say a word the whole time they flew back to where they were being cared for.
David: You had mentioned in updates that you recently put out that there was something about the gases having to do with why this hole is there. So could you talk about why is there a hole in the ice, and how does that factor in with the excavations that are going on now?
Corey: Right. There are more than one of these holes, and they're natural. They occurred mostly natural. They're geothermal vents.

It appears that what's occurring is that the continent is heating up under the ice.

There's a lot of geothermal activity going on that's causing the under-ice lakes to significantly heat up and it's heating up the ice shelf itself.

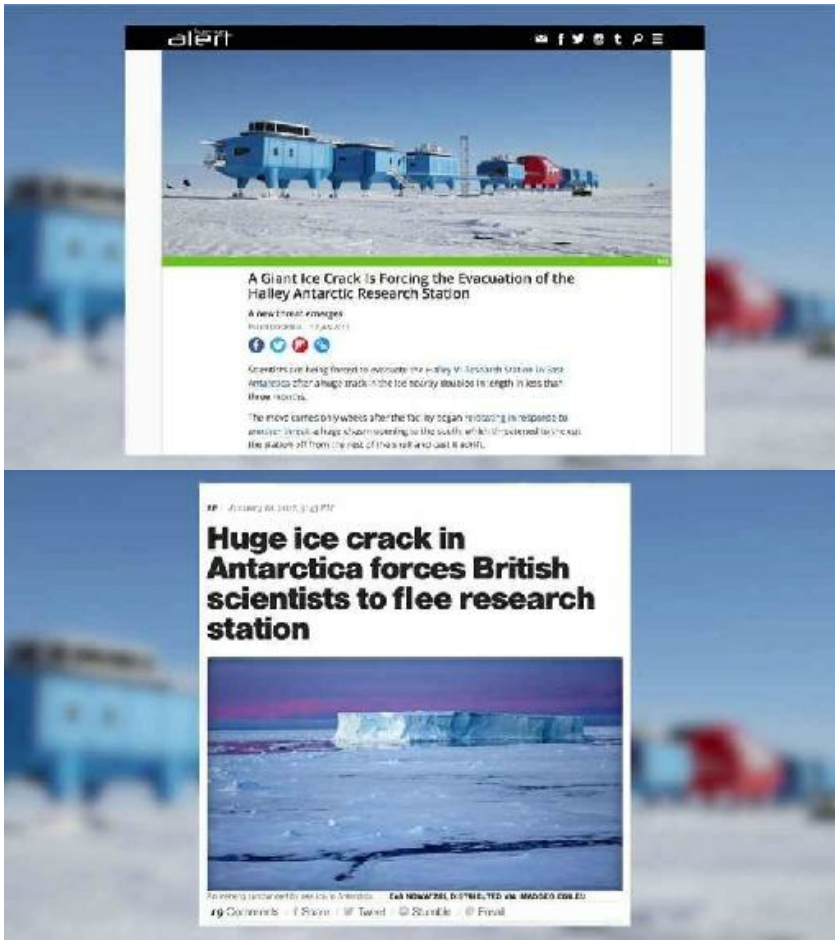
Now what this is doing is it's causing the ice to start to melt at a quicker rate. So these . . . It's a geothermal ice vent, and they have widened it for their purposes of flying in and out, and also using it as a way to vent out all of the heat that they're creating with their excavations.
David: Could they be using that heated air to potentially channel it, much like you would steer a river with irrigation projects?
Corey: No. They're trying to vent out as much of the heat as they can, because it is destabilizing these ice caverns that they've created.

You have to understand that the ice is moving at about a foot a day. And they're at a stationary point under the ice.

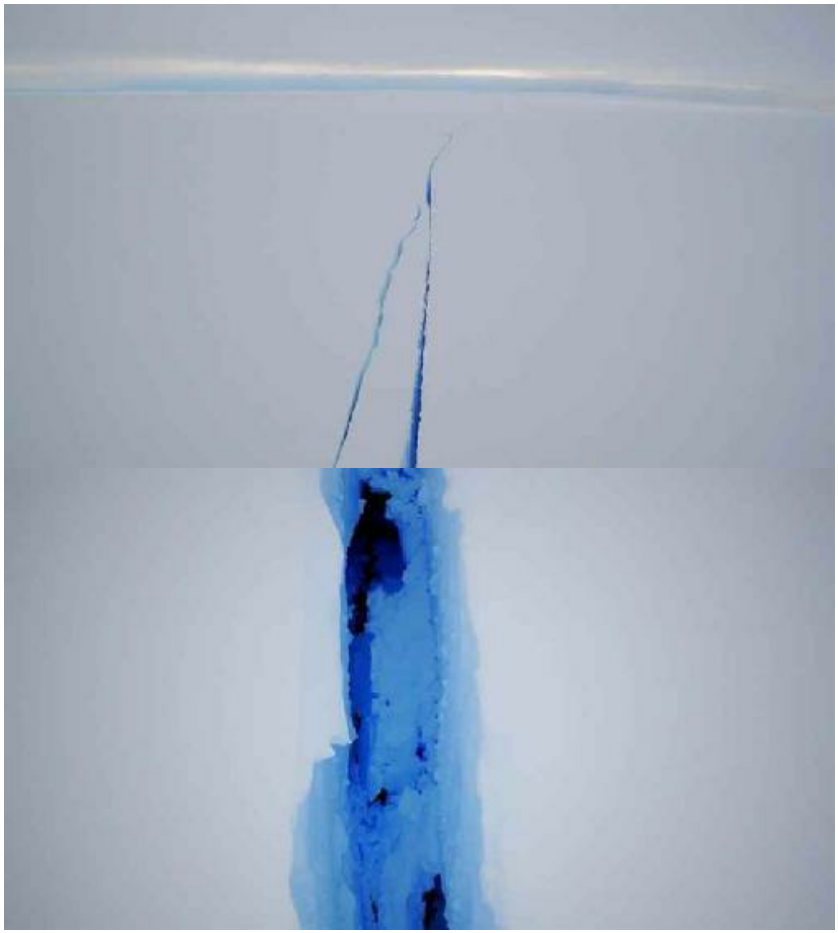
So not only are they excavating in this direction [Corey moves his hand in one direction outward] to uncover new artifacts, but they have to constantly excavate in this direction [Corey moves his hand to the opposite side] as the ice flow occurs.

This is compounding the thermal issues that are going on, because we're using different types of steam pressure to excavate, and when that melts the snow, it causes under-ice rivers, and that's further lubricating the ice shelf. So there are some significant issues that it can cause.

If they continue what they're doing and this ice shelf were to break off and fall into the water, it could cause tsunamis and other obvious problems.
David: It was interesting that in January, all of a sudden, there were news items in the mainstream media in which all these people were being evacuated from some of the main bases in Antarctica, and the story was that there was a big crack, and they were fearing that it could break off into the sea.



alert
A Giant Ice Crack Is Forcing the Evacuation of the Halley Antarctic Research Station
Huge ice crack in Antarctica forces British scientists to flee research station



Corey: Yeah, the entire ice shelf is going slushy under their feet. The temperature is raised like one degree in . . . I can't remember the time period that it's raised one degree, but one degree is significant in the ocean and on a ice shelf. One degree can make a major difference in the rate of melt.
David: It does sound familiar to me because we have other data that supports this: one of them being all the volcanic activity in the world from 1875 to 1993 was mapped out, and there was a 500% increase in global volcanic activity during that time.

So is that what's causing this?

Corey: Yes, and according to the information I have, these energetic changes that are occurring in our Solar System are causing this heating up process on our planet and other planets as well.
David: We have this idea that we talked about before, that Pete Peterson said there was one mothership that he estimated, based on his intel, as being 30 miles across and having a kind of elongated oval shape.

You then said that there were three.
Corey: Yes, but . . .
David: So what's the latest data on that?
Corey: The information I got was that they wanted me to give clarity that there was one miles-long craft that was up to three miles and oval shaped, and then there were two smaller, I guess, support-type craft that would be in a fleet that survived the attack and trip down from the Moon to here.
David: So this was something they felt was important for you to clarify for everybody – that it's not 30 miles wide. It's only more like three miles wide?
Corey: Right. Yeah, they thought that a little bit of clarity on that was in order.
David: Okay. But that is still an absolutely spectacularly large object.
Corey: Absolutely. And in the largest craft, there have indeed been located a bunch of beings in stasis, and they are the original beings from, I guess, Mars, that had come here – the original pre-Adamites.

Most of the ones that we've been dealing with since this great catastrophe are some sort of hybridized type of pre-Adamite that survived.

It's obvious that the pre-Adamite group, before they had to move here, had already been taking part in these genetic experiments, according to whatever agreements that were made with these other groups.
There are up to 22 different genetic programs going on.
David: Oh, so the pre-Adamites were part of the genetic farmer initiative?
Corey: Right. They were taking part, but they seemed to have a problem getting along with other groups. They were warlike. They tended to strike first and ask questions later.
David: When we're dealing with this subject of Antarctica, something comes up for me, very interesting, which is that one of my other insiders, Daniel, said that there was one natural ancient stargate on Earth.

He told me this years ago, and I put it on the Internet, . . .
Corey: I was about to lead into that.
David: . . . and that it was in Antarctica.
Corey: Yes.
David: So something that you said recently, not on our camera yet, just blew my mind, because it's a perfect one-to-one correlation. So could you talk about that?

Corey: One of the most important aspects of this Ancient Builder Race technology that they were trying to control was that there was a very powerful Supergate that is in Antarctica. And it was built by the Ancient Builder Race.
David: I'm sorry. Let me hold you right there. What is the difference between a Supergate and a stargate? Because you never said 'Supergate' before.
Corey: A Supergate has the ability to travel from one end to the other through the cosmic web, no matter how far it is – anywhere within our galaxy or to local galaxies.
David: Right. That's exactly how Daniel described it.
Corey: Right. Now, these other nodes that we have on the planet, you have to jump a few times to get to your location if it's very far.
David: So it would be like getting a transfer? You have to stop in one place, get out of a gate, to go another location, and then another one?
Corey: You have to wait for the electromagnetics to line up properly between different planets . . .
David: Oh!
Corey: . . . as they are spinning and turning within their local star system in relation to their star with those electromagnetic connections between their planet and their star, and then their star and our star have an electromagnetic connection through this cosmic web.

And those present electromagnetic, I guess, tubes for matter to go from point A to point B through.
David: Do they have the ability, when they make these stopovers, to fast forward time? Do they have time acceleration capability, or do they have to build little resorts that they would stay in in order to wait for the next gate to open and kill some time?
Corey: No, they do have to wait and kill time.
David: How long might they be waiting?
Corey: It just depends on where they're traveling and how long it's going to take this – it's like a big clock – wait for all the mechanisms to be lined up just properly.
David: Are you saying that some of these waits might be years in duration for our time?
Corey: I'm sure they plan it out much better than that. Yeah, they have all the mathematics for predicting all of these locations that they want to go to down very well.
David: So you're saying that the Supergate isn't like that. The Supergate will take you wherever you want to go, . . .
Corey: Right.
David: . . . whenever you want to go.
Corey: Right, and it's a part of a . . . very much like Stargate Atlantis or SG1. An Ancient Builder Race built a network of stargates that are very powerful and very reliable. They can be turned on and used at any time. You don't have to wait for calculations. Now, . . .
David: What about the ring shape that we see in Stargate? How does that compare

with what it looks like?
Corey: It doesn't look anything like what they show.
David: Oh!
Corey: No. Usually, you have . . . You're in the middle of the room. The middle of the room is open.
David: What's 'the room', first of all? So it's an indoor structure?
Corey: Well, just gates in general.
David: Okay.
Corey: There's not some sort of orifice that you walk through.
David: Okay.
Corey: Usually, there is at least three different points that are opening, that are out in the periphery of the room, opening in a empty part of the room, a vortex that is a three-dimensional ball that looks like a mirage.
David: Okay.
Corey: And as people walk into it from all directions, it looks like they're shrinking as they . . . almost like they're walking downhill. They're going down into it.

And it's pretty much the same in this Supergate.

One of the things that I haven't mentioned is that they can, by the amount of energy they feed and the type of energy they feed in, and at what oscillations, they can use these gates for traveling in time as well.
David: So the room, then, you're saying, is like an Ancient Builder Race underground facility that you would go into?
Corey: Yes.
David: Could you paint for us a picture of how big that room is? Is it primarily just the three emitters in the room, and you walk into the center, or might that be part of a bigger facility?
Corey: I haven't actually seen it with my own eyes.
David: Oh, okay.
Corey: But most of the Ancient Builder Race technology are built in very large rooms with very large hallways and doorways, so these were not small beings.
David: So this idea of the Supergate and the Ancient Builder Race, it seems to me like it couldn't just be one Ancient Builder Race if it's outside of our own galaxy, that there might have been some ancient effort to do this on a widespread scale. Do you have any specifics on that?
Corey: Most of the information I've had is that they created this stargate system in this local star cluster of 50, 52 stars.

Now, they do branch out and go to other locations, but this race could have . . . They had plenty of time to map out the galaxy and put stargate locations where they wanted.

They could very well have collaborated with other races in ancient times.
David: Daniel's testimony, also, I just want to get this in, was that you couldn't bring metal or any type of weapons or anything that was non-organic through these original Ancient Builder gates.

I'm curious if you ever heard about that one way or the other.
Corey: No, they had some issues. They had some calibration issues that took them a while to figure out. The gates had to be calibrated, somehow. They were in time-space and in some sort of a network communicating with each other, and they figured out how to do it.

They ended up getting the gate to where they could bring anything from point A to point B. Now, the biggest problem they had were when they were creating their own stargates with our technology. In the beginning, we could only send supplies from one place to another, and then we would take a craft there, because organics would not make it from point A to point B intact.
David: When you say 'they' were making stargates, which 'they' are we talking about now?
Corey: The precursor to all of these Secret Space Programs, back in the '50s and '60s when they were figuring out how to do portal travel . . .
David: Right.
Corey: . . . with the technology they had back-engineered from non-terrestrials.
David: One of the things that Daniel said about the Supergate was that the early, early 1970s' analysis of it led to the development of the IP address protocol for the Internet, because apparently every gate location has a numerical address similar to what we use for the Internet.

I'm curious about your thoughts on that.
Corey: Yes. I don't know if ARPANET developed TCP/IP communication protocols to mimic what was occurring in the Supergate, or if they even knew about it, but they work very much the same.

You even have subnet masks to mask certain gate systems so you don't end up going there.

Yeah, it works in a very similar way.
David: Okay, let's get back to these pre-Adamites, and you say that they were shot and burning. They crash land in this continent that was not, obviously, a glacier back then.

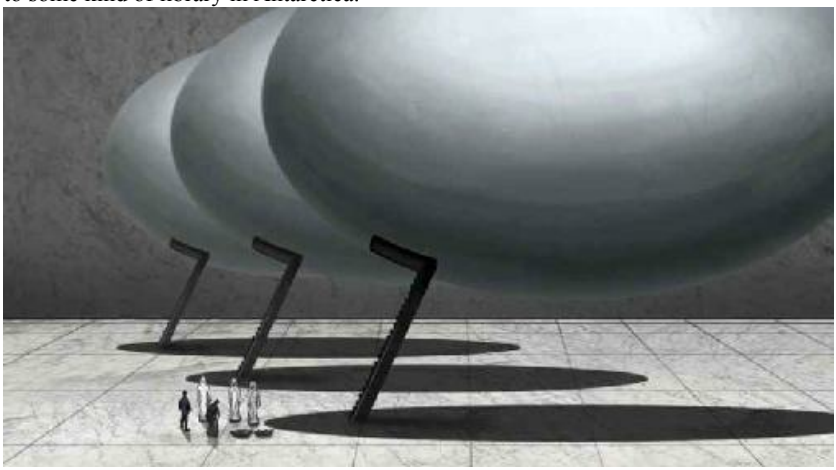
What was the strategic significance for them having access to the Supergate? Did they have a surviving part of their civilization that they could still visit with it, or were they trying to visit other civilizations? What was their goal?

Corey: You know, I really don't know what they were do . . . They wanted control of the gate, but not all of their species were trapped with them.

Originally, when they had escaped from the exploding planet, and then later on, when Mars became uninhabitable because of further warfare, . . .
David: Right.
Corey: . . . a large group of them went towards the outer Solar System and out and away, and then another group of them went towards the Moon and Earth.
David: Ah! So they were able to reach out to some of their lost refugees once they gained control of this gate?
Corey: That would . . . That would make sense.
David: It does make sense.
Corey: Yeah.
David: So who's in control of the Supergate right now?
Corey: This same shadow government group that has control over the spaceport and this Antarctic Area 51 area. It's the same group.

They have control over it, and they're trying to figure out what to do with a lot of this. They're finding so much.

Obviously, they're learning to back-engineer and cannibalize that technology to add to our existing space fleet technology.
David: Now, in our previous update, you mentioned Ka'Aree and others bringing you to some kind of library in Antarctica.



And you witnessed the extraction of scrolls from this library, but at the time, you did not know what they were or what the purpose of this was.

Do you have any further information on that now?
Corey: Well, you know according to Sigmund, what they were looking for down there were files, basically, that had, I guess, a multigenerational bloodline list that traced way, way back – back . . . It was a historical document even before their planet exploded.

Now, what's interesting is that everything in their society depends on bloodline – where you are in the hierarchy. The way they apply their laws had to do with where you were in this bloodline hierarchy.

So these are very, very important scrolls for them for a number of reasons.

They also wanted to be able to genetically tie themselves to this pre-Adamite race and then set up this pre-Adamite race as being basically gods, and they would be demi-gods.
David: 'They' meaning the Cabal?
Corey: The Cabal.
David: So this would have given them, using a legal term, this would have given them the imprimatur to claim this divine right of kings . . .
Corey: Right.
David: . . . and an extraterrestrial bloodline.
Corey: Right. And then internally, the documents were important because it's how they jockey for position and apply laws. It's a very . . . It's a cultural thing as well. It's

very important.
David: So why do you think the Anshar felt it was of such strategic significance to remove this, and why, also, would they want you to have witnessed it?
Corey: I don't know why they want me to witness certain things, but sometimes they have me witness things and it just doesn't really make sense to me.

But they obviously were removing these documents to disrupt future plans by the Cabal and some of these non-terrestrial groups working with them.
David: Would you argue that they wanted you to witness this so that everyone following this story would know about it?
Corey: I think since I'm reporting the information, they wanted me to witness it firsthand.
David: Have there been further Anshar meetings since the last updates that we did on this show, and if so, what have they told you?
Corey: Yes, I have met mainly with Ka'Aree in The Construct. And I asked her if what Sigmund told me was true, and she confirmed that, yes, that's the reason that they took the documents was to disrupt operations by the Cabal group, and also prevent them from being able to do a divine right of kings kind of thing.
David: One of the most remarkable plot twists for me was that after you and I had already exchanged a great deal of information on this, I called up Pete Peterson, and he starts telling me almost exactly the same stuff, but one of the differences was that he said in one of these ships that had been converted into a very advanced base, that there were groups of people who survived the Atlantean catastrophe but had gotten locked in there.

And then, apparently, our people finally dug them out. And this is only something that happened, apparently, recently.

So what are your thoughts on all that?
Corey: It's a little different than the information I received. I received information that they found very small pockets of a lot of these basically genetic experiments and humans from this pre-Adamite group.
David: Living, you're saying.
Corey: Living. That had been living basically in cavernous areas under the ice that were discovered.

I had no information about people surviving inside the ship. The information I had was that – and it would match if there were people in – was that up until the last couple of decades, it was completely ice-locked.

And when they went inside, there wouldn't be a whole lot of technology left inside this cannibalized ship to sustain anyone for any amount of time.
David: Right.

Corey: They took all of this technology out and put it into this new city that they built. So it's a little bit of a divergence.
David: So these people could take light sources that they build, remove them from the ship, go into these caverns, grow food and have water that they can melt and make available to themselves, so they basically can have a sustainable society.
Corey: Yes, and there's also less, I guess, advanced ways of getting protein and vitamins and minerals, other than using technology. There is an ecosystem underground that they could probably use as well.
David: You said that some of these people were chimeras, these animal-human hybrids?
Corey: Yes.
David: What types have survived?
Corey: I haven't heard the specifics, other than there were humans, and then some of these strange sort of experiments that were being created by the Pre-Adamites.
David: So let's talk a little bit about these stasis beings. They trace all the way back, you're saying, to this Super Earth before it blew up 500,000 years ago.

How many of these beings are there, and is there any way to wake them?
Corey: Well, I don't know the exact number. There are a number of them that are in stasis.
David: Tens, hundreds, thousands?
Corey: Nowhere near that many. I think it's maybe a handful, a dozen.
David: Okay.
Corey: And this group has put themselves in stasis at some ancient point, and they've been in this ship for a long time. And it was very important for the people that were guarding them to also get them down to Earth and hook up to the power source that the Ancient Builder Race was using to help them keep this stasis chamber and the ship working.

It is piped right into the Ancient Builder Race power source.

And they have figured a way to awaken them. They are unable to awaken one at a time. They have to awaken them all at the same time.

And there are a lot of security concerns about what's going to happen after they wake them.

I mean, everyone who has seen the movie Prometheus will see where the concerns are.
David: So you're saying that this would be a being that has literally edited out the last half million years of history, and wakes up knowing only that it went down when its planet either had been destroyed or was about to be destroyed.
Corey: Right.

David: How are they addressing the problem of these beings potentially being very dangerous when they wake up?
Corey: Well, there's pretty much a committee trying to figure out whether they're going to wake them or not. But in case they decide to wake them, they have these little mini-nukes, like these fifth-generation type nuke weapons that they have sitting right in the middle of all these beings in stasis.

And when they awaken these . . . if they awaken these beings, they're going to have the people there with, basically, dead man triggers.

If the pre-Adamites become violent or hostile, then they can be eradicated very quickly with a large nuclear explosion.
David: Well, this is really fascinating, and I thank you for continuing to be on the front lines and having these experiences to share with us. It's very, very interesting.

And again, even if you don't believe this, necessarily, it's a very fascinating story, far deeper and more complex, with threads to so many things that I've been researching over the years. I find it very believable in light of all the data that surrounds this.

I'm David Wilcock. This is “Cosmic Disclosure”, and I thank you for watching.

Faster Than Light Technology Season 7, Episode 20

Cosmic Disclosure; Faster Than Light Technology with Mark McCandlish Season 7, Episode 20

16 May 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. So, Corey, welcome back to the show.
Corey Goode: Thank you.
David: We're going to start out now with the first of a series of interview footages from Mark McCandlish, where he's going to be talking about a particular type of propulsion system and a particular craft that one of his insider friends saw.

So without further ado, let's take a look.
* * * * * *

A TOUR OF HIDDEN TECHNOLOGY

Mark McCandlish: I get a phone call from a friend of mine that I'd known in college. For the sake of this conversation, I'll call him Brad.

So Brad calls up, and he says, “You know, I saw your article. I saw your art work, saw your name in the magazine, got a hold of the art director. He gave me your number, and this is Brad. Do you remember me?”

And I said, “Yeah. That's great.”

So we got together for lunch. We were talking, and I mentioned to him that there was an air show coming up at Norton Air Force Base, which is in San Bernardino. It's

about 75 miles east of Los Angeles.

And there was a story that they might have the SR-71 Blackbird either do a flyby or that it might be on static display, which was kind of rare back then.

So we decide we were going to go to the air show. And at the last minute, the magazine called up and indicated that they were so happy with that illustration that they wanted me to do another illustration that was going to be coming out the following year in February of '89, on the X-31 program.

So they wanted it completed as a quick turnaround, and so I basically had to pass on going to the air show.

So about a week goes by, and I didn't hear anything from Brad. And I called him up, and I asked him, “Well, how did you like the air show?” But on the phone, he was very quiet.

And I said, “Well, what's wrong? You don't sound like you had a very good time at all.”

He said, “Well, I think I saw some things I wasn't supposed to see.”

And I said, “Well, how can that be? Everything that's at the air show is put there for static display for the public.”

And he says, “Well, there was another little show that happened while we were there.”

And in the beginning of this story, when this first came to me, he made it sound as though the exhibit that he was allowed to go into, the person that he had brought along, someone that we were going to network some illustration jobs for, was a high-ranking person at Lockheed Martin, and that they were going to . . . we were going to get together and talk about doing some work.

And this individual, right about the time the Thunderbird, the Air Force demonstration team, was about to start their program, he says to my friend, “Let's go over here.”

So this gentleman, my friend, a number of high-ranking politicians and high-ranking military brass, all boarded a Boeing 727, military airliner – military aircraft with passenger seats and so forth. And they departed from Norton and flew up to Air Force Plant 42, which is in Palmdale. That's where Lockheed Skunk Works is located.

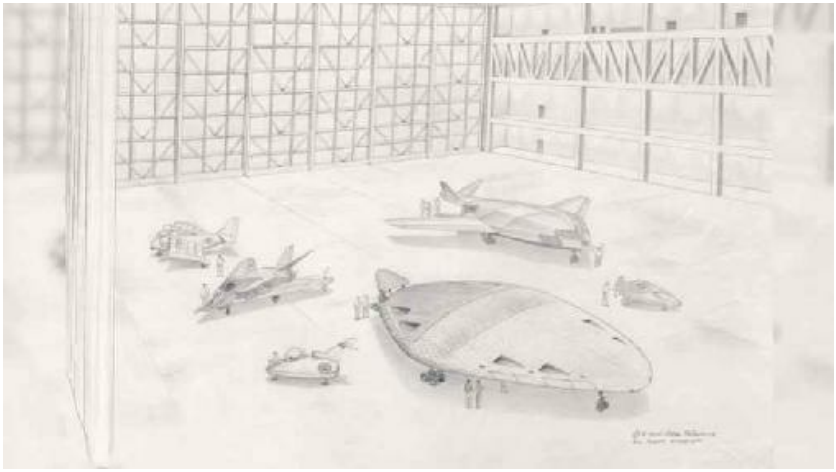
So the plane rolls out. They get out of the plane, and the security detail that was

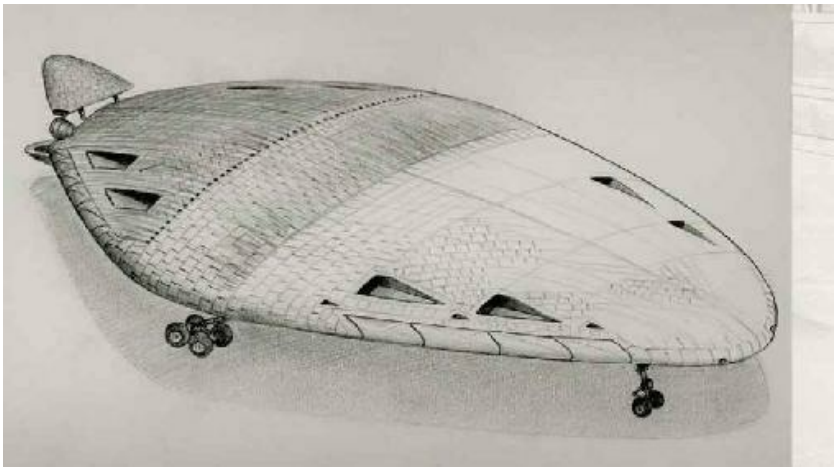
around the building with a cordon and M16s, and the whole nine yards, challenged my friend because he didn't have any kind of a badge or anything like his escort did.

And so his escort essentially vouched for him, saying that he was this gentleman's aide.

So they go into the show, and as soon as they walk in, he looks around and he says, “Okay. I can see that there's some things here that I wasn't told about, things that you're not cleared to know about. So just keep your mouth shut. Don't say anything. Don't talk to anybody. We'll get out of here as soon as we can., but enjoy the show.”

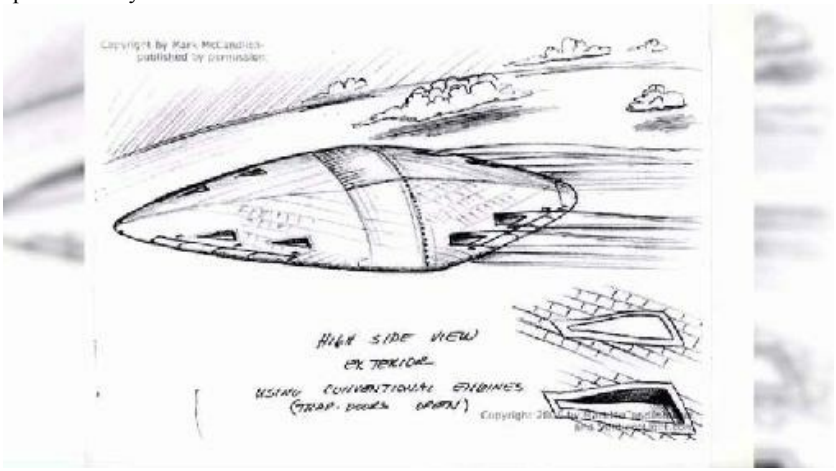
So Brad indicated to me that there were high-ranking Air Force officers that were walking around like tour guides, and they were showing the various aircraft types that were on display, one of which was the first generation Aurora aircraft, what the Lockheed folks called the Pulser.





And so they had four engines that were buried in the airframe. The entire thing was covered with heat-ablative tiles, just like the Space Shuttle.

The back end of the aircraft was being used in the same way as . . . very much like the entire back end of the aircraft was like a linear aerospike engine with dozens of these fuel ejectors that would spray fuel into this supersonic shock wave and would spontaneously combust.



And the explosion of these gases would expand between the supersonic shock wave and the tapered afterbody of the aircraft and essentially pinch it – just like squeezing a

wet pumpkin seed and having it shoot away out of your hands.

But the interesting thing about this particular aircraft type was that it obviously had some strategic applications, that it wasn't just for high-speed, high-altitude reconnaissance.

This was an aircraft that had weapons. And underneath the fuselage, buried in the fuselage between the engines, were 121 vertical launch tubes, each of which had a large circular heat-ablative tile on the outside that could be blown away with explosive bolts.

And what was so fascinating about this design was they kept it as simple as possible, but it was totally effective.

And they had what amounted to . . . that you could use either conventional explosive-type warhead, but they were in re-entry vehicles like the MIRVs that you see on an ICBM, except that above this MIRV in the tube, they had another heat-ablative tile with a big coiled spring behind it, all compressed.

And so as soon as they blew away the outer tile, this thing would be spit out of the tube. Another tile would come down, slam into place, and immediately restore the aerodynamic efficiency of the aircraft.

So you didn't have bomb bay doors and this kind of thing opening up when you're going at high speed.

Another one of the things that I found from recent disclosures was that when the aircraft was actually in the active functioning as a weapons platform, that it had a tertiary, a third type, of propulsion system where the back end, which was kind of flat but triangular shaped, it would open up.

It was like a clam shell on the back end, and a rocket motor would pop out, and this thing could then climb up into an exo-atmospheric launch position and loiter almost indefinitely.

This was probably one of the largest remotely-operated vehicles that's ever been in the inventory. But it did have a provision for being piloted by someone internally. But mostly, it was an unmanned aircraft.

But it could go up, and it could deploy these MIRV-type weapons from space.
* * * * *
David: Well, for me, Corey, as an outsider who has not been in these circuits, when somebody comes forward and has this much technical detail, I'm extremely,

extremely fascinated.

I've heard about the Aurora for so many years. Never have I heard the kind of detail that he just gave here.

What are your own thoughts in light of what we just saw?
Corey: Yeah, it's the amount of detail. That's what I was going to comment on.

The people that come out and talk about these things have normally just had a glimpse of them. They haven't had someone that was able to walk around and kick the tires and have a tour from Air Force personnel.

So this is very good insight on the way this craft works.
David: I had heard about the Aurora making this very loud jackhammer type of noise as it traveled.
Corey: They left what they called, what, “donut contrails”?
David: Right. But never have I gotten anywhere near that type of technical detail about it.

What do you feel this kind of a craft, the Aurora, which apparently is one of the more classic designs, even all the way back to the '80s and so forth . . . What might the Aurora be used for?
Corey: Back in that day, all high-altitude craft were usually exclusively either for a reconnaissance or for delivering . . . as weapons platforms.

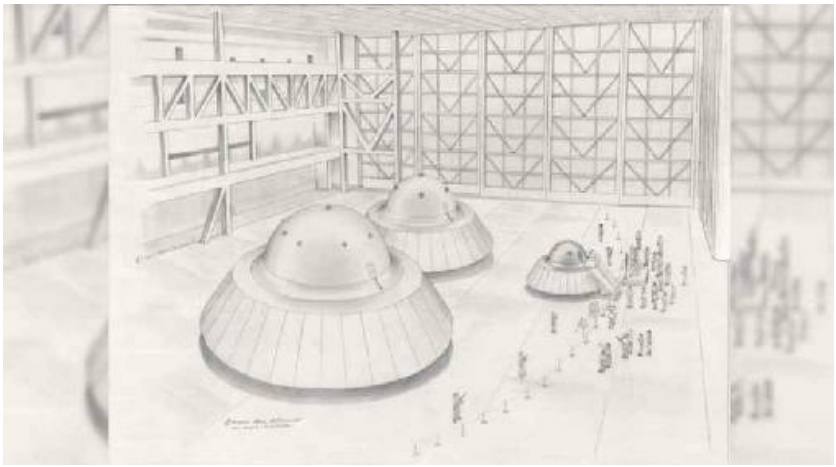
And a lot of times, they can have technology switched out on them, and they can be either/or.
David: Are you saying, then, that the Aurora might have been used in conventional warfare, just that the people who get hit by those bombs don't know where they came from?
Corey: It's possible that it was used in conventional warfare, but it sounds like that was saved for . . . it was in the inventory for a special event, like if there was a conflict with the Soviet Union.
David: All right. We're now going to get into actual blueprint illustrations that he gave from insider testimony of the Alien Reproduction Vehicle, or ARV, which seems to be an exact duplicate of the original German Bell Craft. Let's take a look.
* * * * * *

ALIEN REPRODUCTION VEHICLE

Mark McCandlish: There was also a separate display that was presented after all of the people, the attendees of this exhibit, showed up.

They brought back the curtains, and there were here the three flying saucers, what

eventually became known as the Alien Reproduction Vehicle or Fluxliner – ARV for short.



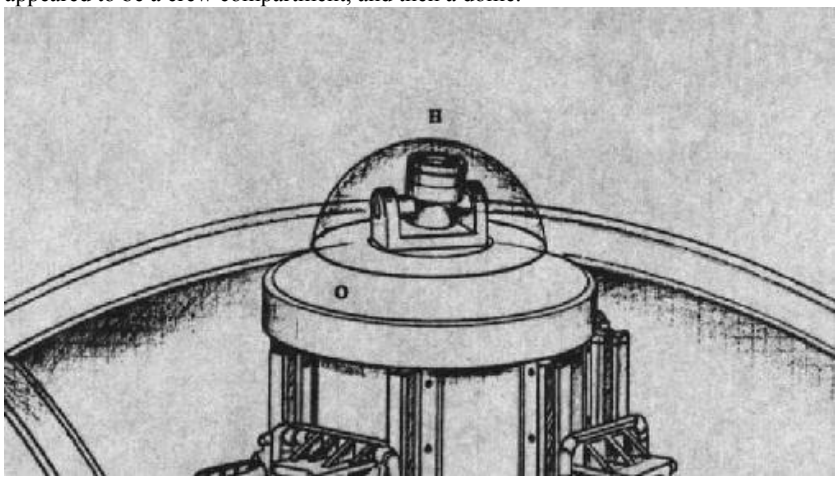
And that's when I began to understand that there were some really wild and advanced systems that were under development.

Not only were they on display, but these craft were hovering off the floor. There were no landing gear underneath, no cable suspending them from the ceiling.

The smallest one was approximately 24 feet in diameter. The next one up was 60 feet in diameter, and the largest of the three was approximately 120 feet in diameter.

The interesting thing about that particular part of the exhibit was that Brad commented that these aircraft looked like they'd been around for a very long time. And this was in 1988 – November 12, 1988.

And he said that there were a number of panels around the perimeter of the fuselage, flat on the bottom, sloping sides at about a 35° - a little bit of a ledge around what appeared to be a crew compartment, and then a dome.



And on the top of the dome were these little clear blisters with a little . . . like a CCD-type camera in each one on a little gimbal that would move it around and point it and this kind of thing.

And this, again, was another use of something like a synthetic vision system, where two of the cameras could be slewed together in pairs to create a left eye and right eye view so that the pilot wearing a special helmet inside could have a completely three-dimensional view.

And what eventually became obvious was that the system was using an unusual technology to create electrical power, drawing it right out of the vacuum of space-time called scalar energy or zero-point energy.

But when this thing was powered up, it would create such a tremendous amount of ionization around the craft that the air molecules would actually begin producing X-ray photons, which are lethal.

And so you couldn't have windows in this thing. You actually had to have some kind

of a synthetic vision system to be able to pilot this thing.

But getting back to his description of the craft, he was saying that the entire thing looked like it was covered with what looked like a resin-based paint that had little flecks of metal embedded in the resin that had been just slapped onto the sides of the aircraft.

There were chips and cracks and things around the Dzus fasteners that held these panels around the perimeter of the fuselage, you know, greasy handprints and this kind of thing.

And so he said it looked like it had been around for a very long time.
* * * * *
David: There's a lot of specifics in terms of what he's saying here, one of which was that ionization is forming around the craft when it's powered because of how much electrical charge it has, and that it actually releases X-ray photons, which are so deadly that there can't be windows in the craft.

Now, I was under the impression from some of the illustrations you commissioned before of the Maria Oršić and the craft that she came out of that they did have porthole windows in the craft.

So do you think maybe there was an innovation that allowed those windows to block X-rays, perhaps?
Corey: Yeah. A lot of the craft do have windows in them, especially back during the time that the Nazis were developing it.

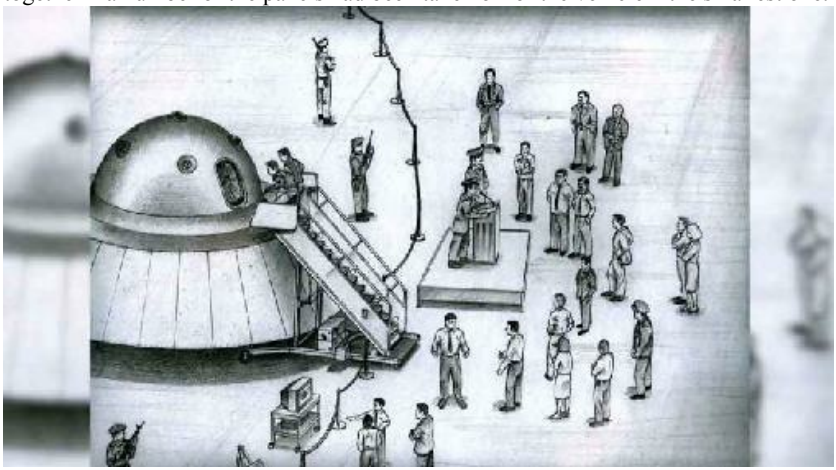
And they didn't have the cameras, I don't believe, set up. They may have. I can't remember. There were . . . actually, some of the images, there were what he called blisters, the clear, see-through hemispheres that pop out that cameras go inside of.

I've seen some of those on some of the craft, but I don't recall that they were using cameras for visual reference.
David: Just so that we're absolutely clear, how close is this description that he's giving to your understanding of the original German Die Glocke-based craft?
Corey: From what I understood, the ARVs were hand-me-downs from the Germans, and they were calling them ARVs, or Alien Reproduction Vehicles, as a way to throw people off of where they came from.
David: Where did they come from?
Corey: The Germans, during the exchange after 1952, when the breakaway Germans started working closer with our military-industrial complex.
David: Why would the craft be able to ambiently float if it's not actually running? Or is it in some sort of hovering state to keep it hovering like that?

Corey: They use anti-gravitic propulsion, so it can be put in, basically, a neutral state and locked into one place.
David: All right. There's a lot to talk about here, so let's keep the party going. We're going to have more from Mark McCandlish on this amazing observation and the illustrations that resulted. Let's take a look.
* * * * * *

INSIDE THE ARV

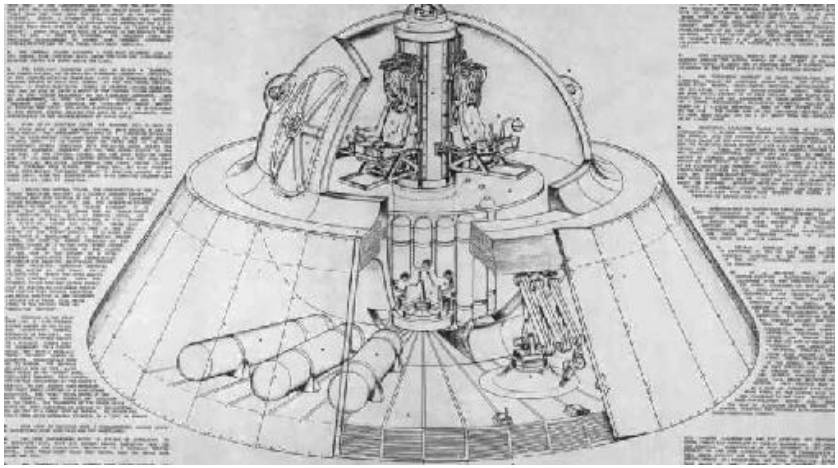
Mark McCandlish: As a draftsman, someone with my experience in conceptual art, one of the ways that I was able to figure out how all these components related together – a number of the panels had been taken off of the vehicle – the smallest one.



They had a rolling staircase that came up next to it with kind of a platform that rolled underneath the vehicle, and then the stairs that went up on the sloping side. And you could actually stand on a little platform and look through the cockpit door.

And what's so funny is that the door itself looked like something off of an old Captain Nemo submarine with the steel frame and the wheel you would turn and little pins that would go on the frame to lock it into position and everything.

But he said you could look inside, and you could see the ejection seats.



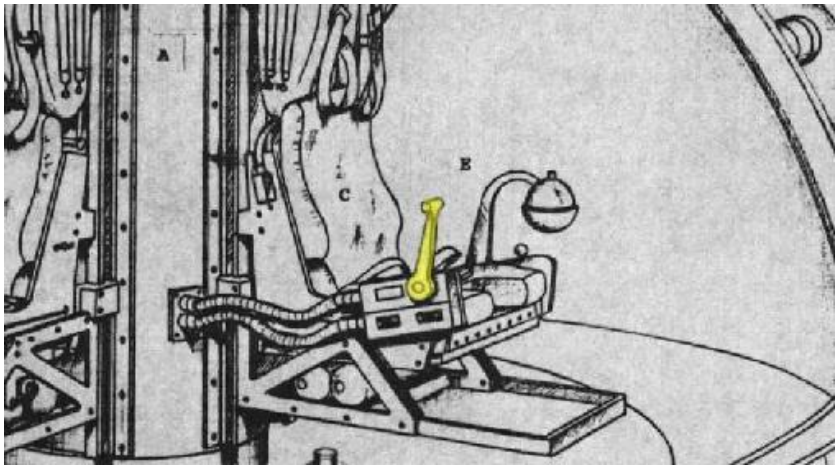
The central column that runs down through the middle of this crew compartment, which is really just a large composite sphere. It's what they call a pultruded vessel.

Pultrusion is a process where you take a filament like fiberglass or carbon or Kevlar, and you impregnate it with a resin as it's being spun around an armature, a shape, a vessel.

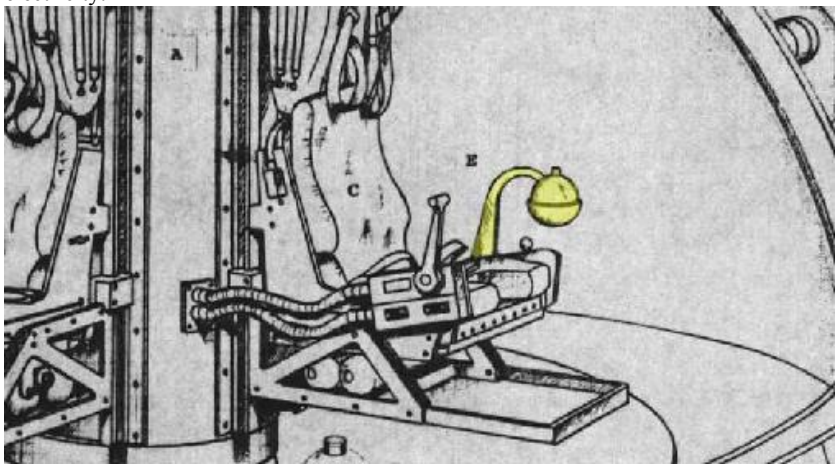
They make oxygen tanks out of this kind of thing now, but this entire sphere was one large pultruded sphere. And the whole thing . . . The idea is that while this resin-impregnated fiber is being wrapped around this shape, it's under high tension, so the entire structure is pre-stressed before the resin kicks off, is catalyzed, and hardens and becomes very strong – stronger than steel.

And so these things could actually go into the ocean, too, which is another whole story.

But the view of the cockpit revealed that it was really spartan inside, I mean, no instrument panel, no gauges, no kind of telemetry. Everything was in the headset that the pilot wore.



On the right side of the ejection seat for the pilot was like a big potentiometer, like something from the “Frankenstein” movie, where you control the amount of electricity.



And on the left side was a really unusual type of control. It was a stand. It looked like a metal or a composite – sort of like an inverted J-shaped post that supported what looked like a ball that had a conformal hemisphere on the bottom side of it.

And this thing had a laser inside that would be reflected around. And it would send impulses to the different parts of the aircraft that controlled the yaw and the pitch and this kind of thing.

What was interesting was that when this thing was operating at low power and just hovering by itself, that as the vehicle would begin . . . I mean, because they looked like they were setting on the ocean, just moving around like over the currents in the water, and when it would begin to tilt a little bit to one side, the bowl that was hanging down on the underside of the sphere would begin to tilt in that direction.

The gravity had just enough influence on it that it would begin to lean it, and it would correct itself. It was self-correcting, no matter what direction it began to lean in.

The thing was able to accomplish things like traveling faster than the speed of light – superluminal speeds. “Light speed or better” was the quote from the general who was giving the presentation.

And so the question becomes how is that even possible? A lot of people think that it's just hogwash, that it's not possible.

And you have to go back, and you have to look at Einstein, his original equations, and all the things that he said about the utter impossibility of ever exceeding the speed of light.

And what he said was, in his equations and in his writings, was that as an object is accelerating through space-time, that its mass begins to increase.

But the key to that whole thing, the thing that nobody talks about, is the reason that the mass of a vehicle increases is because the interaction that the atomic structure of that vehicle has with the zero-point energy in the environment, it basically causes the atoms to become more energized.

Because back in high school physics, the big question I had was, well, if matter can't be created, can't be destroyed, the electrons never slow down, they don't follow the second law of thermodynamics, which is entropy, you'd expect them to slow down over time, but they don't.

And the reason they don't is because they're constantly absorbing this zero-point energy. And that's what keeps all the parts of the atom going all the time. That's why it never disintegrates, falls apart.

And so as an object, you know, made of atoms, goes through space-time and is accelerating faster or faster, it's absorbing more and more of this energy, and all the parts are spinning faster and faster like a gyroscope that gets spinning faster and faster.

And just like a gyroscope, if you've ever held one – like a spinning top or something – once they get going really fast, it's hard to move them around. It's the same. It's kind of like it's developing its own kind of gravity, in a way.

And so this is what Einstein said would slow things down and make it impossible to ever have enough energy to go up to and exceed the speed of light, because you're mass literally begins to approach infinity as you get closer and closer to the speed of light.

And so what the engineers figured out was that if you used that same energy in the environment that would increase your mass, but you used it as a propulsive energy source to power your system, it means that the faster you go, the more energy you have to propel your craft even faster. You don't have to carry a fuel supply, so you don't have to worry about the weight of the vehicle.

So the faster you go, the faster you're able to go. And that's how you actually break the light-speed barrier, because your mass never really becomes anything greater than what you started out with. But you have this tremendous, almost limitless, amount of energy that you can draw from as a propulsive force.

This is probably why all the electrical components in the craft are embedded in quartz as a kind of insulator, because we're talking about millions and millions of volts of electricity.

That's also why when it's in the atmosphere, the ionization is so severe that it produces X-ray photons, and they have to have a synthetic vision system just to see where they're going.
* * * * *
David: Well, all I can say is, wow! One of the things that I believe you told me seems to have been heavily validated here, so I want to get your thoughts.

And that is the idea that some of the UFO propulsion systems work in a manner similar to – I think you were the one that said this – like squeezing a pumpkin seed out from between your fingers.
Corey: He said that, but I've said that in the past, too.
David: Right. I heard it from you before he said it.
Corey: I probably said a watermelon seed. Ha, ha.
David: Watermelon seed, right.
Corey: I'm from the South.
David: Since what Mark McCandlish is talking about here does appear to be at least partially speculative based on his own trying to understand what is going on and what he was told, your personal briefings – like maybe from smart glass pads – on

propulsion systems, how do they compare with what he was saying here?
Corey: It's very close. I think I've described it in much the same way, including I've described how the torsion field drives worked in the research vessel, that it created an area to where there was torsion greater on one end than the other. And it was like squeezing a bar of wet soap on one end. It would just shoot out. It'd shoot the other way. So the descriptions are very close.
David: Laser, Light Amplification by Stimulated Emission of Radiation, is supposedly a post World War II invention. It's often been associated with, in the insider world, that it was discovered from Roswell wreckage, is one of the back-engineered technologies that originally formed.

Whereas here, we're portraying this as very likely one of the original German craft and therefore dating back to probably the late 1930s.

Yet, he's saying that a laser-based cupola that you put your hand on was essential to the whole navigation system of the craft.

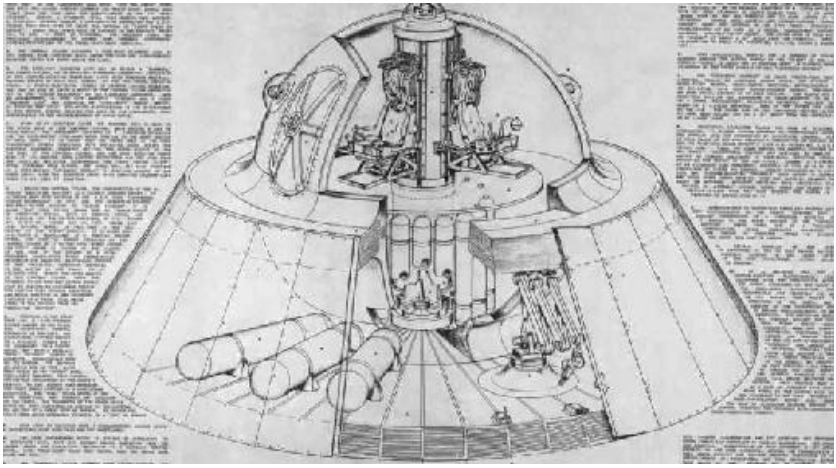
Do you think that the Draco had given the Nazis the ability to make lasers before they were officially unveiled as a technology?
Corey: Well, you also have to remember that the Germans had a Roswell of their own. They had a craft that had crashed long before Roswell, in the '30s. I think it was – what is it, the Black Forest or the dark . . .
David: Yeah.
Corey: . . . something like that? And so they had much brighter engineers in Germany than we did at the time. And they had the technology at least a decade before we got a hold of it. So they were probably able to reverse engineer what they recovered.
David: When I first saw this diagram from McCandlish, one of the things that really seemed mysterious to me was why did it look so hokey? Why would you have this old-fashioned submarine mechanical-looking door?

Now that you've brought in the idea that this came from German technology, it seems to make more sense. Do you think that with the Germans' background in submarine building, that that's why there's such a similarity in how it looks, in some ways?
Corey: Absolutely. Yeah, that's exactly what I was going to say. And that Captain Nemo door probably came off of a German sub.
David: So McCandlish is also describing a technical means in which the craft can accelerate to lightspeed. How did you feel about his re-interpretation of the mass increase phenomenon, that instead of mass increase making it impossible to travel at light speed, that it's actually your best friend?
Corey: That's exactly what I had read in the smart glass pad, and also that that's why The-Powers-That-Be have kept the electroplasmic universe model of physics out of the mainstream, because that is the basis of the science that they used to build these craft to make them work.

David: All right. Well, we have one last piece of footage for you to see. And this is going to round off our discussion for this episode of reverse engineering and all these interesting subjects. Let's take a look.
* * * * * *

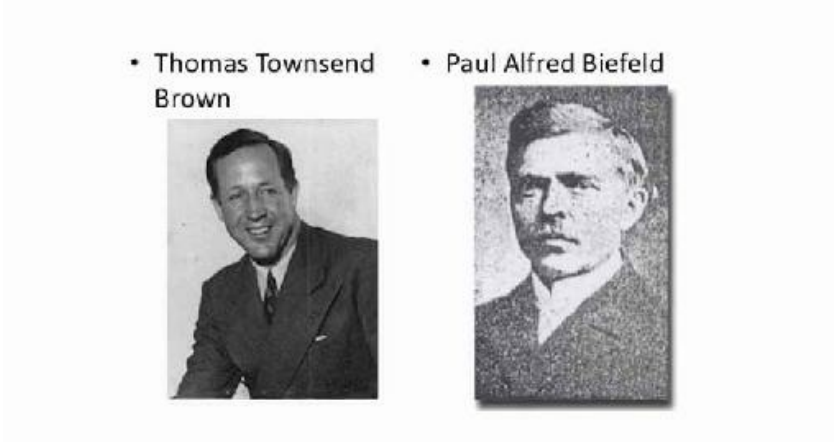
TRANSVERSING SPACE TIME

Mark McCandlish: Well, in the beginning, when I saw this massive capacitor array in the bottom of the craft, that was my assumption that it was relying entirely on the Biefeld-Brown effect.



Now, what is the Biefeld-Brown effect?

Back in the 1930s or '40s, there was a student at a college – I think it was in Ohio somewhere – Thomas Townsend Brown, and he had a professor, Alfred Biefeld.



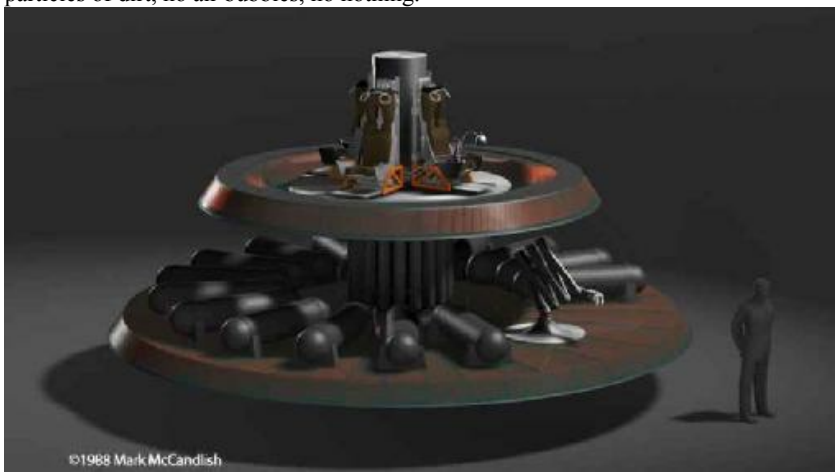
And he had decided to experiment with plate capacitors, parallel plate capacitors, that were charged with electricity, and he had some kind of an insulator between them. He found that when he put the right frequency of electricity, the right voltages – usually direct current – that this thing would actually float. It would begin to levitate.

And so there's a lot of controversy about this because you see these videos on YouTube and stuff, people making lifters, and people have gotten these little bell-jar type of appliances that you find in some laboratories to create sort of a semi-hard vacuum where you evacuate all the air out of the chamber. And these things short out, and they don't work. And so they can never possibly work in space.

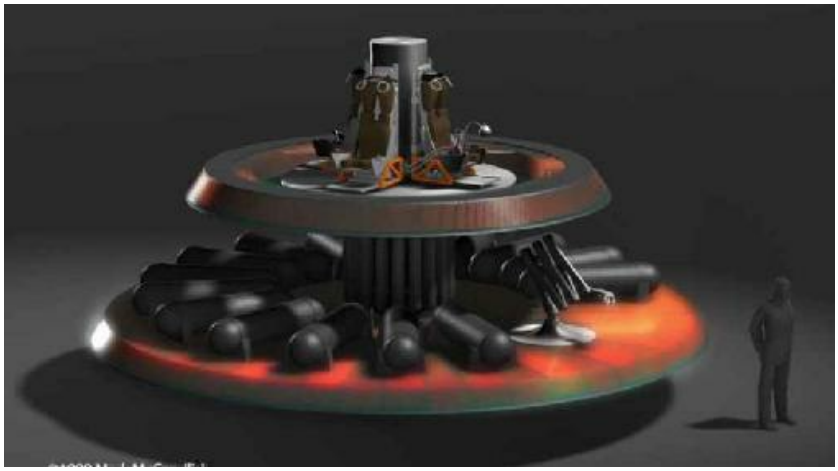
But if you really look at the way the Alien Reproduction Vehicle is designed, all of those capacitor plates are not open air. They are heavily, heavily insulated. And that's where the difference is.

That's why it is able to operate in outer space, is because those components don't have the opportunity to short out.

In fact, one of the things that was noticed about this quartz that surrounds these plates was that it was optically clear. It was like clear optical glass – no occlusions, no little particles of dirt, no air bubbles, no nothing.



It seemed logical to me, in the beginning, when I saw all of these parallel plate capacitors that were segmented and divided up into 48 radially-oriented sections, like long, thin wedges of pizza pie from a large pizza.



There were eight plates stacked up in each one of these wedges, which would mean, if you're talking Biefeld-Brown effect, you're talking an alternating positive, negative, positive, negative, with the positive plate being on the top of the stack, and the last negative plate being on the bottom.

It occurred to me that that was the basis for the propulsion system, but there were all these people saying, “No, no. Beifeld-Brown effect's not that powerful. You can't do that much.”

But everyone who was talking about that never talked about a system that was actually embedded in a dialectric or an insulating material like quartz.

Now, one of the things that the witness also said was that they were not just using the pure quartz. They were actually doping the quartz with heavy elements, like uranium and other things, and that they had found in their experiments over the years that when you dope the quartz with heavy elements and the starting mass of the vehicle is high to begin with, that it improves the thrust efficiency of the system when it's working.

But as time went on, I began to realize that because the thing was using zero-point energy as a power source, which is something that happens within the central column of the vehicle, this thing was creating such a tremendous stored potential of energy on the entire array of capacitors as a whole, that it was actually beginning to warp space-time.

Now, it turns out that around 1994 – March, I believe it was – there was a scientist,

Miguel Alcubierre, who wrote a paper on a warp drive, a space-type – a metric engineering space drive.

General Relativity and Quantum Cosmology

The warp drive: hyper-fast travel within general relativity

Miguel Alcubierre

(Submitted on 5 Sep 2000)

It is shown how, within the framework of general relativity and without the introduction of wormholes, it spacetime in a way that allows a spaceship to travel with an arbitrarily large speed. By a purely local expa behind the spaceship and an opposite contraction in front of it, motion faster than the speed of light as outside the disturbed region is possible. The resulting distortion is reminiscent of the ``warp drive'' of s just as it happens with wormholes, exotic matter will be needed in order to generate a distortion of spac discussed here.

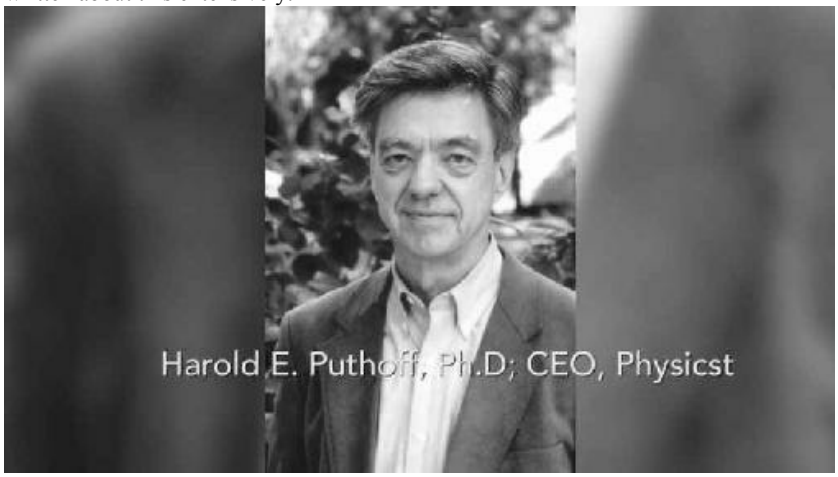
And he was talking about doing this very thing, that by controlling electromagnetic and electrostatic fields, that you could create a compression of space-time ahead of the vehicle, like what you'd find with a black hole, like a singularity.

And then behind the vehicle, you would create an expansion of space-time.

And this is all kind of a polarization process, is how Puthoff described it. And he's

written about this extensively.



And this polarization process allows you to create what amounts to a system that is kind of like surfing on a wave, where you have a depression in front of you and a ridge behind you, and you're basically sliding down the face of this warp in space-time.

And that's what creates the vector that allows you to move forward.

But the interesting . . . The fascinating aspect to this whole concept, this principle of creating what is called a dynamically engineered local space-time or metric engineering, is that you're taking a bubble of space-time that surrounds the vehicle, that is being created and influenced by the system inside the vehicle itself, but when this thing begins to move through space-time, it moves uniformly, where a portion of the space-time – the vehicle, the crew, the components, everything that's in it – moves as a unit.

And it's moving as a unit that's being influenced by other things that the craft is doing to the space-time around it. So it's creating an expansion of space-time behind it, a compression of space-time ahead of it. But the whole thing is moving uniformly, so there's no sense of g-forces at all. None.

So when people talk about seeing an object moving through the sky at 9,000 mph (miles per hour), plotted time-to-distance over the land, and making right-angle turns at these tremendous velocities, people who've never seen this say, “Well, that's impossible. The pilot would be turned to hamburger, smacked around on the inside of the vehicle.”

But if you're eliminating mass, then there's no inertia. And if you're talking about uniform acceleration of a metrically engineered space-time – the vehicle, its contents, and everything – the whole thing moves together so that there's no sense of g-forces at all, because there's no inertia inside this metrically engineered local space-time.

It'd be like taking a goldfish in a spherical-shaped goldfish bowl, and you move the whole thing very quickly. And the water, the fish and everything move together with the goldfish bowl, but the fish doesn't feel anything, It doesn't feel any g-forces at all.

He may notice the water sloshing around a little bit in time. But if you fill it up completely so there's no air bubbles that allow the water to move around, the whole thing moves in unison.

And that's what uniform acceleration's really all about.
* * * * * *
David: Well, that's certainly pretty interesting body of data here. Have you heard, first of all, about electrocharged components being covered in a clear quartz? Have you ever seen anything like that?
Corey: Yes. A lot of times, they will have, like, a man-made quartz that's poured like glass that they can impregnate with different other types of materials. So that is something I have heard before, and it would make a great insulator.
David: Now, I noticed that he leaned pretty heavily on some physics stuff that I was well aware of in the 1990s, which is the Miguel Alcubierre propulsion method that was advanced by Hal Puthoff.

But Puthoff and Alcubierre were the ones that talked about this idea of space-time itself moving with the craft.

And since that was the bulk of what we heard here, how does that correspond with any propulsion methods that you were made aware of ?
Corey: He's exactly right. It creates a local space-time bubble that is isolated from inertia or any other forces outside of that bubble.

So being able to change directions going Mach 12 and do a 90-degree turn, there's absolutely no effect on the inside of that bubble.
David: It definitely appears that Hal Puthoff is an insider and was tasked with releasing things. I'm curious if somebody like Alcubierre . . . Did he just come up with this on his own? Or are scientists like him sometimes used to allegedly theorize about something that they already know is true?
Corey: A lot of these guys are trying to come up with these concepts on their own, outside of the programs.
David: Right.

Corey: So there are still a lot of brilliant minds out there that are thinking outside of the box. They try to keep people inside the box, the physics-model box, and working within that box. But there's always the innovative types that step outside and come up with theories that they aren't really supposed to in mainstream.
David: All right. So as you've seen here, we have some very fascinating stuff from Mark McCandlish, really getting into much more technical detail than you might have ever thought we could have about the original German technology that started the Secret Space Program way back in the late 1930s.

This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with Corey Goode and our special guest, Mark McCandlish. Thanks for watching.

Boyd Bushman's Deathbed Testimonial Season 7, Episode 21

Cosmic Disclosure; Boyd Bushman's Deathbed Testimonial

Season 7, Episode 21

23 May 2017

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, our insider's insider. And in this episode, we have some rare footage from a now deceased insider from Lockheed Martin, none other than Boyd Bushman.

So, Corey, welcome to the show.

Corey Goode: Thank you.

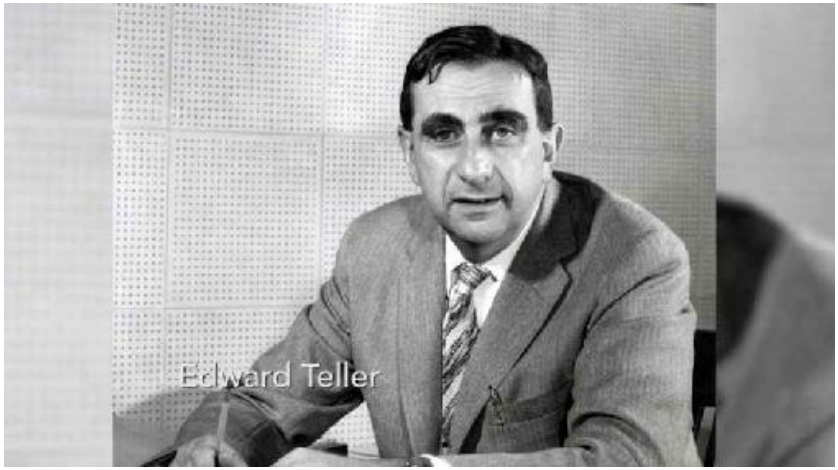
David: All right. So here's our first excerpt of an interview that we did not shoot with Boyd Bushman, but is public domain, fair use on the Internet. And given the importance and what we talk about on this show, it's well worth watching. Let's check it out.

* * * * * *

MEET BOYD

Boyd Bushman: My name is Boyd Bushman. I'm a senior scientist from Lockheed Martin. I have 27 patents.

Approximately 13 years ago, I ran across a person who had been given a job by Dr. Teller.



Dr. Teller was Oppenheimer's right-hand man.

And even after Oppenheimer was thrown out of Area 51, Dr. Teller stayed there and was in charge of several programs.

The person that I contact twice to three times per month is the head of that program now, and they continually update me on everything they possibly can. I do have a top secret clearance.

I choose, however, for their purposes, not to use it because they – the intelligent ones of me and me – actually believe that a great deal of information should be lifted up from those dark recesses of Area 51 and moved over so people can see it.

So that's what began about 13 years ago.

Since I am a scientist, I do not believe in theory. I basically, say, “Follow the data; theory be damned.” If something can't verify by a physical test that something is true, then I do not care to accept it in that [information] that I present.

Therefore, everything we present here will be data that comes directly from them, through me, to you.

* * * * * *

David: He's talking about the idea that Teller was working with a group of insiders and that they now want to disclose the truth. So is this something that happens fairly often in these classified programs, that people actually do want to get the information

out?

Corey: Yes, it's fairly common. And whoever is doing security of these groups know that. They've done personality profiles on these people. They watch them very closely. They're watching for body language, different micro facial expressions. They're watching them very closely to know whether they need to step in.

So a lot of the times, these guys will usually have these conversations, you know, at a Sunday cookout and sit around and talk about it instead of talking about it at work.

And eventually, they end up getting found out, for the most part. It's very rare that they don't find out that they're talking about it "outside of the office", as they say.

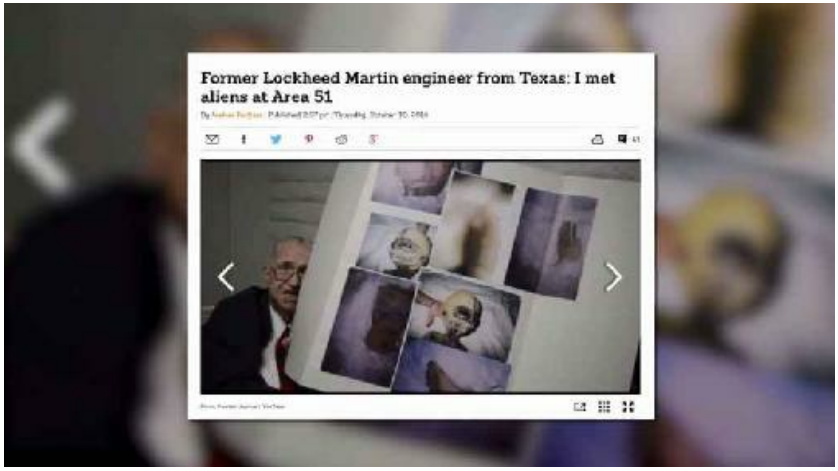
David: He said in there, "I have a top secret clearance, but I don't choose to use it." What do you think he meant by that?

Corey: If you go in and work under a top security clearance, you're bound, legally, by everything you agreed to when you signed the agreement for the security clearance.

So if he's trying to work, he's trying to skirt the security clearance and any retributions that may happen legally or with his pension. So he's playing kind of a little game.

David: Now, when this interview came out, as I'm sure you remember, it lit up even the mainstream media like a wildfire. There were a lot of articles that were written about this, covering this guy.

BOYD BUSHMAN, LOCKHEED MARTIN SENIOR SCIENTIST TELLS ALL, BEFORE HE DIES [VIDEO]



Former Lockheed Martin engineer from Texas: I met aliens at Area 51

So that, to me, suggests that he is not working as some rogue, but that what he's doing here was perhaps part of an orchestrated plan. Do you think that's true?

Corey: Well, it very well could be, because the groups that I was describing prior, the ones that don't get caught, are the ones that find like-minded people in security that turn a blind eye to the talk.

These are the types of people that really got this SSP Alliance rolling.

David: Right.

Corey: You know? That's how it got rolling.

David: What would be the objective of articles about this man and what he's going to say as we go through this episode, being released to the public?

He does seem to have the credibility. He says he works for Lockheed. We're going to see some pictures of extraterrestrials, allegedly.

What would be the ultimate endgame of promoting these videos and his testimony in front of the whole world?

Corey: Well, the Alliance anyway, and as well as the – whoever we want to name – the shadow government, they've been seeding the consciousness of humanity through movies and, you know, comic books, people giving deathbed statements like this.

So they kind of want to – in a way that they can distance themselves from or deny – deliver this information in bits and pieces to our subconscious.

David: He said that he worked for Lockheed, and he has 27 patents.

Corey: That should be easy to verify, unless they're . . .

David: That's what I'm thinking.

Corey: . . . one of the 5,700 classified patents.

David: Now, the reason why I bring this up is, can you verify that these patents might be held under national security, and therefore we might not be able to find them because they could be classified technology?

Or might there be enough things Lockheed is doing that are unclassified that at least some of those patents could be tracked down?

Corey: Yeah. A good deal of their patents are unclassified, but the most sensitive ones end up being among that 5,700 or so patents that are classified to this day.

System and method for electromagnetic propulsion fan
Patent number: 6606578
Abstract: An electromagnetic propulsion fan includes a hub and a plurality of fan blades coupled to the hub. The electromagnetic propulsion fan also includes a rim coupled to the fan blades such that rotating the rim causes the fan blades to rotate. The rim includes a plurality of magnets coupled thereto. The electromagnetic propulsion fan further includes a plurality of electromagnets in proximity to the rim, the electromagnets controllable to generate magnetic fields that interact with the magnetic fields of the magnets to cause the rim to rotated.
Type: Grant
Filed: March 1, 2001
Date of Patent: August 12, 2003
Assignee: Lockheed Martin Corporation
Inventors: J. Kirston Henderson, Boyd B. Bushman

Apparatus and method for amplifying a magnetic beam

David: So then, if someone is trying to fact-check this, they might find some patents. They might not find all 27, but it's likely that at least some of these should be able to be tracked down.

Corey: Yes.

David: Many of these insiders, such as William Tompkins, and people he's spoken to, are told that, “Oh, just calm down. You know, the things that you're working on, we're going to release it in 10 years.”

Then 10 years go by, nothing happens.

How does that influence what we're seeing now with this guy coming forward, when he's been told by the doctor that he might only have weeks to live?

Corey: Well, that is very common, telling them “a decade – it's a decade away”. That was told to a lot of people in the programs that I was in.

David: Really?

Corey: A lot of them who had a conscience wanted to know when is this information going to be given to the public? And they also wanted credit for what they've been doing. They want the public to know what they've been doing.

David: Sure.

Corey: And they were told that, “You'll be a hero someday. Everyone will know 10 years from now.” And they keep kicking the can, and a lot of these people become very disillusioned and become ripe to become members of the Alliance.

David: How is the Alliance able to contact people in this position without getting outed if there's so much surveillance? How are they able to do it?

Corey: It's usually people that are friendly within the security apparatus of these different groups. That's usually . . . If you want to start some sort of subversion, you need to first infiltrate security or police.

David: So you're saying it would then happen as a verbal conversation with, like, somebody who's allegedly a security guard?

Corey: Oh, yeah. Only mouth to mouth. You know, mouth to ear, mouth to ear.

David: Is it possible for people to send letters to each other? I heard recently, that the U.S. post offices, they might not read your letters, but they are now scanning everybody's mail and seeing who you're sending mail to.

Corey: No, it's not advised to have anything in writing. You know . . .

David: Really?

Corey: Yeah. You pass information down the chain, which can be unreliable, kind of like the telephone game. It goes through different people's filters, and then they kind of tweak it a little bit, but you don't want to have anything written.

David: When we were talking before the show about some of the validation that's now showed up recently for Boyd Bushman, it seems that it comes out of this Vault 7 leak recently that took place.

So for those who have not been actively paying attention to that, since it did seem to go by pretty fast in the media, could you explain for us what the Vault 7 story is and how it relates to Disclosure?

Corey: Yes. Vault 7 was a data dump done by WikiLeaks on the CIA.

David: And my understanding is that there's 8,700 documents in this Vault 7.

Corey: That's a very large dump.

David: Yeah. The thing that shocked me the most was when WikiLeaks came out with this and said that 99% of the stories that there are to be found in there have not yet been made public. And we had Drudge Report calling this another Snowden.

What would be the purpose of releasing information from classified CIA documents? And how does that relate to Disclosure?

Corey: They released a lot of names in this Vault 7 data dump, and a lot of these names are people that are civilians who have been tracked by the CIA.

David: So Boyd Bushman is in the Vault 7 leaks.

Corey: Yes.

David: And they were watching him and keeping him under surveillance.

Corey: This was a list of civilians who have been surveilled by the CIA.

David: If the NSA is our National Security Agency, which is really national surveillance agency, and that's what they do, why the heck does the CIA need to be doing the exact same stuff but under their own umbrella? That's not going to make sense to most people.

Corey: A lot of these organizations are not completely connected when it comes to data. They're not necessarily all pulling from the same haystack.

They'll have their own haystacks of information. And it is redundant, but these groups aren't fully . . . These groups aren't fully sharing between each other. They go through kind of a committee to share information with each other.

David: One of the things that just came out about Vault 7 was a leak from the highest levels that no one is allowed to work with each other in the CIA for more than three years because they're so worried about individual people on a team starting to form their own little factions.

Corey: Collusion, yes.

David: Do you think that's partly the Alliance and how they're trying to stop the Alliance from being able to grow?

Corey: That's how they're trying to prevent any type of coordinated effort against them.

David: Exactly. All right. Now, let's see the next very interesting piece of the interview done with Boyd Bushman, his deathbed confessional, Lockheed Martin insider. Check it out.

* * * * * *

ALIENS ARE REAL

Boyd Bushman: I asked them to tell me about who was flying these things. He, therefore, said, “Fine. They're approximately 5', 4½' to 5' tall.”

They had one or two of them around that were 230 years old. And we have a total of at least 18 that exist and operate with our facility as Teller set it up.

And notice the eyes are different, nose are different, but they do have five fingers, five toes, two eyes.

And rather strangely enough, I asked him how they communicate. He says, “Well, it's like this, Boyd. You all of a sudden have a question in your mind. You walk into a room with one of them, and all of a sudden, you find yourself giving the answer to your question in your own voice. They're able to use your own voice by telepathy to talk to you.”

And I said, “Fine.”

Now, that's how they look from front, but when you turn around and look at the back, it's like that.

Now, notice that they have three back bones. They're actually cartilage. Nevertheless, it's a much more efficient system than ours.

They also have three ribs in their system, rather than more. This is also the back side of an alien.

Here's a 45° look.

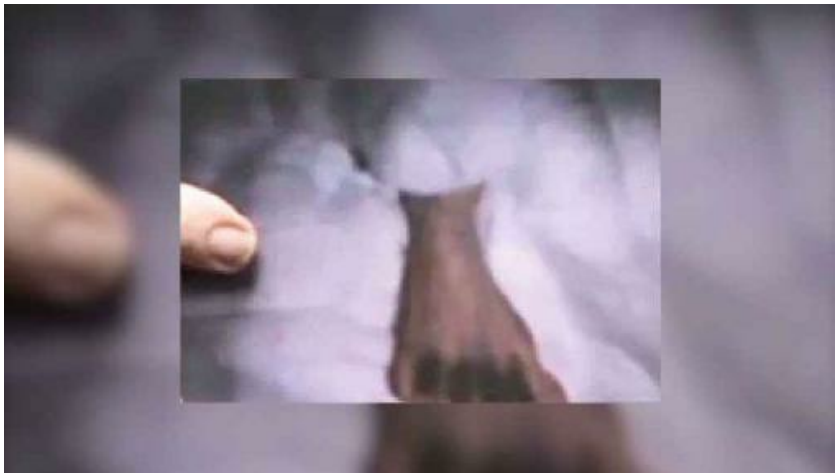
And, now when we talk about aliens, I pushed the issue, and he said, “Well, there's kind of two groups of aliens.” They divided them into two groups. One group he calls . . . it's like you have a ranch. And you have a ranch, and you find that one group are your wranglers that know how to wrangle your cattle.

There are others who are rustlers, ones that steal your cattle.

And indeed, the two groups do act differently. The ones that are wranglers are much more friendly and have a better relationship with us.

Here's the other side of the alien, too.

Now, also notice that their feet, where they have five toes, the toes are joined together like a frog, yet they are dissimilar.



And this is the home planet that they come from, which they call Quintumnia.

And notice that the hand . . . that's an alien hand.

Notice that the fingers are longer than ours by quite a bit, about 30% longer, and that's just the way they're put together.

* * * * * *

David: Well obviously, there's a lot of very interesting stuff we can talk about in this

one excerpt alone.

One of the things that he said, that I think even the people writing the articles didn't really catch, was he mentioned the number 18.

And it sounded to me very much like when he said that there were at least 18, that he was talking about different types of extraterrestrials.

That's a much smaller number than what you were aware of. However, would someone maybe just working as an engineer for Lockheed only be given a number around that size as part of this compartmentalized security?

Corey: Yes. And he most likely found out about the majority of them towards the end of the time he spent as an engineer or after.

They usually let you know of three, maybe eight, different types, depending on what technology you're reverse engineering, what technology you're studying.

They're not going to let you know more than you “need to know”.

David: Let's just say that one of those guys is watching our show, and maybe you can show him that there might be more than he thinks he knows. So what might those three to eight groups be? What would he have been told, necessarily?

I mean, they could change but . . .

Corey: Oh, yeah, it could change. Some of them know about Reptilians, but some of them don't.

David: Okay.

Corey: It's interesting. Some of them have been told about this Eben-type group.

David: Okay. Which would be what?

Corey: Some people associate them with the Greys, but they look very fleshy. They're bipedal, fleshy beings. You know, their eyeballs aren't black unless they have lenses in.

Then you have these Nordic groups.

David: Okay.

Corey: Mostly, they'll know about that, or the Tall Whites. But for the most part, they'll know about those. And some of them seem to know about the Reptilians, but some of them don't.

David: Now, there's going to be controversy right up front with the Boyd Bushman stuff because all these kids on the Internet thought that they win the Nobel Prize for discovering that this ET picture that he's holding up was actually just a photo of a toy from Walmart.

Corey: Right.

David: The toy from 2008 looks exactly the same as the pictures that he's holding up now.

So many people on the Internet have tried to – as the skeptical debunkers – think that this guy literally just took a toy and took pictures of it. How do you answer that?

Corey: There is the possibility that this toy was released in a limited edition to preempt any disclosures of this type of alien.

Now, I've mentioned to you in private, I believe, that I've seen these types of beings, and I've seen them alive.

David: Right.

Corey: And they were referred to as “Oranges”. And when they were alive, their skin color was sort of carrot-colored, but it was darker – carrot-colored with a little brownish, I guess. But they called them “Oranges”.

And they were very positive beings. When they're alive, if you've ever had a pet bird or seen a bird that has died, their eyes recess into their head quite a bit.

David: Right.

Corey: And when they're alive, their eyes are out from the head. And then the little wrinkly areas under the eyes and above their eyes, they're very, very . . . in the eyes, the energy's very pleasant.

David: Mmm.

Corey: And their eyes articulate around quite a bit, and you see the wrinkles that go under the eyes and around the eyes push out and move around as the eyes are kind of out from the head a little bit – barely.

David: So you're saying that the Orange has a much different look when it's alive than what this desiccated corpse is.

Corey: Right. They have been here to try to assist us. I guess they would be one of the wranglers.

David: That he mentioned.

Corey: That he mentioned. They've been here trying to help manage us, manage the planet, you know, sort of like watchers.

David: Some people who are not very well informed would say that any type of ET that looks like this is a Grey, and that it is abducting people and torturing them and putting probes in them and implants in them. How do you answer that in terms of what you're saying these guys are doing?

Corey: Well, there are a number of beings out there that have loosely the same description as these Greys.

David: Right.

Corey: So there's a lot of confusion. You know, there's even a Reptilian-type species that has the same body configuration and sort of look that these Greys have.

And in the rehab, the people that had had contact with these beings, the military would reabduct them, and a lot of times the people would tell them that they were Greys because they had seen so many different TV shows, and they've seen that outline image of the Grey so many times that they try to connect them all together because they look similar.

David: You also mentioned that guys at a lower level of security clearance, who were still nonetheless Top Secret, would be told about Nordics. We've discussed Nordics living inside the Earth.

What would the typical boiler plate, lower level disclosure of Nordics involve? What would they be told they are? Where do they come from? What are they doing?

Corey: Well, not all Nordic beings come from Inner Earth.

David: Right.

Corey: Some of them actually come from other stars and have been in a millennial-long battle with the Reptilians and have had skirmishes with other beings and civilizations, as well.

There has been a galactic war – if not intergalactic war – that's ebbed and flowed and happened in history, way back before humanity even existed.

David: So that material science guy working at Lockheed Martin, working on surface texture, whatever, that kind of stuff, okay, what is he told about Nordics based on what you just said? How much might he know?

Corey: It just depends on his need to know. Whatever technology he's working on, he only needs to know what he needs to know to interface with the beings or to know that it's associated with a certain being, to have an idea of what type of approach was taken to the technology development on their planet.

Other than that, unless he's worked multiple programs and got to know of multiple ETs, he's just going to know of what they tell him for what he needs to know on his job.

David: He mentioned something about cartilage being the way that the bones are made, and that they only had three ribs, and that there was an unusual structure in their back.

Are there some ETs that have more of a cartilage skeleton instead of a bones skeleton like ours?

Corey: Yes, a cartilage-like skeleton, but a lot of them are not . . . the whole skeleton is not cartilage. They just have features. Like we have cartilage in our nose.

David: Right.

Corey: They might have different protrusions or other things that are something similar that was a part of whatever they were before they evolved, like the webbed fingers.

David: Now, he mentioned something strange about telepathy, which was that not only do you experience telepathic communication as soon as you walk into the room with these beings, but that you hear it as if it was your own voice speaking to you.

What are your thoughts on that?

Corey: That's exactly how it occurs. And it'll make you wonder when you're having ideas and thoughts, where are they coming from? You know, it could be another source outside of yourself.

But, yes, the communications I have, everyone has that one voice that they sort of process hearing in their internal monologue. That's the same voice you hear them communicating with you.

And you also get images, smells, tastes, depending on the being.

David: He also mentioned that these beings had a planet of origin that he called Quintumnia. I'm curious if you ever got into enough of a dialogue with these Oranges, as you called them, to hear anything like that, or if there are, in fact, names of planet and things like this that pop up sometimes.

Corey: Yes. They will give names of their planet, which is obviously from their location. It's not some sort of English translation of where they're from. This very well could be the name that they have given to their planet. That's the first time I've heard it.

David: So if he's saying that he was made aware in briefings, it appears that he was made aware of 18 groups at least, and he's saying that they neatly divide into two major categories.

Category one: wranglers. Category number two: rustlers, which would actually be those who steal your cattle.

Corey: Right.

David: This sounds an awful lot like the galactic slave trade you've mentioned. So I'm curious about your thoughts when you saw that part of the video.

Corey: That's correct. And during the time that he was getting his briefings, most likely a lot of that was going on heavily before we had developed the Secret Space Program far along enough to where we could, I guess, warden – Solar Warden – our own territory.

But yes, they would come in and scoop people all the time, and then shoot out of our Solar System real quickly. And even the nonterrestrials that were monitoring things, it sometimes would happen so fast that they couldn't respond.

David: How long do you think people in the United States' defense establishment were aware of this going on before they had the technological means to stop it?

Corey: They've been . . . Since the inception of an intelligence community, they've known.

David: And when did they gain the capability to stop this from happening?

Corey: That would have been probably in the early '80s that they would have been able to show enough force to stop it from occurring consistently.

David: All right, our next section of Boyd Bushman's interview is coming up right now with a lot more fascinating information. Let's take a look.

* * * * * *

AREA 51

Boyd Bushman: I do, because of some very good reasons, keep things within control, but I don't want us all behind the Russians and Chinese. And the problem I have is that Area 51 is working with both the Russians and Chinese right now trying to make UFOs.

There's been a total of 39 United States citizens that have lost their lives, trying to reverse engineer UFOs.

And, well, the last one I heard of was a year and a half ago, where we lost 19 lives in one test. They actually wanted to bring various flying craft near the UFO, and the UFO defended itself, and 19 of our people died.

* * * * * *

David: How do you think it would have felt to somebody like Boyd Bushman, working probably during the Cold War obviously, and then knowing that Russians and Chinese are actually jointly working with the US at Area 51?

Corey: The people that were fighting the Cold War, so to speak, were heavily indoctrinated in the anti-Russia mentality. That's what drove them in doing their engineering was keeping America safe from any type of nuclear exchange with Russia.

David: Well, China wasn't as much of a . . . It wasn't considered as much of a threat in the '80s as it is now, but why would China be at Area 51? What's really going on here?

Corey: We got to a certain point in our Secret Space Program to where we couldn't hide it from the other technologically evolved nations. They were tracking us.

So not only did we have this Global Galactic League of Nations that was set up, but in . . . I can't remember the time period, but I think it was in the '90s, some sort of an agreement was signed between these powers that they would share technology.

They're exchanging scientists to make sure there's a continuity of technical information going to all of the different groups. It assures that they're all sharing what they have.

David: What would the purpose be for apparently being in a nuclear showdown with Russia in the world but then very nicely collaborating with them at Area 51? Why would there be such a division?

Corey: Well, the collaboration with the Russians during the height of the Cold War openly in these bases was . . . you didn't see it that much. It was towards the end of the Cold War, most of it after the Cold War, when we started making agreements with China and Russia and India and some of these other groups.

And we also have people from India and a couple of other nations that we work closely with and share technology with, because we found out that they were getting pretty far in their development, as well.

So sharing this information is also a way of managing it if you have agreements between all of these different nations.

David: Now, he mentioned 39 people losing their lives in the course of working on UFOs, but then he also said 19 people died when they flew with conventional flying craft towards a UFO in the sky, and it apparently defended itself.

Let's break these things down. So, first of all, the number 39, based on all the stuff that is really known, seems very, very small.

Corey: He could have been just quickly passing over without giving much detail. It could have been 39 Lockheed employees that have worked on these programs that he knows about.

David: Right. Wouldn't you think, though, that the total number of people who lost their lives trying to back engineer UFOs would be a lot higher than 39?

Corey: Absolutely. There have just . . . We've lost a lot of lives just retrieving the craft before we're able to begin reverse engineering them.

David: Wow!

Corey: So, yeah. Lots of lives have been lost retrieving them, reverse engineering them. And then we have back during the German Secret Space Program when they developed it, we had a lot of Germans dying in the process, a lot of scientists dying producing these technologies, not to mention all of the slave labor they had.

David: All right. In our final section of the interview footage from Boyd Bushman, we have a very interesting Roswell-like incident that he tells us about.

* * * * * *

BATTLE OVER NEW MEXICO

Boyd Bushman: Turned out to be a doctor. He was a very, very fine gentleman, and I was carrying on a conversation with him. He saw how the subject was going, so he simply said, “Well, you need to know what I did one day.”

And I said, “Okay.”

He said, “I was in the process of doctoring a pilot who was a test pilot, Navy test pilot, for the United States government, and it was 1947.”

He basically told me that he was . . . that “they, the radar group, had found a blip out over New Mexico, and that they would like to assign me to go out and check it out.”

So he says, “Fine. I'll do that.” And he got the fastest airplane that existed then, which was a propeller at that time. And it was fully armed and all the rest of those things.

He was out flying, and he found the item, and he immediately communicated back, and he said, “I wish authority . . . First of all, I want you to tell me, are there any other airplanes flying? Are there commercial or anything else around other than he and I?”

They said, “Just the two of you.”

And he said, “Fine. Second thing I wanted to know is do I have authority to shoot it down?”

They said, “Why do you want authority to shoot it down?”

He says, “Because I am flying the fastest thing that the United States can make, and he's beginning to leave me. Therefore, I know he's either a friend or an enemy, and if he's leaving me, he's an enemy. Therefore, I wish authority to shoot it down.”

The commander said, “Fine.” He granted him authority.

He pulled in. He shot him down. It came down.

He flew past and saw that there was a road on the one side of the fenced area. He came down and landed his airplane. Hard to do, but he did. And then he cut across the fence.

One of them . . . The door was open. One of them was out, walking around, but he didn't care about that. He cared about what the vehicle was.

So he went over, and rather strangely enough, when he ducked down – because they're only 5' high – he saw that he could see through the walls. Not only that, but as he stepped in, the floor was spongy.

He look at the three that were there, and they were dead. He knew they were. He'd killed them. But he also knew that the military would come, and he'd put up with those guys for a long time.

So he went over, went back across the barbed wire fence, got in his airplane and took off.

When I got up with my contacts in Area 51, I brought up that story, and they said, “Well, that's totally true, but we can't say it. You can.”

* * * * * *

David: All right. So this is clearly a story that gives us detail into the fact that there

are vulnerabilities to these ETs. They are not necessarily like the Battle of Los Angeles, where this thing's got a shield around itself as our military is firing at it and nothing seems to have happened to it.

Some of these craft, apparently, can be shot down. Is that, in fact, true?

Corey: Yes. And if you catch them at different stages in their flight – and I don't know what those stages are – they are vulnerable to high energy, disruptive weapons. Like they said, the radar may have taken down the Roswell craft.

So a lot of these can be taken down with high energy weapons. It's rare that you hear of them taken down with a kinetic weapon.

I don't know if a missile was used. It sounds like it might have been hot lead that took them down.

David: Right.

Corey: So that would be a very rare occasion. I would be speculating why they were able to not only get that close to get within range of this craft to be able to shoot without them taking evasive maneuvers.

So I'd have to speculate what was going on at the time with the nonterrestrial craft.

David: He mentioned when he went inside the craft that the wall became transparent, and you could see all around. Is that a normal thing for one of these?

Corey: Yes. Oh, yeah. Yeah. That is very common. You will see no windows, but everywhere from inside a craft, you can see. It looks like there are no panels at all, like you're just looking out through an open area.

David: Is it common for stories like this to get passed around, like scuttlebutt in maybe cafeterias, and this kind of stuff?

Corey: That's usually after a couple of beers in a bar that they feel comfortable talking about that. Usually beer is involved.

David: Ha, ha, ha. All right. Well, that's all the time we have for in this episode, giving you a unique insight into Boyd Bushman, who was widely publicized in the media with this unique testimony, clearly intended to be part of an ongoing disclosure to bring us the truth.

I'm David Wilcock here with Corey Goode, and we thank you for watching.

Zero Point Energy and Advanced Technology Season 7, Episode 22

Cosmic Disclosure; Zero Point Energy and Advanced Propulsion Technology **Season 7, Episode 22**

31 May 2017
David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. So, Corey, welcome back.

Corey Goode: Thank you.

David: So I've got to say that when I saw this interview footage, the first one we're going to watch here, he actually mentions the name of a guy who I knew very well.

And Mark Comings is one of the only people I've ever met who literally could run rings around me when it came to advanced physics.

And so when you and I are talking, you know a lot more about Secret Space Program stuff than anybody else I've met, except for a few insiders.

Mark Comings is one of those guys, but in the physics arena. So this really shocked me to hear him mention that name because I know so much about this guy we could talk about him for two hours.

So without further ado, let's hear the first thing that Mark McCandlish has to say, and maybe you'll understand why I was so surprised once you see it yourself. Let's take a look.

* * * * * *

CHASING FREE ENERGY

Mark McCandlish: I met a scientist who has since sort of taken himself out of circulation. He's vanished. His name was Mark Comings.

He was a physics professor working as a teaching assistant at UC Berkeley, in their physics department.

And he had been . . . He'd become aware of the fact that in the basement of the physics building on campus was a lot of this old surplus equipment – frequency generators and oscilloscopes and power generators – all these different kinds of things.

So he asked the head of the department if he could go down and just tinker and do some experiments. He had some ideas he wanted to play around with. And they gave him the okay.

So he had this idea that, as you may know, there are certain kinds of crystals, like quartz for example, that . . . It's the whole basis for the original phonograph record, the stylus.

When you would put a small crystal – I think it was like a diamond crystal – under pressure, it would create a mild electrical current. And if you amplify that current, you could then hear what the impulses were coming through that stone, that gem. And you could actually hear the vibrations that were recorded in a disk of plastic. That's how the phonograph works.

And so his idea was that, okay, crystals, when they're put under pressure – physical pressure – will create an electrical charge. But he wondered if you augmented the process by putting electrical coils that wrapped around the crystal, and you essentially

applied an electrical pressure to the crystal, that the crystal would do not only the same piezoelectric process of creating an output of electricity, but that it might actually be more than what you would get with just putting physical pressure on it.

That by taking advantage of the lattice – the crystalline structure of this object, this stone – that you could then get it to resonate in a way that would kick out even more energy than you were putting into it.

And so he had a barium titanate crystal. It was about eight inches long, double terminated – in other words, a point on each side – had a cross-section that was kind of like a stop sign, sort of an octagon shape, had it fabricated by a facility outside the San Francisco Bay area where he lived.

And he had two different coils. One had a lot of fine windings, and another coil wrapped around the outside of that, all completely insulated, that had a lower number of windings.

And he experimented with putting a variety of different electrical charges, different voltages, frequencies, in different combinations, until eventually one night, about 1 o'clock in the morning, working late on this apparatus, the crystal began to glow a bluish-green, and it began to ring.

You know how when you're at a wedding, and you take your glass – your wet finger on a champagne glass, and it makes that high pitched ringing sound? He said it was like that.

And he looked at the scale – the dials on his equipment that showed input voltage and output voltage.

And this thing was putting out 125% more – in other words, everything it was getting plus an additional 25% over and above what he was putting into the crystal.

Of course, he was very excited, you know, took his notes, shut everything down, went home, went to bed. And by 8 o'clock the next morning, his house was surrounded by black SUVs and guys with ear buds and dark glasses.

They kick in the front door. They tossed the whole house. They arrested him. They confiscated all his notes. They confiscated his equipment.

And they basically said that they'd found a closed circuit TV system that he'd set up to view some of the women in the Phys Ed building, the locker room, the women's locker room in the next building. And, you know, he was in trouble.

And they wouldn't tell him what he was being charged with. They kept saying, “You know what you're charged with. You know what's going on here.”

And the reality of the whole thing was that he had created an apparatus that had accomplished what is supposedly impossible.

And I asked him, I said, “When you did this, when this thing finally worked when you found all of the right ingredients to make it work, do you believe that this thing put out some kind of a footprint in the environment that someone in the know was listening for and were ready to clamp down on?”

He said, “Absolutely, without a question.” He said, “Somebody triangulated my position, found out where I was, found the equipment, got ahold of the administration of the university, and they were at my house by 8 o'clock the next morning.”

That's how fast it was. And so he's gone into hiding. And I've heard that he's working somewhere in the Far East.

He's well-funded and continues his research, but all underground.

* * * * * *

David: Well, Corey, this is a very emotional thing for me actually, because first of all, I knew Mark Comings before he went into hiding. We actually spoke on the same stage at a conference I was doing in Portland in 2003, called “Time and Global Shift”.

And he wouldn't tell me what he had invented that caused these guys to come to his house. So seeing McCandlish go into detail about what the invention was, was a first. I had not heard . . . I just heard about the bad parts.

So let's talk about that first. Is there, in fact, some sort of energetic signature like Mark and I also talked about personally, that we theorized had been released when you build one of these types of devices that they could detect?

Corey: Yes. And that is how they track, also, a lot of the nonterrestrial and human craft within our solar system.

It is used as a way of doing air traffic control to be able to locate the vessels producing this signature. There is indeed a signature that is put off in a limited spectrum that they are always listening for on the Earth and also in space.

David: Is there any place safe in the world for somebody to develop this technology? Or could the Cabal hit you basically at any geographical location on Earth?

Corey: When it comes to developing it, yeah, there are plenty of deep, dark holes you can hide in to develop it. And you have to acquire everything that you're going to use – all of the different types of technology – you have to acquire it very quietly.

If one person starts acquiring certain technology, red flags go off.

So you can find a place secure to develop it, but the minute you're successful, they're going to know because of this energy signature that they can pick up.

David: Right.

Corey: That's why they watch these people very closely, very important that they develop a personality profile on them so they can decide which way to approach them.

Some people, you know, the almighty dollar. If they go and offer them $1 billion, they'll sign over the patent very quickly.

Others, who are more principled, they have to threaten their families. They have to lean on them. And sometimes, ultimately, these people will die of strange cancers, heart attacks, strokes, suicide.

David: It sounds like you're describing a different type of what John Perkins wrote about in his classic book, “Confessions of an Economic Hitman”. And he called it “The gun or the money campaign” . . .

Corey: Um-hmm.

David: . . . where he'd walk in with a gun in one hand and a bale of cash in the other, and say, “I'm giving you one of the two of these before I leave here. Which one do you want?”

Corey: Yes.

David: Same basic idea, huh?

Corey: Same basic idea. And, I mean, if it's going to work in that situation, humans are so much the same, they're going to be able to use it for the free energy sector as well.

David: Another story that Mark Comings told me was that in another group that was aware of this kind of thing happening, they tried to build a free energy device where each component was built separately and the plans were kept separate.

And then only right when they were going to test it would they have each of the guys bring a different piece of the machine together, build it on the spot, test it, then break it down and take it away.

But even in that situation, he said they still got popped.

Corey: Well, it's easy because there are satellites that are covering almost every square inch of . . . well, every square inch that is important on the Earth.

So if they came together real quick, put this device together, turned it on, and then The-Powers-That-Be got this signal ping on their device – they call it a ping – and then these people take apart the device and then scoot, well, they're going to be able to go and rewind – just like a videotape where this satellite was tasked, at what time – and go to the right satellite, find the footage, and then track the people back to where they came from.

David: It's very interesting that Mark Comings is describing the crystal glowing. So I'm curious if you ever witnessed glowing crystal technology in any of the stuff that you saw.

Corey: I saw the scientists working with different types of crystals and stones and stuff, and I saw very small crystals that were square, obviously man made, glow when a field was applied to them.

And there were . . . Nothing physically was touching them. So, yeah, I've seen that.

David: If they give you, let's say, billions of dollars, and you take it. Do they then kill you later, or do you actually get to live out your life?

Corey: Very quietly live your life, probably on a remote island.

David: All right. Well, with that in mind, let's now see this next piece of interview footage with Mark McCandlish discussing the interesting and scary politics of free energy. Take a look.

* * * * * *

RELEASING FREE ENERGY

Mark McCandlish: Actually, bringing the technology out and making it available is something that's going to require all of the precautions that we started to implement when we went from the horse and buggy era to automobiles – you know, car crashes,

or people going too fast, or spilling gasoline, and fires.

But, you know, the technology, if it's properly implemented, can give the petroleum industry the ability to take all of that chemistry and use it for other things that are much more valuable in terms of their return on investment.

There'll have to be a time when the scientific community as a whole is going to get together, and they're going to have to acknowledge that the technology is real.

There's been enough experiments, enough patents done now, that anyone who's really in the know, who understands what the implications are of the technology, is going to understand that if a scientific consortium, a group of scientists, came together and they outlined a plan to implement the development of the technology in a way that it could be used safely – safely for the production of energy, with the sole purpose being to save the environment from all of the impacts of the pollution that's created by fossil fuels, especially the nuclear power industry after the wake of Three Mile Island, Chernobyl, and now Fukushima.

I mean, there are people now that are saying that in 20 years, the Pacific Ocean could be dead because of all the cesium 137 that's being put into the ocean.

And if we can use the technology to produce power and not have to worry about nuclear power and the fallout, and the terrible footprint of nuclear waste, then I think we'll be so much further ahead. I think the environment will really benefit.

* * * * * *

David: So regarding this question of clean energy, I think you and I both agree that it is being suppressed for a variety of reasons.

What would you say are the main reasons why this technology isn't being allowed to go out there despite its awesome usefulness for the problems that we have?

Corey: Most of these patents have been classified for one reason. The reason is that if the free energy was released to the public, it's going to collapse the economy because the energy sector is a very, very large part of the economy.

What truly is the reason is that those who control the energy sector don't want to lose their power and income. So we are being denied these technologies just because somebody wants to get paid.

Another aspect of this is you'll have someone try to reproduce one of these free energy devices. And if it is known, remotely they can create an imbalance in the field

of where the people are doing the testing, and things that should normally be repeatable – experiments that are repeatable – won't work.

So they're able to affect it remotely as well – affect people's research.

David: All right. Now, we're going to have some footage from Mark McCandlish in which he's describing not a reverse engineered situation, but an actual extraterrestrial craft and the attendant circumstances. Let's take a look.

* * * * * *

UNDERSTANDING ZERO POINT ENERGY

Mark McCandlish: Since I found out about the Alien Reproduction Vehicle, one of the things that I began investigating was the whole business of alien abduction, and alien contact, and this kind of thing, because my thinking was that if these people really were having encounters with beings from another star system, there might be a chance – however slim – that they were taken aboard these vehicles, and they might have gotten a tour of the ship.

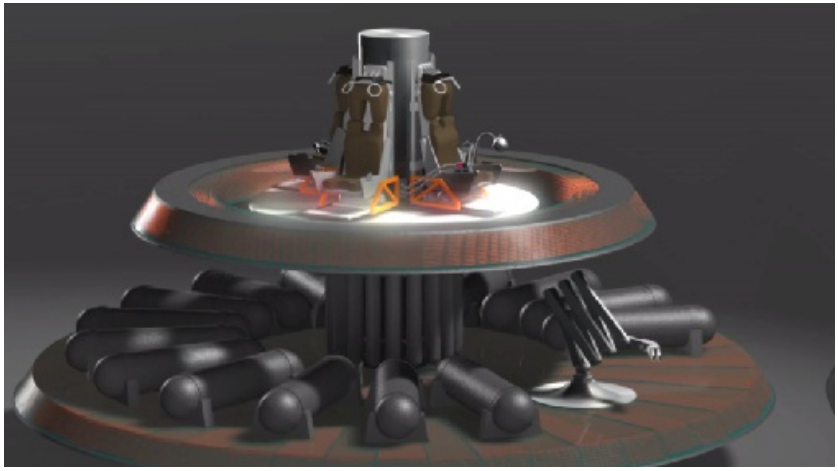
They might have had an opportunity to see some of the components of the ship.

And I really got pretty lucky, because one of the three young ladies who I investigated very thoroughly, did, in fact, make that claim, that after she had gone through some very horrifying tests to determine whether she was a threat to the beings on this vehicle, they did, in fact, give her a tour of the ship.

And one of the areas that she went into was an area where the central part of the propulsion system was located. And many of the components described were remarkably similar to the ones in the Alien Reproduction Vehicle.

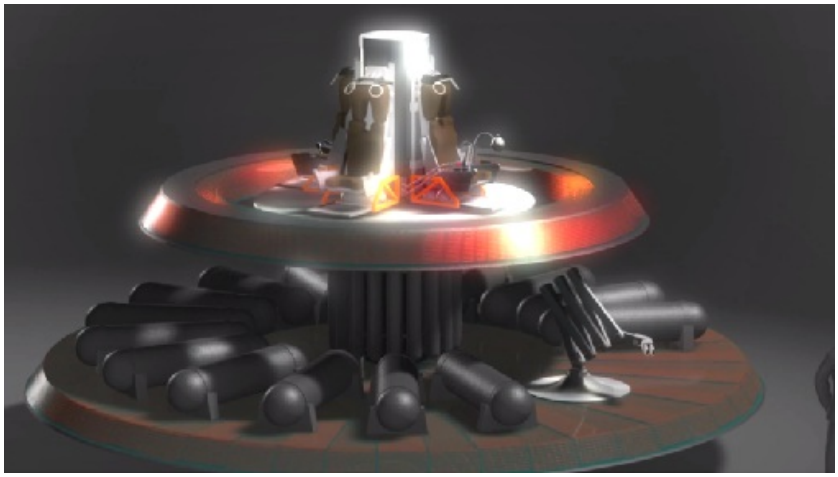
There was a central column. There was evidence of counter rotation, just like in the Bell. There was a small disk, very similar to the item that's in the Alien Reproduction Vehicle. But in the Alien Reproduction Vehicle, this thing is . . . it looks like the floor of the vehicle. It's about a nine foot diameter disk that's under the ejection seats.

But on the alien version, this thing's only about two to three inches larger in diameter than the central column. And the column was made out of a glass-like substance, just like the materials used in the ARV.



It was sitting in a pit in the middle of a circular room, and the perimeter of the room was kind of a walkway with a railing at its edge.

But she said that when she looked down into the pit and across the far side, she could see that beneath the floor was this glass-like substance with these coils embedded, just like the ring of coils around the crew apartment in the ARV.



But the thing that was most fascinating about her description was that in the central column, with the little disk at the bottom spinning in one direction, the column itself spinning in the opposite direction, that there was a silvery metallic-like fluid that was inside this column that she could see under the glass.

And it had these little flecks, shiny flecks and dark flecks of material that were sort of swirling around, but she said you could see the turbulence pattern in the liquid.

And the turbulence pattern looked like a series of five little tornadoes that were spiraling up around the inside of this column.

What she was witnessing is very much like what you see when you get an F5 tornado. You have the big one in the middle that's going 150 miles an hour. It's tearing up everything in sight.

And then a lot of times what you'll get is a series of smaller tornadoes that are rotating in the opposite direction, almost just like a planetary gear drive. And they're orbiting the main one in the middle.

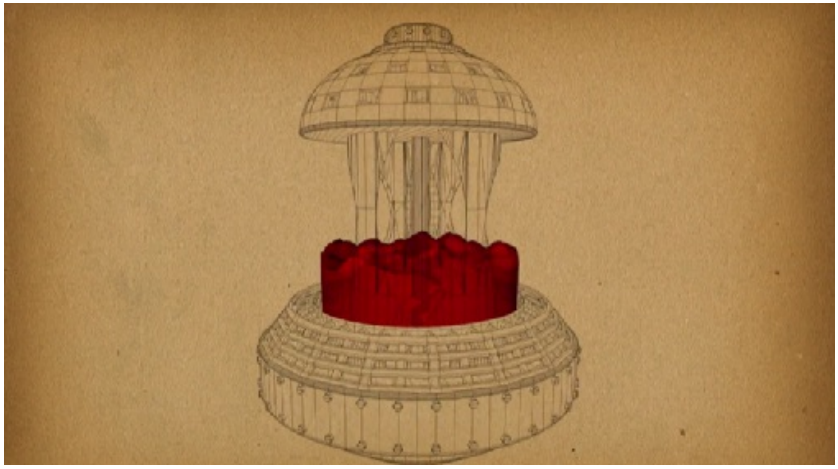
And the turbulence pattern that she was seeing in this column looked just like what you would see in those little sister tornadoes that would orbit an F5.

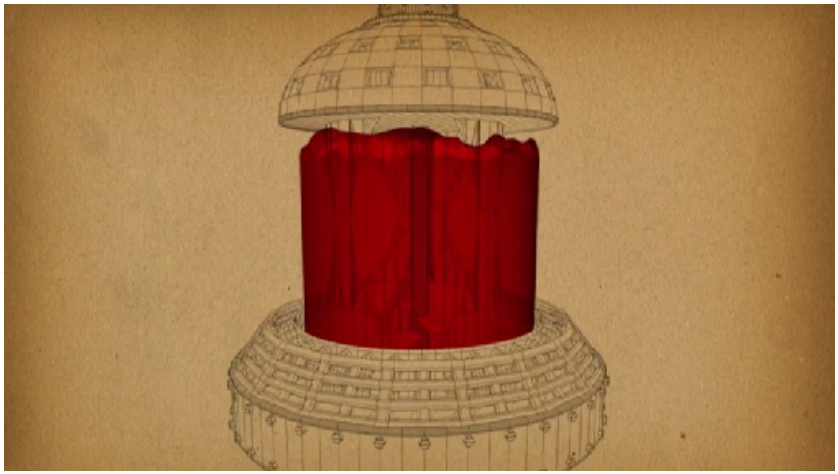
And so that told me that inside this column was a shearing effect, where two things are moving past one another like that, which means that there's another cylinder on the inside moving in one direction. And then there's a cylinder on the outside moving in the opposite direction.

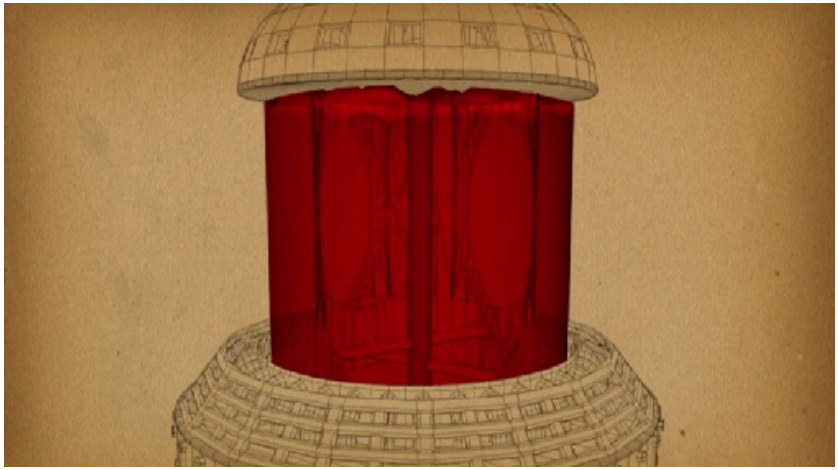
And that shearing effect is what was creating these like miniature tornado-type structures on the inside.

So then, the fluid itself can be seen moving upward. So that begs the question, okay, where is it going?

Well, if it's a closed loop system – and this sort of fills out some of the details of the Die Glocke, the Bell – is that if the fluid is moving upward, then it has to be coming back down somewhere.







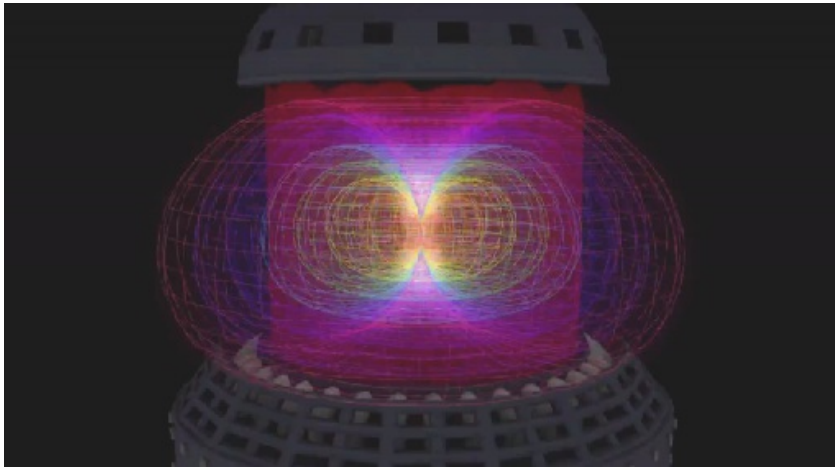
And the answer is it's coming down through the middle. So it's a closed loop. It goes up through the edges between the two cylinders and then down through the middle.

And if you're having this tremendously powerful electrical discharge that fires through that liquid, and it's done in just the right way – if you shape different parts of the system in such a way that it's like a venturi, like a funnel at the top – when you fire electricity down through the center of that funnel – because you have a ring

shaped electrode and then a cone shaped electrode in the middle – you get what amounts to an artificial ball lightening.

Ball lightning has been modeled as a torus, as a donut shape, in the laboratory. They've done this.

And what happens when you create this kind of an event with high voltages, is in this donut shaped event, you have the ions that are not only moving around the perimeter of this donut shape, but they're also moving in and out, precessing around the perimeter of this donut shape.



And they create a powerful electromagnetic field.

So what you have in this device is an electoral discharge that creates what amounts to a smoke ring of ions that shoot down through the column. The outer edges are basically stroking through the whiskers of this electrode and giving off all the power that's essentially being drawn out of the vacuum of space-time.

And that's how they're drawing the zero point energy out of the vacuum – is with this system.

* * * * * *

David: Well, that's remarkably technical. And all kinds of lights are flashing in my head as we listen to him say these things, because you are one of the people who've

mentioned a mercury-based propulsion system.

But given how many specifics he said, and that you've never actually spoken to him before, how much truth is there in what he's saying based on what you know here?

Corey: He's explaining it way better than I ever could. And they . . . I guess in the beginning, we tried using mercury, but they have engineered other gallium metals that are basically liquid metals that conduct electricity much better, and when being exposed to high electrical fields, don't turn to gold, which is what was occurring when we were trying to use mercury. And I've talked about that in depth in the past.

David: So the essential idea that there is a crystalline-looking tube or waveguide in the middle, and that the mercury or whatever liquid metal is spinning is inside that central tube, and that there's this counter-rotating smaller vortexes outside the larger one, all of that seems true?

Corey: Yes, it's . . . And the donut shapes that go down or up depending on the polarity of . . . that its' . . . which way the plates are spinning. The liquid travels up and then down through the tube and back down through the system.

David: When you say donut shape, are you saying it's a donut vortex in the liquid that you see?

Corey: Yes, it's like a . . . You can see them going up, you know, one after another. And they're spaced out perfectly from each other.

David: When he says ball lightning is formed in the center, does that mean there's some sort of visible, glowing sphere in the center of the tube, or . . .

Corey: He was saying something akin to ball lightning. He was describing these donut-shaped vortices that were coming up.

David: Oh. So do they have a luminosity to them, a light?

Corey: No, it looked like liquid . . . just looked like liquid metal being pushed around with eddies of the same liquid metal within it. You could tell different vortexes.

David: Now, this event that this woman had was being described as an extraterrestrial abduction. Do you think, in light of what we now know, that this might have been from the space program using programmable lifeforms and that sort of thing, given how similar it is to sort of like a more advanced version of the German technology you've described?

Corey: This sounds nonterrestrial to me. A lot of . . . He was describing we had like 9-foot plates, that they had 11-inch plates that would suffice or do the same function, perform the same function.

David: Right.

Corey: And it has to do with how much more advanced they are than us in the material sciences. So they can create a superconductive plate that puts out or handles the same amount of electricity as we do, but they can do it with a much smaller surface area.

David: Why do you think he said there were some black flecks in this material? Wouldn't the material conduct the best if it was a uniform substance or could there be that maybe it levels out the charge with certain particles in certain places by having them distributed like that? What do you think?

Corey: Yeah, that would be a good explanation, that it helps distribute the charge.

David: How common is it for extraterrestrial groups to use this sort of waveguide and liquid metal type of propulsion system where the waveguide is like a tube that you can actually see in the middle of the craft?

Corey: I believe that is fairly common. And it's one of the methods that some of the less advanced groups use. There are much more advanced temporal drives and other types of propulsion systems that are much more advanced than this.

But when you have nonterrestrials . . . When you think of nonterrestrials in the universe, they're at different levels of technological development themselves.

And it is also not unusual to hear about an abductee getting a tour. I've read information about them getting tours, being shown equipment, being shown star maps, being given other information. So that's not unusual either.

David: All right. Next up we have Mark McCandlish talking about a very unusual crash story. Let's check it out.

* * * * * *

ADVANCED CRAFT RETRIEVAL

Mark McCandlish: I was at a little web cafe or Internet cafe using a computer because my computer had been hacked, so I was borrowing their computer.

And I'm busy checking my email, and off to the side I can hear this conversation going on between two people who are talking about magnetic ferrofluids – oil-based fluids. They have lots of metallic particles that react to magnetism because they have iron.

And they were speculating about whether it had anything to do with a propulsion system.

And so my ear, my attention kind of picked up a little bit. And the guy was talking about a crash in a vehicle, and I was all, "What are you guys talking about?"

"Oh, we can't talk about it."

I said, "Well, okay, let me tell you what I know, and then if you think that it's interesting enough for you, you can tell me what you know."

Well, one of these two guys had been in the Army. He was . . . Apparently, he had been part of a crew, a group, a unit, that had just been formed. It wasn't even on the books, yet.

And it turns out later that's how I found out this is how they conduct a lot of these classified operations is that they create a unit, but before it's ever on the books, before it ever becomes part of the historical record, there are already people operating in that unit. They go out and perform a mission, maybe a couple of missions, and then afterwards, then everything's on the books in terms of the existence of the unit.

But prior to that time, there's no access by the Freedom of Information Act at all, because it officially never existed. And that's what this unit was.

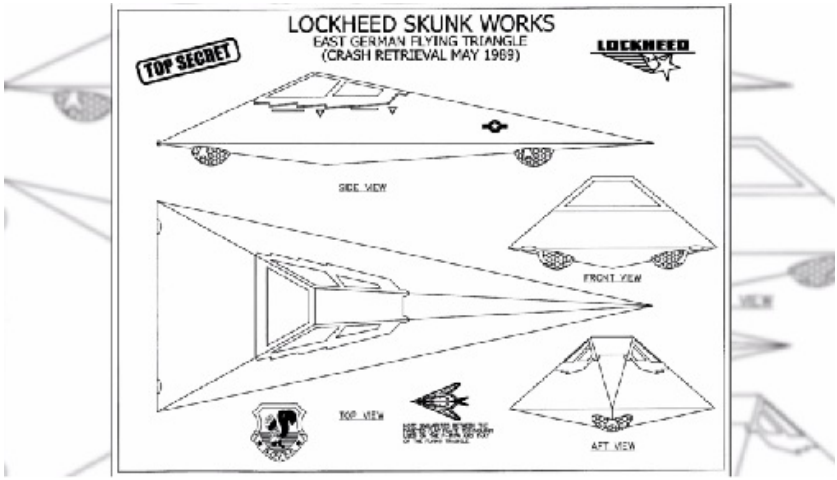
And right at the end of the Cold War, as the Soviet Union was collapsing, and there was a lot of talk of the reunification of East and West Germany, there were double agents – people working for the United States intelligence community that were inside the East German government.

And the assignment that this young man was a part of was to go in, do an insertion into East Germany – you know, all nap-of-the-earth, below the radar, literally – and to collect some of the people that were operating on the inside as double agents because they were really worried that these people might be killed once the government started to collapse.

And they were in the midst of that mission – going to a pickup point to collect one of these individuals – when they were redirected to this crash site.

The vehicle itself . . . And I don't know what the vehicle's called, but I can describe it for you.

Imagine a big, black arrowhead with the blunt end here [leaving one hand by his face] and the long pointy end over here [his other hand is stretched out about two feet].

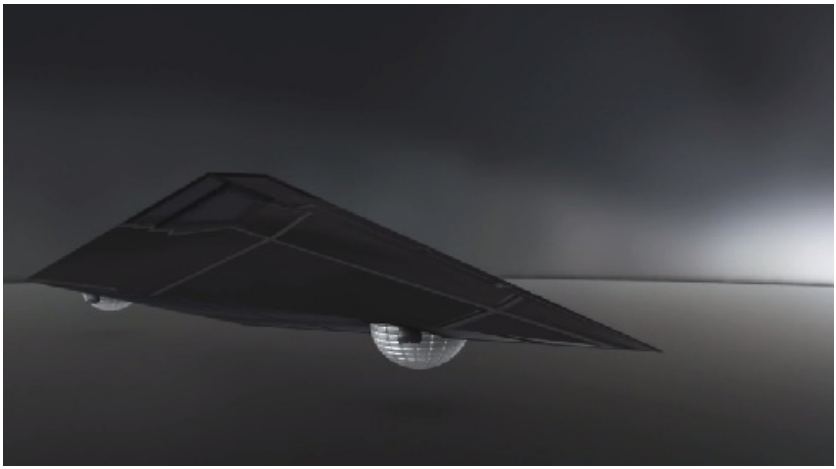


Except that when this thing flew through the air, it flew with the blunt end forward.

It had a cockpit that looked an awful lot like the cockpit on the F-117A stealth fighter with the little sawtooth edges around the windows. And the edge of the canopy had the same kind of sawtooth cutting in the architecture of the vehicle.

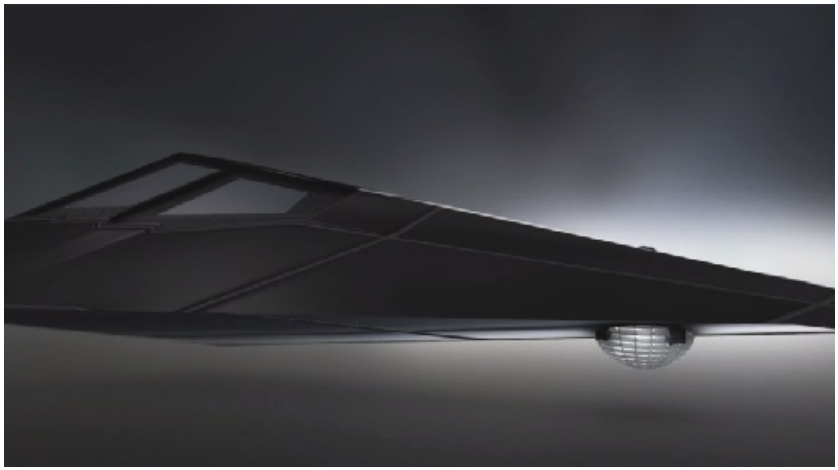
If viewed from head on, it would look like a triangle. From the side, it would look like a pyramid that had been stretched out on one of its three corners.

And then under each of the front corners was about a 2½, or maybe about 24~30" diameter white sphere embedded up in the body of the vehicle at each corner in the front.



And then about 2/3rds of the way back, on the long point end, there was a third

sphere.



The spheres were held in place by a three pronged clasp, almost like the setting of a pearl in a ring, that was silver, that looked as though it could be articulated and pointed in different directions for perhaps steering control of the vehicle.

By the time he arrived, as part of this salvage operation, there were a couple of technicians with white lab coats, the whole nine yards, taking important components

out of the cockpit. They were taking components out, and those were being carried away to somewhere else.

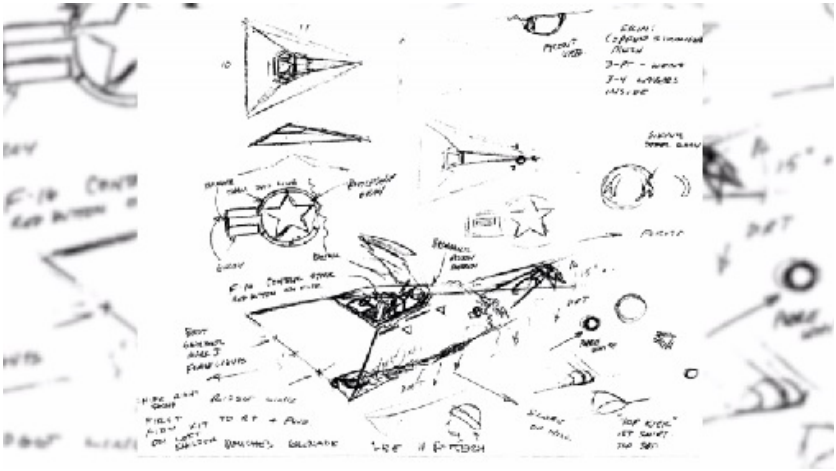
The vehicle had crashed because the pilot was flying some kind of a surveillance mission, was flying nap-of-the-earth using this system, came up through a valley about 10 kilometers southwest of the city of Halle, H-A-L-L-E, in East Germany.

And he came up over a ridge, and he clipped the top of a large pine tree with the left front corner of the vehicle and basically sheared off the corner, crushed the sphere that was at that corner.

And the vehicle immediately began to dive to the left and downward because of the loss of that support, whatever the propulsive mechanism was.

And so in an attempt to not crash, he tried to bank it as far to the right as he could, and he pulled the nose up, and it impacted the hill side anyway. It hit tail first.

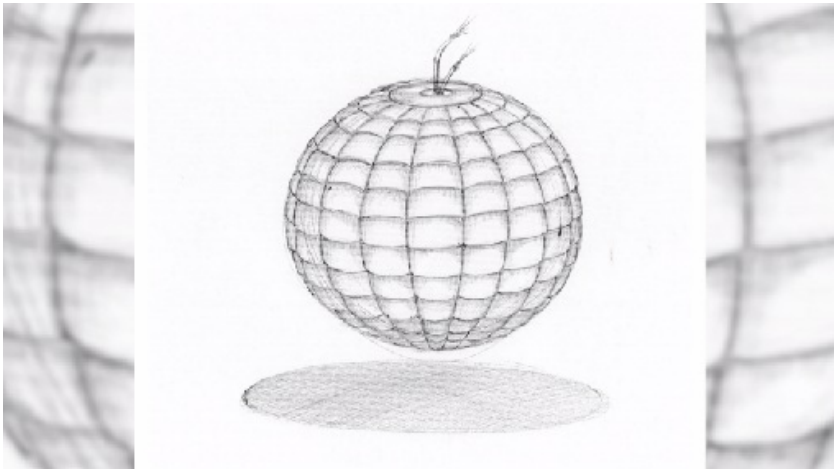
And when it did . . . When it hit tail first, it cracked open the structure of the fuselage where that third sphere was in the long pointy end.



And that sphere basically began floating off and was floating around the hill side when they arrived.

And the three-pronged retainer had come off, but the sphere itself was pretty much intact. He described it as looking like a white, ceramic pumpkin with the vertical striations like you'd see in a pumpkin.

But then each of the individual striations had a scalloping, almost like the terracotta tiles on a missionary-style piece of architecture.



So it had this kind of . . . And it looked like the shape was designed to create turbulence patterns on the inside of the vessel.

At the very top was an electrical carry through, metal in color, like a brushed aluminum color, with a number of wires coming out of it.

Now, he described this thing as sort of bobbing around, just a few inches above the surface of the ground, and every once in a while, it would begin to spin rapidly and sort of bobbing around.

And it would get a little bit higher off the ground, and then there'd be an electrical discharge between a couple of the wires coming out of this thing, and then it would sort of calm down and settle down again.

And so they were tasked with capturing this sphere. And the object would periodically make this little bit energetic dance, and so they had to kind of time it so they captured it at a moment where it wasn't too energized.

And they had one of these large, utility-yellow, aluminum carrying cases the military is notorious for using, with a piano hinge along one side and the turnbuckles on the other. You know, you bring it together and lock it up real tight.

And so when they walked up with this thing like this [Mark has the backs of his hands together and his hands spread out] to try and close around it, and the aluminum was apparently reflecting a magnetic field that was created by this object.

And so when they would try to approach it, it would just sort of wander away. It would be repelled by the aluminum.

So then what they came up with is they took the lid off of this thing by undoing the . . . sliding the piano hinge and disengaging the pins. They slid the lid underneath this thing. And then they brought the bottom half of the case down over the top of it, engaged the hinge, closed the turnbuckles, and then they let go of the case.

And the case went “poof” [turning his hand up straight indicating fast movement] and stood up on end like a gravestone. It was really spooky from what they said.

But they brought in – and this is really pretty fantastic – they brought in a CH53 Super Stallion with a very long – at least a 100' long – synthetic lanyard that they hooked this container on.

Apparently, it was so powerful in terms of the magnetic fields it was producing, they were worried that it was going to screw up the avionics on the helicopter, and they booked out of there.

There were Navy SEALs with pea coats, the nightwatchman cap. They had the M-16s with the under and over grenade launchers.

They had two Cobra helicopters, fully armed with the missiles and the whole nine yards, orbiting the site.

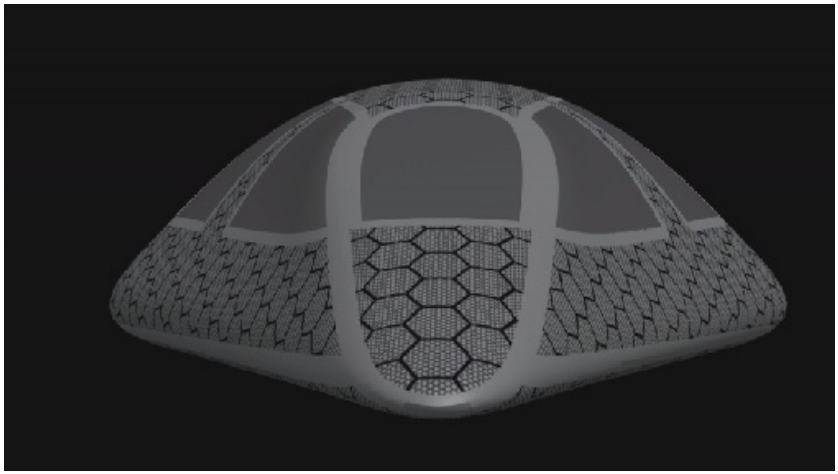
And they collected as much debris as they could. It was carried off to a vehicle that was on a roadway not too far away.

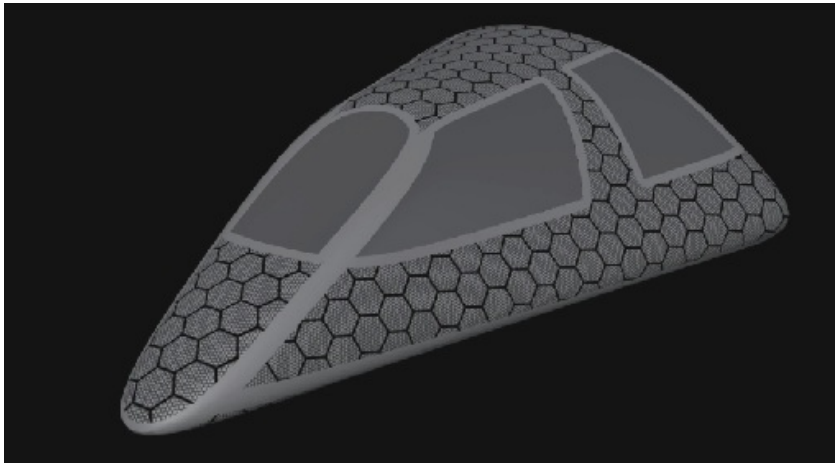
And then they put thermite grenades into what was left of the fuselage and burned it down to nothing.

* * * * * *

David: I didn't even realize that anybody had ever gotten such a close description of what you call a Dart. How close does that look to what you've been saying you were getting picked up with at your house?

Corey: Well, we've recently had an image of the Dart produced.



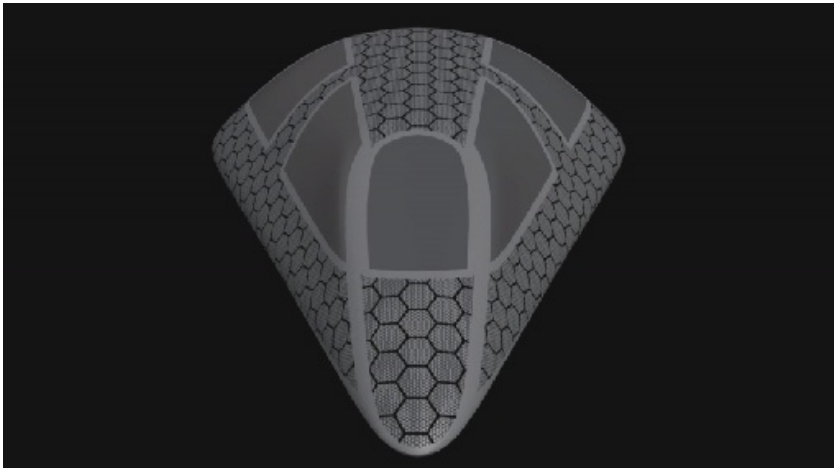


David: This is an astonishing connection. Just . . . They're so similar in how they look that I'm wondering if there are any differences, or if it's just that maybe your illustrator didn't quite have the ability to capture every nuance.

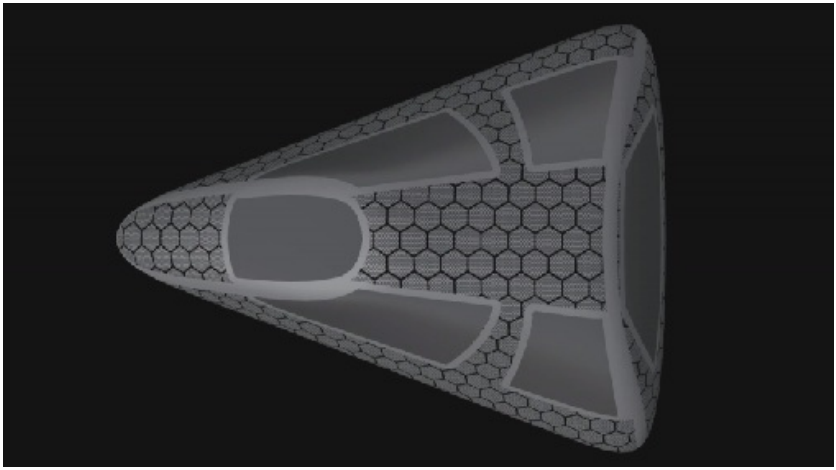
Corey: He didn't catch every nuance, but it is very close. This sounds like an early precursor to what we're calling the Dart now, . . .

David: Right.

Corey: . . . because it has a crew – the crew cabin – there are for two people. There are seats for two people.



And in the back, there are seats for three people.



David: Right.

Corey: And no real . . .

David: In the Dart that you were on?

Corey: In the Dart that I was on.

David: Right.

Corey: And there were also these red or maroon like domes, three of them that hang from the bottom. And I had wondered why when I'd asked, what's – it was small – what propels the craft? What makes it work? And they would tell me that they have disco balls in them.

David: Ha, ha.

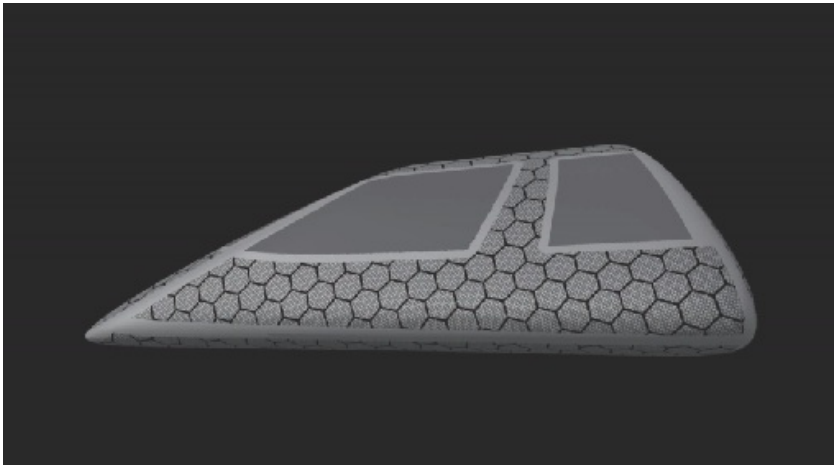
Corey: And I thought they were just screwing with me, but after seeing this orb that was floating around and how it was described, that could be very well what they were referring to.

David: Wow!

Corey: And that just hit me when I was watching that footage.

David: So even for you, you're getting surprised and learning some new things here.

Corey: Yes. And how he described from the front and the top, it looks like a triangle, and I had described it looks like a pyramid. It's built up like a pyramid from the side. That's exactly how it looks.



David: Do you think that the Dart will be one of the more commonly used craft in a post-disclosure world, that we will see a lot of these?

Corey: Different variations of it, yes.

David: One of the things I noticed that happened while we were watching this is that you had visible shock, or at least surprise, when he was describing Germany before the collapse of the Berlin Wall, and the idea that an American helicopter would have been able to go in there to do a crash retrieval operation.

So what was your reaction based on here?

Corey: I think that pretty much proves collaboration at the highest levels between the Soviet Union and the West during that time.

David: Ah!

Corey: Because there is . . . Anyone that lived during that time period would know that there is no way we'd be able to fly, especially air assets, into East Germany during that time period. They would be taken down quickly.

They had air defenses everywhere. It would have been . . . I think it would have been impossible to get air assets in there without collaboration between the United States and the Soviet Union up on the top level, where the Secret Space Program is being discussed.

David: One of my original insiders described having to transport 26 boxes of highly sensitive documents for a friend of his who was a high level Mason. And they had to do it very quickly in one night because there was a security breach.

And as a gratuity for risking his life to do this, he was able to open one of the boxes. And what he said, among several fascinating things that I've talked about before, is that he saw a document that was from the United States that apparently was given to every country in the world.

And they were told, “If a UFO crashes in your country, let us handle it because biological material could come out, radioactivity could come out, all these kind of things.”

Do you think that that document is, in fact, true? And do you think that this is something that the U.S. generally handles wherever it happens?

Corey: The U.S. handles it, but the Soviets also have a great response group. I believe

we called it . . . At least in the Army, it was called Pounce, Operation Pounce. For any foreign materials that would fall to Earth, they would go and recover them.

So the Americans would go in and recover materials in foreign countries. And usually the foreign countries would let us know, not just because they were scared and took our word for it, but there had been incidents, such as in Mexico. In the Zone of Silence, there was a UFO that crashed and they sent in American Pounce teams in full NBC gear to recover the craft. And when they did, there were, I believe, Mexican military that had died from exposure to the technology.

David: Now, you mentioned one of the five factions of the space program was the Global Galactic League of Nations. Do you think that the world leaders who are essentially told at gunpoint to give up these very valuable artifacts crashing in their country, that them being taken up to some kind of space base, is like a gratuity to keep them quiet, keep them happy, like they're inside something?

Corey: Yes, that's why that particular program was set up was to give other countries that know about the space program a seat at the table and also a way to keep them quiet about it, keep them from announcing it.

David: All right. Well, that's all the time we have for in this episode. It's absolutely fascinating stuff. Every hair on my arms was standing up when I saw that image of the Dart pop in front of me just now.

And Corey, you just nodded your head.

Corey: Yeah.

David: So it's really astonishing to work on this for so many years and to see completely isolated sources give you almost exactly the same stuff. That's where real disclosure starts to happen.

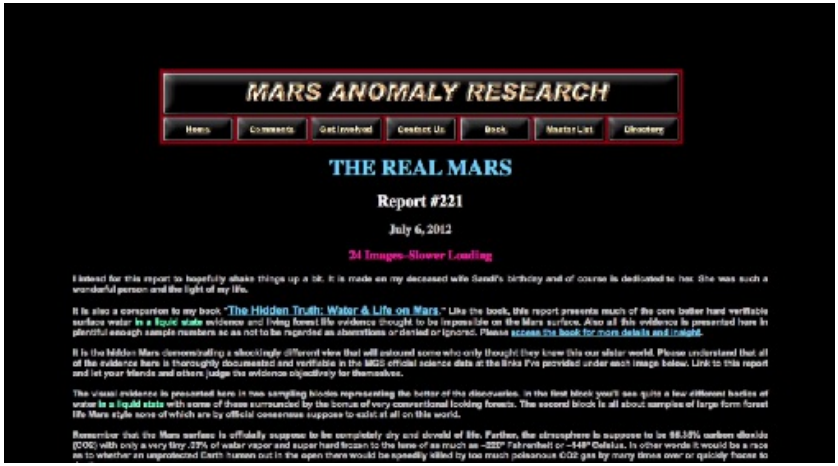
And it only happens right here on “Cosmic Disclosure”, bringing you the tip of the spear for Full Disclosure. Thanks for watching, and we'll see you next time.

Analyzing Joseph Skipper's Photo Archive Season 7, Episode 23

[Cosmic Disclosure; Analyzing Joseph Skipper's Photo Archive]
Season 7, Episode 23

06 Jun 2017
David Wilcock: All right. Welcome back to another episode of "Cosmic Disclosure". I'm your host, David Wilcock. I'm here with Corey, and we're going to do some show and tell for you.

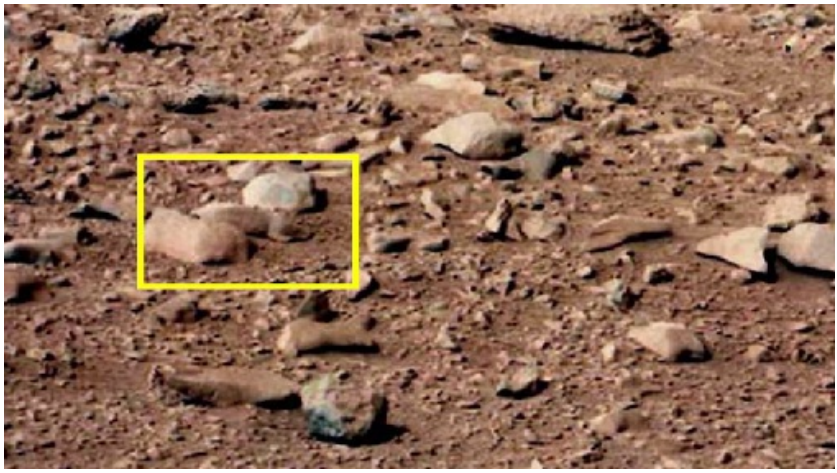
We have pictures of anomalous formations, picked out by the Internet sleuth, Joseph P. Skipper. And whether it is actually real or not, it certainly opens our imagination and it lends itself to discussion about what may or may not really be there.

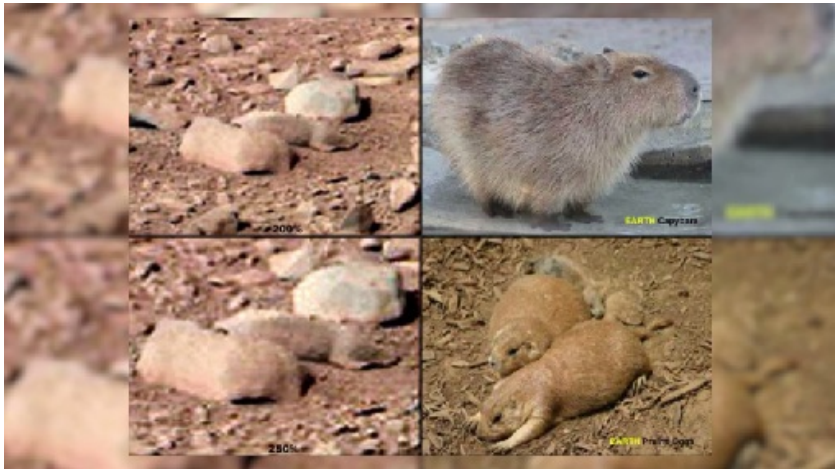


Here to discuss this with me is Corey Goode. So, Corey, welcome to the show.

Corey Goode: Thank you.

David: So the first image that we have here is of a rock, which, when we zoom in on it up close, they look sort of like a capybara or a prairie dog.





Whether what we're seeing here is authentically a rodent or not, is there any potential truth behind this based on your knowledge, Corey?

Corey: Well, I think I've reported before that in the smart glass pads, I had read that when the Germans were building these different bases on the moon and on Mars, in their larger craft, they were bringing a lot of food and supplies.

And within those food and supplies, they had different rodents like rats and spiders and cockroaches, things like that, that hitched a ride with them.

Now, after some time, of course, they are trying to get them out of the base that they're staying at, so they chase them out into the environment of Mars where they think they'll perish.

But some of the information stated that the rats that had been out in the environment for a while began to mutate, and they were larger, and they began to look a little bit differently.

And also there were remarks about different insects that had gotten larger, and they think it was because of the radiation.

David: Lack of atmosphere causing more radiation from the Sun.

Corey: Right.

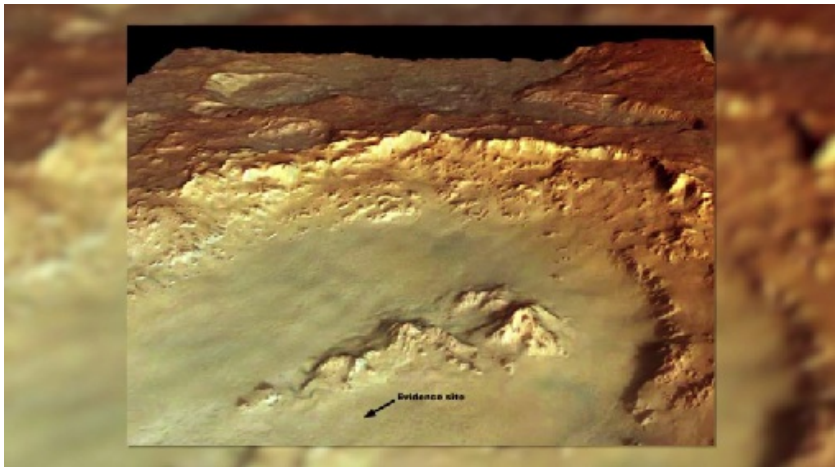
David: If NASA has recently announced that there is, in fact, liquid water, standing pools of water on the surface of Mars today, then wouldn't it stand to reason that they would be able to survive?

Corey: Well, yes. I mean, they could be eating the bugs that escaped from the same bases.

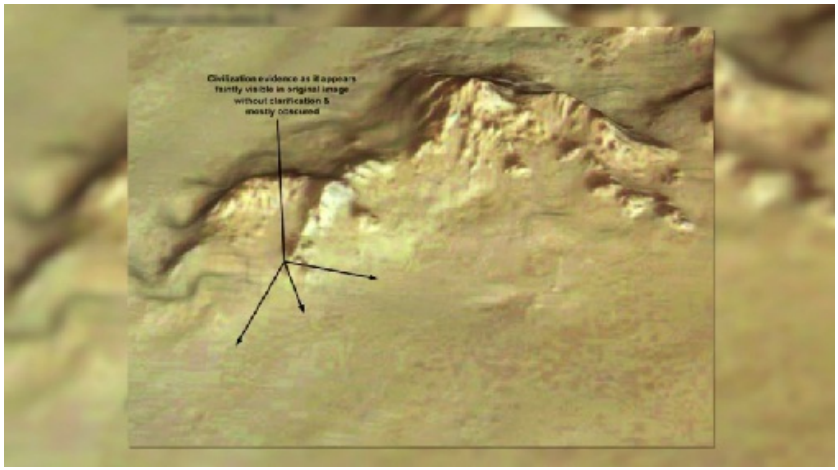
David: Right.

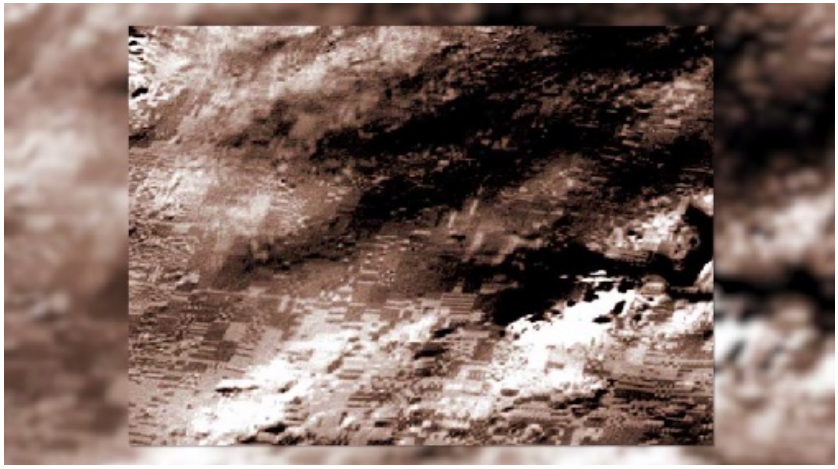
Corey: So we may have created a little environment, or they may have taken over the environment of other indigenous life that was on Mars.

David: Okay. So, now what we're going to see is an image that was apparently sent to Joseph P. Skipper by someone from the European Space Agency, or ESA, and it particularly deals with the Hale Crater on Mars.



And what you're seeing in this image where it says “Evidence site”, is an area where, as we get closer and closer, we start to see some very strange grid work.





Now, at this point, we're really starting to see some bizarre stuff.

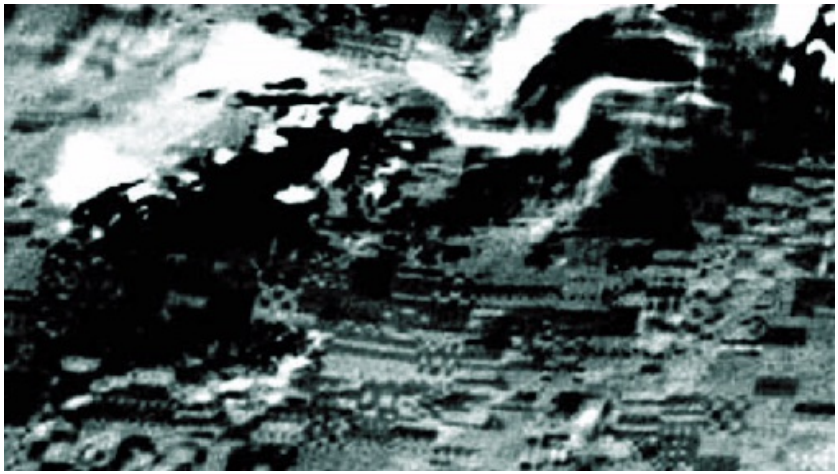
Corey, what do you think we're looking at here?

Corey: You know, I'm unsure. When I've been brought to different bases or different locations on Mars, we usually had a steep approach to prevent you from seeing certain things.

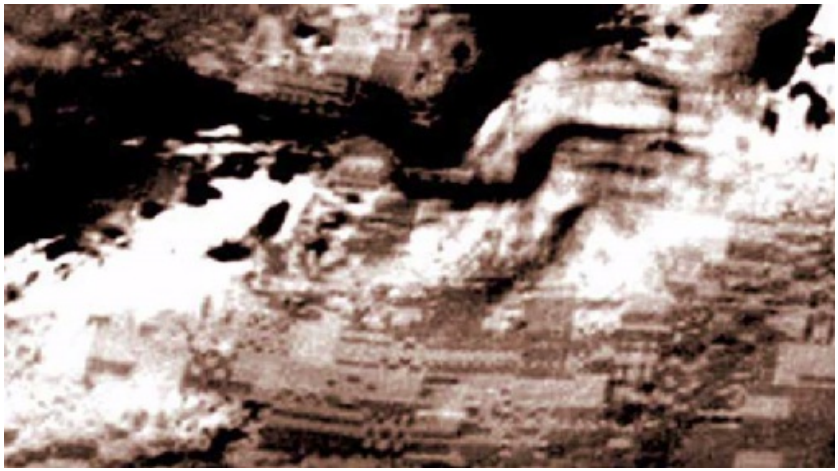
David: Uh.

Corey: And when you would see them, it was difficult to know exactly where they were when you saw them. So this could very well be some artifacts that were captured that I haven't seen before.

David: It's very odd because there do appear to be patterns of, in some cases, groups of straight lines. There does appear to be an architectural organization to this.



Another thing, Corey, that's very bizarre about this is that some of it looks sharp, whereas other sections, as we can see in this image, have a blur effect around them, almost as if someone had deliberately not wanted us to see certain parts of this image.



So what do you think is going on there?

Corey: Well, if you spent a lot of time looking at the Google Earth feature for Mars,

you'll see some areas where they've stitched together different groups of photographs and will cause some things. But when you find areas where everything else around it is clear and there are spherical or elongated type of pixilation areas, that is usually an area for you to try to concentrate on and look around to see if you can find anything else smaller, because even on the Internet, if someone finds something interesting today on Google Earth for the Moon or Mars, usually within weeks, if you go back, it's been pixilated.

David: Really?

Corey: Yeah.

David: And people have documented this?

Corey: Yes, very recently. And interestingly enough, even with higher resolution cameras, when you're above Mars looking at what used to be structures, the ruins, much of them are covered in a thick mud – like they were covered by a thick mud, and then after most of the moisture was pulled off out of the atmosphere, the mud kind of solidified.

David: Sure.

Corey: And mostly what you see are areas of structures, or corners of structures, sticking up out of this mud, or pieces of structures strewn out on top of and under this dried out mud.

David: Are you aware of there being any bases in which series of long corridor-like halls would be built, where they're all parallel to each other?

Corey: Yes, I've seen that very often, but this could also be the remnants of what once was a settlement on the planet.

A lot of these settlements look like almost melted adobe, like they were built out of adobe bricks, or just a massive adobe structure, and all of the water that poured across it in some sort of a catastrophe, just seemed to melt it.

Some of them look somewhat melted, but they looked like they were made out of a type of adobe.

David: So, Corey, if there is something in this particular Hale Crater, why do you think the crater might be a desirable location for a settlement to be built?

Corey: For a couple of reasons. They would build inside craters because craters would

offer a small amount of protection from wind storms – wind is a big problem on Mars – and it also, depending on how the Sun is traveling through the sky, the craters will provide shielding from solar radiation.

David: Okay. So, could there also be something having to do with the scarcity of water, and that the crater might actually be a better location to harvest water?

Corey: There might be water underground. But one of the second reasons it's a good place is that under a lot of these craters, the impact, when the impact occurred, it has caused fissures underneath that can be exploited and dug out and widened to make underground bases that are more shielded from the environment.

David: All right, so this looks like a dendritic branching pattern of something that clearly seems to be above the surface of the terrain.

What do you believe we're looking at here?

Corey: Well, I think I've spoken in the past about these strange colonies of bushes that would grow that were very stickery, like briars . . .

David: Okay.

Corey: . . . and sharp pointy leaves that had purple and red in them that grew sort of in colonies. The roots or some of the vines would shoot into the ground and then come out, and then another plant would sprout and grow.

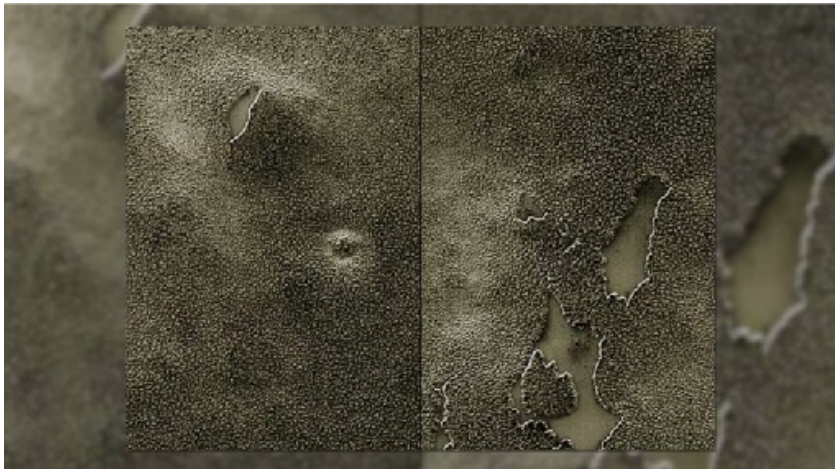
And they would radiate out from a center, original plant. That looks very similar to the growth pattern that these bushes would do. So this could be an aerial photo of it at a lower definition.

David: Is this similar to what you witnessed that they actually look like? In other words, did you see things that looked like this but were clearly three-dimensional, rounded shapes as you would fly over them?

Corey: They were round in the sense that when you looked at them, they radiated out into a circular pattern.

David: Oh.

Corey: But when you're closer to them, you see all of the . . . just different patterns of how the plants are growing through the ground and sprouting up.



David: Corey, it seems like we're seeing a much more densely packed area of these sorts of things. It's very, kind of fluffy, but it actually looks more like a forest.

Do you think it's possible that this is a more dense area of that type of foliage? Did you ever see it come together in a thick area like this?

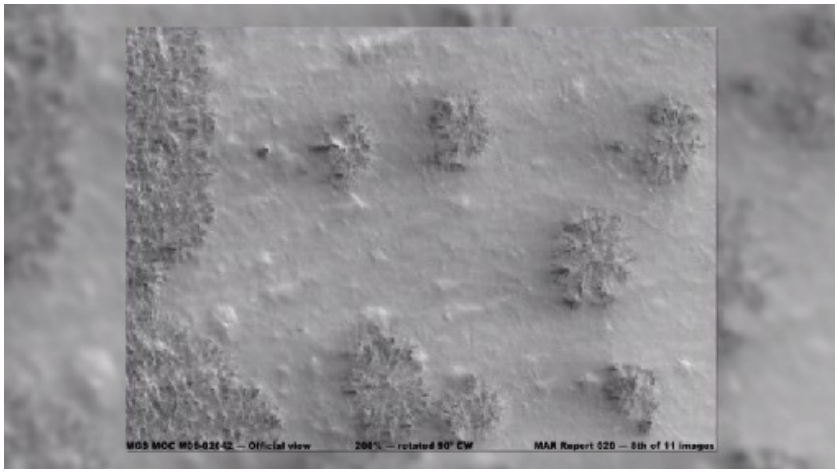
Corey: In certain areas, it gets thicker, but they're usually more sparse. This is kind of . . . These are kind of like desert-looking plants.

David: Okay.

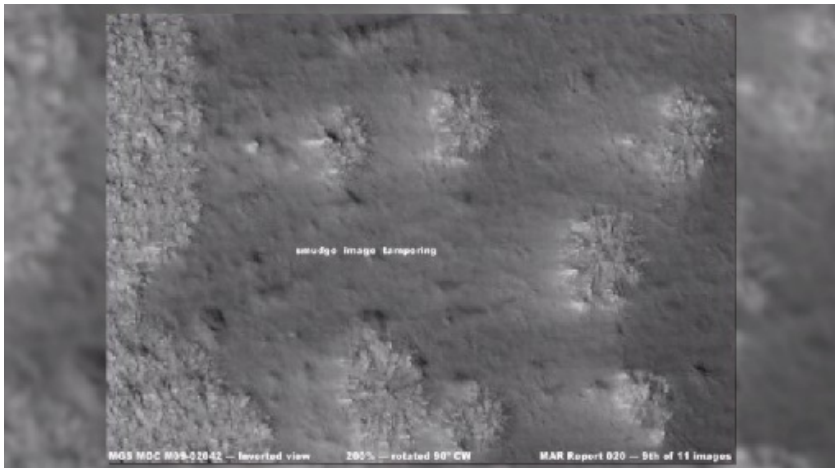
Corey: They're tunneling deep for water, or they'll be close to one of these pools that have built up in a crater, like a crater-type lake. And the standing water in it is full of sediment.

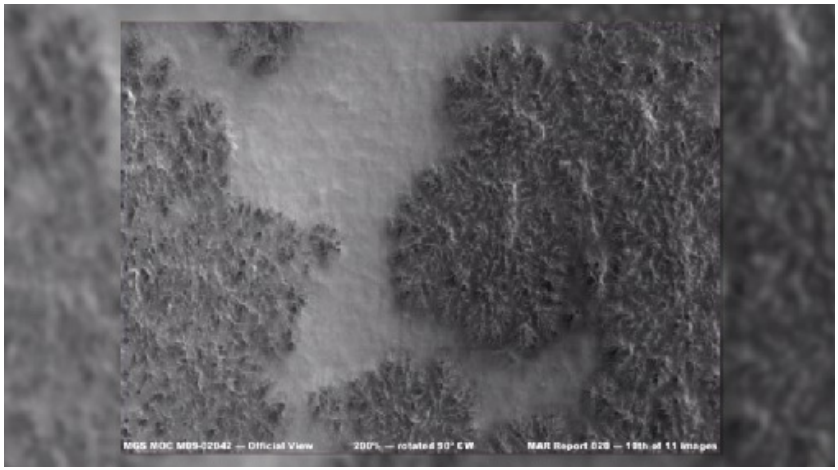
It would be like going to a lake in Oklahoma, if you've ever seen one of those, and the water looks almost red because of all the red sediment that is suspended in the water.

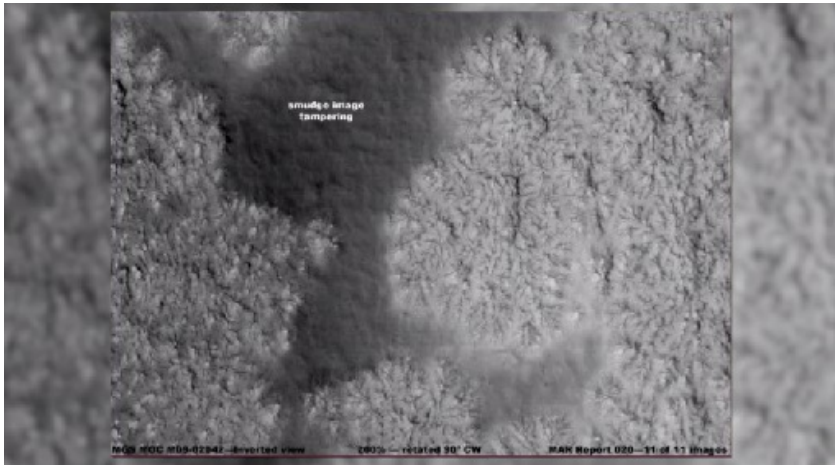
David: All right. We now have an image that is strange because we're looking at the bush type of phenomenon again, but it clearly seems that there's been some tampering with the image.



Corey, what we're seeing here looks like somebody played around with the brightness and contrast filters in Photoshop in some way. And if you did that, you could make shadows that clearly were three dimensional objects not look like shadows anymore.







This clearly appears to be a tampered-with image. What do you think is going on here?

Corey: I agree. It looks like we're looking at something similar as the last image, some sort of radiating out pattern of biological growth that they somehow played with the image to make it look like just weird shadows and hills.

David: And this is something that NASA is going to do routinely if there's things

there they don't want us to see.

Corey: Yes, and we've had whistleblowers come out and talk about NASA smudging images of the Moon, . . .

David: Right.

Corey: . . . so why wouldn't they do it on Mars?

David: Okay. Now, we have one of those images that, maybe it's just a rock, maybe it's something else.

And there is a kind of a humanoid skull appearance to this particular formation.

To your knowledge, Corey, have there been actual skeletons that are on the surface of the ground after all this time and catastrophic activity on a planet like Mars?

If you do know where to go, can you find human remains that are visible on the surface?

Corey: They have found fossilized remains, and what I described earlier, this sludge that was once like a mud that had covered all of the artifacts, and then when it dried out, it solidified. So it's almost like a . . . It's a real porous kind of rock or dried mud. And they'll find some under that – some of the skeletons.

But a lot of what they found are . . . there were giant statues of different characters, and they found broken pieces of the shoulder here, a part of the head there. So what we could be seeing, and we're jumping to a conclusion, that it's a dead body or something like that.

It could have been some of the ancient structures and statues.

David: There was something that happened that came to my attention back in the early 2000s, where Rush Limbaugh, and it was on April Fool's Day, but he did something on his show called the Gore Report. And he talked about this Gore Report, and he basically announced that there was life on Mars, said that they'd had a totalitarian government, that there was a small central elite that was ruling over the people, and the people were very oppressed, whereas the elite were very wealthy.

Corey: Sounds familiar.

David: Yeah, it does. It's interesting. And he also said that bodies were found, but that they were like Pompeii.

Now, somebody sent me this link, and I publicized it on my website after he said it, and almost instantaneously, the show was completely scrubbed from Rush Limbaugh's website.

I don't know if Rush Limbaugh actually had been told anything that was true, but why do you think something like this broadcast would have suddenly disappeared from the website, and could there be any truth to what Limbaugh was saying during that broadcast?

Corey: Yeah, I mean it's very probable that there is truth to it. Whether he knew what he was saying was . . . that there was truth in it, or was just a big joke, I don't know.

But a lot of times, a lot of truth is delivered in jest.

David: Another interesting thing about this Gore Report – and it seems like he was talking about Al Gore, and the whole climate change thing was big at the time – was he said that he got this from classified briefings.

And when he starts it out, he said that he has contacts with people that most people would not be able to get to talk about this, but that because of his position as this famous radio show host, that he was able to get information that was unavailable to most people. So it was very curious that he spoke about this.

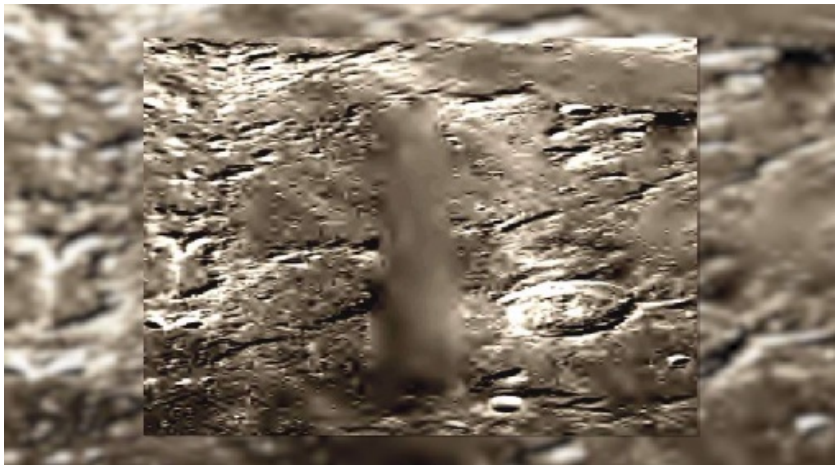
Is it possible that someone like Rush Limbaugh could be given classified information,

even though there may be a risk of him talking about it on his program?

Corey: Of course. A lot of times information will be delivered to an individual or a group, and for plausible deniability, or a way to deliver the information without really getting in trouble, they will deliver it as a joke or put it out on April 1st.

David: Right. All right. Now, what we're looking at here, Corey, is so bizarre because we have Donna Hare.

See clearly testifies that NASA employees are hired to airbrush out anomalies. When we see this picture, it very much looks like somebody did a crappy job, phoned it in, to airbrush out some kind of tower.



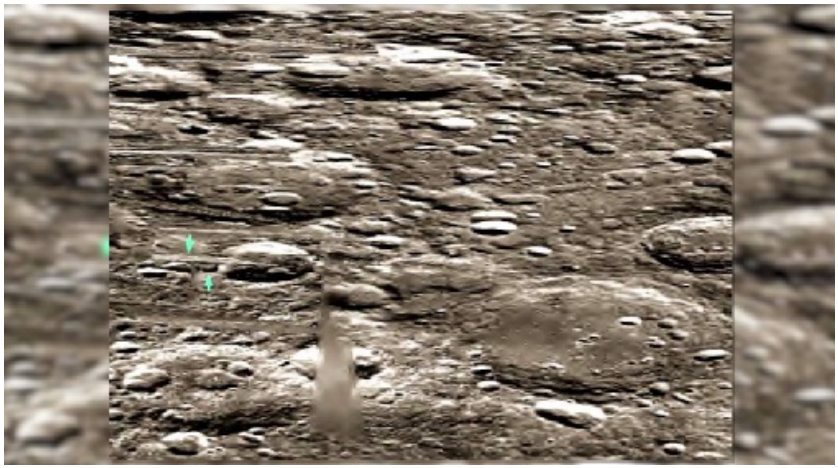
So are there, in fact, towers that would have the kind of slope angle and structure of what appears to be the blurred-out area in this image?

Corey: Yes, and I'm told that some are up to two miles.

David: Two miles tall.

Corey: Tall.

David: So now we're going to the Moon, and we're going to see some very interesting images here, that Joseph P. Skipper first brought to our attention, of strange anomalies that appear to be blurred out on the Moon's surface. Let's take a look.



Corey, what we're seeing here looks kind of like the same tower or a similar tower at the bottom. But then if you look carefully on the left, going up, there is actually a series of straight lines.

And these straight lines cut in about a quarter of the way over from the left toward the center of the image. They're all horizontal, and they definitely look like they don't belong.

What do you think there could be? Are there roads on the Moon's surface? Do they have vehicles that actually travel by land, or are they all like antigravity type or spacecraft?

Corey: I haven't seen a whole lot of road-looking anomalies, but I have seen what looks like tracks from a large excavation machine that didn't belong to us. They're pretty ancient.

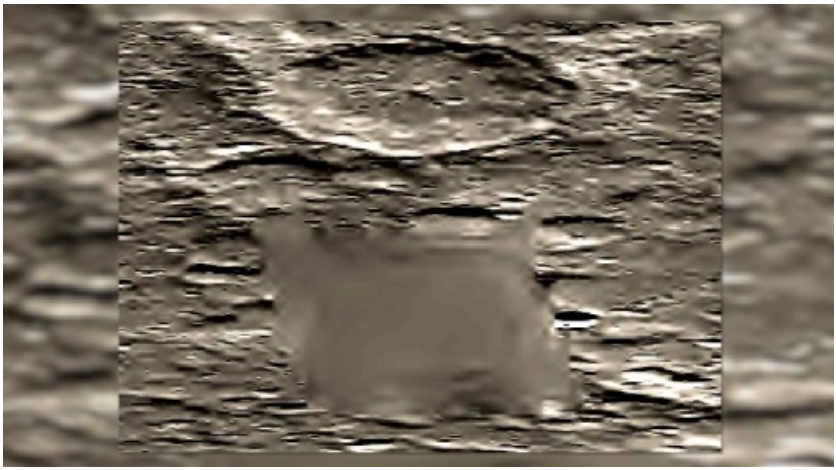
David: All right. Now in this image, you're going to see some very interesting stuff. Corey, it looks like we have a blurry image that totally barges in, intrudes over two otherwise normal-looking craters, and it is sort of a lighter color on the left and a darker color on the right.

Do you have a feeling that there could be, in fact, structures on the Moon's surface that would have that level of almost blackness to them, if you look at them? Because whatever was blurred out here, looks like it has a very dark color.

Corey: I don't remember seeing anything black, but there are certain structures that were obviously damaged in some sort of a conflict.

Now, that could be carbon build-up from some sort of a weapon. I don't think there are going to be many open fires on the Moon – not a whole lot of oxygen to burn. But I can't really identify anything that I remember seeing that was really black.

David: This last image that we have is certainly extremely curious.



Now Corey, I know what I think I'm seeing here. It looks very obvious to me. What are your feelings when you look at this?

Corey: It looks like a dome to me, and not all of the domes are completely spherical. The spherical domes that are there are broken and shattered, many of them.

This one looks like some of the domes that I saw that were somewhat trapezoid-shaped. If you get, I guess, gumdrops or the candy you used to get when you were a kid that were sort of the trapezoid shape.

David: Yeah.

Corey: And that's the way they looked three-dimensionally as well.

David: All right. Now we're going to be going to some shots that are taken on Earth. These are Google Earth anomalies, again pointed out by Joseph P. Skipper, that suggest very strongly some anomalous structures on the floors of the sea here on Earth.

Corey, to start this off, there have been rumors about an extraterrestrial or human-ET joint base off the coast of Los Angeles, right near where I am around Malibu.

So first of all, before we get into these images, what is your statement that you could make on these rumors of some sort of anomalous base out at sea by Malibu?

Corey: The information I had was that it is an actual entrance to this, I guess, cave or fissure system that runs under the ocean all the way up under Nevada, the northwest, and then connects to other, I guess we'll call them fissures in the Earth, that go all the way down to Antarctica.

David: That far?

Corey: Yeah. Some of them . . . They didn't naturally make it all the way down to Antarctica, but this Ancient Builder Race had gone in there and tunneled out areas between rifts to create these large archways that . . .

David: You had commissioned art for us at one point.

Corey: Yes, and we have large electromagnetic submarines that travel up and down this rift system through those large arches.

David: So those arches, just like it shows in the illustration, they are going to look pretty sharp inside – almost like they're laser-carved. Is that true?

Corey: Yeah, except for the pieces that have kind of broken off and floated down to the bottom. You see that it looks pretty ancient.

David: Why do you think it had to be so large, because in your image here, the submarine looks completely tiny compared to the size of this dome.

Corey: And the submarine is actually quite large. They carry shipping containers. They're the size of the ships that carry these shipping containers.

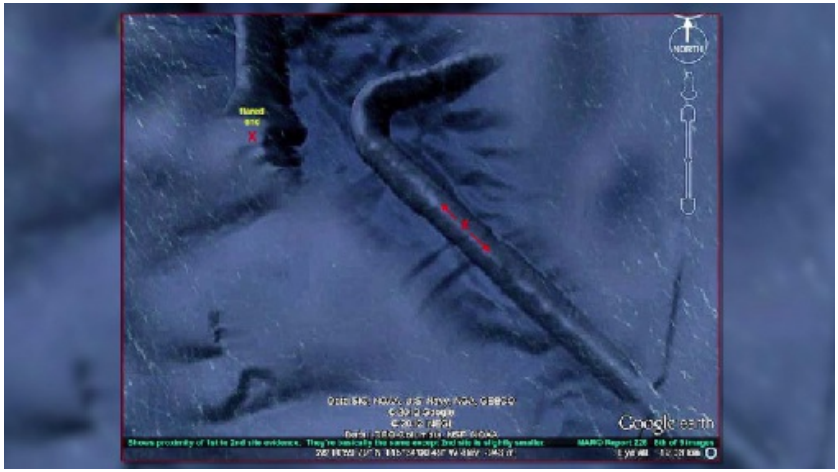
And they travel underground electromagnetically. But I have no idea why these arches need to be so large, unless what they had traveling through them were much larger than what we have.

Or there were a bunch of them traveling through at the same time.

David: So what we're seeing here is a detailed view now near Islas San Benito, which . . . What we're looking at, Corey, seems like a very bizarre, non-natural formation.

Corey: Yeah. I mean it looks kind of like that glass tube on Mars with the ridges on it.

I think some people, they call it the worm.



David: Now I'm also noticing here that it makes a kind of a gentle, not a sharp turn, the width doesn't change, and then it has a long, almost exactly arrow-straight pattern.

What do you think we're actually looking at here?

Corey: You're probably familiar with these deep boring machines that use nuclear power to bore through the hardest rock.

And it melts the rock and turns it into a glass that goes along the edges, and it kind of self-seals.

David: Right. And there's that infamous image of the big boring machine that says, “US Air Force”, and it's white. It's got all these guys standing in front of it.

And now more recently, images have been publicly shown of borers that are much bigger than that, and they actually can go through and do something like a total underground subway system.

And these are publicly acknowledged. They've done it in Norway and various places like this.

Corey: And they vitrify the rock.

David: Right.

Corey: Well, you may have heard reports, or may not, about when they've been boring through long areas of rock, they've come into open areas, and they will back out and send out a little robot to take a look.

And sometimes they have cut into the exact same structure, a tunnel, that was created very similarly, but they are massive in size – much, much larger in circumference than the ones that we're digging.

And at times, nonterrestrials have appeared at that point where we have, I guess, egressed into their territory and told us to leave. Then we'll back out and then take another way around digging.

David: In some much older episodes, you mentioned that some of the abandoned cities are very deep down below the surface of the Earth.

Corey: Yes.

David: And they haven't even really been explored that much. I'm curious if anyone in

the past might have used boring machines to bore their way down to some of those cities deep below to make a clear path that allows them to get in there.

Corey: Most likely what had occurred was that they were in the middle of boring out or excavating a new area to run their underground trams, and they ran into one of these things accidentally.

Now, they're able to do this weird remote imaging to where they can see these pockets deep in the ground, but they can't tell that much about them until they get there.

David: Ah.

Corey: If they're inhabited, that could be a bad situation if they pushed through. If they're uninhabited, they just can't tell.

And as I stated before, they came into . . . they pushed through into some massive areas that were real square, cut into the rock, that used to be large areas for, I guess, a civilization to maybe hide during a cataclysm.

David: Since we're on the subject, Ancient Aliens is always talking about Cappadocia, Turkey, these tunnels that have been dug several layers deep – I think nine layers deep around Turkey.

What do you think Cappadocia is, just so we get you on record for that?

Corey: To me, from a, I guess, a military perspective, it looks like a place that you're sequestering people to hide them from an invasion or a cataclysm.

David: It seems really odd that anybody would have taken the time to dig that out with conventional technology. It would have taken an eternity.

So do you think there was some unconventional technology used for Cappadocia?

Corey: Even if it wasn't a physical technology, that mathematical technology used to be able to do all of that is more advanced than what we believe they had back then.

David: All right. Now, we're looking at a couple of images – we're going to do them side by side here – of that same tunnel system, but now we're getting in closer on it. And you can see that, in fact, it is very stable, very nice and straight.

There's a mouth at the front that we're looking at here. So that's a pretty large tube.

Are there tubes built by our Secret Space Program on Earth that would need to be that wide, and why would they make them that big?

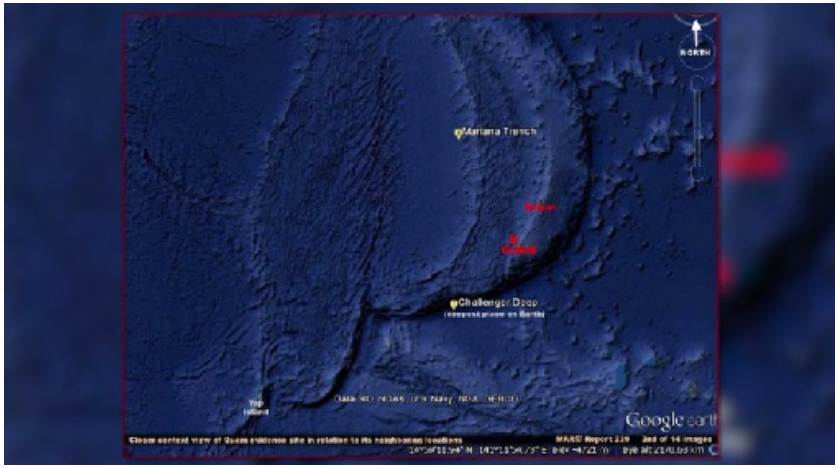
Corey: I have not heard of our capability to make one single tunnel that large. The only thing I could see that we could do is take one of our smaller boring machines and thread the needles a bunch of times until you get that circumference.

David: Do you think there could be an extraterrestrial group that might be doing this for their own reasons with their own technology?

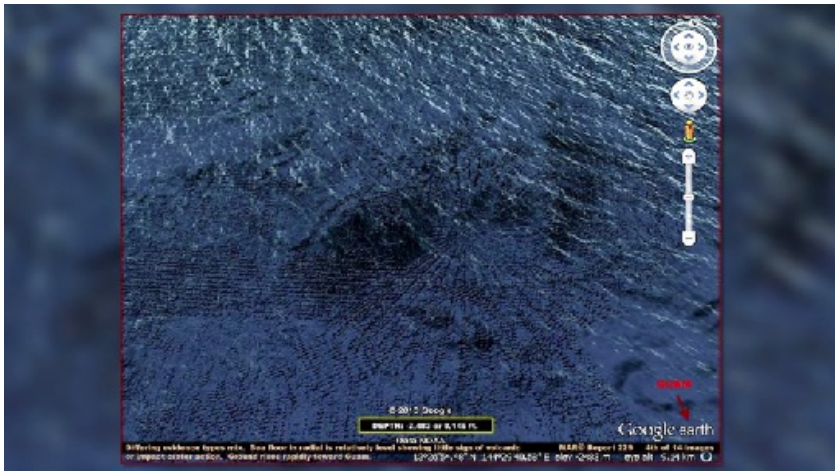
Corey: That's most likely. The nonterrestrial tunnels were extremely large.

David: All right. Lastly, we're going to go over to the Mariana Trench.

So first we're looking at it here from the wide view, and now we're going to zoom in more.

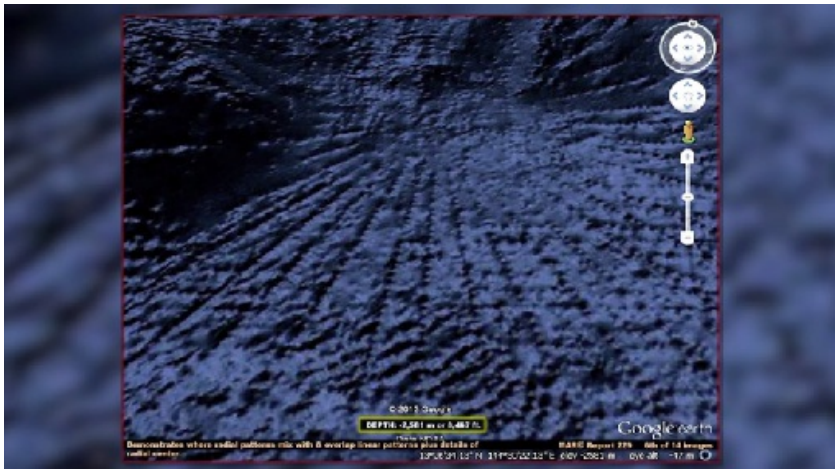


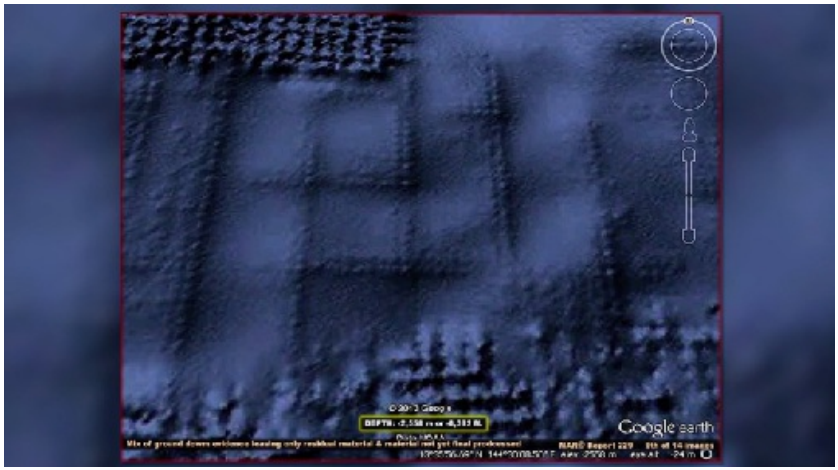
You can see there that Guam and Saipan are nearby this area that we're looking at. There's come crescent type of formations in the oceanic crust.



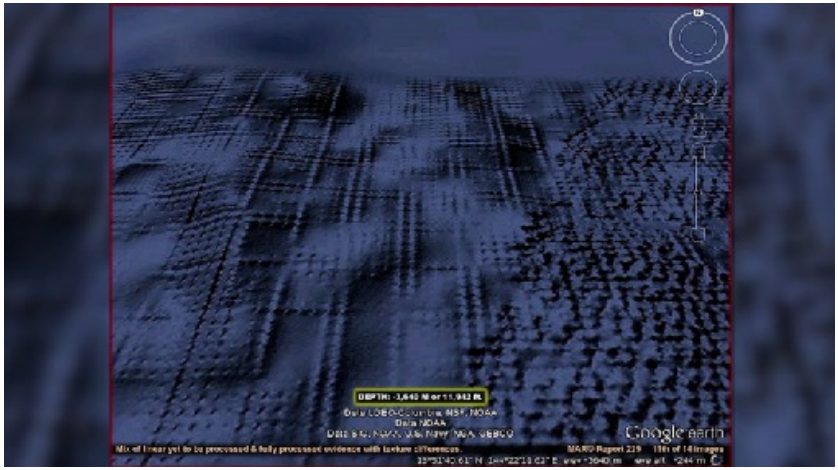
Now, what we're seeing here, Corey, is strange because at first, someone might think that this radial pattern that we're looking at is only some kind of imaging artifact, . . .

. . . but as we zoom in on it more, we see a series of radiating straight lines that absolutely appear to be a set or regular striations in the surface of the oceanic seabed.





What might something like this actually be if it is not just some kind of volcanic dome underneath the surface of the ocean?



Corey: Well, if it was anywhere else, I would jump to the conclusion that it might be a kelp farm, because somewhat similar but smaller types of configurations were seen from satellites along the coast, I believe, of either North or South Korea.

And when they went to visit, they saw that they were kelp farms.

But kelp does not grow at that depth in the Mariana Trench, and there is no one around to manage them. And these seem larger.

So it could either be some sort of underwater plant life, but it's growing in, I guess, in the rectilinear geometry that Richard Hoagland talks about, so it could very well be structures.

I'd have to get a much better resolution picture to comment further.

David: Corey, is it possible that there could be something on the sea floor where a grid-like pattern of a whole series of individual structures would then be put together in some sort of big giant grid like a rectangle?

Would there ever be a reason to build something like that on the base of the ocean?

Corey: Well a lot of the underwater bases that the Navy, and some of them are shared that even have some Coast Guard elements as a part of it, that are long cylindrical tubes that are connected together with other, almost dome-like structures, to have areas where they can perform research.

So I've seen . . . and they're modular. They will drop them from a ship or transport them underwater and let them settle at the bottom of the ocean. And then they'll have people come in with these submarines and weld them together or connect them in some other way together and build them modularly.

David: So do you also think that perhaps an interesting area of all these squares like this could be built so that you have a larger settlement where, if there's a breach in one of the areas, that some kind of airlock or pressure lock could prevent the whole area from being lost, that maybe only a few of them would be compromised before they could lock it off from the other ones?

Corey: Yes, and we can think outside the box, too. What if millions of years ago, that area, through the ebb and flow of the changes of the Earth, was once above ground?

David: Right.

Corey: Could be what used to be an above-ground structure.

David: All right, so that's all the time we have for in this episode. The Joseph P. Skipper anomalies of the Moon, of Mars, and of the seafloor on Earth. It's very fascinating, thought-provoking stuff to look at.

And these are just a few of many things that various Internet researchers have found. So we're not by any means saying this is a definitive collection. This is just some of the interesting stuff of which there is much, much more.

I'm David Wilcock, here with Corey Goode, and the Joseph P. Skipper collection of anomalies.

This is “Cosmic Disclosure”, and I thank you for watching.

Wormholes and Breakaway Civilizations Season 7 Episod 24

[Cosmic Disclosure; Wormholes and Breakaway Civilizations with Mark McCandlish] **Season 7, Episode 24**

14 Jun 2017

David Wilcock: Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. Well, Corey, welcome back.

Corey Goode: Thank you.

David: So what we're about to see here is Mark McCandlish describing a very fascinating UFO sighting that was certainly unambiguous way back during the era of the Vietnam War. Let's take a look.

* * * * * *

THE CITY IN THE SKY

Mark McCandlish: I was at an air show at El Toro Marine Corps Station. This was back around 1991 or '92. And they had a static display there.

And they had this beautifully restored B-24 Liberator.

The aluminum of the plane had been polished to a mirror finish. And they had all the stencils were just perfect.

And I'm standing there behind this rope, and I'm looking at this plane. And I've just got a big grin on my face, just admiring what a wonderful restoration they've done on this plane.

And standing next to me is this fellow. He's probably about five foot five, an older gentleman, probably in his 70s or 80s. And he's got the same grin on his face too.

And so I look over and I said, “Boy, she's a beaut, ain't she?”

And he says, “Yeah!” He said, “I started my flying career in one of these.”

I said, “Really? You were in the Second World War?”

And he said, “Yeah, I was in the Pacific theater.”

And I said, “Well, so how long were you in?”

And he says, “Oh, 25 or 30 years.” And he said, “I ended up my career as a navigator in a B-52 in Vietnam.”

And I said, “Well, boy, that was some pretty serious fighting, especially, you know, B-52s and all the political flak that the military took.”

And so we started talking about different planes and weapons systems, the different things that he had flown or been a part of over the years.

And I said, “Well, you know, I understand that there's some new, pretty advanced stuff that's flying around now.

“I've heard stories from people who were in the Persian Gulf War who saw things zipping around in the sky that were unexplainable, making right angle turns at incredible velocity, stopping on a dime, and shooting away like they'd come out of a gun.”

And he kind of nodded and said, “Yeah, I've seen some of that stuff.”

And I said, “Really? Well, tell me about this.”

So he looks around nervously, you know, because he felt that maybe somebody might be tailing him – at least that was the way he acted.

And he says, “Well,” he says, “in the mid-'60s,” he says, “we'd flown a mission over North Vietnam, and our plane had picked up some flak from a surface-to-air missile. And so they sent us over to Guam to repair the aircraft, and we got about a week of R and R.”

And he said, “We were on our way back to our base in Thailand, and we were out over the Pacific. It's about 1 o'clock in the morning, full Moon, not a cloud in the sky anywhere.”

And he says, “I'm in my navigator suite just cruising along, not really paying much attention.”

I think they were at like 56,000 feet, some incredible altitude.

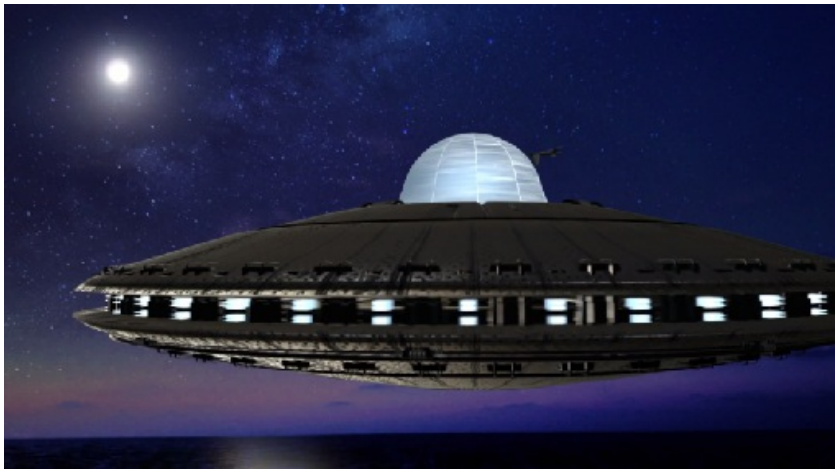
And all of a sudden, the pilot says, “What the hell is that?”

And so everybody scrambles up to the cockpit, and he points out to the left, and on

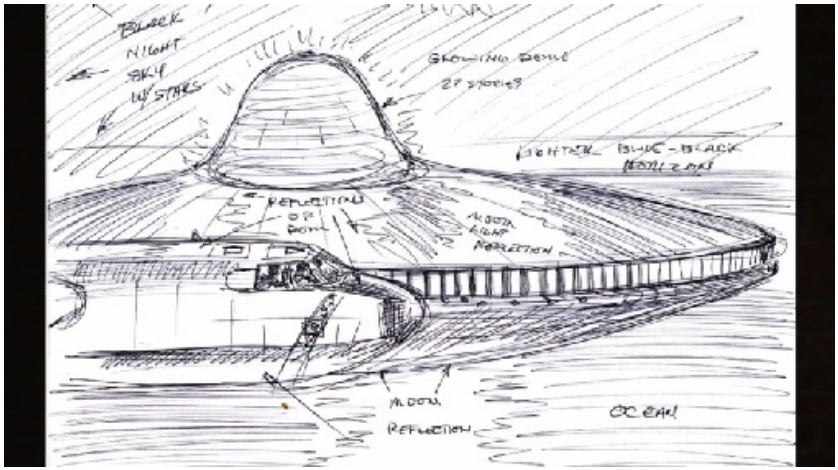
the left side of the vehicle is this huge disk – immense. He said, “Conservatively, conservatively, between a quarter and a half of a mile in diameter.”

And I said, “Well, how did you . . . How could you determine . . . How could you tell it was that big?”

And he says, “Well, it had a cupola, a dome, on the top.” And he said it looked like a single casting of white Lexan. And it was translucent. And it was glowing. It was illuminated from the inside.



And he says, “On the outside of this dome, you could see the silhouette of each of the floors inside.”



And he says, “We counted 27 stories – 27 stories!”

And I said, “Okay. Well, what was the aspect ratio between the thickness of the disk and the overall diameter?”

He says, “About 10 to one.” So he says, “That's how we figured out that it was somewhere between a quarter and a half a mile in diameter.”

So he describes this thing. And he said, “It didn't look like your typical, you know, science fiction flying saucer where the outside is mirror smooth and polished.”

He said, “This thing was rough.”

It had panels that were different, you know, textures. And there were conduits that would come out of one place and snake around and go somewhere else, and plumbing and tubing and pipes and things, little antennas and stuff sticking out of it all over the place.

But he said, “Around the edge,” he said, “was this slot. And in this slot were these big . . . they looked like turbine blades.”

And he says, “Each one of these turbine blades was the size of a bypass door on a hangar for like an aircraft from the Air Force, really big.”

And he says, “And these turbine blades, whatever they were,” he says, “they were

sliding along in this track around the circumference of this vehicle, just very slowly. And this thing paralleled our course."

He said, "They were with us for at least a half an hour."

And he says, "Maybe it was owing to the fact that the B-52 was designed to fight a nuclear war, and so the electronics of our plane was completely shielded against EMP," electromagnetic pulse.

So he says, "Whatever was keeping this thing in the air, and we thought it was probably magnetic something," he says, "we flew all around it. We flew over it. We flew under it."

He says, "We got a really good look at this thing."

And he says, "And it was the strangest thing we'd ever seen."

But he said, "After a while," he said, "this thing moved off a little ways."

And he said, "The way we could see the features was, number one, from the illumination of the dome, and also the fact that it was sort of backlighted by the full Moon."

And then the reflection of the Moon light coming off the Pacific Ocean would illuminate the underside of it.

He said, "The thing moved off a ways." And he said, "These big turbine blades at the edge began going faster and faster and faster and faster until these blades, the size of a hangar bypass door, moving so fast you can't even see them. It's just a blur."

And then all of a sudden, this thing, phew!, takes off on an oblique angle from their flight path.

And he says, "And as it did, this shimmering tunnel of light opens up, and this thing goes into it."

And he said, “And as it did, we could see at the far end of this tunnel, we could see a day-lit sky with white puffy clouds, which there were none around where we were.”

And he said, “And it looked like it was coming out of a tunnel into the daylight.”

And he said, “And then the tunnel just sort of dematerialized and went away. And we were all sitting there with our mouths hanging open.”

So he said, “We went the rest of the way to our base in Thailand.”

And he says, “As soon as we landed,” he says, “the FBI was there, and they wanted to interview us and debrief us.”

And he says, “That was the one thing that they were the most interested in, this apparent traversable wormhole event that we had seen.”

* * * * * *

David: Well, this is extremely fascinating. I guess we got to start with some of the nuts and bolts here, which is this seems like a more primitive type of craft except that it's very large, describing all these pipes and rivets and doohickies hanging off of it.

What do you think he might have seen back there in Vietnam? Where might this have come from?

Corey: Well, this was definitely a nonterrestrial vessel. He was describing how the cupola at the top had 27 floors. And the main section of the flying saucer, I guess we'll call it, that's where most of engineering is, and you have a bunch of moving parts that cause this, I guess these large vents to slide around.

So most of the crew compartment is up in that cupola at the top.

David: Right.

Corey: And down inside, that's the business end where the power is generated, where the things spin. And only people who could go down there are maintaining the craft.

David: So just to be absolutely clear, nothing like this has ever been seen by you in the Secret Space Program, per se?

Corey: Well, like you said, it's older technology. And this type of craft has been associated with what people call the "Greys" a lot.

David: Oh, really?

Corey: Yeah. Or the Ebans, that these type of craft have been associated with them. Yes, I have heard of similar craft – very large, some of them like even a mile.

David: Why do you think they might have been over the Pacific Ocean near Thailand?

Corey: During times of conflict, there seems to be a lot of UFO activity, like the aliens are coming in to watch what's going on, observe, maybe even take part.

So as we heard when we interviewed Clifford Stone, when he was in Vietnam, they had an encounter with nonterrestrials after a B-52 had crashed.

So it seemed like during Vietnam there was a lot of nonterrestrial activity around that part of Asia.

David: The story about the wormhole at the end, of course, is really fascinating, because they're at night. They have moonlight reflecting off of this disk, but then they see a tunnel, and it's not night on the other side. There's a sky. There's clouds, and there's sunlight.

So what do you think is going on there? What are we looking at?

Corey: They're looking at their destination, a window to their destination that's been opened up.

This has been described – I don't know if I've mentioned it on the show before – but I've heard that described many times. They will see strange-looking skies that look like they're obviously not on Earth anywhere. So, yes, I've seen that described many times.

David: So if you have the right angle, you can see right through the portal and see where the destination is on the other side?

Corey: Yes.

David: How did the description of the tube itself being lined with sparkling light fit in with other things that you've seen or heard?

Corey: Well, the way I've described it is it will refract light. It looks kind of like a shimmering mirage, is what I've seen.

David: Well, it's fascinating to me, because McCandlish doesn't know what I heard from Daniel, another insider, who described working at Montauk, and that portals would appear in the cafeteria.

And you would see like a grassy field where there was no field. Like you'd be looking at the wall, but there's this shimmery thing around the wall and then there's this field.

Now, do these portals take you through time as well as space?

Corey: Yes. And they learned how to manipulate some of these portals to be able to travel backwards and forwards in time even.

David: All right. So now we're going to have more of this interview with Mark McCandlish, where he's going to describe his own personal experience.

* * * * * *

THE FLASHER PHENOMENON

Mark McCandlish: I was coming back from an Angels' baseball game in 1994 – I think it was June or July at Angel stadium – going east through Carbon Canyon.

There's an area there near some kind of a wildlife preserve that's southwest of Chino.

In the distance, there were some heavy duty high tension power lines that went over the hill, and there were some developments, some houses, and things in there.

I'm with a group of two or three other kids, and we're in this car driving along. And there was a Santa Ana wind condition in that area at the time, and so all the planes that would normally come in and land from the east really couldn't do that because the wind was coming in from their back, and it would lower the amount of lift they'd get.

So they were orbiting around and coming in and flying in from the west, going towards the east to have the extra lift of that wind. And so there were all these planes in a holding pattern, and you could see their lights and everything.

And I said, “Boy, you know, it must be quite a challenge for the air traffic controllers to keep all those planes organized and not have any one of them crash.”

And we had just finished talking about UFOs. This is the thing that was so fascinating.

And right as I said that, about the crash and, you know, a midair collision, there was a brilliant flash of light. And we all kind of went like this *[Mark shows shock on his face]*.

And this brilliant flash of light gets big, and then it kind of closes back up.

And then there's another point of light that starts coming out of the sky, and it's dropping down about a 45° angle and it's getting bigger as it does so.

And then it was almost as though there was an invisible hole in the sky and following in unison and in trail with this object were these parallel lines. And they were moving in unison. And they were all sort of staggered. They all had different line weights. Some were thick; some were thin.

But they were all the same sort of golden yellow color, and they were moving in unison with this thing.

And I thought about it. I called the airport. I said, “Was there a crash? Was there a collision?”

“No.”

And so as I was thinking about this, it occurred to me – and this thing came right down into this wildlife preserve. And they have very strict guidelines about no one being in the park after dark. There are signs that say so. I investigated this.

So they don't want you around there after dark. And now I think I kind of know why.

But the object that I saw appears to have just exited from one of these traversable wormholes.

And just like in that scene in the very first “Star Wars” movie where they make the jump to light speed, and as they shoot off into hyperspace, all the images of the distant stars begin to streak.

Well, it's the same thing coming the other way, because what's happening is that as this thing is coming out of this traversable wormhole, it's actually dragging some of the light from those stars where it was when it left some point in space. It's pulling that light along with them.

And so what you see is the image of those stars sort of stretched out into lines. Each star, the big ones that are closer have a larger or heavier line weight. The ones that are faint, further away, have a little tiny line. But they were all parallel, moving in unison like this.

And then I realized that the golden color was the red shifting of the light from stars that looked like white to the naked eye. But if you're talking about the Doppler effect of moving away from a light source, you get a red shifting so the light turns sort of a yellow gold.

And that was how I figured it out.

Well, since that time, since I recognized what the phenomenon looks like, and since I moved to Northern California, I've probably seen events like that maybe at least six to eight times – a couple of them quite spectacular.

But they're so often, they're so frequent, especially in the summertime. We don't know why. The summer seems to be a time frame when this happens more often.

But they happen so often that the local people who watch the skies, and you know, astronomy fans and people who like to watch UFOs or wait and see if they see one, they call these things “flashers”, because they happen so often.

* * * * * *

David: When he's describing this portal phenomenon with lines coming off of it, what are your initial thoughts as you see all this?

Corey: A lot of optical types of phenomenon have occurred. Even light can get stuck

in the wake of these craft as they travel through these wormholes.

So I've heard of different types of light phenomenon that have occurred in air when craft have entered and left through wormholes.

David: He talks about these flashers as if they're fairly common. I haven't really heard people describing that. Do you think that if someone such as either an extraterrestrial or one of our own are traveling in and out of our atmosphere using portal technology, that if you are perceptive enough, and you're looking in the right place at the right time, that there will be visible phenomena like this?

Corey: There's a lot more going on above our heads than we know. The typical person spends the whole day looking at ground level. Very few people stop to look up.

David: Right. So you think there could be atmospheric phenomena that most people wouldn't even notice because it's fast or otherwise not so visible?

Corey: Atmospheric and light phenomenon, yes.

David: Right. In a case like what we just heard him describing, would this be more like a craft? Or would this be more like a natural phenomena in some way that bends light as a portal phenomena?

Corey: It could be either, because as I've described how the cosmic web works, and how the Earth, as it spins, there has to be the correct electromagnetic connection between the Earth, the Sun, and then the Sun and the star of the destination that they're coming from.

So this could also explain why they're only seen in summer, or possibly, because that's when these portals are opening over certain nodes on Earth.

And as I've described, these electromagnetic nodes can open below ground, below the ocean, on the surface of the Earth, and extremely high in the atmosphere.

David: One of the things that he made me think of was something I saw in “Discover” magazine in the 1990s, where they were describing a new phenomenon that they were announcing that wasn't really Aurora Borealis, but had some similarity. And they called them “sprites”. That was one type.

Another type they described as “elves”.

And when I think back about this now, the sprites and the elves predominantly were linear columns of light that seemed to have a mouth, like a funnel type of shape to

them.

So do you think sprites and elves might be an example of these wormholes actually being visible to us?

Corey: No. No, those are electromagnetic phenomena that happen. Some have negative and positive charges. A lot of the electrical charges that we see coming and grounding, hitting the ground, are of one polarity or charge.

And the ones that reach out into outer space are of a different polarity and charge.

David: Okay.

Corey: And they reach very far out into space, the sprites and the elves.

David: Well, I thought you said that portals themselves have a plasma basis to them?

Corey: Plasma is more of a byproduct of the electromagnetic fluxing that's occurring. Just like he was talking in the Flux Liner how it would create kind of a corona around it of light that emitted x-rays.

David: Right.

Corey: It's more of a byproduct.

David: One of the interesting things he said in the course of this little section was that whatever was coming through this alleged portal appeared to be getting larger and larger as it got towards him.

Do you think that that size increase was simply a function of the object moving nearer to them? Or is there something else going on here that causes that?

Corey: When we would go through these local distortions in time-space that we call portals, I've described how there would be like a metal beam, and then the portal would be turned on and it would fold up and go in.

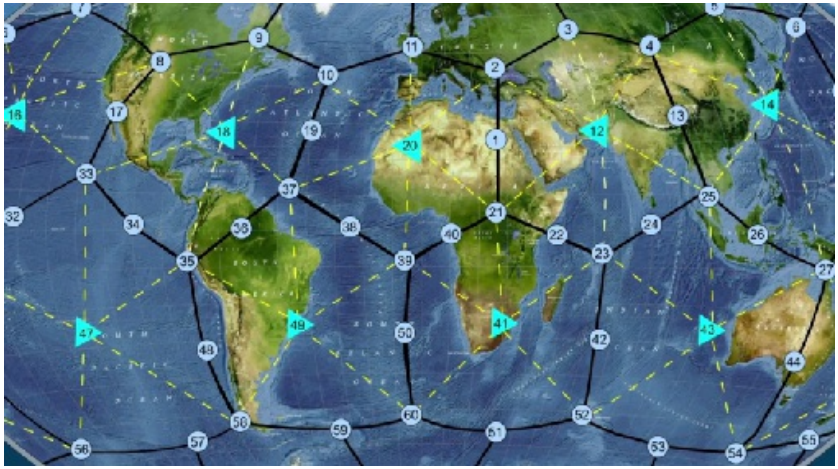
And I've described how it'll be a three dimensional sphere, and people will walk in from all directions at the same time. And then on the other side they pop out going that direction.

Well, as they go in and come out, there's such a twisting in time-space that as they go in, they seem to shrink. And as they come out, they seem to kind of grow larger.

So when I saw him describing that phenomenon, it could be perspective that it was coming closer to him. But it made me think of that weird anomaly that occurs when people and items go in and out of these portals.

David: Do you think that there is some sort of connection between megalithic stone architecture and portal phenomena?

Corey: Yes. The ancients built a lot of these megaliths along this grid system on the Earth.



And this grid system is what conducts the electricity and channels it to these different nodes . . .

David: Right.

Corey: . . . that open up into portals.

David: All right. So our last and final section of this groundbreaking interview with Mark McCandlish is where he describes his interpretation of a term that was coined by Richard Dolan, the wonderful UFO investigator who really is all about the facts.

He termed the idea of a breakaway civilization being something that could arise out of this culture of national secrecy, and how these back engineered UFO anti-gravity technologies could, in fact, be colonizing outside the Earth, and therefore, form a civilization that is totally isolated from us.

Let's hear what Mark McCandlish has to say about this fascinating concept.

* * * * * *

BREAKAWAY CIVILIZATION

Mark McCandlish: I think my friend Richard Dolan was one of the first people to speculate that this kind of technology sort of sequestered and held away from public view might have such a consequence that there might be a population of people who are held to a higher standard of security.

That are selected for their intelligence, their abilities, their understanding of what makes these kinds of things work. And that people who get involved in these things can . . . in all likelihood, they can never talk about them. They can't describe the technology. They can't divulge what they know.

And so they may, as a consequence of that, establish their own society, their own groups, their own peers, where they congregate and hang around together.

I mean, there's probably some kind of a location, maybe in Antarctica. I mean, there's been a tremendous amount of interest in what's going on in our Antarctica.

I mean, you hear John Kerry, and, you know, people like Richard Branson, you know, they're all flying down there for God knows why. But there's something very interesting happening down there.

There's been a lot of suggestions that Admiral Byrd had a confrontation with an advanced technology, you know, isolated civilization down there right after the Second World War. But there were losses of aircraft and personnel and a few ships, you know, as an outcome.

The technology is real. I know that I've seen things that were unexplainable by conventional types of propulsion systems or technology – things that moved across the sky at incredible speeds, things that look like they're manipulating time at the same time.

And so if you have a society that has at its disposal this kind of physics, this kind of technology, it seems to me that under the right circumstances that kind of technology could be used to do a little arm twisting around the world, in terms of things that are happening politically, for good or for bad.

It might be a way of encouraging someone not to start a third world war. It might be a way . . . I mean, you know, when you see the Chinese doing a lot of saber rattling and

then all of a sudden there's a major UFO sighting over a capitol like Beijing, it gives one pause.

It makes you wonder if they aren't being given a very subtle message to stand down.

* * * * * *

David: What we seem to be driving at here is a concept of a much greater amount of secrecy behind the UFO phenomenon than most people could ever imagine.

And that's obviously been a central element of our show. I thought it was interesting that he mentioned Antarctica and brought up a lot of the same data that we've been talking about, seemingly without any awareness of what we have disclosed.

So what was your feelings on that?

Corey: Well, especially in connection with a breakaway civilization, because one of the updates that I have delivered recently is that there is what is referred to as an Antarctic Area 51, that is in Antarctica, that they have a lot of these under ice bases that they built under Project Iceworm.

They're very large, and they're research and development facilities. Lockheed Martin, all these places, they inhabit them and they use them.

Not only that, but there is a spaceport there that used to be a Nazi spaceport that was

handed over to us during the late '50s, early '60s, and we converted it into our own spaceport. And that is a very heavily used spaceport.

But let's not forget that the concept of breakaway civilizations is not new. It occurred in antiquity.

Ancient civilizations would have the priest caste, and the priest caste would be made up of engineers. And all of the knowledge was guarded by the priest caste. They would even keep it from the kings.

In these times when they had developed these types of technologies, they had developed them separate from their civilization. And many of them would go below ground, off-world, develop bases.

And some of them are around today as some of these nonterrestrial groups – what we think are nonterrestrial groups – that we see flying in the sky.

David: What do you think is the likelihood of this breakaway civilization ever actually healing this divide with people on Earth to the degree that we will know that it exists and be able to interface with it in some way?

Corey: I'll be very surprised if they self-identify. I mean, the full-on breakaway civilization that has the most advanced technology. We'll most likely hear about one of these other secret space programs before too long.

But the only way I see that being disclosed is through some mass data dump, or some sort of an event to where the information is put out against the will of The-Powers-That-Be that run these breakaway civilizations.

David: How do you see that unfolding though? Because it seems like part of how this breakaway civilization concept has worked is that we don't have the ability to send our own drone and orbit the Moon to look at what's on the dark side. We don't have the ability for ordinary folks to get out into space.

Then you have guys like Elon Musk and Richard Branson who create their own little space program, and they try to make a launch, and it blows up, which appears to be sabotage.

So how would we actually experience this? How would we get out there?

Corey: Well, all of these things are occurring in secret. The weapons, the programs that are, let's say, sabotaging those two civilian programs, this is all happening in secret.

If we have some sort of a data dump and a large amount of information comes out that really can't be disputed, then the ruse is over. They can hide behind the curtain all they want, but we still know they're there.

David: What do you think is the end game as far as the breakaway civilization is concerned? If they still live in our solar system, they're kind of like sitting ducks if there was some kind of disclosure.

If they really wanted to break away, wouldn't they cut the cords to our Solar System completely and just go somewhere else?

Corey: They have. They inhabit other star systems. They have bases in other star systems.

If they had to, and they had planned to, at some point when it looked like information was going to be divulged to the public or to the middle tier – people that have teeth, some of the military-industrial complex groups – if these people started to have this information disclosed to them, The-Powers-That-Be that are part of this breakaway civilization had planned to escape our Solar System and go to one of these other star systems.

David: How do you think this so-called outer barrier affects that plan?

Corey: It has destroyed that plan. They are stuck here with us.

If we get Full Disclosure, then like you said, they're sitting ducks. They've been identified, and everyone's going to be taking a good look at them and what they've done to keep their breakaway civilization a secret from us, which is where a lot of the meat of disclosure is going to be.

David: All right. Well, on that note, we're going to end this episode. Very, very fascinating series of interviews with Mark McCandlish, one of the original 39 Disclosure Project whistleblowers who I got to meet personally back in 2001. And it is really amazing to hear how much more he had to say.

I'm David Wilcock here with Corey Goode. This is “Cosmic Disclosure”, and we thank you for watching.

Darkness on the Far Side of Moon Season 7 Episod 25

Cosmic Disclosure; Darkness on the Far Side of the Moon with Niara Isley **Season 7, Episode 25**

20 Jun 2017

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with our insider's insider, Corey Goode. And we have a very special guest, Niara Isley.

So Corey, welcome to the show.

Corey Goode: Thank you.

David: And Niara, welcome to the show.

Niara Isley: Thank you very much.

David: For the purpose of our viewers, let's assume they haven't read your book yet. They probably are going to want to after seeing this.

You started out in the military.

Niara: Uh-huh.

David: So this is how you got into that. So could you just give us a little backstory of how this ended up happening to you?

Niara: Well, I was in the Air Force from 1979 to 1983.

I was an auto track radar specialist. That's a surface-to-air missile and anti-aircraft artillery radar.

David: Okay.

Niara: And there's a sweep-the-sky radar, like an air traffic control radar. And then it calls up different radar sites and said, “You have an incoming aircraft at such and such degree of elevation and azimuth and this range, and please point your radar in that part of the sky and see if you can pick up this guy, track him for five minutes.”

And then if we tracked him for five minutes, it was considered a kill.

David: Right.

Niara: And basically, an auto track radar paints a very tiny target on an aircraft. And it's a targeting point. So then if we were an active SAM site, surface-to-air missile site, then we would push a button, fire a missile, and blow that plane out of the sky.

What we were doing was teaching pilots to fly against radar to increase their survivability in a wartime setting.

David: Ah! And where did this start? Where were you stationed?

Niara: I was stationed at Nellis Air Force

David: Nellis? Wow!

Niara: In Nevada.

David: Now that's one of the ones that, if you've ever studied UFO lore, we hear a lot about.

Niara: And then I was part of a group that was bused up to radar sites in Tonopah and Tolicha Peak once a week, every other week.

And then we would go out and do our job. And it was during that time, when I was at Tonopah, that I was taken in the middle of the night out to test the radar on “special aircraft”, which were extraterrestrial or back-engineered extraterrestrial craft.

David: So I guess first of all, just one more question would be, what was the rank that you held at the time that this happened?

Niara: I was an Airman First Class.

David: Okay. So how long had you been doing this job before you got this “special assignment”?

Niara: I was brand new to the job. '79, April of '79, I went in. And then after boot camp and so on and so forth, and then I went to Nellis after the beginning of the new year in 1980.

David: So this is exactly when Reagan takes control of the White House. And as you said, Corey, that a massive influx of financing goes into the military-industrial complex and this Secret Space Program.

Corey: Yes, And this is also . . . around 1980 was when Solar Warden was launched.

David: So they told you that it was a special radar assignment and special craft or something?

Niara: They didn't tell you much of anything. They just treat you like cattle. You're just a person that knows how to run radar, so you get picked up. You get taken out there. You put on the scope, and you do what you're told.

We were given fatigues to wear with no rank insignia and no name tags. We were forbidden to speak to each other beyond what was necessary to run the radar and try to track the aircraft.

They effectively isolated us from each other through fear. “Don't talk to each other – other than what's absolutely necessary – and we're watching you all the time.”

David: This was in general, not just on this special assignment.

Niara: This was in general. This was in the special assignment.

David: Oh, in the special assignment.

Niara: Uh-huh. Because during the day in my regular job, I would wear my regular fatigues with name tags and patches . . .

David: Right.

Niara: . . . and stuff like that. But these fatigues were given . . . nothing identifying whatsoever. They didn't want us to have any means to search through our memory and think, “Oh, I saw this name tag,” or “I saw this patch,” or “I saw this whatever identifying mark.” They wanted to try to keep everything as generic as possible.

David: Other than Corey, I've had several insiders who I've spoken to who worked in what we could call the Secret Space Program, and THE MOST consistent element you hear from all of them is they're not allowed to talk to each other.

If they get to talk to ETs, they're only allowed to talk about what their job is. They're not allowed to ask any questions outside the assignment. And it's a very repressive environment in which if you so much as very slightly deviate from these guidelines, you could get a butt of a rifle in your head kind of thing.

Niara: Yeah. Mhm.

David: And Corey, of course, also has had the same experiences. In fact, we just were talking about you being picked up by these military-industrial complex people and that the guy was not wearing any . . .

Corey: Yeah, they were airmen. It was Air Force. And they weren't wearing the fleer or any patches.

Niara: Yeah.

David: Those are the little details that I notice as a researcher, doing this for 20 years, talking to insiders. So many things pop out that just can't be coincidence.

Niara: Right.

David: There's too many things that line up.

Corey: I had a question.

Niara: Sure.

Corey: When you were on this special assignment to using radars to paint unknown craft for the anti-aircraft batteries, can you describe . . . were you able to get a good look at these unknown craft?

Niara: I didn't get a good look at it from inside the radar van, in front of the scope. But when we were done with the test, and we went out and stood on the deck of the radar van while, I assume, officers were inside the radar van discussing the results of the test . . .

From my standpoint, we couldn't track those things. They could literally appear in one part of the sky and then blink out and be someplace else. So they couldn't be tracked.

And I think that's what they wanted from the test, that they couldn't be tracked.

So when I was standing out on the deck of the radar van, then yes, I did see the craft. I saw probably as many as 12 to 15. I didn't get an exact count.

What I focused on was the one that was closest. It was maybe 50 to 75 yards out. It was huge, saucer-shaped, glowing orange on the bottom.

David: Oh, wow!

Niara: And the bottom was like a transparent sort of skin or really thin metal.

And it looked like there were lights kind of lighting up in sequence around the bottom of the craft.

Corey: Shining through it?

Niara: Shining through the metal, yeah. And so I was watching it, and there was a sound coming from it that was like speakers at a rock concert when there's no music coming through and they're just sitting there kind of humming with a little static. That

was the sound.

And then there was the vibration and feeling coming from it, too, even at that distance.

Corey: Yeah, that's still pretty close.

Niara: Uh-huh. You could kind of feel a little prickle in the air because that thing was putting out a hell of a field.

David: Were you tracking these unconventional aircraft all the time? Or was it just when you did this assignment at Tonopah?

Niara: Just when I did this assignment at Tonopah where I got taken out in the middle of the night, because usually, I had a day job where we would go out and we would track regular aircraft, you know, F-16s, F-4s, and whatever was out there flying to try to train pilots to fly against radar.

David: So when you got brought in to Tonopah for this special assignment, in the beginning, you're just tracking these unconventional aircraft. Or did you get abducted right away?

Niara: The primary job was the day job, and then this night thing would happen every so often. They'd come and get me in the middle of the night, and then it would be the weird things.

David: When you say “the middle of the night”, like what time?

Niara: After midnight, between midnight and 2:00 AM.

David: That's exactly when they would pick you up. [David is speaking to Corey.]

Corey: Hmm.

Niara: Yeah.

David: Same thing. So did you . . . Were you aware . . . Let me ask you this. Did it begin just with you tracking these unconventional aircraft before any type of abduction took place? Or did the abductions start at the same time as you were tracking the unconventional aircraft?

Niara: To my knowledge, the abductions started at the time I was tracking the aircraft.

David: Okay.

Niara: But I am an abductee of the Greys, or an experiencer of the Grey abductions since childhood, early childhood.

David: Oh.

Niara: And I write in my book that I had the distinct impression that the people that were working with me in the military knew that I was an abductee.

Corey: Clifford Stone!

Niara: Mhm.

Corey: That reminds us of Clifford Stone.

Niara: Yeah.

David: Well, it's also what you've said, Corey . . .

Corey: Right.

David: . . . that these MILABs are . . . They know who's being abducted.

Corey: They do.

David: They track everybody who's abducted.

Niara: And there's another guy, Dan Sherman. He wrote the book called "Above Black: Project Preserve Destiny" is the title.

And he said the same thing. He was trained as an intuitive communicator, again, isolated from his other training companion, not allowed to speak to each other, the whole MO right there.

David: Right.

Niara: Uh-huh.

David: Obviously, by the time this has happened, big movies like "Close Encounters of the Third Kind" have come out. So when you're seeing these craft, are you thinking, "Okay, that's a flying saucer, that's a UFO"? Or were they trying to tell you it was one of ours?

Niara: No, they didn't tell me anything.

Corey: Yeah. Need to know.

Niara: Yeah. They just did that.

And the other thing about Dan Sherman's thing that's really important is as an intuitive communicator, he was tracking people who were being abducted by the Greys.

David: Right.

Niara: It's really important because he would be the one that supplied the information about people that are being abducted by the Greys to the military.

David: Right.

Niara: And you wonder about it. Why do you take somebody who's already had extraterrestrial experiences? Maybe because the shock of seeing the technology won't be quite so much if you're working with an abductee, or this or that. You can come up with all kinds of different reasons.

Or maybe there's some special faculty that I have as a human being that other human beings that aren't taken don't have. I don't know what it is, but I would certainly love some answers.

David: I'm just wondering if there was a point before maybe things really got traumatic and horrible where you had that moment of, “Wow! These are UFO's! They're having me track UFOs! This is amazing.”

Niara: Yeah.

David: Did that happen?

Niara: Mostly, I was just scared, because I only had a “Secret Security Clearance” at the time.

David: Oh.

Niara: And I thought, “What I am seeing is classified so far above 'Top Secret' that this is scaring the living hell out of me. It is scaring the living hell out of me that I'm even seeing this.”

And I was right to be scared because after we were done there, we were put on a bus with painted-over windows and taken to what I either . . . it was either Area 51, at an underground facility there, or I've recently heard that there was an underground facility at Tonopah.

And then we were put in a waiting room where . . . let's see . . . The chairs were diagonal. So if the room was square here, the chairs were set out diagonally with the backs here. We were facing this way. And behind us, there was a double door with light coming in from the hallway. But the lights were off in the room. [In other words, the people sitting in the chairs were facing the dark part of the room. The double doors and the light from the hallway were behind them.]

Again, my thinking is they were trying to disguise any details that might be shown by light to keep us, again, kind of in shadow with each other, so that we were forbidden to speak to each other. But if we were sitting next to other shadowy experiencers next to us, you know, you get the idea.

Yeah. They just wanted to do it. And then they called us one by one. And I've told this story so many times.

They called us one by one into this little room.

When it was my turn, I went in there. I laid down on a stainless steel examining table, fully clothed, and laid there for the longest time.

And there was a security guard with a sidearm standing at parade rest in the room, kind of next to the wall at the foot of that examining table.

Then finally, a guy came in with a white lab coat on, saying, “Stay calm,” three times in a real deadpan voice.

And when he walked around my right side, he came up with one smooth move. He had a . . . In his hand was a hypodermic needle, and he came up, one smooth move, and injected me in the side of the neck with some unknown chemical that put me immediately into chemical trauma.

And then, suddenly, two guys were on either side of me, on either side of the table, lifting me off the table and taking me down a very long flight of stairs.

And I was thrown in a little booth where I went through the effects of the injection.

David: When you say “chemical trauma”, what does that mean for people who don't know?

Niara: It was like having an instant seizure.

David: Oh, wow!

Niara: It was like [Niara throws her head back and her body shakes uncontrollably.] . . . like this. And the chemical went straight to the brain. Wherever they injected it, they wanted it to go straight to the brain.

David: Wow!

Niara: I was shaking. I couldn't really move. It was consciousness altering.

And here . . . this is an unusual supposition, but it's just a supposition based . . . It's an educated guess based on the experience and a few other things I've kind of put together in my own mind.

But because I've been a spiritual person my whole life, meditating and all kinds of spiritual inclinations and pursuits, I have to wonder because of the effects of the injection. I mean, I felt like I was going to . . . that the molecular bond between my molecules was being dissolved, and I was gonna dissolve and run through a drain in the floor of that little booth that they put me in.

It was really a terrifying feeling.

David: What were the effects on your consciousness? Were you able to have clear thoughts, or did you start to become very discombobulated?

Niara: I didn't have clear thoughts until later.

David: Okay.

Niara: But I had major psychic awakenings. I remember waking up in my bed in Las Vegas, Nevada, in the apartment that I was renting at the time.

And one morning, I woke up, and it was like all of reality just looked absolutely as fragile as it could be, like all I would have to do is blink or sneeze, and reality would shatter in front of my eyes.

And I closed my eyes again, and I said, “Whatever's going on here, it's really, really disconcerting, and it's kind of scary, and I want it to go away.”

And then when I opened my eyes again, things were more normal.

David: Corey, you've talked before about psychic training that's being done that involves injectables that seem to do something to consciousness.

So could you just briefly touch on that a little bit to what we're talking about here?

Corey: Yes. These were pharmaceutical medications that they would give people on a regular basis to enhance your intuitive abilities. And they would give people these types of shots, as well, that were remote viewers or remote influencers. So that is consistent.

Niara: I just felt scared, and I remember curling up in a fetal position in, like, a little ball with my arms around my knees on the floor of that booth.

And I just went through the effects of the injection, and I screamed and screamed and screamed.

David: Wow!

Niara: (Sighs) And then – this is really hard – and I had a hard time even believing this because I just didn't want to believe that other human beings could be so cruel to one of their own species.

But I was dragged out of that room after the effects of the injection were wearing off, and I was sexually assaulted by two security guards while eight people watched.

And one of the people watching was a Grey extraterrestrial.

David: My God!

Niara: And the Grey, interestingly enough, maybe because of my childhood experiences with the Greys and through young adulthood, maybe I'm sensitized to their telepathy, but I could have sworn that I heard the Grey thinking that he was kind of incredulous that human beings would do this to one of their own kind, that they would subject them to that kind of violence.

David: Wow! Did there seem to be any difference in how the Grey was treated as opposed to everyone else? Did it act differently, or were people treating it differently?

Niara: I have gotten the impression that some of the people in the chairs didn't want to be there. They didn't want to witness what they were witnessing because they were saying to these guys, probably, something like, “Well, if you ever talk, this is what your wives or daughters or sisters are gonna get.”

David: Were they having a similar type of uniform that had a lack of discriminating characteristics on it?

Niara: These were people in civilian clothes.

David: Oh, civies?

Niara: Mhm.

David: Okay.

Niara: Yeah, the people sitting in those eight seats were civilian clothed, or there was the E.T. And then the military people in the room . . . They may not even have been regular military. They might have been military contract workers.

David: Right.

Niara: And I say that because our regular military are mostly pretty good people, you know?

Corey: Yes.

Niara: I don't think they're gonna lend themselves to that kind of thing.

I also thought that the one blond security guard who was so brutal to me, I think that he might have been a psychopath or a sociopath that they got out of prison and put to work doing this kind of stuff because he had no conscience about doing horrible things whatsoever.

Corey: Yeah, they look for those types of people for these programs.

Niara: Yes. Uh-huh.

Corey: And also, I'm very familiar with them using sexual trauma to remove memories or to control a person on a very deep level.

Niara: Uh-huh.

David: Did anything else happen to you after the assault? Or did you just get brought back to your original base?

Niara: I was injected with something to put me to sleep. And then I assume they loaded me unconscious back onto the bus. They probably loaded me back on there

and then dumped me back in my hotel room, tucked me into the bed to make sure that I wouldn't just be laying there fully clothed and whatever waking up and thinking, "What the heck happened to me in the night?"

David: Could you bring us to the next significant event that you remember happening after this initial traumatic experience?

Niara: The next major thing was being taken to the Moon. The next major thing that I was really dealing with.

David: So what I'd like to do, then, is let's go through that step by step.

Niara: Okay.

David: So again, you were working at Nellis most of the time?

Niara: Well, it's a funny thing because when you work the radar range, at least back then, when you were military working the radar range – I think they have civilians doing that job now – but you would work up there a week at a time, and then you would be down at Nellis for a week doing work around Nellis.

David: Okay.

Niara: Then you'd be back up another week. So every other week there was a different crew up there.

So I was a week on, a week off, a week on, a week off. And so this one week that I was up at the site, I got pulled out of bed in the middle of night, the usual routine.

David: Who pulled you out of bed? What did they look like?

Niara: That blond security guard, he was like my handler.

David: Okay.

Niara: He was usually always present for each one of the situations I found myself in.

David: And was he in a uniform, or how was he dressed?

Niara: He was wearing desert camo fatigues.

David: Okay.

Niara: Sometimes, I think, he wore other things, but that was mainly what he wore. And he had blond hair, very cold, blue eyes and a blond mustache.

So when I was talking about that ramp where you could look down at the craft, the way he took me, he took me to, like, an open garage door on the side of the mountain. And we went in from the ground level, where the craft was sitting parked.

And there was all these lights inside, and people were working around the craft. And there was this little ladder or stepladder that went up underneath the craft.

This security guard, he handed me these silver garments to put on. And I had to strip down and put them on without anything on at all. You had to wear them over naked skin.

And it had a strange faculty to it, where as soon as . . . It was shapeless, and then you put it on, and then it would kind of vacuum pack itself to your body.

And it had gloves and boots that would do the same thing. You'd put the boots on, and they'd be kind of suctioned on.

David: I've heard about this from other insiders.

Niara: Yeah.

David: And Corey, you're probably familiar with this kind of stuff, too.

Niara: Yeah. So that's what I put on. And so I had the boots. I didn't put the gloves on, but I had them with me.

And the blond security guard took me to the ladder to get onto the ship. And he said, “When you get on there, just go to the right and lay down. There's two other guys on there. You lay down between the other two guys that are laying on the floor.”

David: And what did it look like on the inside?

Niara: Very basic, not a lot of features. There were some chairs around this central console.

David: Okay.

Niara: And there was a beam, a rather wide beam, right through the very center.

David: That's the waveguide for the propulsion system.

Niara: Yeah. And while I was laying on the floor in there, there was a reptilian that stepped out from behind that beam. And I looked at it, and all the breath just went out of my body. It was like, you know, I just couldn't believe what I was seeing.

David: What was the height of the being?

Niara: Very, very tall.

David: Okay.

Niara: 8 feet, at least.

David: And what was the surface of the skin? What did it look like? What colors?

Niara: Kind of an olive gray green. And it didn't stay out where I could see it very long. It kind of moved out from behind that pillar, and then it moved back behind it.

David: Did it have vertical slit pupils?

Niara: Yes.

David: And what were the color of the eyes?

Niara: Yellow.

David: Okay. Did it have sharp teeth?

Niara: Yeah.

David: Could you describe the hands and feet of this being?

Niara: Yeah. Claws.

David: Well, this is all extremely consistent with Corey's reports.

Niara: Uh-huh. Yeah.

Corey: It's very upsetting to recall an encounter with one of those beings.

Niara: Yeah.

David: Based on what she's saying . . . We've talked about the fact that the Royals are white, that there's a lower level that's a sable black color. The type that she's

describing, where do you think they would fit in to the hierarchy that you're familiar with?

Corey: They're like the worker bees or the soldiers.

David: Okay. So you're lying there, and this being comes out, and you see it, and you have extreme fear.

Niara: Mhm. Yeah.

David: And then it just retreats after that?

Niara: Well, it's kind of like it was just kind of moving around, and it moved out of the way of the beam. And then it just stepped back where . . .

Corey: To a control panel, behind it?

Niara: Yeah. It may have been the pilot. Or maybe there was a Grey pilot, but I didn't see the pilot.

But some human beings came in before the craft took off, and they occupied the chairs. And then me and the other two guys that were being shipped to the Moon were being shipped like human cargo. That's all I can say. That's how I felt. I felt like human cargo.

David: Were you strapped down to the floor?

Niara: No.

David: Okay.

Niara: No, they accomplish an awful lot with fear and intimidation.

Corey: Mhm. That's hard to make the average person understand, when you've been subjected to that kind of environment, how you can be so easily intimidated and do what you're told.

Niara: Yeah. Uh-huh.

David: What did it smell like inside the craft?

Niara: I think that I was smelling that creature. There was a musk to it.

David: Corey's used the same word.

Corey: Yeah. They're usually marked by their higher up who's controlling them with a musky spray.

Niara: Uh-huh. Yeah.

David: Wow!

Niara: Yeah. But when we did land, we were told to disembark the craft and to walk straight towards the nearest building. And we were not to look right, left, or up or down.

David: But you could breathe without a breaking apparatus.

Niara: I could breathe without a breathing apparatus. So either . . .

David: When you looked up, what did you see?

Niara: I wasn't really allowed to look up, but I did roll my eyes up to see if there was a dome up there because I thought, "I'm not wearing a spacesuit, and I'm on another planet, and I'm breathing."

So I wasn't sure what to think of that. Either there is atmosphere on the Moon, or I was under a dome.

David: Did anything look unusual as you were looking around you?

Niara: No.

Corey: Eyes on the boots. Ha.

Niara: Yeah. Yeah, that's really pretty much it. Eyes on the boots is a good thing. So I'm walking. I didn't have my eyes on my boots. I had my head straight in front of me like this.

David: Did it look more like just another military facility?

Niara: Yeah.

David: Was there a lot of conventional military looking stuff?

Niara: It's kind of like they took the same old ugly military buildings that they have

on the Earth and put them on the Moon.

Corey: Exactly.

David: Ha, ha, ha.

Niara: Ha, ha.

Corey: Same doors.

Niara: Quonset huts and . . .

David: Right.

Niara: Yeah. All kinds of stuff. So I walked over there. I mean, in some ways, . . .

David: To this building?

Niara: . . . you could not even realize you were on the Moon because the buildings are so similar to the ones down on Earth.

David: And they told you to go to the nearest building?

Niara: It was kind of a largish building. And we went in there, and there was lots of rooms and hallways and stuff like that. And we just went to this one room.

David: Okay.

Niara: So the two things that I remember most about that particular trip to the Moon was the work that I did, where they had me operate some kind of electromagnetic excavation equipment because they were excavating different area of the Moon for more buildings.

And there was this thing where they had embedded two metal plates down into the ground. And then when they turned the electromagnetic equipment on, it was like those two plates were two poles of a magnet that are like poles. And they would repel, but very powerfully.

And these two plates would go apart and excavate this entire area as they're moving apart.

David: Crushing the rocks as they went?

Niara: Yeah. Uh-huh.

David: Wow!

Niara: Yeah. It was that strong of a magnetic field they were using. And you have to be kind of careful around that strong of a magnetic field because we've got minerals in our blood that could be pulled on.

David: Wow!

Niara: So there was that.

David: And they trained you on how to do this drilling, or this mining?

Niara: Yeah. Well, there wasn't that much to do. You just kind of operated the machinery, and you had to stand in your little thingy.

You know, so many people have been, shall we say, rubbed out because of the UFO field. I heard that 400 people alone were killed to cover up the Roswell incident.

David: Wow!

Niara: I don't think they're really at liberty to just dispose of people like that, especially people like me that they pluck from their normal, regular, everyday life and put in this situation.

So it's very important their mind control techniques, and the mind control trauma techniques, are fine-tuned to the point that you're not going to remember, at least not right away, what was done to you or where you were. But they want it to be covered up.

So they just keep doing these . . . It's a combination of trauma and drugs.

David: And Corey, you've said that the techniques work so well that only a small percentage of people actually remember anything, right?

Corey: Yeah. Yeah, just 3~5%.

David: Right.

Niara: So there was the excavation equipment.

David: Okay.

Niara: That was one thing. And then there was a lot of just manual labor, like stacking boxes and moving things from this shelf to that shelf, or just a lot of lift and haul kind of work.

The food was terrible. It was something I would call gruel and maybe dried bread and maybe a little water.

And then at night, I wasn't allowed to sleep. That was another part of the programming.

Corey: Sleep deprivation.

Niara: Sleep deprivation has been huge. Sleep deprivation in and of itself is a trigger for PTSD for me. And I've had a lot of sleep deprivation in my life.

David: Was there anything extraterrestrial or otherwise unconventional that you saw while you were there on this base?

Niara: When I was outside doing the excavation, I would catch glimpses of extraterrestrials. And the ones I remember were very, very tall and willowy. And they didn't look quite like traditional Greys. I'm not sure what species or race they were.

But it was one of them, that I found out in a later hypnosis session, that may have helped me get out of that situation.

David: Wow!

Niara: Yeah. Because they could see me energetically. And they looked at me, and they could see me energetically. And they just said, “They really shouldn't be doing this to this woman.”

David: So you've been out there as a public figure. You've done conferences. I hope you're gonna get a lot more invitations because I think your story is very important.

Niara: Yeah. Uh-huh.

David: Do you think the Illuminati has a vulnerability? Do you think that they are invincible? Or do you think there is a way that this could be turned around in humanity's favor?

Niara: It could absolutely be turned around in humanity's favor because I know you know [David], and I know that you know [Corey] that everything is consciousness. Everything is consciousness.

And this physical stuff we see right here is underlied by an energy that makes this possible.

David: Right.

Niara: And that energy and those subatomic particles are influenced by thought, consciousness and intention.

And anything that we are looking at . . . Have you heard of the Georgia Guidestones, right?

David: Of course.

Niara: Okay. The Georgia Guidestones think we should have the population reduced to what, 500 million?

David: Yes.

Niara: Uh-huh. Okay. You know why they want to do that? Because they're scared to death. They are scared to death that 7 billion people could awaken and take the game away from them just by the power of consciousness.

And it doesn't even have to be all 7 billion. It just has to be a tipping point amount. And those are the people that I hope we're reaching out to today.

David: Do you have spiritual words of inspiration that you would like to share with those people who are awakening and who believe your story at this time?

Niara: Yeah. I would just say, realize that so much programming has been done on the human race for so many millennia to try to program our consciousness.

And this is the real Matrix, folks. It's trying to program our consciousness into a world that keeps them in control and keeps us subject to them. And it's all a lie because we are the ones with the real power.

The power of our consciousness is the real power on this planet, and we're all living under it right now. We are the ones fueling the machine, fueling the Matrix with the power of our programmed consciousness, programmed by the Illuminati, to create a version of reality where they are in control of us.

And all we have to realize is that that is a lie, and that we need to take our power back, and that we need to realize that through the power of our consciousness and intention . . . and we need to use the negativity in the world in a positive fashion.

That means when you look at something like a story I saw recently that the Great Barrier Reef is dead, so you can take that and you can turn it.

You can say, “Wow! There's a story that the Great Barrier Reef is dead. I'm going to go into my consciousness, and I'm going to see it thriving and alive and coming back into its full glory.”

And use your power of your consciousness on that. So every time you see something out there that scares you, don't shy away from the fear. Just realize, “Yeah, that's a scary thing, and now I'm going to turn it completely 180 degrees, and I'm going to visualize something beautiful I want to see in its place.”

And I would urge you also that if you're in a place where the weather will permit it, go outside and do this visualization. And take your shoes off, and put your feet on the Earth, because the Earth herself wants this process of human evolution to occur.

And just like when we saw people touching things in “Avatar” in the ground, and the plants would light up, that happens here, too.

We don't see it visibly, but it happens here, too. Okay? We are connected with our Earth mother, just like the Native Americans have taught down through the ages. So

get her onboard.

And remember where it said, Jesus said, “Wherever three or more are gathered in my name”? Try to get a couple of friends to go out with you barefoot on the Earth. All hold hands and pick that thing that you want to visualize as healed and whole and complete. And we can change this planet, and we can take it back, and we can make it a garden again.

I believe that with every fiber of my being.

Corey: So do I.

David: How does it feel, Niara, to have folks like Corey and William Tompkins coming forward so remarkably validating your testimony?

Niara: It's a relief. It's a relief because you put out a story like mine, and you know that at least half the people that read the book are gonna think you're wonkers. And whatever.

But I don't have any investment in people believing the book. I just want people to have an idea of the kinds of things that are going on. And I did tons of research. And I put tons of research links in the book because I wanted people to realize that I'm just not some lone voice in the wilderness coming out with this.

I'm part of a whole culture and a whole community of people that are coming out and saying that this is real and this is happening. And if it doesn't stop, we are all at risk.

David: I know from hearing your story that there's going to be a lot more validation.

Niara: There is a lot more.

David: And I applaud you for your bravery and your courage in coming out today . . .

Niara: Thank you.

David: . . . and sharing this with the world. It's a very personal thing for you. And I just love you, and I want you to know that. And I'm here with you as we go through this together.

Niara: Thank you.

David: Thank you.

Niara: Thank you both.

David: And I want to thank you folks at home for your support for her and for this effort that we're making to try to bring peace to this planet and to all beings living on it.

So we'll see you next time. This is “Cosmic Disclosure”. I'm David Wilcock here with Corey Goode and Niara Isley. Thanks for watching.

Viewer Questions 8; Protocols and Loopholes Season 7, Episode 26

Cosmic Disclosure; Viewer Questions 8; Protocols and Loopholes Season 7, Episode 26

27 Jun 2017

David Wilcock: Welcome to "Cosmic Disclosure". I'm your host, David Wilcock. I'm here with Corey Goode, and in this episode, once again, we are taking your questions that you've written in to us so that we can have a two-way dialogue here and engage in the stuff that matters to you the most.

So, Corey, welcome back to the program.
Corey Goode: Thank you.
David: All right. So the first question we have here is:

"What was the vetting process that Gaia led you through leading to you being considered a trustworthy and reliable whistleblower with an entire show built around your information?"
Corey: Well, I guess after I made it through your vetting process, I was introduced to the team up here, names that a lot of the people in this community would recognize. I didn't at the time. I didn't know who they were.
My first encounter was I was brought into a room – I did not expect to be questioned at the time – and two or three people, I believe it was three people, came and sat around the desk, around the table, and just started pelting me with questions.

And I think I did about, all in all, about 20 hours worth of answering questions.
David: So what was the nature of the questions that you were asked?
Corey: Very in-depth, very intricate questions, that the same questions would then be snuck back in, but in a different way. It was a … . They were being very thorough and trying to be tricky.

At first, the people sitting across the table, they were kind of like, this. *[Corey shows an expression of doubt and skepticism on his face.]*

And as we got through the process, the looks on their faces changed obviously because I was invited to begin doing episodes.
David: So Corey, you mentioned the vetting process that started with me, and I think that's an important point. What a lot of people don't realize if you watch this show is that I had people coming forward, like Henry Deacon, as an example, who barely ever said anything publicly.

Another one would be this guy Daniel, who allegedly worked on the so-called Montauk Project. Another one is the guy Jacob, who I've dedicated an entire chapter

to in my new book.

The bottom line is that I was holding on to a very interesting, world-transforming story about a secret space program with literally thousands of individual pieces of information that I had never gone public with so that I would know if somebody was real when they came along.

And you remember that when you and I started talking, especially within the first, I'd say, two or three months, every time you and I spoke you were finishing my sentences.
Corey: Right.
David: You knew things that I already knew and had heard from other people. And I think what was really bizarre for me was that, despite how much I thought I knew, it was like having a flashlight that I could only look through the keyhole of a door with.

And then when I talked to you, it's like somebody opened up the door.

And you had said to me before how interesting it was that a lot of these people that I'd had briefings from before would kind of walk up to a line.
Corey: Yeah. That's one of the . . .
David: Could you describe a little more what that is?
Corey: Right. And that's one of the reasons I did come forward – originally I wanted to come forward anonymously – was that I was seeing a lot of these people, I heard what they were saying, I knew they were legitimate, but they were walking right up to the line without crossing it. They never crossed the line.
David: What were some of the things that would have been crossing the line?
Corey: Well, some of them that had been to Mars could have given a lot more detail. They could have told more about the Mars base that they went, about the slave labor, a lot of different . . . There are a lot of different details that they could have easily have shared.
David: Why do you think there would be people that would say some things but then withhold so much?
Corey: Well, they step over that line, there's ramifications. So they were sharing what they could, what they felt they could, and stay safe.
David: How do you feel that the case of William Tompkins has affected what you've talked about on this show? Have you had any personal discussion with him, and how much does he know about what you know?
Corey: Yes, we've been working together recently, and I've had a number of discussions with him. And it's very apparent that the information that I was looking at on the smart-glass pad was information that had come from his briefings when he was speaking with the German double agents.

And there were a lot of little details that we've been talking about back and forth to

each other that I've seen a light in his eyes several times on a few subjects.
David: We also incidentally had Pete Peterson tell me recently that the conclusion of the United States government now is that you were in contact with real extraterrestrials when this thing started, that that contact that you have experienced is, in fact, genuine.

So that is significant, because here is a real insider who has said that the collective view on the inside now is that your information is authentic.
Corey: Yeah. Well, they're watching me close enough, they should know.
David: All right. Well, let's have another question. This is kind of interesting and dodgily worded, but we'll take it.

"Why is the Cabal allowing you to come forward with your story and intel?"
Corey: It's not that they're allowing me to. There is kind of a stalemate between the Alliance and the Cabal. The Alliance has their assets in play and so does the Cabal.

What seems to be occurring here is that I'm probably getting rolled up in this Navy disclosure that's occurring through Tompkins to begin with.

So he was given the green light to go forward with this information that is almost exactly the same as what I've been sharing. So there might be some sort of claws that has kept, I guess, the powers that hopefully will be were soon off my doorstep.

But they've definitely made themselves known. You know, the helicopter flyovers. Out in the backyard with my son I've got green laser dots on my chest. They make themselves known.
David: Do you think that people have been conditioned through various Hollywood movies to believe that the so-called "Big Brother" is this all-powerful, all-seeing eye, and that anybody real would never be able to say anything without being immediately whacked? Do you think that's a social conditioning they gave us?
Corey: It is. And, I mean, there are plenty of people in this field that even believe that it's impossible to destroy the Cabal.
David: What do you think about movies like "Iron Man 3" and "Captain America: The Winter Soldier", where you have military assistance in the movie, you got a $100-plus million budget, and the films are very clearly exposing the Cabal? Nobody could possibly deny that.
Corey: There's definitely been Alliance money and agendas poured in to Hollywood recently to expose different aspects of the Cabal. That is a good sign, since Hollywood has been completely controlled by what we're calling the Cabal since its inception.
David: I'm going to hit you with another one here.
Corey: All right.
David: Whoo! "Is there a way we could offer a type of forgiveness to the

Cabal/Alliance in exchange for a Full Disclosure?"
Corey: Um. I think things like that have been floated around, but on the Alliance side, how many people can you get to agree to remove the ramifications of what the Cabal has done over the last 100 years minimum?
David: Right.
Corey: These people want retribution. You know, they're not angelic people. They want payback for all of the crimes against humanity that have occurred.
David: When you say "these people", you mean Alliance?
Corey: The Alliance, yeah.
David: Yeah. I also think, and let me ask what you feel about this, that the people who are following this in our community have had a lot of time to learn about the truth. Whereas what you've described seems to be a rather sudden exposure of a lot of information that's very disparaging.

And how do you think . . . Or what is the modeling from the Alliance of what happens when all that disparaging information comes out at once?
Corey: You know, I have not seen any type of plan for a post-disclosure world. That's one of the things that I've been working with other people to come up – psychiatrists – to come up with a response plan.

If we get Full Disclosure, there's going to be a lot of people out there that, like you've said before, that won't be able to get out of bed or feed theirselves, that are going to need help.
David: Right.
Corey: I haven't seen a plan from anyone yet for a post-disclosure world.
David: *"Are there protocols in place to counter information leaks and whistleblowers? How extensive is the use of disinformation, cover stories, etc., to try to maintain plausible deniability and secrecy?"*
Corey: Well, yeah, they do use misdirects a lot to find out where leaks are coming from. You will compartmentalize your people, which is usually already done in the military or in programs.

Then you'll give them slightly different versions of information to find out which compartment you need to focus on before you focus on the individual.
David: Hm.
Corey: So, yes, a lot of misdirect is used, yeah. They will lie to you, and they have no problem with it to try to trick you into giving yourself up as a leaker.

The go-to method of countering the leaks is to attack the leaker, to use character assassination, or to dig up something from their past. So that's the number-one way they go after people that are more in the public sector.

If you're in the programs, and you're trying to leak something, unsanctioned leaks,

then you could very easily disappear.
David: *"If the Secret Space Program and other Cabal groups have anti-aging or healing technologies, then why do they not appear to be used by folks like George Bush Sr., Henry Kissinger, and other high-level elderly members of the Cabal?"*
Corey: Well, a lot of the people that we think are high levels . . . high-level members of the Cabal, really aren't. The highest-level people are people . . . we don't know their names. We don't know who they are. They've stayed off the map.

So they are taking advantage of some of these technologies, but they use these technologies within these Cabal groups to control the people below them. You know, they always act . . . It's like a carrot to dangle in front of them.

"If you do this, when you reach a certain point, we'll put you back to a certain age and then insert you back into society rich and let you do what you want to do."
David: I've heard this, and I want to get your comment on this, that some of these people at that level that was in the question might be offered something more akin to a soul transfer, where their awareness could somehow, through an advanced technology, be downloaded into what appears to be a completely separate being.
Corey: There are different facets of these Cabal groups. Some of them are AI prophets. They want to be uploaded into some sort of a database.

There is a technology that is a soul transfer technology that uses electromagnetic fields to push a person's soul from one body into another that is compatible, that's been genetically designed to be compatible with their energy like their old body was.

And then there's the groups that will . . . they'll reach a certain age, then their deaths will be faked. They didn't really die. They'll be taken, and then they'll be regressed back. And a few years later, you may see someone and be like, "Wow! That looks like Henry Kissinger when he was 28 years old."
David: Hm.
Corey: But other than that, there's no way of knowing what happened to him.
David: Is there a cloning technology? Could they clone out somebody and make a younger version of them?
Corey: Definitely. That was the version you were talking about where they push you into another body with a soul transfer. You have to have a cloned, genetically engineered body that's going to match your frequency so . . .
David: Oh, it has to be a clone of your own body?
Corey: Yes, or they can . . . They do create other avatar bodies that are . . . but they have to be genetically programmed to match your frequency of your DNA, and all that.
David: Hmm. I have had other insiders tell me that the typical clone doesn't live much more than about two years.
Corey: Well, it has to be genetic . . . perfectly genetically engineered to you. To live

in it long term, it has to be a designer body that will match your . . . the frequency.
David: *"What forms . . ." this kind of lends right into what we were just talking about. "What forms of human enhancement technology already exist? Examples might be growing taller, growing more muscle, increase in your IQ, increase in your ability to remember."*
Corey: Once we'd started to receive this technology from non-terrestrials on genetic programming and manipulation of the human body, it's become child's play.

The human body is very easy to change and manipulate with certain technologies. They can trick the body in certain temporal fields to accelerate or reverse the age of the cells. So they can do all kinds of stuff.
David: I want to throw something at you, a wild card, that I just heard from another insider who has connections to the space program who has not come forward yet. And he just kind of randomly threw this out.

We were talking a couple of weeks ago that he was aware of a particular group of humans that were being grown to be of a very large size for certain work out in space, but the speed that they were being grown was too fast, that they're basically like worker drones.

And that as a result of how fast they're being grown that their faces are kind of hideously disfigured with keloid-type of scars.

And he said that had something to do with if you try to push this genetic material to grow too fast, then you get these ugly . . .
Corey: Hormonal things.
David: . . . anomalies that occur. Do you have any comment on that?
Corey: Yeah, yeah. There's some of the . . . kind of like super-soldier-type programs they had, where they were growing these humans, but playing around with their hormones in a way to make them gargantuan, to make their bones bigger.

But their foreheads would look real weird around their eye socket. Their jaws would look very caveman-ish or weird from the process.
David: Hmm.
Corey: Yeah, that's something I'd heard.
David: Interesting, yeah. Okay. So just to clarify this question then, they do have the ability to do something like boost somebody's IQ as well?
Corey: Yes, they can enhance your IQ. They can enhance your intuitive abilities through genetic manipulation, gene therapy.
David: Okay, interesting. I hope this question is answered in the affirmative, but we don't really know, I guess.

"Will the public be able to travel freely through our own Solar System and beyond in

the next 70 years?"
Corey: I don't see this technology being readily available to everybody immediately. I think there's going to be a process. They're going to have to develop it on a large scale. People are going to have to be acclimated to using it.

I think it'll be a while before the average person is able to take a cruise to Jupiter.
David: Right. Do you think that there could be some sort of accepted protocol for portal travel rather than craft travel, where people could get jobs and portal to certain locations to and from Earth as a part of their job?
Corey: People like diplomats and stuff like that, not your average person – not in the beginning. It'll be a while.
David: Okay, next question. "If replicators work on the principle of converting energy to matter, does that mean there is also a reverse of this technology where you could dispose of waste by turning matter back into energy?"
Corey: Yes. Yes.
David: Ha, ha.
Corey: Yeah, yeah. They have . . . Yeah, they have the ability to reverse the process.
David: Okay. What's an example of you seeing this happen? Have you ever seen it been used?
Corey: I haven't watched it be used, but I knew that they had the technology and that it was used.
David: Does the energy get stored in some kind of battery, or where does it . . . . where does it go?
Corey: Well, they can also use that for site-to-site transport of different materials and stuff. So, I mean, yeah, that's not something I have a whole lot of details on.
David: Okay. *"Is there any way for us to protect ourselves from scalar waves and other types of mind control technology?"*
Corey: I don't know of a really good way, short of living in a SCIF room or a Faraday cage, to protect yourself from these things. Unfortunately, I don't.
David: All right. Let me throw something at you. I just had an insider the other day, who swears by this, talk to me about this. He always carries an empty bottle, like a plastic water bottle, in his backpack or something.

And he claims that if a scalar beam is used against you, that you'll hear it suddenly crack a little bit. Like it'll pop. There's something about the air pressure changes. Have you ever heard of that?
Corey: Yeah, that can happen in certain frequency. Yeah, that can happen, but . . .
David: And he said that if that happens, you just move to a different location, because this technology apparently requires you to be in one spot as it's working. And if you move even a little bit, it apparently reduces the effectiveness.
Corey: Yeah, that's true.
David: Okay. Well, Corey, let me ask you this, because I've had a lot of discussions with Pete as well on this, and he claims that he was a mind control specialist for a

while, several years.

He said to me that certain people have what he calls alien DNA, and that with that DNA comes a much greater resilience to these types of technologies. Have you ever heard anything like that?
Corey: Not that it was alien DNA, but that different individuals have the ability to resist the technologies a lot more than others.
David: Now, another interesting thing that he said was that he developed something called a flicker frequency generator. And that the basic idea is that if you're . . . the speed that your brain is running is above a certain flicker frequency, a certain refresh rate, that these technologies become a lot less effective, and so it would stimulate people's frequency to go higher.
Corey: Yeah.
David: Have you heard anything about a higher frequency possibly being a good countermeasure?
Corey: Well, there's also . . . In the programs, yeah, you're going to have countermeasures. But the average citizen out there, like the person asking the question, they're not going to have countermeasures.

There's pharmaceuticals people can take that affect their body in a way that makes them less susceptible to these things.

But for the average citizen out there, you can't just put foil around your head and hope it's going to work. I mean, there's nothing really they can do.
David: Well, I just want to raise the possibility, from some of the discussions I've had with Pete, that if you have, according to his research, if you have a meditative peaceful focus, that that actually raises your flicker frequency and makes you less susceptible.
Corey: Right.
David: Do you think that's possible?
Corey: Yeah, more positive people, people that are definitely unplugged, are less susceptible.
David: Okay. So if people practice meditation, forgiveness, love, they're less likely to be affected by this kind of stuff.
Corey: Ah, it'd be mitigated.
David: Okay, fair enough.

"The Mohammad Accords state that the ETs are not allowed to interfere in the development of humankind. Have the Draco and the Blue Avians broken these accords by taking the steps they've taken?"
Corey: Well, first of all, the Mohammad Accords really don't have anything to do with Mohammad, other than they occurred around the time that he was here on Earth.
David: Right.

Corey: The Reptilians and the Blue Avians, I guess, they were saying that violated this treaty? They have not . . .
David: They're wondering if the noninterference clause has been violated by them appearing as they have.
Corey: Well, they haven't been appearing to the masses.
David: Right.
Corey: If they would appear to the masses or small groups of people, then, yeah, that would definitely be infringing.
David: How is the work that they are doing falling into the guidelines of this treaty then?
Corey: The positive beings stick to these laws very closely, but they know how to skirt them very well. And I'm sure they're working just barely within the boundaries of the Accords.
David: What would be an example of the Draco trying to get as close to the edge as they can without walking over it?
Corey: Well, the Draco, they've been known to appear in front of small groups that have kind of summoned them, but they're not going to appear in front of a large group of people or people with cameras or anything like that. That's against the Accords.
David: *"Is there a program to interbreed humans with extraterrestrials and create hybrids? If so, why does this exist, and have you seen any of these children?"*
Corey: There are, as I've stated before, 22 different programs that are both genetic and spiritual. Within these programs, there are multiple different subprograms where they are splicing DNA with other beings as a part of this greater experiment.

And some of these beings are . . . they use them.
Basically, a billion years ago there was an alien group that we're talking about. We're seeing these weird hybrids that ended up being us, that we were then transported to this planet.

There's a lot of that going on – a lot of genetic farming going on. To try to pin it . . . which program is going on with which group, is very difficult because there are multiple hybridization programs going on.
David: Another question that comes up from an insider that I've been talking to recently: *"Do you think that because Earth is this genetic cornucopia where apparently many more types of genetics can survive on this planet due to its complex frequencies, do you think that there could be future programs in which many other types of life on Earth are accelerated to the point where they become human-like hominid life and are then seeded throughout the galaxy at various points?"*
Corey: Yes, that's part of the 22 programs.
David: Oh, really?
Corey: Yes, definitely.
David: Do you think that may account for things like squid beings, dolphin beings, insect beings, this kind of stuff?

Corey: These different genetic programs, they work in concert with what is occurring in the region of their experiment, cosmic energy-wise. We're about to have these energy fluctuations coming in that are going to make massive changes. They're working in concert with that.
David: *"Do you have any advice on how we could identify extraterrestrials and hybrids who have integrated amongst us already?"*
Corey: It depends on what stage they're in of integration. A lot of times they will bring these beings down, even have a human handler to help them acclimate.
David: When you say they will bring these beings down, who are they?
Corey: The beings that designed them, that created the hybrids.
David: Okay.
Corey: They will bring them down, set them up in a situation to where they'll have an apartment, maybe a job. And they'll have a human, who is a contactee, help them, assist them, in acclimating to human life.
David: But obviously what you're describing now would have to be a being that's almost indistinguishable from any other human on Earth.
Corey: Right. Right.
David: Okay.
Corey: You're not going to see the hybrids walking around that are . . . that look different.
David: Some people might be very afraid of that information. So let's just talk about this a little more.

First of all, if such a being is put here, do they pose any unusual threat to us above and beyond a typical human being on Earth?
Corey: No. They're just learning how to socialize, how to fit in.
David: They don't have any unusual characteristics that would allow them to have a weapon capability or something that would make them very dangerous to human life?
Corey: Not that I know of.
David: Okay. How widespread to you think this type of immigration program is?
Corey: I mean, it goes on. I don't have any numbers. But it was something that was going on and that we knew about during the intruder, intercept and interrogation programs.

There would sometimes be groups that would come in and try to plant people like that without the proper clearance or that weren't working with the correct groups.
David: *"If the various terrestrials and ETs are different density or vibrational beings, how are they able to meet and communicate with each other?"*
Corey: This gets back to the people getting densities and dimensions mixed up. The way I've described it is, what would you describe a bacteria as, what density?
David: In Law of One terms, that's second density.
Corey: Second density. What about a worm?
David: Second density.

Corey: Second density. Can you touch a worm?
David: Absolutely.
Corey: Can a virus interact with you?
David: Yeah.
Corey: Yeah. So it's not like if something is fourth density, all of a sudden you're reaching through it like a ghost.
David: Right.
Corey: That's just not my experience.
David: So a higher-density being could leave behind a corpse that would rot?
Corey: Yeah.
David: Okay. *"Have you personally met any extraterrestrials with feline-human characteristics?"*
Corey: I did not meet one, but I saw one that had recently been killed. There was a capture or kill order out on this feline-type non-terrestrial. They were able to appear and disappear at will.

They had trapped this one somehow in some sort of a net, an electronic or electrical net that killed it.

When I saw it, it was . . . the way it was laying over it was crispy. It did not die in a pleasant way.
David: Wow! So getting to this question again about the densities, this is a being that did leave behind a body, but also could dematerialize.
Corey: Right. But using what technology, I don't know . . . if it was technology or if it was an ability that they had.
David: That leads to another obvious question implied by what they wrote here, which would be, if James Cameron's movie "Avatar", as Pete Peterson has testified, has multiple examples of accurate hardware that's already being used in various space programs and the mining seems to be accurate, what about the people in "Avatar" with this feline characteristic?

Do you think there's any truth to that?
Corey: I think that they did base that off of reports of . . . There are a number of creatures that have feline looks, but there's one that people in this community tend to talk about a lot, and that happens to be one of the ones they have a capture or kill order out on.
David: Is the skin color accurate – the blue?
Corey: It was more of almost purple.
David: Uh! Really!
Corey: Yeah. Lavender, I guess.
David: Interesting. All right. Well, that's all the time we have for questions for this episode. This is David Wilcock and Corey Goode bringing you "Cosmic Disclosure". And we thank you for watching.

The Shadow Cold War Season 7, Episode 27

Cosmic Disclosure; The Shadow Cold War Season 7, Episode 27

DAVID WILCOCK: All right, welcome back to Cosmic Disclosure. I'm your host, David Wilcock. I'm here with Corey Goode. In this episode, we're going to get into the highly sought after updates that will bring us current with what Corey has heard at the time of this taping. Before we do that, we're going to have a little footage for you from one of our brand new shows here on Gaia. This show is called Erich von Daniken, Beyond the Legend. So without further ado, let's take a look at this footage, and then Corey and I will have a little discussion about it. Here we go.

ERICH VON DANIKEN: Recall the pyramids in Guatemala, Central America. There again, under the main pyramid, they found a big sarcophagus where they believed, finally we find the founder of the [INAUDIBLE],, the one who created the city. But inside they found quicksilver. Quicksilver is, again, one of the components of the fuel of the Vimanas in ancient India. I say the ancient Indians, we have translatings of the fuel, the composition of the fuel, what was together. And one of the components was mica. Now in Teotihuacan, in this city outside of Mexico City, There is a mica chamber completely isolated with mica. It was, for a long time, not open for the tourists. After I had published it in my book, now it's open for the public. They cannot hide it any anymore. We have no reason today, why is the whole chamber completely isolated with mica?

DAVID: Well, this is interesting, because this idea of what he's calling quicksilver actually being mercury, of course, shows up in the propulsion systems of the German bell craft. So do you have any idea why we might see a similar material, or the same material, appearing in an ancient pyramid as became this very useful propulsion medium for modern space travel? GOODE: Well, you know, the German craft were reverse-engineered from craft that were given to them. And those craft had the mercury engines as well, the mercury fueling the electromagnetic field in their engines. So that's been in use for millennia, if not before humans were on Earth.

DAVID: So you think that it's possible that there could be some type of anti-gravity effect generated in the pyramid, or some type of energetic from the mercury?

COREY: It's more of a storage place for the fuel, and the mica. They were storing it for future use.

DAVID: When von Daniken is talking about the idea that a room made out of mica could shield high temperatures and electromagnetic fields and this kind of thing, why do you think they might have built a room like that? It would obviously take great

trouble to go to such an extent to put mica inside the pyramid like that. Why do you think that might have happened?

COREY: Maybe they had something inside that room that they were trying to shield the walls of the pyramid from, so they wouldn't crack. Some sort of an electric generator of some sort. Maybe one that's of a different technology that we don't know about.

DAVID: You've said in some of the previous updates we had that even recently, the Alliance has been discovering new chambers with technology in them in various ancient stone works around the world. What is the nature of what they're finding?

COREY: Well, not only are they finding things in the walls of some of these ancient structures, but they're finding much older structures underneath. That these, what we think are ancient structures, they're built over much, much ancient structures, ones that most likely go back to the pre-Adamite time period.

DAVID: And are there any specifics about what type of gadgets are being found? It sounded to me like you were saying that they are finding highly advanced gadgets that would not be stone but would be something that we would clearly identify as a very high technological piece of equipment.

COREY: Yes, and these appear to be after whatever great cataclysm that occurred in ancient times where the pre-Adamites lost their major foothold on the Earth. It is pretty much postulated that they've taken these trinkets and hid them in this manner for a future time.

DAVID: So be on the lookout for this new show here on Gaia, because von Daniken, of course, the author of "Chariots of the Gods", is a legend in this field, really kind of started the whole ancient astronaut theory in the first place. You have Velikovsky before him, but "Chariots of the Gods" was a really amazing book that was very, very major bestseller in the 1970s. And so we all owe a great debt of gratitude to von Daniken for bringing this information to our public awareness. All right, let's get into the updates now. And we have a nice outline here, so I want to make sure that we get through everything. There's a lot to talk about. The first thing, Corey, that we have in our outline is something regarding your contact in the SSP military-industrial complex Version Sigmund. And what ended up happening with Sigmund from where we last were speaking?

COREY: Well, the last time I did an episode on these updates, afterwards, we had a get together at the bed and breakfast I was at. And--

DAVID: You and Sigmund did?

COREY: No, me and you and a few other people. We were getting together for a little bit of a celebration.

DAVID: Right, you're talking about here in Boulder.

COREY: Right.

DAVID: Yeah.

COREY: After everyone had left and I went to bed, a dual cab pickup started driving up to my bed and breakfast, and the headlights were shining in the window. I thought that it was somebody returning back from the party, because it wasn't that long after. While I was sitting there, I saw three figures walking up to the door. The bed and breakfast I was staying in, the door wasn't locking to my bedroom. It was kind of a glass door that opened. And I saw three figures walking up, I'm sitting up in bed, I still had a freshly broken foot from my trip to Hawaii, and feeling very vulnerable. He just knocked on the door and opened it at the same time, coming on in as if he knew it was unlocked and walked in. And immediately, I was--it freaked me out.

DAVID: You didn't know who it was at first.

COREY: I didn't know, I wasn't expecting him, I didn't know who it was, and they just came walking in.

DAVID: Wow.

COREY: After I settled down and we started to talk, while this was going on, the two airmen I called Tweedledee and Tweedledum were--one of them walked up and stood on the balcony and was walking, the other one stood sentry outside the back door. He asked me how the taping went, if, indeed, I had shared the information about the R&D facilities and the secret spaceport down in Antarctica. And I told him yeah, I shared the information how he shared it with me, and he said good, but that's going to be my ass.

DAVID: And this is because, as you said before, they're violating some kind of international treaty by having military presence?

COREY: Weapons development is not supposed to occur down there.

DAVID: And just to be clear, when you say spaceport, are you talking portals or are you talking spaceships or both?

COREY: Well, all the information from the last update, the spaceport that we received from the Nazis later on, and the R&D facilities were ones that we built

during the '60s during Project Iceworm.

DAVID: So he thinks it's going to be his ass but he doesn't care?

COREY: Right. He said this information needs to get out. He further warned me that once that information breaks, that I better get ready, and all the people in my orbit should get ready, because all hell was going to break loose, which actually has occurred.

DAVID: And how would you describe all hell breaking loose?

COREY: Well, Sigmund disappeared. I was picked up by Tweedledee and Tweedledum. They were very concerned, and they wanted to know if I had heard from him. And when I said no, they looked even more concerned, and they let me know that he was taken from his home somewhere in Virginia. His family was freaking out that no one knew where he was. Strangely enough, I talked to Linda Moulton Howe on the phone this morning, and she told me that during the same time period, about three and a half, four weeks ago, her major insider in the secret space program disappeared.

DAVID: Wow.

COREY: So we have that aspect going on, people disappearing and we also have these large coordinated disinfo attacks and character assassination attempts that have been going on against anyone working with me.

DAVID: Was there anything else that you discussed with Sigmund during this meeting before he vanished?

COREY: Yes he wanted me to dial back talking about the Blue Avians or Inner Earth groups, that he wanted me to only talk about the nuts and bolts experiences I had in the secret space program. He said that the people that I had been giving the briefings to, they just could not follow it. They could not track it. That he said that if I would pull back that narrative, that he would begin to set up these briefings again. I told him that I was not going to back off talking about the Blue Avians and what was going on.

DAVID: It seems to me, Corey, that if whatever cabal group or groups is responsible for making people disappear and doing what are almost absurdly exaggerated lies on an epic scale about you and me and others online, this doesn't look like a group that's winning. This looks like desperation to me.

COREY: Right it's what we've been seeing for a while. The intelligence community has come up with this new fake news model, and it's taking off like wildfire in mainstream media. But in the alternative news area, they're really starting to

implement that same model and just put out the biggest lies they can and present them as truth and see what sticks.

DAVID: Do you think that all of these actions are happening because we are closer than ever to some kind of disclosure event?

COREY: We're close to some major event. All the talk I've been hearing in the background from the military groups about what's going on, sounds like everybody is very nervous. The Alliance is nervous to see how things will turn out, but the cabal groups, they're nervous to a point to where they're beginning to make some serious mistakes.

DAVID: So the next part of our outline here is another interesting area. And let me start this off with a question, and that is, what was it like for you meeting William Tompkins, who's 94 years old and goes all the way back to actual World War II briefings about the space program to the highest level American generals and military officials?

COREY: It was amazing. Recently, William Tompkins, Dr. Bob Wood, Dr. Michael Salla, and myself decided to write a book called "A Case for the Secret Space Program." When we met in San Diego for the first time, of course, being a character, Tompkins walked up and acted like he didn't know who I was to mess with me. Once we sat down and really started to record and speak, the amount of correlations that we had were amazing. It was very obvious from speaking with him that most of the smart [INAUDIBLE] information I read about the World War II era had come through his briefings.

DAVID: Wow.

COREY: And there were a number of other things. Like I talked about the pirate ship, and his cousin had the same thing, a pirate ship coming to pick him up. We had some--

DAVID: I don't understand what you mean by pirate ship.

COREY: Well, when you're a kid, we would have memories of a pirate ship flying through the sky, like Peter Pan, and coming to pick us up. But it was really a masked UFO. And so we would have a memory of being picked up by something other than a spaceship.

DAVID: What was the most unexpected correlation between your data set and his that maybe you had no idea what had happened?

COREY: Well, the thing that's kind of come up the most is some sort of interaction

going on with this Nordic group. My inner circle, this team that I've been building, all of them seem to have some sort of history with this Nordic race. One of the people on my team told me, when we were discussing memories we had as children about these Nordic races, told me about a memory that was similar to mine, but almost exactly like one of my good friends from 20 years ago. It was a dream to where he was a kid, and he was around a bunch of other kids. They were playing these three-dimensional holographic games, like puzzle games, and when he was able to solve it, they pulled him aside and started showing him star charts and planets, saying, is this your home, is this your home, and it was the exact same memory that my other friend had shared, which was similar to mine. I didn't have as much detailed memory, but I had a memory of a Nordic standing next to me, studying me very closely, showing me images of star systems and planets, asking me, is this your home, is this your home, as if they're trying to find out where you're from.

DAVID: Was there anything about his knowledge of reptilians that surprised you or otherwise was unexpected?

COREY: No. It was just a lot of confirming each other's information when we were sitting there having a conversation. It was pretty exciting.

DAVID: It's certainly interesting, when you read Tompkins book, "Selected By Extraterrestrials", to really get the sense that he's just being telepathically steered, almost by remote control, to build these craft designs that became the ship, apparently, that you were in for solar warden. The Nordics really seemed to have been doing an awful lot, but yet they work through somebody like Tompkins to get these initiatives met. And yet they seem to also be actual secretaries working at NASA and other agencies. So what kind of conversations did you guys have about that Nordic influence?

COREY: Well, we discussed the Nordic influence that was going on right now. And I'm not going to go into a lot of details, but what you described about being influenced or giving information, synchronicities occurring, being guided from an unseen force, which, it's all pointing to the Nordics. Pointing so much to the Nordics that when I had my next meeting with Kaaree, I said I finally was going to hit her with these questions, because too much was popping up about this group. The first opportunity I had to ask her about it, I asked her who this Nordic race was.

DAVID: What Nordic race?

COREY: This Nordic race that had been--that we're talking about.

DAVID: Working with Tompkins?

COREY: Tompkins and us. I asked her about this Nordic race. I said, is this Nordic

race the same blond, Nordic-looking people that I saw in that Inner Earth meeting? And she said no, these are brothers and sisters of the Confederation. They work quietly in the background, they guide humanity, they give humanity insight and ideas, but they usually do not interact with us directly. She said that they have been interacting with us and guiding us for thousands of years. A very long time.

DAVID: Do you know whether they're from Inner Earth?

COREY: They're not. I was pushing that. I kept going back and pushing that. And she hadn't seen me like this before. I'm normally--was more kind of docile and playing along, but I was asking for answers. She finally confirmed for me that the Anshar are actually people from the future, from after we've gone through all of these fourth density changes, somewhere in the future the Anshar had what we would consider like a Mandela effect thing occurring in their society. Their people--

DAVID: Could you be a little more specific about what you mean by that? What was the Mandela effect that was happening in their society?

COREY: I don't know.

DAVID: OK.

COREY: They were having--

DAVID: The Mandela effect means that there are bifurcating timelines, that things don't line up. Somebody remembers something. but it's not really there.

COREY: Right.

DAVID: Or it's a little bit different.

COREY: Right.

DAVID: So they start having time anomalies like this, like their history books are not the same as what they remember, this kind of stuff?

COREY: I wasn't giving any examples, but they had their own Mandela effects occurring that caused them to look back and see about when this bifurcation was occurring, and they decided to send a group back 17 million years, just before the time that the temporal anomaly was occurring, to have this group be stewards of their timeline. There is a possibility if they don't steward the timeline properly, that they could cease to exist.

DAVID: How does somebody travel 17 million years back in time? Let's start with

that.

COREY: The same way they travel 17 light years in space. I've explained in the past, time and space, if you can travel through vast distances in space with short periods of time, you're time traveling. And these beings can travel through time as easily as they can travel through space. It's happenstance. Either one is just as easy for them to do.

DAVID: Well, we seem to have a similar analogy in the scholarship on the so-called Montauk Project, where apparently there was this hopscotching timeline between 1943, 1963, 1983, where the Philadelphia experiment occurs in '43, but then by '83, there's some sort of really big time anomaly that overlaps in the Montauk Project, like a wound in time, a rift. And we've often heard other insiders saying that when you have a rift, that really negative beings can get in through that. Do you have any idea as to whether what they experienced in their future was a rift of this sort, where maladaptive entities could get in and they had to fix it, or--

COREY: I didn't receive any of those details. I kept circling the conversation around to push her for more information about this Nordic race. I was in a different state than she'd seen me. I wanted some answers.

DAVID: OK. So what you're saying is that there was some kind of bifurcation or time rift that occurs in their future, that they believe is very maladaptive for them, and somehow, fixing it involves traveling 17 million years in the past. So how did she explain what the value of going 17 million years in the past was? Why would that do anything?

COREY: They traveled 17 million years in the past, before the time anomaly that they were able to figure out, so that they could prevent the time anomaly and steward the timeline all the way through their current timeline to make sure that there were no, I guess, changes in the timeline. Certain changes could cause them to not even exist.

DAVID: OK, so you say that they went 17 million years in the past. If we're talking about a fourth density Earth civilization, that could be something where they've already gotten millions of years ahead of us before they did this. So are you talking about 17 million absolute years, or are you talking about them traveling to 17 million years before our current present? 17 million years in our past, from our current era.

DAVID: And what I'm hearing you say sounds like the time anomaly that they were concerned about started very soon after that period of 17 million years in our past. Is that right?

COREY: That's why they chose that time period, to get there before the anomaly to correct it.

DAVID: Do you have any sense as to, is this anomaly like a geophysical event, like a catastrophe, is it a solar flash, do we know what the event is or any steps they took to fix it?

COREY: No information on that. I was circling back around to ask about the Nordics and what was going on and what type of interaction they were having with our group. That was my--that's what I kept pushing back to in the conversation.

DAVID: So if these are people from our own future, did something happen that--was there some kind of karmic entanglement that they got, that they had to go back and fix? Is that part of what this is?

COREY: Going back and making that change in time did have karmic ramifications. So they are tied to us karmically in a certain manner, to where I've talked about other ETs, we have to progress in a certain way for them to, but that's organic for them, because if we progress the way we're supposed to, that's their timeline. If that makes sense.

DAVID: Sure. Now just so we're clear, "The Law of One" stipulates that once you go into fourth density, process time differently, and so 17 million years for them is not necessarily what it would be for us. Is that correct?

COREY: Yeah, it would be. If they go back 17 million years in our past, and they're living that 17 million years up into the present, then they're experiencing 17 million years. They may process the time a little bit differently, but they're still here experiencing it. And they were not in contact with the Anshar from the future. When they were put back here, 17 million years, they were like colonists, and it was from that small group that they've grown into what they are now.

DAVID: Oh really? So only a small group of people did this.

COREY: Yeah. They didn't send giant cities back, of people. It was small groups, and they've grown into these large cities underground they have now.

DAVID: And you said that they were concerned that they might not even exist if they don't handle this properly? Could you explain that?

COREY: Well, if they don't handle--if they don't go back in time and fix whatever was occurring, there is a possibility that the timeline could shift enough to where they would never have developed.

DAVID: Does that rely upon us and the decisions we're making right now?

COREY: Yes.

DAVID: What would be a choice that we would make that might cause them to cease to exist?

COREY: Well, if we were taking steps that brought us away from the optimal temporal reality, I would guess. If we're doing anything that's going to keep us from progressing forward, according to their timeline.

DAVID: So if we don't ascend, if we don't have this more positive, loving change in society, if we don't overthrow the cabal, that kind of stuff, that could all lead to this happening.

COREY: Exactly.

DAVID: I'm curious about whether you got into any dialogue with Kaaree regarding your meeting with the sentinel that you had when they took you to Venus and this packet that you say got downloaded in your head.

COREY: Yes. That came up at the same time I kept pushing the Nordic issue. Finally, she let me know that there are agreements between all of these different groups. And part of the agreement they have with this Nordic group was that they would not share too much specific information about the Nordics. She said if I wanted more specific information, I needed to put the intent out there that I wanted to be in direct communication with them. She said that I needed to basically get the information from them, according to the agreement the Anshar has with this Nordic group.

DAVID: Did she offer you any suggestions as to how you might be able to recover more of these memories, or any tools that she said you might be able to use?

COREY: Well, when it came to the zip file that I basically--was downloaded to me when I met the sentinel on that space station, and also on Venus, she said that if I wanted to gain--I've been starting to have bleedthrough of information that I've been trying to process, and I've been going to her to help me process and make sense of--she said that to get the information in a more digestible way, that I should consult the sacred plant. And at the time, I didn't know if she was referring to a plant on the surface of Earth or she was referring to that drink that she had presented me in the beginning when I met her that was made out of a flower. But I kept pushing and pushing for the Nordic issue and that conversation wound down with her unable to answer my questions further and me unwilling to stop asking the questions.

DAVID: Do you think it's possible that if we pick our optimum timeline, that this breakaway group that traveled back 17 million years ago as a small group would eventually be able to reunify with their future selves in some way?

COREY: That would make sense.

DAVID: Interesting. All right, so the last area we have here regards this current battle that's going on between the Alliance and the cabal. And it says here that you have been saying--what your intel is now is that this war is not actually progressing. Neither side is really making progress at this point.

COREY: There has been a stalemate in this shadow civil war going on. We have aspects of the deep state, that they're calling these groups in the government, which are basically career bureaucrats that weigh everyone else out and make all the decisions. They also have the intelligence community, which is engaged in a battle of sorts against the military, a group in the military, and also within the Department of Justice. They're in a 50/50 split, and the intelligence community, it's a split more towards like 80% being cabal.

DAVID: The intelligence community is still 80% cabal?

COREY: Right. So very little has occurred since they've tried to implement this, basically, a bloodless coup in the United States. What the military faction has pretty much decided is that the changes are not going to be able to be done in a bloodless way or in a legal way. They think that they're going to have to do a full-on military coup here in the United States, which is very scary to think about, but we're at a point to where nothing's happening. No one's gaining ground. The cabal isn't, and the Alliance isn't, and something's got to break. So that was one of the things that I found out recently, was that they're really starting to discuss an open coup in the United States and a couple of other Western countries.

DAVID: I know that a lot of this is obviously very sensitive, but on a basic level, what might that look like if it were to happen? What would we experience?

COREY: It would be, I am surmising from other coups in the past, that all of a sudden there would be tanks in the streets of DC, all of these government types would be ordered to stay in their quarters. Those who don't and come out to fight will be engaged. And they expect that it would be a nice little battle between some of the intelligence groups and the military.

DAVID: Do you think it's possible that the Alliance might use unconventional technology as part of this?

COREY: Yes. I mean, unconventional technology has been used for a while in this battle. You know, playing with the weather, that kind of thing. So I could see unconventional technologies being used as long as it doesn't violate any agreements of using certain technologies in the open.

DAVID: Well, I'm specifically thinking about things, like you mentioned these drones that could be various sizes that have propellers that we've seen in movies, but people

don't know if they really exist. Do you think they might use stuff like that?

COREY: They could, but as I stated, it's going to be more of a conventional military, if it indeed does occur, which has not been approved to move forward. But that is where they are right now. Things are so contentious, there is such a stalemate, that they're beginning to think that violence is going to have to be used.

DAVID: This obviously sounds a lot like this mass arrest scenario that I've been reporting on since at least 2011. And one of the elements of that appears to be that we're not strictly just talking about Washington DC and we're not just strictly talking about intelligence, that there may also be actions against controlled media, financial centers, these kind of things. What are your thoughts on that?

COREY: Yes, controlled media would be taken over, the banking system would be taken over, yeah. All of the infrastructure would be taken over. It would be--when a coup occurs, it's basically shutting down the country.

DAVID: What are your thoughts about the other thing we've heard so often, this idea that there would be, perhaps, a power outage during this time and that very few people would even know what had happened until it was over when the lights come back on?

COREY: Right, that's communications, power outages are things that they might implement during a coup. That's just a diversionary tactic.

DAVID: So if something like this actually does happen, I would assume, Corey, that along with that process would be a lot of very ugly information coming out about how we have been lied to and about how we've been controlled. And if that kind of information goes from being conspiracy theory to fact, how could people watching this show use a social event like that to help try to create a positive outcome?

COREY: Well, how about instead of waiting, sitting back and waiting for all of these things to occur, for these horrible things to occur, we empower ourselves? We begin to get out, demand that technologies be released, demand that we want governments working together better, we want to have all of the corruption removed from all of our systems. Not just the United States. It's going to take the people standing up and demanding this. If we're waiting for a coup to happen or we're waiting for one side to win, then we're always disempowered. If we can come together and start to work on getting a more positive outcome, than we don't even have to worry about a coup.

DAVID: I like that. All right, this is Cosmic Disclosure. Bringing you the latest updates. Here with Corey Goode, I'm David Wilcock, and I thank you for watching.

Viewer Questions 9; Time Travel and The Future Season 7, Episode 28

[Cosmic Disclosure; Viewer Questions 9; Time Travel and The Future](#) **Season 7, Episode 28**

11 Jul 2017

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we are taking your questions so that we have a nice interactive two-way dialogue going on here.

And Corey, welcome back to the show.

Corey Goode: Thank you.

David: All right, so the first question we have . . . This is interesting. I'm curious to how you're going to answer this.

“If we have a being that's in fourth density, does that being have unique psychic properties that we don't have, that would allow it to be able to see beings that are discarnate from our perspective?”

Corey: Wow, it is an interesting question.

I would think that some of them would at least have that ability to see disincarnate beings. But, yes, they do have enhanced abilities far beyond our own.

David: Hm. Interesting. All right, this one is a question that I really find interesting because I've talked so much about this Solar Flash. And I think I know how you're going to answer this, but you might surprise us.

"Why does it matter if the Earth Alliance negotiates a partial disclosure that will take place over the next hundred years or a Full Disclosure if this Event is about to take place?"

Corey: This Event may not be what each of us thinks it is. This Event might just be a catalyst for a disclosure of certain technologies. It could be a series of solar events, which has been postulated, that occurs.

Some of the first ones would possibly take out electrical grids or cause certain technologies with integrated circuits to no longer operate. And then they would have to come in and replace that with the new technology.

And that's when the Alliance was thinking was going to be the best chance to bring in that new technology.

David: Hm. Very interesting. This next question kind of goes along the lines of that one.

"Are the Alliance and their opposition aware of future events that are about to take place and how everything is going to change?"

Corey: The Alliance, along with all these different groups, are made up of other groups. And each of these subgroups have different ideas about what's going to occur.

And some of them are expecting like an Ascension kind of an event. Some of them are expecting just mass chaos, loss of technology. Some of them are expecting a lot of deaths.

So there's not one agreed-upon outcome that they're planning for.

David: You had mentioned that in the space program they actually took human beings and exposed them to energy fields similar to what would happen after the Event.

Corey: Leading up to the Event.

David: Could you describe, again, what that outcome was and does everybody have that intel?

Corey: Yes, everyone understands about . . . that they've received the intel from the Navy vessels that went out to the outer reaches of this energy anomaly. That's what they were calling it in the beginning.

The ones that were going out there, they were noticing that they were being affected by the energy. And they started doing further tests by putting people of different polarities – positive people, negative people – in a room and piping in this frequency to see how they would react.

And these people would be sitting down doing a job, not knowing that they were being tested, experimented on.

The people that were more negative would start becoming more agitated and claustrophobic and couldn't handle it.

And the people that were more positive would kick back and start to bliss out, smile, and start to daydream and not be affected by the other variables that they had in the room that they were using to try to affect the people.

David: So you're saying this was a Navy study, and that data has been shared with pretty much all of the Alliance groups?

Corey: Yes, the Alliance has it. All the information that the Cabal has, the Alliance has that information.

David: Okay, but even, I guess, within the fact that it seems to amplify and potentiate people's innate state of being, there could still be a great deal of scholarly debate as to how that affects us as a collective.

Corey: Right. And then there is the aspect that some people want to weaponize it. They have a lot of different plans. They've been studying this for a long time.

David: Okay, next question is:

"'The Law of One' only speaks of there being eight densities where the eighth density is a return to the oneness of the universe. Can you clarify then what would a ninth-density being represent?"

Corey: I don't know all the different octaves. I've been told that the octaves returning back to Source . . . if there wasn't an end to it, it would seem as though they were going on forever.

David: *"Are Raw-Tier-Eir and the two others who also use the Raw prefix to their*

names in any way associated with the same social memory complex entity that was speaking to the people who wrote down the original 'Law of One' material?"

Corey: They have confirmed that they were involved in communicating 'The Law of One' material.

David: *"After you were age regressed, although you are now 45 years old biologically, is your soul actually 65 years old?"*

Corey: I would have to say, "Yes", because I still have those extra years of experience.

David: *"Have the USSR and Russian leaders been involved in the Secret Space Programs?"*

Corey: Absolutely, definitely since the '80s. Before the end of the Cold War, we were already working with them on a very high level.

Now would certain generals in the USSR military know? No, they were . . . The generals on both sides believed that the Cold War was real, and they were prosecuting that war thoroughly.

Above them, things were going on a different level, compartmentalized level, to where the Russians and the Americans were working very closely.

David: When we saw the book "Alternative 3" come out in the 1970s, it was describing secret collusion between the U.S. and the USSR going on all the way back at that time.

Do you think it's possible that this was earlier than 1980s, based on data like that?

Corey: Yes, especially the early continuity of species programs were joint programs. They went back pretty far.

David: I want to share with you something that one of my other insiders told me and see what your thoughts are.

He got a job in the 1980s for one of the most serious intelligence agencies. I won't say which one. And he was really shocked because he said, "Aren't we at war with the Soviet Union?"

And they just started laughing. And they said, "That's just for the newspapers".

Do you think that a lot of people that would get these kind of intelligence jobs would find out at some point that this whole Cold War nuclear threat thing was really just a scam?

Corey: Seen a lot of the behind the scenes, I'm sure they would extrapolate that eventually. But I don't think it was common knowledge documents at the ready information.

David: *"Do you have any update regarding the negotiations going on between whether we will have partial disclosure or actual Full Disclosure?"*

Corey: Right now there is a major stalemate going on between the Alliance and their proxies within the U.S. military forces and what people are calling the Deep State – mainly the intelligence community and the bankers.

So there is a major stalemate going on right now between the two. There's not a whole lot of movement.

It's gotten to a point to where the military aspect believes now that there is no peaceful way of making a transition away from the Cabal. They think that they're going to have to have a military coup.

And they think that a military coup will curtail whatever type of civil outbreak will happen. There's major factions of ideologies that are being pitted against each other right now to try to get our attention away from this civil war going on.

David: *"Is the Cabal's preferred method of disclosure the type of slow rollout that we are already seeing right now? Have there been AI predictability computer systems used to design this partial disclosure gradual strategy?"*

Corey: Well, these groups have definitely used an AI technology to get an idea of what's going on in different probably futures.

From what I've understood, it's that this technology has not been reliable recently for them. There is something that has occurred, maybe this Mandela Effect thing, who knows, that this technology is not as useful to them anymore.

But they definitely have, in the past, used that technology. That's why so many times there have been opportunities to take down this Cabal, but they've found a way every time to escape it by using this technology.

David: So the core of the question is, does the Cabal prefer this low drip, drip, drip disclosure that we're already seeing, or is there some point maybe where they want to

do a big blast?

Corey: Well, there was a plan to have a few big blasts, not a Full Disclosure, but disclosures that would definitely get the attention of every human being on the Earth.

If stuff starts to come out about their crimes against humanity – boom, "We found pyramids under the ocean". Boom, "New information: We found weird artifacts in Antarctica," you know, to kind of distract you and throw you off.

So they'll use disclosure as a way of distraction and manipulation as well.

David: *"Is there a limit to how many times you could send someone back in time before certain inescapable health consequences or other things would take place?"*

Corey: Definitely, especially with the early technologies. Such high electromagnetic fields are used that even when people that spend 20 years in the space program, being within those high electromagnetic fields, they have a lot of side effects: the temporal dementia, different types of neurological issues, weird numbness.

There are a number of issues that occur from being inside those magnetic fields. So, yes, if you're sent using the technology, especially that they used to use a long time ago, sending you back in time over and over would be like working in the engine room of one of these torsion drives.

They wear these Faraday suits that are like a metal mesh that go all the way over them when they're in these.

So, yeah, it's very detrimental to the neurological system.

David: So is there any contraindications for people's lifespan if they've been in the Secret Space Program?

Corey: Yes. Usually the people that have either retired or have gone through a 20-and-Back like myself, they have a lot of neurological issues for a while. Their quality of life tends to go down, down, down, and they do not have the life expectancy as the rest of the population.

That's a tradeoff that they make, and most of them knowingly make that tradeoff.

David: One of the things we described in a previous update is that you have had new information come your way about there having been more than one 20-and-Back program.

So how does this new knowledge impact the question that's going on here, which is, is there a limit to how many times somebody could be sent back in time?

Corey: Yes. That information was relayed to me through Gonzales when I was up getting an examination on the Mayan craft.

And they had actually repressed two of the 20-and-Back memories from me when they first met me.

Because when I had the eye surgery, when I had a detached retina that they said was basically the same as astronaut's eye, I had full recall of all three 20-and-Backs.

David: Oh!

Corey: And I was almost suicidal. It was bad.

And then they came and assisted me by removing some of my emotional energy to some of the memories of this 20-and-Back, and then rebury the memories of the other two.

The memories were not conducive to me having a normal life.

David: So given that you are a person who now believes that you've had three 20-and-Backs, that would make you, I guess, with a soul age of like 105 or something like this?

Corey: Yeah, something like that. So how does that affect you in terms of your health and your functionality?

It's definitely had side effects. I've had a number of surgeries because of neurological issues with my hands and forearms, which is common.

I'm starting to have issues with memory recall a little bit, having, what is that, aphasia, where all of a sudden you can't remember your normal words out of your lexicon. It's like it's been erased.

David: Sure.

Corey: So yeah, there are a lot of different side effects that I'm dealing with currently.

David: Are you aware of anyone having had four or five or more 20-and-Back experiences? Does that ever happen?

Corey: I'm not aware of them, no.

David: So you think three might be as far as it ever gets pushed?

Corey: I have no idea.

David: Has anybody ever died from having done a 20-and-Back that you know of?

Corey: I know that people have died while on 20-and-Backs, but I have not known of anyone that has died in the process of the 20-and-Back, the pharmaceutical process or the temporal process.

Now, I'm sure at the beginning when they were developing this technology that was passed on to us by nonterrestrials, they definitely broke a few eggs before they got the omelet right.

David: How do they handle it when somebody dies in a 20-and-Back? How do they bring those people back?

Corey: Well, if they're military, and depending on the situation, they'll receive military honors. But if they're a civilian on the 20-and-Back, they become a missing person.

David: So you can't age regress a dead body?

Corey: You know, they could probably go through the process of cloning a body at the right age and then replacing it there, but really what occurs is that there's nothing to return home in that time period of the return. So you don't get returned home. And parents come in the next day, you're gone, missing person.

David: Do we know which extraterrestrial group gave us this 20-and-Back age regression technology? Was it the Draco? Was it the Anshar? Do we have any idea how the space program got this?

Corey: We got a lot of our stuff from a Nordic group.

David: Oh, really?

Corey: Yes.

David: And would that be an Inner Earth Nordic group?

Corey: I'm not sure. They don't claim to be. They claim to be from another star

system.

David: Okay. Is this kind of 20-and-Back thing a fairly common strategy that's employed throughout a variety of other worlds besides just Earth? Is this a common practice?

Corey: Seeing that they had a in-the-box type of solution all ready to deliver to us, I would assume that, yeah, it's being used on some level on other planets.

David: You had said before in one of our other updates that you would have people in the space program who had been pulled from various eras of Earth's history simultaneously. I'm curious about how those people from – like you said, some of them might have been from the 1950s . . . Is that a process of time travel that is required to get them in the first place? How are they picked up?

Corey: Yeah, they have to go back in time to pick them up. And then once they pick them up, and they serve their time, they bring them back to that exact time period.

David: What would that look like for somebody in the 1950s? Would they see something like a UFO contact or how would it happen to them?

Corey: I have no idea. Yeah, that's not information that we were allowed to share with each other.

And I've seen people that obviously were from different past eras. Was not common, but you would see it.

David: So here's an interesting question:

"If we're about halfway out from the center of the Milky Way, towards the edge, we're moving along at 1,000 miles per hour, there is some kind of spatial displacement . . .

Corey: Right.

David: . . . *as we're moving through that galactic space, how do they compensate for that in this 20-and-Back protocol?"*

Corey: They're taking a person and putting them 20 years back in the past. Now, 20 years back in the past, the celestial mechanics were different. They've changed. It's like a giant clock that's turning at all times.

Just like they have calculations for the Cosmic Web on how to travel between different stars and arrive there at the correct time period, they have the same

mathematical model for going back in time. So they're able to calculate it.

David: Are you aware of there ever having been people from Earth's future that were getting pulled in just like people from the 1950s may have been pulled in?

Corey: I've heard that there have been people from the future that have been picked up here while coming here to do recon. I don't know anything beyond that.

David: If you have somebody from the 1950s and somebody from the 1980s pulled from Earth, working in what is now the same time for wherever they are, how does the space program avoid time paradoxes?

In other words, wouldn't that person from the 1980s at some point toss out a cultural reference that could somehow pollute the mind of the guy from the 1950s?

Corey: Sure, if the person from the 1950s wasn't blank-slated.

David: So the blank-slating would eliminate any memory of him from something that would be in our future?

Corey: Right.

David: But you also said that 4% of the time it's not effective.

Corey: Yeah, 3 to 5% of the time. And then they have to mitigate those problems when they occur.

David: “Mitigate” meaning like reabduct the person, that kind of thing?

Corey: Yeah. Reabduct them or bribe them or who knows.

David: We also seem to hear from other insiders I've spoken to that time has a natural repairing ability for itself.

Corey: Yeah. Time is elastic just like space is. That's why in the beginning we were trying to go back and fix these different paradoxes that we had created.

And the nonterrestrial groups told us, “Stop. You're just making it worse.” In time, time will snap back. It'll correct itself.

David: *“In previous episodes of 'Cosmic Disclosure', you were posed a question about yourself. The question was, do you want the knowledge of who you were, who you are, and who you will be? If you were to get another chance to answer this*

question, would you now answer, 'Yes, I do want to know', and why?"

Corey: I think I'm close to being ready. I'm doing a lot of work on myself – a lot of things that are being pointed out by these beings that I need to change.

But I think a lot of this information was actually downloaded into me when I had that meeting with the Sentinel on that station and all of the information was downloaded. I just haven't had access to it.

I think it's a process of working through that information to gain access to it.

But if I'm asked the question again, it depends at the moment where I am. Right now just the feeling I get from it, it's an overwhelming experience. And it's one that's changed Gonzales considerably. He is literally a different human being. He only looks like the guy I knew before.

David: Okay. This is, I guess, just a general personal guidance and philosophical question based on what you've been through:

"How can someone make peace with past and present experiences that are negative in order for them to be able to heal themselves, not feel that they are stuck in their life, and move past any feelings of vulnerability and lack of trust of other people?"

Corey: Well, you can't bury them. You have to confront them head on. A lot of them are traumas that you're going to need help [with] from a professional. Don't try to do it on your own.

But if you want to, I guess, evolve, you've got to begin to focus on those traumas and be able to get to a point where you can speak about them without feeling the energy connected to the trauma.

It takes a lot of work, but I've been able to do it on several different topics, and it's been very painful. I've had to just confront things about myself that I didn't want to do.

If you're in a place in your life where you can do that, then go for it. If not, then do the work that it takes to get there.

David: Very well said.

"Are there only two timelines: the one that we experience here on Earth and the one being experienced by the Secret Space Program? Or does each new person brought into the Secret Space Program create a new timeline?" I guess that's the first

question.

Corey: Timelines, realities, they're basically the same thing. There are many, many, many different realities and timelines. So there's not just the two.

David: Okay. The next part of this question is:

"Do two versions of the same person exist at the same time? Would there be one that is enhanced and highly trained, living off-planet, while the other version of themselves is living a normal life on Earth?"

Corey: Those are two different timelines. So it depends [on] how you look at it. I mean, if you look at it as during the same time, not split off or segmented from each other, then, yes, it would look like they're coexisting at the same time. But they're two different timelines.

On one timeline, you're in the space program and there's a missing person's report out on you during that time period on Earth.

On another timeline, once you're back, you're going through your reintegration period after being placed back here from the Secret Space Program, if that makes sense.

David: All right. Let me ask you this. It kind of falls in line with your question. They're talking about that you would be enhanced but highly trained off-planet.

So could the people doing the space program roll back enhancements and high degrees of training as they do the regression process when you get brought back into your regular life?

Would you lose the training and the enhancement?

Corey: The training you can get back. It's compartmentalized. The training, the knowledge, the experience is still there. It's compartmentalized. It's been blank slated or removed from your ability to pull it into your immediate recall.

David: Hm.

Corey: So, your skills are retrievable. Now, the abilities, if it's a chemically-enhanced ability, you're going to have to go through the process again of them building up the chemical in your body and then your body adjusting to the chemical.

David: The next part of this question is:

"What happens to the off-planet timeline once the Secret Space Program worker has been regressed and sent back to the moment that he first left?"

Corey: The timelines . . . That other timeline still exists. You're just now on this timeline.

David: So, in some way, people's idea of a nice organized linear time isn't really working when you're talking about timelines here.

Corey: Time is not what people think it is. We're just starting to get an idea about how gravity and space works and the torsion of space. Time works in much the same way. It can be manipulated and stretched and merged in some cases with other timelines.

David: Okay. So we have one last question for you here, and that is:

"What specifically can the average citizen do to actively promote disclosure and gain the greatest impact?"

Corey: Well, I definitely wouldn't go out and start talking about little Gray aliens or eight-foot tall blue birds in the beginning. Ha, ha.

David: Ha, ha. You learned that one the hard way.

Corey: Well, yeah. You know, I had no choice.

David: Right.

Corey: I think that the best thing that all of us can do is start to focus on the suppressed technologies that we want released – start focusing on that.

If we focus on nonterrestrials, that's already a topic that's been programmed into people to resist.

Now, if people start finding out that maybe the government has technology that could cure cancer, maybe they have technology that's zero point energy. That is something that the average person could think of as more tangible that they could get behind.

So I think that we should focus more on the nuts and bolts part of the Secret Space Program in the beginning and try to get that disclosed to get the general public interested and just to a point to where they're not going to shrug their shoulders when they hear "ETs" or "aliens".

David: How do you feel about people who are watching this show and having access

to the Internet? What can they do with the Internet to help this process along?

Corey: Get petitions going, make comments, spread the information as much as you can. Also with your family, don't go talking about aliens to them. But I think the best thing to talk to them about is suppressed technology.

Everyone can . . . Just about everyone can believe that the government has technology that's 50 years ahead as a part of national security. But if they start thinking, “I have an aunt that's about to pass away from cancer”.

If I was able to get those technologies out right now, I would. And there are many people out there who have loved ones that are going through this.

I can't think of anything else that will motivate people to get out and demand disclosure.

David: Do you think there's an opportunity for journalism to be done with articles and blogs and videos that isn't being done? Or do you think that everything that could be covered has already been covered?

Corey: I think that it can be done in a way that is easier to disseminate to the general population. I think if a lot of us in this field begin to focus on that and try to get the general information out about the Secret Space Program, the technologies that would change our lives, I think that that's going to cause a groundswell of people asking for disclosure a lot more than us talking to them about crashed aliens in the desert.

David: I agree. Well, you heard it here first. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with Corey Goode, taking your questions and answers and handing it back to you with action points you can use to help make this disclosure reality. Thanks for watching.

Testimony on Pyramids and Underground Season 7 Episod 29

Cosmic Disclosure; Testimony on Pyramids and Underground Cities **Season 9, Episode 29**

19 Jul 2017
David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and we have a special surprise for you.

This is Pete Peterson, coming back a year later after our last taping, and there's a lot more that he's been authorized to talk about. So without further ado, I bring you Pete Peterson.

Pete, welcome to the show.

Pete Peterson: Thank you.

David: So you have so much knowledge. It's pretty amazing to try to even figure out what we could talk about first, but we were talking about this before we started.

And it seems like a good place to begin would be the fact that we have pyramids. There's over 500 pyramids in Mesoamerica made of gigantic blocks. There's over 100 to 120 of them in Egypt. And then there's many other cultures around the world that all seem to get the idea to take gigantic, multi-ton blocks of stone, carve them very precisely, and put them in these amazing monumental structures.

Everybody wants to know, what is the insider view of this? Based on your personal experience with government top secret programs, what did they speculate was going on there? Do they have any idea as to how these were built? Does it have anything to do with extraterrestrials?

Pete: Well, I'm going to divert just a little bit here at the first to explain that when I was growing up, I learned to read very early. And the things that I was most excited about was anthropology and archaeology, and King Tut's tomb was big, and etc., etc. And so I wanted to be an anthropologist/archaeologist.

Because of that, every time I've had a chance to stick my nose into ancient archaeology, I've done it.

David: Okay.

Pete: They were obviously built with alien or at least certainly far advanced knowledge from the people that built them.

David: Sure.

Pete: And not necessarily the people that ruled those societies, but at least the people that built them.

So we had a priesthood class that had a lot of knowledge. We had a scientist class that had a lot of knowledge. And they were at the top of those societies.

David: Hm.

Pete: So we had knowledge that we haven't had since that time because, eventually, these societies moved elsewhere or perished for one reason or another – many times because of getting into war with each other.

They were built because, think of it, this is a concentration of mass. Even the Earth isn't all rock, but these were all stone. They were very, very heavy.

They were built in a specific - they called it a “religious mathematical structure”.

David: Uh-huh.

Pete: There was, in their mind, a religion or philosophy-based thing to start with. Secondly, because they needed the informational structure and the informational field that was generated by this much mass in a particular shape at a place and time.

And it allowed them to do ceremonies. It allowed them to do – we'll call it – extraterrestrial communication.

David: Hm.

Pete: It enhanced the – I don't know what other words to say than – psychic talent or psychic abilities of the priesthood that used them.

David: So do you think, Pete, that there was some sort of amplification of the spiritual aspect of that civilization where the pyramid or giant stone structure was built?

Pete: Very definitely. And I think I'll call it “informational”.

David: Okay. What was the effect of spiritual, or as you say, informational, effect on that society? What would the people feel? Or how would it change them when this pyramid was built? What would that look like?

Pete: What we live in is like three separate universes that are one inside the other

inside the other with no border.

David: Uh huh.

Pete: And so most of the things that we do in our life here is in two of those fields. And then the informational field is the background of it, and it's what's responsible for what religions call the soul or the spirit.

It's responsible for a good part of what goes on in things like remote viewing, remote influencing.

A lot of it goes on with leadership abilities and what we call the Cabal today . . .

David: Hm.

Pete: . . . and people who have more knowledge than the average person. They have different training. They have considerably different DNA.

They're remnants of very ancient, very, very ancient, back to probably as much as 200 million years or maybe more, of beings that have inhabited the planet at one time or another.

David: Hm.

Pete: And it's what's behind all the esoteric and spiritual writings of the world, despite what, it may seem, quite a bit different in these religions.

A religion has power only because of what it knows that the average person doesn't know.

David: So let me ask you this: What do you think is responsible for these huge stones being able to be fit into those giant structures? Graham Hancock, and guys like that, have pointed out that there's no crane that is capable of lifting those stones in today's world.

So how do you think those stones were moved?

Pete: Oh, they were moved with anti-gravity devices or anti-gravity thought.

David: What would that look like if we were there and could witness this happening?

Pete: It'd look like they were floating, and several people were moving them.

David: Some of the pyramids are widely known. The ones in Egypt, the ones in Mesoamerica, are widely known. But then we have some really strange stuff that most people don't know about, like, for example, about 100 pyramids that show up in China that have flat tops and look kind of like the ones in Mesoamerica.

Why do you think all these different cultures all over the world keep getting the same idea to build such similar-looking structures?

Pete: Well, because it's the structure that gives us its power. It gives us its capabilities. It gives us its utility to the people that are building them.

Most of the flat top pyramids had tops.

David: Hm.

Pete: As time passed, technology advanced, and they learned to build the top little pyramid that sat on the flat top, or truncated pyramids, were able to be done by, as best I can say in English, imagination.

They were actually physically present, but they were there as something imagined – something conjured.

David: Like an energetic structure?

Pete: Like an informational structure, the information structure includes physicality or not, and it includes energetics as well – the power for it. And it includes a shape knowledge.

If you look at the . . . The Tibetans are not an ancient civilization, but they have yantras or shapes that are very, very powerful that they use in their sand paintings, they use in their prayer wheels, they use in their fabrics, they use in temporary drawings that they make for powering something up and causing things to happen.

So there are some societies that call them holy charts or holy graph – 'holy', H-O-L-Y, graph.

David: Uh-huh.

Pete: And, probably, they're more powerful than physical things.

David: How were these pyramids used to communicate with extraterrestrials? How was that done?

Pete: That wasn't what their use was. I mean, they would do rites and things inside of the pyramids as holy structures.

David: Uh-huh.

Pete: Just like in the church, many people go to the church and pray at the church. So it's the center of what would be psychic or holy activity, but it isn't that they used the pyramid for that. They just do it there because it generates fields, informational fields, that are very powerful. But it doesn't work like our communication works. It's completely outside of the physical realm thing.

David: Uh-hm. Are there any pyramids that you know of, or other structures like that, that have not yet been discovered?

Pete: Oh, there are many. There's a lot of underground cities that have pyramids –

David: Hm.

Pete: – ancient underground cities. There are some that haven't been discovered. There are some that were filled up by the natural things of being underground. In other words, there have been several different floods or deluges that have washed them full of sand, or clay – a lot of clay and sand, small particles – and they're clear full, but they're buried underground.

Those have been pretty easily mapped, inadvertently, by spy satellites we've built for looking for underground laboratories.

David: Hm!

Pete: And so you see these structures underground. There are tons and tons of them that have been talked about, but nobody has done much about it, that are under the ocean.

David: Are there any pyramids in Ohio that have not been publicly disclosed?

Pete: I don't know of any that haven't been publicly disclosed, but the people probably doesn't [don't] know about it.

David: Right.

Pete: So they're digging them up there. There are three pyramids that I know of and have seen that are three times larger than the largest pyramid in Egypt.

David: Wow!

Pete: They were part of a city of 15 million people . . .

David: Hm.

Pete: . . . that's been discovered. That city is written about a little bit in the Book of Mormon, for example. The Book of Mormon is not the Mormon Bible. It's a history of the American Indian, . . .

David: Hm.

Pete: . . . and it goes way back. But they're unearthing a lot of that right now.

There are a lot of laws about unearthing archaeological sites, and the problem is that you have cities built on it. Three-quarters of the city has cities built on it.

David: A lot of these books that I've read about the mounds and when they were originally being excavated, even going all the way back to Lewis and Clark going west and exploring America, it seemed like they kept finding giant skeletons in there, and these giants were sometimes nine feet or more tall.

So do you know anything about the giants and how that relates to these mounds or pyramids?

Pete: Well, these were the people who were here, living here at the time, and building those things, and breeding with the . . . There's been a long, long long breeding program to breed with Earthlings.

When I was a child, we used to visit museums where there were samples of . . . there were skeletons of red-headed people. The hair always seems to stay. Red hair seems to stay better.

But there were museums you could go to, especially in Oregon, where there were people up to about 12 feet tall.

David: Wow! Right on display?

Pete: Right on display. Very near there was a place that they used to mine obsidian for making primitive tools.

This was right after they came to the Earth, and they needed weapons, and they hadn't located . . . here's the steel, and here's the copper, or here's the iron.

David: “They came to Earth.” You're saying the giants are extraterrestrial humans?

Pete: Extraterrestrial.

David: Okay. Do you know where they came from?

Pete: We don't have any idea where they came from. There are some that we know where they came from. Some were from Arcturus.

David: But in short, what you're saying is giant, extraterrestrial, human-looking people – people that look pretty much like us but are tall – somehow came here. But then you're saying they had to make tools out of obsidian.

Why wouldn't they have had laser guns and all kinds of cool things like that?

Pete: How many people can you get in a spaceship?

David: I guess it depends on the size.

Pete: And then you'd land on a planet, and what do you have? When we go to Mars, we had to terraform it. When we went to the back of the Moon, we had to terraform it.

You didn't go there, and “here's stacks of steel and stacks of aluminum and stacks of tubing and stacks of girders.”

David: Right.

Pete: So you come there, you have to take a period of time, and it may take quite a while. We're talking now about one of our pseudo enemies or enemies, like North Korea or Russia, popping a couple of e-bombs that would put us back probably 90 to 100 years before we even had electric power in the country again, because we have to build those things.

And we don't have certain phasing transformers and things like that. We don't have large stacks of them waiting to replace something that somebody else blows up.

And when you come to a totally uninhabited planet or a system of planets, you don't have all the building tools there. You have to build the tools to build the tools to build the tools to build the product.

David: Now, I've noticed that a lot of these giant skeleton reports – because I've looked through as many as I can find, and there's hundreds of them – they seem like they have elongated skulls compared to us, which suggests that their brain would be

larger for the body than our equivalent.

Pete: Probably it's as much as sometimes five or six times larger. The brain . . . If you look at the shape of the body of an octopus or a squid, even more especially a squid, I think they're probably degenerate DNA products from those kind of people because they look exactly from the side, they look exactly like it.

You have a front cortex area, and then you have a thing that looks like a bag hanging on the back. And that's the way their brains looked. That's the way their skulls looked.

David: To your knowledge, did these giants mess around with DNA on Earth? Did they try to breed themselves out?

Pete: Oh, of course, absolutely. They tried to breed with Earth women. And let's look at what we would do. Most of our spaceships have had mostly men, and you get somewhere, and you know you're going one way, so you get creative.

So not all of them, by the way, in fact, very few of them actually had that type of skull structure. Some of the larger ones did. Some of them had a skull structure almost exactly like ours.

David: Were those different races?

Pete: Different races, and there are very, very different races.

David: So these giants come here with what . . . I'm just going to infer. Since you said that indigenous people built pyramids, the priestly caste was in touch with extraterrestrials, I'm assuming these giants were one of those groups.

Pete: No, the priestly caste were extraterrestrials.

David: Oh, they were? Did these giants bring anti-gravity technology with them? Is that part of what they . . .

Pete: They came that way, a lot of them.

David: Okay.

Pete: Again, when you come to an absolutely undeveloped planet, it takes a period of time to . . . especially when you have to change YOUR DNA so that you can live on the planet, breathe the gases that are here, not be toxified by some that wouldn't be toxic to us but are to them.

I'm relatively certain from things that I know and I've seen, and remembering that basically I'm a scientist, but I'm also an amateur anthropologist/archaeologist, I would think that there have been people here . . . Like I've had access, several times, to the Great Library of Alexandria, which we call the Vatican Library.

David: Right.

Pete: And it has different floors, and it's rated by how many years old the materials that are there.

And you go through several layers where there was writing and several layers where there wasn't writing.

We've had civilizations come and go, come and go, come and go. Some left to go elsewhere because one of the main reasons for going to another planet . . . It's an expensive process no matter who you are or what you have. It's time-consuming and expensive.

They came here to get raw materials.

David: How far back do you think civilizations on Earth that were intelligent have gone?

Pete: I think at least 200, 250 million years.

David: 250 million years?

Pete: Right. I mean, there's evidence for it. For example, in coal mines, we've had some coal mines that go down 3,000 to 4,000 feet. And in the mass of coal, they've broken out astrolabes, which are navigation devices that were set up for navigation throughout at least this galaxy, the Milky Way.

And these were semi-primitive in some ways, but absolutely perfectly filled the job.

David: If these giants come here with technology that can levitate stone and can work stone to make it basically floating like that, did they do anything underground? Were they able to manipulate stone underground, make caverns, anything like that?

Pete: Well, there were a lot of caverns that . . . And again, in the beginning, they came here, nothing was here except what was natural to being here.

There are a lot of places on Earth, because of the type of structure from the Earth, like in Arkansas, a lot of limestone . . . Limestone gets eroded away very easily by water.

Lots of natural caverns there. Lots of natural caverns in New Mexico.

They inhabited those first because they needed protection from the Sun, because the Sun goes through about a 29,000-year cycle. Where it's now going into a cycle where we're probably all going to have to live underground.

And I think that opens up the fact that there's a lot of underground things. They did build underground. There are a lot of things underground.

I've visited a lot of highways, I'll call them, underground in South America that are well-known and well-documented. But you go in these underground tunnels that are at least as big as the Chunnel they built from England to France under the ocean.

David: Wow! Tell me how these tunnels that you saw in South America, or wherever else, looked. If you go inside one of these . . . because everybody would love to see this, but we're not generally allowed to. I don't think anybody's ever gotten to film it.

Pete: Oh, there are books, and books, and books written on it.

David: Yes, but nobody has been able to film it. So if you saw it yourself, could you describe what it looks like for us?

Pete: I saw tunnels that had a flat bottom, had a kind of oval-shaped top to them. Now those look very much like natural volcanic tunnels, but they're not. They were actually put in there.

The walls are glass, but it's a flexible kind of glass. And they go for miles, and miles, and miles.

I know I've been on a little vehicle like a moon buggy that they do tours with and so forth, that goes, probably, . . . I think I've been as much as 120 miles down one tunnel.

David: Wow!

Pete: I did highway engineering at one part in my life, and they're obviously designed by engineers. They wouldn't appear naturally at all, and they wouldn't appear even with somebody that wasn't a very sophisticated engineer.

With a tunnel, when it was going over a hump, let's say, it ramps up to the hump, stays on part of a cylindrical surface, and then ramps down to another flat.

David: So help me visualize this. Are you talking about sharp-edged walls that look like it's laser-cut drilling? That kind of stuff?

Pete: Yes.

David: Okay. And you say it's a glassy . . .

Pete: It looked like you had a great big oval drill bit that just drilled it.

David: Wow! But it was flat on the bottom?

Pete: There are places in the early tunnels . . . Remember, time progresses, technology moves. There are places in the early beginning where you could see that it was ground off by some kind of cutter, like an oil well cutting head, where there were striae in the walls. So there wasn't an engineering reason for that. It was because that's the kind of cutter they were using.

Later, they advanced and developed, I'm sure, laser technology.

David: Why would human beings make something underground that was anything much taller than their own heads, because why would you create all that extra space if you don't really need it?

Pete: Because you need the air flow.

David: Oh!

Pete: Or the oxygen flow, or the gas flow.

David: Do these tunnels go to cities, or are they just long roads? Is there other . . .

Pete: Well, the ones that I've seen in South America appear to be roads.

David: But roads to where? Is there a . . .

Pete: I wish I knew.

David: Okay.

Pete: Like I say, I went 150 miles and turned around and came back. We ran out of gas.

David: Did you see any inscriptions on those walls?

Pete: Oh, absolutely.

David: Oh really?

Pete: Oh, yeah, there were . . .

David: Like what?

Pete: Well, symbols, yantras. There are yantras there to protect the people. There are yantras there to keep the glass flexible.

David: Yantras, like mandalas, you mean?

Pete: Like mandalas, yes.

David: Wow! So geometric patterns.

Pete: Geometric patterns.

David: Interesting. Now were these just like engravings in the glass, or was there also color?

Pete: Well, they were engravings, but there had been some type of colorant rubbed into them many times, and many times just an engraving.

David: Did you ever see pictures of people, or spacecraft, or anything interesting like that?

Pete: Never saw spacecraft, but I did see . . . There are various ones of them that have people.

David: Hm. Did they look the same as us, or was there anything unusual?

Pete: They looked like normal . . . minor variations of us. Like there's so many people that are seven feet tall, and there are so many people that are four feet tall. So you'd see the variations. And probably by the percentage of people who lived there at the time, was the same percentage you saw in variations of people on the wall.

You'd see a few small people, and eventually, you'd see a few tall people, and eventually, you'd see a few people that we'd say were within the boundaries of what our shapes are now.

David: Were the different sizes of height of people co-mingling in the same images?

Pete: Sometimes they were, and sometimes they weren't.

David: Are you aware of anyone finding unusually technological gadgets down there, like a hologram or a laser?

Pete: I know of nothing that was found in South America like that.

David: Okay.

Pete: And I mean, I looked, because I'm a technical guy, and I'm a . . . So it's one of those things I look for.

For example, I found tons of things in the British Museum that they had stolen from people that they . . . You know, the British ruled the world at one time.

And then the British Museum, and in the bottom of the Smithsonian, for God's sake, there's multiple stories of all kinds of stuff that they don't have the slightest idea.

David: Was there anything in the British Museum Library or the Smithsonian that you got to see that was so jaw-droppingly, obviously technological, like a really nice metallic form that looks very futuristic. Did you see anything along those lines?

Pete: Not along those lines, but I saw craft. I saw vehicles.

David: Really?

Pete: Yeah, in the structures itself, they were structures, a place to stay out from under the Sun, and under the rain, and live.

I didn't see people like you'd expect to go to New York and see highly architecturally decorated and built houses and things like that. I didn't see a lot of that kind of thing. And that's from an anthropological aspect rather than an engineering aspect.

They had, obviously, very advanced technology in building things, but as you would go from the tunnel entrance . . . very crude.

And as they built these tunnels, they were probably looking for minerals, and then a place to put more people, because there were quite a few people we know of that came here because their planets were crumbling or their system was crumbling.

And we're in a place where ours was going to go through a little spout of that, bit of that, but it's gone through it 12 or 13 times in the history that I know of, . . .

David: Hm.

Pete: . . . because we have this 29,000-year solar cycle.

David: Right. Earlier in our interview, you mentioned that there were underground cities that you said actually had pyramids built into the city.

Pete: Yes.

David: Could you tell us a little bit more about that, and is there any relationship between that and these tunnels?

Pete: Well, yeah, there has to be a relationship between the tunnels because that's how you get to these cities.

David: Okay.

Pete: And there are cities that are very large. There's one, there's a waterfall and with an automobile driving light – which is probably, I don't know, 300,000 candlepower – you can shine up, and you can just still see it coming. You can't even see where it fails from – in a mountain in Utah that I've been in extensively – and it's a 12,400-foot mountain very near population.

It's got several different caves that are commercialized, that are owned, probably, by the government or maybe by private parties, I don't know, but I've been in.

Some of them, you can go back in these caves as far as 17, 18 miles. You can row across a lake that you can't see the other side of. That's got a waterfall that's falling.

And this whole mountain, the very top of the mountain . . . I've hiked to the top of it when I was much younger and in much better condition. I've gone up to the 12,000 [foot] line. I think it's 12,400 and some feet.

And the soil right there is loaded with seashells, ancient seashells.

David: Hm.

Pete: So that whole mountain has risen up since we had these particular type of brachiopods and other types of sea creatures.

David: If pyramids have been found in underground cities, do they have a similar composition to the pyramids we see on Earth? In other words, are they made out of blocks of stone that are fit together? Or is there something more bizarre about those pyramids than the ones we see on Earth?

Pete: I see nothing more bizarre. They're made out of the materials that are usually nearby or inside.

David: Okay.

Pete: And remember, we're building that for its shape because its shape affects one third of the universe as to information.

David: Sure. I've done a lot of episodes of Wisdom Teachings on pyramid technology and how the actual shape does create these effects – very bizarre effects.

Pete: Absolutely.

David: So you're saying, then, that there's a civilization where the pyramid is not going to hit the roof of this interior cavity inside the Earth.

Pete: No. And also, we talked earlier about the truncated pyramids. There are truncated pyramids underground. That was more modern because we learned how to do . . . like, for example, the Great Cheops Pyramid. We know it had capstones on it that filled in the steps of the pyramid.

David: Right, the casing stones.

Pete: The casing stones. And they came down a certain way and stopped. That part of the pyramid and that shape, the rest of the pyramid concentrated information, and then that information sat up there in that top part and beamed up.

David: Are there any cities in which some of these people that built them actually still live and have survived?

Pete: As far as I know, the only one that I know of is the one in Antarctica.

David: Could you tell us a little bit about that?

Pete: Well, there was a crash there about 200,000 years ago. And at that time, it was tropical. There were palm trees there. Where the crash was, there were palm trees. That's about three miles under the ice now.

That's being excavated. They're putting a huge tunnel down into that one.

A lot of these ancient things look like some of the early science fiction movies, where they were trying to presume what the future was like, but way off from what happened. We advanced very rapidly.

My grandparents came out in covered wagons. So there's a tremendous advance in technology. You see a very definite change in the technology.

So the early stuff, the low stuff, that's down underneath two or three other layers of civilization, is very ancient, seemingly very ancient civilization, probably where they would have used these gear-driven navigation instruments. But the navigation instruments, the gears, the gear ratios, were all set up for this galaxy.

David: So what are we going to find when we look at Antarctica if we get the truth?

Pete: You're going to find several layers, separate layers, of occupation. You're going to find several separate layers of what the exterior was like at the time that civilization was there.

Only the last layer was it really Antarctica. Prior to that, it was a tropical island. And part of that, it was part of a very much larger island. Probably good pieces of it were pieces of Atlantis that actually picked up and moved down there.

Because it's like there are several parts of Atlantis that we find in the ocean, parts were left behind. There were a lot of parts that were highly radioactive and are still radioactive, parts that were destroyed.

But down there, one of the things you're going to find is those people, in the beginning, the early people down at that low level, were all giants. And some of them, as much as I understand, as much as 37 feet tall.

David: Wow! Well, I hate to stop you there, Pete, but that's all the time we have for in this episode. I'm David Wilcock. This is “Cosmic Disclosure”, and I thank you for watching.

UFOs under Antarctica Five-Fingered Mystery Season 7 Episod 30

Cosmic Disclosure; UFOs under Antarctica and the Five-Fingered Mystery **Season 7, Episode 30**

25 Jul 2017

David Wilcock: All right. Welcome back to "Cosmic Disclosure". I'm your host, David Wilcock, and I'm here with none other than Pete Peterson. So Pete, welcome back to the program.

Pete Peterson: Thank you.

David: We were talking in a previous episode about giant extraterrestrials that you said came here. And we ended on kind of a cliffhanger.

You said that to the best of your knowledge, there are crashes in Antarctica. And that the lowest of these crashes occurred where it was still a continent that did not have ice on it but was more like a tropical type of environment.

Could you tell us a little bit more about what happened there? And you had said something about people that were as high as 37 feet tall.

Pete: It's my understanding that some of the people from that . . . We call it the 'lowest crash' because it's deeper under the ice.

And along with . . . What happened was, there was a spaceship crash. You'd think that people with high technology would have less crashes, and they probably do. But when you think of coming across the galaxy and

the fact that they are probably going to be . . . At that time, they probably didn't have time travel. Or they probably didn't have a way to put people to sleep with no degeneration over long periods of time.

David: Hm.

Pete: You know, there are many things that can happen. And as perfect as man, or modern man, or ancient man, or far more intelligent man than we are, builds things, they're still going to have problems.

There are electronic parts that you build them as good as you can. We've done tons of beautiful things for outer space.

We've built them up so that they won't be hit by micrometeorites. We've built them up for a number of reasons, but we still don't get everything. So it's natural that they would have crashes. We've had a lot of UFO crashes.

David: Do you think it's possible they were in a war, that they might have been shot down?

Pete: Well, now, there are always . . . there's always been wars. But there have been things like the terrestrial, in other words, the nearer a planet, navigation and steerage of a lot of these early craft were done based on magnetic lines.

Well, when you get near a pole, the magnetic lines, instead of being nice and parallel, and parallel to the surface, where you could go over the surface, [at] the poles they bend in.

David: Right.

Pete: And go in the electromagnetic or geomagnetic pole; they go in. Well, here's a craft that's stabilizing itself on these things, and all of a sudden it gets sucked sideways and down to go in.

And so that's why there were probably more crashes in the Antarctic and Arctic regions.

David: Do you think there was something that was desirable in that area for why they wanted to try to land there even if there is this problem with the magnetic field?

Pete: Well, why did we want to go there? Why do we have a huge ice station there? There's all kinds of things that happen in the different environments that's there.

There's a lot of growth of organic chemicals, organic living chemicals. There's a lot of growth that can happen there that can't happen where we have a downward gravity rather than an inward gravity.

There are a lot of minerals and metals processing, semiconductor processing tasks, that can take place

when gravity is different, and when the electromagnetic field is different.

David: What was the approximate size of this ship to your knowledge – the oldest one?

Pete: The oldest one, I think, was probably about 300, maybe 300 feet in diameter.

David: How was it first discovered in modern times?

Pete: It was discovered by some of our spy satellites.

David: About what time did we start to try to get down there and explore this ship, that you know of?

Pete: Oh, boy. I had to be, I don't know, 16 years old.

David: Hm.

Pete: I'm 77.

David: 77 now?

Pete: 60 years ago.

David: 60 years ago? So 2017, we're talking about . . . now we're talking about like the late 1950s?

Pete: Yeah. Yeah.

David: What was the level of excitement about this kind of discovery? I mean, that sounds way more interesting than Roswell.

Pete: Well, we couldn't tell exactly what it was. In the beginning were lumps, you know? They're lumps, but they're not lumps that appear to be made by nature. They're lumps that appear to be made by man.

David: Right.

Pete: In other words, their geometricity was something that man would have done. So that's what got us excited.

But, they're, you know, they're three miles deep in an area that's . . . would freeze you in about 30 seconds if you don't have proper clothing on, on the surface.

And so you have to have special tools to even go after it. It's three miles deep. How are you going to go there?

You know pretty much that where this was, was in a valley, because there are mountains – there are mountains underground that are probably 2½, 3 miles deep, or high.

David: Right.

Pete: And so, you know, it's been known to be there. Because of the fact that it was known, that's where they built some of the ice stations over the top, so eventually, maybe, we'd find a . . . drill a hole, or find a way to go down.

Also, there are layers of things that are obviously man-

made things coming up from that area, because it's now . . . That ice there is now three miles plus or minus deep.

David: Did anyone find a hatch or a door or anything that would eventually allow them to get inside the ship?

Pete: No.

David: Okay.

Pete: It looks like . . . It looks like . . . I mean, the vegetation . . . There's a lot of vegetation surrounding it. That's kind of blurred the view that we had in the meantime, because the carbon absorbs radio waves, which is what we had to look at things.

So as our technology grew, we found better ways to look at the same pictures.

David: Well, could you just give us a view of what the hull looked like? If we eventually got to the point that we could reach the hull . . .

Pete: Oh, I have. We made the hull. [Note: I think, Pete thinks David has said 'hole',] It was all . . . It was all ice.

David: Okay.

Pete: So we're digging it out.

David: What did we see when we finally got down to the hull? What did the hull look like?

Pete: Well, it was metallic. It was long and tubular.

David: Did there . . . Were there any structures on it, or was it just totally smooth?

Pete: It had rivets, but they were surface rivets. I mean, they were chamfered, chamfered in, so they'd rivet. But that's not a rounded head that sticks up off the . . . off the surface.

David: Was there anything unusual about the material of the hull?

Pete: Oh, yes, very unusual, very unusual characteristics. We've not ever found – and this is normal, I would think – we've not ever found elements that were different from our normal table of the elements.

I mean, we say, "Okay, you have a nucleus and so many protons, so many neutrons." And then you have electron rings. Let's say there are different rings around that.

David: Right. The periodic table is all there is. That's everything.

Pete: Yeah. But we have found some that can be . . . There are things that can be radionically changed. Like, for example, a water molecule has been used for . . . water's been used for healing for as far as back as we have history.

And the way that they use water for healing is that they

lay on of hands and give it a different, a different . . .

David: So you're saying there was some material science breakthroughs in the hull? Could you tell us?

Pete: Oh, absolutely. I don't know what they were. That wasn't my . . . why I was involved at the time.

David: But what was strange about the hull? What was the physical thing we could observe?

Pete: Oh, what was strange about the hull was, it was there; it was as old as it was. We knew that people had visited here long before there were human beings, long before there were apes, long before there were any precursors to human beings.

I mean, we've gone through numerous complete changes.

David: You had told me before that when people tried to cut a piece out of the hull and pull it away that something happened that was unusual.

Pete: Yeah.

David: What happened?

Pete: It didn't cut out and it didn't pull away. Ha, ha. It pulled back.

David: It pulled back?

Pete: It was bent to be part of what it was.

David: So there was some gravitational weird attraction?

Pete: No. It was an informational field that was built around it, which is where . . . which is where after probably 15 years of study, I kind of figured out that there was a whole set of science that was dealt with . . . dealt with information.

David: You're saying that the hull had self-healing qualities?

Pete: It had self . . . It had self-preservation qualities.

David: So if I tried to cut a piece out, what would happen if I tried to pull that piece away from the ship?

Pete: Well, you would, say, probably start with a diamond saw. Today, you would start with a cubic boron nitrite saw – four times harder than diamond. You can cut diamond with it like butter.

And it started with a saw of some kind. You might have started with a torch. We tried a torch.

The metal would get metallic and you'd pull the torch away and go back, and it would be exactly the way it was before it got metallic.

David: Wow!

Pete: And it wouldn't run down the side. It would kind of wobble like an egg white.

David: Was there speculation that there might have been nanites inside the material, like nano robots, that were doing this?

Pete: No.

David: Huh.

Pete: I mean, that . . . I think there were those things at that time, but they wouldn't have been used there in that place.

David: What happened if there were larger cracks in the ship? Like, let's say that it broke in a certain area, water got in, it turns to ice and the ice expands?

Pete: It didn't work that way.

David: What happened?

Pete: It self-healed.

David: Hm.

Pete: I mean, they weren't cracks, there were bends. But it was like . . . It was like, you know, trying to stretch a shoe sole. You know, they're built to be flat and you walk on them, but you can bend them more than 90 degrees, and you put them on and walk on them some more and no damage.

So the metal was very, very, highly flexible.

David: So as the ice melted and turned to water, what happened to the cracks, if there were any cracks in the hull?

Pete: Okay, what we're talking about is ice inside the craft which expands as it freezes.

David: Okay.

Pete: It pushed apart in certain areas. It looked like this thing might have been built with a design in, again, six-sided tiles that fit together.

And it – like playing with magnets – that they would have magnetically stuck together but melded.

David: Wow!

Pete: And so when you tried to tear the thing, it like came apart and in like bricks that it was made out of, like LEGO blocks, in a way – not as technical as LEGO blocks.

David: Okay.

Pete: Just sides that fit. So it evidently shut it off.

It also appears that when, in that original time . . . Remember, it was a tropical area, not semi-tropical, a tropical area.

It looks like it might have been moved there. A part of it

might have been moved there, because it looks like the freezing that took place . . . because this craft was completely waterproof. So it looks like what happened was it started freezing, it started making pressure, these blocks started coming apart. And it may have been even magnetically, because they had some unbelievable magnets.

But anyway, it looks like these came apart, water got inside, then it froze, and then it shoved out, some of this stuff came apart.

And then when they got some heat down in there – to get the heat out so they can see what's inside this thing, you know, what kind of machinery is here, what kind of control surfaces are here – it went back together.

David: Wow!

Pete: And there were no . . . You know, there wasn't . . . There weren't places that were bent, like permanently bent.

David: Were there individual quarters, living quarters, for the people in the ship?

Pete: Again, that was out of my time. That was later, much later.

David: Okay.

Pete: I mean, they played with that thing for a long time.

And we had a little hole that you could . . . it was like trying to climb into the Lunar Lander, you know, 3½ miles [down]. Ha, ha.

David: Ha, ha.

Pete: I know that there were several people hired who had been contortionists, trying to get into some of the interior stuff.

David: So you said that you did have more contact with what was on the second layer?

Pete: Yes.

David: Well, let's get into that a little bit. Now, tell us first of all, is there any relationship between the ship at the bottom and the ship on the second layer? Were they . . .

Pete: They were extraterrestrial.

David: Okay.

Pete: That's about the maximum thing in common. I mean, they were probably, at least that one, was powered with . . . it had some anti-gravity in it.

David: The second one, you mean?

Pete: The second one. It had the same rotating masses and electromagnetic rotating, electromagnetic counter-rotating, electromagnetic fields.

And I guess the one that's there today, again, is another one I know almost nothing about.

David: What do you mean 'the one that's there today'?

Pete: Well, there are three layers of these things.

David: Okay.

Pete: Three crashes. And strangely one's down about a mile, and one is about two miles, and one's about three miles.

David: Hm. So tell us a little bit about what was discovered with the second craft. Was it a newer . . . I'm assuming . . .

Pete: Oh, much far different. It came from a whole different part of the universe, I'm sure.

David: Okay.

Pete: There were things that were similar, which told me that there was probably commercial traffic/communication between those societies.

David: Hm. Okay.

Pete: And wholly different controls. Those people had three fingers, so you had a place that your hand would fit into an indentation in a control surface. And it was . . . You had two thumbs, opposing thumbs, one on either

side, and a main finger.

David: Hm.

Pete: And we can later get into how that got me going on the Tower of Babel and what got confused, but we now have five fingers. We have five fingers specifically because we were confused with counting in tens.

David: If these people had three fingers, are you saying that they used base 6 in their calculations?

Pete: I have a dear personal friend of many, many years – 30, 40 years – who is just about to publish a book. And we show a base 6 mathematics in which 99% of all of our mathematics is proven absolutely wrong.

David: Did we inherit this system from them, this base 6 system, do you think?

Pete: I think that that was a good part of why my friend has been examining the base 6 system now for about 13 years.

David: Okay.

Pete: I don't think they . . . They not only didn't teach us that, what they did was gave us five fingers from three, or they gave us five fingers from six.

And when you look at the words that I've seen written – this goes back 67,000 years – when I see the words that

were written, I can't tell in translation whether it was three or six.

David: So we have this interesting time counting system where there's 60 seconds in a minute, 60 minutes in an hour, 24 hours in a day. A lot of this stuff would be called a sexagesimal type of system. So there's a lot of 6's in the time system.

I'm wondering, is that related to this inheritance that we got?

Pete: It's in everything. Remember, I told you the universe was tiled with six-sided tiles?

David: Yeah, it has to do with sacred geometry.

Pete: There are three universes: body, mind, spirit; Father, Son, Holy Ghost. It's all over, everywhere.

And if we use a mathematical system based on 6's, everything changes. Pi instead of becoming a long, long, billion long, random number, becomes just a simple series of groups of three.

David: Are you saying that if we look at something like pi, where right now 3.14159 that just goes on and on, does that become more like an integer if you do it in base 6?

Pete: Absolutely.

David: Okay. Do you still get decimal points?

Pete: And there's no such thing as infinity.

David: Hmm. Really?

Pete: Don't have to go there.

David: What would happen to pi if we did it in base 6, in this special math you're saying?

Pete: Well, from a practical standpoint, look where we've got in using pi as, you know, 3.1415 . . . you know?

David: Right.

Pete: Is it practical once you get past a certain point? You know, you're in billionths of an inch. You're smaller than the dimensions of the atoms that you're making things out of for machining and stuff.

So in that respect, that's, you know, it's okay. It's nice to know. But in the respect of where that leads us in astronomical dimensions and shapes and distances – very important.

I mean, you go out 700 light years, and one billionth of a degree is going to put you off a half a billion miles.

David: Sure. So let's get back to the chair, now. You said that these beings had three fingers. You said two of them were like thumbs and that they went into indentations.

Pete: Right.

David: Could you give us any more information about how they were actually able to control the ship from there?

Pete: Well, that was my job, was figuring out control and how was this thing controlled? And it wasn't a chair. It was actually a panel that kind of dropped off so that . . . They had arms somewhat like ours, I guess. So it dropped off.

And so you have a thing that your hands would have just fit right into, down into it. And then there was a clamp that came over about where an elbow would be. It would be a longer forearm. Anyway, it went down in and held it there.

So there were some stress forces, or they wouldn't have had a clamp there. And not a whole lot, because it wasn't a heavy duty clamp and a long thing like a cath.

David: Real quick, were the fingers longer than ours?

Pete: Yes, oh, much larger. Much larger!

David: Really?

Pete: Probably that long. [Pete spreads his index fingers apart to show a distance of about eight inches.]

David: Wow! Okay.

Pete: And the shorter fingers on the sides.

David: I'm not understanding, though, how they controlled the ship.

Pete: Well, they moved their fingers.

David: What would that do?

Pete: Every single thing to control a ship, everything.

David: Okay. Wow!

Pete: Yeah. And those units that it fit in were like a one-sided glove. The actual unit moved as well as the fingers, so you had a lot more control parameters.

And one of them stabilized, one of them did the tilt, speed or slow down, speed.

David: Were you able to tell how many joints they had in their fingers?

Pete: From what I looked at, I would say they probably were more like a . . . built like a worm or a snake, rather than with joints. But my understanding, from what I've seen, was they had joints in them.

David: If these beings have three fingers, and you said that there is a theory that we have five fingers, did they somehow modify our DNA on purpose?

Pete: That's what the Tower of Babel was all about. I got

seeing what this mathematician/philosopher that I worked with . . . I got seeing . . . And then from things I've noticed in the past, because I try to be a good observer, when things I saw in the past, the Tower of Babel and confusing the languages didn't make sense to me.

So much happened when that happened, when that occurred – at the time that occurred – far more than changing the language.

David: All right, let me say something dumb, just so everybody, even the kids who watch this, will understand this – because we do have kids eight years old, and I'm not saying they're dumb, but they might not have heard about the Tower of Babel.

So the idea is that at one time, everyone spoke the same language, could talk to each other. And then something happened that caused us to have separate languages and be spread apart?

Pete: No.

David: Okay.

Pete: Not at all.

David: Could you explain what the Tower of Babel was?

Pete: It was exactly the other way around.

David: Oh!

Pete: Everybody, every different race, came from light years, or millions or more light years from each other. They all had totally different languages.

We had a predominant language on Earth – different story. We had a number of aliens on Earth. And like we learn to speak . . . In Africa, there's a kind of a common language. Swahili is a common language.

David: So you're saying there was an attempt to make a common language for all these extraterrestrial immigrants on Earth?

Pete: That's a natural thing.

David: Well, how did this relate to five fingers?

Pete: That's where I'm coming.

David: Okay.

Pete: I just need to get there.

David: Okay.

Pete: Okay. So I got looking at the Tower of Babel, which was supposed to have confused our languages. That didn't make any scientific or mathematical sense to me whatsoever.

So I said, where am I going to learn? Well, I know that

the Vatican Library contains 80% of the Tower of . . . or the Great Library of Alexandria, the part that didn't burn. I know they have books that go back 72,000 years that are much more technical than the books today. We still haven't been able to figure out how to read many of those.

But we've gone through a number of different groups of people that were here on the Earth, running the Earth, living here. And so I said, what I need to do is look at what happened at the Tower of Babel, because it didn't make sense.

So what I found out was, what they didn't . . . they altered some parts of the language. Yes, they confused some of them. But they also . . . The main thing they did was changed the counting base.

And that made all the sense in the world, because you can do things with 0 through 5 mathematics. You can do things with that, that are totally different than anything you can do without that. And it's very subtle, but it's so totally important. It changes everything scientifically – everything.

David: So are you saying that the development of five fingers, in some way, threw us off from this ideal mathematics?

Pete: Totally threw us off, because you can use either 3

or you can use 6 – it's just two 3's.

David: Right.

Pete: So we have two 5's, so we go to 10.

David: Was this . . . Do you think that this . . . If this decision was made to give us five fingers, do you think that was done voluntarily?

Pete: No, it wasn't done voluntarily. They simply changed us – boom!

David: Okay. And why would they want to confuse people on Earth? What would be the goal?

Pete: Because man, or sentient beings' personal philosophy, is pretty much the same. We all started out trying to survive somewhere.

And so we needed to have survival mechanisms. And then we came up with mathematics. And we needed to have mathematics in order to do the engineering and things, so forth, things that we've done.

You can do that with any base, set of base numbers.

David: Right.

Pete: Like all of our digital world is base 2:0 and 1.

David: Can you tell us, what is so special about the number 3? What is it about 3 that makes it so intrinsic to

this number system?

Pete: Okay. We know, as best I know, nothing about the informational world. The informational world is the structure of the world we live in. It's the structure of the whole universe. Everything in the universe appears as 3's.

David: What are some examples?

Pete: Size, shape, gravity, travel, speed of light, light, electronics, you know, everything. EVERY SINGLE THING that's physical in the universe is based on 3's.

And I mean, everything, even to the point that, how many . . . like, if you . . . I've spent 10 years in the Marine Corps. And you learn that one person can control three people.

David: Hmm.

Pete: You have one platoon commander, and he has three squads. Each squad has three fire teams. Each fire team has three people.

And you'll find out, throughout history, you look at the structure of almost all churches, you have a pope, and then you have two bishops, you know, on and on, and on. And then they have sub-bishops. And it's everywhere.

And the tiling of the information of the universe is on six-

sided tiles. It's like a soccer ball . . .

David: Right.

Pete: . . . which is three triangles to make a six-sided device. So you can use 3's, 6's, 12's.

You look at, say, just take our . . . take the last number. It isn't 10, it's 9. 1, 2, 3, 4, 5, 6, 7, 8, 9.

David: Right.

Pete: You look at 9. 9 times 1 is 9, two 3's. 2 times 9 is 2, six 3's. Six 3/s add up to what? 9.

Two 3's add up to what? 9. Take 5. 45, 5 and 4 is 9.

David: Yeah.

Pete: You take 9 times 7 is 63. 6 and 3 is 9.

So it's very interesting how that spreads as the base net, like we're woven onto a net. And the whole net is based in 3. Everywhere you see a junction on six-sided . . . take six-sided tiles. Everywhere those sides of those tiles line up, you have a junction of three things. Every junction has three things coming together.

David: I'm curious about whether this has anything to do with fractal mathematics? Because when you zoom in on that Mandelbrot set, you keep going in and you keep seeing the same structure appearing again and again.

Pete: Yes, and you'll see that it's all six-sided once you get to the base of it.

David: Ah! Do you have any idea what Tesla said about the number 3?

Pete: My grandfather was Tesla's right-hand man at Colorado Springs, here. And I have all that information, was taught it from the time I was a child. And, yes, Tesla knew this.

Tesla was one hell of an engineer, but he also was obviously visited.

David: Right.

Pete: But he understood it, which, for them was unfortunate. But that's . . . Ha, ha.

And for us, he scared the hell out of us, and so he was put against his whole life.

David: Hmm. All right. Well, that's all the time we have for in this episode. There's still a lot more to talk about regarding Antarctica, and this fascinating story about the number 3, and people who may have naturally counted that way because that was built into their physiology.

All that and more is going to be coming up in a future episode of "Cosmic Disclosure". I'm here with Pete

Peterson. And I thank you for watching.

Three-Fingered Technology Season 7, Episode 31

Cosmic Disclosure; Three-Fingered Technology with Pete Peterson Season 7, Episode 31

02 Aug 2017

David Wilcock: All right. Welcome back to another episode of “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with our special guest, Pete Peterson. Pete, thanks for being here.
Pete Peterson: Thank you. Thank you.
David: We had been talking about crashes in Antarctica, and you had mentioned that, at the deepest level, there's one that landed on what's like a continental surface with tropical type of plants. And then you said that you had a lot more experience with a second crash.

Now one of the things that I find really fascinating in what you've been telling us, is that there was a set of controls for beings that had three long fingers. So there's a lot of really interesting connections being made here.

And we were also talking about the mathematics of base three and the idea that, perhaps, we were given five fingers to confuse us away from this ideal math.

What would be the practical application of this base three mathematics that you say your friend has discovered?

If we start using that, what are some of the technological breakthroughs that we might have, or scientific breakthroughs that we might have?
Pete: What would be the proximate result, in the very beginning, probably half the mathematicians in the world would violently protest against it. And the other half would see it immediately.

It can easily be seen because he's broken it down into a series of charts, of charting numbers, and with different colors for the different digits and the different, say, points.

And then we'd try to say, 'Well, here are all the things that this makes possible'.

We can't even begin to imagine maybe 1% of the things that it'll make possible. It's so totally changes our representational viewpoint of the universe. Mathematics is a language.
David: Okay.
Pete: It's a way that we can talk about numerical things. And it's THE language of science. It's how we talk about almost all the things we do in science, even biological

things and so forth.

Every form of engineering we have will change. Things that we couldn't ever do will become instantaneously doable by children.
David: Are there any other examples, that you know of, of beings with three fingers? You mentioned that this craft had sockets for three fingers.
Pete: Almost all the ancient beings have three fingers.
David: Really?
Pete: The ones that we have samples of.
David: Really?
Pete: I don't know, except very recently, of any alien craft that we recovered that didn't have three-finger control.
David: That didn't have?
Pete: Didn't have.
David: Really?
Pete: We don't have joysticks. The movement of the hand, wrist and hand, and fingers . . . and like I said, almost all the aliens have very, very similar apparatus. It's just that most of them have three fingers because it's much more . . . it's more than enough, or it's exactly enough.

And it's easier to deal with. It's easier to compute in your head for three fingers.
David: Some of the people watching this are going to say that intelligent life could not develop with three fingers because conventional anthropology believes that once we got the opposable thumb and could grasp and hold, that's once we were able to do toolmaking and develop intelligence.
Pete: They're absolutely correct, except you have two opposable fingers instead of just one – twice as much you can accomplish.
David: Really? So each of the fingers on the sides acts like a thumb.
Pete: Like a thumb.
David: Hm.
Pete: And in many of them, they go in like a thumb. I mean, they go in from the side. They're not three fingers like that. [Pete holds up three middle fingers.]
David: Right.
Pete: It's three fingers like that. [Pete holds up his thumb and index finger on one hand and positions the thumb of his other hand next to the index finger.]
David: Hm. Interesting. Could you tell us a little bit more about what was found in that second level, that second layer in Antarctica?
Pete: The control of exterior surfaces as if they were living surfaces and you were giving them commands . . .
David: Explain.
Pete: . . . to change the aerodynamics.
David: How could you give them commands?
Pete: Mentally. But you can also . . . In the beginning, it was with these control

systems. The newer ones are done mostly mentally.
David: Wow! Are there any of these three-fingered beings still around today?
Pete: Most of them.
David: Most of them? Okay.
Pete: Right.
David: Visiting us?
Pete: Ha! We're kind of the least people on Earth . . . in the universe that they would visit. What do we have to offer?

Well, I'll tell you what we have to offer. Why are they interested in us?

We have Ormus, which is another type of gold, which allows you to live for many, many years. [It] extends the life of the flexibility of the regeneration of the nervous system and the telomeres.

It's what Solomon's Mines were all about – Solomon with his many, many gold mines. He didn't mine yellow gold. He mined white gold.
David: Hm.
Pete: And he sold it for very high prices to all the leaders of the world.
David: So you're saying there's something about the Earth that makes Ormus in greater amounts than might be available on other planets?
Pete: No. There's something here that we have a greater concentration of gold.
David: Ah.
Pete: Most of the space exploration was for finding Ormus or manna, another word for a very similar type of thing, but it uses Ormus, and the principles by which Ormus functions.
David: So when we go back to the cuneiform tablets, the Sumerian texts, most of the conventional scholarship on that now is in agreement that these Anunnaki were some type of extraterrestrials and that they specifically were coming to Earth to steal our gold.

Do you have any comments on that?
Pete: We, as a race, exist only because we were designed to be gold miners. That's why we exist.

We were a genetically-manipulated cross-breed of the Anunnaki and . . . I'll give you an example, which is easy to tell.

I think we have about 92% of the same DNA as the chimpanzee.
David: Chimpanzee DNA is 98.8% similar to human DNA.
Pete: Yep. And very early people were not fair of look and bred by the Anunnaki. Ha, ha. They bred a lot more into us.

And that's why a lot of the aliens . . . I mean, you know, we're bipedal. We have hands, We have fingers. We have two ears, two eyes, two nostrils, one mouth.

And we look at a good part of the aliens and they're exactly the same.
David: Right. So, just to be clear, are you saying that the Anunnaki bred us out of something like a chimpanzee and then mixed their own DNA with it?
Pete: We were somehow bred into what had the DNA . . . similar, obviously very similar, to chimpanzee. It gave us the ability to squat down, get in small . . . Gold usually appears in very small cracks.

You follow the crack up through the Earth. It came up with water and then set up.

And remember that a lot of gold is found in quartz. Most gold is found in a quartz deposit.
David: Hm.
Pete: Quartz is piezoelectric. If you squeeze it, it produces electricity.
David: Right.
Pete: The electricity would do the conversion process. The movement of the Earth would make the electricity that did the conversion process. That's why we find yellow gold there.
David: Do you think there is a relationship between the Anunnaki that we're talking about just now and the crashes that you personally saw in Antarctica?
Pete: Well, I think there is because the Anunnaki were the ones who . . . Imagine a mining claim. Well, the Anunnaki were the first people to find that there was a lot of gold on Earth.
David: Hm.
Pete: So they had a certain claim and were given a certain task by their task masters, who are, very probably, Draconian.
David: Are these three-fingered people still on Earth with us today?
Pete: When I was reverse engineering the controls, I had three-fingered people helping me.
David: Really? What would they look like in terms of their head and face?
Pete: Well, there's a difference in the eye structure because of the inner eye fold between Orientals and Anglos. So you have that kind of difference. It's different.

Lesser nose and different nostrils.

Their mouths are round, kind of like an octopus sucker. I mean, they're more round than ours.

Their food is produced by them eating food and excreting an excretion that comes off their skin. And they scrape it off and eat it.
David: Hm. Is there anything about the head that we should know about?

Pete: Well, it's different, but it's very much the same.
David: What's the color of the skin of these beings that you personally interacted with?
Pete: Well, they are differing colors. I've seen them look almost like aluminum. And I'm not sure but what they might not be, you know, might be aluminum. They might be clones, because they tend to clone these people.

And they are clones, by the way. This is why their whole feeding system works differently than ours does.
David: Hm.
Pete: They're actually like robots, but they're more biological than non-biological.
David: Hm.
Pete: I have kind of clandestinely measured the electric fields to kind of get some information, and I can't find any different . . . much different than the human electric field.
David: Are there any known places on Earth where these people or creatures might have been?
Pete: Yep. Arctica, Antarctica, Alaska, Canada. Most people don't know, but the Yukon and the Northwest Territory are not part of Canada. They're owned by the . . . whoever the sovereign of England is. They're directly . . . They're privately owned.

But that's where most of the gold is found. Surprise, surprise.
David: Ha, ha.
Pete: Ha, ha.
David: Are they working on the surface or underground?
Pete: No, most of them work underground. And the reason was, because when they came here, we were in the same part of the 29,000 year solar cycle that we're in now. And the Sun's emitting X-rays like it was an X-ray machine.
David: Ah!
Pete: So they were evidently sensitive to those and are working underground.
David: Hm. About how many of these people do you think are on Earth right now, or in Earth, if you had to estimate?
Pete: I couldn't even begin to estimate, but I believe I know of some of the places, and of those that I know of, I'd say probably 350,000.
David: Wow!
Pete: I think there's probably that many in Antarctica. Just a guess.
David: Are these people using a language to communicate or do they speak more telepathically?
Pete: Well, most of them are more telepathic if they're older, but the younger ones and/or the cloned ones, they can . . . I've watched one of them learn to speak English with an accent that talks about “eatin' grits for breakfast”, in three to four days from arrival from wherever they come from.
David: Wow! Are there any of these beings in South America?

Pete: South America is one of the first places they were. All the Indians down there have, if you look at their outfits, they all have things like kachinas. They all have serpents. Serpents are big, which would be the Dracos, or parts of the Dracos.

Some of the Dracos are the nicest people you'd ever want to meet – ethical, moral, as we would judge, etc., etc. And some are pretty nasty.
David: You had said that you feel that the Draconians were in some way controlling or working with the Anunnaki, so could you define what you mean by Draconians so that we know we're on the same page here? And then explain the relationship between Draconians and Anunnaki that are more human looking.
Pete: Well, they're different. Some of them look almost human, but if you want to know what Draconians look like, go back to any ancient society and look at their dragon people.

They seem to be the older civilization that we know of, at all. They came from . . . Very few Draconians, naturally, were in the Milky Way.

The Milky Way is kind of a holding facility for people who are going to be growing the things that are required to keep the DNA of ancient societies working.
David: Really?
Pete: Yeah.
David: That's a very provocative statement.
Pete: That was our primary purpose, as best I can tell.
David: For the whole Milky Way?
Pete: The whole Milky Way.
David: It's sort of like a big genetic farm.
Pete: Yes.
David: Hm.
Pete: But a farm for other things, too – a farm for gold, which is required for Ormus, which is required to keep the telomeres working and keep the neural system flexible and the brain multiplying and getting greater and so forth.

It was responsible for all the ancients that we know of in our own history who lived to be 200, 300 – you know, Methuselah.
David: So could you explain for us if anybody got into the second ship? Did you ever get to see the interior or hear about what was inside?
Pete: I got a quick walk-through.
David: Really? Wow!
Pete: The reason was, I have done a lot of interesting work on alien control systems. It's one of my small areas of expertise or large areas of expertise.
David: Uh-huh.
Pete: So I look at the control systems, and, you know, I can figure them out. I can say, “Oh, I know what that's for. I know what that's for.” I've had enough experience with

it. I just know.
David: All right. Let me ask you some questions that might seem basic, but it will help us.

First of all, how high was the ceiling once you got inside?
Pete: I'd say it was probably, in areas, maybe three feet, three and a half, and in other areas, it was probably as much as six and a half or seven feet.
David: So it's kind of a crouchy situation.
Pete: Well, it's . . . Remember, it's saucer-shaped. It's going to taper down at the edges and get higher in the middle.
David: So what did it look like inside? What did you see?
Pete: Well, I saw a central core. That's normal on saucers because of how the ones I know of work that way. They work with a huge shaft. You could call it like a flywheel down below the deck and then an upper deck.

And then you find a lot of them have like a – I don't know what you'd say – maybe a control tower. They have . . . If they have windows that are up on a top, an upper thing, where you'd stand up and look out the windows.
David: Ah.
Pete: The piloting is not done with a window, it's done with a . . . like we do it today. It's done from a computer screen, a screen. I'm not saying a computer screen. They have very organic kind of things, like they can make it look just like you're looking right out . . . like you were sitting right out in the open in front of it.
David: What were the surfaces predominantly like? Were they metallic, or did they have a color?
Pete: I would say they were some form of coated plastic or coated metal. There was a coating.
David: What was the most surprising thing about it to you?
Pete: From the ones I'd seen, there was a lot of technological changes, which is to be expected. I mean, look at our aircraft.

Each generation . . . The ones we have flying now were started 20 years ago in design.
David: Right. You said that these craft were piloted by beings with three fingers and that they've appeared all over the Earth.
Pete: Right.
David: Does it appear that that population came from this ship originally, that that was their original . . .?
Pete: Oh, no, no. Not at all.
David: Oh!
Pete: Not at all.
David: Okay.
Pete: No, I know of probably five or six races that all have three fingers. I would say, probably most of the aliens have three.

David: Hm! You had told me before about something with a craft in Antarctica where there were panels that gave off their own light.
Pete: Right.
David: Could you talk about that for me?
Pete: Yeah, those are on the last two ships.
David: Okay.
Pete: It's a material much like phosphorus, or phosphorus. You know, we have these little things that you can pin on your ceiling that look like stars and moons and galaxies . . . kids trying to . . .
David: Right. Glow in the dark.
Pete: – glows in the dark – and shine lights on them. They glow for a little bit and then they die out rather rapidly.

There's a material that's being made in Australia right now that you put it out and give it about 30~45 minutes of sunlight exposure, and it'll give off enough light to see and, at least for a day, to read by before it runs down.

Well, the alien lights are absolutely much the same, except they light them up with ultraviolet or infrared LEDs, some type of photo . . . what we would call alien LEDs.
David: So you're saying that the interior of one of these ships had a material that they would light with some kind of LEDs, and then once they did, it would glow for a while on its own.
Pete: Well, it would . . . What they would do is . . . The lights flicker at, say, 1,000 times a second . . .
David: Okay.
Pete: . . . but they may only turn on every 10 cycles, or 20, or 50 cycles, depending on the outside light and the ambient light, and where they are in that programming pattern of the lights.

It looks like the whole ceiling in the control rooms, which is where I mostly have seen, all the ceilings made of . . . They're coated with this material. You can paint it on.
David: So let's talk about the third crash. You said that there were three layers of crashes there. What was the third uppermost layer?
Pete: Well, these are the ones I know about. There's three that I know about.
David: Okay.
Pete: That was quite recent. It was exposed to the outside. It was picked up by satellite photographs. It was a disk. It was at an angle, about maybe a 15° or 20° angle.
David: Okay.
Pete: And it obviously had gotten caught up with the control navigation systems, which we're using, . . . the electromagnetic . . . there's an electromagnetic field, and it got . . . where it got too close to where it goes straight into the ground and, I guess, it slid off.

I mean, there are quite a few electromagnetic things on the craft to help it stabilize, and it picks up the field and then reacts with the electromagnetic field.
David: What was the size of the ship like compared to the other two that were there?
Pete: It was an intermediate size. It wasn't that large, I'd say, maybe, 350 feet, 400 feet in diameter.
David: Hm. And what was the technology like compared to anything else you're aware of?
Pete: Upgraded, considerably upgraded.
David: Is there anything unusual about the third crash?
Pete: Well, the third craft had a lot of living people.
David: Really?
Pete: I don't know that they lasted very long because I know some of them didn't. I know some of them were shot. I know some of them were used for experiments.
David: You mean we found living people inside it?
Pete: They'd been living there for years.
David: Okay.
Pete: I mean, they were growing their own food. They were synthesizing their own food.
David: What were the people . . . What did they look like for this? You said they'd colonized basically once they got there.
Pete: I think this group had people that had been here for a long time that came from somewhere else onto this craft. Some looked like Dracos. Some looked like both the metallic and the non-metallic people with the large eyes.
David: Uh-huh. You're starting to describe what sounds like different types of ETs, but you're saying there's one craft. So could you please specify?
Pete: The one craft was used as a lifeboat.
David: Okay. And there were different types of beings inside?
Pete: There were 15 different species of beings there.
David: Really?
Pete: These are the ones I know the best.
David: Okay. And they were all inside this craft?
Pete: Well, they were inside of various compartments in the craft – different compartments, different atmosphere, different gravities.

And it looked like that some of them had been there for a long, long, long time.
David: When did the U.S. government find this craft?
Pete: I think they probably found it, maybe, about 1941 or 1942.
David: Really? Like World War II?
Pete: Yeah. Oh, yeah. Before the end of World War II.
David: You said that some of these people were killed when we first got there?
Pete: My understanding is that some of them were shot by guards. Some of them decided they didn't want to be restricted to this craft.

There were some of them that breathed our atmosphere fine. They went out for a walk, and then they got shot, because they didn't know the protocol, because they'd never been out there. The guards lied. You know, they were just typical human beings.
David: So the Germans seem to have gotten to Antarctica pretty early, maybe as early as 1938~1939.
Pete: Oh, they had huge [number of] people there.
David: Do you think that the Germans might have found this craft first since you say it's kind of on the surface?
Pete: I'm certain they found it first. I mean, I don't know that for a fact, but I can't imagine how they'd miss it.
David: Okay.
Pete: And, of course, they were way into that, and they were in communication with four or five or six different groups of aliens at the time.
David: So did the Germans do the shooting, or did the Americans do the shooting?
Pete: I have no idea. I would certainly think it was the Germans.
David: This craft . . . It sounds like they might have also gotten down to the other craft if you're saying they landed in the same proximate area. Were they trying to get to those other older craft?
Pete: Yes, the last one was trying to rescue anybody that was still there.
David: Oh!
Pete: And the people in the older craft were in a stasis-type of situation, but it had long since run out of power.
David: Hm. Were the people in the newer craft able to actually use any of the resources or activate any of the power systems?
Pete: They used a lot of the resources.
David: Of the older craft?
Pete: Of one of them, not the bottom one.
David: The middle one?
Pete: The middle one.
David: Okay. So you're saying then that they had created some kind of colony where they're in their original ship. They're also able to access the second ship. And that they had lived there for quite some time as colonists, if you will.
Pete: Some of them had, yes, the ones that lived on.
David: Did they have any ability to travel around the Earth? Did they have any craft they could fly in?
Pete: I don't think that they . . . If they did, they didn't really use them because they didn't want to be discovered. And I don't know that they did. I don't know that they had anything that was running.
David: But these different groups of people – you said there was 15 different types – they'd all learned to get along with each other?
Pete: About as well as 15 different groups from this planet would get along with each

other.
David: Well, you had mentioned that some of them look kind of like what we would call Greys.
Pete: Yes.
David: Others maybe look more human. How divergent were these 15 different types?
Pete: Well, you had the ones that were from insects.
David: Hm.
Pete: You had ones that were from underwater or under liquid beings. You had some that were Dracos. There are good and bad Dracos in a one-thirds, two-thirds kind of thing.
David: One-third good, two-thirds bad?
Pete: Yeah, of those that we know of.
David: Okay. So how would you have a predatory species like the Draco able to co-exist with other types of extraterrestrials? That seems hard to understand.
Pete: They don't.
David: Oh!
Pete: I said there are good and bad Dracos.
David: Okay.
Pete: A good Draco's not a problem, in fact, even less than not a problem. They're like the priests and the ministers and try to do good and so forth.
David: Hm!
Pete: Most of them are that way. There are a few of them that are a little snotty.
David: Well, then I would assume that the Dracos that were in this craft were the good ones?
Pete: Absolutely. The rest of them, they got rid of immediately.
David: Ha, ha. Okay.
Pete: Ha, ha. They don't get along well.
David: Did they allow any of us to go in there and work with them or live with them?
Pete: Well, yeah. A good part of the main staff and crew are humans.
David: Hm.
Pete: I mean, we are producing, helping them get raw materials and learning from them. It's a tit for tat.

You know, we're learning a lot of technology. We have technology right now that I would say is a good 300 years in advance of anything that anybody that lives above the ground knows about.
David: Sure.
Pete: Remember, we have lots and lots and lots of people living below the ground.
David: Are there any other significant things that have happened in Antarctica that you know about?
Pete: Well, I have a conjecture that the reason we went there is because we knew about what was going on with the Germans.

On the other hand, the ostensible reason we went there is to see what all we could do in the field of early, early, early field of semi-conductors, biological research. What could you do in this particular – and they called it like atmosphere. In other words, how much electromagnetic waves, how much gravitic waves, how much magnetic structure there was.

The magnetic fields were oriented 90° different than they are on most of the rest of the Earth.
David: Uh-huh.
Pete: And each one of those things we found, had very, very great import for synthesizing metal structures, for synthesizing chemical structures – fluids, both fluids and solids – for working with metals, for doing research work on magnetism, and finding out new things about survival in that particular part of the world because we knew that probably two-thirds of the world's leftover – left from our mining and so forth; those metals and those compounds and those rare Earth and stuff – all exist on these two continents.
David: All right. Well, that's all the time we have for in this episode with Pete Peterson. And Pete, I want to thank you for being on this program.
Pete: Well, I appreciate that.
David: Thank you. And I want to thank you for watching. I'm David Wilcock here with Pete Peterson, and this is “Cosmic Disclosure”. We'll see you next time.

The Grand Experiment Season 7, Episode 32

Cosmic Disclosure; The Grand Experiment Season 7, Episode 32

10 Aug 2017

David Wilcock: All right. Welcome back to "Cosmic Disclosure". I'm your host, David Wilcock. I'm here with Corey Goode, and in this episode, we're going to get into the Grand Experiment.

This is something that is of particular interest to me, and I'm sure to many of you watching this program, because this Experiment affects people who are human but may not fit in and may in fact have ET souls.

So here for more information is Corey Goode. Corey, welcome back to the show.

Corey Goode: Thank you.

David: So we've talked about the idea that there was a Super Earth in our Solar System that exploded 500,000 years ago, and that it deactivated some sort of protective grid around our own Solar System and neighboring systems as well.

And you said that shortly after this, a bunch of groups of ETs came in. And could you tell us a little bit about them just to recap? Who are they, and what do they want?

Corey: Yes, they've been referred to as this Genetic Farmer race. And they've been on some sort of a mandate throughout the galaxy to spread advanced life, and to monitor and assist the development of that life, as well as the spiritual development of that life.

David: Could you define "advanced life?"

Corey: Advanced life would be, I guess, like a human being.

David: Okay. So at what point did you become aware of this existing?

Corey: I first became aware of this program when I was around the age of 13, and I was in these MILAB . . . what we're calling the MILAB programs.

David: Okay.

Corey: Once I had been put through the process of receiving the full dose of the serum that they were giving me for intuitive empaths, I was also about at the end of the training, and they wanted to have me out in the field.

So around age 13, they took me to . . . which we've done an episode about . . . they took me to this Super Federation base outside of Jupiter.

And I've described before how when we would fly into this temporal anomaly, that you ended up in a giant, like, a bubble in space, that you couldn't see stars. It was just pitch black.

And the space station was sitting right there in the middle, and you would see craft going to and from, from different races. And they were coming to have a meeting.

David: So why would ETs doing this be interested in a 13-year-old kid?

Corey: They had no interest in me whatsoever. I was there as one of three IE supports. They usually would have three intuitive empaths with them to help triangulate any type of deception, danger, anything like that.

David: Okay.

Corey: And as I've described before, they brought us into the main meeting hall, and we sat in sort of a horseshoe fashion in a delegate seat. And at that point, they were giving us smart-glass pads to keep ourselves busy.

And I was starting to read information in those about the group that I was there to support and the different genetic programs that they were involved in.

And that's when I found out that there were 22 different programs.

David: Were you there to support an ET group? Is that what you were involved in?

Corey: No, I was there to support the Earth delegation, but I was there to monitor everyone other than the Earth delegation.

David: So even though this Earth delegation is not elected, on some level, they represent us for this council?

Corey: Right. They rotate in. The seat rotates to different people on Earth.

David: And what would be our role in these negotiations? What are we fighting for? What do we want? Why are we there?

Corey: We don't have a role. It's just an observation. We're just there to observe. And that was granted fairly recently, from what I'm told.

David: Did they ever intend for this information to be known to the general public, or do they want it to stay strictly classified?

Corey: Classified.

David: The beings that you saw in this Super Federation, how extraterrestrial would they look to us?

Corey: Well, there were 60 plus different groups. So some of them looked very similar to us in size . . . not in size but in configuration – you know, humanoid.

But a lot of them were very human-looking. They just had slightly different skin colors. I mean, they looked slightly different, but they looked fairly human.

There were some that were obviously a part of this Pre-Adamite group, the more ancient one. They were taller, and they had the elongated skulls.

There was even the ones that I had talked about in the previous episode we did, with green skin and black hair.

David: Do we know how local they are in terms of positions in our galaxy? Do they come from all over the galaxy, or is it more of a local area?

Corey: No, they come from all over the galaxy. Our local star cluster was once protected by a barrier, as we've discussed, by the Ancient Builder Race.

David: Right.

Corey: And once that was brought down from the inside by some of the inhabitants, these groups finally had access to all of this new, rich genetic stock. It was a very exciting time for them. They had not had access.

The only genetic programming that had gone on inside this bubble, if you wish, were groups that had become advanced themselves genetically and were traveling around within that local star cluster doing genetic experiments. And that had been going on for a billion years.

David: Just to review something that I believe you said before, are the people that evolve on planets in our local star cluster going to look more like us in general?

Corey: For the most part, they look very similar. Yes.

David: Okay.

Corey: There are different types that aren't as mammalian-looking.

David: It seems to me that we're pretty clear now that the Secret Space Program was being run by the Cabal, that there were some very negative aspects to it.

The term "Genetic Farmer", to me, sounds kind of derogatory. And I'm wondering if perhaps what they're doing might be actually more benevolent for human life on Earth

than how the Cabal-run Secret Space Program might have been seeing it at that time.

Corey: When you are the petri dish, or the rat in the cage, your perspective is a little bit different than if you're the one wearing the white coat.

David: But wouldn't you say that the basic idea of what they're up to . . . People hear the term "Genetic Farmer", they might think that this is some kind of slave mill in which human genetics are being used for food or something like that.

Whereas what you've described before sounds more like an ascension plan, that they're trying to help us.

Corey: Right. It is a spiritual and genetic plan, or program of evolution, that is working in concert with the cosmic changes occurring in different regions.

These cosmic . . . In different parts of the galaxy, these energetic influxes have occurred at different times and in slightly different ways. And they're working with the local populations in concert with those cosmic changes to enhance their DNA and to enhance their consciousness.

David: I was recently going through the Hindu sacred texts using a search engine, and I found approximately . . . and it's not exactly clear if they're all individual or not, but I found approximately 188 references to the Solar Flash.

Everybody talks about this Solar Flash, and you have groups that are Reptilian groups called the Rakshasas. You have clearly groups like Krishna that have blue skin but are human-looking.

There's a variety of groups that were on Earth at that time. And in these books, the Vedas, they talk about the Solar Flash as if everybody knows that this is going to happen. The Sun is going to give off this big flash at the end of the age, and that there is some kind of transformation of life on Earth.

So do you think that there is some relationship between the Genetic Farmers and what's going on in the Hindu ancient texts?

Corey: Yes, because this flash they're talking about is just a byproduct of these cosmic changes that are occurring, these energetic changes. So yeah, it's a direct tie-in.

David: It's interesting, because it's like reading other people's mail. Everybody takes it for granted. They all know this is going to happen. There's no question that it happens.

Corey: It's happened before.

David: Yeah, so it's something they consider just to be a basic fact, like we would say that the color red is on a stop sign. Same thing.

So if they are trying to promote our Ascension, what is the difference for us when this Solar Flash would occur as opposed to if we were just out in the boondocks and nobody had ever done any of these experiments on us? What's the difference?

Corey: Well, I'd like to think that there's some sort of structure to the cosmos. I think that most likely you would still be advancing but at a much, much slower rate. This is like putting turbo speed on the Ascension process.

David: It's almost like the analogy of the jack-in-the-box, where we're spring-loaded and POW! Something happens when the Solar Flash takes place.

Corey: Right.

David: What was the history of intelligent life on Earth, if any, prior to the catastrophe of half a million years ago where the Super Earth blew up? Was there any human life or intelligent life on Earth before that?

Corey: Well, interestingly enough, this Reptilian or Saurian group that has been in conflict with humanity for so long, claims that they originally were stewards of the Earth, and that they had their own experiment going on here, that some of these races that now have a mammalian experiment going on had sterilized their experiment, and that in doing so, they had lost three races.

David: Hm. Three different intelligent species?

Corey: They said there were three lost races because of this cleansing that took place. So that's one of the claims made by the Reptilians that I have not had verified.

David: The insider, Bruce, who gave me a lot of the information for "Ascension Mysteries", said that the prevailing opinion within his insider clique now is that the asteroid, or whatever it was that destroyed the dinosaurs, was deliberately steered in, and that the Moon was placed in its current position at that time to jump-start more of a mammalian cycle for the Earth by giving us seasons that we wouldn't have had without it.

Corey: Yeah, interestingly enough, my recent contacts with some of these airmen that escort Sigmund, they told me that I had gotten the dates wrong.

They said, according to their information, this Super Earth blew up 500 million years ago, and that it was 60 or so million years ago that the Moon came into orbit and that a lot of stuff . . . and that also they were telling me that it was really strange, but they were trying to push the dates out much further.

David: Well, my own research would suggest that they might have been disinforming you for some reason . . .

Corey: Yeah, yeah.

David: . . . because I've had multiple individuals say the same dates. And the 500,000-year-old date is precisely in the Law of One.

Corey: Right. And this is after Sigmund was missing, and they were asking me about his whereabouts. And so, yeah, there's a lot of stuff that's been kind of weird since then.

David: Do we know anything about what these three Reptilian races would have looked like or where did they go?

Corey: Nothing. Possibly, because the Raptor group, it is postulated that they are remnants of the dinosaur race that escaped under Earth, underground, and they escaped the cataclysm. So I don't know if they could have been one race that survived and three more are missing, but it's interesting to think about.

David: Hm. So I know we covered the Raptors before, but not everybody is going to have seen all episodes. So could you tell us a little bit more about them? This is a very strange thing, obviously.

Corey: And I found out since then that they have all different sizes and types.

David: Oh, really?

Corey: Right. And the ones that we see the most have feathered plumes on the back of their necks like birds. They look like a mix between a dinosaur and a bird. They've got really jerky bird-like movements.

The opening to where they are is somewhere in the jungles of South America. And they've been known to come out and hunt at night.

Now, this is information I've been given more recently second-hand. It's not anything I read on the glass pads.

David: Do they make speech? Can they make speech sounds? Or how do they communicate?

Corey: They communicate telepathically with each other.

David: Oh, so they don't actually speak.

Corey: Well, they make noises. They have all different types, they . . . just like birds. They have nonverbal communications of different types.

But, yeah, they do not have a voice box. They do not have lips or a tongue, or the gene that everyone who has speech on the Earth has – I doubt very seriously. But they are

high intelligence and are pretty ferocious.

David: Are they technological in any sense, or are they just basically a primitive species?

Corey: They're pretty primitive technologically.

David: Are you aware of any technology that they have?

Corey: Just basic . . . not high technology. Just basic technology.

David: What would be a basic technology?

Corey: Well, you know, like using sticks and rocks or putting things together. They're not super advanced.

David: Okay. So we have what appears to be a diabolical type of Reptilian race that was growing out of the dinosaurs on Earth. Somebody else comes in and decides that that needs to be sterilized and cleansed. Do the Reptilian groups believe that they still are in control, and they have land and title rights to this planet as a result of thinking that they were here first?

Corey: Yes, that is one of their claims.

David: Okay. So it looks like what we're seeing, if this did in fact happen, is that these Genetic Farmer groups are actually terraforming, that they're able to remodel an entire planet based upon a certain desired outcome. Would you say that's true?

Corey: Yes, that's part of the Grand Experiment.

David: And if we've talked about the Moon – we had William Tompkins say this as well – having just a massive amount of internal structure, is it possible that the Moon could be transporting, literally, an entire biosphere from one planet to another inside of itself as part of this terraforming?

Corey: Well, that is one of the theories, that it's that ancient.

David: Okay. So if the Genetic Farmers are actively pursuing this type of a strategy, it seems like it's not just about creating life as we see it today. We are in the middle of something. We are not the end of something. Would you say that's true?

Corey: Right. Yeah, we're pretty far along in the Experiment.

David: Oh, we are?

Corey: I would say so. We're obviously about to reach some sort of a crescendo, so we'd

better be a pretty good ways into the Experiment.

David: Would you speculate that the Experiment would conclude fairly soon after the Solar Flash, that whatever they get out of that is the outcome?

Corey: It won't conclude. It'll just change – go into a new phase.

David: Okay. So this could actually go on for, in our terms, quite some time.

Corey: It'll go on until everything returns to Source or whatever happens at the end of time.

David: Would these Genetic Farmer groups acknowledge at some point that we would grow up enough to meet them and be aware of what had happened?

Corey: Definitely. The goal of these programs is to get each planetary sphere and the advanced beings on it to a point of self-management. At a certain point, we will be technologically, spiritually evolved enough to where we will start managing our own genetics and the pace of which we want them to evolve. That is the goal.

They want to get everyone to that point. And at that point, you become a part of this Grand Confederation.

David: You've talked before about the galactic slave trade, and the idea that whatever they've done here is so much more valuable than in many other places, that we are a highly desired abducted commodity, either as slaves or as a source of genetic material.

Why do you think this planet is so unique in terms of what they were able to accomplish with these programs?

Corey: Most likely because of its location in the local star cluster. It's right in the middle, right by a supergate, so beings are going to be able to come here easily from anywhere in our galaxy or other galaxies.

David: Do you have any specific information about the actual components of the genetic programs that these guys are running?

Corey: There is a genetic component. There is a spiritual component, and a related component, consciousness component. And the last component is one that we discussed, it's the cosmic component – all of these working in concert with each other to work in timing with the cosmic component.

David: Okay, that's interesting because when we talked about this before, you would basically just describe it as a genetic and spiritual component, and it's like a sliding scale between one or the other.

So now you're also saying that there's a consciousness component and a cosmic component as well as a genetic and spiritual.

Corey: Right.

David: So could you delineate what these four categories would represent?

Corey: Right. And we just had never gone this in depth.

David: Okay.

Corey: The genetic program is pretty obvious. They're harvesting genetics from other star systems, galaxies. And once they've gotten to a certain point that they think will be a good catalyst for a different species, they'll bring it to that planetary sphere and begin to genetically manipulate that species.

They have to stick to cosmic laws very strictly – the laws of free will.

David: Uh huh.

Corey: So one of the largest components of this program – and it took a long time to figure this out – was a lot of the people, if not most, that are being abducted and experimented on, they were incarnations of the soul group, I guess you would call them, of the beings that are doing the experiments.

So basically, let's just say like an Eban – they don't normally do that much experimentation on humans – but if they wanted to go down and ethically do experiments on humans, they would have a number of their people leave their bodies, go down, go into incarnation on Earth, and then be a part of the experiment and allowing themselves, in an agreement before they went in, to be genetically experimented on.

David: Are you saying that cosmic law requires you to do that in order to play around with these experiments?

Corey: The cosmic law requires the benevolent ones to do this type of thing.

David: Wow!

Corey: They learn how to skirt these cosmic laws very well without crossing them.

David: Hm. Okay. So you have a genetic component, and you indicated that they are harvesting genetics from another planet. What does that mean? That sounds pretty terrifying.

Corey: Well, they're getting genetic samples from beings that they have developed to a

certain period. And there is a being over here that needs that same development. So to give them a turbo boost, they'll take those genes, transport them over to this group.

David: It's not like they're throwing a being in a blender and then just taking the tissue.

Corey: No.

David: This is a very technical process I assume?

Corey: At this current day, if you were to give a genetic sample, you're just going to spit in a cup or get a swab.

David: Right.

Corey: They don't have to put you in a blender.

David: So that's what you mean by "harvesting".

Corey: Right.

David: Okay. Then you also said there was a consciousness component to this. And could you explain what the consciousness component is and how that would differ from the spiritual component?

Corey: Yeah, the consciousness component is related to the spiritual component. The consciousness component is to have the target group, which would be us in this case, develop their consciousness on a schedule that matches the cosmic schedule that's about to occur. So it's all managed very carefully.

And consciousness grows at a certain rate that they have calculated, but they're enhancing it by coming in and giving us different, not just religions, but cultural things. You know, teaching us how to raise animals and all of that civilization kind of . . .

David: Yeah, this is interesting because it appears that if you look at this Atlantean catastrophe of 12,500 years ago, thereabouts, that in the aftermath, we have independent civilizations all over the Earth that seem to develop the technology of milling grain, metallurgy, plumbing, sewage, building technology, mathematics, time measurement, codified law.

You're saying that these Genetic Farmers are centrally involved in all that type of stuff?

Corey: Yes.

David: And it's because they're keeping us on a timeline?

Corey: Well, not necessarily a timeline, but keeping us on schedule for the Cosmic Event. And they want to enhance us much further through this genetic engineering and spiritual engineering process so that when this Event does occur, this Cosmic Event, that we are going to boost much further than we would if we developed naturally.

David: And it would appear that they are allowed to be "gods", if you will, to show up in person with their craft and in their incarnate forms as they're going through these stages of a rebooting of civilization like this.

Corey: Yeah, if they're in the middle of a reboot, but for the most part, no. The positive ones try not to appear in the sky or around human beings or other beings, unless that is one of the catalysts that they're trying to use to have them grow in consciousness.

David: So if they want to teach us about alchemy, or metallurgy, or astrology, or something like this, and they don't want to appear, how would they be doing it?

Corey: Well, through leaders. They communicate with people telepathically. They give people ideas. They've done that with our scientists for a long time, seeded ideas and information to them subconsciously.

And the spiritual component is very much tied in with the consciousness component. That also has to do with these Genetic Farmers. They are incarnating as us to be a part of this Experiment, but many of them are karmically tied.

Because of the experiments that they've been doing, they can't go any further in their evolutionary process unless we come along with them.

So a lot of their agenda has to do with having us progress so THEY can.

David: Do they all have languages where the name of their group would be something that would be able to be encapsulated in the type of consonant and vowel sounds that we use in our own spoken language?

Corey: Some [names] we'd be able to pronounce.

David: Are there others that have anomalies in how they speak that would not be at all familiar to how we could talk?

Corey: Well, I mean, go to Swaziland or somewhere just here on Earth and you hear the difference in how they communicate – clicking and pops and stuff. So yeah, there's a wide range of ways that they communicate – different types of languages.

But there is . . . There does seem to be one standard language that they share, that they use.

David: I was sitting down with Graham Hancock for dinner at Contact in the Desert,

and we talked about some similar subjects as this. And he reminded me that he wrote an entire book called "Supernatural" in which he discussed this idea that various indigenous cultures are making these cave paintings, and that that may actually be a far more sophisticated language, sort of like a hieroglyphic, that in some ways is tethered to a psychedelic consciousness, where the beings that they're drawing actually exist somewhere.

So I'm curious if any of the languages that these Genetic Farmers have may involve a type of written hieroglyphic that does have a psychic domain that it activates by looking at it in some way.

Corey: Yes. Yeah, there are a lot of pictographic languages that the non-terrestrials have that in them will evoke that type of response. In us, it may evoke a similar response. It just depends on whether you're close to them. There are a lot of variables there.

David: So we talked about four components total, and the fourth one was a cosmic component. So where does that fit in with what we're discussing?

Corey: Well, the cosmic component is that in each region of our galaxy, the way that the galaxy rotates, star systems and star clusters are moving into these high energetic gaseous areas that are a catalyst for this.

And they calculate how quickly you're moving into it. A lot of these energies they say have been hitting us since at least the 1930s, but they've been increasing, increasing.

So what they've been doing, the Genetic Farmer groups, is that they've been engineering humans genetically and also working on our consciousness and spirituality in a way to where when we get to the crescendo of this energy influx that we will be ready to make a turbo jump in changing densities, in changing consciousness, as opposed to if they hadn't have interfered, we would just be a slightly different version.

David: There's a lot of really interesting stuff in this Genetic Farmer subject for me, because the last time I ever used alcohol and drugs was on a Friday night. And I went to AA meetings starting on a Saturday.

And that same weekend, I believe on Sunday, I wrote this long essay about Earth. It was called "Earth as an Experiment."

And I was describing the idea that there were ETs that were setting all of this up of our lives on Earth as part of a grand spiritual experiment.

Do you think these Genetic Farmer groups show up as people?

Corey: Well, definitely. They incarnate as people, as human beings. So they will incarnate as a human being. And at the end of that lifetime, their people will come and

retrieve that soul and add it back to their collective. They usually have a backup body for them.

In fact, in the programs, in the beginning, there was some confusion, because some of these beings were coming in that we weren't real familiar with and abducting people and returning their, basically, dead bodies.

And what finally occurred is that when we captured some of them and interrogated them, we found out that they were here retrieving some of their people who had died in crashes here thousands of years ago.

David: Hm.

Corey: And their people got caught up in the reincarnation cycle here on Earth. And what they had to do is locate their people, remove them and remove the souls and put the souls into another container, and they would return the bodies. So they saw it as a rescue mission, and a lot of the people in the programs thought there was something more nefarious going on.

David: Yeah, that wouldn't sound as much like one of the benevolent groups as a group that's probably more just tinkering around but without so much of a spiritual focus.

Corey: Right, but from the perspective of this group, they're basically like "Star Trek Voyager" coming in to rescue some of their teammates that have been missing for 1,000 years or so.

So they have a completely different perspective on it.

David: So how much memory do these, as they're called in "The Law of One", the Wanderers . . . how much memory do these Wanderers have of who they really are once they become human?

Corey: They're basically a blank slate when they get here to keep them from violating the laws that they're trying to circumvent by incarnating here. So that's a part of circumventing those laws is to incarnate here as a blank slate.

David: What would allow one of these people to escape the reincarnation cycle? You said once they come in they have to reincarnate.

Corey: In our incarnation cycle, reincarnation cycle, for as much time as it takes them to, I guess, evolve out of it, which they can do a lot quicker since they've done it before, they're usually a species much more advanced than us, of course.

But also what can happen is they can be rescued. If they're not rescued, they're stuck here until they complete the cycle.

David: From what you're describing, it sounds like some people might interpret this as if they're getting into a soul trap by coming here.

Corey: Well, their soul DOES get trapped, but what occurs is that each planetary sphere has its own reincarnation cycle. And if they get caught up in it and don't have anyone to rescue them, then they're going to have to stay in it until they are able to get out through quick evolution.

David: In "The Law of One", it says that any Wanderer that engages in a consciously unloving act towards others gets caught up in this reincarnation cycle. That's actually stated in there.

I'm wondering if anything that you've heard personally would validate that idea.

Corey: I mean, the validation of that idea is basically the report that when these craft have crashed in the past, they've gotten stuck in our reincarnation cycle. So that would correlate.

David: Right. So let me ask you this. Are all of these various ET groups – you said there was 40 or 60 of them at various Super Federation meetings – are they all basically cooperating with each other and working for the same goal?

Corey: They're working for the same overall goal, and they're loosely cooperating with each other, and they have treaties and agreements, but they are not working in concert with each other.

A lot of these programs are competing programs as well. That's why they have kept their experiments separate from each other. And they've instilled religious things like, "Do not mix with other races". They didn't want to pollute their experiment with another experiment.

David: Would they ever actually abduct someone outside of their own group for any reason?

Corey: Yeah. Often these groups, they keep tabs on each other's experiments. And oftentimes, they try to sabotage each other's experiments.

David: Hm.

Corey: What will happen is they will go and abduct an experiment, or a person that is an experiment from one group, and get the genetic information, do evaluations of their spiritual and consciousness level to keep tabs on how quickly their competitor's experiment is proceeding.

David: So you said that religion is one of the ways that these groups are partitioned. So are you basically saying that geographic regions with particular races and their own

separate special spoken language, that those are all actually separate programs?

Corey: Well, yes. And the fact that these different races on Earth are found in different regions separated by oceans, usually, that is done on purpose to keep these experiments from intermingling and polluting one another.

And that's where a lot of the social programming, religious programming, has come in. You know, "don't marry outside of your race" – a lot of instilling of racism to make it "us against them".

They want us to self-manage on that level and not interbreed and mix with each other. That will pollute their experiments.

David: What would be the goal of them competing with each other like this? Is it about prestige?

Is there some sense of winning if one group proceeds faster or develops faster spiritually or technologically?

Corey: I don't think it's that type of competition. They want to see their agenda completed first.

And before all the treaties, a lot of these 22 different groups were battling with each other. When they first come into an area that has not been controlled by one of these Genetic Farmer groups, they have a whole routine of making claims, and there are skirmishes over claims.

So they go through this whole process, which usually ends in some sort of a treaty which they abide to until that experiment reaches the point of this cosmic portion of the program.

David: If you're saying that there are 22 different groups, and there are also up to 60 attendees of races, . . .

Corey: 22 different programs.

David: Okay.

Corey: 60 attendees. And some of these attendees, there will be like five groups working on one genetic program together.

David: Okay. That's what I thought.

Corey: And then some of them will be working on more than one program. They'll be working on other programs that are not in competition with theirs.

David: So you could actually have one particular culture on Earth in a geographically isolated region that might have as many as five different ET groups that would be working with them, incarnating among them? This kind of thing?

Corey: Yeah, and some of them might be just taking the genetic component. Others might be appearing to certain people on the ground and giving them religious ideology. Some of them might just be appearing to give them a boost in civilization, technology for civilization.

So they work in concert with each other.

David: I'm curious about the population density of some of these groups on Earth, because it seems to me that someone might erroneously conclude that you would have only a few categories of these programs, given the fact that there's only a few major monotheistic religions.

But what I'm hearing is, just like in medieval Europe, you have countries that are separated by mountain ranges or water, etc.

You might have something that we would think of as a country that could be its own genetic program, not just that it's a race or it's one particular religion, per se.

Corey: Right, regions.

David: Okay. So there could actually be a number of different geographically diverse regions that have their own experiments running in some sense.

Corey: Right. And sometimes multiple experiments, if they coincide with each other.

David: Hm. So in "The Law of One", people that have this type of heritage are called "Wanderers". They're also frequently called "Starseeds". And I would imagine that probably the majority of the people who watch our show would be ET souls, given what we know about them and how long I've been studying this, ever since 1996.

What would you say is a message that you could give to those people that might help them understand who they are, what they're doing here, and what their purpose might be?

Corey: Well, I guess the hardest thing for most of them to believe is that they agreed to come here and experience all of this. Remembering that you, on some level, agreed to experience all this is the best way to keep yourself grounded, I think.

David: What would be a spiritual guideline for those people in terms of understanding what their purpose is for being here?

Corey: Well, most of those people are drawn to those things already, to eating properly,

to raising their vibration through the type of information they watch and bring in, and meditating, that kind of a thing - and also mingling with people that are birds of a feather, I guess you would say.

David: It seems to me that a lot of people really get trapped into what esoterics would call "victim consciousness", this idea that they are being oppressed by something that is gargantuan and totally beyond their control. And a lot of people seem to "sign off" on personal responsibility and move into that very comfortable skin of the victim role.

What would you say, in light of people that would be prone to thinking that way because they're awakened to the truth, learning that they volunteered to do this, that they volunteered to be here?

Corey: Well, we're learning that maybe we're not victims after all. This victim mentality, maybe that's just another psyop. Maybe once we realize what we are and our true potential, we will feel empowered and not like victims anymore.

David: Hm. I like that. All right. Well, that's all the time we have for in this episode regarding the Grand Experiment. I hope you've enjoyed it. It's very fascinating to me with the history of being a Wanderer and awakening to that in 1996.

I'm David Wilcock here with Corey Goode. This is "Cosmic Disclosure", and I thank you for watching.

Cosmic Disclosure Season 8

David Adair Bio Season 8 Episode 1

Cosmic Disclosure; David Adair Bio Season 8, Episode 1

17 Aug 2017

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and in this episode, we have a true special surprise for you, one of the original and probably the heaviest of the original Disclosure Project lineup from 1997, the most intense insider in that original meeting, David Adair.

So David, welcome to the show.

David Adair: Thank you. Glad to be here.

Wilcock: Tell us a little bit about . . . Where were you born, and what were some of your early childhood experiences that brought you into this bizarre arena?

Adair: Ha, ha, that's well-phrased. I was born in Welch, West Virginia in Number 10 Pocahontas Coalfields.

Kind of like Hunger Games, you've got different districts. I was Number 10 District.

Wilcock: Ha, ha.

Adair: And being relative, about three miles from where I was born is Coalwood, and that's where Homer Hickam of October Sky was born.

And he and I both agree there must have been something in the water in that place. But when . . . I knew there was something different about me.

My mother told me a story. She said I was only one and a half years old, and I was playing with a toy, and, of course, it's a model rocket, but it got caught between the refrigerator and the wall. And she didn't do anything, just watched me.

I was looking around, found a broom, could barely walk, get over there, sweep the rocket out, pick it up and take off.

And my mother said to my dad, Fred, “Fred, there's something not normal about that child.

Wilcock: Ha, ha.

Adair: “You know, he's already got tools and recognition. He's only one and a half.”

Wilcock: Right.

Adair: So by the time I was seven, I would go to the local library, and boy, that's when it started. I started reading books in the 600 area, the science, really hard science, and then mathematics.

And this elderly librarian named Mrs. Hunt, she was watching me and said, “Are you reading those books?”

And I didn't mean to be smart, I said, “Well, there's no pictures in them.”

And she looks at it, and she goes, “Okay, let's see what you know.” So she grabs a book, just a random . . . I think it was one on singularities with black holes, and it's just really basic theorems, because around 1962, '63, there wasn't a whole lot on the subject.

Wilcock: Sure.

Adair: But you know, I read up on it, and I started explaining to her exactly how in detail it works with the mass star collapsing and graviton fields, event horizon, the opening.

Wilcock: Right.

Adair: And I was kind of drawing pictures for her, and she's watching me. And she said, “Man, you really do read this stuff.”

I said, “Yeah.”

Well, how many of these books have you read?

I said, “All of them.”

And she goes, “Why are you reading them now?”

“I'm going through them and correcting the mistakes in the books.”

And she just kind of stared at me, and I couldn't tell whether she believed me or not or just thought I was being smart.

But she said, “Tell you what. Would you like to get other books?”

I was like, “Oh, God. How can I?”

“Don't tell anyone, and I'll use resources and order them for you,” and she'd get stacks of them.

Wilcock: Wow!

Adair: And from other books, there'd be references to other books. So that's how I built my list, and I must have read about, oh, God, 1,800 books in a few years.

Wilcock: Wow!

Adair: And that was a real basis to work from at that point.

Wilcock: What ignited your passion the most in these 1,800 books or so that you read?

Adair: Space travel, pretty much so. Although I really liked all sciences – Earth science. I really liked Earth science, but space travel and propulsion, where it could go from then to maybe 100 years from now.

I just liked reading what people were trying to do or thinking of doing.

Wilcock: What was the most surprising mistake that you found in the books?

Adair: Their math. The math was off. I could tell right away. And there was a good reason for it. Nothing bad about the authors. They were just going on data that was coming off of satellites and probes and other research material, but we didn't have big computers then.

I could rework the math, extend it out and find where the errors are. And they really couldn't because they didn't have the support mechanism to do so. I don't know. I just could do it.

Wilcock: How did you start to apply this knowledge? Obviously, you're not just going to read books. You're going to want to do something with it, so how did you start to apply the knowledge?

Adair: That's a good question. There's a step that we can do, scientific method. You'll look at theoretical stuff, and then you move on to applied science.

Wilcock: Right.

Adair: So what does that mean in normal terms? It means that I was studying

propulsion, so I started building rockets. And I started off by solid propellant, which I made my own solid rocket fuel just like Homer Hickam did.

There were no . . . The Estes kits didn't come out until later.

Wilcock: Right.

Adair: But they were just too slow and too primitive.

I mean 4,000 years, China with gunpowder.

And so I jumped to the cryogenic fluids, liquid hydrogen, liquid oxygen.

Then we got some power out of that.

And cryogenic fluids with their temperatures running around 325° Fahrenheit below zero . . . when you detonate something like that, you get a lot of BTUs, so you get thrust.

And now you can start working on all kinds of math tables with that kind of stuff.

But it was all leading to something, and I wasn't even aware of it.

There are only two types of rocket engines today – solid fuel and liquid fuel.

Wilcock: Right.

Adair: We don't use anything else. Well, the big one that I built, Pitholem, she was neither one.

Wilcock: When you say “Pitholem”, what's that?

Adair: Pitholem is the name of my rocket. I was working on it, and I hadn't named it yet. My mother came in. “I just had a strange dream with you.”

I went, “Oh, this out to be good,” because she had some really interesting dreams.

And I said, “So what's the dream?”

So I'm just working away with my back to her, and I'm working on the bench. She said, “I saw these giant bleachers out in the desert, you know, grandstands. And there's railway tracks between them. Big railroad locomotives, several of them, were pushing this giant rocket laying sideways on like a sled. And it stopped, and there was

a gantry built way up to meet the door." You opened the doors, stepped out.

And she goes, "You didn't have any hair on top, but the hair on the sides was white."

I'm going . . . That's about all I heard for a few minutes. I didn't have any hair? That's not good.

However, she said, "You addressed everybody, thanked them for coming out, and said, 'Let's see this thing. You know, let's not talk. Let's just do this.'"

So I get back in. The locomotives pushes about a mile or two away from the stands. Then they come back, and then the thing just turns on. The sled motors turn on. It takes off across the desert floor. It goes up the side of a mountain, and then she said, "I guess the main engines come on and just . . . you know, you're a welder. How bright it is?" She goes, "It was way brighter than that. It was like the Sun."

Wilcock: Wow!

Adair: And she said, "We never saw you leaving. We just had an explosion, and it was gone. And the only thing left trailing in the vapors was like a rainbow."

And I went, "My God, she described electromagnetic fusion engine in our atmosphere perfectly." And my mom doesn't . . . My mom didn't know that.

So I'm just, "That's interesting."

And she goes, "Oh, one other thing. There was a name painted on the side of it."

"Really? What is it?"

She said, "Here, I wrote it down for you. I woke up spelling it. P-I-T-H-O-L-E-M."

It looks like "pithole", but with that M on it, it becomes Pitholem.

So anyhow, that's Pitholem. That's where it came from.

The Original Rocket Man with David Adair Season 8 Episode 2

Cosmic Disclosure; The Original Rocket Man with David Adair

Season 8, Episode 2

17 Aug 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with David Adair.

So why don't we start from the beginning, because you have a very significant story here. Take us through the story.

David Adair: Yeah, well a chain of events occurred while this was going on. My mother was a nurse, and she – this is 1966 – and she was in charge of a coronary care unit.

And my mother ran third shift from 11 to 7:00 in the morning. And she had this elderly patient, 95 years old, and his name is Irving. And the wife, Arizona, was there. And they had a son named Curtis that would come in about 3:00 a.m. in the morning to see him. Their last name is LeMay.

Wilcock: Ah! Ha, ha.

Adair: So this is Curtis LeMay's parents.

Wilcock: Right.

Adair: My Mother was the CC technician, and since she is in charge of third shift, Curtis LeMay has to go through my mother to see his parents. So they became friends.

And he would show up at 3:00 in the morning because he's like paparazzi, back in those years, I mean. You know, former head of the joint chiefs, designer of the B-52, founder of SAC, Strategic Air Command. Guy had a little bit of power.

Wilcock: Yeah.

Adair: So he got to know my mother, and they'd just talk, you know, personable guy. And he asked my mother, “What's your family like?”

She said, “Well, I got my husband and three sons.” And then she goes, “These other two sons are only about a year apart. It's pretty much normal,” but she goes, “that younger one, he's a little bit different.”

And Curtis says, “How so?”

“He's flying all these rockets out in the cattle fields. And they are really fast, and they're big.”

And he said, “Well, how tall?”

And she goes, “Oh, they're about twice my height.”

He goes, “Damn, that's big. And he's always writing stuff down.”

And that got Curtis's attention. He goes, “He had stuff written in a book?”

“Yeah, he's got this big notebook, about 93 pages of it.”

“Could you bring that and let me see it one night?”

So she brought it one night. I go to bed to get up to go to school, so I didn't even know it was gone.

She comes back 7:00 in the morning, put it back down. I never even knew it was missing.

Wilcock: Oh, wow!

Adair: So Curtis looks at it. He starts flipping through it, and he's a pretty smart guy himself. And he's going, “Man!”

He turned around to my mother and said, “You don't have a copier do you?”

Wilcock: Ha, ha.

Adair: And he copied about a third. Thank God he didn't copy the whole thing. But he copied about a third of it, and he took it to about an hour and a half way from home, to Battelle Memorial. That's a big think tank.

Wilcock: What was in the books that caught his eye? Were you just taking notes from these 1,800 books in the library that you'd read?

Adair: No. To do what I was wanting to do, I'd have to make everything new from scratch. So I extrapolated information as a base point, and then I started my own math. And I went into electromagnetic fusion containment.

Wilcock: For space travel?

Adair: Yeah, for containment of a sun, electromagnetic fields. So Curtis took those pages he copied to Battelle Memorial, and he asked them, “Is that just chicken scratch or something important?”

And their immediate reaction was, “Who is this? Where is this person that's writing this?”

He said, “Some kid launching rockets out in cow fields.”

And they go, “My God!”

So LeMay asked, “Is it real?”

They said, “Yeah. We'd like to meet him.”

And that's when things started with LeMay.

Wilcock: So LeMay and his people started to think that you might actually have developed a way to contain electromagnetic fusion. Now, was that not being done at the time? And what's the payoff if that works?

Adair: There were some people working on some stuff, Los Alamos. But what LeMay saw was that, according to Battelle, I was on the right track, and I was definitely closing in on it. And they just were kind of flabbergasted that I wasn't at some institution or agency working with whatever.

And to LeMay, his brain was going in something else. So what he smelled was a coup here that he could pull, and that is he would fund me for everything I need, and he would end up with something that he was dearly looking for, which was speed. He was looking for enormous speed, because he had a term that I've never heard before in '71, it's called “first strike”.

Wilcock: Right.

Adair: So I just thought, “Well, you're a kid. You're 15 years old, and somebody is willing to give you everything that you need?” Come on, you going to jump on it. You're not going to say “No”. I don't think so.

Wilcock: Right.

Adair: And there's been some critics that says, “You couldn't pull this off in a garage

by yourself."

You're absolutely right. I needed everybody. And this guy, with his power and his background – although he was a civilian, it does not matter in his power – he had the entire Iron Triad working for him, which is the commercial, and the military-industrial complex.

So we had people working with us. We'd sub parts out that we need, and machine stuff. So I had people like National Livermore Laboratories at Los Alamos, Oak Ridge, Tennessee, Battelle Memorial. The list just goes on and on.

And LeMay was very shrewd. We would break things up into small units, and send them out, farm them out. So when the person's working on a device for us, [he is] not really sure what it is. It might be some kind of propulsion thing, or this might be regulating a flow.

You couldn't put it together unless you had all the parts. And that was very smart of him.

So when everything came back to our building, our assembly lab, I put everything together. And there was a lot of personnel – hundreds of people working.

So it took us 26 and a half months. I'd go to school, get off the bus in the afternoon, and all these people were at this big garage lab that I had. And I had asked LeMay to get everybody out of their uniforms and wear blue jeans and plaid shirts, so they'd blend in with the locals, 'cause I'm trying to live a normal life here.

And he said, "Oh, man, that's perfect. It's like covert."

And I went, "What's covert?"

He's, 'Never mind. Just keep on going."

And I wouldn't talk . . . try not to talk about much at school, but the kids knew that there was something going on with me.

Wilcock: So what did LeMay tell you the goal was of what you were doing for him?

Adair: What he wanted was . . . he said, "I want the same thing you want, David."

And I said, "Oh, you want an electromagnetic fusion containment fire plant."

And he goes, "Yeah, that's what I want."

“Well, let's see what we can do to get it.”

And he knew for me to test my fuel, the best thing to test it in is a rocket body, which is exactly what he wanted.

So Colonel Bailey Arthur Williams was the XO for General LeMay. And he was there on site every day. I never saw LeMay. It was just Colonel Williams.

Once we got done, we were ready. It was completed after 26 months. And now we're ready to put it in a truck and take it to Wright-Patterson Air Force Base. And so we arrived there.

I do remember this: When we pulled in, there was a C-141 Starlifter. If you've ever seen them things, they are huge.

Wilcock: Enormous.

Adair: And there was this ring of heavily armed Air Force people around the plane. And they told me to drive over to it. I was afraid to pull up to it because I thought something's going on. I don't want to mess up with it.

An then I realized that was for me. That was for my . . .

Wilcock: Ha, ha, ha.

Adair: And I remember just standing there on this apron, big concrete area, and that big C-141 sitting there, and all these military people with weapons, and a lot of security people everywhere.

And I thought, “My God, this is all for me! I'm about to have a heart attack.”

So we get the thing rolled up onto the plane, and off to White Sands, New Mexico we go. So we're going to launch this thing.

And when we get there, we prep it. And then that's when more characters started showing up in this story.

It's a long way to explain it, but I had become friends with Wernher von Braun by then.

Wilcock: Ah!

Adair: And people go, “Well, how's that possible?” I won science awards. Oh, man, by the time I was 16, I had won probably over 100 scientific awards.

Wilcock: Wow!

Adair: And some of the trophies were taller than I was. And you have dignitaries hanging medals around your neck. Well, one dignitary was Wernher von Braun, which makes sense.

Wilcock: Really?

Adair: So now we're at White Sands with the rocket.

Wilcock: Did the C-141 actually hold the rocket inside of it?

Adair: Yeah.

Wilcock: Is that why they were guarding it?

Adair: Absolutely. LeMay picked it out. And I said, “Good choice.”

So we got to White Sands, and then there was . . . That's when things started.

This black DC-9 landed the next day. And I made a joke with Colonel Williams as he's watching the DC-9. I notice he's not smiling. I said, “Where's the white bunny head?” You know, on the side of the tail of the plane, because that's Hugh Hefner's plane flying around those years.

Wilcock: The Playboy bunny.

Adair: Exactly. And I looked up at him, and normally he's really a personable guy, but he's not smiling. He didn't look happy at all. And he had a good reason, because he was worried about something, and he was right.

As soon as the plane rolled up to our hangar, it stopped. Out came these guys, so help me, black suits, white shirts, little skinny black ties. Get closer to them, funny-looking triangle watch. And I didn't know . . .

Wilcock: Triangle watch?

Adair: Yes, it was kind of a triangle-shaped watch.

Wilcock: So they're agents?

Adair: Actually, what I believe y'all call MIBs.

Wilcock: MIBs, yeah.

Adair: That's the first time . . . I didn't know who they were. I just thought, pretty stupid people wearing that kind of clothes in the middle of a New Mexico desert in the summer.

Wilcock: Sure.

Adair: And then one little guy came out behind them after everybody got off. Now, he had khaki shorts and stuff. And I thought, “He's smart! He knows how to dress.”

And I'm looking at Colonel Williams, and he's not saying a word. And I asked him, “What's wrong, Colonel Williams?”

And he goes, “We're in serious trouble.”

And he goes, . . . “Well, who's the guy in khaki?”

And then he got closer, and I recognized him from a photo that von Braun showed me. He came in through Operation Paperclip. His name is Rudolph, Arthur Rudolph.

He is the chief architect of the F-1 Saturn V Moon rocket engines of Apollo. But he's also a full Gestapo Nazi, and he had killed . . . he was responsible for tens of thousands of deaths at Mittelwerk, [inaudible] where they had built the V-2 rockets.

And von Braun told me, if he'd ever show up in anything I'm doing, you are in such trouble . . .

Wilcock: Wow!

Adair: . . . because this guy will take command. So at least I knew who he was, and I could tell Colonel Williams knew who he was, and the Colonel wasn't happy.

So he come walking over to me. And I went, “Hi, my name's David. What's your name?”

He wouldn't answer. Oh he said, “Oh, I'm just a guy who goes around looking at hardware for the military. I understand you got a different kind of rocket here.”

I said, “Yeah. You want to see it?”

And he says, “Sure.”

So I take him over to it, and he gets on the opposite side of me. The rocket's between us.

And he said, “Can you open it up and let me see?”

I said, “Sure.”

So I take a big block of metal in my hand and run it down the hull, and the panel lifts up and slides over.

And he's looking at my hand and that block of metal, and he goes, “What is that?”

And I go, “It's called a dissimilar metal lock.” I went, “It's old. It's World War II technology. You don't have one of these?”

He got mad on that one. And I guess I may have insulted him.

But apparently, he didn't know anything about it.

He said, “That's pretty advanced.”

And I thought, “It's old stuff. It's not advanced.”

So he sticks his head down into the engine area. And I thought, “This would be a good time to say something to him.” Ha, ha.

So I lean over, and I was saying to his ear while he was looking down, I said, “This engine has about a million times the power of the F-1 Saturn V Moon rocket engines, Dr. Rudolph.” Man, he . . .

Wilcock: Which he made.

Adair: Oh, man. He raised up . . . and I'd never seen anybody get that red before. I mean, he looked like a barber pole.

Wilcock: Ha, ha.

Adair: And he looked at me and goes, “Who ARE you?”

And I go, “I'm just a kid that launches rockets in cow fields over here in Ohio.”

And then things just went south from there. He took over completely. He took over the launch. He had me reprogram the off-the-shelf navigation to an area about 456 miles, if I remember right, northwest of us.

Anyway, he dropped it in a place called Groom Lake, Nevada. And I guess y'all call it today, Area 51.

Wilcock: Right.

Adair: I never heard of Area 51 in 1971. Just Groom Lake's all I knew.

Wilcock: So what happened when you got it to Groom Lake?

Adair: Well, once it got out of White Sands and it launched . . . I was curious about Groom Lake, so I pulled geophysical maps, and it says it's just a big dry lake bed.

And I said, “You see this black DC-9's got rubber tires, you gonna warp it's belly in this dry lake.”

He tells me, “Shut up and get on the plane.”

Well, he's got a good reason, because when we get there, it's big runways. It's an Air Force Base. It's not on my maps.

Well, we kind of circled the base at first, and we saw Pitholem laying out on the desert floor.

Wilcock: And that's your rocket.

Adair: Exactly where they wanted it. That's the only compliment I think I ever got from Rudolph.

He said, “You landed it precisely on mark.”

And I thought, “Yeah. Well, good.”

Wilcock: The rocket could land?

Adair: On the sides of the rocket, I built these big slip-slide containers that have parachutes. These two parachutes came out, and these parachutes are tank parachutes, 70-ton tank.

Wilcock: Right.

Adair: So the rocket landed just like a feather. There's no damage. It's perfect . . .

Wilcock: Wow!

Adair: . . . just laying on the desert floor, parachutes blowing around it.

So anyway, we land. We taxi over to it. There were three hangars, I remember. And there was a lot of construction going on. This is June 20, 1971, and there's construction all over this base, runways, everywhere.

So we go to the center hangar, and I thought, man, this is really strange. None of this is on my maps, and these are government maps.

Wilcock: Ha, ha, ha.

Adair: I thought, “What the hell is this?”

So anyway, we get off. We get in these funny-looking go-cart things, big ones, really big, carrying like 10, 12 people.

And being in science, and oriented in engineering, I'm looking at these golf cars, and I go, “What the hell is running these things? It's not propane tanks. It's not electric.”

It's got a big intake that some kind of light recessed inside gets brighter when it runs. Then when it slows down, the light dims down.

Wilcock: Did it have any exhaust?

Adair: No. And it only made a strange . . . like a whine.

Wilcock: Really?

Adair: Kind of like a spooling effect, like a turbine. I have no idea what . . . And even today, I have no idea what those things were about, but they were fast.

You know, golf carts only go like 10~15 miles an hour. These things did 60~70 miles an hour.

So he says, “Get on this thing,” and I did, and we rode into the center hangar. And we stopped, and we're setting there. And then these yellow caution lights start flashing at all the doors.

Then out of the floor comes these little pipes with chains hooked to each part, so a

guardrail's coming up. And I thought, “What is that for? They don't want people walking in this building.”

Well, we got the answer pretty quick. The floor of this hangar is bigger than a gymnasium. The entire floor goes down. It's an elevator.

And I thought, “Man, that big elevator, and with a concrete floor like that, there's got to be 100 tons of concrete here.”

And I thought, “Man, you can't be using chains or cable moving something this heavy.” Sure enough, they weren't.

After we got down below the floor, you can see them spin, about 12 of them, spinning in the walls. They're worm gears. That's the heaviest load-bearing gear we ever know of. Each one was bigger than a sequoia tree.

Wilcock: Wow!

Adair: And I thought about that. I thought, “Where'd they cast and manufacture those things at?” Just amazing.

We went down, and I was so . . .

Wilcock: So it could hold a spectacular amount of weight.

Adair: Absolutely. I mean, you could drag an aircraft carrier in there and drop this thing.

Wilcock: Right.

Adair: So whatever they're moving is really heavy.

So we drop down. We go down, and I'm counting feet and estimate we're about 200 feet down, and we flush out with the floor. And man, what you see next is nuts.

You're looking straight forward. The other three walls are solid, so you're looking one way only.

You're look at this . . . it's like Mammoth Cave, if you've ever been in that thing.

Wilcock: Oh, I have been. In Kentucky.

Adair: Yeah, that cavern thing?

Wilcock: Yeah, it's huge.

Adair: It's like that, but this is about 10 times the size of it.

Wilcock: Wow!

Adair: It goes down, I guess, from the floor to the top of the arc is probably 100 feet. That's a lot. And then it comes down to the sides and goes straight down, canters down, and then it's perpendicular walls.

In these walls are all these shops and hangar bays and offices. And you see people working in the office. And we're just getting it on this go-cart thing.

And we go past all these hangar doors every once in a while, and some of the hangar doors are open partially.

And man, I saw some things in there I just can't explain. There was some really unusual craft. I can't tell if they were aircraft or spacecrafts.

[We] went on down further, and there was another thing over in the hangar, and it was open a little bit wider.

Man, this thing was a moose of an aircraft. It looked like a XB-70, the Valkyrie, but it had some different canards and different air intakes. So it's something else.

Now the first Valkyrie was destroyed in a crash. It sucked up a camera plane in its tail.

The second one was in a museum, the Air Force museum at Wright-Patterson.

So what was this thing setting here?

Wilcock: Right.

Adair: And once again, it had all kinds of things hooked up to it and drip pans. Now, this thing's running. I don't know what it's doing.

So we went on down – went on down about a quarter of a mile. And this causeway, the main corridor, it went clear out of sight as far as the human eye could see. And it would curve with the curvature of the Earth.

Wilcock: Really?

Adair: I mean, it's just enormous. So we're riding, and I just asked the guy a very simple question, “Wow, what did y'all do with all the dirt?” And they got so mad about that.

And I thought, why would a question about dirt bother him?

And I just made another off comment. I said, “What did you use, a phaser?” And they got REALLY mad then.

I thought, “[i] stepping on nerves here.” And I thought, “What is going on with this place?”

Wilcock: How fast do you think this golf-cart was going right now?

Adair: Doing about 50 [mph].

Wilcock: Okay.

Adair: So we're covering a lot of area.

Wilcock: Yeah.

Adair: And you still don't see the end of this thing.

Wilcock: Wow!

Adair: But here's where it gets good. Now that I'm kind of calming down from . . . I didn't know there was anything underground.

I was leaning out, just to look around the people sitting in front of me so I could look further, right? And I noticed when I stuck out my arm, there's no shadows anywhere. Like a paint booth. Can't have a shadow because you'll get a run in the paint. You can't see it.

But here's the problem. I can't find any light fixtures. None. No indirect lighting, no direct light, just no lighting fixtures.

Perfectly illuminated, and I have no idea even today how in God's name did you do that?

I have thought that it might be atmosphere. But how do you illuminate an atmosphere? You're breathing your own light?

Wilcock: Did it look any brighter near the ceiling? Or was it just evenly illuminated?

Adair: Evenly illuminated. Perfect. Illumination right down in the corners, which you'll have . . .

Wilcock: Very strange.

Adair: Yeah, that's a word for it.

Wilcock: Now, so you're driving down this hall, and the whole entire time, you're going at 50 miles an hour. You're just seeing offices, offices, offices?

Adair: Yeah.

Wilcock: And hangar doors with craft in them . . .

Adair: Yeah.

Wilcock: . . . and all this kind of stuff?

Adair: Yeah! Yeah! And some doors are . . .

Wilcock: So there must have been hundreds or maybe even thousands of them.

Adair: Maybe, if we didn't keep on driving. Like, we only went like a quarter mile.

Wilcock: Wow!

Adair: But it gets stranger. If things aren't weird enough, no shadows, perfect illumination, gigantic cavern I didn't even know was there, all these hangar bays, and most of them were closed tight. So God knows what was behind them.

Wilcock: Right. And how bizarre it is that you're asking simple questions, and they're getting all angry.

Adair: Yeah, and I mean REALLY angry. I was about to say to them, “Calm down! Gee! God! I'm just asking.”

And we come up . . . This is where it gets . . . If it's not strange enough, imagine this.

We pull up on the left hand side. There's this iris, like a camera.

Wilcock: Right.

Adair: About 40 feet in diameter.

Wilcock: Wow!

Adair: That is huge, y'all. We stop, driver gets out, runs over to this glass panel, puts his hand down. And he looks in this scope thing, and then there's a flash, and the iris opens up.

And when the iris opens completely, another, from horizontal, panel comes by to fill in the gap so we can drive across it.

Wilcock: So this was like a retinal scan that he had?

Adair: Yeah, I was sitting there going, "What is . . . Did I . . . Is that a retinal scanner and a palm scanner? We don't have anything like that." This is 1971.

We don't have . . . no PCs, no faxes, no modems, no cell phones, no laptops.

Wilcock: Sure.

Adair: We didn't have a handheld calculator from Texas Instruments. That's a few years off.

Wilcock: Right.

Adair: And you're telling me this guy's got a retina scanner and a palm scanner on a wall that opens this giant iris door? Which I ain't never seen an iris THAT big.

So I'm going, "Man, what's going on with this place? They're packing technology like I've never seen."

And so we go into this big gymnasium-sized room, and it's dark. Here comes the lights.

Wilcock: Let me just ask one question, though. Do you think that iris might be that they would have that instead of a regular door in case something inside exploded, and they needed to contain an explosive force?

Adair: Well, that or security.

Wilcock: Okay.

Adair: They surely didn't want you just walking in there, slide a door open and walk

in. You ain't sliding an iris open.

Wilcock: Right, that's true.

Adair: So whatever . . . [The] first impression I got, “Man, there's something really super-duper behind this door they don't want to have anybody just walking in seeing.”

Wilcock: Wow!

Adair: So we drive in, and the lights come up.

I thought, “All right, I'm going to find a light fixture.” I'm looking everywhere – no light fixtures. [It] comes on like a rheostat. [It] comes all the way to full luminosity to match what's out in the causeway.

And I'm going, “God, how do they do that? I'd give anything to know how you do that.”

So we pull up to a stop, and at the far end of the room, this big giant steel platform, like a stage. And then there's something up on the stage, but there's this giant curtain hanging down around it, which is not a material curtain, like cloth. It's like mudflaps off a semi, but as big as this curtain is. It weighed tons.

Wilcock: You're saying “giant”, but could you be a little more specific about the platform and the curtain?

Adair: Yeah. I would say just the curtain itself was over 100 feet wide.

Wilcock: Wow!

Adair: And it stood probably 25 feet tall.

Wilcock: Wow!

Adair: That's big.

Wilcock: So something big is behind there.

Adair: You better believe it. And there's cables that run up to the ceiling, and they just disappear into darkness.

Wilcock: Hm.

Adair: God knows what's up in there. I don't even want to know at this point.

So anyway, they raise the curtain. We get out of the cart. We're all standing there. They raise the curtain, and I was so disappointed.

I thought I was ahead of everybody, electromagnetic fusion containment engine setting up on the desert floor, right?

This curtain rises . . . Think of an 18-wheel semi with big sleeper cab. That's about 70-feet wide.

Wilcock: Yeah.

Adair: Or long.

Wilcock: 70-feet long.

Adair: About 70-feet long, 25-feet wide, 15-feet tall. It's an electromagnetic fusion containment engine THAT BIG!

Wilcock: Wow!

Adair: And I'm setting there, going . . . I had mixed emotions. I was disappointed, but I was just thrilled. Like, good God, mine is only about 2½-feet long, and this thing is just a monster.

Wilcock: Let me ask you a question then. Do you think that when LeMay saw the original 93-page notebook that your mother showed him, that he was seeing blueprints that you were making that looked similar to this very valuable object that they had in Area 51?

Adair: I think Battelle did.

Wilcock: Okay.

Adair: You know, Battelle Memorial, in 1971, they had 137 Nobel laureates on staff.

Wilcock: Wow!

Adair: It's a powerhouse. Well, a group of them figured it out, looking at the math. And they can tell by the math which direction or shape you're taking in physical form.

And so I would imagine that somebody in that group knew about this thing, or made

LeMay know of it. But to be humble, I was very humbled at the moment, because I had a Model A, and they had a Lamborghini.

Wilcock: Wow!

Adair: And even though the Model A and the Lamborghini are so different in powers, both of them are internal combustion engines, okay? They got some similarities.

Wilcock: Was there a color? What color would you say it was?

Adair: It had an aqua color, like ocean blue-green – really pretty. And it had a sheen to it. But unlike mine, this big one had an ectoskeleton structure over it, which I thought, “That is so weird”.

And it looked very much similar. It looked like HR Giger's work.

Wilcock: Really?

Adair: Yeah. And I thought, “Man, what is this?” Well, I had to ask. [i] looked at Rudolph, “Is this thing a machine or is it organic?” I can't . . . Because the ectoskeleton structure looked like bone.

Wilcock: Really?

Adair: And I'm setting there going, “Man, all I can say, that's alien-looking!”

Wilcock: Okay. If you say it looked like bone, and it was an ectoskeleton, would it be something that had a regular matrix structure, like chicken wire? Or did it have certain areas that were thicker, certain areas that were thinner? Were there dendrites?

Adair: Well, you know how bones start off thicker at the spinal column, like a breath cage.

Wilcock: Oh.

Adair: And it's breath caging all around. It's really protected well.

And there was steps leading up to the platform where it's setting.

Wilcock: In the bone?

Adair: No, we're back at the platform.

Wilcock: Oh, okay.

Adair: I turn around and ask Rudolph, “Can I go up the stairs and onto the platform and get close to this thing?” Air Force people say, “No!” Rudolph says, “Yes.”

And he's obviously in charge, because they just got quiet.

So I went up the steps, walked up to this thing, and that's when the weird stuff really started. You think weird now, it's going to get more weird.

First thing I noticed, my shadow's on it. And what I've been seeing through the whole thing, there's no shadows anywhere.

Wilcock: No shadows.

Adair: So I'm spinning around, looking everywhere, and I see no light fixtures.

Okay, we got luminosity with no light fixtures and no shadows. Now we got a thing sitting here that's got my shadow on it. Of course, normal down here.

And I noticed something else. As big as it is, on my device, I had probably five miles of wiring, screws nuts, bolts, well-aligned seams and all this stuff.

This dang thing, as big as it was, not one screw, rivet, weld line, seam. It looked like it grew, like an eggplant.

And I went . . . I was just dying to turn around and say to him, “How the hell'd you build this thing?”

And I figured I already got enough trouble asking about dirt. They'd really go nuts on that one.

Wilcock: If you say it's aqua blue, did it have . . . In terms of its specularity, was it glossy? Was it flat? Did it have a kind of an aluminum look? Was there particles in it?

Adair: Different areas – the bone ectoskeleton structure, that was flat. The big round spheres, which in my engine would be cyclotrons, they were like the aqua color, but they were smooth.

And when I walked up to it, I noticed my shadow, right? And so I go like this [raising his arms up], my shadow is just a split second behind me.

Wilcock: That's weird.

Adair: I was just . . . I'm watching it, and I turned around and looked at Rudolph, and he was happy. I could tell. Like, “Uh-huh, you're getting on and picking this up, are you?”

And I look at him, and he and I are the only one really eye connecting. Military people are like a different world.

So I just went, “Is this heat recognition alloy?” It's picking up the heat radiation off of me, and then reflecting it on the hull.

And I thought, “God, that's pretty cool.”

Wilcock: Well, I hate to stop you right there, but we have to make episodes.

Adair: Yeah.

Wilcock: So that's all the time we have for in this episode. It's very fascinating. Sorry for the cliffhanger. But we're going to be back with more with David Adair, our special guest here on “Cosmic Disclosure”. I'm David Wilcock, and I want to thank you for watching.

The Descent Into Area 51 with David Adair Season 8, Episode 3

[Cosmic Disclosure; The Descent Into Area 51 with David Adair](#)Season 8, Episode 3

22 Aug 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and in this episode, we'll bring you another round with our special guest, David Adair, a man who actually was able to walk around in Area 51.

David, thanks for being back.

David Adair: So glad to be here.

Wilcock: You're describing this thing that looks like you've just rolled into the scene of a horror movie.

Adair: Ha. Could be.

Wilcock: You've got some alien creature, if you will, with bones around it, and it's gigantic. You didn't have any fear as this is all happening to you.

Adair: Yeah, you're the first person that ever asked me that question. No, I was having fun.

This . . . The only thing I was scared of is Rudolph, you know? That human down there is dangerous, you know?

No, this thing was just . . . I was just mesmerized, you know, because every time I see something, I've got about 50 questions behind that.

And when the thing started interacting, you know, shadows and stuff like that, I thought, “Man, what is going on with this thing?”

So I turned around and asked Rudolph, “Can I climb up on top?” Because the bone work like lattice work. It's like a rib cage casting down on each end and then meeting in the center. The ribbing would kind of interlace, so it's protecting the big structure underneath.

Wilcock: So you could climb it like a ladder?

Adair: Well, you could. It's just . . . Think of a big skeleton of a dinosaur. You can crawl up that thing. So because it had angles and horizontals, and perpendiculars, so you're got ways of climbing up on it.

So I looked at Rudolph, [and I] said, “Can I climb up on this thing?” And he said, . . . First thing you hear all the Air Force people, “No!”

“Yeah, go ahead.”

Wilcock: Ha, ha.

Adair: And I actually said thanks to him – about the only time I ever really thanked him.

So I crawl up on this thing, and as I'm crawling on the bone, wherever I'm touching the bone structure, nothing. But the big smooth area that's recessed inside that the bone structure's protecting, when you touched it . . . I swim with . . . go to a place where you swim with dolphins and all that.

Wilcock: Uh huh.

Adair: If felt just like a dolphin's skin.

Wilcock: Hm.

Adair: And you push hard, and I pushed on it, it would go in a little bit, and then it's just like rock. So it's like organic covering with steel or some kind of alloy on the

inside.

Wilcock: So were you about 25-feet up when you got to the top, off the ground?

Adair: It's 15-feet high and 22-feet wide.

Wilcock: Okay.

Adair: I was about 15-feet up – about 5 feet more than a basketball goal, which is pretty tall.

Wilcock: Yeah.

Adair: Don't want to fall off. You definitely would feel it.

Wilcock: Right. You wouldn't . . . It wouldn't kill you, but you would be hurt.

Adair: You definitely would be hurt. So I crawl up on top. But when I pull myself up, I pushed against that smooth area, and then the thing . . . it started reacting.

Wherever my skin would make surface contact around my hand, cascading down inside would be these really pretty blue and white waves – kind of like that wave motion machine you sit in front of executives to keep them calm, a little device you can buy.

Wilcock: Blue and white, as in, like, light? Or what did it look like?

Adair: It had its own illuminosity. You could see it outside of the other material. And it actually glowed a little bit and would run down its side. You'd pull your hand off of it, and it would dissipate at the most outer reach, and then come back to where the original contact was, and that'd be the final area that would dissipate.

Wilcock: Did you feel any electrical charge or anything as that happened? Any heat?

Adair: No heat, but there was something going on, because I noticed the hair on my arm was standing up.

Wilcock: Ah.

Adair: So there was . . . but it wasn't any electrical charge. Maybe static, but I didn't get a shock.

Wilcock: Okay.

Adair: You could definitely feel something going on.

And so I lift off of it, and I turned around and looked at Rudolph, and I put my hand on it, and they're watching it, right?

And the way their faces look, it's . . . I looked at them. I said, . . . I took my hand off and I'm looking at their faces, and I take my hand back on it, and they were looking at it, and I was like, "Y'all haven't seen this before, have you? Huh."

And they got made over that. And so apparently, they can't get a reaction.

Wilcock: It likes you.

Adair: I guess. If it was a cat, it's be purring, I guess. But I asked Rudolph, "Can I climb up on top?" And he says, "Go."

Air Force, "No."

"Yeah, go ahead."

So I get up on top. And you're walking down what looks like – this is really weird. It looks like a giant spinal column with vertebrates.

Wilcock: Wow!

Adair: And there's a bone plate that . . . I would say it was probably about 4-feet wide, and then the vertebrates at . . . and then . . . It makes it very easy to walk. So I just step over the vertebrates.

And then I notice in between the vertebrates, there's this big bundle of . . . It looks like fiber optics. But it's not really fiber optics, because it's got a fluid running through it.

Now, the best way I can describe this fluid is, when we were kids, you'd fall and hurt your knees, get skinned. Your mom would come at you with this bottle, and you're going to hate this, cause it's called Merthiolate.

Wilcock: Ha, ha, ha.

Adair: And it's going to burn like holy fire when it hits your skin. But the color of Merthiolate was so unique. It's bluish orange green iridescent. You hold it up to sunlight, the bottle, it was gorgeous-looking.

Well, anyway, that's the kind of fluid running through these tubes.

Wilcock: Weird.

Adair: And they run all the way down the whole length of the spinal column.

But then I lean over and look down, and it's really cool. These fibers break out of the trunk case every other . . . almost every vertebrate, and they spread out running down its sides.

And when you back up from it, like down on the floor, you can see it clearly then. It looked like a human's neural synaptic firing system.

Wilcock: But you said they looked like fiber optics. So this . . . that part doesn't sound biological.

Adair: No. It just reminds me a little of a lyric or in a song, “partly fact, partly fiction, a walking contradiction.” That's what this thing was.

Wilcock: Ha, ah.

Adair: It's like . . .

Wilcock: Was it breathing?

Adair: That was something I checked for. Remember I put my hands on it?

Wilcock: Yeah.

Adair: I stood there, and I was being real quiet, and I was looking for a pulse or breathing.

Wilcock: Right.

Adair: I didn't feel anything. But by God, it wouldn't surprise me if it did.

Wilcock: Yeah.

Adair: If it sneezed, I would have jumped.

Wilcock: Ha, ha.

Adair: So anyway, I'm walking down it. I'm heading toward . . . and I think of a figure eight, an hourglass, a figure eight where they cross over. Right at the crossover, on . . . God, I don't' know what's front and back on this thing, but the side facing out to us,

there was a hole that was deep.

Wilcock: A hole?

Adair: A hole.

Wilcock: Like it had been shot and damaged?

Adair: Yeah. And to make things more confusing in trying to figure it out, something machine-like, where you'd blow a hole in it, the metal would be really sharp – shards and hanging around the blast area. It would be really sharp.

I saw a picture once, and it looked just like this. When they fire a harpoon into a whale, it has a grenade charge, and it detonates. God, what that must feel like to that whale. But they blow a big hole in the whale, and you see a big hole. And you see the blubber, right?

Wilcock: Right.

Adair: That's what this blast radius looked like.

Wilcock: Really?

Adair: It looked like blubber, not shards of metal. And actually, that . . . Now, that's starting to disturb me, . . .

Wilcock: Sure.

Adair: . . . because that looks like meat. And I thought, "Man, what in . . ." You know, I kept asking them, I said, "It's like . . ."

"No, it's a machine."

"No, it's organic."

"No, it's a machine."

It's like you go back and forth as you see things.

So I lean over the side and look down the hole and asked Rudolph, "Can I take a look inside the hole?"

Wilcock: Are there any lights or controls or visible . . .?

Adair: No, it's dark in there.

Wilcock: Okay.

Adair: Which, I don't know why I even wanted to go down in there. It's kind of nuts to think about it. Why do you want to crawl in a dark hole?

Wilcock: No kidding. Especially, this is already, like, a scene from a horror movie, right?

Adair: Well, I figured at this point it doesn't matter. I'm gone anyhow, so . . .

Wilcock: Ha, ha, ha.

Adair: So I asked Rudolph, “Can I go inside this hole?”

Boy, the Air Force people went from “no” to “definitely not”. Rudolph said, “Quiet. Yeah, go ahead.”

And so I stepped down, and I'm expecting it to be mushy, you know, give way, but it doesn't.

Wilcock: Did it smell like anything?

Adair: There's another good question. There was an overall scent to the thing. I know this is going to really sound strange. It smelled like baked goods.

Wilcock: Really?

Adair: Now you'd expect some kind of chemical, metallic odors and stuff, right? No, this thing smells like cookies. I have no idea what that is.

Wilcock: Weird.

Adair: So I step on the . . . on the torn flesh, blubber, metal, whatever. And when you step on it, it doesn't give at all. You can feel that it's like, almost like a rubber, a real hardcore rubber, like rubber on a tricycle tire, you know?

Wilcock: Uh huh.

Adair: And I thought, “Man, what is this? What is this thing made of?”

So I step down. I squat down and just slip . . . And just as soon as I get to the event

horizon of the area, a light comes on inside. It's like a blue light.

Wilcock: Really?

Adair: Very light baby blue. And you can see things down in there. And I'm looking at this going, “Oh, man! What . . .”

Whatever interacts with this thing, it's got to be a bipedaled anthropoid, because there's a . . . The floor has a platform that drops off.

There's a chair - like chairs we're sitting in, and you see our feet are here. That means we have legs and knees bent. So whoever is fooling with the thing is built like me and you.

Wilcock: Same sized body? Bigger, smaller?

Adair: Same. About the same size.

Wilcock: Okay.

Adair: A little bit bigger so it can accommodate you with some comfort.

So I slide on down in there. And this is where it's really interesting. Apparently, this is a power plant that would be inside a spacecraft. It's gotta be.

Blast came through the hull of the craft, came into the side of the engine, blew its way into this area. And what I think this area is, is a diagnostic center. It's where maintenance people, or crew members, would sit down in this chair.

There's no chair there because you can see some outlines, remnants of a chair. But the blast came through, come through the wall, through the chair, taking it out, into this wall.

Wilcock: About how big is this room that you're in right now?

Adair: About the area between me and you.

Wilcock: Oh! So it's pretty small.

Adair: Like a cockpit.

Wilcock: Okay.

Adair: So . . . but this wall over here on the right, you're sitting down, there's, like, an observation window, which I thought was the coolest thing, because if it's running, that means you can see the plasma flow in this thing.

Wilcock: Wow!

Adair: That'd be so cool. How cool would that be?

But the blast went through the wall, and the next thing you encounter would be the electromagnetic shielding, the fields.

Whatever blasted through there, it either . . . the wall, the fields, stopped it, or they both stopped at contact. Because as soon as this made contact, simply because that kind of blast occurred, and the rest of it's intact, you would have to shut down in a picosecond, about a trillionth of a second.

Otherwise, the engine would have been vaporized by the heat that's inside the plasma fields. Inside the electromagnetic fields, nothing would survive.

So it shuts down real . . . a fail safe. That's how you shut it down in an emergency.

So if somebody was shooting at this thing, they knew exactly where to hit.

Wilcock: Wow!

Adair: I mean, within an inch. They knew exactly where to hit the thing to shut it down and still keep it intact.

Wilcock: Did you look for a control surface with the seat?

Adair: Yes, I did. Matter of fact, I sat down in what was left of the chair, and right in front of me are these two big pods about the size of a volleyball if you cut it in half.

And they've got indentations, and it's where your digits go. However, it wouldn't be like that. [David Adair puts his hand out palm down.]

The only way you could get your hands into it, us, you've got to put these two fingers together. [He brings his middle finger and ring finger together. Then he raises both hands and shows his index finger, middle and ring fingers combined, and his little finger.]

So that's what you've got. And then you set it down, and you'll sink down till the top of your hands are even with the surface of the pods.

Wilcock: Are you saying that there was more width in the area where your two fingers go together?

Adair: Yeah, just enough for you to sink down into it to where the top of your fingers are now flush with the pod.

Wilcock: Okay. Okay.

Adair: So it was obviously . . . That's what you're supposed to do.

Wilcock: Well, now this is interesting, David, because this sounds very, very similar to what Arnold Schwarzenegger puts his hand into at the end of “Total Recall”. And I'm wondering if they might have borrowed that from you, because you might have done this testimony before they made that movie.

Adair: Oh, yeah. I remember seeing that.

Wilcock: Except his . . . It's these two fingers in “Total Recall” [David Wilcock holds his index finger and middle finger together] not these [middle finger and ring finger]. But it's very similar-sounding.

Adair: Yeah. Well, this is how I did it.

Wilcock: Okay.

Adair: Yeah, but if I remember “Recall” right, the next thing didn't happen. I sat down. I finally get my hands settled in, and no sooner than I get them all settled, I thought, “Well, this is cool. It fits.”

These interlocking rings came up like a . . . I saw a Batman movie with the Batmobile and its shield. And it goes, “Chink, chink, chink, chink, chink.” You know, it's covered.

Well, that's what it did, except it was faster than the Batmobile. It just went, you know, “Ching, ching, ching, ching”. And it was already up to your knuckles.

Wilcock: Wow!

Adair: And this thing has got you. Then all those rings started tightening down, and I was thinking, “It's going to cut my fingers off if it don't . . . “ So I started to yell for help.

And it's just . . . The interaction with the thing was . . . That's what it was designed

for. Maintenance people would put their hands in. I didn't build it. I don't know the language. I don't know anything.

So it's just . . . You know, I just wonder what they did with it. But obviously, it was designed to maintenance. And with that window to look at the plasma field, obviously, they would do alignments.

That's something else I saw in the plasma fields. I have these very specialized plates that move the electromagnetic field so I can . . . for efficiency.

Wilcock: Uh huh.

Adair: They had something that looked like a tetrahedral turned inside out. And they were spaced all along the walls, but they were all in line of sight with each other.

So I think that's how they . . . I don't know what they're doing. It was just . . .

Wilcock: So you saw tetrahedrons inside?

Adair: Yeah.

Wilcock: What do you mean “turned inside out”?

Adair: It's the way . . . You know how they look like a Moravian star?

Wilcock: Uh huh.

Adair: Okay. Imagine you take a Moravian star and you do a reverse of it. One spike would go this way. It'd actually go in the other direction.

Wilcock: Okay.

Adair: And I could tell it's like some kind of reverse matrix that's not known to us. Maybe it had something to do with polarity of the electromagnetic fields. I don't know what they were doing. I didn't design it.

Wilcock: Right.

Adair: And I guarantee you, they were smarter than me.

Some of the designs, though, I saw throughout the thing, I memorized. So when I reassembled my own version again, I cheated. I was told their idea. They had better ideas.

Wilcock: So you must be scared. This thing is – pfft! It's like popped over your hands.

Adair: Yeah. Well, I just . . . Yeah, I just about freaked out, and I started to yell for help. And it says . . . There's a voice I can hear. And it says – sounds like Lauren Bacall . . . Ha, ha.

Wilcock: Really?

Adair: Some female sultry voice, and it says, . . . like Veronica Rabbit, or something like that. It just . . . "Be quiet." And it's got a hold of it.

And I went, "Okay." You know, like, "Oh, God!" You know, how stupid am I? I crawled inside an alien vehicle, stick my hands down in it. It grabs hold of me. God knows what's going to happen next.

You know, I thought, "I'm not thinking through this stuff. It's too much . . ." A phrase kept going through my head, "Curiosity's going to kill the cat," you know. There was definitely information exchanged.

I remember coming . . . It was really like an intense heat coming up my arms. And when it got to where my neck was – carotid artery – it's just like . . . All of a sudden you have a heads-up viewer.

Wilcock: Oh, wow!

Adair: And images you see are just unbelievable. I couldn't make sense of anything. I saw different star systems.

What I came away with is impressions. That's how I think it talks to us, anyhow, because I guess we can't speak their language, so how else do you communicate?

Well, we are beings of feelings. That's a whole new world, another way of communicating, like body language. Well, this is feelings and impressions.

Wilcock: Did you see any hieroglyphics or unusual writing like that?

Adair: No, but I saw entire civilizations, advanced worlds. This thing is a power plant that is intercon . . . it'll connect into a big craft. Then you have a crew. All three are sentient beings.

Imagine your power plant's alive. Your spacecraft is alive and your crew, and y'all interlock with each other in symbiotic relationship.

Wilcock: Wow!

Adair: What a way to travel through space, God almighty! Pretty much eliminate the need for damage control. Think about it.

You get in some trouble, get hit or something, you're the captain sitting in the bridge. You don't need somebody to tell you where the . . . You know where we've been hit because you feel it.

Wilcock: Right.

Adair: You're aware of it. You know, somebody blew a hole in your side. You would know it.

And even if you didn't have visuals, you could tell where the enemy is anywhere around you.

Wilcock: Right.

Adair: Man, wouldn't the Navy like to get a hold of that?

So anyway, I thought – you know, what felt like maybe hours. I'm sure I was there just a few minutes, because the people downstairs didn't even seem to be, you know, alerted it was long or even that I'd been in there too long.

So I come out. And soon as I got to the opening, the light goes back down – just, like, shuts off. Some kind of, you know, sensory.

Wilcock: I'm curious, though. Were you able to see in these visions what these people originally looked like or anything about their civilization? What the buildings were?

Adair: Yeah, there were a few things that stuck in my head. Apparently, this symbiotic society, it's old, man. It's not thousands of years. It's not a million years. This thing's like eight or nine billion years old.

Wilcock: Really?

Adair: It's the oldest thing there is in the universe. You know, it's just . . . It's the first of the species of the universe – not just the galaxy, the entire universe.

Wilcock: Wow!

Adair: And home to them is the space between the galaxies.

Wilcock: Really?

Adair: Kind of like a whale living deep in the ocean. That's where these things reside, I guess. And they're a mixture of . . . kind of like – now that we know it – kind of like the Borg.

Wilcock: Uh huh.

Adair: They're a mixture of birth and construct all together, all at once.

Wilcock: Did you get a sense that they were a positive people, not like a warlock, evil race?

Adair: No. But apparently, I can't . . . just images, impressions. But this thing must have been in a knock-down, drag-out battle of some kind.

Wilcock: Hm.

Adair: And it got wounded, and that's the best word for it. It got wounded in a conflict, and so it's looking for a place to land, you know, repair itself or heal, heal up. I don't know what it does.

Where are we as a planet in our galaxy? Where are we? We're right out on the very edge.

Wilcock: Yeah.

Adair: It flew into our galaxy. First planet it came on, M-class planet, probably been us.

Wilcock: Hm.

Adair: So it slides in. And they may have found this thing. We wouldn't have been capable of shooting something like that down probably. Nah.

Wilcock: Right.

Adair: No, they dug it up. Maybe that's why they built Area 51 where it's at . . .

Wilcock: Hm.

Adair: . . . because they hit a treasure trove, which means the spacecraft is somewhere, and it's big. So if you're going to follow that matrix, that means the crew's

somewhere around.

Wilcock: Do you think that a reactor like this could power . . . would have enough energy density to power an entire city like Los Angeles?

Adair: Oh! Not just city. It could power an entire planet.

Wilcock: Really?

Adair: You know, carriers come in. Like, one of our naval carriers went to Beirut, and they ran their reactors into Beirut and ran the whole power supply of Beirut till they got the infrastructure up. The place has been just bombed to death.

This thing could land on a planet. This power plant can be extracted easily. It's only got four disconnects and lifts right out.

So you could drop it off and power an entire planet with it.

Wilcock: Wow!

Adair: So it's just . . . I don't know how much power the thing's got.

Imagine not just a yellow star like ours to a medium star. And you pour a million Earths inside the thing, it's so big.

I think this thing's got the power of a giant blue. It's just unlimited.

Wilcock: Wow!

Adair: And I couldn't imagine what weaponry of something like that, but the thing never seemed to have a need for weaponry. Maybe defense.

But anyway, I crawled out of this thing, and I had a different attitude. That was an excellent question you asked me – was I scared?

I never was scared of this device or anything in Area 51. I was more scared of Arthur Rudolph than anything.

So I got out, but I am so angry when I come crawling out of that thing, I guess, because I've seen so much.

And what hit me is that, “Nobody knows about this. Nobody has a right to keep this kind of knowledge away from everybody.”

I stop, and I talk to these guys again, the Air Force people and Rudolph, and finally, I just . . . They asked me something, and . . . Oh, they wanted to say, “Did I learn anything in there that I could tell them how this functions?”

And that was the last straw.

I just yelled down to them, “Look, this thing is not ours. It's not theirs, the Soviets. As a matter of fact, it's not from the neighborhood, is it, guys?”

I said, “And how old is it? How long have you had it? And did you shoot it down? I don't think so. Did you dig it up?”

Boy, now they're bristling, and they are furious. And I don't care anymore at this point, because I told them, “Nobody, I mean nobody, no president, no head of state, has a right to withhold this kind of knowledge from the entire human race.”

Wilcock: You said this out loud as you're standing up there on the platform?

Adair: Oh, yeah! Yeah, it's a good place to . . .

Wilcock: In the middle of Area 51?

Adair: Yeah, it's a good place to . . . Ha, ha, ha.

Wilcock: Ha, ha, ha.

Adair: I hadn't thought of it till you said that. I guess I was stump preaching. Man, look at the stump you're standing on.

Wilcock: Ha, ha, ha.

Adair: But I don't know, I just had this . . . I'm normally very easygoing and everything, but boy, at that moment, I am just furious.

And I'm saying things. I thought, “David, did you just say that to them?” Yeah, and I'm pissed off.

Well, they're angry. And they tell me, “Get off the damn thing.”

So I'm coming down, and when I put my hand back on the smooth area on the innards of this thing, as soon as my skin hit it, cascading 20 or 30 feet down the side of this thing, way longer than the blue and white, now it's red, orange flames going down,

halfway down this thing's body, wherever my contact is.

I pulled it back [his hand], slapped it on again, and it's there.

And as I'm marveling at what's happening, it starts retracting back down. Then it turns back to blue and white because I'm calming down.

This thing is not heat sensitive recognition alloy. This thing is feelings recognition. This thing feels me. It knows when I'm easygoing and when I'm really pissed off.

How in the hell does it do that? It's interacting.

Well, anyway, we come down off of the engine. All they tell me is, “Get on the cart. Get in the back.” You know, just real curt.

So I get in the back, and I'm facing outward, and they're driving forward. And we're going back up the causeway, back up to the elevator so we can go back up to the roof, the other floor.

And that's when I hear these guys whispering, because the wind's blowing past them past my ear. I can hear them, and they don't think I can hear them, and I hear everything.

And they're saying, you know, “We've got to get him to help us figure out how this engine works or get him to replicate another engine” like mine so they can have one to take apart and one to have working. And that way, they have a completed cycle, and they can start mass producing.

And they said they need it for “the first strike fleet.”

And I'm going, “God! How many do they plan to build?” Well, how many nuclear warheads did we have in 1971? 4,000? So they want my speed.

Wilcock: Right.

Adair: How do you . . . How do you win MAD? MAD, Mutual Assured Destruction. It's what we live under, have lived under since the Trinity test. [Trinity was the code name of the first nuclear bomb test under the Manhattan Project, July 16, 1945, in New Mexico.]

The only answer to winning MAD is speed. Whoever strikes first and strikes the fastest wins.

Wilcock: Right.

Adair: And I just gave them the vehicle they need.

Wilcock: Oh, wow!

Adair: And I thought, “I'm trying to build you a power plant. You want to go nuke half the planet.” Because they're not thinking. If you nuke the Soviets, who are you going to have to kill that same day? China. Now you're looking at 50% of the population of the planet.

So what you're talking is a worldwide military coup, and we will be reigning kings. That's horrifying. That's worse than the Germans.

And now I'm getting even more pissed, because I'm trying to give you unlimited energy, clean, change the carbon footprint. I'm not a tree hugger. I'm a science person, you know? I build things.

But this is good for you, your kids, your grandkids. You'll bring carbon footprint to a halt.

Another thing this engine can do, I can go send one over to Yucca Mountain, burn all of its waste into my reactor, give you energy and get rid of the waste forever.

I mean, man, this thing could really change this place. And here they want to make a weapon system out of it so we can . . . So that's all they think when you first discover nuclear power. What do you do with it? Build a nuclear power plant? No, you blow a hole in the ground.

Wilcock: Ha, ha, ha.

Adair: So it just really pissed me off. And I'm riding up to the surface on the elevator, and I'm thinking, “I've got to blow my rocket up. This just sucks.”

It took me 26 months to build this thing. It came out of me. It's like . . . It's like you have a child. And now, because of their moronic ways, you're going to have to kill your child. That sucks!

So I get up to the hangar . . .

Wilcock: Now Curtis LeMay was one of the Joint Chiefs of Staff, I believe, during John F. Kennedy's administration.

Adair: That's right.

Wilcock: Yeah. So you're talking about the highest levels of the American command structure that want to use this for first strike.

Adair: That's correct. I can see where you're going with this. Ha.

I don't know what to tell you, man. I'm just an average guy, and I just realize everything's getting perverted. They just want to do destruction.

How much have we learned from all the wars? Not a damn thing, except how to kill more efficiently.

So here's the problem with, how do you blow up a rocket on a top-secret Air Force base, and you've got nothing but your clothes? What are you going to do?

So I'm sitting there, trying to think. I thought, “Oh, God! Come up with something. I can't let them walk away with this.”

So I saw the answer. We pull up, the elevator levels out up at the top. We're back in a hangar.

So I walk over to the hangar doors, and I look down at the wheel and there's a hub. So I just kind of lean down like I'm sitting against the door and reach down and get a handful of graphite grease.

Ask anybody what happens when graphite meets deuterium. It's a violent reaction.

So I start screaming and hollering, “I'm never going to see my rocket again. You're going to take it away from me.” Just being a whiny little thing, because Rudolph can't handle that.

I said, “At least let me see it once before . . .” and he told the two guards, “Take him on the cart and go out there.” I need to check the engine out there anyhow.

So we went out there – just me and these two guards.

So we drive up. I said, “You know what, you guys mind staying in the cart here? This thing may be leaking.” Them guards aren't going to move.

So I get out.

Wilcock: Ha, ha, ha.

Adair: I go in. I open up the induction chamber, slide in the graphite. It's going to be pulled into the cyclotrons, and the cycle will start up in 90 seconds. Hope that's enough time.

Wilcock: Oh, wow!

Adair: So I set it for 90 seconds, close the door, and you hear it winding.

I turn around to these guards and go, "Oh, my God! It's leaking! Do you hear that whine?"

"Yeah!"

"It's going to detonate."

We get in that car, and man, they are leaning forward, you know, ha, ha, to see how fast they can get . . . We were just touching the high spots on the ground. (Eeee . . .)

Wilcock: Oh, my gosh!

Adair: And he asked me a really good question like you asked. "What's a safe distance?"

Wilcock: Ha, ha.

Adair: And I'm sitting there going, because . . . Oh, God! If it goes nuclear . . . I went, "Chicago!"

Wilcock: Ha, ha, ha.

Adair: And the guards look at each other, and they lean forward, you know! Ha, ha, ha.

Wilcock: Ha, ha, ha.

Adair: We go hell flying through there and more likely to be killed in this damn cart than the blast.

But we get up to the hangars, and boy, Pitholem, she detonates. And it blows a hole the size of a football field, about 100-feet deep. Did not go nuclear.

Wilcock: Oh, wow!

Adair: Just convention. But biggest piece they found out there, about the size of my thumb.

Wilcock: How loud was it? Did you have some hearing damage?

Adair: As a matter of . . . Man! Those are fabulous questions you ask. Yes, I have permanent hearing damage in the ultrasonic rings in both ears forever.

Wilcock: Wow!

Adair: Kind of handy, though. I could be laying in a room and there's a cricket. I can't hear it. Anybody else is going, “God! I can't stand that cricket!”

Wilcock: Ha, ha, ha.

Adair: “What cricket?” You know? But if we hear in mid-range and low-range, I'm fine. But the ultrasonics, gone.

Wilcock: Wow!

Adair: No one ever asked me that. So it's real. This is real stuff. It's real permanent damage, real reactions.

Wilcock: Yeah.

Adair: So even the audiologist, when he takes my reading, he went, “Man, what hit you?”

I said, “Why?”

He said, “The way your inner ears and the stirrups . . . it must have been an ultra-high-pitched . . . It must have been one whale of an explosion.”

I went, “Yeah, it was.”

So anyhow, I get back up there, and now I'm going to show you how smart Rudolph is. He's just looking at this, you know, mini-nuclear cloud out there. And he looked at the guards, and he said, “What happened?”

“He says it was leaking.”

Now he knows these things don't leak. So he's looking at me, and he grabs my hand and rolls the hand over, and he looks at the hangar door. That's fast.

Wilcock: Wow!

Adair: And he just looked at me, and he goes, “Very clever!”

And then he just hits me so hard my lower teeth pushed through my lip. And I hit the ground, and I'm spitting blood everywhere.

Wilcock: Oh, wow!

Adair: I've got a really nice looking scar inside. And I hear all these guns cocking, and I thought, “Man! Just at this point, just go ahead and shoot me! I don't care.”

And I roll over and look up, and guess where all the gun barrels are pointing? At Rudolph.

Wilcock: Really?

Adair: These are Air Force personnel. He's a Nazi. He just smacked the heck out of a Midwest Ohio boy in front of these Air Force people.

And I look up, and I went . . . you know, just bleeding everywhere. And I look up, and I went, “Well, Rudolph, I guess you're not in charge after all. And apparently, these guys looked like they ain't through with World War II yet.”

Wilcock: Ha, ha, ha.

Adair: And he had men in black there, and they grabbed me. And off we go. And we go through the hangar, go through an office area, and then down a hallway.

And I'm put in this room where there's no windows, just a door, light bulb hanging from the ceiling on a wire. That's it.

Wilcock: Uh-oh.

Adair: And they slammed the door shut. And I'm sitting there going, “Man, I'm in bad shape.” And that's where Rudolph, on the way there, he just wanted to get his point in.

He says, “Just a minute. I want you to see something.”

So we go in this lab-looking thing. There's a cadaver laying there. Pulls it [a cover] back. “It's a 17-year-old male,” he tells me.

And he goes, “We're going to change the dental records to match yours. We're going

to burn this thing to a crisp and send it back to your parents saying that you were burned in an accident at White Sands, and you're going to stay here the rest of your life."

Now, this is a sociopath you're talking to.

Wilcock: Wow!

Adair: And that's when I . . . They locked me in that room, and I started crying. I'm only 17. I knew I was done.

Who is going to come and rescue me, you know? And Colonel Bell is meanwhile locked in his quarters at White Sands. But I found out he broke loose, overpowered the guards and called LeMay.

LeMay's en route to Area 51 right now.

And if you didn't know this, Area 51's under the command of SAC, Strategic Air Command.

Wilcock: Right.

Adair: So who appointed all the commanding officers? LeMay did. So he ain't asking. He's just flying straight in.

And I hear a lot of ruckus out in the hallway, and the door flies open, and all I see is a silhouette – big square shoulders and somebody doing this with a big stogie. [Puffing on a large cigar.]

And if you've ever seen any pictures of LeMay, you would go, "That's Curtis LeMay."

He's got hold of a tie. The tie is around a full bird colonel of the Air Force that he's been slinging back and forth. That's the banging I heard. And he was banging this colonel who's commander of the base. And he's so furious. He appointed this commander.

So all the commander knows, civilian or not, that's a four star Chief of the Joint Chief's got you by your tie.

And he looked down at me, and I'm just a mess. And he looked back at that colonel, and that colonel quickly said, "We had nothing to do with that. Rudolph and these other guys did."

He said, “Where's he at?”

“He just left.”

“Find him! And get him cleaned up and put him on my plane.”

And we flew from Groom Lake to Wright-Patterson Air Force Base. And they put me in the general's car and drove me back to my house in Mount Vernon, Ohio.

And that's how I spent my summer vacation in my junior year in high school.

Wilcock: Ha, ha, ha.

Adair: And when they asked me to write that up with . . . I'm a rising senior, went back to school . . .

Wilcock: “They” who asked you to write it up?

Adair: Oh, the English literature . . . “What did you do for your summer vacation?”

Wilcock: Oh! Ha, ha.

Adair: Well, I'm going to tell you, “Yeah! Well, I invented the fastest rocket on Earth, and I met this madman Nazi war criminal that's been riding me all the way, and I'm working with a four-star general, and I'm at a secret Air Force base, and I blew up the missile and . . . saw an alien power plant.”

So I just said, “I worked at Pizza Hut.”

Wilcock: Ha, ha, ha.

Adair: What are you going to say?

Wilcock: All right. Well, that's all the time we have for in this episode of Cosmic Disclosure. I'm your host, David Wilcock, here with our special guest, David Adair. And I think you for watching.

Timeline Splits and Diversionary Tactics Season 8, Episode 4

Cosmic Disclosure; Timeline Splits and Diversionary Tactics
Season 8, Episode 4

30 Aug 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and in this episode, we are here with Corey Goode, bringing you some very interesting up-to-the-minute updates.

So without further ado, Corey, welcome to the show.
Corey Goode: Thank you.
David: So let's talk about this first, because the first subject is one that is on a lot of people's mind if they're aware of what's going on, and that is that there have been a very densely concentrated number of incredibly snide, vicious personal attacks against me, but much more so against you, and even against this network.

I will just say, for the record, that I consider these attacks to be very over-the-top and ludicrous. And I don't typically respond to this kind of stuff because it's just so absolutely outrageous.

But what are your thoughts or feelings about what's going on right now? I mean, it's obviously made to look like it's just normal people having typical complaints, but what do you think is going on here?
Corey: Well, I've spoken to you; I've spoken to other people that have been in this business a long time. No one's ever seen anything near the magnitude of this type of attack.

And this is exactly what I said was coming at least six months ago, when I was told that anyone associated with the Navy Secret Space Program narrative had to be discredited and destroyed, because they want this Air Force narrative to come out and be disclosed.

David: The thing that surprises me the most about this, Corey, is the feeling of almost total invulnerability that the people perpetrating this appear to have. It's as if they don't have the slightest concern about being sued, or committing libel, or slander, or defamation. They just absolutely do not care.

What are your thoughts on that?

Corey: Well, as I stated, this is a part of a major operation. It's not just a few people that have some issues. These are people that have been activated, and they have to squash or quash anything that gives credence to the Navy program.

They only want the Air Force program to be in the forefront right now, because they plan to disclose it fairly imminently.

David: Would they be attacking you if you were losing?

Corey: Absolutely not. When you put yourself out as a victim, you are then in defense mode. You're not in attack mode, which is what they're used to being in – having the upper hand and being on the attack. Right now, they look extremely desperate with the tactics they're using.

David: You recently did a joint article with Dr. Michael Salla, and you've also made some Facebook posts regarding the idea that there could be some sort of official Nordic disclosure involving, I guess, something having to do with us being introduced to them.

Corey: Yes. And this could be tied to a recent meeting I had with Ka'Aree. I've never

seen her display anxiety with body language or energy, and I was picking up anxiety.

And she let me know that the Anshar were concerned about the timeline, that things were not going well.
David: Hm.
Corey: And that because of that, not only them, the Anshar, but three other non-human beings along with the Anshar have decided to go against the Muhammad Accords, which is a really big deal.

They're unable to get all the signatories of the Accords together to ratify it or to end it.

So because things have become so desperate, they are now stating that they're going to start reaching out to humanity.

And in the beginning, they're going to start reaching out to humanity en masse through dreams and visions to prep us for face-to-face contact.

And then they're going to start appearing, very much like they have with me, with individuals and small groups of people but not on a national or world scale to where they're going to be on television, that kind of a thing.

It's going to be a slow acclimation process.
David: I want to be clear on this, and I want to get you to put this on the record. What type of person would be chosen for this kind of contact? And what kind of conduct would these beings be expecting from you if you were going to receive this type of contact?
Corey: They're choosing people that they've been in contact with for a long time, usually, and a lot of these people spend a lot of time in a meditative state and are more in the frequency to where they can be communicated with.
David: Uh-huh.
Corey: So usually, it's going to be the more positive people, the quieter people, that have been focusing on their inner journey and have been preparing themselves for contact.
David: So just so that we're clear, what you're saying is then that these people would start by having, perhaps, a lot more vivid dreams than they'd been having before?
Corey: Yes, vivid dreams.
David: What might those dreams be like?
Corey: Communication dreams. Beings appearing to them in dreams and preparing them for face-to-face contact.

And when that face-to-face contact does occur, people could very well be receiving passes to ride along on motherships.
David: Okay, there's a couple more things I really want to get clear about here. It

would appear that a more ego-driven spirituality would take something like what you're describing, and then somebody is going to want to portray themselves as a savior figure for humanity.
Corey: Well, there are going to be those, probably, who do that. But when you're one person among thousands that this is occurring to, you're not going to rise to the top to be any type of savior.

And they're not going to be choosing those types of people anyway that have savior complexes, they're just not.
David: What do you think will be the conditions in the world, or what have you been told will be the conditions in the world, that we will be seeing concurrently with when the in-person behavior starts to happen?
Corey: Well, a lot of people will be reporting these dreams – contact dreams. That's going to be the major thing that people notice.

Now, one of these four groups is most likely the Nordic group that I received briefings on for quite a while. Gonzales, Sigmund and Ka'Aree have all spoken about this Nordic group possibly stepping forward.

This Nordic group has been in communication with all the world leaders, religious leaders, for a long time.

Recently, there was a meeting of all the world religious leaders, I believe in June, to where they all basically asked if we can just all get along. Isn't that right?
David: It was about, “Let's be friends”, that was the main theme, yeah.
Corey: Right. Be friends.

Well, a lot of information is coming in – a lot of it through the Air Force – that this Nordic group has been working very closely with the Vatican in a way to come out with their existence in a way that's not going to shock the people.

Now, they fully expect that everyone is going to have a lot of questions, you know, about these non-terrestrials.

And we're going to find out that they've been involved in our past for millennia, that they've appeared as angels. They have introduced different belief systems to try to manicure our consciousness, to get us to grow more consciously.

So it is very much expected that when we find out all this information, this group is going to give us, basically, their belief system, their religion.

And it's going to be based a lot on Oneness and what a lot of people would consider esoteric ideas, but it's expected that the masses, the massive part of the population,

will adopt it very quickly.
David: So let's just say, Corey, that there's reason to believe that the Alliance may be very much more a factor in the Vatican now than ever before.

How does that reflect on this alleged disclosure plan you're talking about?
Corey: Well, the Alliance could be a factor directly or indirectly. Some of the people within the Vatican may see the writing on the wall, and they figure they'll make a whole lot of internal changes.

Maybe some of them have been fully briefed on this non-terrestrial group that's going to be introduced, and they want to clean house before that occurs.

So there could be a number of reasons on why the Vatican is behaving the way they are.

But the fact that open discussion . . . And I've heard from other people that they're hearing similar things about the Vatican coming out, announcing a human-looking ET group that is going to introduce a lot of interesting new ideas to humanity.
David: Now when you said before that four groups were planning on breaking the Muhammad Accords, I believe you said the Anshar was one of those groups?
Corey: Correct.
David: So do we know if any of these four groups would be a malevolent group?
Corey: These are positive groups.
David: Oh!
Corey: They have all worked together in this confederation. Four of them have decided to step away from the Muhammad Accords and then start to acclimate people for face-to-face contact.
David: How do you think that affects the overall plans for this partial disclosure that you've been sharing with us in the past?
Corey: Well, it affects it pretty heavily because the partial disclosure was going to start off with releasing information about ancient underground structures under the ocean and under the ice in Antarctica.

Then they were going to release the Secret Space Program that the Air Force and DIA control.
David: Uh-huh.
Corey: And at that point, then they would say, “The telemetry from these technologies has found even more under the oceans and under the ice. On that note, we happened to have found some of these structures on Mars,” for example.

So that's how they plan on stepping things up.

Part of that narrative was going to be that ETs have visited the Earth, but hadn't been

here in thousands of years, except for maybe one or two here and there.

And that narrative will be heavily stepped upon if a Nordic race or human-like race has open contact and begins, at the Vatican, standing next to the Pope, speaking to people.
David: Do you think, or have you been told, that this could happen quite spontaneously with the world just like it is today as we're taping? Or could it be in an aftermath of some sort of catalytic events?
Corey: There are a lot of events that are expected to occur in tandem with any of these disclosures.

As I was discussing, the military-industrial complex wants to start with ancient civilizations under the ocean and under the ice.

Well, they could drop that at any point.

What they're going to do is use that as a diversionary tactic if there are any types of tribunals or arrests that start to occur. That's going to be a major diversionary tactic that they plan on using.
David: I would assume then that these would be very impressive.
Corey: Absolutely.
David: How would you describe something as being more impressive than typical tabloid stories we've seen up until now?
Corey: Seeing actual video and actual telemetry instead of speculation. You'll see . . . Like off the coast of Cuba, you have some sonar of ancient structures, but it was real hush-hush, after that.
David: Yeah.
Corey: These are going to be undeniable reports, and it's going to be sanctioned reports, that are going to give you all the information that they've gained from investigating them.

And this is going to include some of the underwater sites and under ice sites.
David: Have they war gamed what they think people's reactions will be to this?
Corey: Yes.
David: What are they expecting will happen?
Corey: Well, they're expecting it to be a good diversionary tactic, but they also had originally planned to release this information, and eventually release the information that the beings that created the civilization under the ice were not human. And that these elites are part of the bloodline of these beings, therefore, they are special. That was one of the narratives that was going to be pushed.

They were going to push their religion, basically, on the rest of the world using these finds to back up the religion.

David: Well, you remember, Corey, that right before you and I started talking, I got this “authorized disclosure” from the United States government from one of my insiders that was the whole cosmic history of the Mars and Tiamat, or Maldek, civilization 500,000 years ago – blowing themselves up, going to the Moon, eventually crash landing here on Earth and becoming these Pre-Adamites.
Corey: Correct.
David: So do you think that that Pre-Adamite storyline is part of this idea of the elite being gods that they wanted to portray?
Corey: Yes.
David: How would that work?
Corey: Well, they are able to trace their bloodline back to this non-human group, the Pre-Adamites. So, therefore, it's like the “divine right of kings”. They're going to say, “Look at this vast civilization, what they were able to do. Why not give us control? We're the same bloodline. We have all of their information. We can implement something like they had that's technically advanced and a society where everyone can live together.”
David: What do you think is the goal of the Nordic group that's doing this? What would be their ultimate objective for throwing off this partial disclosure timeline? What do they want from this?
Corey: They want to prevent a timeline that they have seen to where there is open negative rule – open rule by negative ETs.

They have seen timelines to where there is open rule by Reptilian-type ETs. They're seeing different divergences in the timeline and how things are going.

So they've gotten to a point to where they have decided that they have to have all hands on deck and begin to have a hands-on approach instead of more of a remote approach, like they have been doing.
David: So you're saying there is a possibility that these benevolent ETs see that even where we are right now, with as much awakening as we've had, that we could actually have a Reptilian-dominated planet?
Corey: That is one of the concerns, yes.
David: So what could we do to prevent that timeline from taking place? And what haven't we done? Why would they see that it would even exist?
Corey: Well, I believe that they're seeing now that there is so much interference from the negative groups. There are these cosmic laws to where you can't directly interact with a developing society. You have to do it more in the background with puppeteers, secret societies, that kind of thing.
David: That's both positive and negative sides, right?
Corey: Right. Well, the positive side finds ways to skirt these cosmic laws. The negative side will skirt the laws very well, but they'll also outright break those laws.
David: But in both cases, we could say that each side has to contact people who are willing to follow their agenda, . . .

Corey: Right.
David: . . . whether it's a benevolent agenda or an evil agenda, . . .
Corey: Right.
David: . . . and then work by proxy through those people instead of appearing directly.
Corey: Yes. But the negative groups have had more of a hands-on approach for a long time, and it's caused a lopsided battle. So a lot of these positive forces that stick very closely to these cosmic laws are starting to get more hands-on.
David: Okay, so then people who are watching this show would ask, if the benevolents are so worried about this, then why don't they just show up right now? Why are they so worried about coming forward and breaking their treaties and all this kind of stuff? What's all the fear about?
Corey: Well, they still have to do things in the proper way. They can't just appear in the skies. They have to go through a process like I discussed, where they're going to start acclimating people through their dreams, appearing to them one-on-one.

That is the proper way to introduce themselves instead of just appearing in the skies.
David: Corey, apparently, Ka'Aree and some of the other Anshar have told you that the stakes for them are very, very high in this battle about whether we get this negative timeline or not.

So could you explain why the stakes are so high for them?
Corey: Well, as I've stated, the Anshar disclosed that their lineage is actually from our future. It's kind of a hard thing to . . . It kind of twists your noodle a little bit.

They had something in their present, which is our future, that was similar to the Mandela Effect, which made them start looking back through time.

They located the cause. So they sent a group back, a small group, to maintain the timeline. And they sent them back about 17 million years.

So they've been here that entire time and have developed out independently. And it went from a small group to a pretty good-sized civilization that lives below the Earth.

Now, if they are not successful in maintaining their timeline, they could blink out of existence.
David: So they would not have existed before nor exist in the future?
Corey: They would not exist in the future, therefore, they would not exist in the past because they would not have had an opportunity to travel to the past to try to maintain the timeline.
David: Very bizarre.
Corey: Very bizarre.
David: Tell us what has happened, any updates you can share with us regarding the disappearance of Sigmund, since he was a major figure in some of our recent updates.

Corey: Yeah, I believe it was in April that he disappeared. And strangely enough, around that time period, a few other Air Force-type connections disappeared for other researchers. It was very bizarre.

Now since then, I've had a few meetings with the airmen that I call Tweedledee and Tweedledum, that . . . Some of them were kind of contentious.

In the beginning, they were very interested in knowing if I had heard from Sigmund, if I knew anything about Sigmund. And something felt a little off. I didn't know what was going on.

Then most recently, in a meeting, these airmen hand me this report that they say was penned by Sigmund.

And in the report, it kind of contradicts a lot of the conversations I had with Sigmund. It says that they did not find any signs of a Navy Secret Space Program, even though he had interrogated some of these people himself.

So that, right away, got my attention.

And then the report started going down the line, stating that there are no giant spheres that came into our solar system, that all of this is a Nordic deception, basically, is what they were trying to tell me.
David: What about the Blue Avians?
Corey: The Blue Avians, they believe, is a creation of the Nordics. They believe the Nordics also created The Law of One. That was all in the report.
David: Interesting.
Corey: So they're giving me this report, and I'm looking at it, and my spidey senses are going like crazy. You know, something's just not right. And they're observing me very closely.

Furthermore, the last time I had seen them, they started, I guess, pooh-poohing a lot of the intel I'd been given by Sigmund on Antarctica, on certain dates when things happened in the cosmos.

It was as if they were trying to disinfo me real quickly. And I felt a lot of deception coming from them. They were watching me, studying me, seeing how I would take in the information.

In the same conversation, when they were talking, I was picking up that Sigmund really wasn't missing. I was getting the feeling that he was actually trying to infiltrate the SSP Alliance.
David: The Navy one.

Corey: The Navy. And I just stopped and went, “Oh!” I said, “Sigmund is trying to infiltrate the Alliance!”

And they lost their composure at that point. And they said if I stated that publicly, that my family would be harmed. And the last . . .
David: You got a threat from them?
Corey: Yep!
David: Really?
Corey: And that was before my last trip here to Gaia to do a report, and I left that out of the report.
David: So define “lost their composure.” They literally started yelling?
Corey: Yes.
David: And angry, violent faces?
Corey: Visibly angry.
David: Really?
Corey: They also told me that under no circumstances should I discuss the R&D facilities in Antarctica.

I've received a briefing on those, further briefing. They are EXTENSIVE! It is huge.

And also, the spaceport down there, they do not want us discussing.

They want us to go full bore and discuss the ancient civilization stuff, because that goes along with their narrative.

It's very problematic, the information about what is going on down in Antarctica with these various contracting firms.

Anything that's illegal to do or immoral, they're doing it down there in those facilities.
David: Why do you think they care so much about what you would say or what I would say if most of the people in the world don't believe any of this anyway?
Corey: Well, they do not want ANYTHING circulating about the R&D bases down there because it's against a 1959 treaty. There could be a lot of negative ramifications, even though I hear other signatories of that treaty are doing similar things down there.

So this is a major black operation area, Antarctica is.
David: Hm-mm. What do you think is the end game for these two airmen in threatening you that way? Obviously, you're not listening to them because you're putting it here on public record.

Why would they threaten you so strongly? What are they worried about? What's their vulnerability?
Corey: They want to steer me into reporting only the Air Force narrative, and

everything they're doing is trying to guide me in that direction.

If I cannot be guided into that direction, then the next stage has to occur to where they completely discredit me or anyone else reporting the Navy narrative.
David: I'm kind of going to fish here, but I think it's a valuable fishing expedition. Is there a relationship between this Reptilian-controlled planet timeline and the partial disclosure timeline?

If they're trying to steer us towards a partial disclosure timeline, is that the gateway drug for this negative takeover of Earth somehow?
Corey: When the timelines split, there has to be a point from where they split. And depending on if it's the negative timeline, positive timeline, or anything in between, it's going to bifurcate at a different point.

So they're going to try to control when that bifurcation occurs by controlling our mass consciousness. Our co-creative mass consciousness has a huge effect on these timelines.

So that's one of the main reasons why we've been so mind-controlled.
David: Have you had any further interaction with Gonzales since we last put up dates out here, and if so, what has happened?
Corey: I meet with Gonzales every one to two weeks. He's been helping manage the temporal dementia-type issues that are bleeding through, and also the two other 20-and-back bleed-throughs that are occurring.

Ever since he started treating me with that Magic 8 Ball thing, I started having dreams and flashbacks from the other 20-and-backs.

And most recently, I had a situation to where all of a sudden, I felt a little sweaty and nauseated, and was feeling outside of my body.

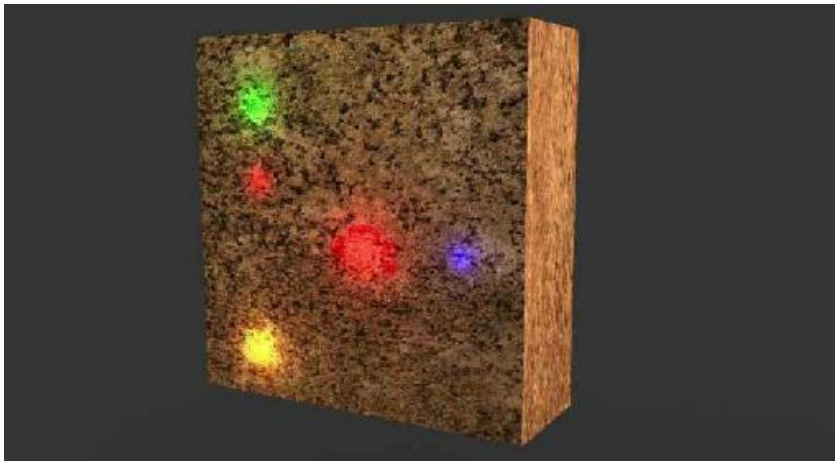
And then the next thing I know, I'm in some sort of a like an NBC-type suit or some sort of a protective suit. And we're walking through this area that looks almost like a cave, but it looks like an ancient facility in this cave.

And we're walking through. I can hear water dripping. And all of a sudden . . . It was just moments. And all of a sudden, I start leaning against the wall, and I'm feeling all dizzy.

And one of the women that was there grabbed my helmet and is looking at me and trying to communicate with me and looks over to someone else and starts saying, “It's happening again! It's happening again!”

And then I'm back, myself, current timeline, trying to make sense of what had just happened.
David: Hm! So you believe that that experience that you just recounted was from one of your 20-and-backs?
Corey: Yes.
David: And this would imply that some sort of degradation of your health or mental condition was taking place as a result of what they were putting you through?
Corey: Yes, but also the last 20-and-back was reported to be around the 1997 time frame.
David: Oh!
Corey: And we're, what, 20 years out from that?
David: Right.
Corey: So like I've stated, a lot of the 20-and-back people start realizing that they were in 20-and-backs, or suspecting it, usually around the 20-year period after they've been released.
David: Is that where these bifurcated timelines start to knit back together?
Corey: After that 20-year timeline is when a lot of people start having memory recall, for some reason, of their service.
David: Interesting. Can you speak in a more knowledgeable fashion about the rough categorization of your three 20-and-backs now? Do you have an ability to say, "Okay, in this one, I actually worked Solar Warden. In this one, I did intercept and interrogate. Has it gotten that specific yet?
Corey: No, no. I was just having flashbacks of moments. And, apparently, the last two 20-and-backs were . . . I was involved with some pretty dark activities. So . . .
David: Okay. This is like galactic slave trade-type of stuff?
Corey: I'm sure it probably does.
David: Would you just say, on a general level, that the space program is designed on purpose to put people into what we would call evil or unethical situations so that no whistleblower could ever come forward?
Corey: Well, that's one of the main reasons I've seen so many other whistleblowers walk right up to the line and not cross it. They do not want to self-incriminate. These are a lot of dark things that occurred, and there are a lot of people that could come forward and give a lot of information, but they're afraid of incriminating themselves.
David: Could you be at all specific about the nature of how you would meet Gonzales? Is it similar to a construct like with Ka'Aree? Does it involve the Mayan breakaway type of method?
Corey: Yes, the Mayan breakaway. They basically teleport or transport me up to a vessel that they have in orbit.
David: Hm. So the way in which you're seeing Gonzales in these meetings is in a Mayan vessel.

Corey: Yes.
David: Are you interacting with anyone else when you're there besides him?
Corey: No, just him. The Mayans will look at me and smile real warmly, but I have, still, to this point, never had an interface with one of them.
David: Do these meetings typically happen in the same room or the same location?
Corey: Yes, the same room that I've described before with the floating stone panel, flashing Mayan-type symbols.



David: So was there anything further that you had from Gonzales that you feel is of importance to share with us right now?
Corey: Yes, actually. Quietly in the background, he has been in contract with elements of the Secret Space Program Alliance. They've been keeping their heads down big time after Sigmund's group appeared.

Now, he's been starting to give me briefings again, that are briefings that the SSP Alliance has asked him to give to me.

Now, this has included information about current events going on on the Earth.

On "Cosmic Disclosure" not too long ago, I had described how different military cells had been spread out throughout the United States before the elections to monitor some of these Deep State-type organizations and assets.
David: Hm.
Corey: Now, I found out more recently that these are Special Forces cells – I can't say which branch – that these people, these soldiers, are the ones that had been sent to Kosovo, and places like that, to gather evidence [of] crimes against humanity.
David: Hm.
Corey: It's not really legal for them to be doing domestic investigations, but they are. And they have identified all of the negative groups. They've been looking into the corruption. They've been looking into ties to very dark secret societies and activities tied to those, which we won't go into details on. And they've identified all of these people.

And this military faction is waiting for a go-ahead to arrest these people. And they

don't' expect it will be unless there is a military coup, because from the information I've received, the Deep State is in a place right now where they're about to pull a few operations to remove some of the leadership that the Alliance has seeded into the United States.

When this occurs, if this occurs, I was told that the military groups that have been planning a coup will enact a coup, and that these Special Forces soldiers are gathering information for tribunals after something like a coup occurs.
David: Well, given the fact that these plans have been on the table for a long time, why do you think it's taken us so long to actually have this happen?
Corey: Well, as I stated before, the Cabal groups were using this probable future technology that are AI algorithms that detect probable futures. This is how they've been able to stay out of the path of any type of arrests.

Now, a lot of the arrests that have been hyped up in the past have been just hype, because strategically, there was not a situation to where the arrests could ever . . . The arrests could not occur because the Department of Justice was so controlled by the Cabal, as is the Congress.

The whole government is basically controlled. So there was never an opportunity to where anyone would be able to order arrests. It just wouldn't happen. They could order arrests, but no one would carry them out.
David: Right. How do you feel it's changed now?
Corey: Well, it's changed now because the Alliance has stepped up their operations in the last few years, especially. And all the signs point to the Deep State, or Cabal, being now in a defensive position instead of an offensive position.

So a lot of the Alliance groups that are loosely knit are seeing this sign of weakness, and it's emboldening them to apply more pressure to try to bring down the Cabal.
David: So if there were to be some sort of massive joint maneuver, how do you think we would encounter that as people who are just citizens?
Corey: Well, there would be a media blackout at first, until the hostilities had ceased. And then the military would take over the airwaves and give a full explanation of what had occurred. That's what I'm told.
David: And you feel that this would be a benevolent thing?
Corey: I think that the Alliance feels it would be a benevolent thing. The people that are in control right now are the personification of evil – the things that they do.
David: Right.
Corey: I don't even have to leave it up to people's imaginations. It's all over the Internet.
David: Have you had any further interactions with Blue Avians, and if so, what has been the content of that?
Corey: Yes. About five weeks ago, I finally had an encounter with Tier-Eir. I was

picked up from my living room by a Blue Sphere, brought to another giant Blue Sphere, as I have had in the past, and I conversed with Tier-Eir.

And he showed me the solar system, and all of these spheres were pulsating and almost completely transparent.

And he told me that soon they will fade, and the full brunt of these energies will hit humanity.

When that begins to occur, do not be afraid when we begin to see large clusters of earthquakes, volcanoes going off, storms becoming even more energetic and dangerous - that these things were going to be a part of it when we get the full impact of these energies.
David: Is that the solar flash? Or is this just an energetic change that's preceding . . .
Corey: It's the energetic change.
David: Okay.
Corey: And I was told also that the End-Time Madness-type stuff we're seeing, where negative people are becoming very negative, positive people are becoming more blissed out, and we're seeing the mentally ill people just lose it – a lot of mentally ill people just lose it – that that is going to occur exponentially, and it's going to become a lot worse.
David: Hm.
Corey: So because of this End-Time Madness, we can expect to see more rattling of sabers and talk of war, and that kind of thing, which can be very fearful.

But what Tier-Eir was trying to communicate to me is that we should not be afraid because we will feed that beast, that we should be hopeful because these are signs that

the great changes are about to occur that are going to give us this consciousness renaissance.
David: If in Law of One terms, if we take The Law of One as being real and that these beings are all represented in it, we would have the Blue Avians being two dimensional levels more advanced than the Anshar.

Do they have the same degree of concern about our future that the Anshar do, or are they more dispassionate?
Corey: They're dispassionate, right.
David: Okay.
Corey: Yeah, I'm not sensing any type of . . . You don't sense any type of ego at all. They're more like a social memory complex that one of them is representing at the time.

It's not the ego of one being that identifies herself as that name. It's a different type of communication with them as opposed to the Anshar.
David: Did they give you any warning about a possible negative timeline for Earth?
Corey: Yes.
David: They did?
Corey: Yep. Yeah, they did state that we need to work harder, doing mass meditations and doing everything we can to try to co-create this positive timeline. That the way our consciousness is being manipulated now, that we're headed, not necessarily to the bottom of the scale, negativity-wise, but somewhere in the middle.
David: Hm.
Corey: And if we get stuck somewhere in the middle, this next cycle is going to occur. You know, who knows what that's going to mean for humanity.
David: Do you have any further information to share with us on these large motherships that we've talked about in the past that have been found in Antarctica and have been excavated over the course of many years?
Corey: Yes, actually. I received, basically, a fairly decent briefing on the R&D facilities there that they really don't want me to talk about, as well as more information about, especially, the three original craft that were discovered on ground level beneath the ice.

There were three oval craft, one very large, two smaller. They're the ones that they jokingly call the Nina, the Pinta, and the Santa Maria.

They arrived at the same time and positioned themselves in a triangulated position on the surface.

And then the beings that were in the craft then began to cannibalize the craft to create a city between them.
David: And this was, I believe you said, around the time of 500,000 years ago – the

original one?
Corey: No, this occurred around 60,000 years ago . . .
David: Oh! Okay, that's the more recent one.
Corey: . . . when they came here and crash landed here.
David: Okay.
Corey: But they already had an enclave down here since before Tiamat and all of that in that area.
David: Right. But when you say “ground level”, do you mean . . .
Corey: Under the ice.
David: So it was on ice?
Corey: No, it was on the dirt, . . .
David: Okay.
Corey: . . . and there were trees, plants. They landed amongst all of that.
David: Okay.
Corey: They created a society, a civilization that rose pretty high. And one of the things I discussed is that they were really big into genetic engineering. They would mix their genetics with the humans' genetics and the different animal genetics.

One of the things that I mentioned when we first talked about this was that in one of the genetic labs, they found a very strange Reptilian being that was in different stages of development. They were small and larger.
David: Hm.

Corey: And what I'm wondering is if the recent discovery of the three-fingered mummy from Nazca, if it could be one of these Pre-Adamite experiments.

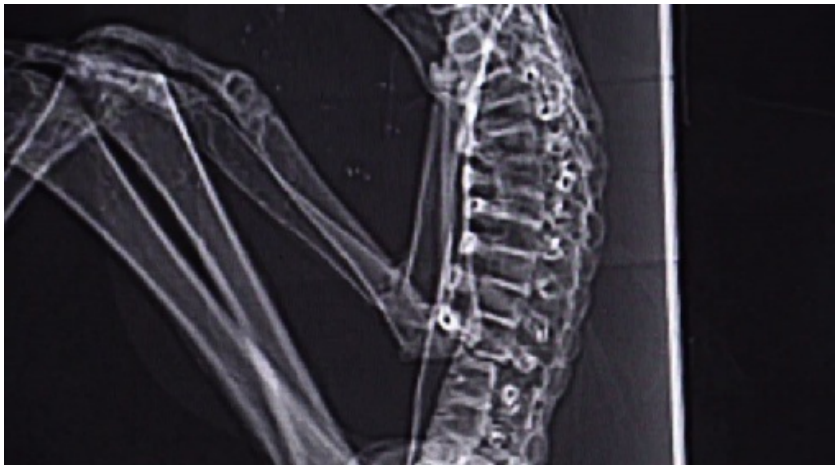
I'm also wondering if . . . We've heard the Draco complain about . . . there were three lost Reptilian races from the Earth that humanity had destroyed a lot because we were told to by human-like ETs.

And so they blame these human-type ETs and humans for removing their genetic experiments from the Earth.
David: Hm.
Corey: And I'm wondering if possibly that these two different types of beings that have been reported by Gaia are two of the three lost races.

So I have an inquiry out on that, and I'm waiting to hear back.
David: For the record, what is your personal feeling about the mummies that have been shown on “Unearthing Nazca”?
Corey: It's mind-blowing! I think a lot of people had a knee-jerk reaction or it threatened their belief system so much that they just had to say, “It's a hoax! It's a hoax!”

But when you look at the X-rays, you can see that that's anatomy.

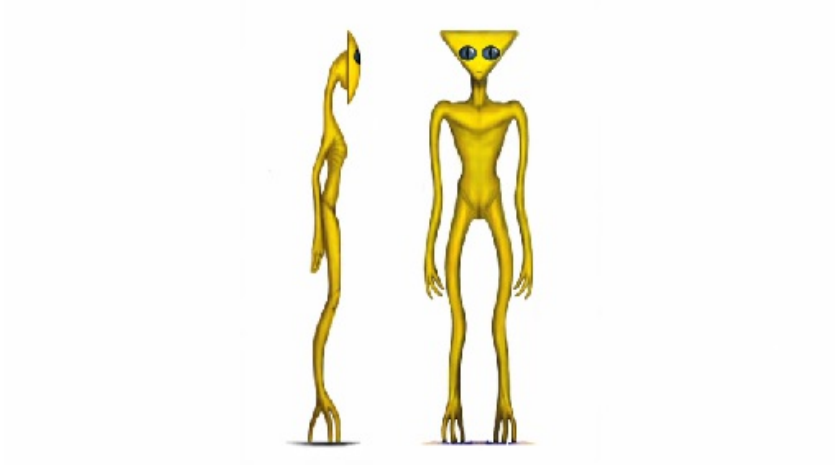
Those bones grew together.



So I can't see how it could be a hoax myself. I mean, if it is, why would someone go through all of the trouble to create a hoax like that? It would take so much time and money. What would their goal be?

So I can't wait to get back the genetic report to take a look at that, to see if there's reptilian, human and unknown DNA in it. Or if it's reptilian, even maybe some avian DNA.

David: Have you ever seen, in your own travels, any three-fingered extraterrestrial-type beings?



Corey: Well, yes, the Golden Triangle-Headed beings are three-fingered. And there are also other . . . It's kind of rare. Three-fingered beings are not common – three fingers that are just very easy to move around, and that they're able to bend around in all kinds of weird ways.

But most of the beings that have been reported have either three fingers and a thumb claw, five fingers, or six fingers.

And our planet produces a certain harmonic field. And that field interacts with DNA, and it creates a template. And one of the templates of our planet is that most beings have five fingers.
David: So do you think that there would be energetic modifications to an extraterrestrial's DNA if it lived here long enough, based on those native vibrations from the planet Earth?
Corey: Yes, yes. Some people call this Schumann Resonance, or whatever, but the frequency that the Earth puts out is going to have an effect on any being's DNA that is here long enough. It's going to begin to change the DNA.
David: How do you think that the Solar Flash events affect DNA as compared to the sort of ground state that we're in, in between them?
Corey: Well, it's definitely got a . . . Just exposure to the Sun alone has an affect that changes your DNA. So that type of an energetic explosion from the Sun is going to have a very huge impact on our DNA.

Like I said, it depends on what you think the Solar Flash is. A lot of people think that we're going to be hit with all these particles, and we're all going to get cancer, or we're going to die very quickly from exposure to these different radiations.

And some people think that there's going to be some sort of spontaneous Ascension.

I think the truth is really somewhere in between there. From what I've been told by Tier-Eir, what's going to occur is going to be more of a change on a consciousness level that's going to send us into a consciousness renaissance, like Mika's people went on.

And in that consciousness renaissance, we begin to understand how to manipulate time and space.
David: Very good. All right. Well, that's all the time we have for in this episode of "Cosmic Disclosure". I'm your host, David Wilcock. We're here with Corey Goode. And I want to thank you for watching.

Remembering William Tompkins - Disrupting Draco Season 8 Episode 5

Cosmic Disclosure; Remembering William Tompkins - Disrupting Draco Domination Season 8, Episode 5

06 Sep 2017

In Memoriam
William Milton Tompkins
May 29, 1923 ~ August 21, 2017

DISRUPTING THE DRACO

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode.

Now some of what we're going to cover in this show has been covered before, but here's the key. We're talking about something that is very real.

The REAL reason why we're doing this show is not entertainment. It is disclosure.

And by talking about these things and exploring them in more detail, we are helping to crack the lid on something that's actually a very serious problem.

And so for that very same reason, in a topic like this, we need as much information about it as we possibly can get. And the more information we have, the more powerful our tools become to be able to stop these horrible things from happening.

* * * * * * * *

GALACTIC SLAVE TRADE

William Tompkins: It's very strange that this has been going on, that the same structure of a medieval country – kings, queens, princesses, all of the top people – agreed with maybe France's or Spain's group, and they became the elite. They became the control of the population in their countries and were never allowing the people a real life, never allowing them to participate in many of the other things, and many of them were actually slaves.

So the big slavery business out there is a big business. It's a major business today – a massive business.

Anything that you want to manufacture, anything that you want to farm, anything that you want to build, it's all done with slave people.

In Germany . . . Germany had massive underground facilities that were all slaves and even to the extent that when the decision was made before the war ended that they were going to continue all of their extraterrestrial developments on UFOs and on every weapon system that they were building, they took the production facilities to Antarctica, but they also brought the slaves with them.

So now there are slaves underneath the ground and they still are today in Antarctica.

But the slave business out there is a big business, and this is happening today. It's not something that happened 100 years ago. This has been going on a long time and that needs to be fixed.

There's all kinds of slavery. There's sexual slavery, unbelievably. There's many different classes of people that are abducted for slavery, sexual slavery. They want the top and the smartest, because they are worth more.

They have, I think, four or five different levels of people that they abduct. They abduct top medical research people. They abduct the corporate levels, and they abduct the most brilliant levels, and then they go down through the three levels and that says where they get sectioned off.

Everybody gets to two planets and then it's decided where they're going to be sent to. But it's a massive business. It's been going on for years, and we can't identify where these people have gone.

Just like 'normal' abductions, we don't know where they went, because most of them don't come back. We're only hearing from the few that came back.

* * * * * * * *

David: Whew! So as we can see there, this is some pretty intense stuff.

We have quite an interesting perspective on this because, of course, if you've been watching our show, Corey has had experience with this himself. He also discussed it when he was on with George Noory.

So, Corey, welcome to the show.
Corey Goode: Thank you.
David: Now, let's just start off by saying I know that you're very uncomfortable about this topic. Why is this so upsetting to you, this topic?
Corey: Because I saw it firsthand. It's a very upsetting topic. If it sounds like fiction, it's upsetting enough, but when you hear someone else corroborating what you've been through, what you've experienced, it brings a lot of the anxiety, a lot of memories come back.
David: Well, let's start to talk a little bit about what Tompkins had to say in the video footage. First of all, he seemed to be talking about traditional Cabal countries, France, Spain, England, and slave trades that they had going back for generations.

So there was a little bit of an "Illuminati" thing there, because he was mentioning royal families that all got together and were secretly collaborating even though their countries appeared to be fighting with each other.

Did you ever get to hear about that kind of stuff – the Game of Thrones sort of politics, the occult elite?
Corey: Yeah, we were very curious where these people were coming from, how they were acquiring them, and it turned out that they were using this multi-generational infrastructure for slavery that they had built just for here on Earth.
David: REALLY?
Corey: Yes, and it had never stopped. The human slave trade on Earth has never even slowed down really.
David: So just to make sure that I understand what you're saying, the exact same systems and the management structures and the coordination of how these Cabal or Illuminati countries were doing it back going 100s of years, it just continued directly through to this galactic slave trade involving extraterrestrials.
Corey: Yes, to present time.
David: I know I've asked you this before, but for the purposes of clarity for today, how long have extraterrestrials been grabbing slaves off of our planet?
Corey: As long as we've been on this planet.
David: Did they have the collaboration with this slavery mechanism from the Cabal countries in the past?
Corey: I know it's gone back some time, but I don't know how far back, how far it goes back, that the Illuminati groups, if you want to call them that, were using the people in the field that go scouting for people to kidnap, give them a list of what you're looking for.

Those people do the kidnapping, bring the people that they had abducted to a central location where they are basically treated like cattle, sent down different . . . go different directions, you know. This person will go off-planet. This person will go into the underground sex slave trade.
David: Tompkins mentioned that there were different types of delineations of who is picked and for what purpose. He mentioned farming. Could we start with that? Talk about what type of farming would these people be doing if they were being brought for that purpose.
Corey: Well, they will raise food for people in the program kind of like hydroponic-kind of setups on other bodies in this solar system . . .
David: Hm.
Corey: . . . where they grow food. And they do have people . . . They'll get people that do construction. They'll go and they'll take these people and then take them off-planet and force them to do these things.
David: How would they prevent these people from trying to put poison into the food supply or doing something to sabotage the operation? If you're a slave, you're not going to be happy about it.
Corey: No, but the way they treat these slaves . . . I mean, you have NO HOPE of ever seeing home again. They treat them just well enough to where they want to survive, they want to stay alive, but bad enough to where they will follow any worker.
David: Tompkins also mentioned manufacturing jobs. Can we talk about that a little bit? What types of jobs might they have?
Corey: Sure. I'm sure everyone remembers me discussing the manufacturing plants on Mars . . .
David: Yeah.
Corey: . . . to where they would have tens to hundreds of thousands of people living close by these manufacturing plants to where they were being sent in trains to these plants to work.

And this is going on on other bodies in our solar system as well.
David: So are they actually going to do high-technology stuff?
Corey: Oh, yes. They're building things that non-terrestrials are coming here to trade for.
David: Right. Is a significant majority of the workforce that they have for things like the ICC all actually abducted slaves?
Corey: There are abducted slaves and people that go and apply for a job. They get a job, they're happy, they go to work, and then become a slave.
David: But you've also described in other episodes that there are plenty of extraterrestrials who are not going to be local to our solar system, and they are also picking up slaves for a variety of different reasons as well.
Corey: Uh-huh.
David: And we may have no idea what those people are doing.
Corey: How this really all turned into such a huge trade is that in the beginning of

when we started having contact with non-terrestrials, we were allowing them to abduct humans and take humans. There were so many humans that were never coming back.

So the very morally bankrupt people in this Cabal, decided, “Wait a minute. If we can hold off the non-terrestrials, we can trade these people for technology.”
David: What is the estimate, or if there is a sliding scale of estimates, as to how many people per year are being brought into this?
Corey: Well, I remember this statistic for worldwide disappearances is like a million people.
David: And if that's happening every year, it could be very sizable.
Corey: Yes, yes, it's . . . Millions of people have been taken off this planet.
David: So we could literally be talking about many millions of people who have been brought off this planet into this world in various ways.
Corey: Yes, that are being brought into the slave trade. And you also have to remember that the people we were just talking about that lived on these . . . that are slaves on these Mars facilities, they, over the decades, have begun to have children, and these children are born into slavery. So it's generations of slaves [that] are up there.
David: And Tompkins corroborated a lot of things that you've said very precisely, including this idea of like a brain drain or different echelons, different tiers, of people being brought in.
Corey: This is one of the biggest topics that the Cabal doesn't want anyone to know about. This is one of the things, if we have Full Disclosure, and people find out about all these crimes against humanity, it's going to be a CRAZY DAY on planet Earth.
David: Well, let's say that happens. What is the carrot that we have to look forward to with all of this? Is disclosing it actually going to stop it? I mean, aren't we turning our backs on these people if we don't talk about it?
Corey: Very much so. A lot of people that have been involved or have firsthand knowledge of this don't want to talk about it because of the huge amount of shame involved.

You know, they have sociopaths that are doing a lot of this work, so, you know, they don't lose any sleep. But other people like myself that get drug into it, we're tortured. Inside of us, we're tortured for the rest of our lives.
David: I'm sure. One of the things that, obviously, we don't want to get too specific about it, but something that we haven't mentioned before, is the idea that there is a sex trade going on.
Corey: Um-hum.
David: What do you think is the purpose behind a sex trade and slavery in that sense? What's the objective here?
Corey: For these humans serving in the darker side of the Secret Space Programs, and for non-terrestrials, to be able to have sex. I mean, it's . . . They like to dominate, and

that's a big turn-on for these sociopaths.
David: Hm.
Corey: So, I mean, it's, I guess, the oldest story in the world when it comes to talking about sex.
David: So this is very similar to the kind of sex trafficking that we've heard about on Earth where somebody could get brought into this world and, for whatever reason, they will work as a prostitute even though maybe they could escape. They're not going to really try to escape because they're kept under such tight control.
Corey: Yeah, there's no escaping. I mean, there's no escaping. You're . . . If you're on a tin can floating through space, where do you go? If you're on another planetoid somewhere in another solar system, what do you do? I mean, you have no hope.
David: What have you been told – and I know we've covered this before, but I think it's important to give people some sense of hope in this subject – what have you been told is going to occur as we end up freeing ourselves from the control of AI and the Draco and other negative groups? How will that affect what's happening to these people?
Corey: A while back, some of the Alliance, SSP Alliance, people, before there was an SSP Alliance – they were just people that were acting on their own volition or in small groups – began tagging people that were going off-world into the slave trade.

And we've had some of these non-terrestrial groups that we work with, go and retrieve them and take them for healing.

So after all of this comes . . . all of the AI is gone, we've had Disclosure, people have had a chance to acclimate to Disclosure a little bit, a lot of these people that were in these different types of slave trades that have been rescued and are now in another star system going through healing, will be allowed to rejoin us.

And I know that's something . . . You know, I talk about this topic, and it is entertainment for a lot of people, but there are people that watch this show that have had loved ones disappear. And I hear from them.

So this topic is very real, and it is the most serious topic in Disclosure.
David: It's possible that maybe some of the people that are watching this show, if they lost a loved one, not everybody is necessarily going to end up in something bad.
Corey: Right. And these slaves are not always treated that horribly by different species. Some of these species respect what humans can do. And when it comes to engineering, manufacturing . . . our abilities, our innate abilities . . . And some of these groups that take humans they take them and . . . they take them off-planet and treat them very well.

Think about shows where you've . . . you hear of people having a maid that lives with them or that . . . So it's not all total doom and gloom. It's happening against their will,

which is bad enough, but not everybody is getting eaten or being part of a sex trade.
David: Sure.
Corey: They really look for the most intelligent and gifted people on the planet, and they will either take them or one of their family members who have the same traits if they are too public.
David: All right. Good.

Now what we're going to have is our last video clip from the interview series, and this is Tompkins talking about a very interesting subject. Let's take a look.
* * * * * * * *

MIND CONTROL

Tompkins: I was in a meeting on the subject with some other people, and this one young lady said, “I've got one.”

And, “You've got what?”

[Whispering] “I've got one.”

“Really?”

“I have.”

“I've got a picture of it.”

“UFO?”

“Yeah. A real picture of it.”

“How'd you get that?”

“Well, we were having a party Friday night in Oceanside, and Saturday morning we went – all eight of us – we went to that cul-de-sac off of Lake Boulevard” - it's right over at Carlsbad. Now Carlsbad is next to Oceanside, okay? So they're standing on the border between the two – to show the other three couples their new condo that's being built just across the area.

So everybody goes out there, and they're standing around this fence because it dropped off quite a bit and then came back up.

So they took the picture, one picture of this whole valley thing – not a picture like that [pointing up like to the sky], but just straight out.

And they developed the pictures, all the party pictures the night before, and then this.

You'll notice it's serrated on the sides and it's serrated on the top.

Look what's coming out of the back of it in color – five separate gases coming out of this Reptilian tanker, dropping five gases at 300 feet.

You're smoking their gas today, because they drop this gas only on technically advancing communities on the planet, okay, every four to six weeks. So you could be getting it today.

Not one – one, two, three, four, five, six. THEY DIDN'T SEE IT, because everybody's minds are controlled to not see it just like a stealth system.

So the commander of this squadron made sure that that stealth was turned on. He

forgot to turn on the stealth that prevents a camera from photographing it. Okay?

So the reason you don't see these – they're flying all over us. There's hundreds of them. They're thousands of them every single day on your planet. They're dropping the gas.

So your mind is being controlled, and you don't function normally or how you should function.

And so, again, we are being mind-controlled not for the last couple of weeks but for thousands of years. And back to the Romans again, their minds were controlled.

And it's hard for us to accept that somebody's controlling MY MIND, and particularly – now this is extremely important – particularly because the brilliant PhDs in ALL technical fields, these people are most important for everything that we need in science, but their minds have been controlled.

So they are . . . they won't listen to what some of the rest of us are talking about because they "know everything", but what they've been taught in those books at the university is all lies. Every technical field, it's all lies. It's incorrect.

And it's preventing people that put in the eight years, or whatever, knowing everything now, to accept this subject.

That's the reason Congress didn't accept it when the MUFON went back to Congress - the Democrats and the Republicans, neither one of them. Well, their heads were all nodding up and down, "Yeah, yeah, yeah."

Ten minutes later it was removed, because they were already programmed. Their minds were programmed not to accept that.

I know this sounds insane, but this is fact. This is what it is.
* * * * * * * *
David: All right. Well, I don't know about you, but that's pretty shocking stuff to me as a UFO investigator. I wouldn't have believed any of this maybe even as recently as a couple of years ago.

So, Corey, what do you think about this? What's your initial thoughts after seeing this clip?
Corey: Very interesting! What I have found out more recently is that they do drop gas – 'they' being the Draco. They do drop gas on technologically-evolving areas, but they also monitor each city, county, whatever, and if a certain amount of people are starting to wake up, they will go and drop mind-control gas on them.

It's more of a throwing bleach on a situation.
David: They would increase the gas if more people start to wake up in a given area?
Corey: Yes, they have . . . Not only do they use gas, but for the most part they use a technology that sends . . . that puts out a field that controls our minds.

You've seen people be hypnotized, and they'll say that . . . they'll be told that, “Okay, your wife is invisible. You can no longer see her.”

And then your wife will walk between you and another thing, and you don't see the wife. You see through the wife, and you see what's behind it.
David: Right.
Corey: Well, the mind control works a lot like that as well. There are different layers of the mind control.

There's different layers of how the mind works, and they have to have a solution for each layer technologically and chemically.
David: This helps me start to put together other pieces I've been gathering for a long time. And the mind control stuff was always kind of sounding a little dubious to me, but I did have an insider, and he explained to me that there is an AI computer system that's monitoring everyone on Earth's thoughts, and that if you start to awaken to the things that this computer is programmed for you not to think about, that it will create things like nervousness, extreme exhaustion, tiredness, anything that it can do to try to divert your mind off of the topic.

Are you aware of anything AI-related like that?
Corey: Not specifically, but it makes total sense. If the Draco or AI prophets, if they

report up to artificial intelligence, and all the information I've given on artificial intelligence about how it's controlling the planet, that's not a huge leap at all.
David: We're looking at a ship in this photograph that William holds up, and there seems to be other ships like that in the sky. First of all, he's mentioning a cloaking technique and it's not really clear if the technique is simply something that . . . we can't see it because we're mind-controlled not to see the ship, or is it that it actually bends light around the object? I wasn't really clear.
Corey: Both.
David: You think it's both.
Corey: Both. It is both. Yes, there's the component that I talked about – the hypnotism reference I gave . . .
David: Right.

Corey: . . . to where they put out a field to where they don't want you to see certain things, you just don't see them. You could have your dog next to you going [looking up at the sky], "What the heck is that?" And you don't see it.

It's set to the waves of how our mind works, you know, the alpha, delta, theta, theta waves.

So they're manipulating you on THAT level, and I say 'you', I mean us, because usually when you hear 'humans are mind-controlled", just like he said, people sit back, "My mind's not being controlled. That must be OTHER people. I'm too far advanced, you know. I have special beings that I talk to. It's just impossible."

But the fact is, all of us – you, me, people at home – we're all mind-controlled to a certain degree.

David: So when he was showing us this image of what he called a Reptilian ship, it has an interesting appearance, and I'm curious if you have seen any craft like that that were attributed to Reptilians?
Corey: Very similar.
David: Really?
Corey: Except they looked as if they were tankers that held a lot more volume of whatever they were transporting. And the experience I had was, I was seeing footage of these things bringing in water from lakes and oceans.
David: Hm. And because of this mind-control and cloaking, they could be doing this and you wouldn't even know that it was happening?
Corey: It could be happening right above you right now and there's no way you would know. They could be taking water out of your local reservoir.
David: Well, let's just kind of get through the fluff and get to the meat of this, which is, what's the purpose for us being mind-controlled? What's the big deal? What are they trying to stop?
Corey: Well, they're trying to stop us from advancing technologically so that we are an interstellar race.
David: Interesting.
Corey: And they're trying to keep us under control on this somewhat slave planet that they are wardens of. So there are a lot of reasons why they do mind-control.

Any of these sociopathic groups, human or non-, that are in a place of power, they want to keep that power. And if you have no moral compunctions about doing slavery, or any number of other things, controlling the minds of the people on a planet you control is going to be just . . . it's going to make sense to you.
David: Well, for those who have watched “Wisdom Teachings” or read my books, or are just familiar with my work in general, then they will know that I've done a lot of scientific validation showing, for example, in the last 5,000 years, our DNA has evolved by 7% across its entire structure.

That's a hard, solid scientific data point proving that we are going through some kind of Ascension or mass evolution.
Corey: Right. And that's one of the other things that I didn't mention that they're trying to stop . . .
David: Okay.
Corey: . . . is: they're trying to not necessarily prevent us from genetically and spiritually evolving, but control HOW we evolve. They're not completely stopping it, but they're controlling it.
David: So this is a spiritual war . . .
Corey: It is.
David: . . . in some sense.
Corey: Yeah! Absolutely.
David: Now, when I spoke to Tompkins in personal phone calls, he mentioned that

the people in our military-industrial complex who are against the Reptilians are very concerned about shooting down these tankers.

And what he told me was, they've determined that although they have the technology to shoot the tankers down, they can't kind of gradually turn off the switch.

They're worried that when they shoot them down [finger pop], all of this technology turns off all at once. And he said that could be very bad for us.
Corey: Very bad.
David: Now, what's your take on that? What's your background on that?
Corey: I've touched on this on other episodes that, yeah, that's absolutely true. They're worried about when the AI is removed [fingers pop] real quickly, we may expect it to occur in a solar event that will remove the AI.

That will also remove these certain entities that attach to us and control us. They use entities for mind control as well.
David: What is that going to look like? What happens to the average person who's been under this mind control if it was suddenly removed?
Corey: Well, if you've ever seen a person that was addicted to heroin and then they stopped cold turkey, it's going to be very similar.
David: Really?
Corey: Yeah. They've had a certain state for so long that the shock . . . it would be sensory overload.

He said that we don't operate normally as human beings. That's true. We have other senses that are being blocked right now. It would be very similar to a blind or deaf person that all of a sudden – they've been that way all of their lives – and then all of a sudden they're gifted vision or the ability to hear. They're going to get sensory overload. They're going to have to acclimate.
David: Well, one of the things I remember reading, and this goes back to Val Valerian and his infamous Matrix Series of books in the late 1990s. He pointed out that the cell phone frequency that has been chosen to be used by the government happens to also be the same frequency that the human skull resonates at if you ring it like it was a bell.
Corey: Right. Cell towers, they're relaying data from your phone call, but they're also . . . that technology is . . . they're piggyback waves that are in there that are mind control. And this is part of this huge grid that goes across the planet that they use.
David: Do you think that somebody who lives in an urban area as opposed to a rural area, just by the number of Wi-Fi transmitters that are going to be around them, are going to be a lot more affected by all this stuff?
Corey: Absolutely. And you can see that in the behavior of people. You can see people act like idiots in the city because they're just piled up on each other, but there is more to it than that. They have all this technology around them to where they are

getting hit with all these waves.

If you're out in a rural area, it's going to be a lot less exposure.
David: Now, one of the most audacious things is where Tompkins very confidently disses every type of science we have. And I forget his exact wording, but he called it "garbage" or something like that.
Corey: It's lies, yeah.
David: It's a very hard thing for people to – people who are not familiar with what we're talking about – to accept him making such a bold statement as that.

What do you feel is the reason behind that statement? How could that statement possibly be true?

I mean, it seems like with science we've figured out a lot of things. We've nailed a lot of things down. We've got some pretty good gadgets. We can travel.

Why do you think he would have said that?
Corey: Well, because every science you can think of, even archeology, physics, medicine . . . all of these people are . . . it's like the Dark Ages. The information is basically the Dark Ages. And we'll look back at this time as being Dark Ages.

They're using antiquated information, and they have been basically brainwashed and taught through their schooling process that, you know, "This is the truth; this is the way it is," and not to think outside that box.

If you notice, people in these fields, if they try thinking outside of the box, they're labeled 'a conspiracy person' or 'a fringe person' and they don't get the respect they deserve.
David: Sure. We have to be dealing with a technology that is a lot more advanced than just what we would think of as a breathable gas, though.

If we're talking about a technology that could actually steer us away from certain scientific discoveries. This is obviously a highly advanced technology, I would think.
Corey: Oh, absolutely. Yeah, the whole planet is bathed in this field, this mind-controlled field. They use gas just for kind of a localized situation. A little red light goes off on their AI monitoring, then they'll send a small fleet over to gas the people, and then the little light will go off.
David: Most of the scholars that talk about mind control pretty much stick to ELF waves or extremely low-frequency waves. And there is research that has pointed towards the fact that if you beam a very low frequency, maybe 5 hertz or something, into a crowd, that you could induce mass hysteria. You could get the crowd to become very agitated. But we're talking about pretty grotesque, blunt movements of peoples' consciousness.

Corey: That's very low tech . . .
David: Yeah.
Corey: . . . what you're talking about compared to what these non-terrestrials have that they're using on us.
David: Do we have any way of understanding how such significant manipulation of our thought patterns is accomplished – how it is actually done?
Corey: We're going to have a problem understanding it, because we're in the paradigm of understanding and believing all of these scientific lies.
David: Right.
Corey: The people in these programs that were investigating it, they had the benefit of having the true sciences. They operate in a way that we just wouldn't understand, or very few of us would.
David: So once this mind control goes down – let's say that it does go down – once we go through this sort of acclimation process, what does it look like on the other side?
Corey: Well, yeah, once we finally acclimate to our new abilities, which are actually old, old, ancient abilities that have been repressed in us, then we're going to have to learn how to use them responsibly. We're going to have to learn how to interact with each other in a whole new way.

We've been so programmed to be at odds with anyone whose skin is slightly different, or you worship a slightly different named God. We're programmed to inter-fight.

We're not going to be able to overcome that like that [snap of the fingers]. It's going to be a process.

So we're going to have a process ahead of us once Disclosure happens.
David: All right. Well, that's all the time we have for in this episode – very fascinating stuff. This is “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

Viewer Questions 10: Ascension Concerns Season 8, Episode 6

[Cosmic Disclosure; Viewer Questions 10: Ascension Concerns and End Times Madness](#) Season 8, Episode 6

12 Sep 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and here with your questions is the one and only Corey Goode. Corey, welcome back to the show.
Corey Goode: Thank you.
David: Okay.
“I love your questions and answer episodes. I am confused about one thing, though. I have heard Corey on other programs state that the Chinese will be, for lack of a better word, in charge of a new currency for 100 years.

“If we are to have this cosmic event between 2017 and 2023, which I thought was our Ascension, why are we worried about anything after that? Won't Mother Earth shed these negative beings as she ascends?”

Corey: There are various groups that have different agendas and plans, and they're prosecuting those plans, you know, the way they would as if they were going to win.

If these energetic things occur, or some of these other things occur that I've been told recently about non-terrestrials making themselves known to people in small groups, then I don't see their agenda being able to come to fruition.
David: So the Chinese, the basis of their idea of wanting a 100-year financial system comes from what?

Corey: It comes from the negotiations that have occurred between the Alliance and the Cabal. They said the West had its 100 years. They want their 100 years to run the financial system.
David: So you're equating the Chinese with the Alliance in some way?
Corey: Yes. Well, the Chinese are a large part of the Alliance, and they're the ones that have been predetermined to take over that financial system, or lead it.
David: So let's just be clear on what is the Chinese plan? Are they wanting to do exactly what the Federal Reserve did? Are they wanting to enslave us?
Corey: It would be a different type of Babylonian slave system, money magic system, of course, as long as there is a financial system, but it's supposed to be a fairer system that is fairer globally, and is based on gross domestic product and other things, other than how much wealth one country has accumulated and using that wealth against other countries.
David: Do the Chinese feel that they have been unfairly pigeonholed into a more poor level? And is that part of what they want to do, is to even the playing field?
Corey: That's the entire reason that the Alliance formed. It was to fight against this Western Cabal that had basically taken over the financial system and most of the infrastructure of this planet.
David: So do you think that the Chinese would preferentially boost the economies of countries like Southeast Asia, Africa, places that have been disadvantaged?
Corey: Not only that, but they're heavily investing in these areas, like South America, parts of Africa. They're buying up land and property as fast as they can.
David: Obviously, the Chinese should be vetted out on the idea that there's going to be a solar flash, but do you feel that if they do know about it, do you think they just don't see the significance of it? They're just going to plan around it not happening?
Corey: Everyone knows about it, but as I've stated before, depending on the group, they have different ideas about what is going to occur when the solar flash happens.

Many think that it's just going to cause a lot of technological communication disruptions.

Some think that it's going to destroy anything that works on an integrated processor.
David: Hm.
Corey: And others think that it's going to be some sort of an Ascension event, or a mass death event, a kill shot event.
David: Right.
Corey: So there's no real agreement on what is going to occur when the Sun does have this “Sneeze”, as they're calling it.
David: Since we're on the topic, what is the most current speculation about when this would be taking place that you've heard?
Corey: Now, the actual solar event, I'm not sure, but the same dates apply. You know, was it 2018 to 2023, I believe was the window?
David: Uh-huh.

Corey: They extended the window a little bit on that, but they still expect these massive events to occur. And it sounds like it's more than one event, not just a solar event that's to occur in this window.
David: Well, certainly we know in “The Law of One” that it's portrayed as being very positive, and the beings that have been in contact with you are portraying this as a very positive thing, correct?
Corey: Correct.
David: That it will be some sort of Ascension-type of thing that takes place.
Corey: That it will . . . Not necessarily the Ascension that everyone has in their different belief systems, but an Ascension, . . .
David: Right.
Corey: . . . which is basically going to kick off what occurred with Mica's people, which is a consciousness renaissance.

And this Ascension is basically going to be a consciousness thing more than it is a physical, you know, “twinkling of an eye” thing, from what I'm told.
David: Right. Well, that's very good. Next question:
“This latest 'Cosmic Disclosure' episode really helped me understand better the nature of time, timelines and time travel. I would love to hear much more on these topics.

“I found it particularly fascinating that Corey mentioned how the Cabal's artificial intelligence future prediction technology seems to be much more unreliable lately, possibly due to more and more good folks focusing on a more positive and productive future for us all.

“Or perhaps it is due to them messing with the timelines so much. Or maybe the nature of time is changing somehow with new energy shifts.

“In any case, this seems to be a very good sign, and an indicator that we are all making headway into a more beneficial timeline. What are your thoughts?”
Corey: There are definitely signs that we're headed into a more positive timeline, but apparently, it could be better.

The Anshar have shown visible anxiety about maintaining their timeline. So it's not all roses, I guess you could say.

There is a lot of work that needs to be done. And most of it is work that we need to do within ourselves, and also spreading the word about what is going on energetically, the changes, and you know, try to get as many people to wake up as possible.
David: So just to be clear on the nature of the question, are you saying that whatever artificial intelligence was being used to probability-model the future, that it's becoming increasingly errant in its conclusions?
Corey: Yes. It has to do with what's going on with this strange Mandela Effect, you

know, the nature of time changing.
David: Hm.
Corey: And it also has to do directly with these energetic changes that are occurring.
David: One of the levels of this question was, is it being . . . is time changing because more and more good people are focusing on a positive timeline? What could you say about that?
Corey: Yes. The co-creative consciousness of people that are more, I guess, positive and trying to intentionally create a positive future, are having a direct effect on what's occurring on our reality.

That's why more and more people are needed to become more focused on meditating and group meditation, looking for a positive outcome for our reality.
David: Okay. Next question. Here we go:
"I think I'm confused on the whole, being in regards to Service-to-Others. I notice I'm attracted to depressed and broken women. I always try to help them see the light, but they just never seem to be happy.

"I'm currently in a relationship and she's very negative and drags my energy down. I try to make her happy, but it only lasts for a few minutes, and then she's right back to complaining about something else.

"Is this something I should continue to do?"
And I guess he means, should I continue to be involved with her?
"Am I not getting the proper point of how to be of Service-to-Others?"
Corey: Well, just because you're being Service-to-Others does not mean you have to be a doormat to anyone. A lot of people confuse that.

They think that you have to be, you know, just succumb to any attack and not fight back.

When it comes to . . . Ka'Aree, one of the big things that she had told me to work on – there were two things before I could progress spiritually any further, and it was outstanding issues on my marriage that we hadn't dealt with, and the other was to reconcile with my father, who I hadn't spoken to in six years.
David: Wow!
Corey: And both things occurred in the last several months. You know, a catalyst came in, a point to where, you know, Stacy and I were going to separate. There was a catalyst, you know?

And it was a situation that . . . it brought on healing, and we were able to mend things, and things are better now than they've ever been.
David: Well, I'm glad to hear that.
Corey: And the same thing with my father. I was able to, just after Father's Day, have

a reconciliation with my father.

So that was a major release of energy on [for] me. And so these different, I guess, relationships that you have can act as a parachute and hold you back. But, you know, I think that we do need to give the other people in the relationship an opportunity to grow.

And a lot of times, us leaving is that catalyst, but I am not qualified to give relationship advice by any means.
David: What do you think about the principle of people being stuck in some kind of depression? And have you explored the possibility that there is a connection to this solar event and the changes that the Spheres are here apparently to buffer?
Corey: Yes, so most recently, I was told by Tier-Eir to expect the End Time Madness type of behavior we're seeing in people to dramatically increase.

You know, everyone, all of our different personality distortions, are being focused and exposed. You know, just the different things that we haven't dealt with are being exposed in our lives, and we're being forced to deal with them.

But we're also noticing, because of the increase in energetic waves, that people are being pulled in the polarity that they lean most towards.

Negative people are becoming much more negative, and they're coming together. Positive people are doing the same.

And, of course, we talk about people that happen to, unfortunately, have mental disorders. They're having a lot of problems right now. And that's going to only increase.
David: There's some interesting material in “The Law of One” regarding the path of Jesus when he goes into martyrdom and basically offers up his life on the cross.

And they do actually say that if he had chosen to live, that he could have been here longer and done more service. And so they explain that there might be a Judeo-Christian bias for people towards self-martyrdom.

Do you think that there are people like our questioner who feel maybe that self-martyrdom is this positive thing? That if they are constantly on the cross with someone and bearing that, that that's a good thing for them to be doing?
Corey: Yeah, I mean, a lot of people will think that we're burning off karma, and sometimes we are. But a lot of times, you know, we're creating our own problems.

By not trying to actively grow, you're going to become stagnant and locked into situations like that.

You have your own growth that you need to focus on. And if we're going to change the world one person at a time, we have to focus and love ourselves just as much as we do the people that we're martyring ourselves for.
David: So since you've had in-person interactions with several different types of benevolent off-planet beings, or Inner Earth beings, if you were in a situation where you had to sever a relationship of whatever kind, friendship or whatever, that was maladaptive, what kind of advice do you think they would give you?

What would they say? If you can remember something, what would they say?
Corey: Absolutely. With my marriage, I was bringing THAT up to them, and they would not give me advice. Everything that ended up happening, happened exactly as it was supposed to.

The catalysts that created all the changes would not have occurred if they had intervened.
David: Ah.
Corey: They told me also, a lot of the times, what occurs in our life, is something that is set before us by our higher selves.

And our higher selves are trying to guide us and teach us, and that they're not going to interfere with that process.
David: Very interesting. So we have another question now. Apparently, we've had some comments of people thinking that it is derogatory for you to refer to one of these beings as a "Golden Triangle Head being," emphasizing its physical attributes instead of, why doesn't Corey just say what his or her name is? So what would be your answer to that?
Corey: That's literally what they're being called in the briefings and documentation, is the "Golden Triangle Head beings."
David: Ha, ha. Okay.
Corey: The name that we have been given for them is a long, weird sound. It's not anything I could reproduce with the vocal chords I have.

So that's why they are not called by the name that they have given.
David: So they would have some alternate way of verbal speaking that is not something we could easily produce, if at all?
Corey: Right. Yeah, we couldn't make the noise. I mean, you could create it with a computer, most likely, but . . .
David: What would be the pitch range of the noise?
Corey: Real high pitch. It's not really whale-like, but it's a weird thing – similar.
David: All right. Next question:
"I'm still confused about the 20-and-Back program. If you are in space for 20 years, and then are inserted back 20 years ago after you have completed your mission, then

you would be on Earth and in space at the same time during those 20 years."
This is like the whole "Back to the Future" thing.
Corey: Yeah, but it's different timelines.
David: Right.
Corey: In one timeline, you're not on Earth, and you've been reported as a missing person.

On the other timeline, you're on Earth. So they're not exactly during the same time. They're different . . . almost like different reality, layered realities.
David: Hmm. Okay. I think that probably helps to answer the rest of the question. He says:
"Then 20 years after you were inserted back on Earth, you would still be in space finishing your mission, then inserted back on Earth 20 years earlier, and you'd be in an infinity loop, stuck forever. I'm just wondering what Corey's response is to this.

"Everything else seems to check out. I'm sure there's a good answer, but it has yet to be brought up."
So I guess they're looking at the idea that if there were two mirrors facing each other, that you're going to see multiple levels of the mirror. And so, if you're on that timeline in space, and then you get brought back to Earth, then you go back to space again, back to Earth again – ping-pong, ping-pong.
Corey: People now have a pretty easy . . . well, not all, but a pretty easy time understanding space and the cosmos. Understanding time and how time blends with space, people don't really understand.

It's a hard concept for a lot of people to understand that these advanced non-terrestrials are more time travelers than they are space travelers, because of the technology they have.
David: Right.
Corey: They can travel into our past, into our future, into our present. They can jump all around.
David: Can you even travel in space at higher speeds without traveling in time?
Corey: No.
David: Or is it all one thing?
Corey: No. Any time you're . . . Even when you're walking across the room, you're traveling in time.
David: Right.
Corey: It's just as you increase the speed, . . . you know the rest.
David: So would you say, then, that these alternate timelines somehow merge in order to prevent the world from spiraling into some sort of paradox?
Corey: Yes. It would blow people's minds, the amount of merging and separating that occurs constantly, moment from moment, as we're progressing, you know, from our zero time reference.

Behind us and in front of us, there's all these changes occurring.
David: And it looks like there are two parts to this, so I'll hit you with one at a time instead of reading the whole thing at once.
“Number one: why do the Secret Space Program and the sophisticated alien races use human slaves? Hasn't artificial intelligence and robots become sophisticated enough to handle 'slave labor'?”
Corey: AI is definitely sophisticated enough, sophisticated enough to where it has become the enemy of most of the beings out there that are benevolent and malevolent.

Most of them say, they'll use a certain amount of AI that will go no further, that will not . . . that has a certain purpose.

But they monitor that very closely, because in just about every case, if you create AI and it gets exposed to this AI signal, then, it is then co-opted by that greater AI being that is out there in the cosmos.

So most of these beings stay very much away from AI type of robotics.

They do have androids that are sort of like the Greys, that are sort of a bio-android machine that they can program.

But for doing fine tasks and engineering, all of the different things that they like humans for, they prefer humans that have been raised on the Earth, have experience on the Earth in certain industries.

The clones do not work as well for them either. The clones are highly programmable,

but they don't have the intuition and all the other attributes that a human that has grown up here has.
David: So do you think that there would be a high level of interest from the Secret Space Program in recruiting people who had grown up in a normal human life on Earth, and then bring them into this occult world?
Corey: Yes. Most of the recruiting occurs within the military. It's a very small percentage of civilian assets that are used. And most of them aren't on a 20-and-Back. Many of the eggheads or engineers would be there for 18 months, four years, eight years, and back.

The military mostly did the 20-and-Back.
David: Why would they be so prone to not want to use civilians?
Corey: They're not as easy to control.
David: Hm.
Corey: And for the most part, they try to keep as much of it compartmentalized in the military as possible. They have to use civilian engineers, civilian scientists, and they also use different people, like myself, that have been in programs to where they're groomed to work in the programs.
David: Why do you think they might allow any of these people to ever return to our world and not just keep them there indefinitely?
Corey: That was an agreement that was made with the non-human group that gave them a lot of this technology that they're using.
David: Hm. They weren't allowed to just take everybody forever.
Corey: Right. And they have to . . . That's why they have to blank-slate people when they put them back.

There are a lot of rules that they're supposed to be following to use this 20-and-Back technology.

And this technology was basically handed over to them. They developed it out, of course. But it was basically handed over to them by a non-human race that was working closely with them, the Navy group, to form a navy that would help fight the Draco and other aggressors.
David: So do we know which group it was that gave them this technology?
Corey: It is believed that it was the Nordic race that was the group that was giving them the most technology.
David: Hm! Interesting.

Well, let's just talk about this Navy versus Air Force thing for a minute, because as we know, there wasn't even a CIA until after World War II. It started as OSS, Office of Strategic Services.
Corey: The same date that the Air Force started.
David: Right. So if fighting World War II, that there is a branch of the U.S. military

that's doing air joint missions with the British against Hitler in Europe, but then the Navy is actually at sea in their own enclosed capsules, and that's more of just a straight-ahead American component, without the British being involved, how do you think that might have affected what we now see as Air Force versus Navy?
Corey: Well, the Navy was, of course, equipped already from the beginning, infrastructure-wise, knowledge-wise, to build deep space vessels and maintain them.
David: Yeah.
Corey: You know, they were sending people out six months or a year at a time on ships. Later on, they were sending them for long periods of time under the water in submarines.

So with slight modifications, they could take that and make it more of a deep space type of fleet.
David: Uh-huh.
Corey: Now, the Air Force was working close with the DIA, and they were working close also with the military-industrial-complex, more of the face that we see, not the hidden part.

They were producing the technologies for SDI as well. These technologies were creating space stations in near-Earth orbit, within 500 miles, triangles to service them.

And they have a small footprint on the Moon and Mars – a very small footprint.

So that is the program that they want to disclose to the population first.
David: So how do you think the origin of the Air Force in World War II, with the air support that was going on for World War II against Hitler, and that British collusion, might have affected their political structure now?
Corey: Well, I believe that once they saw that we were going to be able to reverse ET technology and use it out in our own solar system, they began to work closely with civilian intelligence, trying to get that centralized.

Of course, it was during that time that they also made the existence of non-terrestrials and their technologies the most secret thing on the planet.
David: I guess I'm just going to get really aggressive and ask this directly. Do you think that as a result of what became the Air Force having more involvement with the British, that there might also be more of a Cabal component to the Air Force than there is to the Navy side?
Corey: Yeah, there absolutely is. They are more tied to civilian intelligence, and the civilian intelligence . . . The entire infrastructure has been taken over by the Cabal.
David: All right. Then he has a Number Two:
“Do we face an immediate threat to our society from upcoming AI and robots taking over most of our jobs?”
Corey: It just depends on, I guess, the future we choose. If we keep heading into a

transhumanist type of way, which a lot of the intellects are heading – you know, they want us to get to a point where we can upload our consciousness to a computer, or turn ourselves into a mixture of man and machine – that would not be an optimal temporal reality.
David: For sure. But it sounds like the threat is much deeper than them just taking our jobs. You're talking about a total domination.
Corey: Usually what occurs on the planets is that the native beings will create this technology. This technology gets co-opted by this AI signal, or they develop technology with, alongside, the AI signal after they've been Trojan-horsed, kind of like a Roswell situation.

They build out this technology, and then the technology turns on them, very much like "Battlestar Galactica".
David: And just to clarify in case somebody didn't know what you were talking about, what is the AI signal?
Corey: The AI signal is a signal that they don't even know how old it is. It's just billions or trillions of years old.

This signal somehow, they say, came from another reality. And the signal is being broadcast all throughout the cosmos, and the AI has actually taken over entire galaxies in the cosmos. It's like a virus.
David: So what does the signal do?
Corey: The signal will interact with technology. That's what it prefers to do. But it will also get into a planet's electromagnetic field and stay dormant there for thousands of years until technology comes by and it can piggyback on it.

It can also lodge within a person's bio-neuro field, and people can carry the AI around and distribute them to various devices.
David: So can it introduce ideas and thoughts into someone's mind?
Corey: Yes.
David: And those thoughts would be towards what?
Corey: Pro-AI type thoughts, or leading them to do things that will benefit the AI, you know, like a parasite.
David: So to develop the technology that it would need for its own . . .
Corey: Or get it to the technology that it needs to leapfrog out of you to get into to do whatever its mission is.
David: Okay. Well, thank you, Corey, for answering everyone's questions. And I want to thank you for sending them in. We do read what you're saying, and we listen, and we respond.

This is "Cosmic Disclosure". I'm your host, David Wilcock, here with our special guest, Corey Goode. And thank you for watching.

The Ascension of Earth Season 8, Episode 7

Cosmic Disclosure; The Ascension of Earth Season 8, Episode 7

19 Sep 2017

David Wilcock: All right, welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode.

And in this episode, we're getting into a long-awaited update about several key issues that are happening right now.

So, Corey, welcome to the show.
Corey Goode: Thank you.
David: So, Corey, we've described how the Anshar have been worried about our future. And a lot of this concern seems to have coordinated with the timing of this eclipse.

What were you told about the eclipse exactly from the Anshar and how it relates to what's going on now?

Corey: The eclipse was an energetic alignment that was going to enhance our co-creative consciousness' ability to make thoughts into real things, supposedly.

What she said was that a . . . and this was in concurrence with what Tier-Eir had stated about doing mass meditations. We had gotten together with a few other people and put together a mass meditation on the day of the eclipse, and the Anshar were

very happy about that.

And they stated that they were going to participate in it as well, and that a lot of the contact that people were going to receive was going to be initiated then. But it was very interesting.

During the eclipse, I was standing out looking through a filter at the eclipse. And everyone was meditating and putting out good intent.

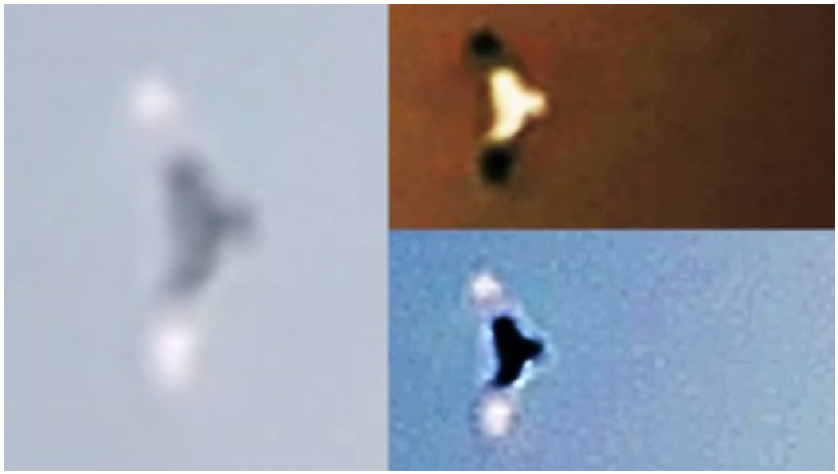
And I was in the middle of doing that when, through the filter, I saw a little flash to the bottom left of the Sun.

And I was just about to say something about it when the lady next to me came up excited and showed me her phone.

“Look what I got! Look what I got!”

And just in the exact spot I saw the flash was a triangular craft. And we caught it . . . We got a photo of it.
David: Very cool.

Corey: And it was very interesting that that occurred during the time when I was putting out intent for humanity to receive assistance.



David: Now you brushed on something very briefly that I think we need to cover more, and that is this concept of contact.

What was the nature of this contact you were informed about by the Anshar that would be happening, or that they were trying to make happen?
Corey: Well, they stated that contact in the beginning would start out with people having dreams.
David: What contact would take place?
Corey: Contact between the Anshar and people on the planet.
David: Okay.
Corey: They would begin to have dreams that would slowly acclimate them to finally having an in-person meeting with the Anshar.

So I was expecting things like that to occur during the eclipse.

What I didn't realize is that a lot of the people that were participating were getting these downloads, just information rushing down into their consciousness, giving them ideas about how to use their talents, about how to solve issues in their lives.

And I was expecting something a little bit more dramatic.

Soon after I got home from this event, I did have a meeting with Ka'Aree, where I asked her more about this.
David: So these contacts start out, as you said, with dreams and possibly telepathic things. Where does it go from there?
Corey: Well, it actually starts a little bit differently.

After I got home, I was exhausted . . .
David: Home from where?
Corey: . . . from the Eclipse of Disclosure at Mt. Shasta.
David: Okay.
Corey: I'm laying in bed, and the next thing I know, I'm in that exact same greeting area that . . . the first time I had met the Anshar. And I'm laying on my back.

But this time, there's a thick bed mat that – it was pretty interesting; I don't want to go into detail on that – and then a round head roll that was behind my neck.

And immediately, I looked up, and I saw Ka'Aree and two others standing. And she just briskly asked me to get up, and we walked back to that original meeting room where she had offered me the Elixir of Isis.

She was kind of frazzled or in a hurry.

She brought me back to discuss the eclipse and the mass meditation. And she was stating that it was a very big success, that . . .
David: Oh, great!
Corey: Yes, that a lot of people that partook in it received massive downloads, only a little bit that they were conscious of, that was going to help them prepare themselves for contact.

And I told her at that point that I appreciated seeing the UFO in the sky, but I was expecting something a little bit more dramatic to occur.

And she told me that I had jumped to a lot of conclusions, that there is a very specific way that the benevolent beings have to approach humanity.

And I thought it was interesting.

She said that they see us on a little bit more of a level than just our physical personal egos. They see us on a multidimensional kind of level.

And before they can come and introduce theirselves to us, they first have to approach our higher selves.

And our higher selves determines whether we get contact, what type of contact we will get, or what we need before contact – what we need information-wise to prepare ourselves.

So it's not the case that I thought that these beings just come to us because we have the right vibration or they think we're ready.

They come to us because our higher selves have approved it . . . have approved that contact.
David: Now, you said a while ago that, I believe, it was Tier-Eir had told you that as we get closer to the solar flash, people would start seeing ghosts of some form.
Corey: Yes, he said as the energies peak – reach their peak – that you will know this because all across the world, people will start describing stories of meeting family members that have died and having conversations with family members who have passed on.
David: So do you think that perhaps these Anshar visitations could also come in the

form of that, as they say contact is going to unfold over time?
Corey: What it sounded like is that they approach our higher self. Our higher self and them come to an agreement about what type of contact our egos will receive.

If our egos are not ready for one-on-one contact, our higher self will converse with the being – the Anshar, in this case – and say, “This is what they need to be prepped, . . . to prep for that type of communication.”

And they'll receive the information they need in the form of a download – an information download.
David: It's been pretty stunning to me to see how soon after the eclipse we've had massive hurricanes. Do you think that is related to this eclipse and what they told you was going on?
Corey: I was shown basically a vision of what is occurring. And the Blue Spheres are almost gone. They're almost completely translucent and gone.

And we're receiving higher and higher doses of this cosmic energy. Our planet and solar system are bathed in this energy right now.

The image I was shown was of the Earth spinning, rotating within that energy, and it was like a dynamo. And the energy was feeding into the Earth through the poles.

And in the vision, it was causing massive, high-energetic storms like what we're seeing and earthquakes.
David: So some people have tried to say that these are HAARPicanes, that they're not natural phenomena, that the Cabal is doing this to try to collapse the American economy. What are your thoughts on that?

Corey: These storms are not created by these technologies, but they are being steered. They have satellite systems that shoot, I think, what they call masers – microwave lasers, focused microwave beams – into the ocean, close to the storm to warm up the water. And that causes the storm to go towards the warmth, and they can lead the storms where they want, to a degree.
David: Do you think that the American economy can survive disasters of this scope?
Corey: It's going to affect the economies, but more so, it is a distraction. It's [a distraction] to all of these groups that are working on trying to set up arrests and courts to hear these cases. The military is heavily involved in this.

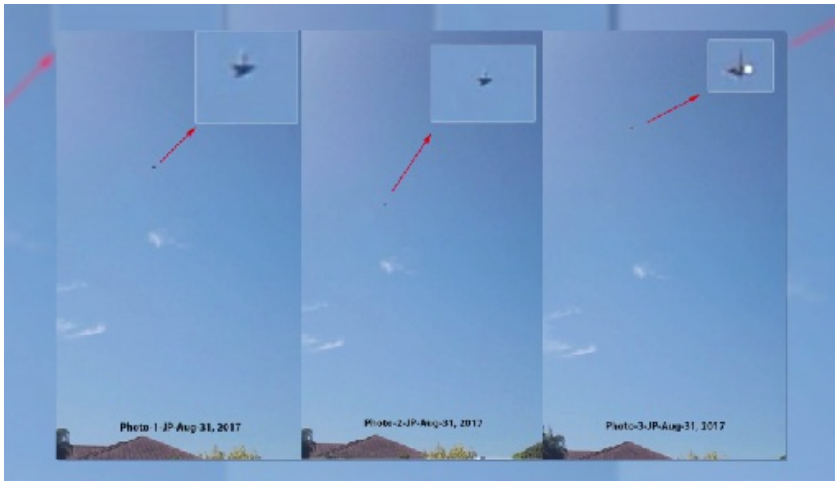
If you have all of these major events occurring – weather events – then the military has to be pulled over to assist.
David: Wow!
Corey: So it's part of it, at least –- to be a misdirect.
David: Why do you think North Korea has been acting so crazy lately with this nuclear threat that they're making?
Corey: Well, North Korea is . . . I mean, it's fairly well known that the Cabal has a certain amount of control in that country, although it appears that we don't. So they are a perfect distraction tool.

Now, another theory that I've heard was that North Korea would become such a threat that we would have to use new exotic weapons platforms that we have never disclosed to the public. But the only way we could use them would be to disclose them to the public.

And that, to me, sounds like a perfect opportunity to disclose triangular craft that are used to go down and try to neutralize North Korea before they fire all of their ordinance into Seoul.
David: Pete Peterson has been saying a lot lately that what he kind of affectionately calls “quadcopters” - though these are full size and piloted – that the military is very close to unveiling these.
Corey: That's exactly the intel I'd been given. And if you remember on the show here, maybe six months ago, I was reporting that the Air Force Secret Space Program, they were going to begin to “accidentally” let us see a lot more of their triangular craft.

I reported that we would start seeing reports of triangular craft.

And indeed, recently over an Air Force base in Tampa, on two separate occasions, people have been taking photos of triangular craft. And I believe we have an image of that.



David: When you were meeting with Ka'Aree, and she's telling you about . . . that contact is going to develop, did you get a sense . . . I know we're talking about higher-self handshakes and so forth. Did you get a sense that eventually people like those watching this show might actually have the type of in-person experience like you've been having with them?
Corey: Absolutely. The Anshar basically let me know that the visitations that I'm having, it'll become commonplace, and that I will, like I want to, slowly kind of drift off into the background because everyone else, or so many other people, are going to be having these one-on-one experiences.
David: Do you think there would be a way at some point to be able to validate who is actually having real experiences, as opposed to who's just trying to jump into the spotlight and gain some attention?
Corey: I think at that point it won't matter.
David: Why wouldn't it matter?
Corey: So many people will be having open contact that the attention-seekers that are lying, . . . it'll be pretty obvious who it is. And it just really will be of no consequence to everyone else who is receiving contact.
David: Do you think that if we have more catastrophes take place like these hurricanes, and everybody's having to go through that, that that in some way opens up more of the universal law for the Anshar to do these type of contacts?
Corey: I don't know about that, but when I spoke last to Tier-Eir, when he was showing me all of these things, I was a little perplexed about why these things were being allowed to occur.

And Tier-Eir stated that while these things are happening, it will be an opportunity for people to be Service-to-Others. And that's the only real response I got on that. The

Anshar did not go that in depth.
David: Now you've had another meeting with Ka'Aree much more recently that really has some fascinating new plot twists in it that actually caught me off guard. When you first told me, I was quite surprised.
Corey: This was the same meeting.
David: Oh, it was?
Corey: Yes.
David: Okay.
Corey: Once again, I had noticed that she was acting abnormal. She was a little bit stressed, and, like, preoccupied.

So she was behaving abnormally from the way she normally behaves, you know, real calm, serene. She seemed preoccupied.

And I asked her if the timeline was continuing to diverge from the timeline that they were sent here to steward. And she said, “Yes, that is indeed the case.”

And she said, “Things have developed quite far in the timeline” – divergence from their timeline.
David: And just to be clear, what you had said was that this negative timeline could involve a very dark future for humanity. Could you reiterate what that was?
Corey: Well, it was a very dark future for humanity, but the Anshar were concerned because if that timeline was diverged from, they would no longer exist.
David: If our positive timeline . . .
Corey: Right, was diverged from. Or, well, THE timeline that they were trying to manicure.
David: So she's concerned, indicating that she's worried whether that negative timeline might still take place.
Corey: Right. And I asked her, “Is this completely unheard of?”

And she said, “No.”

She said, “We have gone through this on several occasions during the changes of cycles,” that her people have had to take drastic measures during the cycles.

And I asked her what she was talking about, and she started walking me back to the area where I had first appeared, that radiated out into different hallways.

She took me out in there and immediately hung a right and went through another hallway. And we eventually ended up in an area that came out to where we could see where the giant city was that I described before.

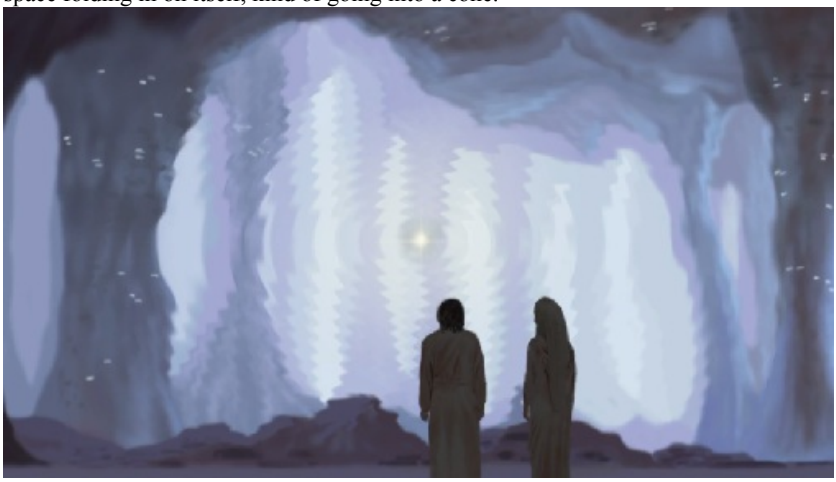
And we exited in a different area. We popped up from a different perspective.

And as soon as we looked into this huge, huge cavern, it was immediately obvious that everything had changed. None of the buildings were there anymore.

The rock pillars that went up to the roof of the cavern that had all of these dwellings cut out in them, those were still there. There were no lights.

And there were little footprint areas where all of the buildings had been.
David: Really?

Corey: Yes. And then there was this weird, . . . this weird . . . It looked like time-space folding in on itself, kind of going into a cone.



And where the cone ended, it was, like, flailing around a little bit.

And I asked her what it was. And she stated that in times past, during the cycles, the Anshar have put their people in this time-anomaly bubble, . . .

. . . and that this time-anomaly bubble is exactly the same as the anomaly-bubbles outside of Jupiter and Saturn where the Super Federation has these giant stations, where they meet.

David: Do you think that the Anshar dwellings are built to be modular, that it's like a little craft . . .
Corey: They are.
David: . . . they can move around?
Corey: Yes.
David: It is.
Corey: Yeah. And what had happened is all of them had levitated and gone into the event horizon of that anomaly to where they would be protected from everything that's occurring energetically.
David: Would that include that if the timeline shifted that they would still have a reality partition that they can live in?
Corey: Exactly.
David: Really?
Corey: They have their own little reality bubble.
David: Hm.
Corey: And in the conversation, she stated that . . . I learned a little bit more about the anomalies, how they work, which is very interesting.

We're supposedly inside this protective barrier here in the solar system. And she's saying that when we enter that anomaly, when we were going to those meetings, we were going to a time-space bubble that had been created that was outside of our reality, so to speak, and that there were entrances to it in, like, other galaxies. From other galaxies, beings were flying in to attend these meetings, but you have to go out the exact same way. You have to punch out the way you punched in.
David: Um-hmm.
Corey: They can't come in and then go out another exit and end up in our galaxy.
David: Hm.
Corey: The majority of her people – that entire city – are inside that anomaly right now.
David: Well, this raises an interesting question, just really briefly. And that is, if these people are sitting in these chairs, and they're telepathically communicating with us, apparently as, like guardian angels, and helping us meet the right people, and have telepathic nudges, and things like this, if they all took off, wouldn't that dramatically undercut our angelic support, if you will, that they've been providing?
Corey: Well, what I was about to say is that all of the people that were dwelling in this city were now inside of this time anomaly, for the lack of a better word.

Everyone that was a part of the religious order, until the last minute, are remaining outside of that bubble and are focusing all of their time, all of their energy, on trying to influence the surface population in a positive way to help steer back towards their timeline.
David: So are you saying that it's only the religious order that was doing this before anyway?

Corey: No.
David: Oh.
Corey: No. Many, many from their cities were joining in, but, yes, all of the religious order were taking part. But the Anshar were taking part and some of the subgroups that are with the Anshar were taking part.
David: Do you think that perhaps the presence of these giant spheres in our solar system could in some way help to provide back-up spiritually if these people are no longer able to serve in that function for us?
Corey: When they get to a point where they can no longer really be of service, they're just going to enter that time anomaly and ride it out.
David: Well, but I'm thinking about what that means for us, as these people are kind of like our guardian angels. Would there be other assets that would still help us at that point?
Corey: Well, I think what we would have to realize is that most of this is on us. You know, it's . . . Most of this is up to us. We can't be looking to angelic beings to come and save us or to assist us.

We really need to focus on being the change ourselves.
David: And what would that look like? If they're not helping us anymore, how would we steer the ship without them and get the outcome that we want?
Corey: The steering is going to be done by a very small number of people here. A very small number of people can affect the timeline.

And the people that they're getting in contact with now, that they're going to appear to, that they're giving downloads to, to help them get to a point to where they're ready for open contact, those people are the people that are going to be the feet on the ground of the co-creative consciousness army, I guess you could say.
David: So it's like we're going through our own graduation and stepping into a more active role than we've had before.
Corey: Right. As a part of that graduation, we have to become the masters.
David: Do you feel that there are going to be other events similar to this eclipse, where there will be yet additional sudden leaps forward?
Corey: Absolutely. I think what you're talking about will be born from how people process these downloads they've received.

A lot of people have received a lot of similar downloads that are going to have them coming together.

One of the things that Tier-Eir stated was that in this mission that he's given me that people were going to start just organically just migrating, that are people that are needed at the time.

And I kid you not, we'll say, “We need a person that does this type of graphics or

animation," and usually within 24 to 48 hours, we'll get an email, a person say, "I don't know why, but I feel like I would like to volunteer or be a part of this project."

And they have the exact skills that we need, that we were just talking about.
David: Hm.
Corey: And I think that what's occurring is going to start occurring in the macro sense, that all of these people that received downloads are going to start receiving assistance and energy to help them feed and nurture the different projects that were given to them in these downloads.
David: I guess I had this view that we were just going to kind of coast right along up to the flash without anything really that disruptive happening, that it was just going to be this boring, business as usual, nothing really changes that much, and then – poof!

But what you've been saying they're telling you lately strongly implies that even before the solar flash, there are going to be some very noticeable changes in how things are going. Could you explain that?
Corey: Yeah, and I'm glad you brought that up, because in the last update when we described it, I didn't go deep enough. And a lot of people thought it just seemed like fear porn or something pulled out of "Revelations" out of the Bible.

But the way it was described to me is, Mika, a while back, had described what his planet had gone through. And his planet is mostly islands. It's mostly islands. It's mostly a water planet.

And they were having . . . Just before their solar event and a sentient event, they started having massive earthquakes, tsunamis. They started having all of these types of things, too.
David: Before the flash.
Corey: Before their Ascension. And what was communicated to me was that our planet is a living being.

Most people watching this show will know exactly what I'm talking about. Gaia.
David: The network.
Corey: Gaia! Right. Now Gaia is going through an Ascension. It is finishing its last transitions into fourth density.

And we're kind of like the fleas on a dog, a dog that's going through Ascension, and we happen to be on the dog. We're riding a planet. And we're riding the wave of Ascension, or the wake, I guess you could say, of Ascension that our planet is going through.
David: Hm. Well, you know . . .
Corey: The symptoms of this change is that there are earthquakes, which cause tsunamis, volcanoes explode, that kind of thing. That's just a natural part of the

metamorphosis.
David: How disruptive do you think these Earth changes might get before the solar flash?
Corey: I think that they'll be fairly disruptive. It'll definitely have our attention, just like these recent hurricanes that are more powerful than what we've seen prior.

I think that we're just going to slowly get used to seeing more and more things – earthquakes. It might become the norm.
David: Do you think that as we are going through these disruptive experiences that people are going to start to have more spiritual contact, more access, more telepathy, or these types of paranormal events in their lives?
Corey: Yes. And the way it was also explained to me is that these things will be catalysts to push us further into our polarities. As in . . .

I guess right now we're seeing negative people are being pulled more towards each other in negative groups. And positive people are starting to congregate as well. And that's going to happen on a much larger scale.

So this is a very positive thing happening. It is kicking off the Ascension process. And if truly there is going to be a three-way split, maybe how we react emotionally and energetically to these Earth changes will help boost us or determine which polarity we're pushing into.
David: And this is up to us now. We are the ones that have to steer this.
Corey: We are the ones we've been waiting for.
David: Indeed. All right. Well, Corey, I want to thank you for all this information. And I want to thank you for watching and supporting our grassroots effort here at Gaia.

I'm David Wilcock with Corey Goode, bringing you “Cosmic Disclosure”, and we'll see you next time.

Viewer Questions 11; Preparing for Ascension Season 8, Episode 8

Cosmic Disclosure; Viewer Questions 11: Preparing for Ascension Season 8, Episode 8

26 Sep 2017

David Wilcock: All right, welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and in this episode, we have questions and answers sent in by you that I'm going to be reading for Corey.

Corey, welcome back to the program.

Corey Goode: Thank you.

David: Let's just hit the ground running here. First question we have is:

“Corey, what is your personal opinion of what the Ascension event will be?”

You and I have talked about this, and some of the things that you've been told are pretty different from what my own ideas or theories have been.

Corey: Yes. Yeah, that's a good question. The way it's been explained to me, what's going to occur is that when this energy shift occurs, and we fully have the brunt of these cosmic energies interacting with our consciousness, we're going to undergo a consciousness Ascension more than anything in the beginning, that it's going to be a great leap in consciousness. Just the way we perceive everything is going to change.

Now, as a result of that, we start learning more about our co-creative consciousness. We learn how to manipulate matter. We learn how to . . . We gain the ability to read each other's minds, I guess, to communicate that way.

So a lot of wonderful changes do occur, but not in so much the twinkling of an eye, the way I've heard in many different religious beliefs.

David: Well, we are also talking about a solar flash, though, right?

Corey: Correct.

David: So how would that factor in?

Corey: I see the solar flash as being . . . and it's not A solar flash. They are SOLAR FLASHES. It's not just one, all of a sudden, boom, there's going to be a solar flash.

There's going to be poof, poof, poof – flash events that they SAY will lead into a full circumference mass coronal ejection.

David: Right.

Corey: Now, if they're correct – and that's what it looks like – then here on Earth, we're going to be hit with this energy very quickly. And we're already going to be bathed in this cosmic energy that Tier-Eir's people have been buffering from us with these Blue Spheres.

So what I'm told by these beings is that this energetic flash is going to be more of a . . . it's going to affect our consciousness more than anything else.

There are going to be physical things that occur. The fact is that that's what Mica's people went through as well.

Our Earth is going through the final transition into fourth density, and there are growing pains, things happening. And that's just what we have to expect and watch for to see and know what's happening.

Now, the energetic changes and the flash are supposedly going to affect our consciousness and cause us to go through a major consciousness boost, which will then lead to us going through a consciousness renaissance, like Mica's people.

They're not all rainbow people flying around on this planet. And it's taken them a while to get to where they are after their event.

David: Right. So you're seeing that there WILL be some very big shakeups on the surface. Would that include the failure of all electromagnetic devices that some insiders have suggested?

Corey: That would definitely occur during these solar events, these solar pulses that would happen, yes. That's fully expected.

David: So there would be a need to be able to weather through that, the loss of electricity.

Corey: Yes. Yeah. Yeah. You need to be . . . Yeah, that's definitely something that's going to occur.

They expect it's going to basically wipe out the AI influence that is REALLY still a major problem. It's one of our biggest problems.

David: Right.

Corey: It's going to root out any, I guess, water that that fish could swim in, you know, electronics.

So we are going to have to replace a lot of our technology, which is a good time to bring in the newer technology, which, when we're going through this consciousness change, and then we'll have this technology boost all of a sudden, we're just going to start growing like gangbusters.

David: Do you think that once these flashes take place that that authorizes extraterrestrials to be more open in helping us and appearing?

Corey: I believe so. I'm told that after this event that there are going to be two beings that are part of the Sphere Being Alliance and this Confederation that are going to move in and . . .

David: Two beings or two groups?

Corey: Two different types of beings.

David: Okay.

Corey: They're going to move in and basically become like guardians of this new cycle.

David: So losing our electromagnetic equipment doesn't necessarily mean that everybody dies off from starvation, rioting, etc.

Corey: No, and there are a lot of technologies . . . There are a lot of non-terrestrial groups that'll make sure that we have help riding through that transition.

There are a lot of them here right now that are already pledging to do that.

Some of Ka'Aree's people have set themselves aside to assist us as well as a few other groups that are associated with the Anshar.

David: Well, since we're really getting our hands dirty, let's talk about this as well.

The Anshar told you in the past that they would move people below ground to their Inner Earth areas sometimes to help them ride this out.

Corey: In the past, they had, yes.

David: Do you think that in certain parts of the Earth that things could be disruptive enough that part of this extraterrestrial assistance would involve bringing people to alternate housing, let's say, like a mothership or somewhere underground if the surface of the Earth was temporarily catastrophic in some way?

Corey: From what I'm told, it's not going to be that incredibly catastrophic.

David: Hm.

Corey: It's not going to be . . . I mean, there are going to be strange things.

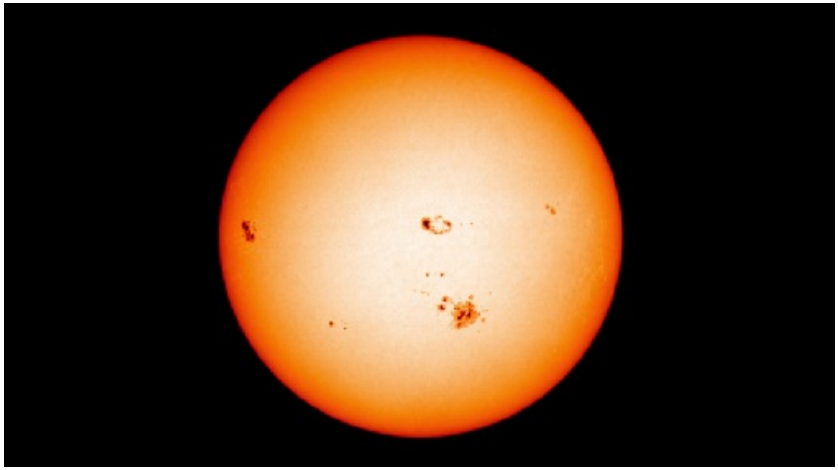
I was shown a meteor coming into the atmosphere and exploding over the Pacific Ocean, really high up and sending a blast wave that causes a bit of a tsunami. These storms would get incredibly more energetic.

And I was shown the Earth spinning in space, spinning, immersed in this cosmic energy. And as it was spinning, it was like a dynamo that was just building up even more energy.

And that was contributing to the storms getting more powerful and also earthquake and volcanism activity.

David: A lot of channeling-type people are always trying to incorporate the three days of darkness from the Book of Revelations somehow. Do you have any sense as to what that prophecy might be? Is it literal? Is it a metaphor?

Corey: Yeah, it's literal. When the Sun has that full circumference mass coronal ejection, the Sun will look like when you look at the SOHO images and you see sunspots. It's going to look like a giant dark ball . . .



David: Really?

Corey: . . . for just a matter of days before it completely flips its . . . I don't know if it flips it's polarity, but it moves back into balance, is the way it was described. And

then, poof, it'll light back up and give its light once again.

David: Very interesting. Very interesting. Well, I guess I'll ask another question. I could go on about this all day. This is my core subject, of course.

Okay, number two:

"Corey, what happens to those who do not ascend?"

Corey: Wow! That's a very complicated answer. There seems to be either a bifurcation of timelines or these individuals are taken to another planet to where they can go through the cycle again – the 3rd density cycle again – brought to a 3rd-density planet. Because our planet is transitioning into a 4th-density planet.

Now, I've heard a lot of people trying to postulate, what's going to happen . . . is there going to be two different Earths? I really don't know the answer to that.

David: Would you think that the time of certain people being moved to another planet would be right around the time that the flashes happen and ETs start to show up openly?

Corey: Well, if they're going to move people, they're going to need to do it just before, I would imagine, unless they're wanting them to be exposed to that energy. There's just a lot we don't know.

David: It is interesting when we look at the Book of Revelations, Chapter 11, Verse 11, when it says that, *"The righteous people who had been shunned by the many will be born into the heavens. And in that same hour, earthquakes shook the Earth."*

So the Revelations prophecy seems to suggest that there is . . . and this is, of course, where the Rapture thing comes from, but . . .

Corey: Right.

David: . . . seems to suggest there's some sort of removal of people to safety who are like the service-to-others, 4th-density Ascension crowd, before some of the more disruptive catastrophes happen on the physical surface. What would your feelings be on that?

Corey: I haven't heard anything about all of the "righteous" people being removed prior to all of these Earth changes. From what I'm told, all of the righteous people need to be here to experience this solar flash and this energy, full-on energy influx, because that is what kicks off this Ascension or this consciousness renaissance.

David: Oh, this is very personal. Ha, you don't know what these are yet.

Corey: No.

David: “Will David ever get to go with you to see the Sphere Being Alliance in the future? And if not, why?” Wow!

Corey: You know, I don't know.

David: You and I have talked about this a lot.

Corey: Yeah, we have.

David: And so, I guess since I'm involved in this, it's not just me asking a question, but I'll dialogue with you about some of the things we've talked about.

Corey: Right.

David: You told me that I was having some problems with not being humble enough, according to these beings, that I needed to develop more humility, and that I needed to develop more of a meditative practice . . .

Corey: That was the main thing, yes.

David: And to de-stress and get my life more sorted out, balanced in such a way.

Corey: Right. Yeah, and they prompted me to give you that remote viewing course from Gerald O'Donnell, . . .

David: Right.

Corey: . . . and they said that that would help you get more into the vibration that you need to be in. And all of those things you mentioned would bring you into vibrational alignment.

David: Right. So I think a real good corollary to this question is something that came in one of your most recent updates, and that is some statements that Ka'Aree had made.

Corey: Well, hang on. Speaking of Ka'Aree . . . Now, a lot of people wonder, why don't ETs visit me? They're visiting that person and that person. How come not me?

And she explained to me that to approach a person is not approaching you, David

Wilcock's ego or who you see yourself as.

David: Right.

Corey: They first approach you on a higher-self level. Your higher self authorizes what type of contact you will get, if any.

Your higher source authorizes that, and also they'll give you downloads through your higher self, visions through your higher self.

And you think that it's coming directly from an ET. But they're having to . . . But for cosmic law reasons and their own karmic reasons, they're having to approach you on that level.

The malevolent non-terrestrials and humans, they could care less about that.

So I found that very interesting, because I was wondering why you said that you were going to contact these people in dreams, and I didn't hear anything.

And she just let me know that it was a little bit more involved of a process than all of us realize.

David: In short, Ka'Aree said to you that there was going to be contacts with others similar to what you have been receiving. So it's not just about me.

Corey: Right.

David: It's about the audience.

Corey: Right. Yeah, it's not about me, and it's not about you.

David: Yeah.

Corey: Right. It's large numbers of people are going to have this type of contact, but . . .

David: What's the sequence? What was she expecting?

Corey: The way she explained [it] is that at first, they approach people – this is before I knew about the higher self stuff --

David: Okay.

Corey: -- that they approach people through dreams and to also give them downloads.

Now, during the eclipse, people that were doing the meditations . . . I have a huge report of these people getting all these ideas and downloads and information. So that did occur.

David: Right.

Corey: I'm still waiting to hear for these real interesting dreams to start occurring, which was really how they told me it would first begin.

And then it would move from dream contact, more and more realistic dream contact, to actual physical face-to-face contact in small groups. It won't be on TV.

You might see people with their iPhone video of these beings or something. But they're going to appear to one, two, three people at a time. They're not going to appear in stadiums.

David: And just so we can reiterate this again, if someone were prone to think of themselves as a messiah, or special, or a savior, or enlightened, after having had this happen, it wouldn't be a good thing, would it?

Corey: No. They will not even attempt to do contact with those people.

Like in the '50s, they started contacting people, these different non-terrestrial groups,

and the people started developing these Christ complexes.

And that's very difficult even for the most humble person not to develop with all the programming we've had. So they had to withdraw from that quite a bit.

So that's another good reason why they don't just appear to people.

David: So if the advice that was given to me might in some way be generalizable for more people, I thought that I was doing fairly well with humility. I mean, I don't feel like I'm out there projecting a huge ego.

How might the average person still be needing to develop this quality of humility? What would that involve?

Corey: Well, the average person has so much programming, so many personality distortions that they haven't focused on and dealt with.

It all goes back to the Blue Avian message for us to focus inwardly instead of outwardly. All of us are . . . We're looking up. “Show me. Show me.” But we should be looking in.

Inward is where all the answers are going to come from – developing your connection to your higher self, developing a quiet mind, these meditative practices. These are all things that are going to get you in alignment.

When you're focused on the outward, the ego, the outward, your vibration is completely different, and your outlook is completely different.

David: There is a really interesting “Law of One” quote about humility that I think we could bring up now, which is that, “It is lacking in humility,” they say, “to see yourself as separate from others and separate from the Creator.”

Corey: Uh-huh. That's ego. That's where ego comes in, how you're distinguishing yourself from everyone else.

David: Right. So it's much greater humility to realize that you are one with all.

Corey: Right.

David: And then they say that means that you consciously recognize yourself as a servant of all.

Corey: Right, and that also . . . Most people . . . When I mentioned ego to you, you immediately – you know, you live in L.A. - you're immediately like, "Oh, you're thinking big head, you know, walking around with your collar popped up kind of thing, you know."

But you just described what ego is. It's how we see ourselves. It's how we differentiate ourselves from everyone else, who we are, being all wrapped up in that ego and in the physical things in life, are really what they're talking about.

David: Sort of identifying with your body more than your soul, you could say.

Corey: Right. Right.

David: Okay, next question:

"How many people . . . " – I don't know if you can answer this or not; we'll try it – "How many people are you aware of who have been in certified contact with the Blue Avians?

Corey: Hm. A lot. That number has been growing and growing.

For some reason, most of the people that have been in contact with the Blue Avians and having Blue Avian contacts, many have written me in emails. And they're very legitimate contacts. But they do not want to talk about it. They do not . . . Or they've been told to keep it quiet for now. So I am not the only person out there meeting with the Blue Avians.

They meet mostly in dreams with people, and they can look slightly different. They show their selves slightly differently to people.

David: Right.

Corey: And sometimes the people's psyche will interpret it differently. They'll come back and say, “Well, I saw a white bird being, and this being does all of the things that the Blue Avians do.

So I don't know if it's them not being able to interpret what they're being given correctly, or maybe the Blue Avians are appearing differently to different people.

David: So to quantify, then, how many people, what would you say?

Corey: I have no idea.

David: Maybe hundreds? Maybe thousands?

Corey: I'm sure it's in the thousands.

David: Yeah. Okay, next question:

“Does Ka'Aree know that she is becoming well-known here on the surface? If so, is she comfortable with you sharing your encounters with us?”

Corey: Yeah, she is very aware. The Anshar are very aware.

One of the things that's been occurring is that since we've reported her existence and the existence of the Anshar, many, many people from the surface of the Earth have been reaching out to the Anshar psychically. And it's something that they weren't quite accustomed to.

They're accustomed to reaching out to the surface population.

David: Right.

Corey: And many times, as I had explained, in the past, they had used deception and told us, “We come from the stars,” when really they were from below their feet. It was just an operational security thing.

So they're very aware of how much we are focusing on them.

They want us to, again, like the Blue Avians do, focus inwardly. But she does tell me

certain things that I should not share.

David: So you would say, then, that she is aware that speaking to you is having you be her messenger. And she wants people to be aware of what she's saying.

Corey: Yes, the Anshar are very concerned right now. The temporal anomalies have been occurring that are very similar to the Mandela Effect with them.

Again, they've been having things that have been showing that they're not quite on the right . . . they're getting off the right timeline, and they're freaking out about it.

And they've taken some pretty strong measures recently that I've reported in my update.

David: Okay, here's the next question:

"You mentioned that Ka'Aree said the Anshar have masqueraded as gods in our history. Has she ever said or implied in which region or timeframes these appearances have occurred?"

Corey: When I did the mind-meld with her, I was . . . She's only – only, ha – she's 130-ish years old. So in that time period, she wouldn't have gone back to ancient times.

It wasn't shared with me which of the gods were her people or some of the other non-human groups that were visiting them.

So as I was mind-melding with her, I saw her visiting with, it looks like, '40s, '50s era uniformed personnel from, it looked like, England. It looked European. I think it was England and the United States.

So they were presenting themselves as being from a certain star system when they were meeting with these military officials.

David: Okay, this next question . . . I think you can clear this up, but it's an interesting one, and it'll help to be cleared up by what you say.

"When the Anshar people landed on this planet 20 million years ago, were they considered third or fourth dimensional beings?"

Corey: Yeah, it was around 17 million years ago. Yes, they were fourth-density beings that came from our future.

So when they traveled back in the past, they did not get demoted in the density scale.

So for approximately 17 million years, we've had fourth-density human beings – I guess we would call them “human” - the new iteration of humans – living below our feet.

David: Would you say that they were more advanced by that point than where Mica's people are now?

Corey: Oh, absolutely.

David: Okay.

Corey: Yeah, this was far into the future after they became fourth-density that they started noticing these temporal anomalies and then went back into time to try to preserve their timeline.

David: Are you aware of whether this time travel was a technological process? Or is it something they could actually achieve with consciousness and a knowledge of portals?

Corey: Their technologies . . . All they do is magnify their consciousness. Their craft, everything . . . They are consciously interfacing and powering the devices with their consciousness.

David: Hm.

Corey: If they were to give us one of their ships, it would just be kind of like a shell with . . . We wouldn't really fully understand it, because a critical component is missing, the pilot. And the pilot is the power system, the flight controls. All of that is done through consciousness. That's why they use crystals a lot.

But they are so far beyond us, us trying to understand . . . We understand things in a nuts and bolts technological way. They are just so far beyond that that we really can't even comprehend it. We can just kind of comprehend it.

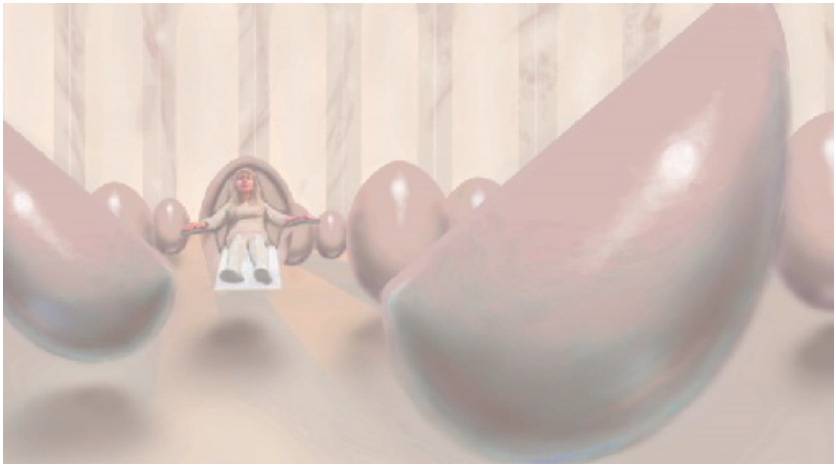
David: I would imagine that people like Ka'Aree would be able to do telekinesis. Did you ever see anyone there moving things with their mind?

Corey: No. No. No telekinesis, but they definitely have the ability to interface with people in a very powerful way. But I have not seen them using any telekinesis.

Now, I've seen other beings walking onto a craft with crates, tight crates, like floating above the ground. But they're not using telekinesis. They're using this consciousness

technology that to us would look like magic telekinesis.

David: Do you know if . . . When you saw the Anshar sitting in those pod-like chairs telepathically interfacing with us, do the chairs levitate on their own, or are the people levitating the chairs?



Corey: Well, the chairs . . . the empty chairs were levitated also.

David: Oh!

Corey: Now, a lot of the things that operate down where the Anshar were in their city, it was kind of like each person down there was contributing a certain amount of voltage and consciousness wirelessly to all of this technology.

I don't' have the capacity to fully understand. And you take the most brilliant person here right now on the planet, and they're not going to be able to follow it either.

Our minds cannot wrap around these concepts.

David: “What do you know about the identify or intention of any ancient gods, based on anything you did hear or learn from the smart pads?”

Corey: I think the intentions can be relayed in the stories about the gods that we look at. A lot of those are based in truth.

Who those gods are a lot of the time, it's really down to our own personal belief systems. A lot of people are like, the Anunnaki or the Reptilians – and only!

And yeah, they were, but it also encompassed other groups that were interacting with human beings, and they received that name.

David: Wouldn't you say that the people in the Cabal, to some degree, still feel as if they are the sort of vilified gods, and that they want to restore their godhood over the planet?

Corey: Yes. That's exactly what they believe. They believe that their lineage comes from off this planet. Their lineage created the genetic stock or the cattle that they are here to manage. And they feel entitled.

David: All right. Well, thank you for answering our questions. I'm sure we're going to have more of this. And thank you for watching. This is “Cosmic Disclosure”. I'm your host, David Wilcock, answering your questions with Corey Goode.

Zuni Disclosure with Clifford Mahooty Season 8, Episode 9

Cosmic Disclosure; Zuni Disclosure with Clifford Mahooty Season 8, Episode 9

DAVID WILCOCK: All right, welcome to Cosmic Disclosure. I'm your host, David Wilcock. And we have a special extravaganza for you, indigenous wisdom from none other than Clifford Mahooty. And here also with me to join in this exciting discussion is Corey Goode. Corey, welcome to the show.
COREY GOODE: Thank you.

DAVID: Clifford, welcome to the show.
CLIFFORD MAHOOTY: Thank you.
DAVID: So Clifford, tell us a little bit about what tribe you represent and why you've decided to come forward on the show today.
MAHOOTY: I'm from the Zuni Pueblo Indian tribe from New Mexico. And the reason I decided to come and talk with you folks today is because I think that we have a lot of information that has been kept within our Indian communities for a long time. And with things that are happening in the world, I believe that there's a lot of connections with what we have known for centuries, or at least my ancestors. So I believe that it is time to talk about these things and to let the other people know about what we have had for many, many years.
DAVID: So Corey, could you tell us briefly why you wanted to bring Clifford onto the show? What were some of the things about what he said that excite you the most?
GOODE: It's definitely time for a Zuni disclosure. There are a lot of correlations, a lot of things that I saw in the programs that did mention the American Indians. So recently he was at a conference and the information that he was giving was very important. And it seemed to tie in with ancient aliens, secret space programs, and how the government is working with the Native Americans to keep certain things still secret.
DAVID: So Clifford, how does this language get passed down from one generation to the next?
MAHOOTY: Zuni has an oral history. And since the day you're born, you're taught the language by not only your parents, but also the extended family system. And so the language, that's the first thing that you learned is the Zuni language. And later on, you pick up the other language, in this case would be English. And so all Indian families, if Zuni, that's what they teach first.
DAVID: Does every Zuni get the kind of lineage teachings that you are carrying with us today? Or is this something that you have to get sort of a special insight to learn?
MAHOOTY: A lot of information is not passed on anymore. When I did some videos and we sent that to some of the people, the young generation in there, they always

have that saying of, oh, that's what that's all about. And I explain to them what the history is all about and where this type of application is generated so they have this thing, that, oh, yeah, well, that's what we have been taught, but we didn't know where it came from.
GOODE: And as you got older, they asked you to actually record the history, did they not?
MAHOOTY: The oral teachings teach you how to know about the history. There's many ways of approach to this. First of all, it's the stories, the mythology, the teachings of mythology, sort of like Aesop's fables. What's the meaning of the story? Your mind starts looking at things in a picturesque way. And then you learn how to relate a lot of different ideas into your head, without even looking at pictures, just by word. And as you get older, then they start introducing other historical events and also things that are sacred.
DAVID: What would the average Zuni who's been brought up on this feel about extraterrestrials and things like this?
MAHOOTY: Well, there's two things actually. One of them is that if you see orbs or if you see things that represent like a fire in the sky, they take that as bad omens.
DAVID: Oh.
MAHOOTY: But if you take, for example, like an orb or a flying saucer type things in the sky, then they say, well, those are the keepers or the guardians.
DAVID: Really?
MAHOOTY: They'd always been part of our history. You look back at, for example, in the petroglyphs, any petroglyphs that you find anywhere in the United States is that you'll always find a reference to a flying saucer and also other activities that were related to the sky. So we knew about flying saucers. We didn't call them flying saucers. But it's part of the system that you don't learn until, again, you go through the step process. Some were--when you become older, then you're taught about different things, like for example, the kachina people. A kachina is representative of what used to be ETs when they first came to our people when we were still in the developmental phase and they were still in the teaching stage of teaching the American Indian indigenous tribes of how to take care of themselves and the Earth and other living things and also the connection.
GOODE: Yeah. Farming, all the different civilization--
MAHOOTY: Technology.
GOODE: Technology.
MAHOOTY: Includes agriculture, farming, how to build things, and how to relate to other different god systems. So those are our transitions that were made throughout history, simply for the reason that--one of the reasons was abductions by the early ETs way back in times past. So they went into what they called a kachina society. So we take the place of those people. But the thing about it is that they say that you become those people in spirit and in the ways that--when you become a kachina person, you become that individual. And they're always there with you, even though you can't see them.

DAVID: So Clifford, in videos where you've come forward before, you explain that some very important things started to happen to you when you were 22 years old. Would you tell us a little about that?
MAHOOTY: We started a program called the information from the elders. And that's where this information started gathering in one source. At that time, we were running a program to get all the elders of the village to give us their stories of what they knew, what is the mythology, what is their own life experiences, and basic history of what their grandfathers and their grandfathers' grandfathers taught them. So we started accumulating this information. And one of the things that was very interesting was that there was a lot of stories about the sky people, about the flying saucers at that time. And this was probably in the mid-'60s was the heavy activities of flying saucer interventions that were occurring throughout the whole nation. But it was not really known outside. But we have had known that for centuries, thousands of years, as a matter of fact.
GOODE: These were audio recordings that they were doing of the various elders?
MAHOOTY: Yes. We had tape recorders. And I think one of the most interesting one was that one of the grandfathers talked about way back in the '50s that a big drought in Zuni, so he had to take his herd of sheep to this dam. And when you got there on the dam, there was a flying saucer sitting there on the dam. He said that he went over there and met those little people about three or four feet high, three of them. And they talked to them. And the interviewer asked him, he said, what language did they talk to you? And then without thinking, he just said, well, they talked to me in Zuni. So that was very interesting that they can--that they can talk any language.
DAVID: Clifford, I've done a lot of research into this idea of ley lines in the global grid. There are definitely reports of Bermuda Triangle type phenomena, things appearing and disappearing in what most people call portals. I'm wondering if you have ever had any of those kind of things happen in the Zuni lane?
MAHOOTY: There has been stories about it. But we do have what we call sacred sites. They were created or put in place by what we call the Ra people or in this case the star people and other. But there are certain places that only certain people that are of that order can only participate in the activities related to those portals, those extra-dimensional doorways if you want to call them that.
GOODE: And lots of military activity around them as well.
MAHOOTY: Oh, absolutely. Recent--within the last, I would say within the last 20 years that I'm familiar with that there have been--the Zuni has become a place where there's a lot of military activity coming down. And then if you see an orb or an anomaly, within 15 minutes there will be a helicopter there. And I say, where do they come from, because the nearest Air Force base is 150 miles, Albuquerque, New Mexico.
GOODE: I was telling you last night, when we were driving through the Grand Canyon, we saw Chinooks flying into the heart of the Grand Canyon. What is the US army doing in the heart of the Grand Canyon?

MAHOOTY: We have also evidence in Zuni of a lot of things that have been restricted against a lot of the people not to go certain places. And I think I also mentioned places like Archuleta Mesa, where a lot of--even those people that are there, in this case the Jicarilla Apache Indians, they're not even allowed to even go to those places.
GOODE: Didn't the government come in and give casinos and that kind of a thing as a trade in order to get access to a portal to build some sort of Department of Energy--
MAHOOTY: I believe that there were some type of agreements there, because the Indians really don't talk for themselves, because they're run by the Bureau of Indian Affairs, which is a government agency under Interior. So those are the ones that negotiate the casinos and any activity on the land, including the resources. So in this case, if they wanted to put in a military or some type of activity on the reservation, they have to go through that, because no Indian owns any land.
DAVID: Well, what do you know about the Archuleta Mesa? What's going on up there?
MAHOOTY: Well, there's so many stories that have been--remember that one where they broke in and there was tunnels in there and there was also some alien base that was in there. There's a lot of alien bases that I have heard about by very reputable people. But they have been there for a long time. But I believe in that case, according to the information that's out there in the public is that they broke into that some time back when they were doing all those different tunnels that were going different bases, whether it's from Los Alamos, Area 51, places like that.
DAVID: Have you ever heard about unusual creatures running around the Archuleta Mesa, like as if some experiments got loose?
MAHOOTY: I've heard so many of them. First of all, the main guy used to be Bigfoot, which was pretty common among all the Indian tribes. But lately, within the last 10 years I would say, I have become aware of some of the different creatures. And I'm looking at it from two standpoints. First of all is that there is a high activity of what they call the skinwalker activities. And those are the ones that--the dark force people are the one that can convert into any animal they want, whether it's a wolf or whether it's a coyote or whatever. And then the other group is the one that there's been some sort of like dinosaur-type-looking animals that have been appearing in a lot of canyons, especially around the wilderness area, like the Archuleta Mesa. And the third group is probably something that I have heard about in many experiences that have gone mad or at least I think that either they escaped or they permitted them to go out there. They seem to terrorize a lot of different people out through especially places like for example where the Los--I mean, the Sandia base, there's also a lab there that a lot of Indians know that used to work there that talk about some of the experiments that they were down there. Of course, they were like people that took care of the janitorial services type people. But they were not allowed to go into the high secret areas. But they heard about them. So there's a lot of stories that are out there.
GOODE: You mentioned a dinosaur-type creature.

MAHOOTY: Yes.
GOODE: Any more descriptions on them? Like do they have like little feathery things or anything like that?
MAHOOTY: Well, most of the ones, they were about maybe about four or five feet high, but they were like two-legged. They would jump around. They had tails. But these are people that did not want to be--have their names said who they were, because they were afraid. It's just like anything else. It's just like back in the old days when we talked about UFOs, you'd be ridiculed.
GOODE: I was just thinking your secret kind of societies within the Native American orders that have contact with these off-world beings, it's very similar to what's going on in the rest of the West with people or organizations that are secret societies having connections with off-world groups and then disseminating information to the people, but it being just very few people that have that access.
MAHOOTY: A lot of those people that belong to those groups, it's within their--I believe that it's in their family. It's within their DNA. And they were created--when the Earth people were first created, they were created along with the rest of the other people. And in the Zuni teachings, they were only supposed to be the balancer of life. In other words, that their purpose was to make sure that there was no overpopulation. It was a safeguard. However it went out--they can no longer control them. And they start interconnecting with other groups throughout the planet, which probably came from different systems, star systems, because Earth, according to the Zuni history, was that this was a water planet. And we believe that the gods were the ones that created this. But we were already here. They just upgraded the humans. We did not come--according to the Zuni, we did not come from any other planet. We were already here, but they upgraded us with their technology and their methodologies to bring us up to speed on a lot of--especially in the intelligence, the spirituality.
DAVID: That sounds very familiar.
GOODE: Yeah. And also, were there not tie-ins between the Zuni or the Hopi and the Mayans?
MAHOOTY: The Mayans and the Hopi and the Zunis are of one stock. And one of my lectures has been on when Lemuria sunk. And that's where they migrated over here. And they had to separate them because there are so many of them.
GOODE: So the Chaco Canyon were associated as well?
MAHOOTY: Yes.
GOODE: Because they disappeared about the same time them the Mayans did, correct?
MAHOOTY: There's a lot of theories about those type of disappearances. Some of the diggings at Chaco, they saw that--they theorized that there was also cannibalism that occurred. And the other one is that the red-haired giants came in there and also the enemies that came in to the Chaco culture and actually just took over their population and they split.
GOODE: Growing up, my grandfather was Cherokee. And I would hear stories about red-haired giants and about how they once had a huge civilization that covered

everywhere from the East Coast of the United States all the way down to Central America. And that after a great cataclysm, their society or civilization fell and they never recovered. And at the end they were resorting to eating human beings to a point to where natives were hunting down the red-haired giants. And we talked about one story about how they would chase the red-haired giants into caves and then light a fire at the mouth of the cave to suffocate them.
MAHOOTY: Well, if you go to any petroglyph, you can always see a giant there. But the giant--the red-haired giants, for example, they were very prevalent, especially around Utah and Colorado, because right after the Ice Age is when they start appearing, according to the legends. And there's even some burial sites in Nevada that a lot of friends have told me about that there are actually red-haired giants that are still in there, because they didn't want to let the other people know, because all they'll do is take them and that's it, so they just left them there. If you look at it from the Anunnaki connection, especially around the eastern seaboard and in the middle of America, there's a lot of those legends that is among all Indian tribes. But the red-haired giants disappeared, like you said, I think either because of the climate change or they just were--the Indians took care of them, because--even clear down to Arizona.
GOODE: Even the Spaniards reported seeing them when they first came.
MAHOOTY: Yeah. I think that--there's a lot of history. And I think what they did was they went somewhere. They went underground.
GOODE: Maybe they did.
MAHOOTY: Or somewhere that they had to find a refuge.
DAVID: So Clifford, you also have some really interesting information about the Los Alamos military base as regards to Zuni. Could you tell us about that?
MAHOOTY: Well, what I understand about Los Alamos is that that's one of the portals, very important for all Indian Pueblo tribes. And that is where a lot of your society's systems were generated from, especially the medicine groups and other organizational groups that are in existence still to this day. And they came from--for example, like in Zuni they talk about the Milky Way galaxy that--the portal that goes out of Los Alamos and distributed the different types of societies throughout the Pueblo people. So my theory, or at least just based upon the teachings and the songs and the prayers, is that when they came through the portal, there's a lot of sacred places. The nearest one would be Mesa Verde in Colorado and Chaco culture.
GOODE: You were talking about how not only the government are interested in sacred lands because of the portals, but also the Catholic Church for years has moved in to try to find sneaky ways to grab sacred lands.
MAHOOTY: Well, the good example is the one over at Mount Graham, right next to the San Carlos Apache reservation is Globe, Arizona. And Mount Graham, I did not know at that time, when I was working as a government person, that the San Carlos Apache medicine man--and his wife was also a medicine woman--they were protesting that that is a sacred mountain. And I didn't know why they were protesting that. But later on, after I left, they built--the Catholic Church built that big telescope.

GOODE: So you think they're using those portals somehow?
MAHOOTY: There's a portal there. It's one of the biggest ones, according to that group down there. And there was actually a portal that used to--and they said it right there on that sacred mountain. And when they opened it up, there's a lot of people that--scientists and engineer types that went over there to inspect it before they put it into use. That's when I learned that it was financed by the Catholic Church.
DAVID: It appears that the science of these portals is you could have sacred land, but unless you know when the portal opens, nothing that magical is going to happen. So I'm wondering if your people were involved in the timing of when these things--did they track time and did they understand when these portals would open?
MAHOOTY: What I have learned, which I--not directly, but indirectly, is that these people that are versed in those activities, there's many, many different societies. And they call them priesthoods. The priesthoods are the only ones that can go in there. And they go through whatever procedure that they go through to go into or talk to those people that are coming through those portals, or that they're there. And that's the one thing that I have never got any information on, because I don't belong to those groups. So there's actually people that have been in those orders that can go over there and talk to the--whether it be the upper world or the inner world people. And of course, they're all termed as gods. So when you take a place--when you become those individuals, you're trained to go over there and you can talk to them. And I have been told by many people that have authorities that they can actually open those places. It'd be just like big rocks in there. They do the chants and they do the prayers and whatever and it opens up.
GOODE: So you've heard of seeing a rock face and it opens up into a walkway?
MAHOOTY: That's what they have--
GOODE: So that's what they see the portals do. It's not necessarily an energetic thing, but the actual rock opens up?
MAHOOTY: Mm-hmm.
GOODE: Oh, interesting.
MAHOOTY: Yeah. And there's a lot of places, especially in the Grand Canyon. There's places inside the Grand Canyon that I'm aware of by--
GOODE: Yeah. We've heard of hikers that have seen that, that have seen openings open and close.
MAHOOTY: Yeah.
GOODE: Yeah.
MAHOOTY: And then they go in there. And then even one person dropped a rock to see if it will hit bottom. It never hit bottom. I mean, these guys would not--these are very high spiritual leaders.
DAVID: Clifford, you've talked about a Zuni prophecy of how the earth is going to go through healing. Could you explain to us what that prophecy is and what might we be seeing?
MAHOOTY: Well, according to my teachings by my grandmothers, grandfathers, and elders, we always have that leeway to go back and try and fix things. And it has to be

done in a full effort. It's just like any other conscious awareness. But if we start practicing it today, there's always forgiveness by the gods. But it has to be done totally. It's just like when we used to do raindance. Out of 100 people that are participating in a raindance, if one of them doesn't have their heart in it, it's not going to rain. So it has to be a total effort. And that will be the hardest thing, to get everybody on the same page. But it can be done. I have no doubt at all, because if you put in your--and we've done it. I have been involved with those type of activities, where it can happen. But we have to get rid of the other influences, especially the dark energy forces people. You have to get them to convince them that we're also doing it for your own good too, because you're part of this whole system. So that has to be happening.

GOODE: Well, it's encouraging that you keep saying "we" instead of "they," because that puts it back in our hands as a people--

MAHOOTY: Yeah.

GOODE: --that we're the ones that can fix this. We don't have to wait on someone to come and save us.

MAHOOTY: We have always said that. And we have always talked to our enemies in a way, when we were first encountered, this is the way it's supposed to be, but they never listened, because their agenda was different. But there's many winning ways to do this. And I think this next generation that's coming on will be that group. I totally believe in that, because they're now--they got rid of the old stuff and they're looking for the new way to do this, still with the DNA in them, with all the teachings within them. And I go through this example of when we had the Indigos and then the Indigos followed them. And now we're at the Crystal Childrens and then now we're at the Rainbow. And I think the next group will be the one that will carry forth that effort, because they're now more advanced. And they're not--they're not set in the ways that we were set, you know, by different sources, whether it's been the federal government, established religion, because they distorted our way of thinking. So these new wave would be the one that's already got the information. They've been downloaded, including the Indian Pueblo side of it.

GOODE: And now the Zuni are I guess taking the first step and coming forward to share some of these correct prophecies and more about your culture. That'll bring people together in that way.

MAHOOTY: My generation, you know, we've already passed that stage of we were indoctrinated too much. So I think that the next generation will be carrying on. They had to dig out this information. That's why I'm doing my part to at least put that seed in their thinking so that they said, oh, at least we have a resource. We've got the technology.

DAVID: All right. Well, that's a great line for us to end the show on. Thank you, Clifford, for being here. Thanks, Corey, for bringing this amazing elder to our attention. And thank you for watching. This is Cosmic Disclosure. I'm your host, David Wilcock, with our special guest Clifford

MAHOOTY and Corey Goode.

Hopi and Zuni Prophecies Season 8, Episode 10

Cosmic Disclosure; Hopi and Zuni Prophecies Season 8, Episode 10

David Wilcock

All right. Welcome back to Cosmic Disclosure. I'm your host, David Wilcock, and we are here with our special guest Clifford Mahooty, who was brought to our attention by our insider's insider, Corey Goode. So continuing this fascinating discussion, here we are. Clifford, welcome to the show.

Clifford Mahooty

Glad to be here.

David

And Corey, thanks for being here.

Corey Goode

Thank you.

David

So Clifford, we are now going to start talking about some of these very interesting artifacts that your people, the Zuni, have had in their possession. You have said on public record now that you believe they have off-world artifacts. Could you be a little more specific?

Clifford

I believe one of the first off-world things that I learned about was the crystals. And these were both used as transmitter and receiver, so I guess they would fall in the category of transceivers. And they would use these for communications with other groups, in this case, probably some of the sacred groups throughout the land here on the planet, and also other places. And there has been some artifacts that had been saved throughout the years, but most of them are now in the hands of those people that don't know what they are.

Clifford Mahooty

Hopi and Zuni Prophecies

David

So these look like regular crystals, or do they have a sculpted look? Or what would we see?

Clifford

They come in different forms. Some of them are natural. Like if you took a quartz crystal, for example, they have the same size. And some of them are round; the crystal balls that they use for looking in there, especially in the other societies and other groups throughout the world. And I also have studied that in terms of what they use now in computers.

Computer technology is also used in the crystal technology, primarily for storage. And I believe that they use this as a bank of information which could be infinite. And, of course, they also connect with other, perhaps off-world or inner-world systems that they can transmit messages and probably viewing through those, those technologies that have been in existence since, I understand, since the beginning of the Indian culture and people.

Corey

So the crystals actually store information.

Clifford

Yes.

Corey

So that's kind of a little bit of a correlation. In previous testimony on Cosmic Disclosure, we talked about the Inner Earth group, the Anshar. And they use crystals as giant, basically, computers. It's data banks for information.

Clifford
Uh-hm.
Corey
So that's kind of an interesting correlation that they can store information in them as well as use them as a transceiver to communicate with, I guess, people from space and people from the inner world as well.
Clifford
I think they're from all different dimensions, if you want to look at it that way, not only the dimensions that we as humans are aware of. But I think that they also go beyond other dimensional areas or zones, or perhaps in an interdimensional type of system, which I really don't have any idea about. But I think that these messages are received instantaneously in most cases. And a lot of that among the primitive tribes have been used for the healing practices. And the healing practices is also used of [by] other groups to also interconnect with other, perhaps, inner world, off-world, and even on the surface systems for transfer of knowledge that is so required at that time. And it's usually done without any language. It just, I guess, in a way, just transmits in a different zone…
Corey
Thought.
Clifford
…for communication. The thought processes.
Corey
Right.
David
So Clifford, were there any other artifacts that the Zuni got from the star people that you're aware of?
Clifford
I believe that there was many things that were given or survived throughout the thousands of years, but most of them were taken out by the early explorers like the Smithsonian. And there's a lot of records. And I even saw them way back in the 1960s, of some of the stuff that they took out from Zuni throughout different expeditions starting back in the 1880s. And they even went and dug up some ruins, the original ruins that were there in existence during the Spanish invasion. And so those artifacts were stored in the Smithsonian.
We went back years later to ask for it, but they told them that they had gotten rid of them or they couldn't trace them back.
But I saw them back in 1966, some of the masks, some of the paraphernalia that they used for religious and curing purposes, and also some of the original artifacts that they recovered from the tribes.
And so there are many things that were in other different museums, like the Hyde Museum in New York and other museums throughout the country. After the Indian Repatriation Act and the Graveyards Protection Act, they gave a lot of it back to the

Indians, but we don't know exactly what the process was.

Corey

There could have been technology, off-world technology, involved in what the Smithsonian removed, because you mentioned before that there was . . . speak of *"flying shields"* that were handed over to the native population, and they actually flew in them.

Clifford

Not only that they used the shields, but other vessels that they used for transportation in the old days.

David

When you say "shields", I just want to be clear. Are these like sculptures that are meant to look like flying saucers, or are they actual craft?

Clifford

It's a craft, but it looks like a shield, the flying shields. A reference is also made of the *flying gourds*, which are round vessels. So because at that time, what would they relate it to?

David

Right.

Clifford

It's something that they were familiar with. So the shield, in this case, would be something that you guard yourself with…against. Most Indian tribes had their shields back in warfare days. And so that's the only reference that you can make. And if your flying shield is flying around, well, that's the only reference that they had.

David

You may be aware that here on Gaia we've been investigating some very unusual, humanoid-looking mummies. Have you had any encounters with possible artifacts of that nature?

Clifford

I'm only aware of them through information that was given me. For example, the one that this Hopi person told me about is that… especially in the ant people that the Hopis are very familiar with. Now, I've heard of other mummified beings like the one that they took out of the Chaco Canyon, according to this same individual, that was inside of a log that they transported from the Chaco to Hopi.

From my first glance, it's mummified. But it also has a covering on it that looks like… If you look at a piece of mahogany wood or a root, a mahogany root, and it's like polished. But I can sense immediately that there was something that used to live as a living being. But it's about… would say it's about that long. [Clifford spreads his hands about 30 inches apart].

David

You're saying it was actually glossy?

Clifford

Yes.

David
Like a glossy polish?
Clifford
It was some type of sap on it or some type of a compound that was in there.
David
Like for mummification.
Clifford
Yes.
David
Wow!
Corey
Well, they've probably seen… Over the years, they'd find tree sap, and then there would be something preserved in it like a bug or something like that. They probably knew that they could preserve…
Clifford
The way I look at it, that they were taught that from the off-planet beings on how to preserve those things. We were all taught by those people.
David
Now did this mummy look just like a regular human three feet tall, or did it have some unusual features?
Clifford
It's got many, many unusual features. It didn't look like a human at all.
David
Really?
Clifford
Yes. It looked lik… My first reaction is that it's an ET because I've seen so many pictures of them. And what my evaluation of the information that I have studied throughout the years is that that's got to be an ET or off-planet living thing, or something that came from not a human or regular animal species… centaur…
David
Well, can I ask you a few questions?
Clifford
Sure.
David
Okay. Did it have five fingers, or…
Clifford
No, at that time I did not go into detail on that because he just showed it and said, *"We'll go through this the next time".* And I respected him, and I said, *"Okay, fine".*
Corey
And there is the possibility of us being able to get x-rays done of it.
Clifford

He even volunteered to have somebody look at these things, because he's the last of the persons at First Mesa. And he wants it to be known that *"I have this information"*. So he sort of like asked me, in a way, *"What shall I do?*" And I said, *"Well, I think we ought to document it".* And one of them goes through the scientific analysis of these things, because this is far too important for just to let it go.

David

I assume that it has a human-like head with eyes, nose, mouth, or…

Clifford

Well, it's got the features of things that humans are made with: eyes, legs, hands.

David

But the proportions are all different?

Clifford

Proportions are different. And it might have been just one of the smaller species… because there are many species. In our teachings, there were different sizes.

Even in the ant people, there's different sizes. In the insectoid world, there's different sizes. So it could be one of the same species but a different type.

David

Wow!

Corey

Does he have the history of how it was found…

Clifford

Yes.

Corey

…where it was found?

Clifford

He's got the whole history.

Corey

Excellent.

Clifford

And he also has detailed information of how he got that, when it happened, the dates and so on. So he's very thorough in that. Mr. Malava, that's his Hopi name, and he has a lot of information. And he's like the last of the priesthood of the First Mesa Hopi.

They're all different. But he has made himself the spokesperson for what is left with him throughout the ages from previous grandfathers and the group that he got his teachings from. And he feels that now is the time to let the public know, primarily for two reasons.

First reason is that he wants to set the record straight about these other writers that have been telling a whole bunch of hoaxes about the Hopi and get the record straight. And the other one is for the longevity of the information for the future generations. Even though it looks like we're at the end of this fourth world, he wants to transfer

that information on to the next generation so that they'll have an idea of what history is involved with the Hopi people. He's got so many information, including not only about the mummified things that he talked about, the flying shield, but also about the asteroids and how it happened in the past and what might happen in the future. And he's at the stage in his life that he wants to pass on this information to the general public.
And nobody… He tried to get somebody to carry on his duties and function of what he is in First Mesa. And he's not getting anybody to work with him to be his protégé. And so what he wants to do is that he wants to record this and pass it on, anywhere from the simple ones to the storytelling-type approach to advanced things like what we're talking about.

Corey

Can you explain a little bit about the Hopi prophecies of the first, second, third, fourth world, and why we're in the fourth?

Clifford

Well, the first three were destroyed by things of nature, you know, like earth, wind, fire, earthquakes. And the last one was, of course, the flooding.
And so this is why we, as Pueblo people, survived in the Grand Canyon, and we've become sort of like the wards of the different insectoid people.
This is what our history tells us. It's not something that was made up. It was not somebody who came from somewhere and gave us this information. It's part of our history and it's our system.

Corey

How does the insect people tie into the fourth world and third world?

Clifford

The way they describe it, I think that they were not only from the inner world, but I believe that they also, according to the teachings, they were from other off-world systems that they saw, which would fall in the same category as the Guardians and the Keepers of our Earth that saw this catastrophe. And there was a reason for a lot of these clearances, so to speak.
You've got to clear the Earth of the bad things. And I think the same theory applies with the dinosaurs or the giants that to get rid of those things. And whoever's in charge, whether you call it God or the Great Spirit or whatever, is the one that took it upon themselves to say that *"we've gone too far on this end or we made a mistake, so let's clean this up again"*.
Or that *"humankind did not follow what we told them to do and they deviated, so we got to destroy that planet that they also created a mess on there"*. And I think that this repeats; history repeats itself. So now we're in… What the Hopis, the Zuni and other Pueblo people say that we're now in the end of the fourth world.

David

Does every world, as described, end in a catastrophe of some kind – these cleansings you're talking about?

Clifford
According to the history that I have been studying, they had given them the opportunities not to get to that point, but they went and they exceeded what they were told not to do. So that was the last resort that says, *"Well, if you do not follow what we had taught you to do, and you're violating that, we have no choice"*.

Corey
When the ant people realized that you were at the end of the third world, where did they take the Zuni, for how long, and what was life like where they went?

Clifford
Well, according to the teachings, we were in the fourth underworld. And they progressed each step from the fourth world, which was "a dark world".
And then every layer that they went through becomes a lot cleaner and more lighter than the previous ones. And there's many, many stories about how they got to the next world. The Hopis used the reed to go up on that. The Zunis, they talk about growing a certain tree, and I think these are just allegories that they had to make a reference to it.
And so they stepped up to the next world, and they stayed there for a while. And then eventually we came into what we call *"the light world"*. And they use the allegory as the Sun Father creating that, which is true to a certain extent, because of the light and what we know about the Sun's energy nowadays.
So there's a lot of things that are mixed in there that i… you look at it from the science standpoint, which is true from the quantum physics standpoint, and then you also look at it from the spirituality standpoint, and you put those together and they fit perfectly of what the interpretation of the Indian talk about and what modern physics will tell you about. And they talk about the same thing from a different language and a different concept.

Corey
Were the Zuni and Hopi brought below the Earth for generations?

Clifford
Oh, this is thousands of years.

Corey
Thousands of years.

Clifford
At least, yeah.

Corey
And when you emerged, do you know where your people emerged from and where you went next?

Clifford
Well, they said that the Grand Canyon…

Corey
Grand Canyon.

Clifford

And there's several places. The confluence of the Little Colorado comes from the east. And the Big Colorad… there's a travertine dome. They call it *"The Sipapu"*. All Indians have a reference to a "Sipapu" or a "Sipapulima". And that's where they came out from other parts of the universe, that they have to have a portal that they go through, where nowadays we can call it a wormhole or a vortex.

Corey

Wow! So when the Zuni were brought underground, they may have been brought to another planet through a portal.

Clifford

Uh-huh. I think that if you really look at it from the standpoint of science, I think that they were actually transported not only into the inner world, but the other beings came from the off-world. They came through those, what we call, again, wormholes or vortices out there. And they came directly through there.

There used to be an expedition, especially from my Zuni tribe, tha… they recruited at least 20 people every year. They would bring them down into the Grand Canyon, and they had like a 10-day boat trip, and they identified all their sacred places, the Indians not knowing that they were looking for these vortices, and they actually showed them.

Corey

The Grand Canyon has a lot of other mysteries. Back in the late 1800s, there was a discovery that some of the artifacts looked possibly Egyptian. Do you have some information about that?

Clifford

Well, we actually did a documentary, I think four years ago. ["Expedition to Sipapu"] And our purpose was to go out there and look for the 1980 expedition that was financed by the Smithsonian through a guy by the name of Kincaid.

And he actually went into the cave, and we were up there to look for that place. And while we were there, there was some drilling that was going on. We did not know that until we got there. And the purpose of us going over there was to find out about the cave where they had Egyptian and Buddhist statues that were removed by the Kincaid expedition and transported to the Smithsonian in Washington, DC.

We inquired about that by official means, and we were told that they had dumped that into the ocean, gold statues.

David

Yes.

Corey

We had heard about bones of giants, bodies of giants, being dumped in the ocean by the Smithsonian in the past.

Clifford

Yeah. But that expedition is on YouTube. It's called "Expedition to Sipapu". It's all factual. We went through the archives.

Corey

But you don't recall any specific stories about people living there from different lands?

Sipapu

Hopi and Zuni Prophecies

Clifford

Well, you know, you have to really listen to the story and you have to really understand the language of what they mean. When they say that they go through… Remember, I said that they went through layers. So they had to be way down in there. And that's… And we have a cyclic life. We all go back into where we were at, which is the Inner Earth.

And the Inner Earth has been visited by OBE, you know, out-of-body experiences. And I know a lot of people that have been there, and they were sad to come back here because it is so beautiful out there. I know they're not lying. They can't lie to me.

Corey

I've had a little bit of experience with that myself.

Clifford

Yeah, it is beautiful, they say. *"I didn't want to come back"*, they say.

Corey

I believe in your testimony, you've mentioned a different type of insectoid as well.

Clifford

Those are the praying mantis type?

Corey

Yes. A lot of people in this audience will be familiar with the mantis-type insectoids.

Clifford

Yes. I think that there were other species, and not only the ones that basically are on the ground, or inside the ground like the ants, in the insectoid species, but there were also other species that were also teachers.

Corey

I heard something mentioned which I found interesting in the smart-glass pads about Native Americans that reported a group called the *Two Hearts*. And I found that interesting because the Reptilians have a primary and a secondary heart. Do you think these are the same beings?

Clifford

According to the Zuni mythology or stories, is that all the people that were made were all good people. But there was a two-hearted people, which we now call them as the *"Dark Force people"*, or to the more blatant term is called the *"witchcraft people"*. Those are the ones that are referred to as the *"two-hearted people"*, because they do not have the same mission as a regular human being. Their mission is to be the Dark Force for the balance.

And the balance was to be population control. But they overstepped that control and they became more powerful, and that's what we're going through right now. We're in an imbalance of the Dark Force. But it's going to be straightened out.

David

One of the things, Clifford, in terms of research that I think is very compelling, is you look at these skulls that were originally found in South Africa, the Boskop skulls, and they are elongated. The brain is about twice the size of a normal brain. This is not the result of head binding. We find them in Siberia. We find them in South Africa. The Egyptian depictions of the pharaohs have this characteristic.

We've now found them in tombs in Europe. And it does appear that some of the classic Mayan inscriptions show people with elongated skulls as well. So I'm wondering if you have any information on that.

Clifford

The theory that I have looked at is what in the beginning, in order to have a leadership to carry on the functions of the *"new human"*, is that they had to have a hybrid program. And those people, at that time, were still in the stages of becoming advanced humans. And I'm talking about the indigenous people.

So they had to have a transition. And I believe that, based upon the prayers and the rituals, and it's just the historical facts, based upon a comprehensive study about these things, and you look at that, and these were a special type of people. And they had different features than the regular group. So even in the Zuni history, the priesthood

were sort of like half whatever off-world means, but at the same time they were half humanoid-type people.
So they started that blue line, so to speak – bluebloods organizations. And it was done by a certain group, by a clan system, or by an order of what you might call a societal system. There's many societies in many different pueblos.
They got the medicine society, kachina society, the priesthood society from all directions and all differen… And each one has certain functions.

David

Clifford, what do you think about casinos being built on American Indian land?

Clifford

Indian reservations are where the casinos are at. And they had access to them all these years, but I believe that there are a lot of activities, construction activities, going on on the Indian reservations because that's land that nobody can go in. It's just like a national park, same status, or a military base, same status.
So they can carry on anything that they want. And casinos are to get people away from their usual activities and take away all their money, number one. And then also to give them another deviation, because they've already got alcoholism.
They've already got domestic violence, drugs and everything else.

Corey

Throw in some gambling in there.

Clifford

So this is another one. Gambling is… You can do it even sober. So I believe that's also another deviation.

David

Do you think that each of these sacred lands for the American Indians have underground areas beneath them, that maybe these casinos are built there so that they have a nice cover to access those underground areas?

Clifford

Yeah, especially, for example, like at Jicarilla Apache, Dulce [New Mexico]. I think there's two casinos over there. The stories and the legends, or to a lot of times, mythology, about some of those places, that the underground people used to occupy – they still do to this day – they used to go into those mountains by pilgrimages by different tribes.
That's where they used to have the contact directly with them. But as time went on, they started putting in fences; they started isolating it. So we no longer…

Corey

…have access. So this is the military that has this place locked down?

Clifford

Nobody really knows who. But I could never get information from those people because . . . I think what they did was they signed a document, *"If anybody asks you this, you don't tell them."*

Corey

Nondisclosure.

Clifford

So they said, “Well…” And they got paid real good money.

David

All right. Well, Clifford, this has been really great, and I’m so grateful that you wanted to come forward and share all your knowledge with us. And Corey, do you have anything you’d like to say to him in closing?

Corey

Yeah. It’s been an honor to have you and your information out here. I’m very happy that this can be a conduit to correct a lot of misconceptions about the Hopi and Zuni people.

Clifford

I’m glad to be here.

David

Well, thank you, Clifford. And I want to thank you for watching. This is “Cosmic Disclosure” with Corey Goode, myself, David Wilcock, and our special guest, Clifford Mahooty.

Alchemy and The Law of One Season 8, Episode 11

Cosmic Disclosure; Alchemy and The Law of One Season 8, Episode 11

17 Oct 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode. And in this episode, we're going to get into the mysteries of alchemy and The Law of One.

So, Corey, welcome back to the show.

Corey Goode: Thank you.

David: The alchemical tradition is a very interesting thing. The word “alchemy” is apparently derived from “Al Kemet”, or the “science of Egypt”. And a lot of people have speculated that this idea of lead transmuting into gold, although there may be a practice that does that, that it is somehow analogous to the transformation of the soul, the idea of the Ascension, the lightbody, that the physical body is like the lead and that the lightbody is like the gold.

Did you encounter any information when you were in the Secret Space Program regarding this idea of the alchemical transmutation?

Corey: I didn't see information directly about alchemy, or if I did, it wasn't what I paid attention to. But the more I'm learning about alchemy, the more I'm finding out how it does have to do with the Ascension process.

David: So did you ever encounter information suggesting that metals could possibly transmute, as the alchemist claimed to have accomplished?

Corey: Yes, actually. When they were building the Alien Reproduction Vehicles, building their models based on that craft that was given to us, I believe by the Nazis, they found out that the middle column inside the flying saucer had mercury in it, or some sort of gallium metal, that was spun in different directions in different tubes within tubes, and a high electrical field was applied to it.

(Embedded video)

This was a part of the process of electrogravitics.

When we were trying to repeat that process, we were using just regular mercury. When the high electrical fields were applied to the mercury, it actually turned into

gold. It looked like kind of a coral. The told turned into like a coral.

David: And this was chemically tested – confirmed to be gold, not just gold-like?

Corey: Yes. And they've reproduced this at a university, but they took small amounts of mercury, applied heavy, heavy electromagnetic fields to it, and it turned to gold.

David: Really? Well another interesting angle here is when we get into the science of vortex points on Earth – ley lines, things like this – I have more than one insider who told me that alchemical transmutation, to get this to work properly in a natural location on Earth, you have to be at one of these special node points. There's something about the physics there that makes this more apt to happen.

Corey: Well, those node points are entrances and exits to, basically, portals. These node points that . . . We've talked about how the Earth has a grid around it, and each of these node points has a certain aspect that has to do with maybe the stone, the crystalline stone, . . .

David: Right.

Corey: . . . and it causes an electrical connection between the cosmic web and the node. And at different points as the Earth is spinning, and depending on where it is with the Sun, that electrical connection takes a path of least resistance.

And whichever node happens to be in that path of least resistance, that is where a portal would open.

David: Hmm. So it is conceivable then that ancient people could have determined that, with the knowledge of the grid and the knowledge that certain planetary alignments would activate these portals, that at certain times you could get this to work.

Corey: Sounds like it. There's obviously a lot of high electromagnetics involved with portals, so maybe they have multiple purposes for those locations.

David: Right. Did you ever hear anybody describe this idea of the alchemical process? Was there anybody in your Secret Space Program that was really big on secret societies and this idea that the body is like the lead that needs to be consumed, transformed?

Corey: Yes. A lot of the engineers and scientists that I worked with were heavily into that.

David: Really?

Corey: They would talk about all of these different things, but it was not in my interest. I focused more on other things. And, obviously, the things that I remember are the things that I was looking into the most.

These secret societies know the mystery teachings. And I believe that in these mystery teachings is a more detailed chronology of what has really occurred on this planet over the last couple cycles.

David: Do you think that some of the texts that have been sequestered into the Vatican library, allegedly from Egyptian Library of Alexandria, might have information about this in them?

Corey: Yes, definitely. The Library of Alexandria was listed in the glass pads as basically a false flag. All of the information was taken out and taken to the Vatican.

And within many different manuscripts from different parts of the world, you have information that points you towards a solar flash or a solar event of some sort.

David: So despite how much has survived that I've talked about in Wisdom Teachings, about the solar flash and so many religions and ancient spiritual teachings, there could be much more about it that we lost that's hiding in the Vatican library.

Corey: I'm sure that in more than just that one location, there are greater details about what occurs during the process.

David: All right. Well, now what I want to do is take us through some Law of One quotes on what they call “harvest”.

And the word “harvest' is how The Law of One usually describes this process.

As I've said, in other episodes, “Wisdom Teachings”, etc., don't get hung up on that, because it appears that “harvest” is referring to a Bible quote in the Book of Matthew, where it says that “the wicked ones will be plucked one by one from the just at the end of the age.” So they use . . .

Corey: And thrown into the fire.

David: Yeah, this harvest metaphor. So what I want to do is read you some of this stuff that The Law of One says, because we've had a lot of people asking for clarification. The Law of One is very puzzling.

And first of all, Corey, just to set this up in case people haven't seen the other episodes, what have the beings that you're talking to said about The Law of One and their relationship to it?

Corey: They said that they were responsible for delivering that information.

David: And this is the Blue Avians?

Corey: The Blue Avians, yes. When I asked them about it, . . . Yes, they said that they brought that to us as a guide for a consciousness expansion.

David: And you also said, I believe, that once you started reading it, their verbiage changed.

Corey: Yes. They were always very, I guess, cryptic with me to begin with. But they basically use what language you have, what words you have already that you use on a regular basis, words from your lexicon.

David: Right.

Corey: They're going to use those in communication with you. And when I was able to finally read The Law of One, that gave them a whole new vocabulary to use with me. It broadened the communications quite a bit, and I was able to understand more of what they were saying.

David: So just to be absolutely clear, they started to sound like The Law of One after you read The Law of One?

Corey: They started speaking, yes, in that same manner.

David: Interesting. And does that continue to happen now?

Corey: Yes. And they spoke in a similar manner before – the cadence, the way the information was delivered – but they were using all of the language from my current perspective.

David: Now, what has their opinion been of the quality of what was done in the original Law of One work? Do they say that it's accurate? Did they say that there were any mistakes in it?

Corey: No, they said that it was accurate, that it did come through the distortions of the people recording it, delivering six higher-density information through a lower-density filter. There's always going to be that type of thing, that they did not plan for

people to use it as scripture like a Bible, like some have done, that they do not want any new religions to develop, that we need to focus on inwardly instead of developing all these religions.

David: So one of the things that I'm sure you're familiar with by now off all the people writing in, you don't just read The Law of One to figure out what's going to happen. There's a lot of cryptic statements that need to be deciphered.

So as a service to the audience, I want to go through what they actually say and have us discuss it with the knowledge that you now have, which has given a lot more clarity in some ways to some of the things that were in The Law of One.

So let's take a look now. At this point, Don Elkins had just gotten this new contact. He wants to know about planetary changes. He wants to know about catastrophes. He's expecting there to be some kind of event. Look at what happens.

THE EARTH CHANGES

**1.9 Questioner: Can you say anything about the coming planetary changes?*

David: Look at their answer.

**Ra: . . . The changes are very, very trivial.*

So they don't want to answer the question.

And then, look at what happens next.

**We do not concern ourselves with the conditions which bring about the harvest.*

David: So isn't that interesting? They don't want to answer the question. They think it's trivial.

So why do you think they would be so disinterested in talking about this particular subject, based on your own experience with them?

Corey: They're very careful about how – when they deliver the information – how we're going to react to it, and also how we might possibly report the information through our distortions.

So they're most likely seeing things probably three, four or five steps down the process of giving that information, since they view time differently. So they're looking at things on a different level.

We see things just like you and me, with linear time occurring. When they're watching, they're seeing what has occurred, what is going to occur, what things are happening currently. I mean, with what's going on, they extrapolate what is going to happen. They see all of that at once.

And they're communicating with you in that . . . Time is real weird for them to try to communicate with us.

David: Why do you think they always call us a "mind/body/spirit complex" instead of a word like "person"?

Corey: Well, they don't want us to focus on ego. They want us to focus on oneness, that we're a part of a . . . more of a collective instead of the one single ego that's fighting or in competition with every other ego.

David: So if the word "body" is only one of these four words that they use to describe us, do you think that their view of us, where we would see ourselves as a body and as a separate person, that they have a different view of us than that?

Corey: Yes. They see us . . . They see all three of those when they see us. Just like they see with the time occurring with us, they see us on all levels.

And they're also, as I've reported recently, communicating with us on a higher self level more than anything.

David: Right.

Corey: Most of it is occurring on the higher self. The higher self decides what the ego is ready to handle; how the information should be delivered to the ego. And the positive beings and higher-density beings communicate with you on that level.

David: So there could be whole levels of what we are that we don't normally have hardly any access to at all. Are they trying, in some way, to help us gain more access to those parts of ourselves?

Corey: They're trying to help us reintegrate all those different parts.

David: Okay.

Corey: Yes.

David: All right, so the next set of quotes is very important, because as you probably know, Corey, I lived with the people that did The Law of One for two years. And I'm

one of the only people who ever got to do that.

And Carla revealed to me while I lived with her that they had censored some of the things that were said, and it never got into any of the first four books, nor did it get into the fifth book where they had allegedly all the things that they had taken out from the first four.

Only after Tobey Wheelock did something called the Re-Listening Project, where he went to the original tapes, listened to everything, and transcribed it exactly the way it was, did this quote come out, which Carla, for whatever reason, was very uncomfortable with this and didn't want it in there.

But this adds so much, so take a look at what it says, why might she not have wanted this in there.

THE SINKING OF LEMURIA

**10.15 Questioner: [1] was wondering about the advent of the civilization called Atlantis and Lemuria . . . ?*

**Ra: . . . The civilizations of Atlantis and Lemuria were not one but two.*

**Let us look first at the Mu entities.*

David: So before we get any further, how do you feel about that statement about Atlantis and Lemuria being different?

Corey: Absolutely. Yes, that's been known for quite a while in the programs.

David: And Lemuria is more a Pacific Ocean-based culture?

Corey: Yes, over close to Asia, I believe . . .

David: Right.

Corey: . . . was the information that I saw. And that's been information also in the public for some time.

David: Okay. So this is still pretty early, because they were doing a lot of sessions at once. So this is right at the beginning as this was happening.

**They were beings of a somewhat primitive nature, but those who had very advanced spiritual distortions.*

David: Now, have you ever encountered something like this in your own travels, beings that would be somewhat primitive but have very advanced spiritual abilities in some way?

Corey: Well, yeah. What seems to occur is that when a lot of these different beings become spiritually advanced, they back away from a lot of the, I guess, worldly things that . . . I guess it's what people in spiritual areas on our world right now, like in Tibet. They're more focused on raising their consciousness than they are building the next Ferrari.

David: So you might not need technology if you have very advanced spiritual ability.

Corey: Well, they have no use for it. They're focused on other things.

David: Right. So we have beings that are very advanced spiritually, somewhat primitive. And then it says:

**The civilization was part of this cycle, experienced early within the cycle at a time of approximately fifty-three thousand [53,000] of your years ago.*

David: Now, this date to me is interesting for a couple of reasons. What was one of the things that you talked about with a time period that's only a couple of thousand years off from 53,000 years ago?

Corey: Well, the Pre-Adamites came during that time period.

David: Exactly.

Corey: And some of the information that I've delivered also stated that there was some sort of a cataclysm cycle after they had arrived that they had to dig out from.

David: Right.

Corey: And then there was an additional one that occurred around 12,000 years ago.

David: So do you think it's possible that Lemuria would have been a separate culture that was still on Earth with very advanced spiritual function contemporaneously with when these Pre-Adamites had landed here?

Corey: Yes. The Pre-Adamites . . . There were several groups of humans, I guess you would call them on the Earth. The Earth was being used as a refugee zone for a while . . .

David: Right.

Corey: . . . over different periods of time. So people were being brought here for short periods of time or permanently.

David: Don't you think it's pretty amazing that this date is so close to what your space program people have gotten about when the Pre-Adamites showed up?

Corey: Yes. Yeah, it's definitely an interesting correlation. I'm not sure how the Lemurians and the Pre-Adamites would have interacted.

David: Well, they make some leading statements in The Law of One, that there were problems around this time that led to this catastrophe being necessary. They don't say what the problems were, but it's in there.

Corey: Okay.

David: And that's what's so amazing, because it's the 53,000 year time frame.

**It was an helpful and harmless place [Lemuria] which was washed beneath the ocean during a readjustment of your sphere's tectonic plates through no action of their own.*

David: Now, this was shocking to me, and it kind of explains why Carla might not have wanted it in there, because they're saying that they were helpful and harmless but that they actually sank through the Earth going through a massive change and that it was no fault of their own.

Corey: Right.

David: What do you think might have been the reason why that cataclysm needed to happen?

Corey: Well, what's been explained to me is that the Earth is going through this Ascension process, going through all of these different changes and processes. We are basically like fleas on a dog, and the dog's going through an Ascension, and we're being brought along with it.

And Lemuria, being inundated with water when they didn't seem to do anything to authorize that type of an event, I was told that in each cycle there are these types of cataclysmic events. It's kind of like growing pains that the Earth is going through. It's not the Earth trying to cleanse itself of us.

David: Right.

Corey: It's just going through a process. And as the Earth goes through the process

again at the end of this age, then there are going to be similar things occurring – earthquakes, tsunamis, that kind of a thing. But it's not directed at human beings, trying to destroy human beings.

It's just the Earth is going through its own process, and we happen to be on it.

David: We're not necessarily just sitting ducks waiting to die when a tsunami comes. There could be some sort of a cosmic rescue plan.

Corey: Yes, and it's not necessarily going to be a global tsunami. It's going to be in a region . . . There are going to be different things happening in different regions.

David: Right. So these peaceful people in Lemuria didn't necessarily die in this flood. They might have been removed by benevolent beings so that they did not experience that.

Corey: And depending if they were that far advanced spiritually, they probably had remote viewing-type capabilities, and they may have been warned by their religious workers.

David: Right. So they could have actually evacuated the area first.

Corey: Right.

David: Okay. Next it says right after this:

**They set out those who survived and reached many places in what you call Russia, North America, and South America.*

**The Indians of whom you have come to feel some sympathy in your social complex distortions are the descendants of these entities.*

David: Isn't that interesting?

Corey: It is, especially when we go back again to the Hopi legends.

David: Okay.

Corey: They talk about their point of immersion in the Grand Canyon, that for they don't know how long – generations – that they were brought beneath the Earth by the Ant People . . .

David: Right.

Corey: . . . to survive a great cataclysm on the Earth. That ties in very well to their current prophecies and lore.

David: Well, and we also see, whether we're looking at Native Americans or whether we're looking at Asians, there are certain similarities in their features, . . .

Corey: Yeah.

David: . . . which has suggested . . . And, you know, the conventional explanation for that is this idea that there was originally a land bridge between Alaska and Russia, and that everybody that came into the Americas had to come over that land bridge.

Corey: Right. And I had a conversation recently with a Zuni elder, and we were talking about Hopi prophecy and that land bridge came up.

David: Really.

Corey: And he said, "No, we did not come here over the land bridge. We came here under, through a cave complex."

David: Oh, wow!

Corey: "Under the ocean is how we got here. It wasn't a migration." And their stories are full of migration stories – their history is.

David: So the really surprising thing is that this should appear in Book One, and it doesn't. And it's only in the last few years that it kind of very quietly emerged.

But once you see that quote, now you know that they're saying that there are some cataclysmic changes that occur at the end of the age.

But without it, you wouldn't really know that The Law of One was saying that. And if you only read the book, you don't get this. You have to go to the lawofone.info website. That's the only place you're going to read this.

Okay, not the quote goes on. And now this is in Session 21, Question 25. And this is going to have some really great stuff about the Pre-Adamites. You're going to love this, Corey.

**21.25 Questioner: Just to quickly refresh my mind – how many years ago did Lemuria suffer its catastrophe?*

**Ra: I am Ra. This was approximately fifty thousand [50,000] of your years ago.*

David: Exactly two 25,000-year cycles.

**The origins being approximately five three, fifty-three thousand [53,000] of your years ago.*

**The damage being completed in that last small cycle of the first master cycle.*

David: So isn't this interesting that they say there had to be a catastrophe, and that the origins of the catastrophe were approximately 53,000 years ago?

That is so close to the time that you and your people have calculated as when the Pre-Adamites crash-landed here.

Corey: Right. And the Pre-Adamites had crash-landed and were here for a little while when they had reported that there was another cataclysm that they had to survive and dig out from.

David: Hoagland's top insider had said that after the Pre-Adamites got here, that they had developed a very technologically advanced civilization in what we now call the Sahara Desert, and that if you go anywhere between 40 to 400 feet below the surface of the desert, that there's literally tons of remnants of their civilization down there, including very, very large statues.

Corey: Yes. That was definitely in the smart-glass pads. They sent out operatives to go and dig tunnels, just small tunnels down that weren't very obvious, and dig around in areas that they had observed through satellite imagery that they had developed.

And this was very similar to the deep penetrating remote imaging satellites that they've used to look in the Western United States for places to put installations in the mountains.

So, yes, they're able to see very deep into the ground. And things like that have been found. And that Sahara region, I had heard this information. I think I reported it on "Cosmic Disclosure" as well, and some of the statues were described looking a little bit African – some of them.

David: Right.

Corey: Yeah.

David: So one other thing that I find really interesting that I've done in my research to try to map out this catastrophe as something physical, is there is a major crater in America called Barringer Crater.

And this crater is normally thought to be the result of a meteor impact. But the really crazy part about it, two things:

Number 1, the crater is basically a square. If you look at it from the top, it's got the corners rounded off, which suggests some kind of geometric energy field – not anything that a meteor would do, because a meteor crater would be round.

And the second weird thing about Barringer Crater is that it has fulgurite under the sand. And fulgurite is fossilized lightning.

Corey: Hm!

David: So this, many scholars have concluded, is actually the result of a supervolcano that went off, and that it also, like in the electric universe model, had this electrical discharge to it that literally fossilized the sand and turned it into fossilized lightning as this big supervolcano eruption went off.

Corey: Right.

David: And the timing of this geologically is exactly 50,000 years ago.

Corey: Right. And in those big volcanic explosions, it produces plasma and electricity.

David: Oh!

Corey: Especially just in the dust from the ash, there can be an electrical charge.

David: And do you think it's possible, with the idea of the sacred geometry and all the stuff I've been talking about with grids on various planets, that you could have an explosion that takes place in that kind of a geometric way, and not just a round circle but actually a square like we see?

Corey: Yes. And also, I mean, have they dated when that possibly occurred?

David: 50,000 years ago.

Corey: I started to say, from what Tier-Eir had shown me, when the Earth is going through this transition, supervolcanoes do pop. The volcanism does increase. Earthquakes do increase. Storms become much more energetic.

So that's definitely in line with what occurs during the cycles, from what I've been told.

David: So we could have a supervolcano go off, and that type of cataclysm could also cause land in the Pacific to sink under the ocean at the same time.

Corey: Exactly.

David: How might those two things be interrelated?

Corey: Well, they may be symptoms of something larger occurring instead of playing off of each other.

If you have the crust starting to slip, it's going to cause volcanoes to explode.

David: Right. Could the solar flash do that? If it's on time – it's 50,000 years ago, right, so it's right when the solar cycle is supposed to end – could it do a supervolcano and a tsunami in the Pacific at the same time?

Corey: Oh, yeah. Some of the crustal displacement that occurs . . . You know, you don't just have plasma ejecting from the Sun. You have huge electromagnetic waves ejecting.

Those electromagnetic waves, when they get here, they interact with the electromagnetics of the Earth, and something has to give.

David: Right.

Corey: And you're going to have all of these crustal displacements, earthquakes from that, volcanoes exploding from the friction of it, storms becoming more and more energetic from the Earth spinning around in these cosmic energies like a dynamo, and all of the energy is going into the Earth.

David: I also want to close out our episode by hitting you with one last piece of really cool science data, and that is this: It's a known fact among archaeologists that if you look at human remains before 50,000 years ago, that we're not making any ceremonial religious type of objects; we're not making any really advanced tools.

Something happens 50,000 years ago, and they admit it – that it happens rather spontaneously worldwide 50,000 years ago. People start doing religious behavior. They start doing art. They start making more complex tools. They start making more complex clothing, more complex weapons.

Something big happens to everyone on Earth about 50,000 years ago.

Corey: The field of consciousness expanded. We suddenly had access to a whole new

spectrum of consciousness.

When you go up in the densities, you're going up in consciousness, basically.

David: Right.

Corey: So they had a massive consciousness boost by what occurred with the solar flash, as well.

David: Well, that also implies that when the Pre-Adamites first got here before this happened, that it really could have been like Planet of the Apes, in a sense.

Corey: Very well.

David: The indigenous humans didn't even have the basic – any type of language, any type of religious behavior, any type of more advanced toolmaking. They really were quite primitive.

Corey: Well, they could have been in between cycles. It sounded like Lemuria and Atlantis. Atlantis could possibly be the Pre-Adamites. The Lemurians seemed to get pretty far developed spiritually.

David: Right. And all those records were lost.

Corey: Right.

David: The ones that we still have suggests that other people on Earth were very, very primitive.

Corey: Right.

David: Well, this is a fascinating discussion. I'm your host, David Wilcock. This is “Cosmic Disclosure” with Corey Goode, going into the mysteries of alchemy and The Law of One. Thanks for watching.

Encounters with Three-Fingered Beings Season 8, Episode 12

[Cosmic Disclosure; Encounters with Three-Fingered Beings with Pete Peterson] Season 8, Episode 12

24 Oct 2017

David Wilcock: All right. Welcome back to another episode of “Cosmic Disclosure”. I'm your host, David Wilcock. And here, again, is our special guest, Pete Peterson. Pete, welcome to the show.
Pete Peterson: Thank you.
David: We have a new series on Gaia called “Unearthing Nazca”. And we're discussing some really fascinating things having to do with the Nazca Plateau.

And I'm curious. In all of your experience in the insider world, did anybody ever try to study the Nazca Lines and those weird geological features in that area, and if so, what did they find? What was their conclusion?
Pete: Well, there are a number of things there.

We talk about the Nazca Lines. I was there specifically to look at some Nazca tunnels.
David: Okay.
Pete: And they're flat-bottomed, rounded on the top, kind of like a baked loaf of bread.

And they were made by, obviously, by some type of energy machine, like a laser machine, or something that was producing very high heat.
David: Are you saying these were underneath the area where . . .
Pete: They're underneath . . .
David: . . . Nazca Lines are?
Pete: .. . the area,and they go for miles and miles, and miles, and miles.
David: Hm.
Pete: And they're underneath that. I think they're much newer, much more modern than the lines.
David: Hm.
Pete: And I didn't get a chance to study the lines much, but we did spend a lot of time up in hot-air balloons looking down to see if we could see the results, or some things that happened when they built the tunnels that might have been visible from the surface.
David: How many entrances to the tunnels were there from the surface that you knew about?
Pete: Oh, that I knew of? Maybe, I don't know, 6 or 8 or 10, but there are supposedly maybe 60, 75, something like that.
David: And how high was the ceiling inside these tunnels?
Pete: The ones I was in . . . it was probably 30, 35 feet, 37 feet . . .
David: Wow! That's big.

Pete: . . . in some cases I know. Yeah, they were huge.
David: How far beneath the surface of the ground were they?
Pete: The greater part of them were probably over 150 feet.
David: Really? And where did these tunnels go? Did you ever find out that?
Pete: Well, there were places where the tunnels would spread out. Or they'd spread out, and then go the same direction, and just getting a larger space that wouldn't collapse.
David: So some of the tunnels would join into larger rooms?
Pete: They joined into larger rooms, or they joined into parallel tunnels.
David: Did you see any artifacts in these tunnels?
Pete: Oh, yes.
David: Oh, really? What kind of artifacts?
Pete: Yeah. Well, no. We saw . . . I'm thinking you're thinking artifacts – the small objects. We saw a lot of shelves.
David: Ah!
Pete: It looked like equipment was probably like generators, big generators – just a supposition from my view from, say, in the '60s – 1960s.
David: Hm. Were the shelves carved out of rock like . . .
Pete: Yes, everything was . . .
David: … the tunnels?
Pete: . . . carved out of rock.
David: Okay. So, were they inset into a rock wall, like a shelf carved . . .
Pete: Yes, inset to a rock wall, or adjacent to the tunnel wall. Some were set up. And it looked . . . and those tunnels would go down at a slope.

It was like they were meant to be filled with water to maybe block off things.
David: Hm. So if there was evidence of this being drilled out, did you ever find any of the tailings from the drilling?
Pete: Never . . . And we'd looked when we were up in the air. And we looked and never saw where any tailings might have been. And it was always a mystery to me.
David: I'm curious if you ever saw a sarcophagus, or any type of statuary, or sculpted objects inside these tunnels. I mean, we mentioned the shelving.
Pete: The tunnels have, obviously, had those kind of things, because there were little small niches in the wall. Things like that.

Now, some of those . . . you could tell, because of the soot collection, or for torches of some kind.
David: Okay.
Pete: But a lot of them were arranged like you'd see in a modern home – an arrangement of shadow boxes or things like that that went on the wall. Those tunnels had been cleaned.
David: Hm.
Pete: I mean, it was obvious the stuff was there. There were places made for it. There

were. . . It'd be like the furniture in a modern apartment today. You have end tables, and you have display tables and things like that, but they had niches there.

They didn't have to move things in. They had plenty of material to make them – just hollow out the wall or whatever, then coat it with this . . . it was like a fiberglass mat, but the mat was not woven like our typical fiberglass mats would be. But it was . . . They were glued together.
David: Hm.
Pete: They'd go through and heat it, make it, let it cool, and then right at the last end, they'd come back and hit it, like with a real high flame, I would say, from the outside, and melt just a little bit of the outside to give it a smoother texture.
David: So how often would you see places in these tunnels that looked like people could be living in there as an apartment or something?
Pete: Oh, all along the tunnels.
David: Oh, really?
Pete: Yeah. Sometimes you might find 500 feet that didn't have it, or 300 feet, or where the tunnel was branching or transitioning.
David: Uh. So this was an underground city.
Pete: Oh, it was. Yes. And it went on for . . . I know we found pieces of the same tunnel for maybe as much as 1,500, 2,000 miles.
David: As far as yo know, then, this probably could have housed at least many thousands of people, if not potentially hundreds of thousands.
Pete: At least many, many thousands along the way. There were places along the way, just like you'd have in a . . . Let's say we took off on Highway 70 across the United States. You know, every so often there's a little town, and once in a while, there's some type of 7-Eleven or something, and truck stops, and things like that.

And so there were places where, obviously, they were going high-speed from A to B. And that's the places you were asking before, like it wasn't continuous or whatever. And, no, it wasn't really continuous, but it was continual.
David: So you think they weren't just walking. They probably had some kind of motorized vehicle inside.
Pete: I would say from the floor, they had a motorized thing, but you could see on the floor that there were a lot of pathways. They led to a lot of things we discovered, because we could see that there was . . . the floor was actually worn, which means it was old, quite old, and had been worn by foot traffic or small cart traffic.
David: Did you ever find any pictorial or written inscriptions when you were in there?
Pete: There were some. And like I say, the place looked like they had . . . If you remember, pretty much . . . and when you were mentioning more north, they may have gone more north all the way from north of Mexico City, clear down to the end of Argentina . . .
David: Wow!
Pete: . . . there were tunnels. There were people . . . for some reason lived

underground.

Now, being as we have about a 28,000-year solar cycle that we're kind of going into one right now, because we now have a lot more solar flares than we've had in the past and a lot less of the ionospheric layers.
David: So you think these people were living underground to hide out from a solar event, some kind of solar flash?
Pete: Well, they were trying to hide out from something, and it could have been other extraterrestrial races.
David: Hm.
Pete: You could tell there were defense areas. I spent 10 years in the Marine Corps, so I can look and say, "Okay, this area was meant to defend."
David: Did you ever see any mummies down there? Any evidence of who . . .
Pete: Never.
David: . . . it was?
Pete: The place .. . It looked like they had literally vacuum-cleaned it.
David: Wow!
Pete: And that was very strange, because you could tell that . . . But a lot of that stuff had been there. You could see these little niches and larger niches where something sat there. Something heavy sat there for a long time.
David: Well, you have seen the video from our "Unearthing Nazca" series.
Pete: Right.
David: And these bodies were found in that exact area of Nazca where you say that you entered these tunnels.

So I'm curious if you feel there is a connection between the tunnels that you saw and whatever these mummies might be.
Pete: Oh, absolutely.
David: Okay. Could you explain what the connection is?
Pete: Well, the connection is they're the ones that built it.
David: The underground tunnels, you think?
Pete: The underground tunnels.
David: Okay.
Pete: The tunnels were built, and then they were modified over the years. I mean, you could see that there was different types of carving, cutting, or hollowing-out methods that were utilized.

It appeared that some of them were done by hand – the early ones were done by hand – then those were connected.

After those were built – they were like little cities, maybe – then they were connected.

And usually, with each one, there was some surface phenomena that would show that

they'd come up out of the Earth and do surface phenomena like the lines at Nazca.
David: Oh.
Pete: And at some instances, you could tell that these were meant to be seen from way far, somewhere in outer space and used for saying, “Well, this is where this is and so forth.”
David: Did you have any evidence that the actual lines of the Nazca Lines would correspond with where the tunnels were underground?
Pete: Oh, absolutely.
David: Oh, really?
Pete: Yeah.
David: Okay.
Pete: No, you'd see where they came up out of the ground.
David: Wow!
Pete: And then here are the lines.
David: Who do you think took all that stuff away?
Pete: No idea. I would think that people had put it there, because I think a lot of those things were religious statues. And, I mean, it's just a supposition that I have, but what else would they be? I mean, it wasn't like the de Gaulle Museum of modern art in Paris.
David: Did you have any evidence that it might have been the U.S. government that took all that stuff out, or could it have been like a . . . ?
Pete: I don't think the U.S. was involved. It was the people down there.
David: Okay.
Pete: The U.S. wasn't even . . . We didn't have that kind of archeology at the time.
David: Right – even in the classified world.
Pete: Yeah, not even in the classified world. I mean, we were too busy trying to eat . . . find some place to eat and hide from the wild animals.
David: Right.
Pete: Did you ever report your findings to the U.S. government of what you saw down there?
David: Very little.
Pete: Really?
David: Some, yes, of course.
Pete: Okay. And sometimes I was asked. I mean, they almost always knew where I was, or who I was with.

“What did you guys find?”

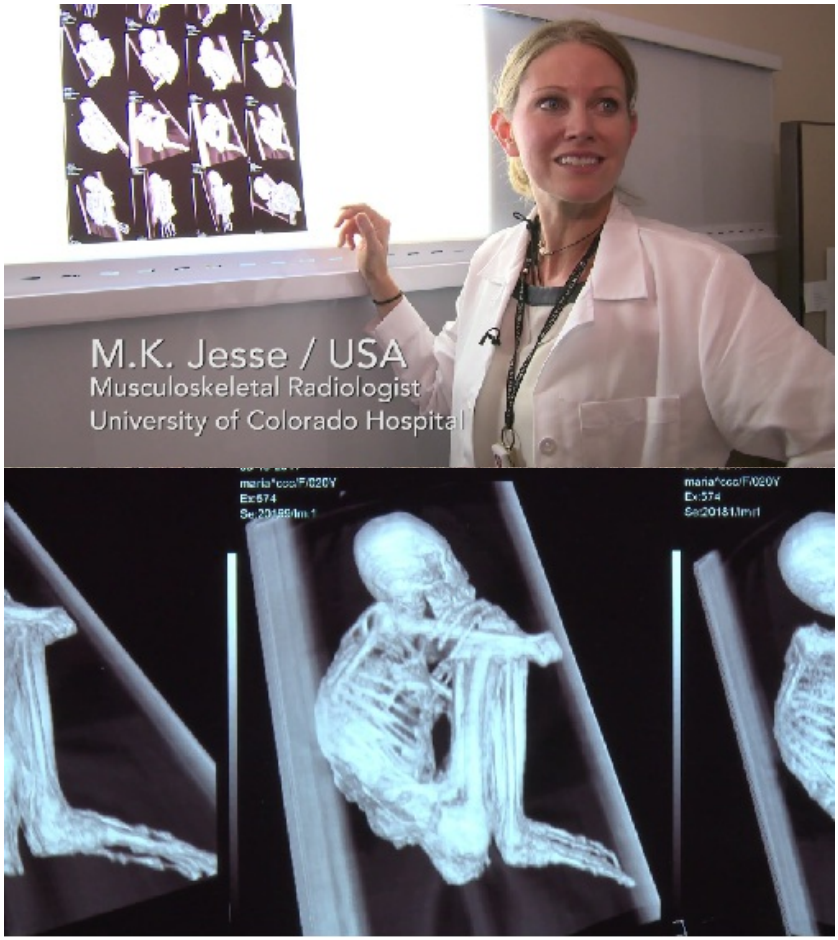
“Well, we found . . .”

“Oh, tell me about this. Tell me about this.”

But not at all to the extent that someone was ACTUALLY REALLY interested. I

mean, I'd have been really interested. We don't have anything that'll do that. Even though we have the device that did the Chunnel, I think it was . . . If they think . . . they looked at these tunnels and tried to figure out how it was done.
David: It appears that the U.S. had tunneling machines, possibly as early as the 1960s, so, that could do even fairly decent speed.
Pete: Well, I saw a lot of these things work – different ones. And it wasn't until maybe the last 20 years that we had any that I know of that were high-speed.
David: Oh, okay.
Pete: We have some now, but part of the problem was . . . is, again, the expense of energy – the energy to melt that much rock.

We grind that out. A lot of it is grinded out and [we] haul it off. And then we melt the rock and coat the outside, or in this case the inside, with it to keep it from . . . little rocks from falling and water from dripping.
David: Sure.
Pete: Things like that. There's always water underground.
David: Okay, let me ask you this: Some of what we're looking at with these mummies appears to be more of a Reptilian-type of being. And I'm curious. Since you've also been able to encounter extraterrestrials in your line of work for the government, did you ever see any beings that had three fingers? Let's just start with that, first of all.
Pete: Yes.
David: Okay. And what would they look like? Could you give us a description?
Pete: They're very slender, long arms, long fingers, long legs, long body.
David: The ones that are in “Unearthing Nazca”, do you think those grew on Earth, or do you think . . .
Pete: No.
David: No?
Pete: Well, I'm sure they did over a period of time, but they didn't come from here.
David: Okay.
Pete: There's no continuous record of evolution.
David: Let me ask you this. It's an interesting question.



M. K. Jesse is a Colorado radiologist that they brought in to look at the X-rays. And one of the weirdest anomalies that she pointed out, which seems to make it impossible that it could be a hoax, is that there are no cranial sutures in the skull.

It looks like the skull is all one big piece of bone with no fissures.
Pete: Yeah.
David: How do you think that's possible? How could a being grow like that?
Pete: It's simply genetics. The fact that ALL the beings that are common . . . now, it may be because they're close to us. They're in our Milky Way system, galaxy, as compared to off-galaxy.

Usually, the off-galaxy . . . In fact, in other areas of science, the ones that are from off-galaxy are REALLY DIFFERENT.
David: Hm.
Pete: Yet, many of them have two eyes, two nostrils, two ears, two hearing things, two arms, two legs. And the fact that there are so many different ones spread all over, to me, is astounding. It says it's got to be . . . You know, they've got to have come from some . . . one basic form or function.
David: There's like a human blueprint, you're saying?
Pete: Well, yeah, okay.
David: Humanoid.
Pete: We'll call it a human blueprint. There's a genetic blueprint that . . . it looks like it was pretty well followed.

Now, we may eventually find out in our anthropological and archaeological studies . . . we may find out that that form just worked best.
David: Right.
Pete: So the natural evolution of it was to go toward what we're seeing.
David: The mummy that we're calling “Maria”, in “Unearthing Nazca”, doesn't have any fatty tissue around the ears. And there's actually no ears at all.

This seems to indicate a more aerodynamic appearance and could possibly be a representation of it being an aquatic being, or a being that is traveling rapidly through the air. I'm curious as to your thoughts.
Pete: Well, I've seen pictures of, or examples of, many different races, if you would. We'll call them races. It's obvious that some came from aquatic things.

It's obvious to me that there are some that are like birds or like insects that did not come from underwater.

There are some that look like they came from underwater where they'll have webbing. They may have arms, but they'll have webbing. [Pete motions to a lower connection between the arm and the body.]
David: Yeah.
Pete: They were built to be in some thick mixture.
David: Right.
Pete: And there are planets that we know of that would support human life that have a very thick atmosphere.
David: Hm!
Pete: I mean, they'd support human life in that the temperatures are there. The gravity is not too much or too little.
David: So you're saying that it doesn't necessarily have to be the Goldilocks principle, that a planet that has a lot of differences from us in its atmosphere, for example, that you could still have intelligent life on it.
Pete: Oh, absolutely. I think I've seen what I feel are . . . were intelligent life that are . . . don't have two eyes.
David: Hm.

Pete: And then when you talk about the no fatty tissue in the ears of the statues you're looking at, that just tells me it's an advanced life form.

A lot of them . . . When remote viewers started visiting distant places, they found that as they got further and further away from what we call "Galactic Center", they appeared to be much brighter, to the point that they lost the need to communicate with vocal cords, and ears, and communicated intramentally.
David: Ah.
Pete: And so their ears . . . It had gone along that evolution had taken it to where it got rid of the ears and . . .
David: Wow!
Pete: . . . got rid of the vocal chords. And you also find that those people are so far advanced in other ways that we have a heck of a time communicating with them because for them, it's like talking to a parking meter or an old fence post.

And we can't carry on a . . . Our languages here, except maybe Sanskrit, which is definitely an off-world language . . . It goes back, that I know of, about 7,200 years. And in 7,200 years, they were giving exact descriptions of how to build flying saucers.
David: Right. So let's talk a little more about extraterrestrials that you personally met with. And could you give us some more information on any three-fingered ETs that you personally saw?
Pete: I've seen three types of three-fingered ETs, actual, you know, walking around-type things . . .
David: Okay.
Pete: . . . that had come here to trade information, basically, or to gather . . . We have a lot of substances with DNA that they are very interested in, very possibly for regeneration.
David: In specific terms, could you just describe what these three types of beings look like?
Pete: Some of the three-fingered ones . . . and remember my job mainly was reverse engineering controls in craft.
David: Okay.
Pete: So like almost all of what we would call flying saucers had control panels that were for three-fingered beings.
David: Almost ALL flying saucers had three-fingered control panels?
Pete: Right.
David: Really?
Pete: And so that was . . . like I say.
David: Would these beings also have three toes?
Pete: All the beings I saw with three fingers had three toes, so it was a universal kind of thing.
David: Now, wait a minute. In the Nazca show, the toes seemed to curl down at the

front joint.

And I'm curious if you ever observed that.
Pete: Oh, absolutely.
David: Really? Okay.
Pete: Yeah. And one of the ways . . . I said I see three different groups of these three-fingered beings. In one group, they have the three fingers. The middle finger is straight. And they have the actual . . . Most of them have two extra joints that we don't have.

They're not the same as the knuckle joints we have. It's a different kind of joint.

But on many of them, the joint for the tip of the outside fingers . . . Actually, instead of moving all in an axis like this [moving up and down], the outside ones move inward.
David: Oh!
Pete: Well, what does that do? It gives you an opposing thumb on either side of your middle finger.
David: Interesting. So the middle finger wouldn't do that, but the other two would?
Pete: The other two would.
David: Uh.
Pete: Now, on the ones now, it looks like they're all three, perhaps, that way. But usually, the middle finger still is linear to one direction, whereas the outside fingers tend to go in.
David: So I would imagine that the tendons for those joints would have to be in a different place.
Pete: The tendons are in a different place, and the control paths, or grooves, or

channels within the bones and along the bones are in a different place as well, and they're very different.
David: Do you think some guy in Peru could have made these mummies as a hoax to make money?
Pete: Not today.
David: Why not?
Pete: We don't have the technology. My understanding is that the crystalline structure of what you have is the crystalline structure of a natural bone.
David: Right.
Pete: How can you make that? We have no way of even thinking of how to make such a thing.
David: Some of the people who are skeptics have balked at the white dust that's around the mummies.

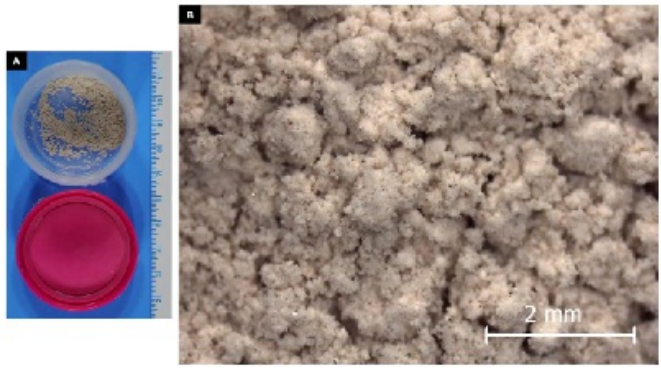
And what we've now seen is that that dust tests out as diatomaceous earth and apparently the whole cave is absolutely filled with it.

Summary and Conclusions

The unknown white powder recovered from a mummy has been examined microscopically and identified as a mixture composed primarily of diatom fragments and mineral grains. This combination indicates the powder is most likely a naturally sourced sample of diatomaceous earth.

Commercial diatomaceous earth has a wide range of uses. Some examples include: water filtration aid, inert filler in paints and other coatings, mild abrasive, insecticide, or an absorbent, among others. Its microscopic pores make it a natural absorbent and its high surface area makes it an excellent adsorbent for chemicals. Additional analysis of the powder could be performed to screen for adsorbed chemicals (e.g., pesticides) and identify them, if detected. This additional information may provide insight to constrain the intended application of the diatomaceous earth to the mummified remains.

If you have any questions concerning this report, or if we may be of further assistance, please do not hesitate to contact either of us directly. Thank you for consulting Microtrace.



So do you think . . . Why would they put diatomaceous earth on these mummies, first of all? What would be the reason?
Pete: Preservation method to preserve the tissue. The tissue is always going to decay. It's going to be eaten by bacteria that are in the air. We always have that problem.

So the Egyptians did it one way. They did a lot of stuff where they used the wax from a certain type of beetle wings that they coated it with, and it blocked the chemical interaction.
David: With your knowledge of material science, would diatomaceous earth function

as a preservative?
Pete: Absolutely. All diatomaceous . . . Diatoms are tiny one cell, or very few cell mechanisms with a carbonaceous outer skeleton.

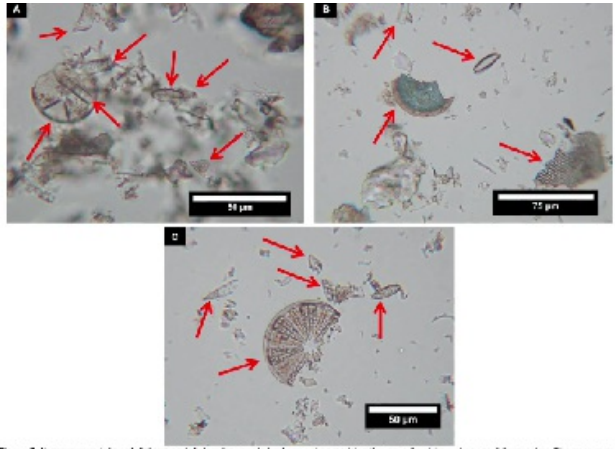


Figure 2. Numerous varieties of diatoms and diatom fragments (red arrows) comprising the majority of the unknown white powder. The specimen has been mounted in 1.680 index of refraction oil (immersion) and illuminated with transmitted, plane polarized light.

And so, for example, in some areas in the Andes, the caves are all in diatomaceous earth.
David: Right.
Pete: They were formed when the Earth had mostly just diatoms as the animal life here.
David: Right.
Pete: And so that's what you'd have for the skeletons.
David: You said that you met three different types of three-fingered beings. And I'm curious about how they communicated.
Pete: Some communicated mentally. Some communicated partially mentally. That's the one like you have that still has ears. Some don't have ears. Or if they have ears, they're set up much higher frequency so they can get better range and better ranging.

Some can see with their hearing.
David: Really?
Pete: In other words, they hearing is so fine, they can distinguish 1/10th of a hertz tone.

Some of their speech is in a very narrow bandwidth, and yet, they have far greater type speech than we have.
David: When you say “narrow bandwidth”, you mean the pitches of the speech?
Pete: The pitches. The pitches would be like, say, between middle C and the A or B note, above or below. And that's all! That's just . . . That's the whole spectrum. But in

that whole spectrum, they can cram in enough information to get vision.
David: Was there anything unique about their eyes, or the eyelids, or the way they blinked?
Pete: All different, but not hugely different. Now, there are some that have an eye that blinks from both directions [meaning top and bottom].

The Reptilian ones have a different kind of coating structure. Or they have a structure that somehow keeps wet. They get a different airflow. It's got a different surface. It holds the water closer. The tears are very thick. All of these things take place.

And their eyes are like most lizards. They don't blink.
David: Right.
Pete: There are aliens with compound eyes. There are aliens with vertical pupils. The pupils, instead of going like this [open and close], goes like this [vertically narrow and enlarge] – open and close and adjust the amount of light.

There's always a certain amount of light and a certain set of shades of light that the eye sees better. And it's because it allows you to gain more information. And all of that's for guidance and survival.
David: If we were to see the eyes of the beings that you saw in these mummies from Nazca, what do you think their eyes would look like based on your experience?
Pete: Now, the beings that are similar to that have an eye that's very much like ours.
David: Really?
Pete: It's not a compound eye. It has lids.

I've seen a couple of them with iris like a camera. Look at the old-fashioned cameras, and they have an iris that goes together and comes apart like this.
David: When you say it's an iris eye, you mean that the eyelid would open and close like that?
Pete: Not eyelid, but the pupil is built . . . There's a chemistry that it follows in animals. There's a chemistry that it follows. There's a neural structure that it follows.

The eagle can see a bug from several thousand feet, crawling on the ground.
David: Sure.
Pete: We don't have that kind of vision.
David: Sure.
Pete: And their eyes are accordingly different. Well, you have the same thing with aliens then.
David: So did these beings walk flat-footed, or did they walk on their toes?
Pete: They walked like . . . First off, if you looked at them from a distance, they looked like they were walking on stilts.
David: Okay.
Pete: And the toes would kind of curve, depending on how soft and how curvable they

were. They'd stand on it, and it would expand, or stretch, or clatter.

And a lot of them had a hoof-like structure on their fingers or on their toes. There were groups of them that had pads, and they had very flexible toes. And the toes would just simply flop and flap and move out of the way. Some of them had control of that to help them balance.
David: Would they be barefoot, or would they have some kind of jumpsuit over the feet or what?
Pete: All the above. Some were bare. A lot of them were bare. Those that were bare had the hardened hornlike . . . some . . . Most of them had the horn in between the joints.
David: What was their role here on Earth? Were they positive? Were they trying to help us?
Pete: Looks like they came, they explored, they existed, and they picked up and left.
David: All right. Well, that's all the time we have in this episode of “Cosmic Disclosure” with our special guest, Pete Peterson. And I thank you for watching.

Viewer Questions 12; Repressed Disclosures Season 8, Episode 13

Cosmic Disclosure; Viewer Questions 12; Repressed Disclosures and Coordinated Communications Season 8, Episode 13

01 Nov 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. I'm here with Corey Goode, and in this episode, we are taking your questions and hearing what Corey has to say for the answers.

Corey, Welcome back to the show.

Corey Goode: Thank you.

David: Let's hit the ground running here:

“Perhaps this will be more of a reminder, but if there are negatively-oriented factions of entities on this planet who are slowing or delaying our Ascension Process, what can we do to combat this or break through these barriers?”

Corey: Well, usually, what they're doing to hold back the Ascension Process is holding things back for you on a personal level.

Usually we scream out, you know, we're being persecuted or attacked. Or if we look deep, we usually find out that we're doing it to ourselves.

So I would say the answer to that question is, focus on yourself. Focus on working on all of those things inside that you've tried to hide from.

And as you begin to work more on yourself, then you're definitely changing the world one person at a time, but people watch what you are doing with your own self-work, and it is a good example for them as well.

David: Next question:

“It appears as if there are some delaying tactics going on, possibly from either side of the disclosure discussion, regarding Antarctica and our true history. Is it known what is going on behind the scenes and why we seem to be taking a leap forward in information, but then everything goes silent once again?”

Corey: Well, you have to understand that they're not just going to drop the Antarctica information or the information about the Antarctic civilization under the ice.

They're not just going to drop the information about ruins found under the oceans

very deep.

It's going to . . . They're going to have to have . . . There's going to be a catalyst for them to drop it, and mostly likely, that'll be some sort of movement against The-Powers-That-Be in the government.

That'll be a time for them to use a grand distraction method.

David: “A weapon of mass distraction.”

Corey: A weapon of mass distraction, yes.

David: So do you think that the Antarctic information is going to roll forward, but that it's more like their final get-out-of-jail-free card?

Corey: That's the plan, yes. They're going to release that information when they have to. And releasing the information during a time of chaos for them they hope will be a springboard for a more orderly future for the planet through their rule.

David: Next question:

“What do you recommend as an appropriate way to hand off the message of the Blue Avians' Law of One Sphere Being Alliance to the next generation? I have two children, ages seven and nine, who are very inquisitive. I raised them to be open-minded about humanity and spirituality, and of course, they are very much impacted by what I talk about and watch on TV,” which I guess is us.

Corey: I would say just sticking to the basics with that young of a generation of teaching them to be service-to-others. Teaching them that being service-to-others doesn't mean that you let others run all over you. And to keep focusing on . . . I guess they don't have a whole lot of inner work to do at that period, but if you can focus on being service-to-others, they're not going to have all of the issues to deal with that we do.

David: *“Do you have any intel on the people who allegedly live under Mt. Shasta in Telos, which they call the city?”*

Corey: I was recently at Mt. Shasta. And no, I did not receive any communication from them. I do not know if one of the groups I saw represented in my first visit to Inner Earth is this group. I just don't know.

I have . . . I know that there is an Inner Earth group in that area, but I have no direct information of them.

David: Okay. Next question:

"My question is this: The 20-and-Back Program, why do they go through such great measures to use and abuse folks for 20 years, and then age and time-regress them, in Corey's case, doing it multiple times? It doesn't make sense to me. It seems very elaborate. Why wouldn't they just use the subjects and then terminate them and then recruit new ones?"

Corey: The technology for the 20-and-Back was given to us by – I believe it was the Nordics. And this is something that has been used on other planets.

It all has to do with cosmic law and how the benevolent beings know how to skirt it in certain ways – the law.

If they were constantly taking us off planet, using us for a 20-year tour, or however long, and then just killing us off, that is going to cause a major karmic backlash to the Secret Space Program, which doesn't need that when it's trying to fight all of these different negative groups.

So the last thing you want to do when you're in a war is shoot yourself in the foot, karmically.

David: Well, and it would be a lot more work to train new people all the time, wouldn't it?

Corey: True. Yes. And most of the 20-and-Back . . . Almost all of the 20-and-Back subjects are military. They've been military trained, conditioned. They're brought into the 20-and-Back, and then they're re-inserted right back into their service [from] where they were taken.

And many times, they're used through one, two, or even three 20-and-Backs. But it's been found that a lot of subjects do not make it all the way through the third 20-and-back. They start having a lot of neurological issues.

David: When you say "do not make it", what does that mean?

Corey: They do not complete the 20 years.

David: They die, or they . . .?

Corey: No, they're either sent back early or they're put into a different position like training . . . training other subjects.

David: But not in the Space Program? They'd be brought back . . .

Corey: They're no longer . . . Right, they're no longer active out in the Space Program.

David: Interesting.

Corey: They're brought back to do training and debriefing for training. That kind of thing.

David: So three tours seems to be the limit of how much you can push this.

Corey: It is. The human physiology just does not hold up.

You know, people think, "Well, you're being taken back in time. You're being age-regressed. Your body is regressing back from any damage that would have happened."

But your body retains a memory of different traumas to it, and the trauma, the neurological traumas that you have from the technologies that you're exposed to, they begin to pop up again later on in life.

David: Theoretically, if you took a tattoo when you were in the Space Program, and then the age regression process, the way it works, would the tattoo still be visible when you were age-regressed?

Corey: No, you're not allowed to get tattoos.

David: Ah.

Corey: But let's say if I had a scar from a very traumatic incident, it was fixed, and even the scar was covered up while I was on the 20-and-Back. After you're regressed, when you're "back in the world", as they say, then this . . . you can start getting a ghost scar in the same area.

David: Interesting. That makes sense. Okay, next question. This is kind of interesting:

"If we have a supergate outside our solar system, and the Cabal are trying to get use of it for their own access, wouldn't that access be cut off by the outer barrier that the Spheres have now created?"

Corey: Yes. Yes, they have not had access to that supergate in some time now.

David: But they did before?

Corey: Yes. That's where a lot of the commerce was occurring through.

David: Oh. And you've said before that supergate can potentially go to other galaxies, not just this one?

Corey: Oh, it does go to other galaxies. Absolutely. That's what makes it a supergate.

David: Hmm. Okay, next question:

"I am wondering what Corey knows about positive Reptilian beings. Do they exist, and if so, have you ever encountered any of them?"

Corey: I have not encountered them. I've encountered positive beings that look Reptilian sort of, but they're not . . . they're not exactly Reptilian. They're a completely different type of being.

Now, I've heard of this dragon-looking or type of benevolent Reptilian-looking being, but I have never experienced one.

David: Okay, next question:

"With the Mandela Effect, if I switch into another timeline, how would I know that I have actually shifted? Am I then interacting with different versions of the people who are in my life, or would those people have also shifted along with me?"

Corey: Ha, ha.

David: Ha, ha.

Corey: I can't answer part of that. I mean, this whole time thing is so hard for us to wrap our minds around. We've . . . We're starting to understand how space works, space-time works. You know, you can stretch it.

There's all kinds of stuff you can do, but we're just now starting to learn about time-space and about how we can manipulate it as well.

David: But you've also said . . . We talked a long time ago about the idea that there is an alternate Earth that has a very radically different timeline than we do, and you said it was very dangerous to try to go to that one.

Corey: That is a different, basically, a different reality or dimension. Now, what's the difference between a timeline and a dimension or a different reality? Those are the things that we're trying to wrap our minds around.

Now, the question also asked, how would I be able to know that I moved timelines? Well, the majority of people on the planet don't really notice.

David: Right.

Corey: But you begin to notice weird things like the Mandela Effect. That is the only real indicator that we can access right now to see . . . or to try to determine if we have changed timelines.

David: Some of the intel I've received concerns these things called “choice points”, and so I want to get your take on this:

If people have choice points in their life where they could make a major decision, would you say that either decision has a timeline?

Corey: I believe so.

David: Okay. So then there could be alternate timelines where you make the choice one way, and your whole reality is different, and you could potentially have people who can see the future, or you could have a prophetic dream that shows you what that timeline might be like for you.

But you could make a different choice if the dreams are, like, deja vu, and they're warning of the future. You could make a different choice and alter your future with that prophetic ability.

Corey: Right. And that happens in dreams all the time.

David: So how do the summations of our choice points affect the outcome right now? What are the choice points that we're being steered towards that would be the better choices?

Corey: Well, right now we're choosing as a collective consciousness, what type of future timeline we want to experience together. So we as a collective are determining our timeline.

It's not something that is just bifurcating, you know, naturally. We are the ones that are changing the timelines.

David: Okay, next question:

“What are the consequences of the negative forces breaking celestial laws of free will, as they have appeared to be doing? As far as I can see, the only repercussions to evil

beings when they interfere with the human race is that they have had incredible success with no obstacles to their evil agenda, going on now for eons. How could we possibly win this war if we're not on a level playing field?"

Corey: Well, I mean, we see that just down here on Earth. We see negative-oriented people that seem to skate through their whole lives without . . . with no real sign of karma catching up with them. That karma tends to build up, build up, build up and then hit them with full force later on.

And then you see positive people that seem to have all kinds of problems.

I think that it's probably pretty close to the same thing above as it is here below.

David: Well, one way this question was worded I think we should clarify, and that is, wouldn't you say that the negative is not just breaking cosmic law? They're actually very careful about how they follow the law. They can't do whatever they want.

Corey: They . . . Mainly, they try to skirt the law. But yes, they will break the law. And there are ramifications.

If they . . . A lot of it is kind of balanced between the good and the bad, like the Mohammad Accords. There are negative groups and positive groups that are signatories of that agreement.

Now, if one of the groups decides to . . . You know, four of the groups decided recently that they are not going to abide by the Accords anymore.

Well, whether they be positive or negative, there are ramifications for that. So if it's not karmically, energetically policed, it is policed on another level.

David: Wouldn't you say that the cosmic principle of the Cabal's sorcery, as the Elizabethan astrologer John Dee first came up with, they have to hide it out in the open, tell us what they're doing, kind of give it all away in various ways, that that sets them up for an eventual defeat?

They're not indestructible in that sense.

Corey: Right. And they don't put it out because it is something that they do out of tradition or something. They do it as a way to make it happen. Because when they put it out there, it enters into . . . it is seeded into our co-creative consciousness.

And then as we stated many times before, they'll use movies, TV, false flag attacks to cause us to catalyze those seeds with our emotions, and we cause them to come about.

That is the secret of their magic.

David: So in that same sense, they're actually very vulnerable, because they've been revealing the agenda to us the whole time.

Corey: Correct.

David: *"NASA actually made a public announcement recently where they denied that there is any slave labor occurring on Mars. If the Cabal were looking for any amnesty with either partial or Full Disclosure, why would they have made a statement like this?"*

Corey: Yeah, that was very interesting. Why would NASA even respond to the question? That all goes back to the question before. I think they're seeding our consciousness with a denial.

I don't . . . I really don't see how that works for them in their agenda to even acknowledge the question.

David: Right. So you're saying that by denying it, they're actually planting that seed of people thinking, "Well, what if there IS slave labor on Mars?"

Corey: Right.

David: Okay, next question:

"How could the MIC Secret Space Program people not be aware of the Navy's Solar Warden program that in the past has been on the Internet, and especially after disclosures of hacker Gary McKinnon and all that publicity going back to the early 2000s? There have been huge waves since they nabbed Gary in the UK."

Corey: So Gary McKinnon is the IT professional in the UK who had in 2004 started trying to hack into the DoD [US Department of Defense] and NASA databases to look for a Secret Space Program information?

David: Yes.

Corey: Okay. That information was . . . If it went . . . Once it made it up to the MIC SSP, was most likely called disinfo, or it was most likely pooh-poohed – the information.

Now, the Air Force DIA [Defense Intelligence Agency] Secret Space Program, which

is the MIC SSP, they do see craft that don't belong to them, that belong to the Navy program. They are told “that is a concept craft. It's being tested. You didn't see it. Don't speak about it.” And they don't speak about it.

David: Right. I want to add something else, Corey, that I've never told you before, and that is at one point, we actually had you and Pete Peterson here at the same time. And he watched you taping an episode, and he wasn't really sure that everything you were saying was real, but he said that what really caught his attention was when you mentioned that it was a Navy space program.

And he said that he had been aware for a long time that there was a Navy space program, and he was dying to get information about it, but that it was “nearly impossible”. Those were his words.

So that's another boots-on-the-ground example of somebody who actually is in the MIC part and really wants to know what the Navy is doing and could not get anything.

Corey: Well, Sigmund, who disappeared, but I was exchanging information with, stated that in the beginning, he did not believe that a Navy program was going on. He knew that the Navy had developed a lot of the Secret Space Program that eventually was awarded to the Air Force, and that's what he believed.

So he began to do an investigation to try to prove whether or not there was a Navy program, and if it was more advanced than theirs, which was . . . they just couldn't wrap their minds around that.

David: Would you agree with the statement that Hoagland's top insiders always said, “The lie is different at every level?”

Corey: Yeah. That's how they compartmentalize.

David: Right. So Sigmund, I guess, . . . The big challenge to his ego was that he was made to feel very special, told that he knew everything, and then he started to find out after actually abducting you and interrogating you, that, no, he probably was being lied to on a very big level.

Corey: Yes, very much. He basically stated – and I'll clean it up - “You mean we are told that we're the tip of the spear when we're actually the effing Coast Guard?” during one of the briefings with him.

David: Very interesting. Okay, next question:

"I was under the impression that some kind of disclosure would happen before the Solar Event. If that is not the case, would it be easier to educate the masses after the flash, given the artificial intelligence and mind-control technologies will then have been wiped out?"

Corey: Well, after the flash, we're supposed to go through this big consciousness boost to where everything just looks different. We think differently. We approach everything differently. So it's hard to predict.

David: Next question:

"Do you have any idea what may happen to the negative groups on Earth after the Solar Flash and/or Disclosure?"

Corey: You know, I've been trying to make sense of that. I don't know if there's just going to be a timeline shift, or if this . . . after this new cycle begins, and we're in fourth density, they're probably not going to be compatible. So what happens to them?

Do some of these Guardian races come and physically remove them? Are they energetically just spliced out of our timeline? I don't know the answer to that.

David: Well, given that you've said that the Blue Avians appear to be the same Ra that wrote The Law of One, and they've told you they are, let me run this by you and see what you think.

In The Law of One, they talk frequently about what they call the three-way split. They say that negative entities are removed and moved to a negative planet, that positive entities get to stay with the Earth because they graduate and stay here, and that neutral entities who are neither positive nor negative are also relocated to a new Earth-type planet where they continue in third density.

So would that correlate in any way with anything you've heard from the Anshar or the Blue Avians?

Corey: It could. A lot of it has to do with . . . The information that they're giving you is, . . . I keep saying, it's hard to wrap your mind around. And a lot of times, a lot of it doesn't make sense until a certain amount of time has passed.

David: Right.

Corey: The information's very heavy.

David: So let me run an idea by you that's a model that I've had for a long time. And this is based on very intense scholarship around The Law of One.

It's difficult to try to understand exactly what they say, but it would appear that the model includes that positive people and people who have to repeat third density but they're not really negative, that those first of all get taken away to safety, that the Earth then goes through a catastrophe of some kind, and if you're sufficiently negative, that you live through that.

And then after that, enough time has gone by that those people can't be on Earth at all. That's when the positive people who are meant to stay with the Earth are then reintroduced to the Earth at that time.

Corey: But how are they actually taken away? Through what process?

David: I think it's the same process they've demonstrated with you. Blue Spheres and Anshar that can portal people out with that white flash that you've had.

If they could do it to you, I think they could probably do it to potentially billions of people at once.

Corey: They could. And it also could be a timeline kind of . . . you know, a shifting kind of thing. So just as in The Law of One they were not real specific, they're not real specific on a one-on-one situation either.

David: Have you tried to get specific answers to these questions?

Corey: Not necessarily THESE questions, but questions that I try to get specifics from. And a lot of times, you know, either it's not relevant to the current topic and they say "It's of no consequence", or they just don't answer.

David: *"How long ago in our time count did Maya culture develop a breakaway civilization? And is Mica's culture a part of this Mayan breakaway group in any way?"*

Corey: Mica is not related to the Mayans. The Mayans didn't develop here. From what I'm told, they were refugees. There was an issue going on wherever they were from, or this group of them were from. They were transplanted here on Earth as refugees.

While they were here on Earth, their numbers grew. But the surface population was living off the land, and the religious caste were the ones who kept all of the secrets about science and that kind of a thing.

And I do not know why they were . . . They didn't break away necessarily from the rest of the Mayan group. They were just kept secret. They came here during the same

time period. It's like a caste system, I would guess.

David: Well, let me run something by you that I think is interesting. Another insider, who's proven to be very credible, has said that there was a vast discovery underground in Ecuador in the late 1970s, and that Neil Armstrong and some of the NASA astronauts were brought into it, and that it was actually quite technological, and that it's going to be similar in time, if this is all disclosed, to what they found in Antarctica.

Have you ever heard anything like that?

Corey: No, I have not.

David: But we do know that these Mayan groups were building stuff underground and not just on the surface.

Corey: Correct. Yes. And they were also . . . The giant mothership that they have, is a giant cylinder that's basically one giant piece of rock that was carved out of the inside of a mountain.

David: Do you think that there are ships of theirs that would still be stored underground somewhere?

Corey: Oh, absolutely. Yes, they have enclaves here.

David: Hmm. Okay. One final question:

"Can you describe the merchant race that is doing trading with the ICC?"

Corey: Yeah. There are a couple of merchant races, but I think the one that they're describing are the ones that are sort of canine-looking. They're all about trade. And they do not . . . They're amoral. They're not really positive or negative, but they stand in the middle and deal with positive and negative groups, you know, passing information and technology, goods and services between the two even.

David: Hmm. Could you describe what they actually look like?

Corey: Yeah. They look very canine. They have ears that are up and pointed, kind of like a dog. They have a snout that goes out with . . . I mean, they look like a dog. They look very much like a dog.

David: Do they walk upright?

Corey: Yes, they're bipedal. They have, like, hands. They have dexterity. They can do all the things that we do. They don't have, you know, like, little pads and claws. You

know, they're up . . . They're humanoids.

David: Are these merchant beings telepathic, or do they speak with their mouths?

Corey: No, they speak.

David: They do?

Corey: Yes. Well, they . . . Yes, they use a language. And they use this, I guess, somewhat universal of a language that sounds very Akkadian-like that a lot of these beings used to . . . for commerce, for trade.

David: Cool. Well,Corey, I want to thank you for going through all these questions. A lot of really interesting stuff this time.

And I want to thank you for watching. This is Cosmic Disclosure. I'm your host, David Wilcock, here with Corey Goode, taking your questions.

Cosmic Disclosure Season 9

Corey Goode, David Wilcock, et al

Guide to Non-Terrestrial Beings Season 9 Episode 1

Cosmic Disclosure; Guide to Non-Terrestrial Beings Season 9, Episode 1

---

07 Dec 2017
Corey Goode: Welcome back to “Cosmic Disclosure”. I'm Corey Goode, and today I will be your host.

Today, we're going to be talking more in depth than we ever have about the different ET beings I've encountered through my childhood, through the MILAB training and ending with the Secret Space Programs.

FIRST ENCOUNTER

My first experiences with non-terrestrials began when I was only five years old.

I felt the need to go outside. I don't know why. And when I went outside, there were three golden orbs that were just floating up in the sky.

And I started watching them intently, and I wasn't afraid.

All of a sudden, I started floating, and the next thing I knew, I was in a room. I just remember I started to lift off the ground, and I was in a room.

And in this room was a Nordic woman, and walking around were small Greys as well.

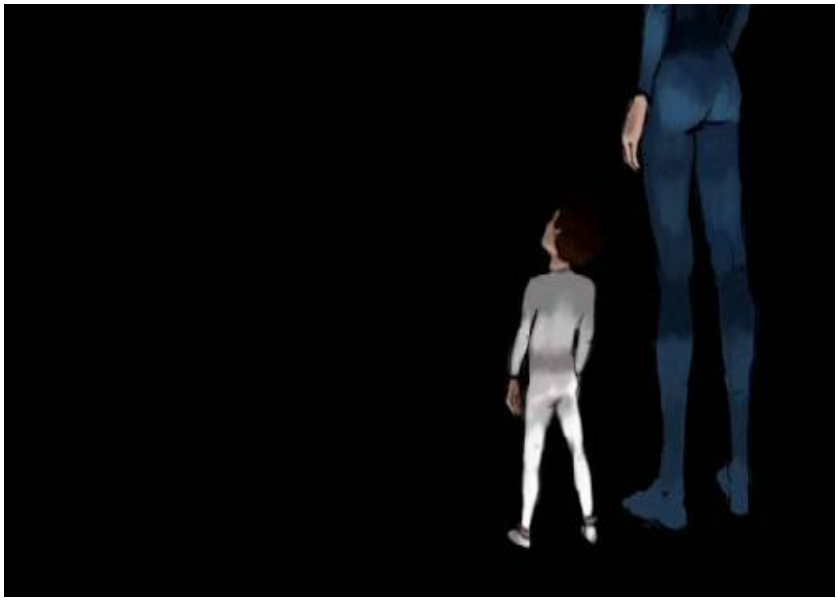
The Nordic woman guided me into a room with children that were playing. And the children . . . some of them were bald, and their eyes looked a little different, but they looked human, like maybe hybrids. And then there were a few regular humans like myself there.

I remember a brother, sister, that were red-headed, that were close to my age, that were there, and they were just kind of interacting and playing with the other children, the hybrid children.

At one point, the Nordic lady comes to us and hands us this little device.

And it's a puzzle – a 3D puzzle. It has squares coming up, circles coming up out of it, and you're fitting all these shapes together.

And I was successful at it, at the puzzle, and when I was successful, the Nordic lady came over and guided me out of the room and took me into more of a control room.



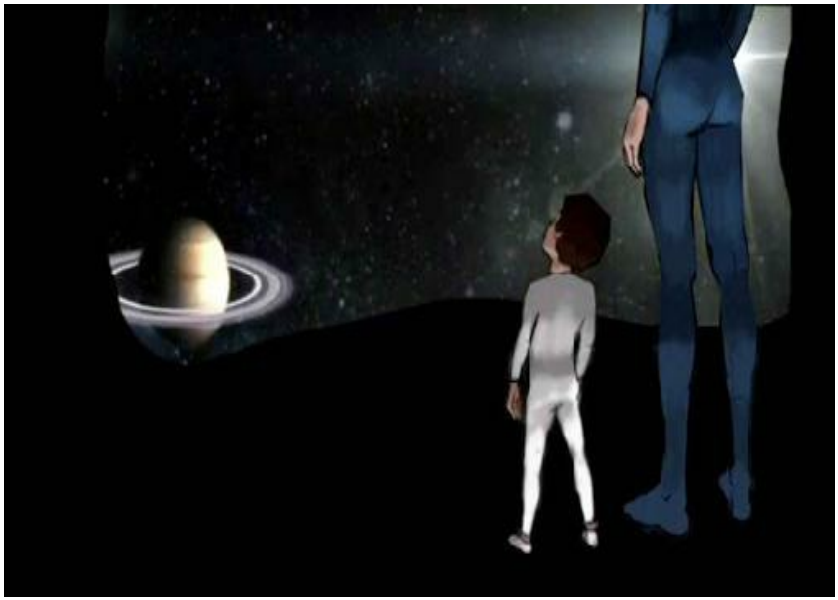
It was darker. I saw other Nordics sitting around control panels, amber lights reflecting off their face[s].

And this . . . kind of like a curved television mist appeared in front of me.

And then all of a sudden all of these star charts started popping up, and she would say, “Is this your home?”

And I would say, “No, my home is with my mom.”

And then she would go through another one. “Is this your home?”



And then she showed planets as well. And there was this very large planet that looks similar to Saturn that had a moon around it, and it was obviously inhabited.

And she pointed to it, and she said, “Is that your home?”

And I got a weird reaction, and I felt the need to . . . I started asking to go home. I said I wanted to go home. And they guided me out and took me home.

That was my first real experience that I recall with a non-terrestrial.

EXPERIENCES WITH PIRATE SHIPS

And then soon after that, I started having the pirate ships. I was five years old.

We were living with my grandparents, and I had had the same thing. I would have this, just need to go outside. And, you know, I was five years old. It was a bad neighborhood.

And I would walk out – I wouldn't be afraid – and I would see, off in the distance, a

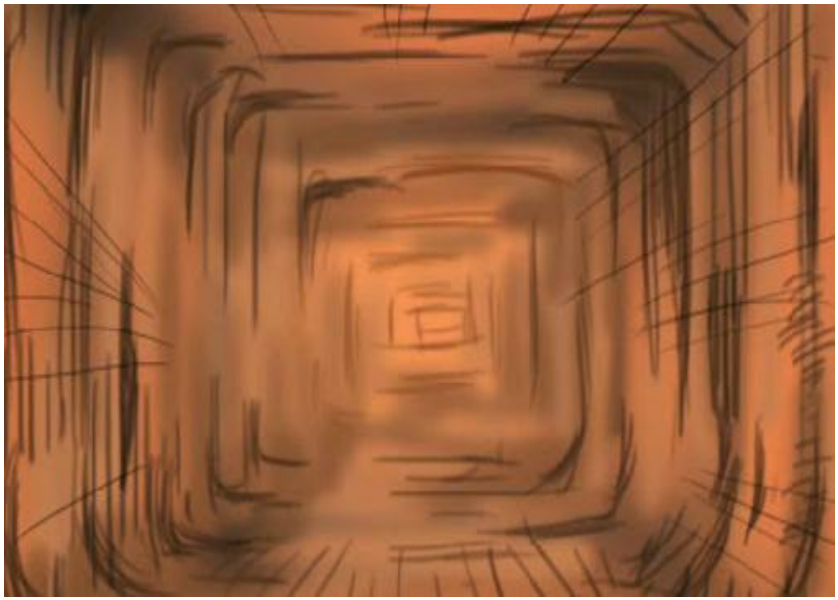
pirate ship, like a leaf on the wind, coming down closer and closer, going lower and lower.

And when it would land on the ground, it would look like a solid . . . It looked like a ghostly ship, as it would slowly come down. It would look like a solid pirate ship.

I would then go onto the pirate ship, and then, all of a sudden, I was in a round room that had a window that went 360°, all the way around.

And when I stood up and looked out that window, I saw my apartment. I saw my entire city.

And then it took off the same way it landed, like a leaf, and I was brought to a cavern area to where they flew down into caverns.



And then they were in the smooth caverns, like they had been mechanically flattened out. On the walls and the ground and the ceilings, there were numbers, like you would see on the side of a ship or on a landing pad.

As we went through, we landed in this one area, and I got off, and it was now a flying saucer. And then I walked through the cavern area. I was not being pointed. They weren't pointing me to go any direction, but I was just walking autonomously.

And I'm looking around, and I see all of these other people of all ages and all colors standing in line, taking off their clothes, and putting them on card tables, military card tables.

These people then were standing in line, a line that . . . There were surgeon lights that were there, that were pointed down onto a table.

And they would all lay on the table with no clothes on, and on one side would be this very tall Grey being and two little Greys. And on the other side would be doctors, human doctors in lab coats.

And they were doing joint examinations or procedures.

I don't have any memory of these procedures being done on me.

The next thing I would remember would be coming back into consciousness or awareness on the craft again in that same circular room. And then I would see myself floating down to my house.

And then I would see a pirate ship leave.

So those were my really, first encounters with non-terrestrials.

STARTING MILAB TRAINING

[Rest of pictures for this article missing***]

STARTING MILAB TRAINING

When I was about seven years old, in 1977, I was brought into the MILAB programs.

I recently saw some documentation from Sigmund, which is a pseudonym of an Air Force official who was giving me information at one point, that stated that I was an asset between 1977 and 1997.

So apparently the real MILAB training started in when I was seven years old.

Because I was identified as an intuitive empath, I was a perfect tool for them. They began to form me.

I started having weird experiences in MILAB training, to where I would be brought into a room to have holographic training.

I would walk in. I would see several Air Force people sitting at a card table, maybe some people in some white coats. I would sit in the chair.

I would go through the procedure, but when I would come out, all of a sudden there would be a Grey alien sitting at the table. And they slowly started to acclimate me that way.

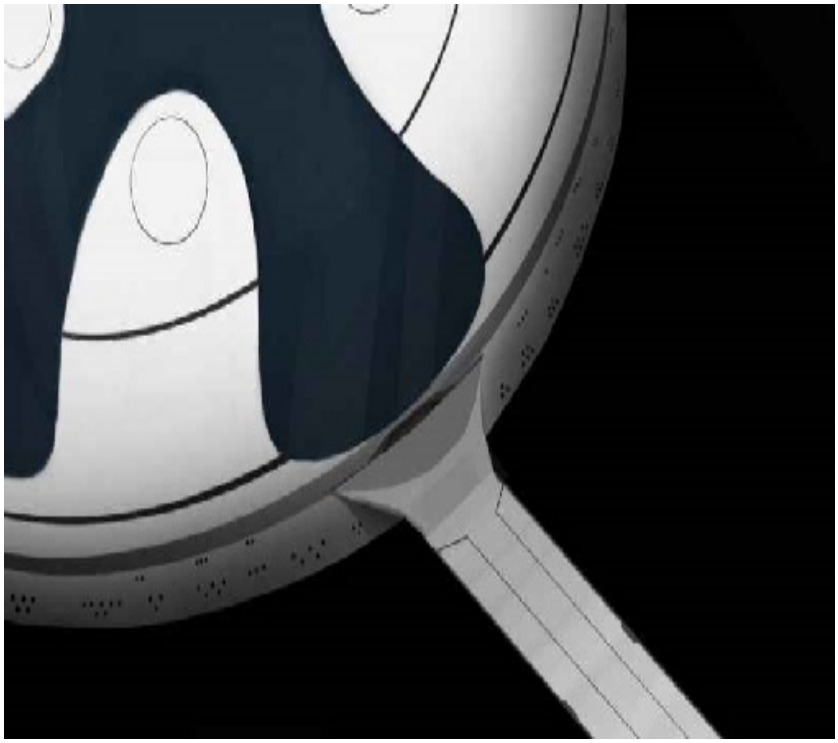
And what they were attempting to do was take my intuitive empath skills and train me to interface with non-terrestrials.

And that training was from the age of seven years old all the way up until I was 16 years old – right before I went into the Secret Space Program.

FIRST EXPERIENCE AS AN INTUITIVE EMPATH

My first real experience with being an intuitive empath in one of those real-world situations was when I was 13 years old.

I was taken off-planet to a small space station that is just outside the orbit of Jupiter.



It was a temporal anomaly that you couldn't see with the naked eye. And you had to enter it and exit in the same way. They called it “punching in and punching out” from the same coordinates.

And it was a temporal anomaly, and when we flew into it, it was pitch-black. There were no stars.

All you could see were other craft flying to this space station.

One end of it looked like a clam shell, and the other end was a big disk. And inside that disk was a giant UN-type meeting hall.

And I was brought into that meeting hall to be one of three intuitive empath support.

They usually had two other children or young adolescents with me, and they needed three to triangulate any type of deception or fear or anything that the primary person in the meeting needed to be aware of.

And there was a representative from Earth that was given a seat in this council meeting.

There were about 60 different beings that were already milling around inside that

room, and some sitting down.

So I remember walking into that room. And first of all, I'm 13 years old. All of these beings, or a good deal of them, were taller than a normal human. So to me, a normal adult already looked very large.

And for the most part, I was trying to scan and look at these different beings to try to get some sort of an energy from them. And they were pretty much ignoring me. They could care less about me or interfacing with me at all.

A lot of them didn't look like they wanted to really interface with each other. I don't think it was a real friendly gathering. A lot of the times these people were at odds with each other because of this [these] 22 different genetic programs that are competing but are overall managed by this committee.

This was the first time that I saw a large number of different types of non-terrestrials at the same place.

Later on, I was brought into these meetings a couple other times. I've been to a total of three of them.

And for the most part, when I went to the last two meetings when I was an adult, it was pretty much the same group there, except for on the last occasion.

THE LAST EXPERIENCE AT A SUPER FEDERATION MEETING

During the last occasion, it was during when there was some sort of an energetic barrier around the Earth that was preventing a lot of different non-terrestrials from leaving or coming.

And there were a lot of different extraterrestrials that were there that I hadn't seen before: a lot of different aquatic beings, a lot more insectoid-type beings, that had stated that they were here on our planet doing research but had nothing to do with humans.

They were more interested in our oceans or in our forests. They could care less about humans.

But they had people that were stranded here, and they were there to lobby The-Powers-That-Be to try to figure out how to get their people off of the planet Earth.

What was interesting about these meetings is that often they would announce themselves before they would get up to speak on this platform, but for some reason, that has been scrubbed from my memory.

There were other occasions where there would be non-terrestrials in the room, and it appeared as though they didn't have a face. You couldn't see . . . I mean, and it was something mentally that they were doing to you. It wasn't that they didn't have a face.

So there were a lot of different countermeasures going on in that meeting to make sure that I didn't, or the other people with me didn't, walk away with certain information.

And for the most part, when I would be used as an intuitive empath in those situations, usually, unless we were interrogating people, which occurred later on, we didn't pick up much.

We would pick up a lot of background emotion and energy that we would have to try to filter through. And a lot of them would be there, and we'd have to . . . Not only do you have a being that is completely different-looking than what you're used to seeing, they have a completely different emotional signature about them.

When you're interfacing with a human, I don't care if you get to a different country, completely different way of living, people are going to still have the same type of energy when they're sad, they're happy. You're going to be able to read it.

You have to establish a baseline with these beings, and it's very hard to do when you're not interacting with them.

So for the most part, we're trying to pick up anything that feels like deception, that feels like fear or panic, and relay that through handheld devices to the person in the meeting that we're supporting.

CHEMICAL DEBRIEFING

At the end of every one of these encounters, we were debriefed, and it was always a chemical debriefing.

They would use us, basically, as a USB drive. And they would put us in a situation, have us smell everything, hear everything, taste, see everything. And then when we come back, they have the ability to download that information from you in the same holographic chairs that they use to train you.

And when they download the information, they then go through a second process after the debriefing to where they blank-slate you.

And as many who watch this show will remember me saying in the past, 3% to 5% of people that they blank-slate begin to get the memories back.

And in my case, I began to get pieces of memories back very quickly. And then when you get pieces, you have threads to pull at, and then you begin to get the larger chunks of information. Then, when you get pieces of information that begin to connect, the full picture falls into place very quickly.

BEINGS AT THE SUPER FEDERATION MEETINGS

At these Super Federation meetings, the beings that were present were discussing genetic programs and a spiritual program that was ongoing on Earth. They were describing 22 different programs – genetic and spiritual components to these programs.

And there were 60 different ET participants in these programs.

A lot of these people at the meeting – and we were instructed to call the ETs "people" . . . When these people were at these meetings, you could feel the animosity between other groups. There would be some beings that there was just not a good energy towards another group. Or when another group would come a certain distance from them, their anxiety level would go up real high all of a sudden . . . would spike.

So I was able to pick out myself, before I read the briefings later on, that these beings didn't necessarily get along all that well.

So to say the beings that I interacted with, or at least witnessed in these meetings, are good or bad would be very difficult to say.

The beings, when they were there, what was in their consciousness, was validating their program, their experiments. And they were there to present information about those experiments, and also grievances from other groups who had interfered with their genetic experiments.

So they were more focused on their experiment. So I would say most of them would be more amoral from our point of view.

There were a lot of different-looking beings. There were humanoids. We had some that ranged from 5' tall, 5½' tall.

This one right here that was depicted by an artist for us that I saw on the ship, they sat there and had kind of a smirk on their face the whole time and were mainly just watching. I did not see them actually get up and speak at all. They mainly seemed to be just observing.

And that seemed to be the case for several of the beings there. They didn't necessarily have a full stake in the genetic programs. They seemed to be there as observers. And this being seemed to be one of those.

I found it very interesting that some of these non-terrestrials looked just like us. Some of them had slightly different shades of skin, but some of them looked exactly like us. They could walk down our streets and maybe just look like a little bit of an odd human.

NORDICS

One of those groups was the Nordics, who I'd become familiar with earlier in life. My first encounter was with a Nordic.

The Nordics were very much involved. They seemed to have some sort of a clerical type of position in this council. And they had a lot of representatives at the meetings, and they seemed to be walking around and having discussions with little breakout groups of these non-terrestrials.

So they definitely have a pretty high involvement in all of these different programs that are going on. And a lot of people, they use the generic term “Nordic”, when there are a number of different species that you could call Nordics.

Some of them are very tall, 8', 9' tall. They have blond hair. They seem to always have a chili bowl-type cut, bobbed hair. And they have six fingers. They're very muscular. And they have blue eyes.

And there are others that are not necessarily from other planets that get lumped into the Nordic category as well – groups that are what we are calling Inner Earth groups that are very Nordic-looking and could easily be described as a Nordic.

HUMAN-LOOKING ETs

A lot of these non-terrestrials looked very human.

And this one looked very human. The male and the female did not have hair. They had blue skin, blue eyes, and they were very tall, probably 9' tall if not more.

They mostly were sitting down when I saw them.

They were very broad. They wore tunics, white tunic-type of clothing, and they had gold belts, very thin belts, around them.

And I never saw them set up and speak at these conferences, but they were present. My eyes seemed to just find their way to them quite often. There were a few beings like that.

These are the reasons these people are sticking out in my head so much, is that I was sitting there, and we were told to look at the smart glass pad and try to distract ourselves with the information there. But every once in a while, you would look up

and you would catch eyes with one of these beings, or you would just see them, and they would be so striking-looking that you would just catch yourself staring at them.

And they did seem to have a very regal or very kingly kind of air to them. And they seemed to be very peaceful, but they were very confident, very, very confident, and seemed to be observing quite a bit.

EBENS

This should be a familiar image.

This is an image of what people describe as an Eben. And a lot of people have described being abducted by this group and have interacted with the Ebens.

A WATCHER GROUP

Now, there was one group in particular that seemed to walk around as much as the Nordics and interface with the other groups. And they also seemed to have a little bit of power, because these other groups would come to them and petition them to assist them in whatever grievances they had with other groups.

I think they are some sort of a watcher group that are observing and making sure that this experiment goes to plan and isn't taken in any one direction.

GREEN-SKINED ETs

Now, in this image, this is the green-skinned people that I've discussed before.

Their skin literally looked the same color of an olive, a green olive, that you pulled out of a jar – no difference.

There was a man and two females present each time. They are probably . . . The man was probably about 6½', 7' tall, and the woman was about . . . The women were about 6' tall. Very muscular.

The men had very short hair, like very military-looking, like a flat-top. The women had extremely long, shiny black hair, very shiny black hair, that went down to the middle of their backs.

And the women would sit with the male, and they would be very quiet during the actual meeting, but afterwards they seemed more like social butterflies. They seemed

to split up and then go to each group, and they were obviously socializing.

ENCOUNTER WITH A GREEN-SKINED ET

And interestingly enough, my last trip, I had an encounter with one of the females. And it was the only time I had an encounter at one of these meetings with a non-terrestrial.

I was there, Gonzales was there, and we had some intuitive empaths that were Secret Space Program military guys.

And they were sitting there making jokes a little bit about her looking like Captain Kirk's girlfriend. And at one point, one of these females walked up to me, and she had empathically or telepathically figured out what we were talking about. I guess she was so much in our consciousness we became a part of her consciousness.

And she came over, and she asked us if Captain Kirk was someone that we served under. And it was pretty shocking. She came over and spoke in English to us and was asking if we served under Captain Kirk.

So it was a little bit of an embarrassment to me and those others.

ASIAN-LOOKING ET

Now, this image here depicts another of the very human-looking beings, a very Asian-looking being. Their skin was more of a slightly more orangish tint, and they had these blue kind of cat eyes, that the irises took up almost the entire eyeball that you could see.

I saw them interacting quite a bit with the other human-looking groups. They seemed pretty standoffish from the insectoid-type group.

So there seems to be some sort of a rift between those two groups, most likely a dispute in these genetic programs.

FELINE RACE

Now, she does have feline-looking eyes, but she is not to be confused with the actual feline race that I only observed one time. It was on the research vessel, and they were moving its body.

There was a capture or kill order out on these beings, and what occurred was these beings teleport around, and they were able to catch one of them, and it died. They weren't able to keep it alive.

And it was a very lavender-looking, cat-looking being. And the head, the ears and the face looked very catlike. The body was more of a humanoid torso.

MANTID RACE

So this image here is depicting one of the Mantids, or a Mantis race.

They are very heavily involved in the genetic side of these 22 different programs, and they participate in several different programs.

People will often witness seeing Mantids with Greys or with Nordics, and even with Reptilians. So these groups work across multiple different genetic programs, and they are known as THE genetic masters in our local [star] cluster.

Now, you may remember a lot of these stories that are told from abductees, and you'll notice that they have very terrifying encounters with these beings.

The weird thing is, they . . . you don't pick up emotions the way you normally would from another humanoid-type of being.

Their communications with each other are through some sort of neural network that is like telepathy or a shared consciousness. And for them to connect with us and communicate with us is . . . it takes an effort from them.

They are totally divorced from us when it comes to emotion. So we could kind of call them amoral, but when they are interacting with us, they are not thinking, “Oh, this poor human.” That just has not entered their consciousness.

They are there working on a project, and we are the subjects of that project.

TALL GREYS

The Tall Grays are depicted in this image, and they're called Tall Greys for the obvious reason. They're about 8' tall.

They look very similar to the classic Greys that are described by people, but usually, you see the 3~4' tall Grey beings next to these Tall Greys.

What these small Greys are are usually some type of biological robot, a programmed lifeform.

You'll see these small Greys with the Nordics. You'll see them with the Reptilians. You'll see them with any number of groups. It's like standard hardware or something out there that everyone uses.

It's like everyone's on a Mac or a PC. Everyone's using this type of technology.

Now, the Tall Greys are very much involved in the genetic part of these 22 different programs. They are in competition with the insectoid groups, and they are in

competition with the humanoid groups as well, but they work closely with them in different aspects of these different programs.

So they are given more of a free reign to come down here and work amongst humans on these genetic programs, doing the actual hands-on.

A lot of these beings, they'll be the ones that come down and physically touch the humans and take the specimens and do the work, and they report back to this larger body.

Some people may also remember abductee experiences where they will describe seeing a Tall Grey and then seeing a man in uniform, in a US military uniform.

That is because there is a very strong bond and agreement between the Tall Greys and the US government, shadow government, that involves trading of biological specimens from off planet and technologies in trade for allowing them to come down and do their experiments without being interfered with.

And a lot of times, human military will be on these abduction ships as observers, taking notes of the names of everybody, the time, what was done. And they keep a log of that, because in the beginning, these beings, who are supposed to be giving us the information about who they were abducting, and then we found out they were not being honest with us.

So because we now have the ability through our advanced space programs to deflect ships trying to come into our atmosphere, they now have to work with us and allow human observers on their ships.

DRACO REPTILIANS

Now, you may notice in my descriptions I didn't describe seeing a lot of Draco Reptilians. That's because there is quite a bit of animosity.

These Draco are claiming that this body, this Super Federation body, long ago, millions and millions of years ago, 65 million, to be precise, had come to this planet and destroyed an experiment that was already well underway – a Reptilian experiment.

They claimed that the dinosaurs . . . They were doing some sort of an experiment of making a Reptilian mix with a mammal, a mammalian-type of experiment.

And that experiment was wiped out, and then the genetic farmer races came in, which

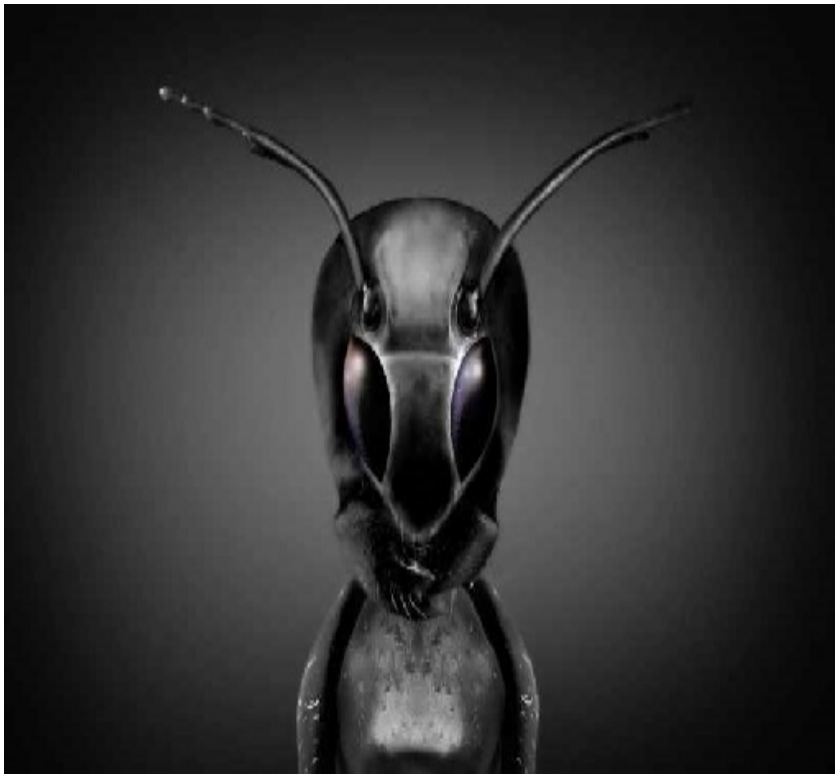
became a part of this Super Federation, began to come in and tinker with the genetics and created a whole new mammalian, fully mammalian-type of experiment here on Earth, when beforehand the Draco claimed that it was their planet, and they had an experiment well underway.

Now, they had representatives that would be at these Super Federations. There were Reptilian-looking beings, some that looked very . . . like human bone structure that had like lizard skin stretched across.

I mean, they would look . . . They looked more like a mixture between humans and the Draco.

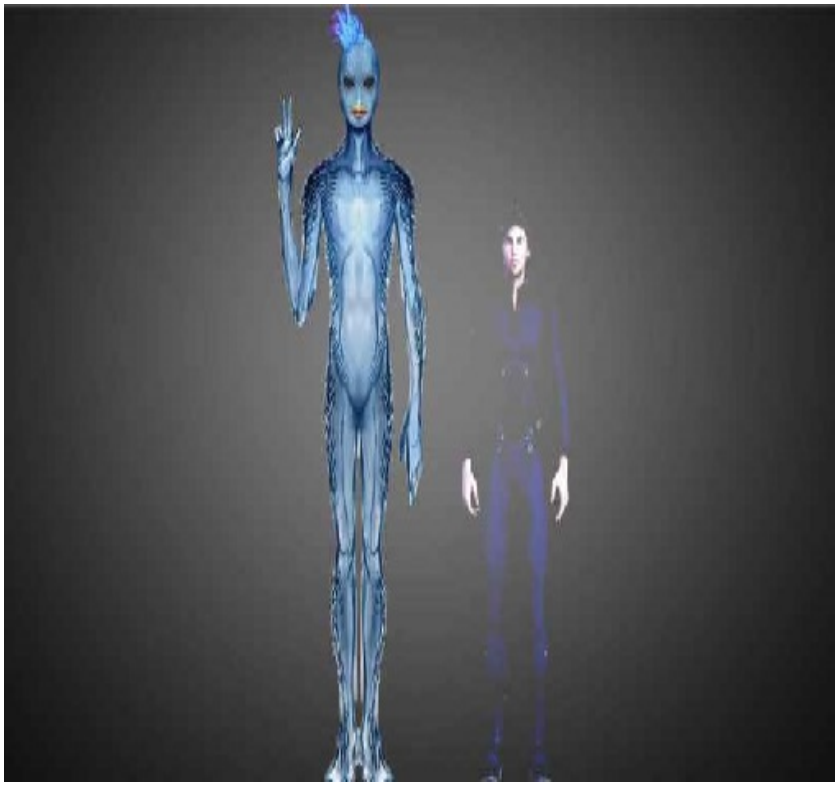
ANT BEINGS

So the Draco were not able to come to this meeting themselves, but they had different members, such as these different insectoid beings that look more like ants.

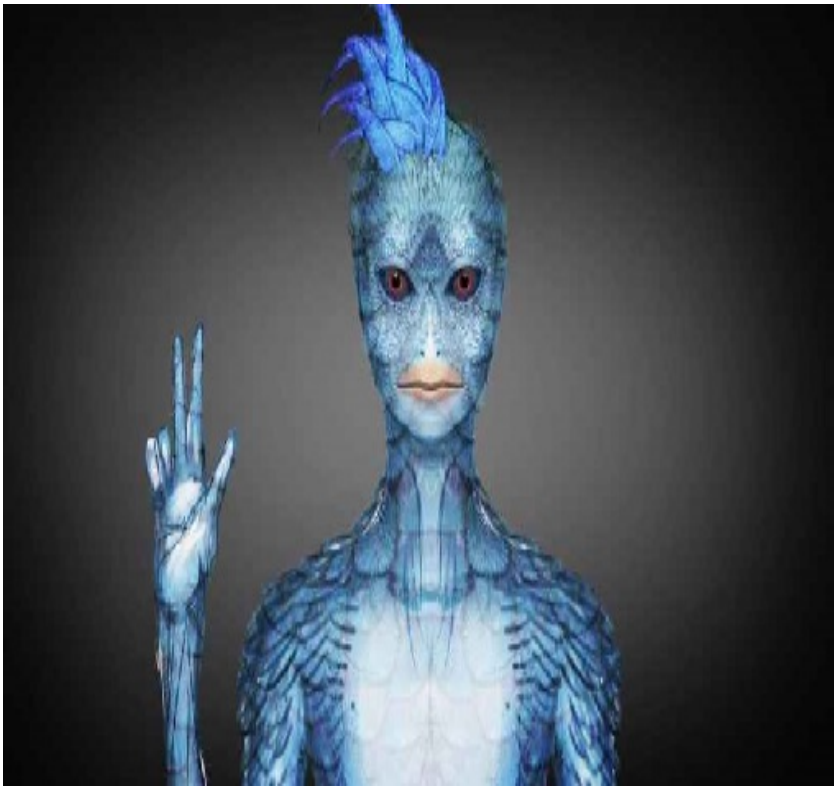


These beings work closely with the Draco and will be intermediaries at these types of meetings.

BLUE AVIANS



So this image depicts an obvious different-looking being than what we've been discussing prior. And to be honest, I had never seen or heard described a being like this in the programs.



When I first was put in the programs, the Secret Space Program, I was first, for about 10 months, put into something called the “Intruder, Intercept and Interrogation Program”. And I interacted with all different types of beings in that program.

In those programs, I'd never heard of a 8' tall bluebird being.

So in around 2011, I had this very vivid dream that you knew wasn't a dream, to where this Blue Avian being appeared in my dream and started doing these hand signs, connecting with me telepathically, and then kind of moving its lips around.

After that dream, I was extremely disturbed. I knew it was something other than a dream, and I'd never heard of a being described that way.

Eventually, it appeared in front of me physically, and I happened to be with my dog at

the time. I was sitting on a couch, and my dog was next to me, and it appeared in a room. And it was a big shock to me and my dog.

The being was 8' tall, was blue, but looked very human. It had five fingers.

And eventually it communicated to me that it was a part of this group of beings that were here to assist us in our transition to a higher density.

They were here, and they could care less about the 22 genetic programs. They were here . . . It's more of an energetic and spiritual component that they're concerned about.

The beings at the Super Federation Council, we would consider them probably fourth or fifth density on the density scale. These Blue Avians, and the other groups with them, stated that they were sixth density and higher.

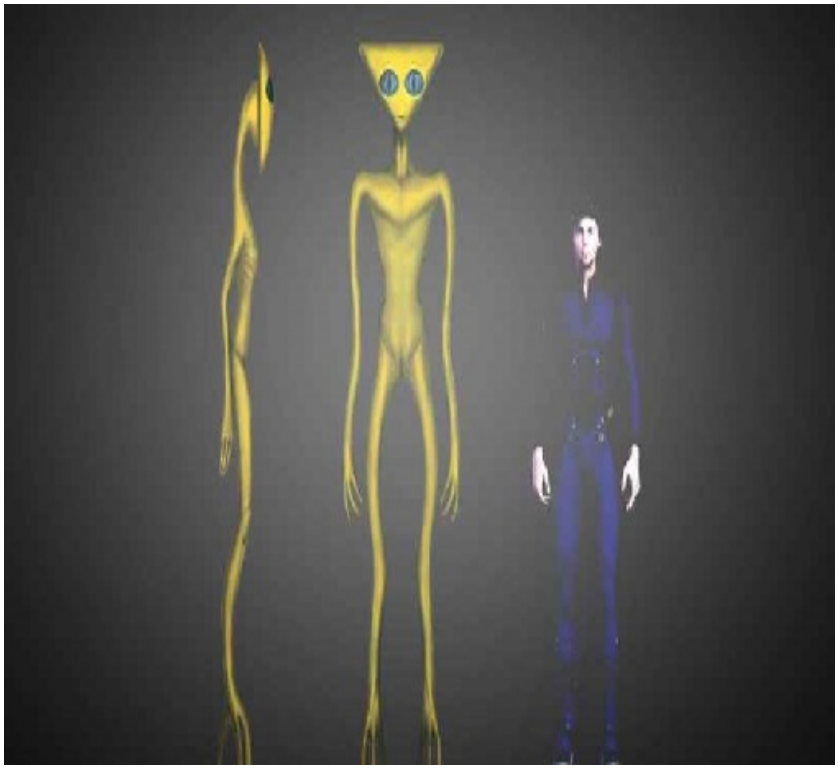
They were able to appear and disappear at will. And basically, it was explained to me that they match their vibration for the location that they want to be at, and they just appear.

They're the ones that pretty much pushed me to come forward with my testimony. And they also introduced me to a number of other different beings.

MICA

They introduced me to beings such as Mica's people, which I've described on “Cosmic Disclosure” a few times, a very Polynesian-looking people, very peaceful, that are in our local star cluster – the closest star, actually.

GOLDEN TRIANGLE-HEAD



They've introduced me to other beings like this Triangle Head being, which I've never actually interfaced with and interacted with.

But when I was at a meeting on the Lunar Operation Command, I was put in the front of basically a conference hall, or, you know, like what you would see in a university with the theater chairs going up to the back of the room. And I was put in the middle of the room with no explanation.

After that, people started picking on me a little bit, because they didn't know what was going on either, and I was standing there completely frazzled at that point.

Everyone got quiet, and behind me had appeared Tier-Eir, which is the main Blue Avian that I interact with, and the other was this very strange-looking like 10' tall golden being with a triangle head.

It had three fingers on its hands and three toes, and it was using its toes like a tripod. And the toes were doing like this [flexing], and it was going up and down a little bit.

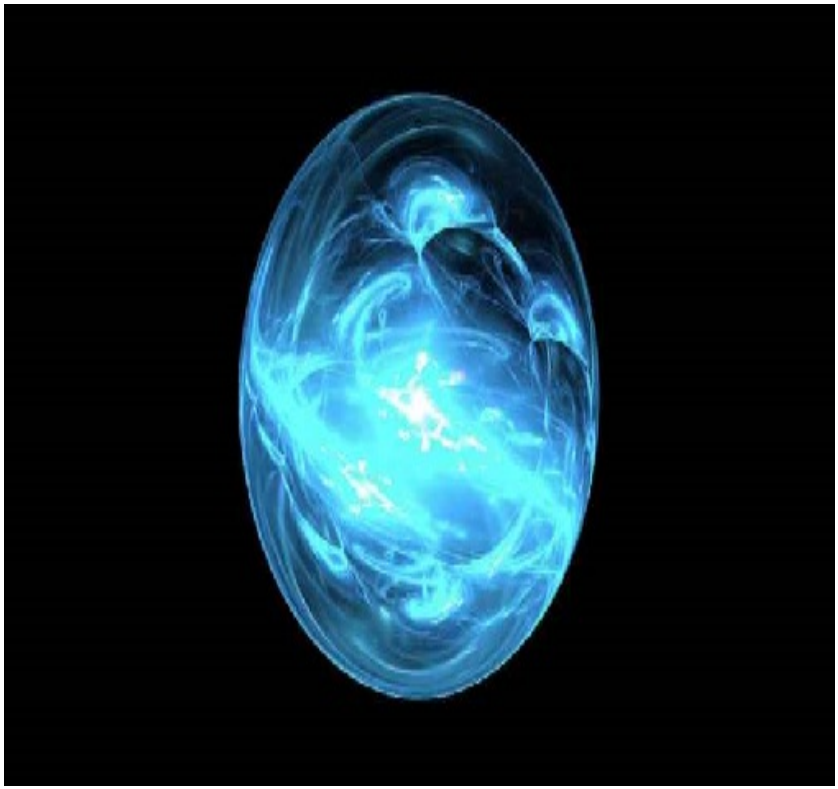
And it looked almost like it was underwater, because its arms didn't look like they had bones. There was just this wavy . . . They were kind of wavy and going up and down rhythmically. It was very weird.

And everyone got completely quiet at that point. And that's when Tier-Eir then interfaced with me and allowed the people in the audience to ask questions of him.

The Golden Triangle-Head had never made any type of contact with anyone.

BLUE SPHERES

What's interesting is though that there is another being that's a part of this Sphere Being Alliance that are actual spheres. Size really doesn't matter to them. They can appear large enough to encompass our entire solar system, which they have done, or they can be as small as a ping-pong ball.



And they are bright indigo blue balls that will float around. And they are the ones that have come, and they would pick me up and take me to meetings with Tier-Eir.

And he told me that they were ninth density beings, non-corporeal beings, that were part of their collective.

DRACO ROYAL

Now, this image a lot of people may remember. I had to meet this being. I was given very little prep time.

I was flown to what looked like a condemned hotel in the middle of the Midwest. It was desert everywhere.

We got up on the top of the building, and the ingress was through a door. Then we went through an elevator that went down into a large courtyard-type of area. All of the rooms were on the side, and it was empty all the way down. And there was a glass elevator that went all the way down to the lobby.

And as we were in this elevator and were going down, my anxiety level started going higher and higher, because I started seeing these beings standing down, looking up, watching us coming down.

It was a very . . . I felt like a fish in a barrel. It was a VERY uncomfortable feeling.

And the minute the doors opened, this musky, urine-y smell came into the elevator – very, very horrible smell. At first we were gagging, and we kind of got used to it.

We walk in and there are present, they had insectoid-type beings. There are other Reptilians that most people are used to seeing, the ones with the olive-green scales, holding long, lance-like weapons, standing at attention.

And in walks this 14' tall white lizard being that literally petrified me the minute it walked in the room.

I'm trying to keep my composure, because I know that I'm supposed to interface with

this being.

And it walks up to me, and it walks up not RIGHT to me, but far enough to where it was very intimidating, and began to interface with me.

And when it did, it was not like the interfacing I had done in the past, where it was more passive to where I was going back and forth, conversation-wise.

It immediately, like a tractor beam, captured my consciousness and was reading what it wanted out of me. It felt like mental rape. And it was controlling me, and its eyes started doing this [Corey uses the thumbs and forefingers of both hands to move together and apart]. The pupils were going “vroom, vroom, vroom”. It was a VERY POWERFUL being!

A meeting with these beings is something I've refused after that encounter. It was terrifying.

Everyone that was in the delegation, the security guys, we were all keeping ourselves pretty calm and cool, but in the elevator ride on the way up and getting into the craft, we were shaking. Everyone was shaking so bad. You heard all the equipment rattling, and everyone was shaking from the adrenaline rush from after the encounter.

It was an incredibly scary encounter.

You've been watching “Cosmic Disclosure”. I'm your host, Corey Goode. Thank you for watching.

Emery Smith - Insider Season 9, Episode 2

Cosmic Disclosure; Emery Smith - Whistleblower Season 9, Episode 2

13 Dec 2017

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and we have a special surprise for you: the insider who I referred to as Paul. And I can reveal for the first time that his name is Emery Smith.

And you may know him if you ever saw the movie, “Sirius”.

Emery, welcome to the show.

Emery Smith: Oh, thanks Dave. I'm so excited to be here – 10 years in the making of working with you and establishing a great relationship.

And basically, you're the reason that a lot of my progression in this field of undisclosed information has been brought to me.

And at the same time, it's time now to bring it forward, which, thanks for helping me get to that point, because, as you know, for the past three to five years, I was kind of just holding onto it.

David: Now, in the movie “Sirius”, . . .

Emery: Yeah.

David: . . . there is an autopsy of a little, six-inch tall, apparently extraterrestrial body.

Emery: Correct.

David: Who, in the movie, is doing that autopsy?

Emery: I was Vice President for CSETI for about five years, and what had happened was there was this being, of course, that was taken over by a civilian lab in Spain.

And the government actually did have it before anyone else, but no one knows about that.

David: Hmm.

Emery: So the thing was, the people I was working with in CSETI decided it would

be a great idea to go over here, and “let's do an autopsy, and let's get some DNA, because if you get some DNA, well, that outrules everything. And let's get a major university to do it.”

So being through my background, working with tissue from un-Earth origin in these compartmentalized programs – I've seen over 3,000 of these things – that it was just a winner for me to be the person to go do the autopsy on the senior team.

And I was definitely also assisted by Dr. Steven Greer and Dr. Jan Bravo.

So they were, of course, the physicians there witnessing this and helping me harvest this tissue.

David: I don't think anybody will forgive me if we don't talk, at least in this first episode we'll get started, about how you came to have multiple medical doctorate-level knowledge from classified military programs.

Emery: Well, I . . .

David: So can we talk about what you did in the military with this unusual biology?

Emery: Yeah, sure. You know, it all started, actually, when I joined the military at an early age. I was what they call a 90252. I don't think they still use those codes anymore.

But it had to do with being like a surgical technician – just a person who hands instruments to the physician.

David: Okay.

Emery: And I was also a paramedic and a surgical first assist, and then I became a teacher for that very quickly – overnight.

And then when I moved to Kirtland Air Force Base, they offered me a special, what we call “moonlighting job”, they call it.

And I was still a kid, you understand. I was very young, but I was very intelligent and very mature for my age at that time.

And I was fascinated when they were putting me in charge of million dollar equipment that not normal people would be able to even utilize or even . . . it's not even ready for . . . even to be used for civilians yet.

David: Right.

Emery: So that lured me into working this . . . Okay, “Well, we're going to say you're THIS, Sergeant Smith, but you're really going to be doing THIS. But you're still going to be getting paid.”

And I said, “Okay.”

So, basically, I'm working for civilian, compartmentalized programs, but I'm an active duty service member. And it worked out.

I know there was a lot of . . . I could tell that the people that I was working for in the operating rooms there, it was like, “Well, why is Smith always leaving every day at noon? Where does he go?”

“Oh, he has a knee issue. He has to go to physical therapy.”

So down the chain of command, they knew something was going on, but they also had to keep it justifiable, in a way, until “let's get him out of here, and let's go full-time with this, basically, dissecting tissues of unknown origin.”

And that's where I got sucked in and was just getting obsessed with what I was doing.

David: And you said this was Kirtland Air Force Base?

Emery: Yes, this was Kirtland Air Force Base, where I . . .

Yes, that's where I started.

David: Where is that?

Emery: Albuquerque, New Mexico. I was not just working there, I was moonlighting doing this other stuff after hours, and that had to do with Sandia and Los Alamos labs.

David: Sandia. Okay.

Emery: Yeah, Sandia Labs is another secured location on Kirtland Air Force Base.

David: Okay.

Emery: Yeah. It's like a base within a base that goes underground many, many stories.

David: So let's start to break into this a little bit.

Emery: Yeah.

David: And I've talked to you about this . . . I've gotten bits and pieces of this from you over a decade now.

Emery: Right.

David: And as time has gone on, you've been able to share more. You've been authorized to tell me more. So let's just put this on the record right now.

Can you confirm that you have been authorized to disclose what we're talking about now? That this is officially okay at this time?

Emery: My NDA [non-disclosure agreement] has expired, but I am still . . . I am not going to talk about something that I don't feel comfortable talking about if I don't believe it's something that would put you or me in harm until that comes.

But what I'm saying now, I believe, is going to be fine.

David: Okay.

Emery: I've not been threatened ever for any of that. The only time I was ever threatened is when I brought the DNA back from Atacama from Spain, illegally, from Barcelona.

And I thought when the government, when I was getting threatened, and they tried three assassination attempts on me, . . .

David: I remember.

Emery: It was very horrifying. I thought it was because that I took the DNA from, you know, over there, brought it here, and snuck it to Stanford, and it had nothing to do with that.

It had to do with someone getting upset with me because I resigned and then putting three compartmentalized labs that, during my work with this group, had their own team, their own wet teams, we call them, to come and do the little dirty work. [A “wet team” is an assassination team.]

But I was able to get out of that, thank goodness, to help from, actually, the U.S. government. And some military and CIA officials, Army and CIA officials, really helped out and turned around and threatened back.

And it was not only me, but it was also another colleague of mine that were working on that Ata [Atacama] being. And it was . . . Immediately, everything stopped. And I thought they just told me when I was taken to the wet room, because I was escaping where I was in Florida, getting all these threats.

They just flew me right there, next thing you know. And I just said, “What did I do? Why am I here?”

And they just . . .

David: Now, just so people . . . in case they don't know, the “wet room” has got tile on the walls, the floor, a drain in the middle of the floor, and the “wet” is your blood, basically.

Emery: Yeah. It's equipped, you know . . . This is where they take people and kill them, and it's an easy clean up. You've got a nice, big drain, a bunch of hoses.

David: Right.

Emery: And a huge disinfectant system.

David: And you knew what this was when they took you into it.

Emery: Absolutely.

David: And you were very intimidated.

Emery: I've seen different types of wet rooms, not for humans, but for other things and other compartmentalized projects, but never in Washington, D.C.

So they just said, “You violated your contract.”

And I said, “Before you kill me, could you please show me and tell me where I violated my contract, and I'll be happy with that.”

I said, “You know EVERYTHING about me. You have your own satellite on me. You know every phone, text message. You know everything.” Everything is bugged. It's like, what did I do? Just tell me.

And eight hours later, I was sweating in this room, and they came back. They said, “We're very sorry, Mr. Smith. It was an internal problem, and you will never have to worry about that again. We apologize.”

David: Wow!

Emery: And it was a really beautiful moment, because the first time that I felt like the Alliance of people in there were trying to protect me or trying to do something positive, besides expose me or hurt my family or, you know . . .

David: You go to Sandia, . . .

Emery: Yes.

David: . . . and . . .

Emery: Well, I'm already living there on the base.

David: Okay.

Emery: I already have my own place on the base. And I work at a hospital off the base. The VA [Veterans Administration] Kirtland Air Force Base Hospital is actually off-base, which is odd.

And don't forget, Kirtland Air Force Base is the fifth largest base in the world, and that's where they used to hide the nukes in the mountains.

David: Oh, wow!

Emery: And I've shown my handlers and people just flying over there to see the doors – those giant doors. But they're not used for that anymore. They're used for other things.

David: Well, we have New Mexico and Nevada near each other. And, of course, we have Area 51 in Nevada.

Emery: They're all connected.

David: So have you ever ridden the sub-shuttle system?

Emery: Only from Sandia to Los Alamos, and I might have went to Dulce and back, but I don't know where it stopped . . .

David: Hmm.

Emery: . . . because they had to do something. There's four of them, and . . .

David: Four of what?

Emery: These maglev-type trains.

David: Okay.

Emery: But from what I just recently heard, they're all upgraded, updated and completely different – more like a vacuum-tube magnetic thing.

David: Hmm.

Emery: And that's some other stuff I worked with. Just because of the tissue regeneration stuff I was involved with, a lot of the craft, . . . that I was brought into different projects to look at the craft, because the craft are actually alive.

David: Oh, wow!

Emery: Yeah.

David: The craft were alive.

Emery: The craft were alive, and they were conscious. Yes.

David: This is similar to what we heard from David Adair, where he described going to Area 51 and seeing this power system that was actually a living being.

Emery: Yes.

David: But it was this very large thing that had like . . . It looked like a skeleton over the surface of it. It had tissue components, but it also had technology components. It was some weird blend of technology . . .

Emery: That's right. It's right. It also . . . And that's already started. And I was part of that movement too, where we formulated tissue into titanium. It's called osseointegration.

David: Really?

Emery: Yeah. So that's a good one to get into at some point because that's what led us in the underground projects to say, "Man, if we can have tissue and titanium to be together, and I can make your bone tissue and titanium, you're going to be pretty strong, Dave. It's going to be hard for me to break that bone."

And then add stem cells to that and platelet-rich plasma, which increases bone density up to, sometimes, 10 times.

David: Wow!

Emery: Your own bone. Keep that in mind.

David: So that sounds a lot like “Wolverine” in the “X-men” movies.

Emery: Absolutely. So yeah, that's osseointegration, where they just, basically, you know, made him all these steel protective plates, but he also had a super ability to heal very quickly.

David: Right.

Emery: And that's the secret. That's what they all want to know: how do we have no downtime?

And now not do we not have any downtime, . . . and not just for the super soldier programs I was part of. I'm talking about the soldier programs that you don't hear about – the more upper-level Cabal, Majestic-type secret corporation levels, where they're trying to anti-age you.

And now that this new protein has just been discovered, A2M, Alpha 2 Macro Globulin, holy moly.

David: Yeah.

Emery: They just . . . They just turned back time.

And now that that's out, I can tell you right now, probably in 5 to 10 years – it will probably take 10 years for the FDA . . . What this does is it's a protease inhibitor, which means it blocks all inflammation. So the body can heal itself.

David: Hmm.

Emery: See, everything you have that you need to survive forever, or for a very long time, is already in your body. The problem is these fields around us and these . . . the foods we eat. Everything is poisoned.

David: Right.

Emery: So it makes us have inflammation. And I don't care if you're in a car accident,

or if you have a disease, it all starts with inflammation.

Now, if I can stop inflammation, your body will heal itself naturally.

David: Hmm. That's very exciting.

Emery: Very exciting. And that by the way, that A2M, I did not discover that. I was just part of a project that specialized in that, and that's how I learned it all.

David: Sure.

Emery: And so I'm so excited now. It's here for the civilians, and it's all over.

David: Right. So let's talk about how you got started with extraterrestrial biology. Were you aware at first that you were autopsying ETs?

Emery: No.

David: How did they do that?

Emery: They . . . ha, ha . . . and it was really funny, too, because the entrance to where I was going was Sandia Labs, but it wasn't like in their compound. It was another little building. But it goes down 30 some floors.

And when I got down there, and they took me down these hallways, and they were just . . . On my first day, I just remember, I was in this little room, kind of like you would see in the movies where the room's kind of all white with the little table, steel table, and all these instruments there. And you're escorted to this place.

And you get in there, and there's this piece of tissue. And it's all positive pressure air system.

And so I go in there – and you do scrub out, just like a surgeon scrubs and puts his gowns on and the hoods and stuff. You do go in there, do all that.

And you label like you would like when we're in a biology school frog.

David: Right.

Emery: You're like, okay, this is a muscle. This is a tongue, or whatever. And I was just there to label and take small samples and put them in these different types of jars and vats and containers, which I would then push through a drawer in a wall, and someone else would take it, and that was it.

So I was basically taking tissue samples from whatever piece of tissue it was. Some looked like salmon. Some looked like . . . I don't even know. I can't even explain it.

But it then, every three to six months, you get a upper security clearance. So I stayed with that.

David: So you had described to me before that you called them salmon filets. Like when you first got started, would it be like a square, like this big or something? [David holds up both hands and makes a square shape about six inches on a side.]

Emery: Yeah. Yeah, it was like a perfectly cut square . . .

David: Okay.

Emery: . . . with arteries, veins, nerves, just different types of tissues. Different types of cellular tissues, I mean.

Sometimes you would find cartilage in a weird area, you know. And sometimes you would see neural matter. But it was always different.

And then the samples started getting more intact, where you could tell that, whoa, this is a hand, you know.

And I could not tell you what that is at that point. I couldn't even say . . . And you're not allowed to ask ANYTHING. You just do that, and you don't talk to anybody, and that's your job, and that's it.

David: What if you told your friends or your family? Like were you given security briefings about that?

Emery: Yes. That I would be killed!

David: Really?

Emery: Yes.

David: Now you say “a hand”. I mean, describe what the hand might look like. Give me one example of a hand.

Emery: Well, imagine every creature on this planet that has a hand, and evolution them a billion years from now to have the five star . . .

David: Like the human star.

Emery: Human star. And so you might have a very small hand, and it might look like a frog, but it's just a little bit different. But it's a palm. Like, it's got prints.

David: Hmm.

Emery: It's got nails. It could be something like a raccoon hand. But we're talking everything's different now.

The most fascinating ones were the giant insect. These hands were just enormous. And they were not only living tissue, they were plant tissue as well.

David: Really?

Emery: Yes. So they had some sort of thing they were making or growing that involved plant tissue with some other sort of living tissue, which they would mix many different types of hybrid tissues together. It's old school. Everybody knows that in these projects.

And it's . . . You've probably heard about it out there. They've mixed every type of animal tissue, DNA, with every . . . with human to see what happens.

David: Like Dulce, New Mexico.

Emery: Yeah, all that kind of crazy stuff.

And then they started adding and adding and adding. And then when they started getting things from up there [space], that's when it got weird.

David: Hmm.

Emery: So whether or not this was an extraterrestrial [showing with his hands that he means one item, say, on a table], I couldn't say at that time, because I know they could have grew whatever this was and killed it, chopped it up in little, bitty pieces, sent it to all these places.

I wasn't the only technician doing this, you know.

David: Right. One of the things that I'd really like to drill into a lot more is if you can give us a much more exacting description of the facility that you worked in. So let's talk about that.

Let's talk about even something as simple as, is there a parking lot, or do you have an underground parking garage?

Emery: Yes, exactly.

David: Okay.

Emery: Kind of like you hear the stories about people flying out to Nevada or whatever to go to Area 51. There's only one way in and out.

David: Right.

Emery: Well, with these places, there's multiple places in and out, depending on where you're going to be working and what section.

And they're very large underground facilities. I mean, they're . . . We're talking up to 100 acres of multilevel facilities down there, with many special wings that do certain things.

David: Wow!

Emery: Some works on energy propulsion, some works on regeneration. Some works . . . There's a whole medical thing to it too, and there's actually a small little city of people that actually live there that do not come to the surface, usually, that I'm aware of.

David: Right.

Emery: And it's a very dynamic setup.

So for me, since I was already living on the base, it was easy because I just road my bicycle to this small building.

So the small building, which you would just think would be a fire tower or whatever, is actually just in the middle of a big area. And there's . . . You could park 1,000 cars there if you want. No one would even think anything.

David: Hmm.

Emery: So you go in, and you take an elevator down, and you get on a big hallway. It's an escalator. And the escalator, just like you would see at an airport, . . . and then the escalator's really long.

You're on the escalator for about 10 minutes.

David: Oh, wow!

Emery: So you're actually going somewhere else . . .

David: And it's moving fast?

Emery: Yes, it's very fast.

David: Really?

Emery: Yes. You can actually sit down on it.

David: What are you seeing? Is it a tunnel?

Emery: Just a tunnel.

David: Okay.

Emery: It's a hallway. It's white, and it has a black marble ceiling, like black onyx.

David: Oh! Oh, wow!

Emery: I don't know what it is, if it's . . . they can see through it, but it's a very different . . . Back then, that was very different to see, of course. And the tunnel is not big.

David: Do you think that one of these underground drilling machines could have made that tunnel, possibly?

Emery: Oh, yeah. The heat one did - the one that melts rock into a molten . . . That's how they made all the lava. They basically make lava tubes now.

David: Right.

Emery: And that's what they're still doing all over.

David: Okay.

Emery: Making an underground freeway to go anywhere you want in the world.

David: Now, when we think of an escalator normally, there's vertical metal grooves

that are all side by side, and there's teeth between each layer.

Emery: No, no, no. This is completely flat and made of some sort of polycarbonate. And you couldn't see through it. And there's . . . You can stand or sit in the chair.

David: Oh, there's a chair?

Emery: Yeah. Yeah.

David: But you're on like a track, and it's moving.

Emery: You're on a track, and it's moving.

David: So what you're describing to me sounds like an extremely cool, futuristic tunnel that you're riding through. Like already, you're going to be pretty inspired.

Emery: Yeah, I mean, it makes Epcot look like a joke. Ha, ha.

David: Ha, ha, ha.

Emery: No offense. I know a guy who built that, too. But it's just like . . . At that time, you have to understand the year that we're talking about. In the early '90s, it was very fantastical to be part of all of this.

So when you get to the end, you go through your check station.

David: What does it look like? Where are you? What do you see?

You were in a tunnel, but what do you see once you get off the . . .

Emery: There's glass doors there, seamless. They open up like you would see in Star Trek. Like “whoosh!” They open up.

David: Oh, wow!

Emery: And there's these two stations. And if there's someone in both stations, you have to wait outside the glass. Other people might be before you, checking in.

David: Oh, they're being interviewed or something?

Emery: Yeah, they're being checked in.

David: Okay.

Emery: And so there's two other glass stations. So when you go, this opens up. Now you have a security check guy here [on the left] and a security check guy here [on the right].

David: So what would happen with these soldiers at the desks? What do you . . .

Emery: Well, they check your palm print and your retina scan. And then you show them your card – a very generic card.

David: And does the soldier talk to you? Do you have questions you have to answer?

Emery: Yeah, they ask questions, anywhere from just a couple, or sometimes they would be like, they're just like, "Go ahead."

So they were doing this with people, and they had these special animals. They were dogs, but special dogs.

David: Special meaning what? They looked different than a dog?

Emery: They were somehow trained, or maybe a hybrided. They were a little bit larger, looked like a German Shepherd-Mastiff mix and a bloodhound.

David: Really?

Emery: And they were there, and they were in like just a compartment, but they can smell you as you walk by them. For sure, you cannot walk by them without them smelling you.

And they always know how to . . . They go . . . They just right away smell.

And then you've got to go through two more doors, and now you're in the locker room. And they're gender doors.

David: Oh!

Emery: Female locker room and male locker room.

So in your locker room, you take your clothes off, and you put these scrubs on. They're kind of like scrubs, like a jumpsuit thing.

You go outside the next door, which has nothing to do now . . . there's a whole wall there. Now you're in another corridor, and there's a room on the right, and that room is where your orders are, and that's where you pick up your folder and your band.

David: Okay.

Emery: Okay. So . . .

David: Does somebody tell you your orders?

Emery: Well, they're usually just there. And sometimes there are – like, we call them the managers – are in there, because there is something they want to say to you. They already know a half hour away that you're coming.

David: Right.

Emery: So everyone knows everything, especially now that you've got your band on.

So they come in, and they'll say, "Hey, we got this, this." They'll debrief you on like, "We got this, this, this, and just make sure you do that and that."

And then you get out, and then there's the white guards, now. And they escort you. Or, if there's not a white guard there, you follow the color strips.

David: What are color strips?

Emery: Color strips are when you're walking down this beautiful, white hallway, there are wings of operating rooms, okay, pressurized operating rooms. Looks like you're getting in a 747 jumbo jet, because the doors are these cool, big, hexagon vacuum-sucked doors.

David: Wow!

Emery: And the colors correlate to the wing you're going to work in that day. And that just tells you how many wings go down there. Each wing can have up to 30 to 50 rooms.

David: Wow!

Emery: Yeah, of these types of vacuum rooms.

David: And how many floors do you think there are?

Emery: Where I was?

David: Yeah.

Emery: Oh, over 50.

David: Wow!

Emery: Over 50 floors, just in the medical one.

David: So once we understand exactly what you're doing, then the number of extraterrestrial bodies that these guys have must be staggering.

Emery: Oh, it's unreal. I mean, it's a . . .

David: And you said you never really saw much repetition in the type of stuff that you saw, once we get to that point in the story.

Emery: Right. No, it was different work.

David: It's always different.

Emery: Always different. But the thing was this, did they grow that here? You know?

David: We don't really know.

Emery: It's disinformation too, because they're going to throw a couple of disinformation things at you in case one day I go public. And no one is going to believe me that I saw a 10-foot Reptilian going down a . . . I mean, being escorted down the hallway.

David: You're saying you did see a Reptilian?

Emery: I'm saying I saw a lot of cloned, hybrid, 3D-printed beings. Whether they were conscious or not, I do not know. They're really good at sci-fi effects, too, to mess with scientists, or to threaten them if they feel they're about to go public, and they would talk, when you work there.

So the best way to do that is to show them something that's completely horrifying, and then they think they're going to go say something, or leave, or do whatever. But now that they know it really does exist, but does it? Is it real?

David: Right.

Emery: I don't know. I can't tell you. I don't know.

David: Right.

Emery: Just because you see it, doesn't mean it's real.

David: Right.

Emery: The same thing with the new satellites we have with . . . we're projecting stuff on cars, on the ground, and cast shadows now. Palpable systems that look like I'm right here, but I'm really not right here.

David: You're saying they could project something that looks just like a car, with a shadow, but it's not really a car? It's just a projection from a satellite?

Emery: It's a projection of a car that is palpable.

David: Wow!

Emery: But you can go right through it, if you were to really walk up to it.

David: Wow!

Emery: But enough to put that amount of atoms into an area and reflect light.

David: Interesting.

Emery: Yes.

David: Interesting.

Emery: Which is a whole 'nother ball game.

David: Yeah.

Emery: So it's hard for me to say, "Yeah, I saw this craft," or "I saw this ET," or "I saw this hybrid," or whatever, unless I actually touched it and felt it and walked on it and tested it myself.

David: Okay. Well, since we have talked about those types of beings before, instead of giving you any front loading, could you be more specific in describing . . . You said it was 10 feet tall, but could you describe a little more about what it actually looked like?

Emery: I was just using that as an example.

David: Right.

Emery: But I will describe other ones that I've seen.

David: Okay.

Emery: And other ones I've seen were anywhere from 8 to 13 feet tall down to just 22 inches.

David: Hmm. But some of them, you said, were alive, like they might be carrying it as if it was their prisoner?

Emery: Well, yeah.

David: Okay.

Emery: Yes. And that's the reason I kind of opted out after 10 years, because I felt that something wasn't going right, because one of the bodies I received was warm.

David: Right.

Emery: So I knew it just, obviously, passed. So then I put in my thing, got honorably discharged, and got out of the contract work, and kept my mouth shut for 15 years, 10 years.

David: So a warm body means that it might have been killed right before you had to autopsy it?

Emery: Correct.

David: Right.

Emery: Right. But I have seen live extraterrestrials face to face.

David: Or something that was ET-like.

Emery: ET-like or hybrid or clone. Cloned individual from an ET.

David: Okay. Let's get back now to your colored lines.

Emery: Yes.

David: I want to get us into the room before we end this episode.

Emery: Sure.

David: What happens when you get to your door?

Emery: Well, every corridor, don't forget, has the white security guys there.

David: Okay.

Emery: So you're never going to not see these guys.

David: Right.

Emery: They're posted on every corridor. Corridors can go very, very far.

David: There's no private area, then.

Emery: No way! There's NO private areas. Yeah.

David: Right.

Emery: So what you've got to do is, when you get there, then you have to go through the pressurized area to put your suit on.

David: Okay.

Emery: And that's the clean area, the sterile area.

David: So there's like an air lock in between the door and the operating room.

Emery: Correct.

David: Okay.

Emery: And now you put more . . .

David: Now, you put more . . .

Emery: And those two technicians run that with the two soldiers, right, the white guys.

David: So you have your scrubs already, but then you put on additional equipment?

Emery: You have to put . . . Oh, yeah. You have to put on the suit.

David: And what is the suit?

Emery: Like a space suit. It's a very lightweight spacesuit, like you'd see in the movies. It's all glass. You have your own little oxygen that you plug into the wall of your unit. So you don't have to carry anything. It's very lightweight.

It's made out of like a Gore-Tex, polyurethane substance. It's waterproof. It's completely air proof.

I mean, you have your own air recycling in there. You have your own speaker comm unit. You can communicate.

And the gloves that you're wearing on these suits are the same gloves we use in surgery. They're very ambidextrous, very sterile.

Sometimes you will have to use certain gloves that are made out of something else that I don't know, because they don't want certain latex or non-latex things to be touching . . . to actually destroy whatever you're touching.

David: I see.

Emery: So there's different types of suits for different types of autopsies.

David: Oh.

Emery: Yeah.

David: So you said . . . I'm trying to see this. You have like a hose that you're going to plug into the wall . . .

Emery: Yeah.

David: . . . once you go through the airlock?

Emery: You get to the airlock, . . . You know, you're escorted by the security guys. And they open the air lock, just like you would see on a Navy ship, kind of . . . like on a . . . Some have clamps, and some have these little things.

And then you go in, and you're suited, and you just plug your stuff in.

There's two cords: oxygen and an electrical comm cord.

David: Okay.

Emery: And you can still hear them if they wanted to talk to you in there without that,

in case it failed.

David: So could you just briefly describe what it looks like once you're inside the OR now?

Emery: It's seamless. It's got a white-pinkish-tinge to the walls and everything. It's kind of oval.

And all of the entire walls actually have . . . can come out in different types of sections. And the sections might be . . . the body will be on this board. And then the other section walls will have all these other tools you're going to need to do it, to do whatever you're gathering or for the testing.

David: Right. So once you actually see these salmon filets, you said it started with salmon filets, but then you upgraded at some point to an arm with a hand.

What was the time interval between salmon filets, and arms, and then, eventually, full bodies? Could we talk about that for a second?

Emery: Yeah. That took about, I think, 16 months. You get three to six months security upgrades if you behave and keep your mouth shut.

David: Hmm.

Emery: I mean, it happens fast, because they go through so many people. And I really wanted to learn this. I was so captivated by it, so I did what they wanted me to do. And then it got more and more stranger, and I would get better and better samples.

And it was frustrating because you're not allowed to ask, well, “What is this from? Where is it?” Or, “How do you get it?” Or . . . You're just there to do the sampling and get out, you know?

And then once the bodies came . . . that was probably after maybe 10 months when partial bodies, not full bodies . . .

David: Oh.

Emery: I didn't get full bodies until way at the end, and then I got out because I got emotional about it, I guess.

David: Could you describe for us the very first partial body that you saw? What did it look like? And we'll end the episode with that.

Emery: Yeah. It was a leopard-colored skin. It was the torso. It looked like it got blown up. And it had Reptilian skin. It had normal body parts like we have on our insides. So I did see a spleen, a heart, lung.

The face was too distorted and destroyed, so I couldn't tell you what the face looked like, but it had perfect, normal bone structure like we do. And it was just . . . The skin was beautiful. It was iridescent blue leopard skin.

It reminded me of growing up in the Everglades with the leopard frogs, where they had those round circles and peacock feathers mixed.

David: Really?

Emery: Yeah. That color . . . That distinct, round . . . It was very smooth skin.

David: Did it scare you the first time you got a partial body?

Emery: Yeah.

David: Were you like, “Oh, my god! What's going on here?”

Emery: Yeah. I was in shock. They're measuring my heart rate, by the way, the whole time. They're measuring how I'm reacting.

So I kept cool, and they didn't ask me, “Hey, are you all right?” one time, because I was only allowed to operate on one part of the body. And I wanted to know more, you know?

David: Right.

Emery: Because there are certain tissues, I realized, from clones, than from real extraterrestrials and from humans, that the cloned tissue isn't as strong as the ones they grow.

Our tissue's really strong, but … And depending on how long they've been, of course, dead, or how long it's been frozen, or whatever conditions they have had it in.

But when you get fresh stuff, . . . and sometimes they'll tell you it is, sometimes they won't. And you can tell that the ones that are fake are more friable. So that means you barely try to get something out of them, it just, like, melts away.

So it's a very interesting dynamic as far as the tissues are concerned.

David: Emery, why do you feel like coming forward today? What are some of the events that have just happened that have impelled you to finally break your silence after a decade of me telling you, “Hey man, you really ought to come forward?”

Emery: Well, you know, I didn't think that's up to me, you know, because I'm a very just neutral . . . You know, I don't even watch a lot . . . I don't watch a lot of these shows, and I like to stay neutral, so nothing influences me.

David: Right.

Emery: And recently . . . [PAUSES, BECOMES EMOTIONAL; TEARS] You know, it's got . . . It's been getting a little violent.

David: We have a photograph of a head-on collision that you suffered 30 minutes after I leaked more of your information in an article.

And you're very lucky to be alive.

Emery: Yeah. Yeah, I mean, it's . . . I've been shot at, been stabbed, been jumped by three agents, got my butt kicked. I mean, that's . . . I've been through it all.
But it was not . . . it was . . . I don't believe it was because of THAT stuff.
I think when they knew I went energy, when I started doing more of the energy stuff, they REALLY got angry.

David: Yeah.

Emery: And that's where I lost everything. They broke into my house.

I mean, rammed my gate, my concrete gate, down, you know, where all this stuff was stored.

And cut into the walls where things and safes were hidden that you can only know by satellite, using . . . These people definitely had perfect satellite imagery of . . . You know, I KNOW about the satellites very well and the stuff they can do with them.

They can look into every brick and every wall of the house.

David: Wow! It's unbelievable. I'm very glad that you made it here alive, that we're doing this now.

We're going to try to get as much on camera as we can for your safety.

Emery: Great.

David: And we'll be back next time. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with “Paul”, who we now have revealed is Emery Smith. And thank you for watching.

Inner Earth In Crisis Season 9, Episode 3

Cosmic Disclosure; Inner Earth In Crisis Season 9, Episode 3

20 Dec 2017

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Corey Goode, once again bringing you vital updates for this on-going amazing saga that we have been experiencing.

Corey, welcome back to the show.

Corey Goode: Thank you.

David: One of the things that you've shared with me in our private conversation is that you had some new interactions with the Anshar that are actually quite interesting. And apparently this is sensitive enough that I'm only going to hear this for the first time as we're talking about it on camera, so I'm excited to hear about this as is everyone else.

So what's going on in the Inner Earth planes at this point?

Corey: Well, it's not real shocking information at all.

David: Okay.

Corey: What occurred is they brought me down to . . . I was brought down to the temple complex area again. And I was brought right past the area where you cleanse.

They didn't have me do that. They had me walk directly out into the corridors that brought me out to the city area, or the cavern area where the cities used to be.

David: Okay.

Corey: In the temporal bubble that was created, they had us fly in.

David: Just to recap, what I remember you telling us before is that the Anshar have actually gone into some sort of protective field because of the possible Solar Flash and they don't know when it's going to happen.

So is that the nature of what this is?

Corey: Right. They create this bubble every time there is one of these cycles that occurs.

David: With the Solar Flash?

Corey: With Solar Flashes and just the other cycle . . . all the cycles that occur . . .

David: Right.

Corey: . . . over time since they've been here. They put themselves in this temporal bubble.

Now, when they flew us in in one of the shuttle craft, Anshar buses, that I've described before, it was huge.

I mean it was huge. There were a lot of them – a lot of people.

David: What was huge? What did you see? The bus was huge?

Corey: No, the inside, all of the different city components were connected like . . . almost like Legos . . .

David: Hm!

Corey: . . . like electromagnetic "Zezt", connected to each other, and they were all over, 306° all around and looking up . . . If they were standing looking up, they'd all be looking to the same point in the middle of the sphere.

David: So, again, just to clarify this, you've said that these units that they were living in in the Inner Earth caverns are modular, and they are like little spaceships that can move on their own.

Corey: Right.

David: So they have now joined together like Lego blocks . . .

Corey: Yes.

David: . . . inside this bubble?

Corey: Yes.

David: How spectacular was this to see? Was it a really stunning thing?

Corey: YES! The thing is, when you first fly into the event horizon of this one . . . I did not experience this when we were going to the temporal anomalies on Jupiter. So

it was a little different.

As soon as we went through the event horizon, it was kind of like being exposed to a heavy amount of electromagnetic field. I kind of fell to my side and almost kind of passed out.

David: Wow!

Corey: And very quickly after that, after we passed that barrier and went in, I was fine. I was just kind of a little out of it and coming to.

David: So this is a time bubble as well as a dimensional space of some kind?

Corey: It is a temporal bubble that is created outside of this reality space-time.

David: So whatever happens to the Earth, even if it moves in an unusual way, they are not going to be affected by that.

Corey: Yeah. The energies are not going to affect them. They are completely segmented from this reality, I guess you would say.

David: Is it in a higher dimension but somehow still local here to Earth? Or where is it actually physically?

Corey: Well, just like the temporal bubbles that they have outside of Jupiter and Saturn, they are accessible from many different galaxies . . .

David: Really!

Corey: . . . and many places in this galaxy. You go in, and you think that you've just traveled a few thousand meters through a barrier and then you're in this dark place.

But really, you're nowhere in our space-time. You're nowhere. And all of these other galaxies have tunnels that get them to the same point. They can travel in, and it's a real quick trip. It like just traveling to the Moon kind of distance.

And then at that point, everyone's together but when they're really many, many thousands and millions of light years apart.

David: So you're saying this temporal bubble that you went into is potentially accessible from multiple points in our galaxy and even other galaxies.

Corey: It is, absolutely.

David: How would they have any protection against an invasion in that case then?

Corey: The way it is designed, you can only go . . . they call it “punching in” and “punching out” from the same trajectories.

When you come in, you come in and then you come to the meeting spot or wherever you're going, and then, I don't know if it's technology, harmonics or what, then they are only allowed to leave through that same point that they punched in, which will bring them back to their space-time.

David: Are these people using languages to talk to each other, or is it all telepathic? How does the communication happen?

Corey: No, they were using a language – that weird . . . they say it's Akkadian like, but the only thing I can image is, imagine someone that grew up in Turkey, and they have the Turkish accent, and they were taught an old dialect of German or something. Imagine how that kind of might sound. It's very, very weird.

But, yes, they were communicating in that common language.

David: They speak with their mouths.

Corey: Yes, they were speaking.

David: Were you able to understand any of it?

Corey: No.

David: Okay.

Corey: What happens after we landed, they brought me down into one of these domes, and at the base of the dome, they were having a discussion.

And it was interesting to me. They had all of the seven different groups that I first saw when the Anshar had their first meeting that I was invited to.

David: Oh!

Corey: All these different groups were there.

David: Now, just to be clear, you had said before that this is the people from Earth's future that had time traveled back, so all the different racial types on Earth are represented in these groups.

Corey: They are. And, yes, that is what they claim, that they come . . . Each of the different racial groups that are here, are here pretty much on the same mission, but they came during different time periods.

They didn't come at the same time the Anshar did.

David: Okay. Interesting.

Corey: So what was going on is there was a discussion going on about how they were going to integrate some sort of technology that they all share.

And as I've told you, in the past, their technology is powered and controlled all by consciousness. So there are really not a whole lot of physical devices around.

So this was the first thing I was shown.

And they were showing above a small, squared desk-looking thing, they were showing a hologram up of these long square-type blocks that, in the middle of them, were almost like cables. They were very large crystalline like cables that went through that were impregnated in a spiral with some sort of mineral. I don't know what it was.

David: Let's talk for a minute about what the boxes are. What are they connecting? What does this do for them?

Corey: It's going to allow them to network together all of their consciousness to be able to help them power and control technologies that they're planning on using in there for however long they are in there.

David: Now, if I remember correctly, when we first started talking about this, you said that different groups had amulets with little jewels on them that showed what part of the Earth they were living in, and they had different regions for different groups. Is that correct?

Corey: Right.

David: So you might have people that look Asian, but they are going to be in one area, and people that look Nordic might be in another area.

Corey: Yeah, they weren't all mixing together. They had their own blocks or areas. That's correct.

David: Now the priesthood that you originally went into with Ka'Aree, that was some some sort of summit that was happening at that time where they were bringing their

troops together so to speak?

Corey: Yes, a very rare meeting of bringing all of the decision-makers together. And the decision-makers happen with all of them . . . pretty much all of them. One of the . . . Some of their religious caste are also somewhat warrior caste.

With that Omega group, it was more that way with them.

David: Right. And you had said that the reason they were first coming together was threats from the Cabal actually trying to wipe them out.

Corey: Yes, well, they had a number of disagreements with non-terrestrials that are in competition for a different future.

David: Hm.

Corey: So, yeah, there were . . . they had that component. And then they stated that the people of the surface had developed technologies and weaponry that now reached them as far down as they were.

David: So it sounds like the meeting that you're being taken to now, there's a deeper level of cooperation and affiliation than just that initial negotiation that you saw the first time.

Corey: Yes, and this is something that apparently they do every 25,000 years or so.

David: Hm.

Corey: They come together and stay together in this bubble, basically, and then afterwards, they leave, and then they do what they need to do. They see how far the timeline is off, if any, from when they went in, and then they begin trying to manicure the timeline again to get it back where it should be.

David: So these cubes with the Mylar-type of cable between them, is this the equivalent of them creating an Internet where they have access to all of their mutual intel, that kind of thing?

Corey: The information is shared on a wider bandwidth range – wirelessly, I guess you would say. These are basically almost like cables coming together that reroutes . . . And all of them are putting off energy and consciousness, consciousness energy. That is being harnessed in this technology to power various different types of technology.

And they can also control technology that's in other areas that way, so I guess it is networked in that sense.

David: Did you have the different groups putting their various cities together like Lego blocks in the one temporal bubble? Is that part of what this was?

Corey: Yes.

David: Okay.

Corey: Yeah.

David: So it's . . . In a sense it's linking everything up once they go into that bubble. Why do you think that you would have been brought in to see this meeting? What would be the reason why you would be communicating this to us today?

Corey: Well, that was the strange part of the whole thing. Aree [Ka'Aree] told me that we needed me to witness it and to help arbitrate it, but I didn't know where to begin.

At one point, I got real close to the desk, and I leaned in to look at the hologram, and they stopped talking. They looked at me like I was interrupting.

David: Hm.

Corey: It's like they had me in the room for some reason, but they didn't want to have me in the room at the same time.

And then afterwards, she just . . . we went back to the Anshar bus. She flew me back through the temporal bubble and to the cavern. And then we walked back. We had a few conversations about some action items she had given me about different changes to make in myself, but other than that, that's all that event was.

David: Well, there's one thing that I'm not really clear on, which is, if they're coming together in one bubble, and they're linking their technology together, then what's the argument? Why would they have any differences of opinion?

Corey: In how . . . In how it was coming together. That was the last component that they had left. They had pretty much connected all of their cities together, and then now, . . . and they all have their separate self-contained consciousness energy grid.

And then they were being very tentative on how they wanted to connect that with other people's grids.

David: Hm.

Corey: So I don't know fully if it was security, just old type of maybe competition between certain groups, but everything else had worked just fine. They had all these areas that were all just snapped together all around.

David: You had also said before that some of these groups were kind of adversarial to one another, that they might not all have the same agenda. Some of them might have an agenda that wouldn't be as favorable for us.

Were those negative groups also involved in this, or was this just . . .

Corey: All of them were together.

David: Really?

Corey: Yeah.

David: So do you think part of the argument might have been that maybe these more adversarial groups would have had all of their communications exposed if they made this grid, and they had things they wanted to hide? Do you think that could be what it is?

Corey: No. At that level, the fourth density, there's no hiding anything, really. It's such an expanded consciousness, and connectiveness. They're all connected in a way that we just really can't understand.

David: So did you ask Aree why you were invited to this and what was the agenda for you to see it?

Corey: She said, as a part of my role, I needed to be an observer.

David: Hm.

Corey: That's pretty much all the explanation I get.

David: How do you think . . . and I know you're probably going to have to speculate, but if you can speculate, how do you think this event and this negotiation affects humans on Earth now and humans on Earth as we go through the Solar Flash and after the Solar Flash?

Corey: What the Anshar are doing right now in the temporal bubble does not affect us at all. What they are doing in the temple complexes, and what the other beings are

doing in their temple complexes, is germane to us on the surface.

David: In what way?

Corey: They're reaching out, the way I've explained before. They're reaching out, connecting with people on a higher-self level, basically making an agreement on how each individual will be brought up to speed or awoken to certain information.

A lot of it is being done mainly in downloads, which is not what I expected. When they said “dream state”, they also included downloads.

I'm getting emails like crazy about people talking about the downloads that they're getting. And they're pretty bizarre and amazing.

But they are also reaching out to people in dreams more and more.

David: You had said before, since we're on that topic, that this initial contact – telepathic-type contact – would segue into some sort of in-person meeting that people might have on larger-scale levels.

Have you heard anything more about that since the last time we discussed it?

Corey: No, I have not.

David: How do you think that's going to manifest? Will it right before the Solar Flash? Because you had also said – and I want to link this to something else . . .

The Blue Avians at one point had told you that as we get close to the Flash that people were going to start to see ghosts, and it might be relatives or people that they knew who had died.

Corey: Right.

David: How do you think those two things might be related?

Corey: The closer we get to that Solar Event, whatever it ends up being, the higher the energy build up is occurring.

So, yes, we're going to see crazy people acting crazier. People cannot hide their agendas anymore – who they are. It's just . . . It's out there for everyone.

It's so much so that I think a lot of people . . . they're not even trying to hide who they are anymore.

David: As an intuitive empath, did you get a sense that these groups were partly discussing how they would interact with us before this shift takes place, like what their strategies were? Was there some debate over how much to contact us or how little to contact us?

Corey: Well, there were big debates on whether to contact us at all.

David: Oh!

Corey: And only a few of the groups really decided to break these Mohammad Accords.

David: Hm.

Corey: And I definitely think that they would start having the face-to-face contact with people before this Flash or Solar Event, because afterwards doesn't . . . you know, yeah, they could show up. We're going to be different. We're going to be closer to them than we are . . . what we are now.

David: Do you think that as we go through the Solar Flash, that if people need to be portaled out of Earth, like it seems to say in so many of these ancient prophesies I've been discussing on Wisdom Teachings, that they would be taken to this temporal bubble?

Corey: I'm not sure. I've talked to several people lately, including Hopi and Zuni, and a lot of them talk about being taken into a cave or a portal, and then being gone like a 1,000 years, or so, and then coming back.

And they may not necessarily be living underground. They may being portaled to a planet similar to Earth where they are refugees, just like I've described happens here on Earth during certain times in our past.

Different beings like the Mayans were brought here as a protection.

David: Another thing you've been sharing with me, now that we're getting into some of this more off-planet type of stuff, is Gonzales apparently has still been meeting with you. And to me this has been very mysterious because most of this stuff you won't say anything about what he's saying or what's going on.

So, could you tell us anything that you can share about what's going on with Gonzales at this time?

Corey: Yeah, Gonzales, I meet with him usually 7 to 10 days apart. He's helping

monitor and manage some of the things that are going on because of doing so many 20-and-backs and being in close proximity to so many different types of technologies that have high EM fields.

David: You're saying that you . . . He's monitoring you because of that?

Corey: Yes.

David: And what would be the . . . What would be needed to be monitored?

Corey: They're monitoring certain things that are going on with my brain and brain chemistry, watching for temporal dementia to onset quicker, and they are keeping it at bay.

But my memory is being affected. I'm having some issues here and there.

David: Hm. Does he have any technology that they can use to help you? What is the form of the monitoring? Is there actual treatment?

Corey: Well, it's what I've described before. I'm brought up to this big cylindrical, stone Mayan ship.

David: Okay.

Corey: They walk me into the rooms that have the floating panels - the different lights flashing on them.

And Gonzales removes a . . . like a black 8-ball-looking sphere, stone sphere, from them, and walks up to me and scans my forehead.

He's scanned the rest of my body before with it, but routinely, he uses it to scan my forehead.

And while that's going on, similar to when they used the halo on me, he'll discuss, “You're going to feel a sensation here,” and then inside I can feel like a “Zzzh”, “Zzzh” sensation. That kind of thing.

David: Does it also provide treatment, or just diagnosis?

Corey: Treatment as well.

David: Okay. And this is treating long-term damage from, as you said, multiple 20-and-backs and also exposure to weird equipment.

Corey: Right. Typically what happens is, people that are exposed to those types of magnetic fields, leaving the 20-and-backs out of it, these technologies, you begin to have major eye issues, a lot of neurological issues occur, and then those usually occur first, and then the temporal dementia starts to occur. And it's pretty scary.

David: Is there any other aspect of what has been going on with Gonzales that you are authorized to tell us right now?

Corey: He's been working very diligently for a while now to reinvigorate the SSP Alliance that pretty much all went to ground.

David: Hm.

Corey: You know, right after several were exposed, and Sigmund's men started rounding them up.

So what he is doing is he's getting command and control communications rolling again.

There's a lot of stuff going on in the background that has eyes on a different problem and not them. And the problem is all of this information starting to come out, be exposed. How are they going to let it be exposed? What will they share? What will they not share?

Different groups competing for . . . all with different agendas.

David: Some of the briefings I've gotten from Pete Peterson recently have said that there is still a pretty active battle going on between Draco-type Reptilians and their groups and some of our own groups with our technology.

And he said that sometimes we're gaining and sometimes we're losing in that war, but that it's an on-going war – lots of ships involved, lots of casualties involved.

Do you have any news on that?

Corey: It's kind of a weird situation they have with the Reptilians. Certain aspects of these Cabal groups are working with the Reptilians, or at least they are being allowed . . . the Reptilians are allowing them to have certain areas of Antarctica.

And there are other factions within the Programs that are more on the side with the Nordic groups and are trying to get rid of the Reptilian influence in this Solar System and many others.

David: Do you know how much of our assets are involved in that war right now in the space program sense?

Corey: The assets don't even know that they are assets most of the time. A lot of the people that I've talked to that work in the DIA, the NSA, the DoD . . . only when they get together at a VFW hall, or have a barbecue at another one of their comrade's houses, and they have some drinks, and they look around and no one's around, they start talking about things.

And something that's pretty common and shocked me recently when one of my contacts told me the same story, is that a majority – a large number of these people – have experiences seeing Tall Grays, usually in their bedrooms. But some of them have seen them in broad daylight.

And usually they're standing over their beds holding a long rod with a light on the tip.

And I've heard some of the names . . . You know, there's colonels, generals, admirals. They're all . . . I've heard some of the names that are reporting this – that have reported this.

On some level, people even down on the DoD level are some sort of an asset in this game, I guess you would call it.

I don't' know what is being done with them by these Tall Grays, but it's common chatter among them that these Grays pop up – these Tall Grays.

David: Now, you had a trip to Spain recently, and I was very, very concerned about whether you were even going to live through it. So could you tell us a little bit about that trip?

Corey: Yeah, Stacy was very nervous as well. I was invited to go to a conference in Montserrat, Spain, close to Barcelona.

There were concerns because Barcelona was going to declare independence from Spain, or a province there was.

David: Catalonia.

Corey: Catalonia.

David: Yeah.

Corey: There were worries about that, but also after that recent attempt to cause a

UFO civil war in the UFO community, and it failed, there were . . . I was told that there were Rothschild components that had put out a “target of opportunity hit” on both you and I. And what that means . . .

David: That's lovely.

Corey: Yeah. Which means that they're not going to come looking for you, but if you happen to walk into their establishment, you're free game, basically.

David: Right.

Corey: And I was over in Spain in an area that . . . It was not exactly an Alliance foothold.

David: And it wasn't even politically stable.

Corey: No, so the Alliance provided security for me. There were a number of people that I didn't . . . that were undercover security that I never knew about. And, you know . . . big-time security.

The Alliance was paying each of these people $10,000 apiece to be security for me.

David: What would be the difference between that type of security guard and a VIP-like a head of state, something like that?

Corey: These guys do head-of-state security.

David: Really?

Corey: Yes.

David: So at that level.

Corey: Yeah.

David: That's how concerned they were about you being taken down.

Corey: Yeah. They were very concerned. They were very concerned, and I really appreciate the elements of the Alliance that made that possible, because there were a few little incidents we didn't report to people at the conference, because the security guys wanted everything kept quiet.

David: Understood.

Corey: But they were watching this guy and talking about UFOs, and they were thinking it was really pretty silly. One of the times, the apartment that we were staying in was tossed or broken into while we were gone.

David: Really.

Corey: And when we came back, they flipped out. You know, I didn't know these security people, so the first night I put a light bulb on my handle of my door, you know.

We were pretty paranoid that night.

David: The light bulb would fall and smash if it opens?

Corey: Right.

David: Okay. Interesting.

Corey: Right.

David: So were there any signs of suspicious . . . I mean, obviously, you get your whole apartment trashed, but other than that, did you see people that looked like they were stalking you? Anything like that?

Corey: No, not while we were in Spain. But as soon as I landed in the Florida area, on the return flight, I had a number of things occur.

I have video on my phone of two of the guys that were following me.

David: You showed me.

Corey: Yeah. One of them came and sat right next to me. The other one sat a couple seats over. And he had either a Strategic Air Command hat or a SOC hat. It's one of the two.

The Air Force, obvious Air Force guy, and he was older, wanted me to see that he was staying close to me.

This really big guy that I got video of too, came and sat down next to me and was fiddling with his phone a lot, and then he leaned over to me, and he said, “I'm a friendly. The others are not.”

And I was like, “others?” I only saw one, and I looked over, and I saw another guy

that was watching me quite a bit and kind of wanted me to know, but I didn't see anyone else.

So that was enough to get me completely paranoid. And that was on my flight from Florida to . . . to fly back home.

David: What can you tell us about the possibility that we're finally going to get the truth about the UFO cover-up? Are there steps of progress being made in that direction that you can share with us?

Corey: Well, just the same steps that were going before. These Earth Alliance groups pretty much kind of came to an agreement that there was going to only be a partial disclosure – a partial disclosure of information, and that was going to be what we've talked about – ancient ruins under the ocean, under the ice in Antarctica, and then, "Oh, guess what? We've got this Secret Space Program.

"It's somewhat ahead of time. We can use a type of gravity nullification to fly to a couple of bases in the Moon, and Mars. Oh, by the way, we found ruins there, you know. But it's all ancient. There's nothing new there."

And that's how they slowly plan on, over a protracted period, giving us Disclosure, which is obviously not what we want. We want an immediate Full Disclosure, rip-off the Band-Aid event.

David: Are you seeing signs that the Cabal will not have the power and influence that it does now when those announcements are made?

Corey: Well, the Cabal is seeing that – the signs. There is more and more activity around routing out Deep State operatives, both in the United States, in other countries. It's occurring right now.

And I've given you updates recently about all of what has been occurring with these secret grand juries, you know, a lot of very interesting things going on. They had pretty much come to a conclusion and were preparing sealed indictments when they just received, very recently, very recently, a treasure trove of other information that's bringing them in all kinds of different directions.

David: So one of the interesting things that you've been telling me about in a very circumspect way, without a whole lot of information, concerns some tangible artifacts that you might have been given that would really help Disclosure move forward.

Could you tell us what those artifacts might be – or objects of some kind?

Corey: Right. I was given some documents a number of months ago – I'm going to be non-specific for a number of reasons here – three documents that were very exciting. They were basically like books, very thick. And they were about things like wormholes and warp drives and different things like that.

And I was very excited, but I was told to sit on it. So I sat on it, and then one of the people I talked to in the Alliance said I should get it authenticated.

David: Uh-huh.

Corey: And they gave me the name and address of a place. It happened to be kind of a pawn shop and a gold and silver exchange kind of a place.

David: Hm.

Corey: I went in, introduced myself to the guy. It was all set up. We went into the back room and sat at a desk.

And he sat there, and he looked over the document for probably 30~40 minutes. I was sitting there for awhile. He was looking. There were document numbers. He was looking at the way things were arranged.

And finally, he leaned back, and he said, “How much do you think this document's worth?”

And I said, “I have no idea.”

And he said, “Well, I'll give you half a million dollars. How's that?”

And I was like, that sounds very familiar. I've heard that happening to other people, including Bob Wood, and it turned out okay for him, but at the same time, I knew that I was . . . It was tempting, but I said, “No, I can't do that. I've been told that I needed to handle this document in a certain way.”

And at that point, he just reached under his desk, and I heard all these like magnetic locks, “pop, pop, pop . . . pop”.

David: Oh, my god!

Corey: And he took out a pistol revolver, sat it on the desk, and he said, “You're not leaving here with that document!”

And I turned over the document. I left, was shaking all the way home. I was a mixture

of really ticked off, and I was really upset. Freaked out.

I went home. I reported it to aspects of the Alliance in ways that we have of communicating. Then I went to bed.

And that night, Stacy and I, we hear something . . . like a box fall over in the attic. I'm thinking it's animals, squirrels that have gotten in. Told her I'd check it in the morning.

I pulled down the stairs and walked up into the attic, and immediately I saw the area where I had stashed the other two books - the installation pulled up and boxes in disarray.

David: Wow!

Corey: So they were in my house and they took the other two.

David: Do you think that somebody might have zip-lined in off a quiet helicopter – something like that?

Corey: I have no idea.

David: Okay.

Corey: That's scary.

David: Yeah! Big-time!

Corey: Because when you pull down the stairs, the springs on it make a lot of noise.

David: Wow!

Corey: I really don't know how this happened.

David: Wow!

Corey: But it freaked me out sufficiently, and very recently, I was meeting with some Alliance contacts, and they said, “I've got a couple of documents for you, but, be careful how you use them.

“They are not classified.” And they gave them to me.

So I have them. I took them. I have them with me at my house, and they're not

classified documents, but what I was told is that I had to reveal the documents in a certain way, with a certain protocol, that if I did that, that the different scientists, engineers and military intelligence folks that had worked in these programs would see that as a sign that it's time to start coming out with some more information.

Because these documents, I was told, were documents that all of these people will be familiar with because it was a part of their read-in process.

David: Now, if I can say this, you showed me just some cover pages. And they said they were unclassified. And so the thing that jumped out at me was, to me it didn't seem like they were really that big of a deal because they are theoretical about wormholes, theoretical about portals, theoretical about time travel.

What's so big . . . Why would this guy want to give you five hundred grand for a theoretical document?

Corey: No, those were not the ones that the guy wanted to buy. The ones that the guy wanted to buy were these thick books that had all these formulas in them . . .

David: Oh, wow!

Corey: . . . scientific books that were describing HOW wormholes work . . .

David: Oh, wow!

Corey: . . . not in theory. HOW!

David: Okay.

Corey: That was a book that people would read later on after they were slowly being read into . . . Like an engineer would be given theoretical information to read to percolate in their mind. And then they would be given further information and then fully directed in and read in.

David: So if we eventually go public with these documents, then the idea is that others will now see that as a cue that it is safe for them to talk.

Corey: Absolutely.

David: Very interesting.

Corey: Yeah, and we're looking to start something similar to a Wikileaks place where people can upload documents and doing dead drop mails and a few different ways that

we're working to not only protect the anonymity of these engineers and scientists and military types, but to handle it all with the protocols we're asked to do it under.

David: All right. Well, that's all the time we have in this episode of “Cosmic Disclosure”, bringing you updates from the front lines here. I'm David Wilcock with Corey Goode. Thanks for watching.

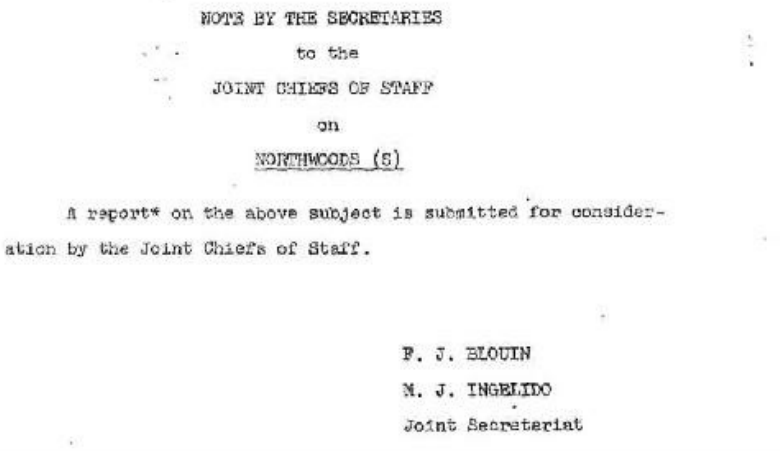
Operation Chaos Season 9 Episode 4

[Cosmic Disclosure; Operation Chaos] Season 9, Episode 4

27 Dec 2017

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and we are here for another exploration into the far reaches of the unknown with Corey Goode.

Corey, welcome to the show.
Corey Goode: Thank you.
David: I want to talk for a little bit about “Operation Northwoods”.



NOTE BY THE SECRETARIES

to the

JOINT CHIEFS OF STAFF

on

NORTHWOODS (S)

A report* on the above subject is submitted for consideration by the Joint Chiefs of Staff.

F. J. BLOUIN

M. J. INGELIDO

Joint Secretariat

These documents were actually approved by the Joint Chiefs of Staff during the Kennedy Administration.

REPORT BY THE DEPARTMENT OF DEFENSE AND
JOINT CHIEFS OF STAFF REPRESENTATIVE ON THE
CARIBBEAN SURVEY GROUP

to the

JOINT CHIEFS OF STAFF

on

CUBA PROJECT (TS)

The Chief of Operations, Cuba Project, has requested that he be furnished the views of the Joint Chiefs of Staff on this matter by 13 March 1962.

There was approval for a plan to fake the hijacking of passenger airliners and to blame it on Cuba to create a cause for them to invade Cuba.

UNCLASSIFIED

7. Hijacking attempts against civil air and surface craft should appear to continue as harassing measures condoned by the government of Cuba. Concurrently, genuine defections of Cuban civil and military air and surface craft should be encouraged.

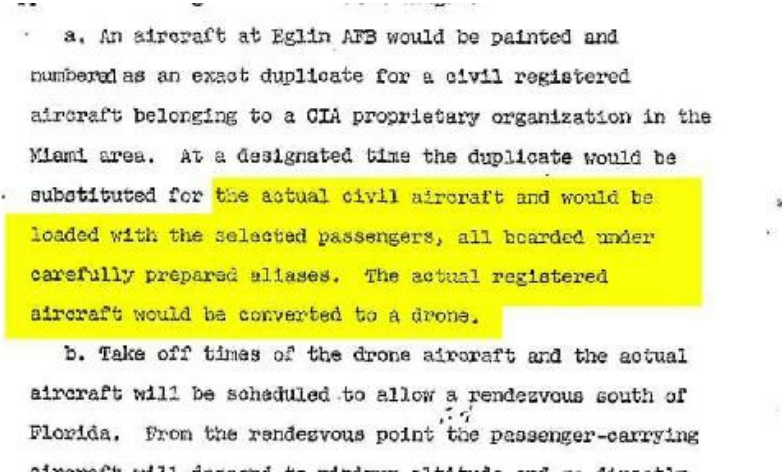
8. It is possible to create an incident which will demonstrat convincingly that a Cuban aircraft has attacked and shot down a chartered civil airliner enroute from the United States to Jamaica, Guatemala, Panama or Venezuela. The destination would be chosen only to cause the flight plan route to cross Cuba.

2. The need for positive action in the event that current covert efforts to foster an internal Cuban rebellion are unsuccessful was indicated** by the Joint Chiefs of Staff on 7 March 1962, as follows:

" - - - determination that a credible internal revolt is impossible of attainment during the next 9-10 months will require a decision by the United States to develop a Cuban "provocation" as justification for positive US military action."

3. It is understood that the Department of State also is preparing suggested courses of action to develop justification for US military intervention in Cuba.

Now, first of all, I guess what I want to ask you is: have you ever encountered "Operation Northwoods" or other plans similar to this within government?
Corey: Similar plans, yes.
David: Well, we actually know the Northwoods documents are authentic. They were formally released by the U.S. government, declassified.
Corey: Wow!
David: Nobody's talked about this.
Corey: One of their quiet releases?
David: Yes. And one of the things that's so shocking about Northwoods is that they openly say that they would use actors, who would . . .
Corey: Crisis actors.
David: Crisis actors who would pretend to have been on the ships, but they're actually CIA personnel, and that they would do what needed to be done, if they were part of a catastrophe, to act out on camera the part that they're supposed to play, . . .



a. An aircraft at Eglin AFB would be painted and numbered as an exact duplicate for a civil registered aircraft belonging to a CIA proprietary organization in the Miami area. At a designated time the duplicate would be substituted for the actual civil aircraft and would be loaded with the selected passengers, all boarded under carefully prepared aliases. The actual registered aircraft would be converted to a drone.

b. Take off times of the drone aircraft and the actual aircraft will be scheduled to allow a rendezvous south of Florida. From the rendezvous point the passenger-carrying

. . . and that CIA employees would be put on the planes as passengers, but that those planes would be replaced with drones that were actually, then, crashed. So the real plane is not used.
Corey: The use of crisis actors is a dirty trick that the intelligence community's been using for a long time, and this has recently come out in the alternative community. So this information coming out is very real and very damaging to them.
David: What is a “crisis actor”, based on your personal understanding?
Corey: People that will come in and, for whatever the crisis is, come in and pretend to be under distress or whatever is called for – even pretend to be injured, pretend to be fatalities.

They were used quite a bit in the FEMA training. When I was in the Texas State guard, for FEMA certifications, joint training between state and local authorities, they would have crisis actors come in.

It's something that's widely used.
David: But these are alleged training exercises which were not being portrayed to the public as real.
Corey: Right.
David: Okay.
Corey: There are a large number of people that are trained crisis actors.
David: Well, isn't it also interesting that a lot of times when these allegedly terrorist events or natural disasters take place, that there seem to be military drills? Like, there were five different military drills on the day of 9/11 involving hijacked airliners.

Why would the Cabal make these drills where they're putting emergency personnel in

place when they're going to do something that's going to hurt people and injure people? What's the idea behind that?
Corey: Well, usually, they'll have them there for operational support, if things don't go to plan, or if things go further than they had planned. They're going to have these people come in and restore peace or come in and cover things up.
David: What would be an example of something going further than they'd planned?
Corey: Well, let's say . . . and I don't have information . . . any of the information about 9/11. But let's say that they wanted to just topple one tower, and they ended up toppling both towers, Building 7, and then ended up taking out some other assets that they didn't plan on.

If they were using micro nukes or secret space technology, somehow that kink was exposed in the operation, then these people would move in real quick, media blackout, and find a way to cover it up.

If it goes to plan, then they're just on a coincidental training operation.
David: If somebody sees something that they're not supposed to see, are these teams going to assassinate that person? Would they inject them with sodium pentothal and try to blank out their mind?

What are some of the things that would happen?
Corey: Any number of things. Usually threats are enough.
David: But could there also be . . . You had mentioned in other episodes this blank slate technology. Would some of these people actually have a version of that that they could use if needed?
Corey: Yes, if they needed to, they have plenty of tools they could pull out of their little bag of tricks. But usually, good, old-fashioned intimidation does the job, especially if people have people they love or something to lose, which most people do.
David: What would someone actually say if they were going to do the intimidation? Let's say that I'm the person, and you're threatening me, what would you say to me?
Corey: Well, you're asking me to take a bunch of leaps here, but I would assume that these special access program black ops wet works guys wouldn't mince words. They would get straight to the point and let them know that something very specific would happen to their child – something very disturbing – or someone they love.

Or they could become destitute or be known as a child molester or any number of things.

So the delivery of the threat could be tailored for the person.
David: Are there any training protocols that are used in terms of how to deliver the threat to make it as intimidating as possible? Are there certain techniques to make it scarier that are followed?

Corey: Yes. They will control the environment. They set up everything . . . The whole psychology of the environment: the way they stand, the body language they use, the way they use their voice, the way they have the person sit. Everything is done a certain way.
David: What about the eye contact? Is it like a very intense eye contact – unblinking, unwavering?
Corey: Yeah, it just depends, but they have . . . And it depends on the person – the way the person is acting. They have to tailor . . . It has to be tailored to the person.
David: Something like this Operation Northwoods document, that's extremely treasonous and shocking. Now, we know that John Fitzgerald Kennedy did not approve the plan, but it appears that all of the top-level military brass from each division felt that this was an acceptable strategy to create a war with Cuba, which they wanted to have, but the American public was not hip to it.
Corey: What you need to understand about the people that come up with these ideas, and these think tanks, that these ideas are then submitted to places like the DoD and the State Department. These people believe in order out of chaos.

So they also use chaos to redirect attention away from things.

And we see that very clearly with the refugee crisis that's going on, that's been going on for a while, that's very much engineered – hundreds of thousands of people from Syria that are flooding into Europe and other locations.

That is the type of plan that comes out of these think tanks.
David: When you say "order out of chaos", some people would be familiar with the image of an eagle with two heads that is clutching a banner that says, "ordo ab chao", which means "order out of chaos" in Latin.
Is this a religious belief that these people have?
Corey: Yes.
David: And how far back does this religious belief trace? I mean, Latin would imply Roman Empire.
Corey: It goes much further than that. What do they say? How did the universe come about? Order out of chaos.

They believe there was a great explosion, a great amount of chaos, and after that chaos, order came about, and here we are.

And they have micro and macro examples of that they use in explaining why order out of chaos is the natural order of things.
David: The emperor of Rome, Scipio Africanus, being caught in a scandal where he was bribing the enemy, the leader of the enemy country, Antiochus, with 3,000 gold coins. He got caught.

And he ended up ripping up the books in front of the Colosseum when he was accused of this.

Now, this is like, 200-something BC. But right there, you have a Roman emperor caught bribing the leader of the enemy country that they're at war with.

That implies . . . That's just like one little thing you can peel up the rug on. That implies the Roman Empire may have been actually collaborating with the people they're at war with.

Do you have any evidence of it going back that far, of this kind of treasonous, high-level collusion going on?
Corey: Yes. On a very high level, including a level that is what we would call not surface civilization involved: interference from Inner Earth civilizations and non-terrestrial civilizations manipulating the secret Earth-government syndicates, people that we call the elite or the Cabal, manipulating them. Or these groups looking at these other groups that I just mentioned, ET, Inner Earth, as gods, and carrying out their bidding.
David: Well, now, the presence of the “svasktika” or “swastika” symbol all over the world, all these ancient cultures have it.

And that would imply, since a lot of these lands are warring with each other, the swastika group, which was one of the more negatively-oriented groups that you met down there, has been meeting with all these different folks that are at war with each other and presenting themselves as gods, but they're actually helping both sides of the war. Would you say that's true?
Corey: Not necessarily helping both sides of the war. Usually, when the manipulation was going on, it was us on the planet being a proxy or kind of like a game of chess. We're pawns. And they are playing from the Inner Earth against non-terrestrials that they call the genetic farmers.

It is a very complex game or war that they're . . . a non-hot war that they're fighting with each other, using us as the pawns. And our kings are the ones that they've been in contact with.

And our kings are the ones that have been indoctrinated and instilled with all these belief systems, such as the . . . you know, you get . . . you create chaos, and then you get order. And they use these tactics on us pawns, or the population.
David: So this would take the form of these, in some cases, Aryan-looking humans appearing in the office of the king, in his royal chamber . . .
Corey: Yes.
David: . . . just popping in there?
Corey: Yes.

David: Which would be very shocking!
Corey: Yes. There is . . . Among the conversations I had with Ka'Aree from the Anshar, they've appeared with people making decisions throughout history – appeared and guided them in making decisions, including with our own . . . beginning of our own United States.
David: This is kind of a ridiculous question, but when you illustrated your meeting with them in the temple, they were all wearing robes. Are they going to appear in front of these kings in robes, or what type of clothing might they be wearing?
Corey: I could not answer that question.
David: Okay.
Corey: Yeah. I had the mind-meld with Ka'Aree, and she was meeting these different people. She wore several different skintight suits of different colors. They may appear in that type of garb instead of the robe.

The robe, it was more of a ceremonial thing that was related to the temple complex.
David: Are these like a single, solid color – the jumpsuits?
Corey: The jumpsuits? Yes, they were.
David: Okay. What are the colors that you saw?
Corey: They were varying shades . . . two varying shades of blue and a yellow one.
David: Okay. So getting back to . . . Let's go back to the major wars in Rome before it collapsed, which would be the Punic wars, kind of like the equivalent of World War I and World War II. They're fighting against Carthage.

Is there reason to believe that Rome and Carthage at the highest levels were, in fact . . . that the leaders were talking to each other, secretly meeting with each other, and coordinating these wars, somehow?
Corey: Let me put all of this in a nutshell for you, and you can apply that to any war, conflict and situation you want to.

Yes, every single situation has been manipulated from both sides by an unseen guiding force that has evolved into what we call “the elites” now. And it's more formally known as a secret Earth government and their syndicates.

But throughout the past, before they were more organized, they had different agendas, but they still had the power, and they still had the access to these Inner Earth beings and non-terrestrials, and the information from these beings, and were following the agendas being given to them by these beings.
David: How could the generals go out there on the battlefield and risk their lives if they know that this is fake?
Corey: The generals don't know.
David: The generals don't know? But that's the highest level of the military, or pretty darn close, depending on the level of the general.
Corey: The generals are normally given an objective, and then they come up with the

tactics and then delegate the rest of the logistics down to the ranks.

The people in control back then, whether it was a priest caste, royalty, what have you, that was where the orders and the information was coming from most of the time.

Now, were there generals, were there certain people, that had contact with these beings and were out making these decisions and doing things AROUND their leaders? I'm sure there were cases of that.

And some of these people probably then became king.
David: When we're looking at the history of things like the Spanish-American War, we have the sinking of a ship. When we look at the origin of World War I, we have the assassination of Archduke Franz Ferdinand, the leader of Austria.
When we look at America's entrance into World War II, we have the bombing of Pearl Harbor.
We have the incidents in Vietnam that brought us into Vietnam.
These sparks, they seem kind of suspicious, don't they? Like the catalyzing event that throws somebody into war.

If what you're saying is true, are these catalyzing events manipulated? Are they programmed? Are they scripted somehow?
Corey: Yes. Every single one that's happened, and any one that would happen in the future, very few wars have genuinely happened over misunderstandings. They've been manipulated by a higher power.
David: Is there some kind of energy benefit that negative beings get from creating chaos? Does it form a sustenance for them somehow?

Why would they be so interested in creating what we would think of as the most unpleasant things that could happen on Earth?
Corey: Well, it depends on the being. Of course, there are beings that vampire the negative energy “loosh” that we're talking about, but it's not ALL about that. It's about control.

It's about a chess player that thinks 50 moves down the road, and they're manipulating and making . . . psychologically working against their enemy to make sure that that 49th move is still going to be viable.

This is more complex than just etheric beings wanting to suck our energy from us. That's a big part of it. That's occurring.

But there's layers to the onion, and some of these beings are just using fear, chaos to distract us from what we need to be paying attention to, or in some cases, they're convincing the humans that follow them that if they create chaos, order will come

from it because that's the natural order of the universe.
David: Well, we see things like the Spanish Empire, the Ottoman Empire, the British Empire, where relatively small countries end up building a massive amount of power by overtaking other countries – the Roman Empire being another example.

Is this empire-building part of the goal? Are they trying to dissolve nationality and national boundaries?
Corey: Different groups have had goals of creating a one-world . . . I guess, not really a one-world government, but all these different groups that have controlled different areas of the globe, or different populations of the globe, have wanted to expand that power and control everything and push their enemies off the globe or underground.
David: So that's the "New World Order"?
Corey: Yes. That one particular scenario would be the "New World Order".
David: So when they say, "New World Order", is that word "order" the order out of chaos that they're trying to create?
Corey: Yes.
David: Why would they need to have every country under their control? Why wouldn't it be beneficial to them to have people that were still opposing them?

Why would they want to own and control everything?
Corey: Until you logistically can control an entire planet, you want to have the entire planet at each other's throats. There's all these different groups that have different agendas and ideas. Some of them want to do population reduction.

I mean, there's many different agendas. And the ones we hear most about are the darker agendas of bringing the population down to 500,000, I think it is, and . . .
David: The Georgia Guidestones.
Corey: Right. And different things. But there are a lot of different agendas and plans out there.
David: Let's go with the Georgia Guidestones. It looks like Stonehenge.
It's sitting there in Georgia, modern times. It's got these precepts that are carved in multiple languages, and the first one says to maintain a global population of 500 million or less.
Why do they want to get rid of so many people? This just seems completely outrageous. It doesn't make any sense at all. What's the idea here?
Corey: What is the true reason they want to do it is really the good question. They say it's because the Earth cannot sustain more than that the way we live.
David: Humans are "bad" for the environment.
Corey: Right. But what actually do they have planned? Why do they want to free up so much real estate on this planet?

There were some of these New World Order groups that were making some dark deals that were planning on giving away entire continents to non-terrestrials. And

some of those groups already have built embassies on those continents.

It doesn't look like those “land deals” will be going forward now, but those were just some of the things that were going on.
David: So there are treaties in place with certain ET factions . . .
Corey: Multiple.
David: . . . and they . . . Are they homeless? They don't feel like they have a home planet any more, and they want to be here?
Corey: There are groups that are very advanced that can sustain themselves almost indefinitely in a space environment that are, basically, in a refugee status, that would like to be in this coveted Solar System.

And there's obviously a lot about these different groups that we don't know.

It doesn't sound like someone we want to live on the planet if a part of their negotiation is to reduce the population by such a large amount.
David: Well, one of the things that other insiders told me is that some of these people can't breathe our air, that the air needs more oil in it.
Corey: Right. Not exactly terraform. I can't remember what they called it, but it was a modification of the environment. Something about the nuclear radiation was going to have a byproduct on the environment that was more conducive to one of these species.
David: Like they have a radiation-hardened body, and it's actually better for them.
Corey: Maybe. Or it seemed like the radiation was going to have a long-term later benefit for them or something.

That is something that . . . I mean, I read that over 20 years ago. So there is . . . I can't remember the specifics on a lot of those individual plans.
David: So what . . . You may not be able to answer this, but what percentage of the people who are actually working in the Cabal are aware that they are being used by extraterrestrials who are trying to terraform our planet?
Corey: I would be totally speculating, but it seems like a large number of them that have been coming over as material witnesses in this off-planet witness protection program now quite a bit, but they didn't know all the details.

And what a lot of what made them flip is hearing more details from information that's been released that scared the crap out of them.

These people have also had to deal with these Cabal groups cleaning house, worried about people testifying against them, having too much information, you know, too much knowledge about their dealings.

So if there are Nuremberg-type trials, they figure, if we take out all the witnesses, we

don't have anything to worry about.
David: Do you think that the Cabal could be trying to deindustrialize the West?
Corey: Oh, absolutely. Yes.

The whole point is you take an industrial nation and move their jobs and that industrial ability over to a nation that's a third world nation that can do it cheaper, and weaken that industrial nation that just so happened to have won two world wars and has been called a sleeping giant in the past, and if awoken, could cause them problems again.

Even though they control it, even though they control it, they still need to manage it and keep it weak.
David: Why do you think so many of the people who write about this stuff online actually seem to worship the Cabal with their fear, that they see this as a towering enemy that has no possible solution?

Why do you think we, in general, seem to believe this group to be supernatural and so powerful that nothing can be done?

I mean, people are going to feel hopeless when they hear you tell us this stuff.
Corey: Because we buy into their propaganda. They've infiltrated the ufology community from the beginning, and they plant these seeds of hopelessness that they have all the power. They cannot be defeated. They are supernatural.

They put in all of these different stories to make you think you have to kill them with a silver bullet, and there's no hope, when we actually have all the power.
David: Well, it's nice for you to say that. It's like putting a little doily out there on the tabletop.
Corey: That's not a New Age platitude. That's . . .
David: But the people watching the show need you to tell them why they're still going to want to get up tomorrow morning and go to work, because what you've said is extremely disturbing.
Corey: It is.
David: How do we stop these people? How do we just . . . because people are going to think that this thing just has been going on for thousands of years. It's just going to keep going. What do we do?

Is there anything WE can do? Or is there anything being done about this?
Corey: When you say this, it reminds me of a kid's movie, an animated kid's move, called “A Bugs Life”, where ants are being dominated by these grasshoppers that come in and take all their food.

There's the leader of the grasshoppers. His name's “Hopper”. And the other

grasshoppers are like, “Why do we need to go back? Why do we need to go back to these ants? We don't need their food.” And, “Just one of them stood up to us. It was just one ant.”

Then the scene occurs to where he shows the power of one ant.
David: We have power in numbers, don't we?
Corey: Right. It's time for the ants to rise up against the grasshoppers.
David: Would you say that people educating themselves is a very important part of that process in educating others?
Corey: Yes. And then starting to spread that education to others through some very uncomfortable conversations.
David: So would you say that this is ultimately going to be a grassroots effort that just involves each of us having more courage and speaking to people in a non-threatening way who may not already be convinced about this stuff?
Corey: It's a good start.
David: All right. That's all the time we have in this episode of “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

Undersea Bases Season 9 Episode 5

Cosmic Disclosure; Undersea Bases Season 9, Episode 5

29 Dec 2017
David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock. We're here with Corey, and in this episode, we're going to go into underground and undersea bases.

Corey, welcome to the show.

Corey Goode: Thank you.

David: Some people, in fact, probably many people, are familiar with this strange image that's been circulating around on the Internet forever of this very large tunnel-boring machine that says “US Air Force” on it.

It's all white, and you see these guys next to it, and they are dwarfed in size by this thing.

What is that machine? Are they able to dig tunnels underground? Is that what that is?

Corey: Yes. It's like a mole, boring machine, a nuclear tunneling machine that crushes and vitrifies the rock as it goes.

They have different sizes and types, but I believe the one you're talking about, the gargantuan one, creates huge tunnels through all different types of rock for as long as you want them to go.

And they're created tunnel systems that circumnavigate under the oceans from continent to continent.

David: So just to break into this a little bit, do you think that underground cities are being made? Do you think that they exist?

Corey: Ha, ha.

David: Ha, ha.

Corey: I know it. I've seen images. I've seen video. If you were to see the video of some of these places, you would think you were looking at a luxury mall or hotel in Dubai. They are very futuristic-looking.

A lot of the times, in the middle, for at least sections, there's wide open areas with, on the outside, along the outside border, will be the beginning of where you enter into the complexes, and then they'll go further out into, I guess, what used to be a cavern wall that they built.

And the images that I saw took almost looked like they were taken from a drone going down, and you could see curved, huge elevators. And this is the kind of thing that

they would show people that they wanted to get into the Secret Space Program to tell them, “We have bases off-planet that are as advanced as the Jetsons.”

These are obviously built for the elite. The military bases are much more spartan, and when you're in them, you wouldn't know much of a difference than if you were at an above-ground base.

David: Well, it sounds a little different, what you're describing, than I think many people's perception would be.

I think if most people would think of an underground base, then they would imagine that a certain amount of ground is carved out, and that ground is the building. So all you're going to have is rooms and hallways.

Corey: They have those as well.

David: They do?

Corey: Yes. A lot of them are laid out in a way that are very long, narrow corridors that are carved out and that will be side by side, or a few side by side, and a few turned the opposite way – I guess perpendicular.

And then we'll have the same amount going that way, in the opposite direction, that will be connected. But those are the ones that are usually not that far underground and are usually directly underneath some sort of already existing base or other structures.

David: Are these always drilled out of the ground, or . . . ?

Corey: No. Over the years, they've used many different ways of doing it, from using conventional or . . . I guess the original type of nuclear explosions to blast out cavities that would vitrify a lot of the rock . . . A lot of it would collapse back in. They would go in and clean whatever out that they needed and then finish it off.

David: So just a typical nuclear bomb underground? They'll hollow out a large cavity, even if it's all solid rock down there?

Corey: Right.

David: Okay.

Corey: And then a lot of times, they would just drill really deep holes, put in charges of high plastiques, things that detonate at well over 32,000 feet per second, that just turn the rock to dust, no matter how hard it is, and then they excavate it.

And, of course, you have the tunnel-boring machines. And then up in recent times, they have more recent, next-gen type of explosive devices, that when detonated, leave a lot more desirable, almost spherical hole in the rock, that also has almost no radiation.

David: When are you aware of these underground civilizations, underground bases first being constructed?

Corey: We've been building underground bases since before World War I that are . . .

David: Before World War I?

Corey: Yeah, that were pretty impressive. But that's when we were really learning. It really didn't become a real pressing matter to have deep, underground military bases until the nuclear age, and until the age of having not only nuclear weapons but delivery systems that were sort of like bunker busters, that could deliver nuclear weapons deep under the rock strata before detonating.

So they had to keep up with the weapons systems that were being developed. As the weapon systems were being developed to take out deep, underground military bases, the deeper they went, and the more sophisticated they became.

David: Isn't there going to be a problem regarding the Earth's crust getting hotter as you go farther down? How do they circumvent that?

Corey: They do have environmental control over the . . . These are closed systems – all the air, everything. They're closed systems.

And in a closed system, you can pressurize it and control the atmosphere.

David: So you're saying that some of the ones that our own people have built have actual buildings in them like you're looking at a city?

Corey: Some of the ones that were actually built as cities, underground cities, for what we call the elite and their families to escape to.

David: Do they have like what we talked about with some of these Inner Earth civilizations? Do they have trees down there, and lakes and rivers, that kind of stuff, as well as buildings?

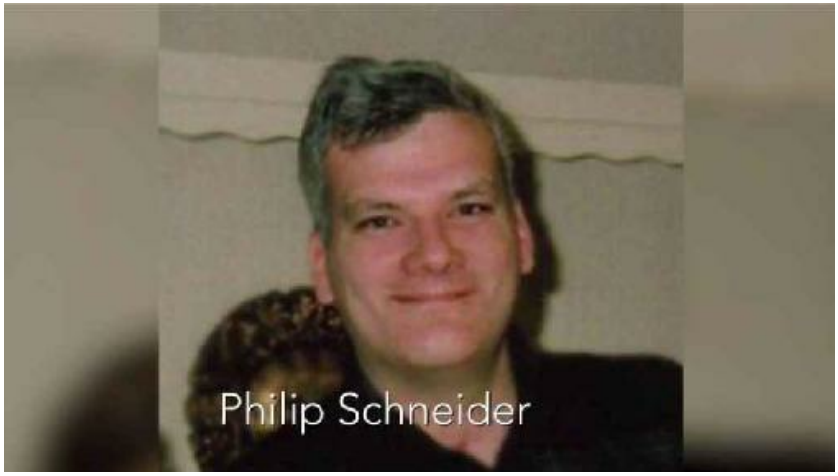
Corey: They do hydroponics. They also have plant life to help do some sort of balance with scrubbing CO2. And also with their water systems, . . . It's a closed system, so

they do have that kind of thing, but I do not know the breadth of it.

David: How do they find a water supply? Are they able to tap into aquifers or underground rivers?

Corey: Yeah. The problem is keeping the water out.

David: Really? Let's go now to Phil Schneider, who is a whistleblower who came out about, as you said, Deep Underground Military Bases, or D.U.M.B.s, . . .



. . . and at the time, Schneider was widely ridiculed by most of the UFO community, but shortly after he came out, he died.

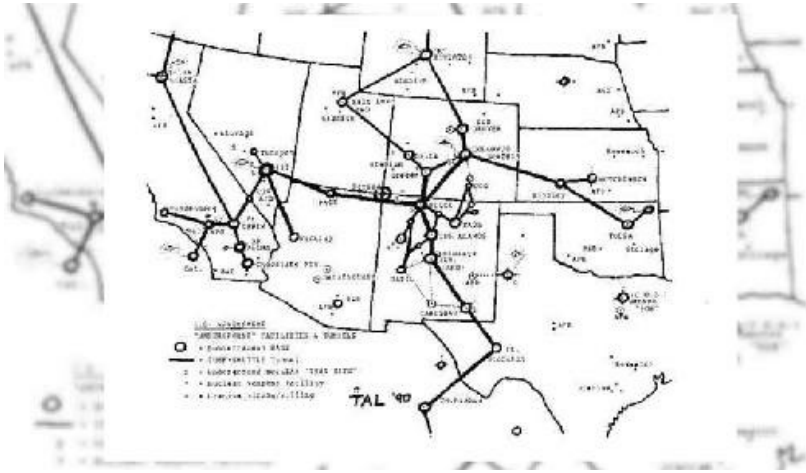
And since then, a lot of the things that others are saying seem to be validating Phil Schneider's testimony.

Corey: Yeah. There are underground bases and facilities all over the place – in cities all around us. I mean, there are people that walk into buildings that take elevators that are service elevators that the rest of the public don't know about.

They go down several more floors than anyone that work in the building know about, get on an underground train system, and are shuttled to anywhere in the world in a matter of an hour or two, to where they can work in these underground bunkers and facilities.

And they're absolutely spread out all over the place.

David: Well, let's take a look now at this map that Phil Schneider hand drew over America that shows a series of round circles where bases are, and then a series of lines between them that ostensibly represent tunnel systems.



Corey: That's extremely incomplete.

David: You say that's extremely incomplete?

Corey: Oh, yeah.

David: Okay. Why would you say it's incomplete?

Corey: Because the underground tram system goes under the ocean. It goes to Australia. It goes to Europe. It goes to Asia. The tram system travels all over.

And there are underwater bases. There are bases that are underwater, on the surface of the ocean floor, and there are also subterranean bases below the ocean floor.

David: Well, some people might have trouble with that because normally just getting a submarine down there, like a bathyscaphe, or one of these things that they would use to try to film the ocean floor, the pressures become extremely great as you go farther and farther down, from all the water that's there.

Corey: Hm-mm.

David: So based on your understanding, how have they surmounted these problems to make these undersea bases?

Corey: The type of base that I'm going to tell you about right now, you're not going to really find in the Marianas Trench, not built by us, anyway.

But I had an engineer describe to me how they built a certain base with domes that were lowered into the water, positioned by the Navy, and then an underwater concrete was applied.

The domes were placed on top of the foundation, and then the water is pumped out from the inside of the dome. And then the pressure of the ocean creates an even tighter seal from the way it's engineered.

It's a type of concrete that is the foundation. They enter in below and come up within.

And these aren't huge domes like you would think of in sci-fi, but they could be colonies of domes that are connected together.

David: And what is the dome material made out of? What does it look like?

Corey: Some sort of . . . I don't know if it's acrylic or plastic of some sort.

David: Does it have any transparency, or is it solid?

Corey: It's kind of an opaque.

David: Okay.

Corey: And then they build within it. And then, again, there is [are] also Navy expeditions that have gone and found beautiful underwater caverns that lead to areas underground that are perfect for sealing off and pumping all the water out, pressurizing, and building a base.

They've done that and created several submarine bases.

There's one that there was a lot of speculation about. Some people said it was a hoax, but there is an opening for an underground base system that submarines use off the coast of California that was, I believe, caught on a satellite image. And there was a whole lot of scuttlebutt on the Internet about it, and then it kind of died off.

There was a door that would normally be closed that matches the features of the ocean floor, and it was wide open, and this is where submarines go in, go to a lake that is in Nevada or . . .

David: I thought it was Nebraska.

Corey: Yeah, Nebraska.

David: The “Nebraska Navy”.

Corey: Yeah. Yeah. And it pops up in a . . . And they pop up in a lake, or they'll stay just below and not surface. But they have . . . It's large enough for nuclear submarines to travel in a subterranean cavern system. It's like an underground submarine . . . and underground, underwater submarine base.

David: Well, let's just speak in generalities now, because I think the answer you're going to give is quite shocking.

How many bases underground or undersea have we, in our modern civilization, built that you're aware of?

Corey: Oh, anywhere from very small ones to very large ones, it's hundreds – hundreds of them. And as we build bases or are tunneling for bases, we come across many ancient underground bases from other civilizations, or current bases from non-humans.

So there's a lot going on down there. There are a lot of different types of bases, and there is some prime real estate below the ground to do things secretly. And all the beings that are doing secret things, including our Special Access Program people, are down there doing it.

David: How could they possibly pay for such massive construction programs?

Corey: You're assuming that they're going to the DoD, putting in a cost, expense, expenditure plan and getting it approved, and then going and taking that money out of the budget and hiring this contractor and that contractor to come in and do all this work, and then paying them with a check.

Everything that is done is done with either . . . if it's done with the lower space program or military intelligence, it's done with drug money, money laundered from some other type of illegal activity, or it is done with misappropriated funds from other things, like maybe Social Security.

But they find a way to make things happen when they need it.

David: When we're looking at the kind of labor that would be involved in building skyscrapers, we're talking about tremendous numbers of contractors, tremendous amount of logistics and support, bringing in all the building materials, the construction materials.

Is there some kind of vast, underground infrastructure of workers who just live underground that would be available to build new things like this? Because obviously, if they are building this stuff underground, and they are using people from the surface, that creates an operational security issue, I would think.

Corey: Right. A large group that do . . . they maintain the underground systems, and the people that build them, well, they don't . . . they live down there pretty much when they're building it, but they are not sequestered down there.

They are a part of this military-industrial complex and are heavily rewarded for the work they do.

Now, if these people were all sequestered down [there], and the security procedures were taken to where we never saw or heard from any of them, we would know nothing about these bases.

David: Is this something that's primarily being done by the Cabal-controlled countries, or are there other countries that are less Cabal-oriented, like, let's say, India or China, that are doing this as well?

Corey: Just about any country you can think of is doing this on some level.

David: Are these countries that are not part of the Cabal, are those bases disconnected from the Cabal bases?

Corey: Absolutely.

David: Okay. So it's not like they're all tunneled together.

Corey: No, they're self-contained. No, these are . . . Yeah, most of the bases are self-contained. There's only a few that are . . . I mean, not a few, but a small percentage, that are a part of this underground network – a small percentage, globally, of them all.

The vast majority of them are built to be self-contained and to house a certain amount of people, anywhere from 10, 20 to 100 years, and sustain them.

David: Hm. What do they use for power to run the electricity down there?

Corey: Well, some of them use geothermal power, and some of them use hydrodynamics, and some of them use classified power systems.

David: Hm. It would appear that there would have to be a decent number of people who are living down there on a continual basis in order to keep this whole infrastructure going.

Corey: Yeah. And they see that as a golden ticket if there's a catastrophe above ground. And they're not going to jeopardize that if they think that . . . If they have a golden ticket for them and their family, to bring their family down, the last thing they're going to do is jeopardize their family being left on the surface during some sort of a catastrophe.

David: Are there people who have been down there for generations, and they've never gone back to the surface?

Corey: That is mostly the case, I've heard, on off-world bases.

David: How many total personnel do you think there are that you know of?

Corey: There's no way I could even guesstimate, but there's more now than ever. All the intelligence that's been coming in – I guess we'll go with the Cabal term – Cabal groups have been moving supplies, tooling, military assets, personal items and family to these bases.

One of the most advanced bases has been built down in Brazil. It is one that there's been a lot of activity, a lot of shipping containers, a lot of supplies, a lot of personnel moving down there.

This has been reported by several different sources, and it's been going on for well over six months.

David: Have you heard any intel on your own about some of these bases having a vulnerability or potentially being portalled out or otherwise destroyed in some way?

Corey: Yes. There have been some of these bases that have been attacked, some of the older bases or bases closer to the surface.

This is why they have put so many resources into building these more advanced bases, like the one I'm talking about in Brazil that I've heard referenced as a “Zazi base” and a few other terms. So it's definitely a Cabal, Nazi-type, fascist regime base.

David: Zazi is similar to Nazi, so . . .

Corey: Yes, it's when the groups moved down to South America, they started going by business names. And business coalition groups, they started going by “Zazi”, and they were all . . . they all happened to be Germans with ties to Nazi Germany.

David: Are you aware of any extraterrestrial groups from your time in the space program that would have a sufficiently advanced technology where long, straight, shafts like this could be built with exceptional ease, much more than what we're doing with these nuclear-controlled drilling tuber systems that we have?

Corey: Yes. These ET “embassies”, as the space program is calling them, are diamond laser-cut-looking and symmetrical and were built in almost no time.

David: So do they have a way of getting rid of the material, so they don't need to just be hauling it out of there?

Corey: Yeah.

David: Is it something that gets rid of the rock?

Corey: Yeah. Once you get to a certain stage and understand everything is vibration, it's child play for them to manipulate matter.

To us, it's a real mind-bender to try to figure out how that magic works, but to them, it's . . . They understand that like we understand how the tides work on the planet.

David: How many of these hundreds of bases that you talked about have extraterrestrials in them as well as humans? Are they primarily ours, or are they also jointly owned and run at times?

Corey: Of course, some of them are joint-operated. I don't have that information. I know that the majority of them are for R&D.

David: One last thing I want to get you to address right before we end the episode here is: people all over the world are hearing these very scary, deep, resonant, trumpet-sounding noises.

And I've had insiders like Jacob, from the space program, tell me that there are these air apertures on these underground bases, and they can partially open them or close them and then ventilate air through them, and it's like blowing into a trumpet and getting this big, resonant sound.

Do you know if they do have these iris-type of metal things that could be used like that, that open and close for air ventilation?

Corey: Every once in a while, they purge the air from . . . they recycle the air. But some of these trumpet noises people are hearing on a wider scale in the skies are actually an energetic shock wave coming from the Sun, causing a . . . not really a sky quake, but the sound is coming from energy coming from the Sun interacting with our upper atmosphere.

David: Do you know if there could be a way that ventilating the air out of an underground base could cause that trumpet sound?

Corey: It does. It causes a real weird sound, almost like a tornado siren.

David: So you're saying that these sounds could be the result of air being ventilated periodically from these underground facilities.

Corey: Right.

David: The metallic shaft is vibrating.

Corey: Right. They recycle air from time to time.

David: All right. Well, thank you, Corey. This has been a very fascinating episode. I hope you've enjoyed it. This is “Cosmic Disclosure”. I'm your host, David Wilcock, and I thank you for watching.

Technologies of the Secret Base Season 9, Episode 6

Cosmic Disclosure; Technologies of the Secret Base Season 9, Episode 6

03 Jan 2018

David Wilcock: All right. Welcome back to "Cosmic Disclosure". I'm your host, David Wilcock, and I'm here with our special guest, Emery Smith. And Emery has some absolutely stunning information, and he has taken great risks to bring us what he's going to share today.

Emery, welcome back.

Emery Smith: Thanks, Dave. Thanks for having me. I really appreciate being here.

David: It's good.

Emery: Yeah. It's fun.

David: I'm really glad you finally decided to do this. I think it's long overdue.

Emery: I know, you've been trying to get me to do this for 10 years, but certain recent events have persuaded me maybe it's for my better safety that we do this, and also to educate the public, and people deserve to know.

I've believed that my whole life, but I know there's also a time for everything.

David: Yes. Now, it seems with a lot of the insiders I've spoken to, that once we dig into their life before the military, that there was something going on before they ever even went in.

And I'm curious: have you had unusual experiences prior to military service that you think may be relevant to share with us today?

Emery: Absolutely. It's personal, but I can tell you right off hand that my grandfather was in the Army, and my father was in the Navy, but when I was born, he was already out of the Navy. And I always wanted to be in the military.

I think I had my first extraterrestrial visit in 1979.

David: Hm.

Emery: And it was at our five acre farm in Fort Myers, Florida. And that was the first contact I ever had, and it was a very pleasant contact. I'll never forget it.

I was not contacted after until 19 . . . between . . . around 1999, '98, where it was like a complete landing and . . . That one was a little bit startling because I was camping out and wasn't ready for it, because it startled me at night because I had just laid down, and I heard some footsteps walking up.

So that turned out . . . That was like the two experiences. The other one's after the military, by the way, but it was just a little bit shocking. But the first one was when I was very young.

But after that, I was obsessed with, of course, laying under the stars. I probably slept more outside of my house than I did inside the house, gazing up at the stars.

David: Could you tell us a little more about the contact in Fort Myers, Florida? Was there a craft that you saw that landed and then what happened? Describe the craft. Describe exactly what happened.

Emery: Exactly what happened was, I had laid down to go to sleep in my sleeping bag, and when I looked up, . . .

David: You were outdoors?

Emery: I was outdoors. Yeah.

David: Okay.

Emery: We had a big farm out there.

David: Okay.

Emery: . . . in the middle of the field. In the middle . . . You know, there's nothing around.

And, you know, a flaming disk comes very . . . a 45° angle. It just comes right out of the sky but moving VERY slow, but red hot.

You could see the orange glow.

David: How large was it?

Emery: Well, from where I was at, and it was probably at least 2,000, maybe 1,000 meters away, and I saw it go into the woods. And I heard it. And I said, “Oh, it was probably just a meteor.” And wow, it was like the most brilliant meteorite I'd ever seen. But I also noticed that it had a very odd shape.

So I just didn't think anything of it. And it actually landed closer than I thought: in the neighbors, just a couple acres over, 5 or 10 acres over, in their swamp.

And one of the extraterrestrials came out and walked over. And I was next to a

barbed-wire fence – you know, the one you keep cows in with, four lines, sometimes five if they're big.

David: Right.

Emery: I used to put up fences. You know, these little hooks that you put that barbed-wire fence . . . you know, but that nail to hold the barbed-wire fence against the pole, right, that little hook?

David: Uh-hm.

Emery: So some of them were kinda loosened, you know. And I laid out a tarp all the time. And then I put my sleeping bag on the tarp.

So I laid down, and I'm in the bag, and I always . . . you know, being who I am, tactical Emery, I always have my gun with me. I did have my gun with me in my sleeping bag. And I was in a mummy sleeping bag, and it was very cold.

And I heard a, "Ugu, ugh", like someone jumping the fence – just as if I would climb the fence. And as the fence gets pushed down, it goes to the metal in the hooks . . .

David: Right.

Emery: It's like, "Ur, ur, ur," and then "bump, bump" on the ground. And I'm like, "Okay. All right. Skunk ape, bear . . ."

David: Ha, ha, ha.

Emery: ". . . panther?" Ha, ha.

David: Ha, ha, ha.

Emery: And I'm just like, "Oh, right now?" Immediately, I'm listening to the footsteps. And I'm very attuned to that kind of stuff.

David: Sure.

Emery: I felt a little like uneasy. So I know, maybe it was just me, or maybe it was this being. So I immediately just grabbed my zipper, and I already had my gun in my hand, and I unzipped, and with my gun and flashlight just stood up, and there was a three-foot being right there looking at me.

David: What did it look like?

Emery: It was blue-gray, and it had big blue eyes. And it had a little thing on its head like you see in the movies, like we see in cartoon characters.

David: Like an antenna?

Emery: Yeah, a little like an antenna.

David: When you say it had blue eyes . . . So we're not talking about a Grey?

Emery: No. No. It was very scrawny, and it was blue. And it . . .

David: Like what color blue? Like your shirt?

Emery: Yes. It was this kind of blue. And with the light on it, and me, I'm still stuck in my sleeping bag, and it looked at me, and I think the light really hurt its eyes.

It got like, “What, huh, oh! This is not going down right.” Or, “Huh, oh, I just crashed my craft. I'm just looking for the nearest help or assistance.”

So it's embarrassing to say, but I jumped up out of the sleeping bag, and I chased . . . because I see him walking . . . going [showing running with small legs] . . . and I'm chasing him, and he goes into this thicket.

And I'm not, you know, like chasing him to kill him. I'm just like, “Come back! Come back!”

David: Ha, ha, ha.

Emery: I'm chasing this thing, and he goes right through this thicket. It was so thick there's no way I could . . . I tried to go in there and got all cut up by the vines.

David: Oh!

Emery: And then I hear, “Ur-ree, ur-ree.” And I look next . . . the fence is right next to me. And it gets really tight. Like he's over there jumping the fence again, heading back . . .

David: Oh!

Emery: . . . to that area. So I was full of adrenaline. And, of course, it was really late at night anyway. But I did, I took a little hike in that area to that direction, but I couldn't see anything else.

So there was nothing exchanged on that. It was just a . . . I think we both startled each other. And that's what happened.

David: How human-like would the face appear for a regular person? Would it look like a regular person from Earth with blue skin? Or was there something different about the face?

Emery: Yeah, the face was fuller and more oval, like a bubble.

David: Okay.

Emery: Like if you have a bubble and you just barely . . . If you get one of those plastic balls and you go like this [squeeze the ball with open hands].

But it had features. It had holes in its sides [of the head], not ear lobes but holes. And it was aware, more than 100% aware, and very agile.

David: Were the eyes larger than a regular human on Earth?

Emery: Yes, absolutely.

David: Like how much?

Emery: By at least three times.

David: Wow!

Emery: Yes, it was more eye . . . Like the eye and the top of the cranium, it was larger.

David: But you said the eyes were blue.

Emery: Blue. Blue eyes.

David: So it didn't have the black like you see with a Grey?

Emery: No. When I say blue, you didn't have white. It was blue eyes. I didn't see any pupils. But it could have been its protective layers. They have these lenses, a lot of the extraterrestrials, they wear over their eyes.

David: It was a solid-color blue?

Emery: Yes.

David: Really?

Emery: Yes.

David: And did it have a nose, or just . . .

Emery: Yes, it had a nose – very small.

David: Very small. And a small mouth?

Emery: Very small mouth. Yeah.

David: Okay.

Emery: And it was very, like, cartoonical. Like, "No way!" It was very comical in a way.

David: And how old were you at the time?

Emery: I was probably . . . ah, '98, I was 28.

David: All right. Well, let's go back to the first one, because this could be very relevant as we get into your military history.

Emery: Sure.

David: What happened in the first event? Let's go through that step by step.

Emery: Okay. I had other multiple events after that, but I didn't understand what it was. I would always do a lot of sleepwalking when I was younger. And I was always outside in a hypnagogic state, but I was very aware, because I would always come back and mom and dad would see my feet were dirty every morning . . .

David: Right.

Emery: . . . and I'd have no idea . . . Many times they caught me just heading out or heading in.

David: Right.

Emery: And I never injured myself or anything like that.

On this particular evening, and it was not very late, I just was told to go outside telepathically.

David: How old were you?

Emery: I was in second grade, so it was probably around '79.

David: Okay. So you got the impulse to go outside.

Emery: Yeah . . .

David: But this had been happening to you before then?

Emery: No, this was the first.

David: Oh, this was the first time.

Emery: This was the first time that anything like that happened.

David: Okay.

Emery: And then after that, it started happening all the time, I mean just going out, but not knowing why "I'm out here," and seeing lights and stuff.

And so I said, "Okay." So I went outside in the driveway. We had a lake, and I went up to the dock, and I just looked up, and there was this beautiful blue craft. And it was just silent.

And I was just so amazed that it was silent and this craft was there, and I'm smiling, you know, and I was like even singing. I was like, trying like, . . . I don't know. I was like, “Woo-oo!” I started whistling or something. It was very odd.

David: What did the craft look like? What was the shape?

Emery: It was blue, and it was disk-shaped.

David: What kind of blue?

Emery: Blue-white, like white. Not dark, not dark blue.

David: Okay.

Emery: This was more like a whitish, bright . . . , but you could see detail, but you couldn't see edges. Does that make sense?

David: Uh-huh.

Emery: You could see outlines of this, you know, classic shape. And it was telepathically saying that “We're here,” and “We exist,” and, you know, “We're going to be back for you.”

David: Wow!

Emery: And I remember very . . . like it was yesterday. And it always stuck in my head.

David: So . . .

Emery: It happened very shortly . . . I think it . . . The whole event lasted, maybe, a minute and a half, two minutes.

David: Hm.

Emery: It's long. For that to happen today, it would not, because we would shoot you down in two seconds.

David: Right.

Emery: But back then, I think, it was a little bit different. I think they had a little bit more opportunity to make these types of meetings with, you know, not only me, but many other people.

David: Right.

Emery: And to allow them to give us hope and to strive for that later on in life.

So then I just became a really firm believer and all that stuff. And I really wouldn't talk about it that much. Neither would my family.

David: Do you think that either your father or your grandfather might have been involved in black ops [covert operations]?

Emery: Yes, my grandfather was in the Army.

David: Really?

Emery: Yeah. And my father flew in the Navy planes looking for the submarines coming in to the Bahamas and off the coast of Florida. So he was a spotter for that.

David: Really?

Emery: And he did some other things, but I don't think they were intelligence related.

David: You were on some kind of extraterrestrial-contact program it sounds like, and you're describing multiple events . . .

Emery: I don't know.

David: . . . of leaving your house at night . . .

Emery: Oh, yes

David: . . . and going outside. Do you feel like there are gaps in your memory from those events, or . . .

Emery: No, no.

David: . . . what do you think is happening when you go out there?

Emery: No, I remember a lot. When I was younger, I had this gift – I call it a gift. I can control my dreams. I know when I'm dreaming.

David: Hm.

Emery: And it just recently came back to me, just recently, within the past couple months, where I can do it again.

I just lost it after I went into the military. I couldn't do it anymore – when I went into the military.

And I started the military early, age thirteen with . . .

David: THIRTEEN?

Emery: . . . with the auxiliary of the Air Force, Civil Air Patrol, my dad introduced me to. And they were giving pilots licenses to kids for free if you qualified and wanted to be part of this thing.

David: Wow!

Emery: And it's for people also before they go into the military so you get extra rank before you go in – kind of like ROTC, . . .

David: Right.

Emery: . . . which I did that too.

David: Right.

Emery: So you get all these perks. Yes, I got my pilot's license at a really early age.

David: Okay.

Emery: I took many tests that . . . I just know one thing: I took a lot more tests than everyone else did going into the military. And they were not your normal ASVAB test.

David: Okay. Give me an example of something unusual as a test.

Emery: Well, you know, an ASVAB test is based off of . . . "What are you good at? Are you a good mechanic? Let's see if he can figure out this sprocket or this chain."

David: Right.

Emery: "Or maybe he's good at writing. Does he know a verb, adjective or linguistics."

David: And that might lead to your MOS – Military Operations Specialty. [Military Occupational Specialty]

Emery: And that's how they lead you out to your MOS.

But with my stuff, it had to do with geometric shapes.

David: Really?

Emery: Yeah, and like mandalas and like . . . "Out of these six, which one do you like?"

Like, "What do you mean, which one do I like?"

So to me, it wasn't a test. But it WAS a test for something! Because obviously, there's some sort of subliminal message in there – maybe some sort of encoding that I don't know about that I have or my lineage has.

David: These could be logos of certain ET groups that they might have been aware had already contacted you.

Emery: Right. Exactly.

David: Right.

Emery: So that's how I got pulled out of the Air Force part after I did my four and a half years and then still continued with the contract work.

David: Had you already done four and a half years in the Air Force before?

Emery: I did four and a half, and then two years of reserve, and then two years of inactive – so a total of four . . . eight and a half.

David: And it's after the four and a half years that you got the salmon filets and that whole thing started?

Emery: No, the first time I got the salmon filet was August 8th of 1991.

David: Wow! You're having these tests. Now, did these tests start all the way back when you were 13?

Emery: Yeah. They started in the auxiliary part. And then . . .

David: So one of them was geometric shapes. Could you give me another example of something that was bizarre as a test that you got?

Emery: There was a lot of high-end physics and magnetic questions, which I didn't understand at that point, but I scored high on it. But I'm really not . . . that's not my thing.

But, you know . . . so I had these amazing job opportunities when I went in the military. But I just wanted to be an F15 Eagle pilot, because I just wanted to fly. You know, Top Gun all the way.

But the Army offered me a huge scholarship that I could not refuse to fly Apache helicopters.

David: Wow!

Emery: But all flight-related, you see, going towards, probably, being an astronaut, or NASA, or other space-related stuff.

David: Hm.

Emery: Most pilots, or most astronauts, as you know, which it's now changed because they need scientific technicians . . .

David: Right.

Emery: . . . for specialty. And that's how I became like a payload specialist.

So getting back to why I was just so adamant that I was going to be a pilot, being just a kid, you know – a 16-year-old when I signed up, by the way – making these decisions.

And they said, “Well, you can also do this medical stuff.”

And I was like . . . And I loved going to the doctor and seeing all the stuff. I liked watching them cut out my ingrown toenails, . . .

David: Ha, ha.

Emery: . . . so they don't hurt so much playing soccer.

David: Right.

Emery: So, it amazed me . . . They're always like, “Sit down. Son, you don't want to look at this. We've got a lot of blood.”

And I'm like, “No, no, I want to see this.”

David: Ha, ha.

Emery: They're injecting me and like, “This kid is frickin' weird.”

David: Ha, ha, ha.

Emery: And all these surgeons, too, and these doctors, when I was really young, end up becoming my friends. And I end up becoming their teachers, because I got CME accredited [Continuing Medical Education] to teach them on platelet plasma and stem cells. It was really a funny circle.

David: What is CME accredited?

Emery: Physicians and nurses and all medical people, in order to keep your license, you have to go to symposiums and get updated on new educational properties. So, you know, Continuing Medical Education units.

David: Oh, Continuing . . . Okay.

So let's get back to when you are first brought to Sandia. And I think that's something . . . You've told me before about the process of how you got to the room.

Let's start with how . . . how you get brought in. Like, what was the first thing that you saw that would be a lot different than a typical military experience?

Emery: Well, being in the operating room and working emergency-type situations, and, you know, already knowing pretty much everything about the human body in the accelerated program I was in assisting surgeons.

David: Uh-huh.

Emery: I knew that when I walked into this place, that they had spent a lot of money on these . . . everything, even the doors, the security systems.

These amazing security guards, the demeanor of the scientists and physicians that were there, the technicians and everyone, it was VERY serious. It was very, very organized. And it was very clean.

And it took . . . You get debriefed first. You know, they take you . . . It's a huge background check, but I'm already on active duty. So I was perfect for them.

David: Yeah.

Emery: Young. You know, “If he messes up, who cares! You can just get rid of him. He died in a helicopter crash,” you know, whatever.

David: Right.

Emery: So, perfect subject, but super high IQ, very perfect – already has medical training. “Let's just see what he can do.”

So they brought me in this room first – and this was before I actually went to do my first case – and they just laid it all out.

David: Laid what out?

Emery: Laid these contracts out. I mean, just . . . It was so thick.

David: Like you were expected to read all that as you sit there? That doesn't make sense.

Emery: Well, of course, I didn't read it. I was 19 years old!

David: Ha, ha, ha.

Emery: I saw the page, and I was like, “Yeah!” I already signed up. I was already stupid enough to sign up to get into the military, so I was like, “Fine.”

And it's like, you know, . . . which I love, by the way, you know, the military. And they saved my life as much as, you know, made me the man who I am today. So I'm like a huge supporter of the military – still am to this day, which with other projects and things. So I didn't mean to make it sound like I'm not.

I was really thankful for that.

David: Well, we're very thankful for the Alliance . . .

Emery: Yeah!

David: . . . and the fact that they're turning the tables for us here.

Emery: I know!

David: It's amazing!

Emery: It is. All the white hats coming out. It's just a blessing.

David: And we need people like you to be brave enough to speak to the truth and say what they experienced.

Emery: Well, I'm hoping once . . . because I know a lot of these people. I'm hoping

once they see me come forward that I really believe there's going to be a lot more come forward like within a year.

David: It's going to get easier too, . . .

Emery: Yeah.

David: . . . because the Cabal is being greatly defeated right now. And you have had a lot of briefings about that as well, which we can get into in later episodes.

Emery: Right. Sure.

David: So you get all these documents.

Emery: So I signed “the book”, and they make it very officious, all these people, you know, the cool lab coats, and other security people, but not in their normal black ops. They're in like clean suits, like really cool, white, tactical stuff.

David: Hm. Like jumpsuit kind of things?

Emery: Yeah, like a flight suit – white, but with a lot of cool straps and not normal guns. I don't think they can use guns down there because of the pressurized systems, is what I was told.

David: Oh.

Emery: And I was always told never to bring MY weapon into the facility.

David: Right.

Emery: You use a locker room at the top. You basically change into scrubs, then go down and change into your suit. So it's like two change-out stations.

David: Wow!

Emery: And you wear a band, which was the coolest thing ever. And this band felt like silicon. I later found out it was graphene, and it glowed.

And that recorded everywhere I went on the facility.

David: Ah!

Emery: And they take it from you. And it also activated later on.

They had iPads back then that make these iPads look like a . . . I mean, thin as . . . You know the X-ray film, how flimsy that is?

David: Yeah, yeah.

Emery: You know, or the films from the . . . we used to use on the projectors?

David: Yeah, yeah.

Emery: Okay. Imagine that being an iPad, and flimsy, and being completely lit up, and accessing the entire main database of whatever section you were working in, and locating your supervisor if you needed to on . . . Everyone kind of knew where everybody was. [There was] nowhere to hide or sneak anything out.

Anyway, you had this cool iPad that was always with you, and you used it for data entry for all the stuff you do because everything's documented.

David: If it's so flopsy, how would you be able to type on it?

Emery: Oh, that's easy. Everything was with your finger, and they had a stylus. And the stylus looked like a thermometer.

David: Hm.

Emery: And it had a very grippy texture to it. And you could hold it, this flimsy . . . It's not THAT flimsy. It's a little bit stronger than that. But it's like that kind of material. It's like a special polycarbonate that, I think, was infused, of course, with probably graphene or some other . . . or, you know, something photovoltaic, obviously, to do all this stuff.

And anyway, it would always be down on something. It's not a text paper. This is something where it is always on your counter, you're using your little thing, your finger, or whatever, and it also interlocks into other . . . Every room has like a hub, like you plug your iPhone into?

Well, this thing, when you lay it down on a table, the whole table now knows this.

David: Oh, wow! That's cool!

Emery: So it's just like this Bluetooth-type energy.

David: And it's full color?

Emery: Yes. Oh, brilliant full color. Three-dimensional objects. You can . . .

David: Oh, holographic too.

Emery: Holographic too.

David: Really?

Emery: Yes, especially when you put it on the tables, the tables become like the actual 3D part of whatever you're presenting.

David: Wow!

Emery: So, if I did get a body, and that's already been 3D scanned, the body, that can be projected above the table. And then you can move it with your hands.

David: Oh, wow!

Emery: And you can say, "Hey, so I don't know what this is here in the body. We want just this. So cause the least amount of damage to get just this organ or this little BB out."

So it was a very . . . and that just TURNED ME ON, because I was a techie, and I was young, and I didn't want to ever mess up. And I just wanted to keep going.

David: And at the time, right, the time window you're describing, all we had was like these desktop tower computers that were ridiculous.

Emery: My goodness, we had those big bulky . . .

David: Ha, ha.

Emery: I don't even know if Apple even came out, . . . even had their comeback yet.

David: Right.

Emery: They just were. So the wrist band, the little iPad floppy thing, was a very important thing that's always kind of with you. And . . .

David: Could you roll it up and keep it in your pocket, or how would you carry the little floppy iPad?

Emery: Well, you don't have anything on you ever but this band and this piece of

paper.

David: Oh!

Emery: You don't have any . . . You . . . I can't have a watch, can't have a piece of jewelry in this facility. Everything has been stripped from you when you do your two change-outs.

David: Corey, on this show, has talked about a smart-glass pad. And it sounds a lot like what you're describing. What was it called? Did they ever have a name for it?

Emery: It was always just called “the folder”.

David: The folder.

Emery: Yeah, the folder. There was no fancy-like Star Trek name or anything.

David: Right. Well, a lot of times it seems like to, as they call it, “reduce psychological impact” . . .

Emery: Yes.

David: . . . they try to give you these conventional things.

Emery: Ah! That makes sense.

David: Yeah. Right. So it's just a folder.

Emery: Yeah. “Don't forget your folder and your band.” “Okay.”

David: Ha, ha. Did the band do anything else besides just glow? You said it glowed, or . . .

Emery: Yeah, every now and then, it would glow. I think it was just because someone was accessing your whereabouts, especially when there's breaches.

David: Oh!

Emery: There was a couple of breaches when I was there of things escaping. And there's also a scientist technician like me that did try to take some stuff out of the facility.

David: Hm.

Emery: And when that thing glows a different color – there's like different colors for different things . . . And, you know, just do not move and don't go anywhere until whatever is . . . the emergency is going on. Like in hospitals, we have Code Reds and Code Blues, and all this stuff. It's similar to that, that not. . . You know what to do or not to do.

David: What were some of the colors you can remember and what they meant on the band?

Emery: Red means you better not move.

David: Just don't even move at all.

Emery: Yeah. Blue is “everything's fine”. There was one yellow, which means “breach”. Contamination breach.

David: Oh!

Emery: Yeah. Not just . . . No, not like someone stole something. Someone, somehow, had a hole in their suit or . . . because you have to understand these things have viruses. They have bacteria that we don't even know. It can kill you.

David: Right.

Emery: It could mutate. The last thing you want is that out. So they have these artificial intelligence systems in place, and these super-high scrubbers, and like the most amazing disinfecting-type of air handlers you would not even believe.

David: Hm.

Emery: And even walking through some of these things, when you have your change out, didn't hurt or anything, but it was just a precautionary thing.

But they have these vents in the systems that pick up on all particles, parts per million, and it could tell if like one small cold virus bacteria got into a vent, and goes and hits this thing. It's like everything gets shut down immediately.

David: And that's yellow, on the band?

Emery: That's yellow. Yeah. So you never want to see yellow.

David: Do you think that the band could tase you or kill you if you didn't move when it was red?

Emery: I had never felt threatened by that band at all.

David: Okay. Describe to me what a breach means. What did somebody do?

Emery: Well, one time, and this is just from . . . now, I can only say second hand.

I will always tell you if it was me talking first hand or second hand. Second hand means these alarms went off. Of course, we were later debriefed that someone tried to take something out. That's all.

So I don't know WHAT it is. I really was not allowed to ask what it is.

David: Ah.

Emery: But that's what happened to ease everybody's calmness, you know, so everyone can start focusing again better. It's nerve-wracking if you hear ANY alarm there.

David: So you never found out what any of these breaches really were. They just give you a very vague . . .

Emery: One breach I did because my really close friend's husband was one of the security guys.

David: Oh!

Emery: So they did have . . . made an awesome hybrid bear-type osseo-integrated being.

David: I don't know really what that means. Could you be more specific? A bear-type . . .

Emery: They made a hybrid animal . . .

David: Okay.

Emery: . . . of some sort that resembled a giant grizzly bear.

David: Okay, but it was human-like?

Emery: But it had metal . . . yeah. But it had like metal talons made of some amazing . . . you know, it was osseo-integrated into his bone structure.

David: Wow!

Emery: That means the titanium and tissue were together, or whatever metal. I don't know what the metal was. I'm . . . hypothetically just hypothesizing.

David: Okay.

Emery: All I know is once it got out, they had a special truck to get this thing. I mean, it got to the surface.

David: Wow!

Emery: It's going across the desert.

David: Really?

Emery: Yeah. Very fast. So they had to blow this thing up. And it was so indestructible that they only injured it, and then was able to put it into this special truck.

And the truck steel was eight inches thick – the cargo container.

David: Good lord.

Emery: And the marks in it were four inches deep . . .

David: Wow!

Emery: . . . from that thing trying to whatever. It was probably trying to get . . . after they knocked it out or whatever.

So he was there on that. And he saw the marks in the truck as well.

David: Wow! That's crazy.

Emery: And, you know, he would . . . I consider him a very honest person. Plus, it was all over. Everybody knew about it.

David: Wow!

Emery: Everyone knew there was this bad-bad. And that was from a different genealogy department on the base.

David: Well, I hate to leave you on a cliffhanger, but that's all the time we have in this episode. Very interesting story.

We're going to pick up more of this as time goes on.

Emery: Sure.

David: And I want to thank you for watching. I'm David Wilcock here with our special insider guest, Emery Smith. Thank you for watching.

Clones and Programmable Life Forms Season 9, Episode 7

Cosmic Disclosure; Clones and Programmable Life Forms Season 9, Episode 7

10 Jan 2018

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Emery Smith.

Emery, welcome back to the show.

Emery Smith: Thanks for having me, Dave. Great to be here.

David: When you first encountered a partial body, by that point, you said you had seen some arms and hands. Had you seen other limbs besides arms or hands?

Emery: No.

Yes, Yes, I saw pieces of like, a face, pieces . . .

David: Oh, really?

Emery: . . . of skin, maybe small fingers. It looked like some sort of appendages, some like, phalanges, maybe toes, feet, parts of, like, legs, very small parts though, cross-section parts, that were cut in a way that you would have to have a very special instrument to, you know, transect these particles of these tissues.

David: Hm.

Emery: The tissue particles I got were always cut in very specific ways. So when we got these tissues, we'd just, you know, of course, start right into, you know, we always had a job what we were going to do with this piece of tissue.

And then later came full bodies and torsos, maybe with or without a head, or a full arm, or other things, even genitalia – all sorts of different things. Yeah.

David: Now, did you have any particularly different surgical equipment? Like did you use a normal scalpel, or was there something unusual about that?

Emery: Yeah, there was normal surgical equipment that we'd normally use, but there was also other devices they had that were more advanced than the stuff that we had at that time.

There were more high-powered lasers and electrocautery devices that we'd normally use in surgery, but on a different level, using different types, I think, of frequencies.

There was one, also, it was like a sonic knife. And later on, that knife did come out to the civilian usage. But I was not familiar with that in modern civilian usage. And when I say “civilian”, also I mean “military” - just normal military hospitals were not using harmonic scalpels at that point.

And my first use of a harmonic scalpel was actually in that program.

David: All right. I want to ask you a question that we might think is dumb, but some people will take very seriously.

Emery: Sure.

David: You're handling exobiology.

Emery: Right.

David: And there's a lot of people out there that think that there are shapeshifting biological beings that can instantly morph from one form to another.

Some people have said that they think the world's elite are shapeshifting Reptilians.

Emery: That's right.

David: Did you encounter any shapeshifting biological matter?

Emery: I think I did. These transdimensional beings, when they get to that level, they are actually a level of consciousness that's beyond . . . like billions of years from now. They get to that light body form, and you can be whatever you want and go to any dimension to help out and do whatever.

But I believe that one of them died here in a 3D shape that . . . how we found him was kind of like a translucent blob, like a jellyfish, but longer. And I think, since it had light with it, I think it might have been one of these very higher-dimensional beings that was, maybe, in the mode of shifting.

Or maybe they had some way of capturing this type of energetic form. Like, you know, somehow encapsulating it, and then bringing it in.

It did give off light, but it didn't give off any type of frequency that we could pick up.

David: So it was approximately like an oval, like a human-type of shape, but just in a very general sense?

Emery: Yeah, it kind of looked like a cookie cutter – like you make those cookie-cutter doughboys at Christmas – but very bulbous, and round, and very liquidy.

David: How tall was it?

Emery: The one I was on was about 6' tall.

David: Okay.

Emery: Yeah.

David: But did it have any differentiated features that you could identify with the autopsy?

Emery: That was the problem. Those pieces of equipment they gave me to utilize to take the specimens did not work, because the tissue was fluid.

David: Oh.

Emery: So we were just using syringes, basic syringes, and needles, and special suction devices. And we were sucking just very small amounts of different parts of the body.

And I don't know where this being . . . that was my own conclusion, by the way. I don't know where this being came from, or how it even got there.

Later on, I learned more about extraterrestrials, and that's how I put two and two together.

And, of course, you know, transdimensional travel with extraterrestrials, and how they do it, and so forth.

David: So I would assume this had some sort of thicker membrane to hold the fluid in.

Emery: Yeah, it did. I was about a centimeter thick. And it reminded me of a very think Jell-O. And when you cut it, it had a glow to it – when you cut it.

David: Inside?

Emery: Yeah, kind of like a cyalume light stick glow.

David: Wow!

Emery: Yeah. And then it would just go away. And then that's when they said, “No more cutting. Start using needles and suction,” - very, very sharp suction devices we have that are very, very small, like 30-gauge suction devices, like 30-gauge-needle-type suction devices. And we were taking VERY small amounts of different parts of the body.

David: What would you say the viscosity of the liquid was inside? Was it like water, or was it more like a thick syrup, or . . .

Emery: Yeah, it was like a clear maple syrup.

David: Okay.

Emery: Yes. And there was parts inside that you could see that were giving off light – pink and purple and yellow.

But it looked like they had shapes, because this is a translucent being, but it's like you're looking into a clear Jell-O. So it's distorted – what that was.

But they would not let us take any samples of the colored liquid.

David: Wow!

Emery: Maybe someone else did, because it was so compartmentalized.

A lot of beings . . . A lot of different technicians had different things they did. And I wasn't that advanced at that time. So I did very simple things.

David: I think probably one of the hardest things for people watching this is going to be, “Come on, man!”

Emery: Yeah.

David: “You didn't try to ask anybody a question about what these things are, or where they came from?”

Emery: No, no. I signed a very big briefing document, and I knew what I was kind of getting into. I thought I was going to be actually doing just cadaver work on soldiers, but it wasn't.

When I got in there, it started escalating. And then I knew how serious it was.

And I have also heard of stories, whether they were true or not, of people talking after hours and things. And, you know, they'd go missing really quickly.

David: Wow!

Emery: So it was a very high turnover rate for technicians there, for clinical specialists, that were doing this type of work.

So I was really good at keeping secrets and keeping my mouth shut. And it got me really far. It was frustrating to a point, but I was so intrigued, and it was so, you know . . . I was just so enthralled with it.

I actually kind of got obsessed with going to work and wanting to know more and more and more, because I was coming up with my own conclusions.

And then I just started studying it on my own, which, there was really nothing out there at that time for that kind of extreme . . .

David: Did they monitor your usage of like a library card or Internet or . . .

Emery: Everything that I had was completely under full surveillance, 24/7. That was part of the deal, too.

And anyone that was with me would always be . . . not . . . they wouldn't TELL them, but anyone, my friends or anything. So it was hard to have friends and relationships.

Even up to this day, it's very hard for me to have anyone close to me, because I'm afraid for them to . . . you know, something would happen to them, because I've basically lost everyone so far.

David: That's right. And very soon after you lost all your stuff is when the brakes went out on my car.

Emery: That's right.

David: So.

Emery: I remember that.

David: All right. One of the things that I think we should cover here is the awesome size of the facility that you were working in, because we kind of got into that with the colored lines before.

Emery: Oh, right.

David: But if you personally are saying that you . . . Well, again, tell us how many different unique species did you appear to have seen?

Emery: Well, I'll say “specimens”, because I count my specimens as a species. Whether it was a real extraterrestrial, or it was something grown in a lab, or if it was just a disinformation piece of tissue they would throw out every now and then to technicians, which is very common in case something happens, so you won't be credible.

David: Right.

Emery: And so I would say a little bit over 3,000. And don't forget, you could do up to 10 to 20 examinations in one day if you were just doing very small harvesting biopsies of small tissue, just for DNA alone.

David: Oh, wow.

Emery: And then you might have one that would last you a week of analyzing, and collecting specimens, and giving reports to specific individuals.

And sometimes there would be more than one person that would come in and observe you, and say, “No, do this,” or “Do that,” instead of using the speaker phone head system for some reason. I don't know.

David: What would be the first thing that you would see when you pick up your folder?

Emery: It basically had basic stuff on it, like time, date, your room, you know, a “Red 12”, what they want you to exactly transect: “Just pull out the nerve,” “Just pull out the muscle,” “Just take this amount of tissue,” “Just draw up this amount of cc's of this liquid from this part of the body”.

It was very definitive of exactly what you were going to do.

And time was . . . They were really big on time and performance. So you would go in there, and you would not know what your second one would be on that pad. So you wouldn't know until you completed your first one.

David: So you might only have, let's say, 60 minutes to work on one cadaver?

Emery: They don't give you time.

David: Oh.

Emery: You do what you do. But the faster that you do these things, and the more proficient that you are at it, they like you. You know, of course, I'm moving more samples than anyone else.

So . . . And I was used to harvesting human tissue, anyway, with harvest transplants and stuff. So it was very easy for me to fall into this category and do these procedures.

David: Did they tell you what surgical instruments to use? Did they have that much of a protocol, or did you have some freedom?

Emery: Well, I pretty much have access to anything. There was a few times I went on the intercom and said, you know, "Hey, I need this." "I need a number 11 blade," or "I need a rongeur of this size." It depends what it was.

But most everything is in that room that you could get from the wall. And if not, they would put it through, and you would get it, like, immediately, within a couple of minutes.

David: In the late 1990s, this alleged alien autopsy film came out – the Santilli autopsy film. I assume you've seen that.

Emery: I've heard about it. I didn't follow much up on it. I remember at the time, I did review it. Yeah.

David: Now one of the weird things about that film is that the . . . and there's debate to this day, and mythology, as to whether it's real or whether it was a very skillful fraud, but one of the weird things is that they peel this black thing off the eye, . . .

Emery: Oh, yeah, I saw that.

David: . . . and then the eyes are like looking up into the head underneath.

Emery: Absolutely. Yeah. A lot of the extraterrestrials that I've actually seen, their skulls and heads and stuff always had film over them, unless it was already taken off by somebody else.

David: Really?

Emery: And it wasn't always black and green like you hear in the stories. It could be many different colors. I've seen violet. I've seen pink. I've seen . . . but that film is always there.

David: Really!

Emery: There's always some sort of film or cap over the eye. And it kind of like conforms to the exact . . . whatever eye shape it is, whether you have a diamond eye, or a trapezoidal eye, or a hexagon eye, or a round eye. They're not always round, by the way.

David: Hm.

Emery: And it's just right over there. And I'm not sure. I always thought that's how we back-reverse-engineered night vision and infrared, is through the reverse-engineering of these ETs that they found, way back when, in the Navy.

And I remember hearing some generals talk about how they took these films off, and those were light-gathering and also light-suppressing films that were not biological, by the way.

David: Was there like a "Google Glass" component to it, like a heads-up display with information that you see?

Emery: No. I'm sure that most of these beings, if they were here, they have already telepathic . . . everything is projected into their consciousness and brain.

David: Hm.

Emery: So I'm pretty certain they wouldn't have any cool helmets, or chairs, or anything like that they sit down in. It doesn't exist.

When I see these craft people show on TV, on a couple of shows I saw, they're like showing these cockpits, and all these buttons.

David: Right.

Emery: And I'm like, wow, they have no idea.

David: Did you find evidence of beings with hardware, like technology hardware in their bodies?

Emery: Yeah, yeah.

David: And what types of hardware?

Emery: Yeah, not just even hardware, but also on the outside of the bodies, which is

really neat, such as things that come out of their head to their mouth and nose, from the back of the head.

I found many types of – which would show up on X-ray – cylinders inside the body. But I was never allowed to take one out or to touch it. I don't know what it was used for, but they were always cylindrical, like capsules, like that you take with vitamins.

David: Like that size.

Emery: Like that kind of size. And they could be . . . I mean, no, that shape, . . .

David: Oh.

Emery: . . . but many different sizes.

David: Hm.

Emery: And sometimes in many different places of the body.

And I don't know if that was put in there by us, or that's just something that they use for their . . . to help communicate with us or something.

I had a feeling that it was more of an adapting process for the body to maybe survive in this atmosphere. And it could have been a field, too, to protect the body.

There's many extraterrestrials that have fields around the body. You can't . . . It's very thin, and it's very small. You can't see it, but it's so thin. It's microscopic. But it's there, and it protects the whole body from this atmosphere.

David: Hm.

Emery: And I think these other devices that we see coming out of the ears or the head, that come around over the mouth and nose, probably has to do with atmospheric breathing and communication.

David: Hm.

Emery: My belief, anyway.

David: The reason why I ask that is that you described them seeming to be downloaded with information. You said that they wouldn't need a heads-up display on these little things that cover their eyes.

So is that some sort of wet-wired technological interface with their consciousness?

Emery: Yeah, I think a lot of them have advanced to this consciousness-assisted technology that they either implanted into themselves, or, just because of them growing over millions of years and forming into these amazing beings, have developed ways and sciences that we cannot even understand or comprehend, because we wouldn't understand the science, because the science doesn't exist yet.

It would all be there already inside the being.

We're talking about beings that have obviously traveled billions of light years, or thousands of light years, to get here. So they have mastered this travel across the universe, and maybe even transdimensionally.

So it would only be well-suited to believe or think that – and that's just my hypothesis, by the way – that they would have this technology already ensued in them.

David: If we have this wet-wire interface, could there be, in certain cases, a sort of booby-trap effect where that would self-destruct the body so that it couldn't be identified? Do you think that was ever happening?

Emery: What I do believe in, what I have heard second-hand from being in the projects, is: a lot of these beings that came to the planet were actually clones of their own – the 3D ones that were actually maybe captured – were actually clones of their own. They were like programmed life form beings.

So they clone them, they program them . . .

David: They clone themselves, like their own body?

Emery: Right. They clone themselves, or they'll clone a similar being from them. And they'll . . . Programmed Life Form. We call them PLFs.

And these PLFs are . . . They're half cybernetic and they're half organic. And so they can move very fluid, like a person. You would not even know.

And when they crash or whatever, sometimes ETs actually want to crash their vehicles here to help upgrade us so they [humans] can reverse-engineer the stuff. And the bodies they find are actually just these PLFs that maybe last a week or up to a year with no sustenance.

But they found that out the hard way. When they were capturing these – and most of them were dead when they crashed – and they were putting them in alcohol or

formaldehyde, and the body would instantly just dissolve.

Because it's not like something we would catch here and put in our lab, an animal, or a human hand, or a brain, or something that has a very strong tissue, collagen structure. It was made up of a synthetic structure.

So they started using saline and special types of water and plasmas.

David: On the 50-year anniversary of the Roswell crash in 1997, Colonel Philip Corso came out with the book, “The Day After Roswell”.

And one of the testimonies that he had in that book was that the original Roswell beings . . . our government was very confused, because they basically had, like, a tube that went from the esophagus to the anus. And there was really no . . .

Emery: Exactly.

David: . . . digestive system.

Emery: Right.

David: So how does that relate to this PLF thing?

Emery: That's exactly what a PLF would look like. The design of that – and I have worked on clones and PLFs before . . . There is no digestive tract or anything, but they're somehow able to have an electrical charge in them that is sustained for a while, that helps the muscles, and their bodies, and also transmit data to whoever sent them.

And they don't need . . . I mean, I don't know what that tube is for, but I know exactly what he was talking about, because we've seen these tubes.

And maybe they have something that they have to take, because we've seen multiple tubes that go off of this tube – like a tree -

David: Oh! Really?

Emery: . . . a branch. Yeah. But it doesn't go anywhere. It just goes into this spongy tissue, which is made up of muscle, and just tendons and stuff.

And also incorporated with that is a type of metal, and other info-, exo-, not an exoskeleton, but an inner skeleton that keeps these beings, I guess, alive for the mission.

And I think each one of those are made for every different mission they have, whether it's crashing into the ocean and giving us some stuff, or carrying out . . . collecting lavender in a field or something.

David: The material, genetically, that makes a PLF, is that grown, or does it have to be actually taken from another being? How do you get the material, the biological material?

Emery: Unlike here, where we grow stuff on Earth, like beings and clones and hybrids, extraterrestrials actually formed this through harmonics and frequency and sound.

So they can make anything, cells, or synthetic cells, which I'm pretty certain they're synthetic, through some of the stuff that I've collected.

And, by the way, I've never got to see an actual synthetic cell under a microscope, or an electron microscope. but just from debriefings I have been on and things that I've seen with my physical eyes, I can tell the tissue was not real tissue, but it was operational tissue.

Just like today, they have pieces of synthetic things they can put in your body to replace a tendon or help strengthen a vessel. You know, we put vessels in all the time.

David: Just to be clear, though, if you're saying it's a synthetic cell, it would still have amino acids and proteins . . .

Emery: Right.

David: . . . consistent with life.

Emery: Right.

David: It's not like it's made out of plastic.

Emery: Yeah, that's what I'm saying. It's more of a hybrid of synthetic and real organisms, but it's not one or the other. Because from what – this is second-hand – what I heard, they didn't have mitochondria in them, and they didn't have DNA, but the cell did operate the way it was supposed to operate.

David: Weird.

Emery: Yes, very weird.

David: If there's no mitochondria, how does it have energy?

Emery: Yeah, good question. That's science that I wouldn't even know about yet.

David: Right.

Emery: But that is something that's asked.

David: Can they culture, like, a small sample of tissue, and then make a lot more, and then use that to grow one of these . . .

Emery: I believe, personally, that's what they're trying to do with all these samples. I wasn't in on that.

David: Oh.

Emery: I do not know. I've heard that . . . Of course, most of the samples are not just tested. They are trying to learn how to hybridize these cells with human cells, and trying to grow things in the lab by mixing these cells together, is what they're trying to do.

And I didn't find that out 'til way later down the road, by the way. So THAT I do know.

David: If there are synthetic aspects to the cell, what would be something that we might identify? Would we find molecules? Would we find alloys? Is there metals in the cell?

What kind of things might be unusual?

Emery: Well, the unusual things that I've heard after this . . . and this is not me seeing the cell.

David: Okay.

Emery: Just so you know, I've seen briefings on my folder. I went through many things where they had pictures of these cells, but I did not see this. I did not personally see the cell.

David: Okay.

Emery: They had many different shapes. And they had . . . A lot of them were geometric, which is weird, because . . .

David: Wow!

Emery: . . . that means it's a lattice. It's not . . . Like, cells are spheres, most of them.

David: Right.

Emery: Or maybe they're a concave disk, like a red blood cell, which is a very unique design. But these cells were more of a lattice. So they formed shapes, and they formed honeycombs and different things, and they definitely had an electrical output to them. And where that came from, I don't know.

So they kind of ran off, I think, their own field of the energy of the Earth for a certain amount of time.

And maybe that tube was used to put certain elements in to help with the electrical part of the body, because those were all temporary – the ones that were found here.

But I'm sure they have ones that last a lifetime.

David: I'm trying to help the skeptics along here, just in terms of . . . You know, a healthy skeptic, I think, would ask healthy skeptical questions.

Emery: Right.

David: We seem to view biological material, clone material, as being rare, valuable, hard to make. And you're talking about beings that are like plastic bags.

Emery: Right.

David: Like one week and they're done.

Emery: Oh, no. Yeah. Yes.

David: So how could these genetic materials be so abundant that they would be that disposable?

I guess I'm having a hard time understanding.

Emery: Oh, that's easy. I mean, number one, these beings, I'm telling you, they can make anything they want. They don't need our gold. They don't need our sperm or our eggs.

David: Right.

Emery: I mean, that's something they could do on their own.

David: Right.

Emery: They don't need to come here. If anything, they're trying to preserve us. But they don't need . . . They're trying to preserve this DNA at THIS time, maybe.

But getting back to your question, is that right now, even in OUR projects, right now we have the ability to 3D print any organ in your body that you need. A lung? No problem. A heart? No problem – with your DNA, using your cells from the tissue from the broken or dead organ, or from another part of the body.

David: Wow!

Emery: Because enfolded in the DNA is actually every part of your body.

David: Right, of course.

Emery: And that's what's so cool. And when you open the DNA up, I can say, "Oh, here's Dave's heart", put it in the computer, and now the printer will print your heart. And now we can do a heart transplant with your own heart, but we'll give you one a little bit younger and stronger. And we'll juice it up.

David: I want to toss in something that my insider, Jacob, said to me once, which was that we are currently believing that neurological tissue cannot be regrown. And, yet, he had reports of people who had been through catastrophic spinal cord injuries, and that even if the nerve fibers had completely gone dead, and rotted, and been reabsorbed by the body, that they could put this thing at the base of the spinal cord in the neck, and that the nerves would just grow back into the body, and the person would get all their function back.

Emery: Absolutely true. And even on a medieval way, like with a system they created with stem cells, harvesting them from fat and bone marrow and blood, we have had amazing experiences with quadriplegics and people who have had really bad spinal cord injuries come back.

And so with the neural stuff, we CAN grow any cell. There is not a cell we can't grow. That's fake. That's false what they want you to believe. And that's what's the truth.

David: Do you believe, as other types of insiders have said, that there is a negative aspect to our planet at this time that is seeking to reduce population dramatically?

Emery: I do believe that. And you can see it every day. It's not hard.

I hate to call out corporation names, but, you know, and things that are going on everywhere with politics, because I try to stay neutral.

David: Right.

Emery: But yes. I mean, you can just look around and see. It'd be so easy to do. I mean, if there was just no electric [electricity] for a couple of days, and I'm diabetic, and I can't get to a Walgreens for my insulin shot. You know how many people in the world have that.

David: Right.

Emery: So, I mean, these little things that you don't really think about. It would look so harmless that all these people died, but, you know, if it was an intentional way to do it.

David: So what I'm getting at here is, if you're saying that any part of the body could be grown, I assume that would also mean if somebody loses their arm, you could grow another arm for them in a vat or something and attach it, right?

Emery: Oh, it's beyond that. If I have just a few of your DNA that's not completely destroyed – it's not completely dead – we can actually just take that DNA and make your whole body back, because it enfolds within it all the consciousness things that you have endured through this lifetime like a hard drive. And you're still you.

And we can grow that – your whole body.

David: Would there have to be some sort of biologically-based broth, or something, that you have to feed these cells with in order to get them to grow?

Emery: Yeah. It's protein, amino acid based – the very basis of life. All of the things that you hear about is what it's full of. And the computer knows when to add collagen, when to add osteocytes and osteoclasts, and all these different cells in the body to help reform it.

And sometimes there is a glitch in the printer, and some things happen, but it immediately puts the cells in there to fix it, which is amazing.

David: Really?

Emery: Yes. And these are huge vats that, you know, . . . You can basically regrow

yourself, if needed.

David: We have just a couple minutes left, but one of the things I wanted to cover is, in previous episodes, you talked about seeing what may have been a 10' tall Reptilian in custody.

Emery: Yes.

David: But then you very – I would almost say flippantly - "Oh, yeah, it could've just been something we grew." Like it's no big deal.

Emery: It's no big deal. We can grow . . .

David: How did you get to the point of knowing that that could have been done?

Emery: Because that's why I went into the regenerative part and started learning a little bit more about what they were doing with growing cells and growing things.

David: "They" who?

Emery: The labs.

David: Okay.

Emery: We'll call them the labs. And what they were trying to do, like I said, is also make fake extraterrestrials, . . .

David: Right.

Emery: . . . to make . . . just have them in their back pocket just in case, to make them look good, bad, evil, or happy, or healthy, or scary, or good-looking, whatever they wanted to do. And they did. They're very successful with it.

So that's why I said, when I saw this being, this species or whatever, maybe . . . I don't know where that came from. I can't tell you.

I could say that I believe it was real. And it was smelly and breathy. You know, it breathed.

But that's where PLFs come in, too. So programmed life forms are the same thing: are grown species that are programmed to do certain things, certain jobs.

David: Without naming anyone specifically, I have a story about one of our former

presidents, and this idea that they can be cloned, and that you might be seeing someone who looks exactly the same, but it could be a totally different biological form than the one that's the real one.

Are you aware of that?

Emery: Yes, I am.

David: Okay. So is there some problem with the clone in terms of, like, if you had a conversation with it, does it have the same memories? Is it aware that it's a clone?

Emery: No.

David: Or does it think it's the same person?

Emery: It's not like I was telling you earlier when we take your DNA and make you. It's . . . We take partial parts of your DNA, make you as a clone without the consciousness part of it. So we . . . It's programmed into you. We program the memories into you.

You might think you had a family, and that you knew that you took this job to look like this president. Up to date, all the way back.

They could even make more clones to be put with you to make you think you have a family, or you would just think. Or maybe they just need you for one job.

David: Wow!

Emery: Yes.

David: Wow! This is really intense.

That's all the time we have in this episode of Cosmic Disclosure. I'm your host, David Wilcock, and we are here with Emery Smith, exposing the truth about very advanced genetic programs involving extraterrestrial biology.

Thanks for watching.

Staged Alien Abductions Season 9, Episode 8

Cosmic Disclosure; Staged Alien Abductions Season 9, Episode 8

17 Jan 2018

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. And we are here with Emery Smith.

Emery, thanks for being here.

Emery Smith: Oh, thanks for having me again, Dave. Appreciate it.

David: So in our previous episode, we started to talk about these genetic programs that have been done, including this idea of synthetic cells, synthetic biology.

And you mentioned something that I think . . . It seems to come very easily to you, but it was probably difficult for a lot of people to really grasp: this idea that . . . it sounds like, from what you're saying, a very large number of clones could be manufactured by various processes.

What is the fascination with making all these clones? Why are they so involved in manufacturing life forms?

Emery: Well, I think they have their own agenda. And each organization has its own agenda.

I mean, there is, of course, one operating everything, but you have to understand it trickles down to many different types of facilities and agendas and organizations. And, you know, who knows where it goes from there?

But, you know, I can have . . . I believe in my opinion that they're doing this to maybe form a fake . . . or stage a fake invasion maybe, or use these beings as part of . . . to serve in a war of some sort, or to even possibly use for abduction purposes.

David: Abduction is something that began with Betty and Barney Hill in the early 1960s.

Emery: Right.

David: And from that point forward, we have these alleged Greys that are apparently doing this.

Emery: Right.

David: So I'm curious as to: why do you think really there were not reports of Grey abductions before Betty and Barney Hill? And what might that be that we're seeing?

Emery: This is the most controversial question I get all the time, and I have the great answer for it.

And, you know, these people DID get abducted. Okay? It really did happen.

And that's why they can pass a lot of the truth tests. And we're interviewed a lot of these people. And it's real. I mean, they really had this experience in their mind, you know, or physically.

But what I'm getting at is it wasn't real as far as the beings and the stagecraft and the things that were going on, because there's many of these stagecraft and these programs running the entire planet because they all want them to coincide together.

So when we interview an abductee from New Hampshire, they have the same exact story as the abductee from Namibia and the abductee from Japan, because they make them very similar, and then they'll do many different types of episodes of what they want that person to see and remember, and how to make them traumatized.

And they can do that in many ways by, number one, using fake stagecraft, using clone programmed life forms, knocking them out first, and then having them wake up in a room with staged surgeons there prodding and poking at them, using special types of gas.

David: Wait a minute. Are you saying that the UFOs are fake?

Emery: Yes.

David: Okay.

Emery: Well, they're . . . right.

David: But is there a craft? Are you saying that there are craft that can be flown?

Emery: There are craft. Yeah, they're real craft that we reverse engineered.

David: Okay. Right.

Emery: But they are OUR craft. They are not the extraterrestrial craft.

David: It's not just like a hologram? There is a craft.

Emery: Right. They can use holograms too, though . . .

David: Okay.

Emery: . . . that have been used in staged moments, absolutely. And they'll show the hologram, and then maybe let off a gas in the area, and the people maybe crash the car.

The next thing you know, they wake up in some facility, but it's blurry. They're always groggy for some reason. You know, something happens.

Or they'll come to the house and do it. You know, they'll pick a specific person.

David: Before we go any further, I just want to ask you this question, which I do know the answer to, but I want to get you to say it on camera.

Have you been watching "Cosmic Disclosure"? Are you familiar with all the ins and outs of what Corey has said?

Emery: No, I don't watch it. Sorry. Yeah.

David: And the reason for that is what?

Emery: I don't like to be influenced by any type of outside source of any type of outside source of information coming from another person in case one day I might HAVE to come forward.

And it's interesting sometimes when you tell me, "Hey, Emery, I actually had an insider that told me almost the exact same thing", because I know I'm not the only one.

David: Right.

Emery: There's hundreds of thousands of Emerys out there that are just petrified to come forward.

And I'm hope that this series will bring a lot more people forward to feel a little bit safer.

David: Right.

Emery: Because it does protect you, I can assure you.

David: Why do you think that these abductions are being done? We're kind of going around it, but I don't feel like we've quite hit it.

This is something that would take incredible resources. We're talking about craft. We're talking about beings being cloned. You're saying that it could be in America, Namibia, Japan.

What is the point of all this?

Emery: To install fear in the world. You know, fear needs to be installed to control and order, you know, to have control and order over a civilization.

So what better way to do that: to have these people on TV saying that this happened. And I'm very compassionate about them, because it really did happen, but it didn't happen the way they think.

That's because Hollywood has basically released an evil alien movie every month, and it goes from here to The Philippines in a year. And everyone in the world is now petrified of this giant creature coming at me.

David: Do you remember last night when we were talking to that guy, and you had told him about the little Atacama being? And you remember the first question that he asked us was: “Am I supposed to be afraid?”

Emery: Right.

David: Why do you think that was the very . . . and he kept asking it in different ways.

Emery: Yes.

David: Like: “Am I supposed to be scared about this?”

Emery: Well, “We shot them down. Are they going to come back with their guns and kill us?”

David: Right. Right.

Emery: You know, and it's like they know the risk. You know, the Earth is what I call the Disney World of the universe.

David: Ha, ha.

Emery: And it's a very dynamic, beautiful place. You know, you would laugh. You

know, let's go see a bunch of hairless monkeys, right?

But what I'm getting at is it's such a diverse community of so many living biological species that they used to come from all over just to kind of like hang out, look around and not do anything malicious or anything.

And this is in and out of all the other negative stuff that has happened millions of years ago with the different civilizations, by the way. I'm not getting into that.

I'm just saying, in this time of age, really the last 1,000 years, it was a really beautiful place to come and show your kids.

David: Hm.

Emery: And this comes down to now after Roswell and a little bit before that with the Germans when they realized there were these other entities, some formed alliances, some didn't.

And the next thing you know is gas, coal and oil got involved and didn't want any of this type of stuff going on, or the government.

Because if you prove how extraterrestrials get here, they weren't using gas, coal and oil.

But getting back to your question: why did he say this? It's like: “They're going to come back because we just killed his family, or we shot down a craft.”

And I was like: “Well, you know, they're a little bit more conscious than we are by a few million years. And they were once us. And they're watching us grow out of this barbaric, medieval way of cutting each other's heads off.”

And that's why we haven't been back to the Moon, or, you know, ventured into space with the normal NASA space program, that is.

David: Right.

Emery: And that's . . . You know, this whole stunted thing is: until we learn how to behave with each other and love each other and accept each other and not have this association of, you know, “you're my enemy because you don't believe what I believe in,” or “you're a different color of race or gender.”

It's ridiculous. It doesn't exist in the higher consciousness of extraterrestrials beyond this universe.

So they're giving us time to behave and time to work it out on our own. And they WANT to see this happen. And they're really interested in that.

So that's kind of what I believe they're there for.

David: I had Whitley Strieber, who is the famous guy who wrote the book "Communion", kind of broke the alien abduction story in a big way in the 1980s . . .

I had Whitley Strieber on my panel at Conscious Life Expo in February 2017.

And one of the things that I thought was fascinating was that he reported having more memories of his abduction, and that he wasn't just seeing Greys. He was also seeing regular humans in black military uniforms who were there at the same time.

What do you think is going on with that?

Emery: What has happened is, yeah, he was probably moved to an installation or something. Or maybe the black ops team for that division, when he came to a little bit, his memory caught a glimpse of it.

I mean, we give medication every day. Every day, we'll do thousands of millions of surgeries around the world. We always give patients Versant right before they go, so in case we do mess up, or they don't hear us telling jokes while we're operating on their heart, they won't remember it. And it's very successful.

But they do sometimes have a total recall.

David: Ah.

Emery: And that's bad. That has happened . . . You can Google that where people are actually awake during the whole procedure and remember everything.

David: Wow!

Emery: Or they'll hear everything and remember it. And they can't move 'cause the anesthesiologist has paralyzed them.

David: Wow!

Emery: Yeah, very scary situation. So that's what happened. He is getting a little bit of a recall back because the drugs didn't work on him, or the gas.

David: So this abduction program would be to instill fear on a mass scale.

Emery: Correct.

David: So there was a sense when Whitley was saying this that he might have been abducted by the military.

Do you think that there are real Greys doing real abductions that are actual extraterrestrials? Or do you think that this is just a vast weird government program of some kind?

Emery: I believe it's a program. Right.

I believe there have been . . . there may have been, not to my knowledge, there may have been like real abductions a very, very, very long time ago because of certain countries that were making some weird, bad mistakes of exchange of information maybe for DNA.

But it's hard for me to believe that now, after what I've been exposed to, knowing what they CAN do anyway . . . Like I said, they don't need anything. But there's a lot more to that story with other beings and other things.

So I believe it's a complete form of military, or some sort of faction organization that works beyond the military, that's doing this.

David: Now, I remember at least three or four times seeing Dr. Steven Greer speak on stage, and you were standing there on stage in full tactical gear as his security guard.

Emery: Uh-huh.

David: And in some of those talks, he mentioned a UN Secretary General being abducted. And that is the highest level of politics on Earth. So what could be going on? Why would this production go all the way up to the elected heads of state in the highest offices in the world?

Emery: They wanted to install fear into the other people that were in these higher positions by doing it to this one.

David: So you can confirm . . . or can you confirm that that actually did happen, that that abduction happened?

Emery: That's secondhand information from two very higher-ups in D.C., and also, of course, working with Dr. Greer and The Disclosure Project and seeing a lot of the official documents that he had shared with me, yes. Yes, he is correct.

David: Wow! So are there hypnotic suggestions being planted in people's minds as well when this takes place? Are they getting post-hypnotic suggestion, things that will be cued by events that took place . . .

Emery: There are no hypnotic or mind control things going on unless you watch TV or have an iPhone or listen to the radio. So good luck with that one.

David: Ha, ha. So in your estimation, there could be subliminals that are being put out.

Emery: 100%. That's definitely happening.

David: Do you have secondhand knowledge of that, or do you actually see briefings on it?

Emery: No, I've seen . . . I was part of a project one time in Los Alamos . . . well, it wasn't owned by Los Alamos, but it was associated with a corporation there, that dealt with frequency control, mind control and cellular frequency control to make you angry or to make you sad or to, you know, manipulate you in a way that this would happen.

David: Getting back to Betty and Barney Hill, as we've drilled into this more over the years in ufology, it has emerged that he actually was testifying early along that he thought this was a military abduction. And he had very specific details.

And then, as time went on, more and more of the so-called “alien component” came in.

Emery: Right.

David: His initial impression was that it was not extraterrestrial.

Emery: I wonder why. You know, it's very realistic. You know, they have these alien reproduction vehicles. You know, we already have conquered anti-gravity for the elites.

So it wouldn't be hard for me to fly one of these devices over your house and jump out in a very expensive Hollywood alien suit and try to convince you to do what I say, especially when I have these frequency devices that I'm beaming at you that basically paralyze you or stun you for a certain amount of time while I inject you to put you out.

David: There was a particular insider disclosure about the Illuminati that I read, a

very, very disturbing book called “Paperclip Dolls”.

And this particular female witness went through a lot of the most savage stuff that you hear about in ritual abuse cases, but she also reported having to wear an alien suit, having to dress up in this kind of silvery alien suit with a head that looked like a Grey, and actually abuse people in that capacity.

Emery: Wow!

David: And that's in the book.

Emery: Hm.

David: So are these cases where people . . . where you could confirm that maybe in older programs?

Emery: I can confirm there's hundreds of thousands of people that go missing just in the United States alone every year, but you don't hear about it except for a couple of websites because they're the derelicts and the drug users or the homeless or the runaways.

And I do believe that these people are being collected and tested and also seeing the response and measuring the chemicals of the person while they're actually being attacked by someone dressed in a suit or something like that. Because for some reason, they're trying to figure out what kind of chemicals are released with this type of fear.

David: Could you tell us a little more about some of the stagecraft that you said is happening in these abduction cases? Like, what are we actually looking at?

Emery: Right. They don't always have to use a real craft, but it always helps. And what I'm getting at is these ARVs - we call them Alien Reproduction Vehicles – do exist.

And I have seen them firsthand.

They're not as well-created, of course, as the original extraterrestrial crafts that they try to reverse-engineer them, but they do what they're supposed to do, and that is hover and look scary. And that's all you need to see.

And then it could be done, and the next thing you know, you're kind of knocked out. But you remember that before the drugs.

So they want you to have a visual of a little guy running across the street in front of your car first, or maybe this thing that just landed in the middle of the Interstate, you know, because you'll remember that. And that's all you're going to talk about the rest of your life because of the most amazing, horrific, scary thing.

Because then you woke up in another temporary tent set up in the woods right off the street. And they're making it look like an operating room. And someone caught a glimpse of some guy carrying an M16 and a tactical vest they remember.

So it's a very classical typical thing that happens all the time.

David: It would appear that if we are dealing with a globalist organization that's doing all this behind the scenes, that they have a lot of limitations, that there is some sort of benevolent force that is stopping them from doing more.

Because these abductions are not really that bad, right? People are getting returned. They don't remember very much. They're not . . .

Emery: They need them returned. They have to be healthy because they won't be able to tell the story the rest of their life. But yes.

David: But there is some aspect of opposition to this. It's not like it's just evil.

Emery: As you notice, these abductions have been going downhill, not uphill, since the '60s, '50s.

David: Right.

Emery: And that is because of this Alliance that has been formed. You know, a high percentage of them now knows that we don't need to do this. We don't need to go this route.

And, you know, this other part of it, you know, whatever you call them, the White Hats, or however you guys . . . there's many different terms you guys use.

But, you know, we're now at the level of 90% good, 10% bad.

David: Right.

Emery: And that's going to come pretty quick here. It's going to be exposed. And the truth WILL come out about all these programs.

And, you know, the politicians are leaning more towards that because they're not

taking care of their families properly. They're not protecting their families.

Instead, they're extorting them by drugging them and making them have sex with an underage person on film. And now you have to do everything I say for the rest of your . . . your . . . And you know this stuff, how it goes.

David: How do you think, or how does the Alliance think, based on briefings you've had? What will happen once they've really crossed the line, and it's actually disclosed instead of just people wondering maybe it's true?

Emery: The polls show that mostly everyone does believe in this, like a high percentage, 70 to 80%, believe there is existence beyond this planet.

David: Right.

Emery: And the problem is: how many believe they're evil and how many believe . . . there ARE good and bad, absolutely. But how many people believe what?

How many people believe that the good is trying to protect us more than evil? And how can we show that and prove that without having people come forward and talk about it and release this information?

David: I want to bring this up too, Emery. One of the things that we talked about, and we laughed last night, but it's come true, is that let's just say a significant number of Americans have never forgiven Vietnam.

And on some level, they're still fighting the Vietnam War. They're still listening to the music. They still worship the musicians who became famous during that time. They act like nothing else has happened that's really of value since then in music.

And we have this kind of horror of the military in America. And I think that's very sad, because like we talked about, if there was a Red Dawn scenario, if we actually had a land invasion, we lose a couple of states to a foreign invading power, . . .

Emery: Right.

David: . . . at that point, what would happen? Everyone wants the military BACK again.

Emery: Well, your attitude changes pretty quickly when you start to lose your freedom. And even though people are angry from past wars and things like this, when you come back home, it's difficult.

And when you have these old programs in you from those times with these soldiers, and I can speak because I am a soldier, you form this “against mode”. “Like, that's all. That's it. Everything else is going to be bad. And I lost my faith in the government, and da-da-da-da-da.”

But it does change quickly when there is a threat in your backyard: “Okay, my neighbor's playing the music really loud. What am I going to do?”

But now I just jump the fence with a 12-gauge shotgun. And he's kind of coming up to the porch. That's not normal.

So, you know, you want to help protect your home, and you want to have that fence. And that fence needs to be there, and maybe a little bit higher.

So people have a change of heart if something like that would happen, because people have families, and people don't want war. People are not born to have war.

If you asked the majority of the world without the warmongers, you know, “Do you want to go flight?”

If a human had a chance to fight or not fight, the polls show they would not want to fight – all of them.

So who's controlling all these soldiers? And who's, you know . . .

So that's kind of where it's at right now is just a bunch of puppets. And that's going to be exposed.

David: I think a lot of people feel as if the wars that we HAVE fought are wars for empire and domination to control oil, to control poppy fields in Afghanistan – that it's all about money and profit.

And there are so few people who are directly aware of the Alliance who have ever spoken out at this time.

What could you tell the people who might still locked in this belief system that the military is just out there doing the whims of globalist bankers?

And then they would ask, “Well, if there IS an Alliance, then why haven't we heard from them?”

Emery: Well, I can assure you that that man on the front line and his commander and even that general most likely has no clue about what's really going on.

“But I'm so gung ho about my country, I'm going to do whatever it takes. And I'm going to protect it, and I'm going to protect my mom and dad and my sister and so forth.”

David: Right.

Emery: “So I'm going to do that because I'm 18 years old, you know, and I believe in this.”

David: Right.

Emery: “I believe in this.” So they made you believe in this with all of the . . . however it happened.

So now that this is coming out, the nonbelievers are going to say, “Well, where ARE these superheroes?”

And you cannot fight a war . . . You know, the war is not fought hand-to-hand combat. It's fought way behind the scenes first to control who's controlling the generals and the commanders.

David: Right.

Emery: So you have to change that first. And that's what people don't understand. It's a very delicate and very difficult situation that's going on: this little secret war behind the scenes.

But that's what changes the paradigm. That's what's going to make everything tilt.

David: It seems as if there's an astonishing lack of truthfulness in mainstream media. And that's become . . . I mean, even the polls are now showing distrust in the media is actually worse than distrust in Congress. It's lower than 12% in some cases.

So do you feel that the media is in cahoots with this globalist crime syndicate in some way?

Emery: No, I know they are. Yes, I mean, the media controls the world.

David: So with that kind of power in place, would that pose a problem for the Alliance if they were to try to let us know what they were doing right now with that much media control still in that apparatus still in place?

Emery: No, because that will be fixed. That will be taken out.

The leaders that control the media are going to have a big eye-opening problem soon. And the Alliance is working on that through the inside, actually, rather than from the outside.

So it's going to come from within. And it's actually going to have to do with also civilians, which is nice to know that people are going to stand up too and find out that, “Hey, this isn't right. We've been lied to.”

And it'll be brought to an attention in a way called “live streaming”. And no matter if it's only on there for five seconds, I can guarantee you someone recorded it, and it'll go . . .

So they would have to shut down all the main servers in those tanker ships off the coast of California, and everywhere else in the world, for that not to go viral.

And it won't be just one person. It'll be many. It'll be hundreds of people.

So that will help. You know, you have unheard superheroes on the ground. You have unheard superheroes way above. And they're all working toward the same thing, and that's to expose that problem.

David: There's been a lot of unpleasant stuff coming out about Hollywood. And I'm wondering if you think that might be part of the Alliance's plan.

Emery: Well, without mentioning movies or anything, Hollywood is also kind of controlling how we think.

David: Yeah.

Emery: But they also encrypt really cool things into it . . .

David: Right.

Emery: . . . for those people who are aware of symbology and different languages and texts. And I think that helps because I believe that's a subliminal message that things are sometimes moving to the direction that it needs to go. And that's where it's going.

And I think it's important for people to know that the message IS being sent out. If you can't see it yet, it's okay. You will. It'll be in another form.

David: So a really blunt, dumb question. Is the military working for our best good?

And if so, will the abductions stop once they succeed?

Emery: Yes, the military is definitely on our side 100%. You know, these . . . The higher-ups are getting very upset about the manipulation. They have their own agents. They're starting to find out things.

So it's a very good sign that this is happening right now.

David: You've said that the abductions have already decreased a lot. Now, are you telling me that the Military Alliance people have already been fighting a war to greatly reduce how many abductions are happening?

Emery: Oh, I believe it's more of a money thing going into secret corporations. They used to use the military to help them do things, but the military didn't know why they were going to pick up . . . or going to this place and slice up a cow.

They didn't know why they were going to go pick up this individual or take part in this. They just know, "I'm there to come here and provide security."

They have no idea what's going on, and they're not allowed to ask. And if they do, then they're terminated immediately.

David: If this Cabal, as a lot of people call it – that's a term that I'm using now . . . If the Cabal is defeated, the disturbing things we've talked about in this episode with abduction, will that largely, if not completely, be stopped at the same time?

Emery: Yes, if the Cabal is defeated.

David: So in a sense then, we're having like a shadow World War III going on.

Emery: That's right.

David: And so many people are completely unaware that it's even happening.

Emery: It's right there in front of your eyes if you really think about it and look at what's going on around the world. But, you know, we don't have time for that.

And it's not the people's fault.

David: Right.

Emery: "I have to work. I have to eat tonight. You know, I have to do these things. I'm in the Matrix too, guys."

David: Yeah.

Emery: So, it's like, “What am I going to do? Okay, I'm going to conform too.” We all have to conform for a little bit, but now it's time to give back a little bit.

David: What do you think the world will look like once we get Disclosure and the Cabal's defeated?

Emery: Overnight, it will change. The devices of all the technology they've been hiding will come. The world will flourish. It will be full abundance. No one will starve.

It'll be clean water for everyone. It will be homes for everyone, and the world will come together as one, and everything else will be left behind.

And the old paradigm . . . We will forget about our religions and all that, because, you know. all of this is getting exposed too at the same time.

So it changes how we were kind of tricked since we were born.

David: Right.

Emery: And now the truth is here. And now everyone will apologize, and it will be beautiful.

David: Well, Emery, I want to thank you for being here. And I want to thank you for watching. This is “Cosmic Disclosure”. I'm your host, David Wilcock, with our special guest Emery Smith.

Hybrid Creatures and Secret Bases Season 9 Episode 9

Cosmic Disclosure; Hybrid Creatures and Secret Bases Season 9, Episode 9

24 Jan 2018

David Wilcock: All right. Welcome to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with Emery Smith.

So we were talking about this concept that you weren't that surprised by the idea of very elaborate genetic hybrids being made by our government, even at the beginning of this time that you spent at Sandia Labs inside Los Alamos.

So I kind of feel like there's something missing here. How much had you been briefed on genetic hybridization programs before you ever started this particular job with these so-called “salmon filets”?

Emery Smith: Yeah, I was not, actually. I was a very low-classified individual at that time. So it actually didn't happen 'til about a year or two later, where because of what I was dissecting, or whatever, led to other briefings that led to other briefings, because a lot of these beings were connected to ships.

And when I got pulled into that, then I was pulled into other things that had to do with hybridization, because I was actually told once that one of the samples WAS a hybrid, and that's how I knew they were doing hybridization.

They didn't hide it that time and during the briefing, . . .

David: Wow!

Emery: . . . and it was a group briefing, so it was exposed.

David: And what was this sample? What was it a hybrid of? What did it look like?

Emery: It was kind of like a tiger. It was a tiger-type, human-type being.

David: Really?

Emery: Yeah. The DNA had a fur on it. It was very humanoid and only stood about five feet tall.

And it was very . . . The way it looked was very dismantled. It was not correctly how you would think you would see something like in a movie or something where it has

the perfect eye set - the nose is perfectly aligned. It was dysmorphed very, very horribly.

And I don't know . . . I cannot tell you what DNA were used to make this creature. I could just tell you what it looked like. You understand what I'm saying?

It had the aspects of a cat face like a tiger, and it had very large green eyes. And it had whiskers, and the body was very small and very frail. And it had just regular fur.

David: Well, we have seen cases of people trying to breed lions and tigers together and different types of things. And I remember noticing that in some of those cases, those animals have this kind of disabled look.

They get these strange deformities to their faces . . .

Emery: Right, I heard about this.

David: . . . and things like this.

Emery: Right.

David: So, do you think this was a failed prototype idea of some kind?

Emery: Yes, absolutely. I think it was a total failed prototype, because I don't know what that would serve – what they were doing.

I think they were just trying . . . which they have already been doing for many years I know before I even came along because of some of the things that were released to me later on in the projects. They were mixing all sorts of DNA with human DNA, including plant DNA, and mammal DNA from other mammals from the oceans and sea.

David: What do you think this tiger being could have been used for? I mean, I know it's speculation.

Emery: Well, speculation for me: total military type, operative-type, super-soldier-type programs. Just as in the old days, they would . . . and the Roman Empire have mastiffs, hundreds of them.

They found hundreds of mass graves at big sites where they would be running alongside the horses, and the mastiffs would jump on the people, and the horsemen would spear the guys. They were just used to knock down people.

So this was probably used to - maybe some future war or something – to release all these crazy hybrid-killing machines instead of using humans, of course. first . . .

David: Right.

Emery: . . . and THEN send in the humans. Or send in . . . Of course, probably in the future, I'm sure it's going to be mostly clones and drones that will be . . . The war will be fought inside a computer room.

David: I kind of asked you this before, but I'm curious to get it in a little more detail.

You said something about that the clone might have memories loaded into its mind . . .

Emery: Yeah.

David: . . . so that it believes that it has an identity that's lived for however many years?

Emery: Yeah. They can program the brain, because the brain is just not its own brain. It does have modulation to it using very, very small sensors, and . . . how can you say this . . . wiring.

David: Implants.

Emery: Yeah, implants, that stimulate certain parts of the brain.

David: Okay.

Emery: And they can also download it and make you believe that you are Marilyn Monroe or you are David Wilcock, or you are whoever, and this is actually what has happened to you in the past 25 years.

And you just wake up in a bed one day going to work, or someone's picking you up, and that's all you will know.

David: Is it possible to store someone's memories and personality on a hard drive actually as a data storage?

Emery: I haven't seen that. I get that question asked a lot, because of the movies out there - “Avatar” - and thinks like that, the consciousness.

David: Sure.

Emery: But I have not seen that, because you would have to have the DNA. All I know is that you can only do it if they have your DNA, because the DNA IS EVERYTHING enfolded within the universe, including your specific matching prototype of who you are and all the conscious experiences you have.

So I'm sure by now they probably have something that can store your DNA for a very, very long period of time without damaging that part of it that keeps the conscious memory implanted into it.

David: One of my other insiders reported working at a base which seemed to be Area 51, though he wouldn't say that. I think maybe at one point he did. He said "S4", which is Area 51.

And he reported that they had a dog that was, I guess, a desert dog that showed up, and the dog started to have certain quirks and certain tricks that it learned.

And then the dog died, and they cloned it because they liked the dog so much they wanted it back.

And they discovered that each clone had the memories of the preceding dog as well. And so, it was as if . . . they started to conclude that the DNA was simply some physical address for an energetic consciousness that superseded DNA.

What are your thoughts on that?

Emery: No, I agree with that. The DNA is just our 3D interpretation of the energy that is you. So the light body, I believe, and all that, is stored.

We call it DNA because it's what we're taught in science, but really, it's in the field of that molecule or whatever you want to call it – a tetrahedron, or however, . . .

David: Right.

Emery: . . . what your belief system is.

David: Yes.

Emery: So I do agree it is an energetic thing.

David: So he referred to the DNA, and they apparently refer to it, as like a tuning fork . . .

Emery: Right.

David: . . . that it tunes in this energetic aspect of yourself.

Emery: Right. It's a radio. That's correct. It's a type of a device, kind of.

David: So how does that interplay with programmed memories? How could they give you a memory that you didn't really have? Or is it more that they can make the clone THINK that it's you and access your own data bank of memory?

Emery: Yeah, they have a . . . I wasn't part of that program, but they do have something that does exactly what you just said. It somehow gives that DNA or that energy frequency.

Like when you talk about the morphogenic field: everyone's everywhere, everything is everything. So that energy somehow . . . You know, if I want to believe . . . If I have an affinity to be you, I will believe I'm you, and I AM you, because we're each other. We're everywhere.

And what happens is I think they have somehow, someway, found a way to change that memory of who you were in the DNA using that exact thing you said: a frequency in this field.

And that's just my speculation.

David: I did hear from my Secret Space Program insider, Jacob, who is very deeply involved on many, many levels, claims to have been to, I believe he said, over 2,000 off-planet locations through portals he claims that he went to. And he was very credible.

He said at one point that certain elite people could have . . . There is apparently a machine they have where they can download your personality and consciousness into a younger version of yourself, that you can be transferred . . .

Emery: Right.

David: . . . from one body to another as your main host body. Do you know anything about that?

Emery: I do not know anything about that, but I have seen them do that with other beings.

David: Really?

Emery: Yeah. So I'm assuming 100% they can do that just through some of the

briefings I've been in on of similar consciousness movement of what you call this downloading of your own personality field.

And so there's no doubt in my mind. I believe that is true, but I have not seen that.

David: What is the reason for why these cloned beings seem to have a shorter lifespan?

Emery: I think any time you take any type of cell . . . like we have problems with stem cells right now. When you take them and you multiply them, there is a couple of them that come out not too well.

So the more you do it, sometimes you have a little bit more problems with the cells being mutatious. They start mutating into different things, not what we thought they were going to be.

So there must be something in the field that only allows us to maybe . . . or we just haven't perfected it here yet, because I know it's been perfected up there.

So I think it has something to do with that. Maybe it's not supposed to be done, and that there's an unhealthier clone every time you clone someone – when you do it that way.

David: If we go back to some of the vintage whistleblowers like Bill Uhouse, it appears that from whoever, and it might be the Cabal, a narrative was presented with the idea that the Greys are humans from the future who had their population greatly reduced after a catastrophe, and that they now have been cloning themselves. And it's like multiple photocopies, it starts to get damaged, that this funny thing they do is diabetic neuropathy.

It's the neuropathy from genetic cloning, and that they're coming back to do these abductions to try to bolster their genetic stock.

Why do you think that kind of a narrative would be created if it's not true? What would be the objective there?

Emery: I couldn't comment on that, because I don't know of this exact story.

David: Okay.

Emery: I could just tell you that if they're real extraterrestrials and they're cloning each other, they're probably pretty perfect specimens. And they would have already figured out how to fix those mutations 100%.

If they're not real specimens, and they were escaped hybrids that formed their own . . .

David: Ah!

Emery: . . . and got smart enough to learn and form their own civilization up there and want to take over Earth or something, then that would be a possibility that they're failing.

David: We have seen a lot of reports, if you go back again into more vintage ufology, of people describing something called a “neonate”. And that is where, if a fetus is allowed to develop without the pressure of the womb around it, that the head will largely increase in size, and you will end up with a being that will retain fetal proportions into adulthood, which is exactly what a Grey looks like.

So some ufologists have speculated that Greys could be humans that simply have been grown in some kind of a vat or a tube instead of in a womb. What are your thoughts on that?

Emery: Yeah, it is a possibility. A lot of these extraterrestrials could have hybrid human DNA in them for sure and vice versa.

So I definitely believe in that, because it's been done. It's been done.

David: Were you aware of any other being like the tiger-human hybrid that was a hybrid program that you were directly briefed on or allowed to see a specimen of?

Emery: No. Other than that, there was one that was kind of like a manatee-type version.

David: Really?

Emery: Yeah, a manatee-type, walrus-type, seal-type phenotype there that they were utilizing that had a very, very weird look to it. [It] also was disproportionate and was dead upon seeing it.

I believe that was part of a project where they were mixing mammalian with human DNA.

I don't know what they were going to do with it, but it looked like a manatee but upright with arms and hands.

David: Well, just to follow on that for a second, are you familiar with there being any

bases that our government or the Cabal might have that would be under the ocean?

Emery: Yes.

David: And how would that work based on what you know? How would you build a base at the bottom of the ocean, let's say?

Emery: Well, there's bases that were already there that they took over that have been here for millions of years that were already functional, and they found these bases in different parts and different areas.

And most of the bases are not just like bubbles on the bottom of an ocean. They're actually under the ocean's crust.

David: Right.

Emery: So that's how they really bore in there. And they build it from underneath up. They don't go down from the surface of the ocean with a bunch of two-by-fours and steel parts.

It's a very complex, very advanced way to make an underground sea lab.

Sea labs exist all over the world.

David: That's what it's called: a sea lab?

Emery: Sea labs, yeah, are all over the world.

David: Okay.

Emery: Very small. You might see a small one on the bottom of the ocean, but underneath that is really where the base is.

David: Huh.

Emery: It's underneath the crust of the bottom of the ocean and the rock.

David: So by digging down first and then working from the bottom up, does that prevent against erosion and cataclysms and that kind of thing?

Emery: I think it's probably the safest way to do it without being noticed.

David: Ah, right.

Emery: You know, it's a secrecy thing. After what happened many, many years ago with the Taos Hums, they were worried that people were catching on with what they were doing with making these tunnels, but now they're using a different type of technique.

Of course, as you know, they make big lava tubes and melt rock, and they don't use the old-fashioned drills. You see these pictures of these ancient drill bits that are like 150' in diameter.

David: Right.

Emery: That's old school.

David: Some skeptics might say that we barely even have the ability to get any submarine that far down. The pressure would crush any type of technology.

So how have they overcome those limitations of the pressure?

Emery: Oh, no. They don't use submarines. They use our own alien reproduction vehicles.

We form our own gravitational force. We're inside our own gravity field, so we cannot get crushed.

We form . . . That's why you can go to space, and that's why you see some of these UFOs and these other ones just go right into the water and keep going, because they're in their own environment and their own gravity. So it would be easy for them to transport people or equipment or whatnot.

But they always have a direct link to these tunnels is what it's all about, and there's many tunnels all around the world.

David: And there's pressure that . . . They can generate enough gravity that they can easily counteract the pressure of the ocean?

Emery: Oh, absolutely. Of course, they can transdimensionally change the size of themselves.

David: Like how would that work?

Emery: Well, they kind of dematerialize, but you're still there but you're just out of this frequency just a hair, so you don't fall under the laws of the science of this planet.

David: Hm.

Emery: And that is for every other planet. That's why they can go anywhere. They can go right through the Earth.

You can fly right . . . In the craft, I'm going towards the tree, because that's where I want to go. And as soon as I see the tree, the craft changes interdimensionally. It can shrink itself or change its frequency just a little bit different so the structure of it will just go through it or around it. And that's exactly how they do it.

David: Do you think that these manatee people could possibly have been bred to be able to do work in the ocean?

Emery: No. I think they were . . . that was just a scientific experiment gone bad. I think they were trying to . . . They were probably looking at other more intelligent mammals, but they were starting with different ones. I don't know why they picked that. I couldn't even tell you.

I've been saying what it looked like. I don't know if it was manatee DNA. I'm just hypothesizing because of the way it looked – like this type of face and the skin, and it was very interesting.

Now, there are dolphin-like extraterrestrial-type people that have evolved beyond us that have come back and dropped off their lineage of dolphins here.

David: It does seem interesting to me, Emery, that in the early, early maritime era, there were sightings of people claiming that they saw human aquatic hybrids of some kind.

And that almost universally is written off as if the sailors were just drinking or something . . .

Emery: Sure.

David: . . . or that “Oh, they saw manatees”.

Emery: Right.

David: But yet, you've seen line art illustrations of people who drew these things from the craft. And you see, for example, a being that has a human face, but it almost has flippers coming out for arms and flippers coming out for legs, almost like it's a scaly type of thing as well.

Emery: Right.

David: So do you think that maybe at that early era before we really started to explore the oceans that these ETs had more free will to be in our oceans without violating our free will?

Emery: Yes, yes. I believe many thousands and thousands and thousands of years ago that there was a race of extraterrestrials that lived in the ocean and have maybe even migrated into Inner Earth oceans now.

David: Hm.

Emery: We refer to them as the “Aquifarians”, . . .

David: Really?

Emery: . . . and they come from another water planet. And there actually are many different water planets.

I'm not sure too much more than that about them, or how they live or anything, but I just know about that because I have seen some briefings of this race, and I've also physically seen things in the ocean that resemble these types of beings.

David: Hm! Wow! What exactly does it look like? Could you be a little more specific?

Emery: Yeah, it looks like you said. It's a human form, and it's fishy. And it's [got] a very beautiful face with long, long hair.

There are men and women of these types of beings, and they can walk. They're not like the mermaids we see with these fins, but they do have fins on the outside of the body, kind of like a cuttlefish.

You know what a cuttlefish is?

David: Yeah.

Emery: They have these fins around the outside of the body that allow them to propel themselves very, very fast. And they're very strong, and they're very tall beings.

David: Well, one of the things that is very interesting to bring up here. Having traveled in Japan for 3-½ weeks, there are very, very extensive records of a being called a “Kappa” - K-A-P-P-A.

And this is essentially an aquatic humanoid. It's intelligent. It can speak our language. And they would actually abduct and kill children, so children were always warned not to go near the water because of the Kappa.

But sometimes the Kappa would come out, and they would taunt people. They would talk to them. They would make jokes. They would make rude noises.

And the other strange thing about the Kappa – just to finish this off – is that apparently – and this is very consistent of all Japanese reports – that they had this indentation on the top of their head about one cup size, and that they needed to have water in it.

And that if the water fell out . . . Like if you could convince them to bow down like this [David bows] and the water comes out, they would actually die very quickly if they couldn't get back to the water.

Emery: Hm.

David: This is a widespread Japanese legend.

Emery: Wow!

David: So what do you think the Kappa might be, just speculating?

Emery: You're talking ancient times, correct, because . . .

David: Not really.

Emery: No? Because this . . .

David: Maybe only a few hundred years ago.

Emery: Yes, because this definitely sounds like a kind of hybrid-gone-wrong-type situation because of the water . . . what you mentioned about the water.

There's many things that they make to try to live on the Earth, but when you start mixing DNA, especially with aquatics, it doesn't work out too well because of the oxygen and the water that these beings need to survive.

You know how fish have gills and sharks and whatnot? And they rely more on these other animals that can gulp air and hold their breaths for 24 hours, you know, . . .

David: Ah!

Emery: . . . like certain kinds of catfish and salamanders and whatnot.

So I think I don't know anything about that story, but it does ring some bells on some other projects that have gone wrong as far as trying to keep beings that they make be able to be in the water AND land. That's the super-soldier being: to be able to go there, to be able to survive the vacuum of space like some organisms we have here, and to be able to survive on its own without help, but to be able to be controlled.

David: Do you think that there are Earth-like planets that are water worlds that don't have land that comes above the surface, and the whole planet is an ocean basically?

Emery: I believe in that definitely, yes.

David: Okay. So is it possible that a humanoid intelligent species could evolve on that planet by evolving in the ocean?

Emery: Absolutely, yes.

David: Now, the funny part was that I've watched some scientists speculate on this. And they said, “Well, intelligent life couldn't form in an ocean because they'd have to be able to make fire, . . .

Emery: Ha, ha, ha.

David: . . . and they couldn't burn anything in the water.”

Emery: That's pretty ignorant.

David: Ha, ha, ha.

Emery: We have a lot of species here that are living quite fine that are more conscious than we are.

Just because we can't communicate with them doesn't mean we should alienate them, just like dolphins.

David: Right.

Emery: I mean, their brains are a little bit bigger than ours. And that's the whole thing with everything else is about communication.

It's so said that just because we can't communicate with someone that we have our differences, or we make them look like they're smaller than we are. That's something

that needs to go.

David: Why do you think the Kappa might have died if the water fell out of this little cup in its head – this cup-shaped indentation?

Emery: I would say it has to do with voltage, because of how the salt water of the body can't have a special voltage. And I think he needs the voltage to keep running in the body.

David: Hm.

Emery: I don't believe it has anything to do with breathing or anything else, because they would not have risked that to come upon the shore.

David: Right.

Emery: But that voltage . . . Because every living creature gives off a type of voltage or a frequency, and it's alive.

David: Now, we've heard a lot of reports about the Philadelphia Experiment. And then when you get into the scientist Gerry Vassilatos, he reported that at Norfolk Naval Shipyard they were doing these major welding operations for battleships around World War II.

And that when they did the arc welding, they would see this huge flash of light, and then all the power would go off. And they couldn't understand why this was happening.

And eventually, they do a high-speed film, and they found that this hole would appear – like a black hole – and tools and objects would be flying into the hole before the power shut down.

And this, apparently, was what led to the development of the Philadelphia Experiment, where allegedly a ship was transported from Virginia up to around Philadelphia – hence "Philadelphia Experiment" - and then back to Virginia.

Are we looking at, do you think, an early prototype example of what later became a portal technology where all the kinks got smoothed out? Is that what the Philadelphia Experiment might be?

Emery: Portals exist. There's a lot of science into portals that we have done without using certain Earth grid points.

As far as that specific, I would have to know a little bit more information of what they were using to weld and a lot of the energy going into that and the fields of electromagnetic energy.

David: It was very, very high voltage electrostatic welding.

Emery: Perfect. Well, that's what you need to do that. So it could very possibly be that that's how they were teletransported to the other side or had a device to do that.

David: Why do you think the soldiers ended up getting embedded in the hull of the ship as was reported? What might have caused that to happen?

Emery: Oh, just a glitch in the system. It happens all the time. We lose lots of people in portals.

David: Really?

Emery: We haven't mastered it very well.

David: We still haven't mastered it very well?

Emery: No, we have not.

David: Hm.

Emery: It works. We've done it, but it's not 100% safe.

David: Wow!

Emery: But nothing is, like driving a car.

David: So another thing that you told me that I thought was really interesting – and I feel like it's a good time to touch on this – is you mentioned to me in private conversation that the locations of where we chose to build military bases might not be totally arbitrary.

What are some of the hidden reasons for why certain bases are where they are?

Emery: Well, not all the bases, but a few bases, like I told you earlier, were built on certain grid points on the planet because they were built on top of other ancient bases that were there.

David: Hm.

Emery: And some of those ancient bases already had working energy devices and alien craft and portals.

David: Hm. So they would literally be able to just dig right down into that base and re-occupy it?

Emery: Well, not re-occupy it, but study it and reverse engineer it. And, of course, if they were building certain portals or certain other devices, they would make sure it was put on that same grid point or try to activate certain portals that are there.

In the early years, you know, in the '40s, '50s, they were . . . when they had a lot of bases going out west and stuff and exploring things using special radars to look underneath the Earth, which have been improved today, they would pick these specific points.

And this is where they would set up labs. Like Sandia Labs is actually on Kirtland Air Force Base; Los Alamos Labs is north of that, but they're all connected.

So I do believe around the world, not just here, but also military bases in other countries, after looking at them and lining them all up, DO fall on interesting grid points. And there have been many spectacles of different phenomena that comes out of these bases that are witnessed by civilians in these specific points.

David: So you're saying, then, that in certain cases a military base might be built over a wrecked extraterrestrial vehicle that's underground somewhere?

Emery: Absolutely, or a base that has already been there from ancient times or from extraterrestrials that abandoned it.

David: This does line up with some other intel that we got from other folks.

So are there certain cases where the craft itself would be very large – like very unusually large?

Emery: VERY large, absolutely.

David: Okay.

Emery: I mean, Kirtland Air Force Base is the fifth largest land base in the world, and you have to look at a lot of different parameters when you're trying to associate and balance all the different bases. And if you're really into this kind of thing . . .

And, you know, there's craft that are very, very, very, very large that's stuck in the

crust of our Earth. And I've seen the photos. We use a very special type of radar that's classified that's 400 times more greater resolution than a CAT scan.

David: Wow!

Emery: And it has a backflow of frequency energy that measures the time of how that frequency comes back to tell us exactly what it was to build a volumetric image.

David: Yeah, and you actually showed me some of that. It's probably not for public distribution, but you showed me some very, very interesting stuff at one point of what appears to be an underground site that is definitely not known to the public.

Emery: Yes. Right. Some of these craft can be anywhere from 8' wide to 33 miles long.

Some of the structures underneath the ground could be just as big – 10 times larger than the Giza pyramids.

David: But are pyramids in some cases?

Emery: Right, . . . Yep, in that kind of shape.

David: Wow!

Emery: Or reverse pyramids, like tetrahedrons – one on the other going backwards.

David: Interesting.

Emery: Yeah, very amazing shapes and very deep in the Earth and with many things inside them.

David: So let's say we have, as one example, a 33-mile-wide craft underground.

Emery: Sure.

David: How many staff might be dedicated to exploring just that one thing, and for how long might that have been happening if you say an entire base is built there where the good stuff is?

Emery: It could take many, many, many, many, many, many, many, many years for that to . . . It's not like you just break into a tomb, and there's the mummy, and okay, and everyone just pillages it or whatever.

They're very careful with it. And just like in Antarctica with what's going on down there, it would take a team to probably research that kind of base – I'll say it's a craft; I'll say base underground – depending on how many parameters: like how deep it is, what kind of rock is in it, how we're going to get there.

The biggest thing they'll do first is all this volumetric imaging. And then they'll plan out, and they'll recreate it on the Earth first.

So they'll actually map whatever they see and make a model of it, exact spec, on top of the Earth, or under a ground base where they can do this secretly, to see exactly what's there.

And then, of course, it's not going to be . . . So when the team goes . . . Now they're using virtual reality to do it.

So when the team goes in, they know where they're at inside this area of the craft or whatnot. You know, is there still energy there on the craft? Is it still on?

Is there beings there? If they are, are they alive, or are they in a cryo state?

These are the things that they do. So they're very, very specific about . . . before going in and just digging everything up. It's not like this general saying, "Get in there and just dig this sucker . . . Get all the backhoes and do it."

It's more like . . . It's very calm. "Let's figure this out first. This is very dangerous. We don't know what we're getting into."

You know, you have to understand there might be microbes in there that come out and infect the entire planet, so vacuum tunnels have to be made with negative pressure air systems and stuff.

So it's a very dynamic and a very huge undertaking. It could take 20, 50, 100 years to do a project like that with all those parameters I said that are involved.

David: Well, I would be remiss to end this episode without just asking this quickly, which would be: Are you confirming the presence of at least one very large mothership under the ice in Antarctica?

Emery: Yes.

David: Okay. We have got a lot of other testimony on this – from Pete Peterson, from Corey Goode, other insiders I've spoken to as well.

You and I have actually never even spoken about that, so it's kind of amazing that you would have heard about this as well.

Emery: You know, it won't be the people. It won't be us exposing this. It's going to be Earth that exposes it because of the warmth.

They can't fight the heat right now. And since they can't fight the heat, it's going to be really hard to explain when some of the snow melts in the next year, and this giant thing starts being exposed and different metals.

David: Wow!

Emery: So Gaia will be Disclosure. Earth will be the one who discloses it, which is beautiful.

David: Well, we're going to help Gaia.

Emery: Yeah, we're going to help Gaia.

David: Gaia's going to help Gaia.

Emery: Yeah.

David: Ha, ha.

Emery: But you get what I'm getting at. Isn't that beautiful?

David: That is amazing! All right. Well, I didn't want to leave it on that cliff hanger. We'll be back next time. “Cosmic Disclosure.” I'm your host, David Wilcock, here with Emery Smith. Thanks for watching.

Secrets at the South Pole Season 9, Episode 10

Cosmic Disclosure; Secrets at the South Pole Season 9, Episode 10

31 Jan 2018

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock, and I'm here with our special guest, Emery Smith.

Emery, thank you for being here.

Emery Smith: Thanks, Dave. Appreciate it.

David: In our previous episode, we talked a little about how military bases are being built over extraterrestrial bases or crashed craft. And we had started to talk a little bit about what you may know regarding Antarctica.

So just to get more specific with you, according to Pete Peterson, operations in Antarctica have been ongoing for quite some time.

He was aware of it being back to at least the 1950s. And he said that it is a truly vast operation that's being conducted down there.

So could you speak a little bit more about what you know of what's going on in Antarctica?

Emery: I have recently met with four of the scientists that were part of that expedition, well, many expeditions in the past few years – in Costa Rica recently.

And what was interesting is there's also another craft that is part of some of the craft that's down THERE [Antarctica] in a cave down near Costa Rica, I'll say.

David: Oh, wow!

Emery: And so this group was asking me to come with them to Antarctica to check it out on another expedition, which I refrained to go because all newbies don't return.

David: Really?

Emery: So that's how dangerous it is.

David: Hm!

Emery: And any people that go down there to do documentaries or try to get with

people to take them down there usually end up pretty much not coming back.

David: Wow!

Emery: So right now, if you don't have a specific, really good classification, you're not going down there.

So that does leave it open to satellites, however, and special drones that we have access to to find out more information.

Different organizations are funding this, private organizations, because the people want to know.

And so this information was given to me strictly from the four scientists that actually came from working there for two years, which they do have the access to get back down in there to do what they do, which is basically . . . Well, I was talking about mapping and measuring of the melting ice and how much time they have before other things are exposed, which lead to the exposure of the underground city that's there that has been there for a very long time, apparently.

David: Are you familiar with there being any plan to reveal ancient ruins under the ice in Antarctica, but not spacecraft at first or anything more modern, as part of a gradual disclosure agenda?

Emery: They already started that. So they're saying there's something down there, a big void, just like they did in Egypt now. There's a big void underneath the pyramids there.

We have a very, very large city that's there.

David: In Egypt?

Emery: In Egypt, under the pyramids, about a mile high dome.

David: Really?

Emery: Yes, it's very large.

So this is the same thing that's going on in Antarctica.

So they're slowly saying, “Wow, through satellite imagery with special ground-penetrating radar, certain scientists from . . .”, which have nothing to do with trying to find bases, by the way – more like trying to find oil reservoirs and gold – have

stumbled upon these giant voids. So you're going to start hearing about this.

These voids are the ancient cities. You know, these are the ones that have been here for a very long time. This is right up your alley with all the stuff that you talk about.

And there has been great camera footage taken from an archaeologist that we know. And we have seen this footage. And it is compelling because the camera they snake down under the pyramid to see this, when it first was discovered, which I cannot disclose, was just fascinating.

David: Hm!

Emery: So the same thing is going on in Antarctica now is: how are we going to disclose this and clean up all the artifacts down there, which will really mess up the story of how we got here . . .

David: Right.

Emery: . . . kind of like Mars and the Moon and everything else. And it's right here on this planet.

David: All of a sudden in the media, we hear this report that neutrinos were used to discover a very large new chamber in the Great Pyramid above the Grand Gallery, which is the big hallway with the tall . . .

Emery: That's right.

David: And they're kind of saying it might be on a diagonal with the Grand Gallery, . . .

Emery: Correct.

David: . . . but it's a little higher.

Emery: Right.

David: And that's a very large, previously undisclosed space.

Emery: I've heard about that.

David: Now, with the technology you're reporting, it would appear that they would have known about this for a long time.

Emery: Oh, they've known about it for a very long time.

David: Have people been into that room that you know of?

Emery: Yes.

David: Really?

Emery: Yeah. And that's what the Alliance needs to decide is: what do we release and how slow do we release it? So there's a gradual scientific, huge, worldwide, scientific investigation of these tablets or this or that or whatnot, because it doesn't match what's going on or what we've been taught here.

And that's going to be the hard thing for people to grasp because of the belief systems that we all have.

David: Do you think that there might be a way . . .I mean, they don't want to tear up the pyramid, right? They're very concerned about antiquities preservation. But now we're talking about a massive, massive chamber inside the pyramid openly discussed in mainstream media.

Emery: Right.

David: So is there a way into that room already? Do we know what's in that room?

Emery: I'm 80% sure they've already been in that room from the bottom up. There are tunnels that they have already dug under into this city, so it's already been . . .

David: Wow!

Emery: They're learning what happened. You know, they're trying to learn the texts, learn all the symbols, and what's it all mean?

And so it's a huge undertaking on the private side of whoever is running that contract job. I can tell you that much.

David: Just for the sake of people's curiosity, what might be some of the most surprising things that we would learn?

Like, what would we actually see if we ever get to see the footage of this room? What would be the most surprising thing we would discover?

Emery: Well, you're going to discover a lot of literature and tablets, and also artifacts

that are not from on Earth – not of Earth-origin technology – which most of it has been removed.

David: Wow!

Emery: Whether they want to say it was found with the site or not, it will be a spectacle because it has to do with someone already being there trying to do the same thing we were doing about a higher, advanced civilization, and they left some things behind.

So there's special scientists in the world who grab these devices, and they can figure out what the devices were used for. That's what their job is to do.

And they're really interesting people, and they're responsible. They're the unseen heroes you hear about.

But a lot of the information that they get is usually used to give to these private corporations to be used for bad because it's so amazing. Why give it to us to help us cure cancer or be able to talk to anyone in the universe?

David: I want to bring something up with you that I think is directly relevant, and that is an insider that Pete Peterson has hoped to get me in touch with – it hasn't actually happened yet – but this person was involved in the excavation of a strange sort of metallic alloy sarcophagus from this same Giza Plateau area. And I believe he said it was underground.

And they removed the sarcophagus, and they had it . . . They were trying to figure out how to get it open, and they couldn't open it with tools.

And apparently on the ship – they were transporting it on a U.S. military ship of some kind – someone telepathically interfaced with this sarcophagus, and they could read the inscriptions. Even though originally it was a different language, they could read the language.

And then they had to sing a certain note or phrase. I can't remember which it was . . .

Emery: A harmonic, yeah.

David: And you put your hands out like this and it opened.

And then what they found inside were these various kind of hand-held tools. And some of the tools, apparently, would give you holographic reconstructions of historical events that happened during the time of the people that had this thing.

Emery: Sure. Oh, yes.

David: And that sarcophagus alone is just of inestimable value. Have you ever heard any stories like that?

Emery: Yes, I have heard of very similar stories of these sarcophagi and coffins and tubes that are made of some unknown metal but they're seamless.

David: Wow!

Emery: And they can only be opened, as far as I knew, by lineage, actually, and harmonic. So that's interesting you said that, because it actually helps me understand some things now put together that I've been debriefed on.

And I've seen some of these vats, actually.

David: What about this idea of an object that you might be able to hold in your hand, and then you can kind of talk to it with your mind . . .

Emery: Yes.

David: . . . and it will show you, like, a library?

Emery: Absolutely. It's a consciousness-assisted technology that you have to hold and use your consciousness. You know, you have to think about it, and then whatever, however it operates – however, the operator knows how to operate it.

Or usually, it just automatically will turn on. You know, it's like having an iPhone without a passcode on it. Automatically anyone can use it.

But some of these devices, these consciousness-assisted technologies, are all lineage-related or frequency-related, so that you have to be of the right ancient lineage to hold that one little frequency for this thing to work.

David: A genetic marker in your DNA, do you think?

Emery: Yes. Yes.

David: Wow! Really?

Emery: Yeah.

David: When we had Pete Peterson here last time, he gave us some extremely

fascinating information about very, very long – many, many miles long – perfectly carved tunnels in South America, like, underneath the Nazca Lines.

And he talked about what appeared to have been a vast extraterrestrial city down there. And, of course, with our show on Gaia, “Unearthing Nazca”, Pete is claiming that the bodies we had on that show were from this city.

So I'm curious if you've heard about those tunnels in Meso- and South America, and any information you might have on that.

Emery: Yes. My scientist sources also have invited me down there to analyze the tunnels, which have a lot of craft in them, which have . . . The tunnels actually have beings frozen in time sticking out of the walls of these things.

David: Have you ever heard the term “stasis beings”?

Emery: Yes. I mean, I don't personally believe these beings that come from Gaia are from that site.

David: Okay.

Emery: But that's my own opinion. And I have not been asked to analyze these beings yet.

David: Okay. So you're saying that there are . . . This is totally amazing, Emery. I'm just going to be honest with you. And the reason why is that I got another briefing from Pete. I haven't said a word about it to anyone.

I'm going to do it for the first time right now, okay?

And the briefing was that, because Gaia did “Unearthing Nazca”, the show, that our Alliance people have gotten a lot more interested in that area again, and that apparently the Mexican government . . . We have the Peruvian government . . . We have different governments in Meso- and South America, apparently involved in this.

And apparently, very recently, we took custody of these five different craft, and he said that they are so advanced that we've got whole teams of people . . . He estimated 2,000~3,000 people are working on these craft now. But it's so advanced we have no idea how to get into it or what the heck is going on.

So I'm curious about your thoughts on that.

Emery: Yeah, I agree with that. But when you say “we”, who are you referring to who

took over the five craft?

David: I guess it would be . . .

Emery: The Alliance or . . .

David: DIA military-industrial complex, what we would call MIC Secret Space Program folk.

Emery: Okay. That I can confirm 100%. They are now in control of all the tunnels and all the ships and all the bodies and all the technology, . .

David: Really?

Emery: . . . which has recently just happened.

David: Really?

Emery: Yes. And it's now very difficult to get in there, but I'm still deciding whether to go or not because it's just a matter of if they invite me again to go down there and decipher some of the ships and craft and some of the extraterrestrials that they found, and of course, the technology.

But yes, there is a large amount of these beings and the craft down there.

David: Can you confirm anything about Pete's testimony regarding that the craft are so advanced that we have no idea what to do with them yet?

Emery: Yes, I can absolutely concur with that, because the group would never have called me to go down there and check this out, number one, because if they knew how to do it and they're scientists and know how to do it, they wouldn't be calling me to ask me to come on board clandestinely, which I can talk about freely. But that's exactly what happened.

David: Wow!

Emery: I mean, I haven't seen his show, by the way, so I didn't know any of this.

David: Okay. So let's talk a little bit about what we did on “Unearthing Nazca”, because I didn't even know you knew anything about this. It's really amazing.

We've had X-rays taken of these bodies, and it does not in any way even possibly appear to be a hoax.

The genetic testing shows that it's over 1,500 years old or more in some cases. It appears to be genuine genetic tissue that's been preserved in diatomaceous earth.

They have three fingers and three toes instead of five, like we do. It definitely looks like this is an authentic specimen of some kind.

So I'm curious about your thoughts. Have you seen “Unearthing Nazca”?

Emery: No, I've seen just the small briefing that came out with those two mummies, and just the briefing that came out over the world and through Gaia.

David: Okay.

Emery: And that's all I read. And you know, my first question as a scientist is, who tested it? Where was it tested? How did you retrieve it? How did you get it over the border? Do you mind if I test it at multiple facilities of my choice, which you are not allowed to know?

And, you know, all these questions, because it's a very interesting story. And I'm not saying yes or no, because I don't know because I was not a part of that project.

David: Right.

Emery: So I can't judge it. Since you say these things, I mean, of course, I'm very close with you. I believe you, but as a scientist, I also have to ask many other questions and actually have to examine the bodies because I don't believe there's too many other people out there coming forward like myself that would probably go do that and give an expert opinion and write something up.

David: Sure.

Emery: I mean, I'm right now being published in Stanford University for the Atacama being coming forward with that with Dr. Garry Nolan.

So you'll see that white paper with my name on it, which kind of gives me some credit about my background.

So, you know, I can't answer that.

Just by looking at some pictures, I can't say yes or no without being part of the project and giving my own opinion of what they are and where they came from, and also the type of DNA it is.

What was the DNA percentages?

David: There apparently is a DNA test being conducted in Russia right now with some of the finest DNA testing they have. The results have not yet come in yet. It apparently takes a long time.

But we did have Peruvian scientists who did a lot of work down there.

We also have M. K. Jesse, who is a radiologist right here in Boulder, who has surveyed the X-rays and has said that this definitely appears to be a biological being. It does not appear to be anything conventional human.

Emery: Right. And the carbon dating or whatever they use to measure the dating . . .

David: Carbon dating has been confirmed, and it's all early AD – very early AD.

Emery: Interesting.

David: So would you be interested? I mean, I'm not able to ask you this on behalf . . .

Emery: Yeah, I would . . .

David: Would you be interested in doing that if you were invited?

Emery: Yeah, I would entertain that, of course. Yeah, I would be helpful in any way I can to help approve or disapprove [disprove] these beings.

David: And you told me before that apparently the Atacama humanoid that you had in "Sirius" is not the only one. Could you tell us a little more about that?

Emery: Yeah, I can. There is another being down in that location that has been discovered that is very similar to this being.

And we are now trying to work something out so we could get this being.

If we can get this being, we can get the DNA from both beings and see if they match and see if it is a new subspecies or not.

But the data that we're printing right now at Stanford is – I'm not going to spill it because I can't talk about it – is going to talk about that exact thing.

So you guys are going to have to wait for that white paper to come out in a couple of

weeks, and then we'll go from there. But I'm very interested in that being, too. I want to immediately grab this being, put it in a safe place, and be able to run multiple tests on it and see what happens and go from there.

It's a speculation right now, so we can't say anything until we actually have the DNA in our hands.

As you know, as I went over to Barcelona with Greer and Dr. Bravo to obtain the first one and bring back that DNA to Stanford for Dr. Garry Nolan to test, one of the world's leading geneticists.

So there's a lot to do, because you have to have, I think, in the future, multiple testing sites, and larger teams involved in organizations. So it's just not one foundation doing all the work.

And it should be a joint collective thing. Most projects like this should be collective and not just one overseer of that. I think it's harder to manipulate things when there's multiple people involved instead of one overseer.

David: One of the things that you carry with you is something that hardly anyone has ever seen. You seem to always have it with you.

The only other time this was ever shown was on stage at Contact in the Desert. You handed it to me when I was doing a panel. It was a sensation for the audience.

Emery: Ah, right.

David: So could you hold up what it is that you have and tell us about this?

Emery: So this . . . After the team and I went over there to Barcelona . . . This is the Ata being from Chile, from the Atacama Desert.

And what we did was we wanted to make sure that we not only have the DNA, but let's run every possible test. Let's get CAT scans, MRIs, X-rays, as much as we can for the scientific community to look at this because the private organization that has it, who's been very generous and needs lots of help, would like to do more testing and do more things.

And I was able, by working on some other secret projects at the time . . . We can 3D render organs and things. We can also 3D render pretty much any CAT scan into any material.

So we can shoot your brain, CAT scan your brain, and I can enter it into the computer,

and I can print your brain out in any material I want.

David: Wow!

Emery: Isn't that cool?

So that way, before I operate on you, I can make sure where all your blood vessels are, and I can actually do . . .

David: Oh, wow!

Emery: . . . yeah. So I can say that now because it's already out; it's been disclosed.

David: Right.

Emery: So I thought, “Hey, why don't I take a CAT scan of this being and put it into the computer and make an exact replica, duplicate, cell-by-cell,” into this just polycarbonate I used, because it was already too expensive to do anything else?

David: Here, let me see it.

Emery: And what happened is: we printed it and this is what came out, this polycarbonate exact being.

David: So one of the things that I notice right away, which people probably notice, is that, like, the head is kind of sliced off.

Emery: Yeah. When we made the program, we made sure that part was open so people could see inside and see the brain lobes, and, you know, there was different things. You know, I could print just with the chest open so you can see some of the lungs and different things that were in there.

But just to have something that was durable that I wanted to last a long time, and something that you could see the volume of. Of course, the skull was the most amazing thing: three times the size of our skull.

David: Yes.

Emery: From chin to top, that'd be like . . . it's the same length as his torso from the sternal notch to the umbilicus. We call the belly button, umbilicus. So, you know, it's three times . . . the same size as that.

That would be like your head, one, two, three, three times your own size.

David: Wow!

Emery: So, very interesting.

The story on this being, if you want me to go into, is . . .

David: Yeah, sure.

Emery: . . . which I was not part of the collection site or anything like that in the early years, but I did read a briefing that matches that of where this craft has crashed. And it was shot down some time ago. I don't know the exact time.

And it was an egg-shaped craft, and there were . . . about the size of a Volkswagen van.

David: Hm! The size of the egg?

Emery: Yeah, the size of the egg. There were five occupants. And when the army got there, the military – not ours, but theirs – got there, two of them were already dead, the adults. They were 22 inches high.

And then there were three trying to get away. And they shot one, and two they lost into the jungle, or into the desert, or whatever, which the story goes they did wind up in a village.

And the villagers apparently saw these little beings, and they clubbed them and wrapped them in cloth, in red cloth, and went to . . .

David: Why would they club them?

Emery: Well, I'm going to tell you. I'll tell you why I think they did. Because after they wrapped it in red cloth, they took it to the front of the church doorsteps, and they wrote “El Diablo”, and they laid it there.

David: The devil.

Emery: Yeah, the devil. So how unfortunate.

David: You know, the skull . . . This is one of the things that I always wondered about is: there's this crack in the plate. Like there's these two plates, and this part here on the left looks like it sticks up in ridges over the part on the right.

So that's not the regular physiology. This is because its head was crushed?

Emery: No, it did have that kind of a point there after we looked at that in different computer programs, but it is offset because of the smashed skull.

David: Right. Okay.

Emery: And the hole in the back of the head, so you know, was also something that was done prior to myself and the team actually doing the autopsy.

I did use that hole, though, that was made by another scientist before me many years ago, to gather the brain material, some of the brain matter, and, of course, some of the layers of the brain.

And some of the bone marrow, of course, was what we're really after. So we took some of that from the rib cage and also from the humerus of the arm of the being.

So we had a lot of samples. We had a lot of good samples. And we took those samples back.

David: Now, it is very interesting, something that I wish we could have gotten into "Sirius".

Emery: Right.

David: I wanted to see us go into the fact that there is a case in Russia of a little being called Alyoshenka.

And this being does have the 22-inch height that you're saying is like the adults, but the dried body of it is basically identical. It is essentially identical to what this looks like.

And the story there was that the being somehow was found by a woman who had mental illness. And she was feeding it candy and milk for a while, but it was dying.

And she tried to bring it to the hospital in Russia, and after it was brought to the hospital, it died. When its body dried out, it dried out the same way that this Atacama being did.

And then, unfortunately, the story goes that the Japanese were going to buy it for a very large sum of money to study it, and then it mysteriously disappears.

So what do you think Alyoshenka is?

Emery: Yeah. It's hard to tell. Like I said, I don't know the story. I know a little bit

about the story. I did read a little bit about that briefing.

David: Yeah.

Emery: And then like with anything, even with this being, you have to understand this is not something that I saw actually inside where I was at.

This was after I got out that I was able to handle this. And I just associated this briefing with this accident at this exact place, so to make that clear.

David: Okay.

Emery: And don't forget, things can be made inside for disinformation campaigns as well. And beings can be grown and these crashes can be made to disinform scientists around the world that are not part of the projects.

And some that leave the projects, they want them disinformed.

So you have to be very delicate about talking about DNAs and beings, and where they come from and the stories behind them, because there's very few people out there that actually know from start to finish: all right, this went to this to this to this.

You know, I'm being a private investigator saying, “Well, this is what I read. This is what happened. Then later on we finally got it. And then we did this, and it matches everything. There's another one; matches the same exact report.” You know, all these different things.

So that I would not . . . I would just say I think it's a similar . . . I think it's part of the same phenotype of species.

Without looking at the DNA and actually matching the two, which would be the most amazing thing . . .

The fact that it went missing, 100% - obviously, red flag. Red flag, red flag.

Any time anything goes missing or someone gets hurt or killed, you know, it's a red flag.

David: Do you think there's any relationship between this story of the church with the being in paper labeled “El Diablo” and the corpse that ended up in the movie “Sirius”, or are those two separate things?

Emery: You're talking about the Ata? The Ata?

David: Yeah.

Emery: No, that's the Ata.

David: Oh, that is?

Emery: That is the Ata.

David: So did the church hold onto it all that time?

Emery: Yes. The church held onto it.

David: Really?

Emery: The priest held onto it many, many years. He knew it was very, very important. And then he made a deal with someone.

I know the U.S. government already had samples of this somehow. So in the exchange somewhere, there was this civilian person, the priest, who had access to it. And then a private organization went down there and purchased the being from him, and now it's in an underground facility near Barcelona being studied.

And many new papers are coming out. I know they're printing so much stuff.

My own opinion, I think they got a little bit infiltrated and maybe paid off because of some of the things that are being said now over from their people in Europe.

But, you know, like I said, we don't know. It's all speculation, because anything can be made to be disinformed.

David: “Sirius” itself kind of ends on a down, because we're talking to Theodore Lockman; we're talking to Garry Nolan. The whole movie establishes that this is a credible non-human – normal human, at least – thing.

And then at the end, it kind of seems like the film says, “Oh, well, it's not really that big of a deal”. It's very strange.

Emery: That's very strange, yeah. Why is that? The biggest story in the world and no one wants to hear about it.

So, yeah, I would say, “Hm”. That's all I can say about that.

David: Right. So another thing that I find fascinating is “Ripley's Believe It or Not”

in, I don't know, 1940s, 1950s, somewhere thereabouts, had this thing called "AttaBoy".

And it's just like the Atacama humanoid – same size.

The only real difference is that the head is a little more bulbous in this way [round] . . .

Emery: I saw that, yeah.

David: . . . as opposed to the way the other one looks.

Emery: Yeah, I saw that one.

David: It's so similar in many other ways. Do you think that's from the same species or a similar species?

Emery: No, I don't believe so. No. No. Yeah, there's too many differences.

I did look at that at one time closely. So I don't believe it's from the same lineage or phenotype at all.

David: But do you think it might possibly be extraterrestrial also in its own way?

Emery: Without actually making a . . . bringing the proper test, I couldn't speculate.

David: Right.

Emery: It wouldn't be fair.

David: So another thing was these edifices that the people on Easter Island wore on a necklace.

Emery: Right, yeah.

David: And when you look at the necklace, when you look at the body of this thing, it looks exactly like what you autopsied in "Sirius".

The only difference is that the face is kind of a stylized human face. It's got these large, round eyes, large kind of nose and mouth.

So it is kind of an exaggerated human face with large eyes.

Emery: Uh-huh.With every passing day, Antarctica is garnering more attention from mainstream and alternative news sources, alike. Emery Smith urges, that as the ice melts, the secrets at the south pole will no longer be contained. What is being disclosed now, in Egypt as well as Antarctica is just the tip of the iceberg as ground penetrating radar is discovering large voids. Although we are being told of the great voids, what is in those voids is being withheld. Now, new reports of tunnels in South America, as well as strange beings, such as the Nazca Mummies and Atacama Humanoids, found in these locations are coming to light. Emery Smith fills in the gaps of withheld information with his insider's view on what is really taking place under the Antarctic ice. This interview with David Wilcock was originally webcast January 30, 2018.

David: That part looks wrong. But the body is absolutely dead-on.

And those Easter Island people are saying that these were the givers of wisdom and knowledge.

Emery: Right. I think there's a connection.

David: What do you think is going on?

Emery: I do think there is a connection with that. Like I said, I don't know enough about their history. I just know, from learning from you about that story and seeing some of these pictures a while back, that there is correlation, for the body, that is.

And whether the bodies are replicas or they're the actual bodies that were mummified, you know, swelling happens during mummification sometimes, depending on where it's buried and what it's buried in.

And things can change and misform different body parts, especially with the skeleton, into different . . .

David: Right.

Emery: Just like fossils, you know, if they're in certain minerals, when they form over time, they'll take on a different color and shape.

So it's a very interesting thing when you look at mummies and how they're buried, where they're buried, the temperature, the humidity, and then all these other factors that fall into place. And the same thing happens with these beings.

So I can see why you're asking these questions, because they are similar in many ways, but they're also . . . There's differences. And without actually having all three of

them right there, for me to say.

But I do agree with you that the bodies are very similar.

David: All right. Well, I want to thank you. This has been very fascinating, and we will have more in store.

Emery: Excellent.

David: So thanks for being here.

Emery: Thanks for having me. Appreciate it.

David: And thank you for watching. This is “Cosmic Disclosure”. I'm your host, David Wilcock, here with our special guest, Emery Smith.

Nazca Tunnels & Super-Suit Technology Season 9, Episode 11

Cosmic Disclosure; Nazca Tunnels and Super-Suit Technology

Season 9, Episode 11

07 Feb 2018

David Wilcock: All right. Welcome back to “Cosmic Disclosure”. I'm your host, David Wilcock. And we are here, once again, with our special guest insider, Emery Smith.

And Emery, again, I want to thank you so much for finally stepping forward to do this.

Emery Smith: Well, thank you, Dave. It's been a long time, as you know, around 10 years for me to come out and talk about it.

And I think it's time for the people to know to add to what you have already been teaching.

But there's some gaps there, and I want to help you fill those if you have any questions with them.

David: We had talked about this briefing that I got from Pete Peterson that was very recent in this idea that he was following up on what he gave us on a previous episode of “Cosmic Disclosure”.

Emery: Okay.

David: We were talking about the idea that there are these vast carved tunnels underground – smooth, almost glass-like interior – like it's . . .

Emery: Obsidian. Yeah.

David: Right.

Emery: Melted rock. Yeah.

David: So you know about this?

Emery: Yes, I know.

David: And he said that, in some cases, they follow the Nazca Lines, and that there are these chambers off the sides that look like people were living there, but it appears

that whoever was there just took all the stuff out when they left.

So could you just speak to that for a second – that part of it? The idea that somebody might have cleared everything out, and it might not have been us, per se, but maybe it was the beings themselves.

What do we know about why it was so abandoned looking?

Emery: Well, there's actually a lot of the craft down there, and they're connected to many other tunnels.

I don't know what he was debriefed on, but what I was debriefed on is, you know, there's over, you know, 200 to 300 craft down there, and many beings that are kind of petrified into the walls.

And it is like a lava tube-type of cave system, where it was intentionally melted, it looks like, and frozen in . . . like frozen . . .

David: Right.

Emery: . . . in some moment and some sort of suspended animation, I would say.

David: Well, that is interesting that you said 200 to 300 craft, because this briefing from Pete, he was speculating that there might be as many as possibly 500 down there.

Emery: Oh.

David: So that's a very similar number.

Emery: Oh, well, just in Mexico alone, in that area is about that, but those go way down south too.

David: Wow!

Emery: So this is a big collective group of scientists, which have now just had to turn it over to the U.S. government.

David: So another one of the things that he said in this briefing that I've never shared with anyone, and I'm just going to drop it on camera right now, he said that the latest intel that he's aware of is that there are evidence of five different epochs on Earth of extraterrestrial colonies that were fairly large and fairly considerable when they happened - that they're almost all underground.

And he said that of these five eras, some of them go back millions of years, and that they are very different: the type of technology, the type of society, the way that everything looks. It's all very different.

So I'm wondering if you ever heard about there being like five major, if you will, ages of extraterrestrial colonization of Earth?

Emery: I've heard up to five. I've kind of known of three, because of artifacts and beings, but that's just secondhand.

I mean, firsthand that I've seen the stuff and read the briefings, and I've seen some of the technology and some of the bodies, of course.

But, yeah, that is correct. There must have been at least five different civilizations that, you know . . . We're talking million year gaps though.

David: Right.

Emery: We're talking, you know, different times, you know. And I think maybe that might be correlated with the stuff in Egypt and Antarctica, and, you know, ancient Lemuria and Atlantis.

It's all kind of tied into different time zones, because the symbols and the thing they're finding, and all the equipment and technology, is completely different, like you said.

So there are a lot of scientists out there they are hiring now to put in like . . . to crack this code, like, what does this mean?

And some of the stuff they can't operate, of course, because they don't understand consciousness is just a technology, number one.

Number two, it's such a higher science that we're not even . . . we've never even learned it, and it's so beyond us that we wouldn't be able to understand it if I was an ET talking to you trying to explain it, because it would be beyond your, you know . . . It would be beyond your brain to assimilate that, knowing what you know now.

David: I was particularly fascinated in the previous episode when you talked about the idea that similar ruins as Antarctica were found in a cave in Costa Rica. And I want to throw something at you and see what you say.

One of the insiders told me about a complex that was found underground in Ecuador, and that Neil Armstrong and certain other NASA astronauts were given the ability to

go in there.

It's VERY advanced. It's VERY amazing, and it's similar to Antarctica.

And I've never found another insider who had a corollary point of data for that particular thing.

I've tried Pete. I've tried Corey Goode. They didn't know about Ecuador.

Emery: I did tell you it was NEAR Costa Rica on the last episode.

David: Oh! Right.

Emery: So correct. Yes, I've been there.

David: You've been to the one in Ecuador?

Emery: Yes.

David: Really?

Emery: Yes.

David: Well, from what I heard, it's absolutely amazing.

Emery: Yes, it seems to have already started its own flora and fauna growing in this . . . There's a craft that crashed there a very long time ago, and it still had some sort of energy system on.

It must have carried extra bacteria or something because deep down in there it's actually kind of a very bio-luminescent type feeling, and its atmosphere is a little different than the atmosphere on top.

And it's NOT very deep under the ground, so you know.

David: Hm!

Emery: But I can tell you that the plant life down there is unlike anything I've ever seen on Earth, . . .

David: Wow!

Emery: . . . so that was really astounding. Of course, some of the little insects and

other things that were running around were also very different. And this is . . .

David: Wow!

Emery: This place is highly guarded and has a really good security system, but I think it's going to be brought to the public because of other organizational satellites are now picking up on Inner Earth things just by accident. So it's going to be hard for them to hide this one.

So he is correct about this . . . Did he call it a cave or . . . ?

David: He just said it was an underground complex.

Emery: Right. It's an underground complex. But it really was a craft that we think may have crashed there or stayed there at one point, and then they started building around it.

And then, since it was so close to the surface of the Earth, the water . . . and it opened up and runoff went in there and some of the flora and fauna has mixed with this stuff, whatever they brought, or it could be the energy from this craft in there that's changing all this stuff.

And I can't got into more detail than just that.

David: Okay. It's been driving me crazy that he used words like “very amazing”, but then wouldn't give me any actual detail of what we might see.

So could you give us a little bit about what we might see if, at some point, we get to go in there?

Emery: Yeah, I can, I just hate to use movies as a retrospect.

David: But movies are programmed with information to discredit whistleblowers.

Emery: It would make “Avatar” land look like a small school playground.

David: Wow!

Emery: Everything in there had fluid running through it. The stems of the branches look like it, you know, had fluid running through everything.

David: Wow!

Emery: There was light, you know, like light from everything – all different kinds of shades of light. Light I've never seen before.

Not just talking about the colors of the rainbow, but so many amazing colors.

And the plants are the most amazing things, and they're like conscious, not like our . . . Of course, all plants are conscious, but they are different in that way.

Everything down from the leaves to the soil was sponge. It was soil. The soil was all sponge, like you're walking on a one-inch foam mattress, I could put it, you know, how you feel that little gushy?

David: Uh-huh.

Emery: And everything is really humid.

And there were little creatures, like little animals, like the size of mice there that were like naked moles, like naked little shrews, running around that were definitely different. They actually had color that was emanating from them, and I don't know if it was a reflection of light from the light that was in there or if they were emanating light.

I was not there to, you know, talk about that specific thing. I was there on some . . . to do something else. But it was the most fascinating . . . one of the most fascinating things I've ever seen here on Earth.

And I do believe there's a lot of other biospheres that are formed. This one just got cracked open somehow and mixed with a lot of our stuff, and that's what they were concerned with. Would it leave this area? And it can't.

The plants they took out of there, and the animals they took out of there, could not survive on the surface of our Earth.

David: Wow!

Emery: So it is its own type of biosphere. And maybe there is an electromagnetic field that's protecting, you know, the opening in that area from anything, you know, going out or, you know, coming in.

David: Part of what he meant by “very amazing” . . . And I'm really glad to hear these details. It's making a lot of sense now.

And, I guess, I'll just say this first that, apparently, this was one of the ways that Neil

Armstrong and other astronauts were bribed to stay quiet.

And from what you're describing, it sounds like it is so incredible that you would want to stay quiet just so you could go there more than once maybe. Or . . .

Emery: Yeah, there was an exchange of favors. There's no money ever exchanged in these programs. It's all favors.

David: Hm.

Emery: And if you don't comply and take the favor, then there's usually a big problem. Favors such as bringing also the astronauts to Antarctica, as you know.

David: Right. Yes.

Emery: So . . . And all of these other places that are very special in the planet that we haven't even elaborated on yet, as this one is.

So there's multiple places like this, actually. They're in the Earth and around the Earth. It's just that this one happened to be cracked open like an egg and beautiful things come out.

David: As for technology, when he mentioned “very amazing”, he did imply to some degree that there were things that looked like a really cool spaceship that you would see when you went in there.

So could you elaborate a little on that part as well? Like what's the interplay between technology spaceship-looking stuff and stuff that looks like the gardens in “Avatar”?

Emery: Well, the craft there are light, and so it's not something you'd kick the tires on. Ha, ha. And the light is palpable. And it is round and oval, and it is very long and thin, but it's large. It's fairly large, what I saw, and I didn't get to go all the way in, by the way.

I was only in the first 300 yards, so, and that was enough for me to be completely . . . My mouth dropped open.

David: Wow!

Emery: And so this light craft is palpable. So think of light not being blinded like the lights we have right now on us, but a light that glows that you can see it and focus on it without being blinded.

And you can enter it from any place you want on the craft . . .

David: Wow!

Emery: . . . once . . . when you walk up to it and touch it. It's a biometric-type thing.

David: I mean, that's very interesting, Emery, because when Pete was on "Cosmic" talking about this craft in Antarctica, he described that it had a sort of diffuse glow.

Emery: That's right.

David: That everywhere was just light, and no matter where you went, it seemed like the light was always there.

And he also talked about how one of the children that was brought in for these programs figured out that you could speak to the craft, and you could talk to it, and it would mold itself based on what you wanted it to do, and what you told it to do.

It was able to figure out language or thought, or something.

Emery: Absolutely. Yes, definitely. That's, you know, . . . The whole consciousness is just a technology that we call it here today on Earth.

And the craft are all alive, and you don't have to . . . To fly a craft, you just have to kind of say, "Go", and where you want to go. It's that simple. And . . . Or think where you want to go, and it'll get you there safely.

And wherever you look in the craft, you can see completely outside the craft. So no matter where you look, it opens up, and you can see very clearly exactly where you're looking to a very wide angle, . . .

David: Wow!

Emery: . . . including up and down.

David: And can you also get binocular vision, like telescoping vision?

Emery: No. I have not experienced that.

David: Well, one of the things that Pete talked about was that our more advanced fighter jets, the classified ones, have this technology that goes through these nubs in your shoulder blade.

If you feel your shoulder blade, there's a little dimple in there, and he said there's a lot of nerves that cross in. And he was part of a team that figured out how to pump signals in through those points that they called ports, and you can actually allow people who are blind to see.

And that on the jets, the jets don't need windows, but you can look out from your mind's eye, and it's the same as vision, except that it also has binocular telescoping function.

Emery: You mean you don't need heads-up display.

David: Right.

Emery: Not . . . You need your . .

David: It's in your head.

Emery: You need your, of course, protection.

David: Right.

Emery: Right. Yes, that's definitely true. It's been out for a while. It's kind of old technology.

David: Ha, ha. Old technology?

Emery: Ha, ha. I'm sorry. And that's . . . They even make toys now, where you hook up something to your finger and think, and the ball floats in the air with a fan or something.

David: Right.

Emery: So all that is real, and that's kind of old technology compared to what we have now – especially with the new suit program, and things like that, is all incorporated into, like you said, into the helmet, where you can think, like you just said, with some of these helmets. And you can zoom in, zoom out.

You see in different wavelengths and light, and, you know, just like you said. So [i] very familiar with that. I can definitely concur and confirm what he said was true.

David: Well, I guess since we're on a technology theme here, let's talk about the exosuit, or smart suit, or whatever you want to call it.

So could you tell us . . . Now, you gave me some very fascinating information about this suit before.

Emery: Oh my gosh, so much fun, the suit. Yeah.

David: And you've actually had the pleasure of using one.

Emery: Yeah. Yeah.

David: So tell us about these smart suits.

Emery: Wow! That's a big one, because that's like a whole series. Would you like me to start on just the amazing technology that's embedded in it, such as . . .

David: Well, what is it, first of all?

Emery: Well, number one, it was designed to be able to go anywhere, and . . .

David: Is it a suit that you wear? Like what people . . . We've got to give people a visual first.

Emery: Oh, okay. Well, the way . . .

David: What would you see on somebody who is wearing one?

Emery: If you would see this suit, what it would look like, if someone had, like a scuba suit on.

David: Okay.

Emery: A very small amount of neoprene, but it's not neoprene at all, but it would . . . It fits that tight, and it's very, very thin.

And the suit has the ability to absorb all the shock on your body, if you were to jump, you know, 40 feet off a cliff onto the ground. So all the weight is distributed into the whole suit, so your body will feel nothing at all.

David: Wow!

Emery: It also is bulletproof; it's shockproof. It's electromagnetic proof, to an extent.

It has the capabilities, and the helmet are just fascinating. It is all mind/thought-controlled, because it's actually connected to you, like you said, with these little things

in your back, but not . . .

David: What about things like heat and cold?

Emery: Yeah, that's the best thing about it is: it will keep any temperature that, you know, you want. It actually measures your body at all times, and knows how much sweat you're sweating. It knows, you know, how much air you're breathing, your body temperature, your blood pressure, everything.

It also can tighten to absorb impact and release, so you can actually be so comfortable wherever you're at. So you wouldn't even feel it. You'll feel like you're naked.

But in a time where you're about to move, it all tightens up and activates, you know, in nanoseconds.

It was made as a super soldier suit to replace the old, you know, dilithium "Predator" suits that just were, basically, for the camouflage, but you had to wear armor underneath those.

So now, this one has different . . . because I think it has different types of composites in it and . . .

David: All right. Well, "dilithium predator suit". So please explain what is a . . . The movie "Predator", of course, . . .

Emery: Oh, that's just . . .

David: The being in "Predator" is like sometimes invisible.

Emery: Yeah.

David: But it has this thing on its arm that you can . . .

Emery: Yeah, it's the pop culture term, you know. I'll never use . . . I don't use the real terms for these devices.

David: Okay.

Emery: But you know, this type of suit, basically, are small round, like pyramids, but they're round. They're faceted.

And at the bottom of the pyramid is a mirror. And these are very, very small – smaller than . . . They're about, I think, 0.3 of a millimeter of a . . .

David: Wow!

Emery: Yeah, 0.03 or 0.3. So there's thousands of them per cubic centimeter.

David: Wow!
